1. ***G. Gnemon***, Linn. *Mant.* 125; an erect monœcious tree or shrub, leaves from elliptic-lanceolate to broadly oblong acuminate or cuspidate; spikes solitary or paniced, hairs round the ovary white, seed ovoid acute sessile. *Endl. Conif.* 250; *Parlat. in DC. Prodr.* xvi. ii. 349; *Roxb. Fl.*

Ind. iii. 518; *Kurz in Flora* iv. (1872) 350; *For. Fl.* ii. 497; *Blume in Arn. Sc. Nat. Ser.* 2, ii. 105; *Rumph.* iv. 3, t. 176; *Miq. Fl. Ind. Bat.* ii. 1067; *Brongn. in Duperr. Voy. Bot.* 6, t. 1; *Wall. Cat.* 8025, 8026. *G. Brunonianum*, *Griff. in Lindl. Veg. Kingd.* 233; *Trans. Linn. Soc.* xxii. 308, t. 55, f. 9-20, and t. 56, f. 27, 28, 41, 43, 44-47; *Notul.* 30; *Kurz in Flora* iv. (1872) 349. *G. Griffithii*, *Parlat. l. c.* 349, 352.

KHASIA and MUNNIPÖRE HILLS, and southward to SINGAPORE.—DISTRIB. Malay Islands.

Usually a shrub, rarely a small tree, 10-15 ft. *Leaves* membranous or coriaceous, 4-8 in., very variable in length breadth and the number and direction of the nerves, which are either strong or faint, often brightly polished above, yellow green or brown when dry, base acute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Spikes* about 1 in., slender; cupular bracts at length distant. *Seed* $\frac{1}{2}$ in. long, orange-cold., shining.—A very slender form from Tenasserim, also named *G. Brunonianum* by Griffith, is noted by him as being scandent. A specimen of apparently the same is in Wallich's herbarium from Penang, under No. 8021 B; it has pedicelled young fruit. These possibly may be a different species, but the flowering spikes do not differ from those of *G. Gnemon*.

2. *G. ? neglectum*, *Blume Rumph.* iv. 6, t. 175, f. 2, and t. 184; *Mus. Bot.* i. 28; a dioecious climbing shrub, leaves rigidly coriaceous elliptic-oblong or -lanceolate obtusely cuspidately acuminate or apiculate, spikes solitary or paniced, hairs round the ovary rusty-red, seed sessile. *Parlat. in DC. Prodr.* xvi. ii. 350; *Kurz in Flora* iv. (1872) 350; *For. Fl.* ii. 496. *G. microcarpum*, *Blume Rumph. l. c.* t. 175, f. 1; *Mus. Bot. l. c.* 29. *G. apiculatum*, *Griff. in Trans. Linn. Soc.* xxii. 308, t. 55, f. 21, 24-26, and t. 56, f. 29-40; *Notul.* iv. 31.

ARRACAN and TENASSERIM, *Griffith, & c.* (*Kew Distrib.* 4972). PERAK, *Wray*. PENANG, *Wallich, Curtis*. MALACCA, *Griffith*.

An evergreen climber. *Leaves* 3-4 in., very variable, usually very glossy above, base rounded obtuse or acute, margins sometimes recurved; nerves very faint; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Spikes* short, fem. flowering $\frac{1}{2}$ - $\frac{3}{4}$ in.; young fruiting 2 in.; young seeds very acuminate.—I am doubtful as to this being *Blume's G. neglectum*, which he figures with acutely acuminate leaves (and describes as "rarissime obtusiuscula") and fruiting spikes 6 in. long. *Griffith* (*Linn. Soc. Trans.* l. c.) gives "Silhet, Roxburgh," as a locality, but I have seen no specimens from so far north.

3. *G. macrostachyum*, *Hook. f.*; scandent, dioecious, leaves large oblong or oblong-lanceolate very coriaceous base acute rounded or cordate, fem. spikes as thick as the finger hairs round the ovules brown.

SINGAPORE, *Hullett*. ? PENANG, *Curtis*. MALACCA, ? Mt. Ophir, *Mainjay*. * *Leaves*; in Singapore specimens a lower pair are 8 by 4 in., cuspidate, with a cordate base; the upper are smaller, 7 by 2 $\frac{1}{2}$ in., acuminate, base acute, very coriaceous, shining on both surfaces and reticulate. *Young male spikes* 2 $\frac{1}{2}$ in. by $\frac{1}{2}$ in. diam.; fem. 4 in. long by $\frac{3}{4}$ in. diam.; cupular bracts short, close together, separated only by the profuse hairs. *Ovules* acuminate, quite glabrous. The Penang specimens are in ripe seed, have less coriaceous leaves narrowed into the petiole, and the very old solitary fem. rachis sessile with close articulations, and a sessile broadly ellipsoid seed $\frac{3}{4}$ in. long, with rounded base and top. The Mt. Ophir specimens are in young male fl. only. Possibly the Mt. Ophir and the Penang plant may not be the same as the Singapore one, of which the great fem. spikes are most remarkable. A drawing apparently of this species (in *Herb. Kew*) has oblong-lanceolate or oblan- ceolate acuminate leaves, short very stout fruiting spikes 8 in. long, and elliptic-oblong green sessile seeds 1 $\frac{1}{2}$ in. long, with both ends rounded; it is in a collection of drawings of Singapore plants (by Parry).

** *Seed stipitate*.

4. *G. scandens*, *Roxb. Fl. Ind.* iii. 518; a lofty dioecious climber,

leaves oblong or ovate obtusely cuspidate, spikes in stiff brachiate panicles. hairs round the ovary rusty (when dry), seed gradually stoutly stipitate young often silvery scaly. *Parlat. in DC. Prodr.* xvi. ii. 351; *Griff. in Trans. Linn. Soc.* xxii. 309, t. 55, f. 1-8, 22, 23, and t. 56, f. 39, 40, 42; *Notul.* iv. 29; *Brand. For. Fl.* 502; *Grah. Cat. Bomb. Pl.* 188; *Dalz. & Gibs. Bomb. Fl.* 246. *G. edule*, *Blume Nov. Pl. Fam.* 31; *Rumph.* iv. 6; *Kurz in Flora* iv. (1872) 350; *For. Fl.* ii. 495; *Miq. Fl. Ind. Bat.* ii. 1068. *G. gneumonoides* and *G. Ula*, *Brongn. in Duperr. Voy. Bot.* 12. *G. funiculare*, *Wight Ic.* t. 1955 (not of *Blume*). *G. pyrifolium*, *Miquel in Herb. Hohenack.* No. 489. *G. latifolium*, *Parlat. l.c.* 350 (not of *Blume*). *Thoa edulis*, *Willd. Sp. Pl.* iv. 477.—*Gnetum*, *Wall. Cat.* 8023 and 8024.—*Rheede Hort. Mal.* vii. t. 22.

EASTERN TROPICAL HIMALAYA, from Sikkim eastwards, and from ASSAM to SINGAPORE and the ANDAMAN ISLANDS. The DECCAN; on the Ghats from the Concan to the Nilghiris.—DISTRIB. Malay Islands.

Trunk compressed, 4-5 ft. girth. *Leaves* 5-7 in., usually black when dry, smooth and shining, reticulations lax; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Male bracts* closely imbricate, fem. interrupted. *Fruiting spikes* 3-10 in. *Seed* oblong, 1-1 $\frac{1}{4}$ in. long, terete, orange-cold., top rounded, narrowed into a very stout stipes about $\frac{1}{4}$ in. long, but often much shorter.—*Kurz* describes the ovarian hairs as rusty, *Griffith* as white. Neither *Blume* nor *Roxburgh* describes the silvery scales on the ovule and young seed, which *Kurz* relies on for distinguishing this from *G. funiculare*. In many specimens I find no trace of them. The Deccan specimens have stouter male spikes than the Eastern.

Var. ? *apoda*; seed small $\frac{3}{4}$ in. sessile.—Sikkim Himalaya in the Terai.—Perhaps a distinct species, but the specimens are very imperfect.

5. ***G. funiculare***, *Blume Nov. Pl. Fam.* 32; *Ann. Sc. Nat. Ser.* 2. v. 2, 106; *Rumph.* iv. 7; a lofty diœcious climber, leaves oblong ovate or lanceolate cuspidate or apiculate shining finely reticulate beneath, spikes in stiff brachiate panicles, hairs round ovary rusty, seed quite glabrous suddenly stipitate, stipes slender. *Endl. Conif.* 252; *Parlat. in DC. Prodr.* xvi. ii. 351; *Kurz in Flora* iv. (1872) 350; *For. Fl.* ii. 496; *Miq. Fl. Ind. Bat.* ii. 1068; *Brongn. in Duperr. Voy. Bot.* 12. *Abatua indica*, *Lour. Fl. Coch.* 630.—*Gnetum*, *Wall. Cat.* 8024 C.

ASSAM, *Lister*; PEGU and BURMA, *Wallich*, *Kurz*.

Stem as thick as the arm (*Kurz*). *Leaves* 5-7 in., very variable in form and breadth, very shining brown or black when dry; base acute or obtuse; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Male bracts* hardly imbricate, fem. spikes twice as long as in *G. scandens*, bracts interrupted. *Seeds* $\frac{1}{2}$ - $\frac{3}{4}$ in. long, oblong, apiculate, stipes $\frac{1}{4}$ - $\frac{1}{2}$ in.

6. ***G. macropodum***, *Kurz in Trimen Journ. Bot.* xiii. (1875) 331; a lofty climber, leaves broadly oblong or elliptic, fem. spikes rameal paniced, involucre cupular very short, hairs round ovule short ashy yellow, seed smooth obtuse apiculate, stipes $\frac{3}{4}$ -1 $\frac{1}{2}$ in. long slender.

NICOBAR ISLANDS; at Kamorta, *Kurz*.

Leaves 6-7 by 3 $\frac{1}{2}$ -4 in., base subacute, thinly coriaceous, conspicuously but laxly reticulate.—I have seen only fragmentary specimens. *Kurz* says it is very near *G. scandens*, differing in the less coriaceous leaves and very long stipes of the seed.

ORDER CXLIV. CONIFERÆ.

Trees or shrubs, wood-cells studded with disks. *Leaves* usually alternate, rigid, linear or subulate, rarely broad, solitary or fascicled in mem-

branous sheaths. *Flowers* monœcious or dioecious; males in deciduous catkins, females solitary or in cones. *Perianth* 0. *Male fl.* of many 1- or more-celled anthers, seated on the scales of the catkin, sessile or filaments connate. *Fem. fl.* of one or more sessile naked orthotropous or anatropous ovules, seated on a scale (an open carpellary leaf), which is free, or adnate to the scale (bract) of a cone. *Seeds* often winged, testa thick or thin, albumen densely fleshy; embryo axile, straight, cotyledons 2 or more, radicle terete often attached to a crumpled thread (suspensor).—DISTRIB. Genera 33, species about 300, chiefly in cold regions, very rare in Trop. Africa and America; absent in the Western Peninsula and Plains of India and in Ceylon.

Thuja orientalis, L. (Wall. Cat. 6047) is commonly cultivated in India.

It is unnecessary in this Order to cite under each species all the (chiefly) horticultural works in which the Indian Conifers are enumerated or described, and which add nothing to what is known of them beyond what the cited authorities give.

A. Ovules erect.

Tribe I. **Cupressinæ**. *Scales* of the fem. cone opposite, in several series. *Ovules* usually 2 or more on each scale. *Leaves* very short or subulate.

Scales of cone woody; testa winged 1. CUPRESSUS.

Scales of cone cohering into a globose berry-like fruit, enclosing the seeds; testa hard, not winged 2. JUNIPERTS.

Tribe II. **Taxodiæ**. *Scales* of fem. cone spirally crowded. *Ovules* 2 or more on each scale. *Leaves* scattered or distichous.

Leaves linear, distichous; seed large, drupe-like 3. CEPHALOTAXUS.

Tribe III. **Taxæ**. *Scales* of fem. cone or spike few, imbricate, all or the upper only ovuliferous. *Ovule* solitary on each scale, erect. *Leaves* scattered or bifarious.

Fem. cone minute, 1-fl.; seed seated in a symmetric fleshy cup; anthers connate in a whorl 4. TAXUS.

Fem. spike 1-6-fl.; seed seated in a very oblique fleshy peduncle; anthers free 5. DACRYDIUM.

B. Ovules reversed.

Tribe IV. **Podocarpeæ**. *Scales* of fem. cone very few, spirally crowded, often fleshy. *Ovule* 1 under each scale.

Seed on a fleshy stipes 6. PODOCARPUS.

Tribe V. **Araucariæ**. *Scales* of fem. cone many, spirally arranged in several series, bract and ovuliferous scale confluent as one scale.

Anther-cells 5 or more; ovules 1, rarely 2; seeds winged . . . 7. AGATHIS.

Tribe VI. **Abietinæ**. *Scales* of fem. cone many, spirally arranged in several series; scale distinct from the bract beneath it.

Leaves persistent, in bundles of 2, 3, or 5, narrowly linear; scales of cone persistent 8. PINUS.

Leaves persistent, in bundles of many, acicular; scales of erect cone deciduous 9. CEDRUS.

Leaves scattered, not distichous, usually subulate, jointed on the branches; scales of reflexed cones persistent . . . 10. PICEA.

- Leaves distichous, flat; scales of small reflexed cone persistent 11. *TSUGA*.
 Leaves more or less distichous, linear; scales of large erect
 cone deciduous 12. *ABIES*.
 Leaves deciduous in bundles of many, acicular; scales of erect
 cones persistent 13. *LARIX*.

1. *CUPRESSUS*, Linn.

Evergreen, monœcious trees or shrubs. *Leaves* opposite, small and scale-like, very rarely subulate, densely appressedly imbricate and decurrent. *Male fl.* a subsessile terminal column of decussately opposite 2-6-celled peltate anthers. *Fem. fl.* a globose or shortly oblong cone of 3-6 series of opposite peltate at length woody scales, with 4-6 erect ovules at the base of the 2nd and 3rd series. *Seeds* small, winged; testa coriaceous or hardened; cotyledons 2-4.—Species about 12, S.E. Europe, Temp. Asia and America.

C. glauca, Lamk. *Encycl.* ii. 243 (*DC. Prodr.* xvi. ii. 470; *Brand. For. Fl.* 534; *Dalz. & Gibs. Bomb. Fl. Suppl.* 83. *C. lusitanica*, Mill. *Gard. Dict.*; *Willd. Sp. Pl.* iv. 511), commonly known as the Goa Cypress, is extensively cultivated in the Western Ghats, and thence introduced into Portugal. It is doubtful whether it is referable to *C. torulosa* or *C. sempervirens*.—The Yunnan *Libocedrus macrolepis*, Benth. (*Gen. Pl.* iii. 426) (*Calocedrus macrolepis*, Kurz in *Trimen Journ. Bot.* (1873) 196, t. 133), with elongate cylindric cones and flattened branches, may be expected to be found in the mountains of N.W. Burma.

1. *C. torulosa*, Don *Prodr.* 55; crown broadly pyramidal, branches spreading tips pendulous, leaves triangular-ovate obtuse, cones sessile erect $\frac{1}{2}$ in. diam. bluish, scales rugose, seeds narrowly winged. *Endl. Conif.* 58; *Parlat. in DC. Prodr.* xvi. ii. 469; *Wall. Cat.* 6046; *Brand. For. Fl.* 533; *Gamble Man. Ind. Timb.* 410; *Griff. Itin. Notes* 240; *Ic. Pl. Asiat.* t. 372.

WESTERN HIMALAYA; from Nepal to Chamba, alt. 5500-8000 ft., on dry slopes.

A tree, attaining 150 ft., and girth of trunk 17 ft.; branches with the leaves on terete or obscurely 4-angled. *Leaves* $\frac{1}{20}$ in. long, with an oblong gland on either side of the midrib. *Anthers* 3-4. *Scales of cone* 8-10, umbonate, 4-6-ovuled. *Seeds* nearly orbicular, nucleus convex on both sides, not angled.—Though described as with spreading branches in a wild state, all the specimens cultivated at Kew are fastigiata.

C. SEMPERVIRENS, Linn. *Sp. Pl.* 1002; crown (in India-grown specimens) narrowly cylindrical, branches and their tips erect, leaves ovate-oblong, cones scattered peduncled 1 in. diam. globose or oblong, scales tubercled, seeds angled and narrowly winged. *Gertn. Fruct.* ii. t. 91; *Richard Conif.* t. 9; *Brand. For. Fl.* 533; *Gamble Man. Ind. Timb.* 411; *Boiss. Fl. Orient.* v. 705. *C. Roylei*, Carr. *ms.* *C. sempervirens*, var. *indica*, *Parlat. in DC. Prodr.* xvi. ii. 468. *C. pyramidalis*, Targ. *Obs. Dec.* iii. v. 53. *C. fastigiata*, *DC. Fl. Franc.* v. 336. *C. horizontalis*, Mill. & *fastigiata*, *DC.* *Endl. Conif.* 56, 57. *C. Whitleyana*, Carr. *Conif.* 128; *Gord. Pinet.* 72, *Suppl.* 27. *C. Doniana*, Hort.

NORTH-WEST INDIA; planted only.—DISTRIB. The horizontally branched var. is wild in N. Persia, Syria and Asia Minor; the fastigiata is only known in cultivation.

A tall tree, attaining 100 ft., and 9 ft. girth of trunk; branches with the leaves 4-angled. *Leaves* ovate-oblong, convex with a gland on either side. *Anthers* about 4

Scales of cone 3-14, usually with a short horn or boss. *Seeds* ovoid or oblong, nucleus angle d.—Parlatore separates the Indian form as a variety with globose cones, and umbonate scales mucronate at the tip.

C. FUNEBRIS, *Endl. Conif.* 58; crown very broadly pyramidal, branches horizontal branchlets pendulous distichous compressed, leaves ovate acute, cones small $\frac{1}{4}$ – $\frac{1}{2}$ in. diam., scales rugulose, seeds angled and broadly winged. *Parlat. in DC. Prodr.* xvi. ii. 471; *Brand. For. Fl.* 534; *Gamble Man. Ind. Timb.* 410; *Flore des Serres* vi. 90 with fig. *C. pendula*, *Staunton, Embass. to China* ii. 525, t. 41; *Griff. Itin. Notes* 131, 143, No. 679 a; *Lamb. Pin. Ed.* 2, 124, t. 66.

Planted near Buddhist temples in NEPAL, SIKKIM and BHOTAN, alt. 4-8000 ft.—DISTRIB. Wild in China.

A very handsome tree, attaining 60 ft., remarkable for its wide-spreading branches, and pendulous distichous branchlets.—*C. pendula* is the first name given to this species, but it was preoccupied for *Thuja pendula*, Lamb., the *Biota pendula*, Endl., which genera are now reduced to *Cupressus*.

2. JUNIPERUS, Linn.

Characters of *Cupressus*, but leaves more often subulate and 3-nately whorled, scales of cone fleshy and coherent or connate in fruit, and seeds with a thick hard testa and often connate into a hard several-celled mass.—Species about 25; temperate and cold regions of the N. Hemisphere.

1. *J. communis*, *Linn. Sp. Pl.* 1040; shrubby erect or decumbent. leaves $\frac{1}{4}$ – $\frac{3}{8}$ in. all oblong-lanceolate or subulate pungent base narrowed flat or concave above convex or keeled beneath, fruit subglobose about 3-seeded. *Endl. Conif.* 15; *Parlat. in DC. Prodr.* xvi. ii. 479; *Wall. Cat.* 6044; *Brand. For. Fl.* 535; *Gamble Man. Ind. Timb.* 411; *Boiss. Fl. Orient.* v. 707; *Richard. Conif.* 33, t. 5; *Reichb. Ic. Fl. Germ.* t. 535. *J. nana*, *Willd. Sp. Pl.* iv. 854.

WESTERN HIMALAYA, from Kumaon westward, alt. 5500 to 14,000 ft.—DISTRIB. Temperate and Subarctic Europe, Asia, N. Africa, and N. America.

A bush in the Himalaya, rarely 6-7 ft., prostrate at high elevations with broader leaves; foliage grey green. *Leaves* crowded. *Fruit* $\frac{1}{4}$ – $\frac{1}{2}$ in. diam., blue black, glaucous, with scarious empty scales at the base.—The common Juniper.

2. *J. pseudo-sabina*, *Fisch. & Mey. Ind. Sem. Hort. Petrop. Animad.* 65; a robust shrub or tree, leaves dimorphous, those on the lower branches linear pungent, those on the terminal branchlets 4-farious closely imbricate appressed. fruit erect ovoid $\frac{1}{4}$ – $\frac{3}{8}$ in., endocarp very thick bony 1-seeded, seed slender. *Endl. Conif.* 21; *Parlat. in DC. Prodr.* xvi. ii. 482; *Ledeb. Fl. Ross.* iii. 652. *J. excelsa*, *Wall. Cat.* 6041 (not of Bieb.). *J. Wallichiana*, *Hook. f. & Thoms. Herb. Kew*; *Brand. For. Fl.* 537; *Gamble Man. Ind. Timb.* 412. *J. sabina*? *Herb. Ind. Or. H. f. & T. J. indica*, *Bertoloni Miscell.* xxiii. 16, t. 1.

TEMPERATE HIMALAYA, from Kashmir to Bhotan, and WESTERN TIBET, alt. 9-15,000 ft.—DISTRIB. Siberia, Soongaria.

A bush in the N.W. Himalaya; a tree, 60 ft., in Sikkim, with stout trunk and black thick ramification and foliage. *Largest leaves* $\frac{1}{2}$ in., rather spreading, the smaller $\frac{1}{10}$ in., rhombic ovate, closely-imbricate, tips free, back obtusely keeled.

Fruit black or blue shining, not glaucous.—Brandis points out that this differs from the description of the Siberian plant in the fruit not being recurved. Bertoloni's figure of *J. indica* is a very poor one, but I think it is of this species. I have seen no specimens of the Siberian and Soongarian plants.

3. ***J. recurva***, *Ham. in Don Prodr.* 55; a glaucous blue prostrate or erect bush or small tree with fastigiate branches, which are decurved and ascending with pendulous branchlets in large plants, leaves subulate imbricate & appressed, back convex, fruit $\frac{1}{3}$ – $\frac{1}{2}$ in. ovoid. *Endl. Conif.* 18; *Parlat. in DC. Prodr.* xvi. ii. 481; *Griff. Notul.* iv. 26; *Ice. Plant. Asiatic.* t. 373, 374; *Wall. Cat.* 6042; *Brand. For. Fl.* 536; *Gamble Man. Ind. Timb.* 412; *Boiss. Fl. Orient.* v. 708. *J. squamosa*, *Ham. in Wall. Cat.* 6043.

TEMPERATE and ALPINE HIMALAYA, alt. 7500–15,000 ft.—DISTRIB. Afghanistan.

As a tree attains 30 ft., with a straight trunk, conical crown and pendulous branchlets; at higher elevations it becomes stunted, and in alpine or exposed situations passes into

VAR. *squamata*, *Parlat. in DC.* l. c. 482; a decumbent or prostrate bush, leaves broader often incurved. *J. squamata*, *Ham. in Lamb. Pin. Ed.* i. ii. 17; *Don Prodr.* 55; *Endl. Conif.* 18. *J. densa*, *Gord. Pinet. Suppl.* 32. *J. Lambertiana* & *rigida*, *Wall. mss.* *J. religiosa*, *Royle Ill.* 350 (*name only*).

4. ***J. macropoda***, *Boiss. Fl. Orient.* v. 709; a small tree, branchlets subdistichous slender, leaves dimorphic, of the lower branches subulate pungent, of the upper and branchlets scale-like imbricate closely appressed ovate acute with a dorsal large gland, male catkins on a scaly peduncle, fruit subglobose $\frac{1}{4}$ in. diam. black glaucous 2–5-seeded, tips of the scales forming transverse crests. *J. excelsa*, *Brand. For. Fl.* 538, t. 68, and *Wall. Cat.* 6041 (not of Bieb.); *Gamble Man. Ind. Timb.* 412. *J. gossainthaneana*, *Loddig. Cat.* 1836, 48; *Loud. Encycl.* 1090.

Inner drier ranges of the HIMALAYA, from Nepal westward, and WESTERN TIBET, alt. 5–14,000 ft.—DISTRIB. Afghanistan, Beluchistan, Persia, Arabia.

A tree, attaining 50 ft., with girth of trunk over 33 ft.; branchlets like those of *Cupressus torulosa*, trunk generally gnarled; foliage light green.—The above notes are from Brandis. Boissier distinguishes this from *J. excelsa* by the scaly peduncles of the male catkins, and the crest-like tips of the scales of the fruit, and the fewer seeds. I doubt its proving distinct from *J. excelsa*, Bieb.

3. **CEPHALOTAXUS**, *Sieb. & Zucc.*

Evergreen yew-like diœcious shrubs or trees. *Leaves* alternate, distichous, linear, flat, often falcate. *Male fl.* in axillary globose heads of 1-fl. scales; anthers few, subsessile, cells 2–4 deflexed; connective with an incurved claw. *Fem. cone* terminal, small, ovoid, sessile or peduncled, surrounded with imbricating bracts; ovuliferous scale adnate to the bract, 2-ovuled; ovules erect. *Seed* large, drupe-like, ellipsoid or globose; testa fleshy without, hard within; albumen hard, fleshy; cotyledons 2.—Species about 6, Eastern Asia, China and Japan.

1. ***C. Mannii***, *Hook. f. Ic. Pl.* t. 1523; leaves linear acuminate subfalcate green beneath.

KHASIA MTS.; in the Lankhla Woods, alt. 5000 ft., *G. Mann, Clarke.*

A small tree. *Leaves* 2 by $\frac{1}{4}$ – $\frac{1}{2}$ in., shining above, paler beneath, base acute or obtuse, margins recurved when dry; midrib stout on both surfaces. *Male heads*

globose, peduncle scaly; anthers about 12, mucronate. *Fem. cones* 3–4, on a common peduncle, pedicelled; bracts adnate, ovate, obtuse. *Seed* $1\frac{1}{2}$ in. long, obovoid-oblong, mucronate, narrowed at the base.

2. **C. Griffithii**, *Hook. f.*; leaves linear acuminate falcate white beneath, base rounded.

UPPER ASSAM; Mishmi Hills, alt. 6060 ft., *Griffith* (*Kew Distrib.* 5000). MUNNIPOR, *Watt*.

Very similar in a dried state to *C. Mannii*, but the leaves are white beneath.—I have seen no fruit. The plant has long been cultivated at Kew, having been sent from the Calcutta Botanical Garden by Dr. Thomson.

4. **TAXUS**, *Tournef.*

Evergreen diœcious (rarely monœcious) trees or shrubs with very tough wood. *Leaves* bifarious, linear, obtuse acute or acuminate, 1-nerved. *Male fl.* a pedicelled whorl of 3–8 anther-cells on a peltate scale. *Fem. fl.* a single erect orthotropous ovule, terminating a short peduncle clothed with imbricating scales, and seated on a thick scale that enlarges as a fleshy red cup. *Seed* ovoid, subcompressed, testa hard; cotyledons 2, radicle superior.—Species one, variable; or several differing only in foliage, all N. temperate.

T. baccata, *Linn. Sp. Pl.* 1040; leaves more or less falcate acute or acuminate, paler beneath. *Endl. Conif.* 242; *Parlat. in DC. Prodr.* xvi. ii. 500; *Wall. Cat.* 6055; *Brand. For. Fl.* 539; *Gamble Man. Ind. Timb.* 413; *Boiss. Fl. Orient.* v. 711. *T. nucifera*, *Wall. Tent. Fl. Nep.* 44, t. 57 (*excl. syn.*); *Cat.* 6054 (not of Kämpfer). *T. virgata*, *Wall. mss.* *T. Wallichiana*, *Zucc. in Abhandl. Bayr. Akad. Classe Math. Phys.* iii. 803, t. 5; *Endl. l. c.* 244. *T. orientalis*, *Bertoloni Misc.* xxiii. 17, t. 2. *T. nepalensis*, *Jacquem. mss.* *T. contorta*, *Griff. Itin. Notes* 351, No. 536; *Notul.* iv. 128; *l.c. Pl. Asiat.* t. 376.

TEMPERATE HIMALAYA, alt. 6–11,000 ft. KHASIA HILLS, alt. 5000 ft. UPPER BURMA.—DISTRIB. N. and Temperate E. Asia, all Europe, N. Africa, N. America.

A tree, in the Himalaya attaining 100 ft., and 20 in girth of trunk; branches spreading; bark thin, flaking. *Leaves* $\frac{3}{4}$ – $1\frac{1}{2}$ in., dark green, coriaceous. *Fruit* $\frac{1}{2}$ in. long, ovoid; cup mucilaginous, sometimes concealing the olive-green seed.—Bertoloni's *T. orientalis* is a narrow long-leaved form from Sikkim, collected by myself.

5. **DACRYDIUM**, *Soland.*

Evergreen diœcious trees or shrubs. *Leaves* either scale-like and 4-fariously imbricate, or distichous scattered and subulate, both forms sometimes on the same branch. *Male fl.* small, sessile, at the tips of the branches; anthers spirally crowded on a short stipes; cells 2, globose, deflexed, connective with an apical claw. *Fem. fl.* in small lax spike-like cone; ovuliferous scale free, concave or cup-shaped, at length exceeding the bract; ovule 1, erect or oblique. *Seed* small, ovoid, erect, longer than the cup-shaped enlarged ovuliferous scale; testa hard, striate; albumen not ruminate.—Species about 12, Malayan, Australasian and Pacific.

D. elatum, *Wall. Cat.* 6045; leaves of two forms, some on the

barren branchlets acicular 4-angled subpungent, those on the fruiting branchlets small closely imbricate ovate-oblong obtuse or mucronate, male spikes cylindric. *Endl. Conf.* 226; *Parlat. in DC. Prodr.* xvi. ii. 494; *Kurz For. Fl.* ii. 499; *Hook. Lond. Journ. Bot.* ii. (1843) 144, t. 2; *Blume Rumph.* iii. 221, t. 172; *Miquel Fl. Ind. Bat.* ii. 1075. *Juniperus elata*, *Roxb. Fl. Ind.* iii. 838. *J. Phillippsiana* & *rigida*, *Wall. mss.*

TENASSERIM ? *Kurz.* PENANG, *Wallich.* MALACCA; on Mount Ophir, *Griffith, Lobb.* SINGAPORE, *Schomburgk.*—DISTRIB. Sumatra, Borneo, Cambodia.

A lofty pyramidal tree with spreading branches and weeping branchlets. Barren branchlets in brush-like clusters, $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., densely clothed with erect subulate or acicular shining subulate or acicular deeply-grooved shiny leaves, $\frac{1}{3}$ – $\frac{2}{3}$ in. long; fertile branchlets very slender, terete, clothed with minute imbricating triangular-ovate obtuse leaves $\frac{3}{10}$ in. long; branchlets with leaves of all sizes and forms between these extremes occur. *Seeds* scattered on the sides of the fertile branchlets, $\frac{1}{2}$ in. long, ovoid, obliquely seated on the shallow cup-like scale.

6. **PODOCARPUS**, *L'Herit.*

Evergreen, monœcious or diœcious trees or shrubs. *Leaves* opposite or alternate, scattered and linear or distichous, or broad and oblong with a midrib or with parallel nerves, or of two forms on the same branch some scale-like and imbricate, others distichous linear or subulate. *Male fl.* solitary, fascicled or spicate, with imbricate bracts; anthers sessile, spirally crowded; cells 2 parallel, slits extrorse or lateral; connective with an apical claw or appendage. *Fem. fl.* solitary or few and spicate; bract forming a peduncle to the also fleshy ovuliferous scale; ovule adnate to the scale, reflexed. *Seed* small, globose or ovoid, seated on an enlarged fleshy peduncle (scale and bract); testa hard, often fleshy without; albumen fleshy; cotyledons 2.—Species about 40, tropical and S. temperate.

The *P. chinensis*, *Wall. Cat.* 6057, from the Calcutta Garden, is referred by Maximovicz (*Diagn.* viii. 562) to a variety (*P. chinensis*) of the *P. macrophylla*, *Don.*

1. ***P. latifolia***, *Wall. Pl. As. Rar.* i. 26, t. 30; *Cat.* 6050; leaves opposite and subopposite oblong to lanceolate acute or acuminate ecostate many-nerved. *Endl. Conf.* 208; *Parlat. in DC. Prodr.* xvi. ii. 508; *Gamble Man. Ind. Timb.* 414; *Bedd. Sylv. Madr.* t. 257; *Hook. Lond. Journ. Bot.* i. (185) 658, t. 23; *Miq. Fl. Ind. Bat.* ii. 1071. *P. agathifolia*, *Blume Rumph.* iii. 217, t. 173. *Nageia latifolia*, *Gord. Pinet.* 138; *Kurz For. Fl.* ii. 500.

The KHASIA Mts., alt. 3000 ft. Hill forests of BURMA and the MALAY PENINSULA. SOUTH DECCAN; Tinnevely, alt. 3–5000 ft., *Beddome.*—DISTRIB. Java.

An evergreen glabrous tree, attaining 80 ft., with aromatic wood. *Leaves* 4–7 by $\frac{1}{2}$ –2 in., very coriaceous, acute at both ends; nerves very many, close and slender; petiole 0– $\frac{1}{4}$ in. *Male spikes* $\frac{1}{2}$ in. long, 2–5 together, sessile or on a short peduncle; bracts ovate, acuminate, denticulate. *Seeds* solitary, subglobose, $\frac{3}{4}$ in. diam., blue-black, seated on a cylindric fleshy scaly peduncle.—Foliage of *Agathis loranthifolia*.

2. ***P. nerifolia***, *Don in Lamb. Pin. Ed.* 1, 122, *Ed.* 3, 74; leaves scattered linear or linear-lanceolate obtuse acute or acuminate 1-nerved. *Endl. Conf.* 215; *Parlat. in DC. Prodr.* xvi. ii. 514; *Brand. For. Fl.* 541; *Brown in Benn. Fl. Jar.* 40; *Flor. des Serres*, viii. 49, t. 768. *P. bracteata*,

Blume Enum. i. 881; *Rumph.* iii. 214, t. 172, f. 1; *Parlat. l. c.* 515; *Gamble Man. Ind. Timb.* 414. *P. polystachya*, *Brown l. c.* 40; *Parlat. l. c.* 515; *Endl. l. c.* *P. macrophylla*, *Wall. Cat.* 6052. *Nageia bracteata*, *Kurz For. Fl.* ii. 501.

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 3000 ft., *J. D. H.* KHASIA HILLS and forests of BURMA, the MALAY PENINSULA and ANDAMAN ISLANDS.—DISTRIB. JAVA, Sumatra, Borneo.

A glabrous evergreen tree. *Leaves* 4–8 in. (in saplings to 8 in.), coriaceous, straight or falcate, base narrowed, midrib prominent on both surfaces; petiole $\frac{1}{2}$ – $\frac{1}{3}$ in. *Male spikes* 1 in., solitary or clustered, sessile, cylindric, surrounded at the base by broad acute keeled bracts. *Seeds* solitary, globose, $\frac{1}{4}$ – $\frac{1}{3}$ in. diam., seated on an oblong fleshy peduncle.

3. ***P. cupressina***, *Br. ex Mirb. in Mem. Mus.* xiii. 75, and in *Benn. Fl. Jav.* 35, t. 10; leaves on older branches minute quadrifarious lanceolate mucronate keeled, on the younger distichous spreading linear and falcate or compressed and tetragonous. *Endl. Conif.* 222; *Blume Rumph.* iii. 218, t. 172, f. 2, and 172 B, f. 2. *P. imbricata*, *Blume Enum.* 89. *P. Horsfieldii*, *Wall. Cat.* 6049.

UPPER BURMA; at Bhamo, *Griffith*. MALACCA; on Keddah Peak, *Griffith*. PENANG, *Wallich*, *Maingay* (*Kew Distrib.* 1501).—DISTRIB. Malay Islands.

A lofty tree. *Branchlets* of 3 forms; (1) short, flat, feather-like, 1–2 in. long, with a slender rachis and close-set distichous horizontally-spreading linear falcate acuminate shiny leaves $\frac{1}{2}$ – $\frac{1}{2}$ in. long; (2) terete, filiform branchlets, clothed with minute imbricate ovate acute leaves $\frac{1}{20}$ in. long; (3) stouter, terete, fruiting branchlets with subulate leaves $\frac{1}{10}$ – $\frac{1}{3}$ in. long. *Seeds* globose, $\frac{1}{4}$ in. diam., on short decurved lateral branchlets.

7. AGATHIS, *Salisb.*

Evergreen monœcious or diœcious trees. *Leaves* coriaceous, broad, nerves parallel. *Male fl.* solitary, peduncled; peduncle clothed with decussate imbricate scales; anthers densely spirally crowded in a cylindric or oblong column; cells 5 or more, pendulous from the top of a rigid stipes, slits introrse; connective with an apical inflexed claw. *Fem. cone* ovoid or globose; scales closely spirally imbricate, tips broad; ovuliferous scale thin and confluent with the scale; ovules 1, rarely 2, reversed and adnate to the scale. *Ripe cone* globose or oblong; scales hard, broad, persistent. *Seed* 1 on one side of the scale (rarely 2 perfect), reversed, compressed, ovate or oblong, testa thin winged; albumen fleshy; cotyledons 2.—Species about 6, Malayan, Australasian and Polynesian.

A. loranthifolia, *Salisb. in Trans. Linn. Soc.* viii. 312, t. 15; leaves petioled subopposite or alternate oblong-lanceolate to linear-lanceolate obtuse, anther-cells with an orbicular cuneate claw, fem. cones subglobose, scales rounded, wing of seed horizontal. *Wall. Cat.* 6057; *Blume Enum. Fl. Jav.* 90. *A. Dammara*, *Rich. Conif.* 83, t. 19. *Dammara alba*, *Rumph. Herb. Amb.* ii. 174, t. 57; *Parlat. in DC. Prodr.* xvi. ii. 374. *D. orientalis*, *Lamb. Pin. Ed.* 2, ii. 97, t. 54; *Endl. Conif.* 189. *D. Rumphii*, *Presl. Epimel.* 236. *Abies Dammara*, *Poiret. Dict.* v. 35.

PENANG, *Wallich*, *Maingay* (*Kew Distrib.* 1500 ft.). PERAK; at Larut, Low.—DISTRIB. Malay Islands.

A lofty resiniferous tree, with a pyramidal crown and whorled branches. *Leaves* 3–7 in., usually opposite, very coriaceous, obtuse, acute, or tip rounded, very like those of *Podocarpus latifolia*, ecostate, very many-nerved. *Male cones* $\frac{1}{2}$ –2 in.,

cylindric-oblong. *Fem. cone* 1-2 in. diam., globose or ovoid; scales broadly cuneate, $\frac{1}{2}$ in. across. *Seeds* $\frac{1}{2}$ in. long, including the falcate decurved obtuse wing.—*Dammar*.

8. **PINUS**, *Linn.*

Evergreen monœcious trees. *Leaves* dimorphic, primary consisting of small membranous scales, secondary linear in clusters of 2, 3, or 5 in the axils of the primary; clusters girt at the base by a sheath of hyaline scales. *Male fl.* spicate; staminal column ovoid oblong or cylindric; anthers in many series, shortly stipitate; cells 2; connective produced at the tip. *Fem. cones* globose or ovoid, bracts spirally imbricate; ovuliferous scale much larger than the bracts; ovules 2, at the base of the scale, reflexed. *Ripe cone* ovoid or oblong, bracts obsolete or small; scales persistent, formed of the enlarged thickened usually woody ovuliferous scales the tips of which are often square and with a boss. *Seeds* 2, reversed, usually winged, the wing formed by the adhesion of the hard testa to a thin separable layer of the scale; cotyledons 2 or more.—Species 70, confined to the Northern Hemisphere, very rare in its tropics.

Pinus Royleana, Jameson in Journ. Hort. Soc. Lond. ix. 52, with a woodcut (Parlatore in DC. Prodr. xvi. ii. 390), a species which on the authority of Royle is a native of the Nepal Himalaya, alt. 8-10,000 ft., is referred by Gordon (Pinetum Ed. 2, 170) to *P. mitis* of N. America, and if it came from Nepal was no doubt from the Residency Garden. *P. nepalensis*, Royle (*P. Latteri*, Madden mss.), is *P. Pinaster*, also no doubt from the Residency Garden. *P. nepalensis*, Forbes, Pinet. Woburn. 34, referred by Endlicher to *P. sinensis*, and by Parlatore l. c. to *P. Kasya*, is known only from Forbes's insufficient description, which states that it is a very tender species, a native of Nepal, procured for Messrs. Lawson of Edinburgh, with leaves in pairs, occasionally in threes or fours, glaucous when young, green when old. Neither flower nor fruit are known; and it is not worth further notice. Wallich's "Pinus No. 7278 an *P. Pinea*," from specimens cultivated in Nepal or Kumaon, is one of above.

* *Leaves in clusters of 5-8.*

1. **P. excelsa**, *Wall. Pl. As. Rar.* iii. t. 201; *Cat.* 6059 (by error 5059); leaves 4-8 in. slender drooping, sheaths and primary leaves deciduous, cones peduncled cylindric pendulous, scales rhomboidly ovate hardly thickened at the rounded apex, seeds oblong, wing subfalcate obliquely truncate. *Endl. Conif.* 145; *Parlat. in DC. Prodr.* xvi. ii. 404; *Griff. Notul.* iv. 18 (*Itin. Notes* 123, No. 398); *Ic. Pl. Asiat.* 366; *Brand. For. Fl.* 510; *Cleghorn Pines of N.W. Himal.* t. 2; *Gamble Man. Ind. Timb.* 398; *Lamb. Pin. Ed.* 2, 40, t. 26. *P. pendula*, *Griff. Journ.* 211, &c. *P. Griffithii*, *McClelland in Griff. Notul.* iv. 17 (*Itin. Notes* 145, No. 21?); *Ic. Pl. Asiat.* t. 365.

TEMPERATE HIMALAYA, alt. 6-12,500 ft. (absent in Central and N.W. Kumaon and in Sikkin).—*DISTRIB.* Afghanistan, Macedonia?

A lofty symmetrical tree, attaining 150 ft. *Leaves* filiform, triquetrous, grey- or blue-green, margins serrulate, white on two of the faces, falling in the second or third year; sheaths $\frac{3}{4}$ in., wholly deciduous, entire. *Male spikes* short cylindric-oblong. *Cone* 6-10 in.; scales concave. *Seeds* about 1 in., cotyledons usually 9.—The *P. Peuce* of Macedonia is hardly distinguishable by definable character in a dry state. *P. Griffithii*, *McClelland*, is founded on Griffith's drawing of the ripe cone of *P. excelsa*.

** *Leaves in clusters of 3.*

2. **P. longifolia**, *Roxb. Fl. Ind.* iii. 651; leaves 9-12 in. slender triquetrous, back obtuse, sheaths persistent, cones peduncled ovoidly conical, scales with a greatly thickened 4-6-lobed tip which is beaked in the centre, seeds oblong with an oblanceolate unequal-sided wing. *Endl. Conif.* 158; *Parlat. in DC. Prodr.* xvi. ii. 390; *Royle Ill.* 353, t. 85, f. 1; *Lamb. Pin. Ed.* 2, 32, t. 22; *Wall. Cat.* 6065; *Brand. For. Fl.* 506; *Cleghorn Pines of N.W. Himal.* t. 3; *Gamble Man. Ind. Timb.* 396; *Griff. Notul.* iv. 18; *Ic. Pl. Asiat.* t. 369, 370.

OUTER HIMALAYAN RANGES, from the Indus to Bhotan, alt. 1500-6000 ft., and to 7500 ft. in Kumaon.—DISTRIB. Affghanistan.

A large tree, attaining 110 ft., but often stunted and gnarled; trunk usually naked, rarely 12 ft. girth; bark very thick and furrowed. *Leaves* dark or light green, serrulate, falling about the third to fourth year; sheaths fimbriate. *Male spikes* cylindric. *Cones* solitary or clustered, 4-7 by 3 in. diam. at the base; scales $1\frac{1}{2}$ -2 by $\frac{3}{4}$ in., beak pungent or obtuse. *Seeds* with the wing $\frac{1}{2}$ -1 in. *Cotyledons* about 12.

3. **P. Khasya**, *Royle in Gardn. Mag.* 1840, 8; leaves 5-9 in. semiterete grooved above, sheaths persistent, cones long-peduncled ovoid, tips of scales thickened flat or convex transversely keeled, seeds with an oblong wing. *Parlat. in DC. Prodr.* xvi. ii. 390; *Brand. For. Fl.* 508. *P. Kasya*, *Kurz For. Fl.* ii. 499; *Gamble Man. Ind. Timb.* 397. *P. Khasvana*, *Griff. Notul.* iv. 18 (*Itin. Notes* 58, No. 901); *Ic. Plant. Asiat.* t. 367, 368; *Hook. f. Himal. Journ.* ii. 282. *P. Keseya*, *Royle ex Endl. Conif.* 158.

KHASIA, CHITTAGONG and BURMESE HILLS, alt. 3-7000 ft.

Usually a small tree in the Khasia, but in Burma attaining 200 ft., with a trunk 10 ft. in girth; bark very thick and cracked. *Leaves* very slender, green, serrulate; sheaths $\frac{1}{2}$ - $\frac{3}{4}$ in. *Cones* 2-3 in., young recurved; peduncle bracteate. *Seeds* $\frac{3}{4}$ in. long with the round topped wing.

4. **P. Gerardiana**, *Wall. in Lamb. Pin. Ed.* 3, t. 79; *Cat.* 6064; leaves stout 3-5 in. stiff compressed and triquetrous, sheaths and bracts deciduous, cones peduncled ovoid or oblong-ovoid tips of scales broad obtusely triangular with a recurved spine from the upper margin, seeds cylindric wing short caducous. *Endl. Conif.* 159; *Parlat. in DC. Prodr.* xvi. ii. 391; *Royle Ill.* 353, t. 85, f. 2; *Brand. For. Fl.* 508, t. 67; *Cleghorn Pines of N.W. Himal.* t. 4.

Dry interior valleys of the N.W. HIMALAYA, alt. 5800-12,000 ft., from Kunawur westwards, and in Garwhal.—DISTRIB. Affghanistan.

A tree, attaining 60 ft., with a stout trunk sometimes 12 ft. in girth, and a roundish head; branches horizontal or decurved, tips ascending; bark smooth, often silvery, deciduous in long flakes. *Leaves* dark green, persistent for 3-4 years, serrulate; sheaths $\frac{1}{2}$ in., entire. *Cones* 6-9 by 4-5 in., glaucous, young erect, peduncle 1 in., bracteate. *Seeds* 1 in. long.

*** *Leaves 2 in a sheath.*

5. **P. Merkusii**, *Jungh. & De Vriese in Plant. Nor. Ind. Bat. Or.* 5, t. 2; leaves 8-10 in. slender semiterete grooved above, sheaths persistent, cones ovoid-oblong, scales with thickened 4-5-angled pyramidal tips and a transverse ridge and depressed scars. *Endl. Conif.* 176; *Parlat. in DC. Prodr.* xvi. ii. 389; *Kurz For. Fl.* ii. 499; *Gamble Man. Ind. Timb.* 398; *De Boer Conif. Archip. Ind.* 5; *Blume Rumph.* iii. 210; *Miq. Fl. Ind. Bat.* ii. 1069. *P. sumatrana*, *Jungh. in Bot. Zeit.* (1846) 698. *P. Finlaysoniana*,

Wall. Cat. 6062. *P. Latteri*, *Mason in Journ. As. Soc. Beng.* xviii. (1849) 74, and *Burma*, 545; *Kurz in Flora*, 1872, 264.

MARTABAN and UPPER TENASSERIM, alt. 500–2500 fr., *Kurz*. TENASSERIM; on Thoungyong, alt. 3–4000 ft., *Riley*.—DISTRIB. Sumatra, Borneo.

A tree, 50–60 ft. in Burma (60–100 ft. in Sumatra). *Leaves* quite smooth, slender; sheaths $\frac{1}{2}$ in. long, fimbriate. *Cones* about 3 in., erect, scales with a pyramidal boss, and small transverse rough scar.—*Kurz* describes the tips of the cone scales as “not zonate, with a depressed umbonate tubercle.” *Parlatore* adds “radiation rugose.”

9. CEDRUS, *Loud.*

Large trees, evergreen. *Leaves* triquetrous, in dense clusters, acicular, jointed near the base. *Cone* of *Pinus*, but scales deciduous, leaving a columnar axis.—Species 1, with three marked forms, a Himalayan, an Oriental, and an Algerian.

C. Libani, *Barrel.*, var. *DEODARA*, *Hook. f. Himal. Journ.* i. 257, and in *Nat. Hist. Rev.* (1861) ii. t. 1–3; branches and leader with drooping tips, leaves 1–1 $\frac{1}{2}$ in., cones oblong, scales broadly flabellately triangular. *C. Deodara*, *Lond. Arb. Brit.* iv. 2428, f. 2283–2286; *Forbes Pinet. Wob.* 149, t. 48, 49; *Parlat. in DC. Prodr.* xvi. ii. 408; *Brand. For. Fl.* 516; *Cleghorn Pines of N.W. Himal.* t. 1; *Gamble Man. Ind. Timb.* 400; *Boiss. Fl. Orient.* v. 699. *Abies Deodara*, *Lindl. in Penny Cyclop.* 34. *Pinus Deodara*, *Roxb. Fl. Ind.* iii. 651; *Lamb. Pin. Ed.* 2, 68, t. 42; *Ed.* 3, 93, t. 52; *Endl. Conif.* 135; *Antoine Conif.* 59, t. 22, f. 2; *Griff. Ic. Pl. Asiat.* t. 364; *Wall. Cat.* 6060 (by error 5060).

N.W. HIMALAYA, from Kumaon westwards, alt. 3500–12,000 ft.—DISTRIB. Afghanistan.

A lofty robust tree, attaining 250 ft., with a girth of trunk 36 ft., and 600 years' age; bark thick, furrowed vertically and cracked transversely. *Leaves* usually glaucous green, acute, persistent for 3–5 years; sheaths very short. *Cones* 4–5 by 3–4 in., erect, top rounded; scales very numerous, margin thin. *Seeds* $\frac{1}{4}$ in. long; wing longer, broadly triangular with rounded sides.

10. PICEA, *Link.*

Large evergreen trees. *Leaves* scattered, acicular, jointed at the base. *Cones* cylindric, pendulous, or erect when young, scales thin, not thickened at the tip, persistent.—Species 12, N. Temperate and Arctic.

P. Morinda, *Link. in Linnæa*, xv. 522; branchlets slender pendulous glabrous, leaves 1–1 $\frac{1}{2}$ in. acicular tetragonous pungent, cones 4–6 in., scales broadly ovate or subreniform from a cuneate base, outer margin rounded. seeds oblong with a broad spatulate wing. *A. Smithiana*, *Forbes Pinet. Woburn.* 103, t. 30; *Loud. Arboret.* iv. 2317, f. 2229; *Brand. For. Fl.* 525; *Cleghorn Pines of N.W. Himal.* t. 5; *Gamble Man. Ind. Timb.* 407. *P. Khutrow*, *Carr. Conif.* 258. *Abies spinulosa*, *Griff. Journ.* 259; *Itin. Notes* 145, No. 694; *Ic. Pl. Asiat.* t. 363. *Pinus Smithiana*, *Lamb. Pin.* iii. t. 88; *Wall. Pl. As. Rar.* iii. 24, t. 246; *Cat.* 6063; *Parlat. in DC. Prodr.* xvi. ii. 416. *P. Kutrow*, *Royle Ill.* 353, t. 84, f. 1; *Endl. Conif.* 122.

TEMPERATE HIMALAYA; throughout the range at elevations of 6–11,000 ft.—DISTRIB. Afghanistan.

A conical tree, attaining 150 ft., with a trunk 21 ft.; branches whorled, spreading;

bark tessellated. *Leaves* dark green, stiff. *Cones* 4-6 by 1-2 in. diam., obtuse; scales rounded, concave, dark brown and shining. *Seeds* $\frac{3}{8}$ in long with the obliquely truncate wing.

11. *TSUGA*, *Carrière*.

Evergreen trees. *Leaves* more or less distichous, narrow, 1-nerved, petiole very short, jointed on the branch. *Cones* small, ripening in the first year, scales few, persistent, thin, not thickened at the tip.—Species about 7, a Himalayan, a Japanese and several N. American.

T. Brunoniana, *Carr. Conf.* 188; branches spreading, branchlets pendulous pubescent, leaves $\frac{1}{2}$ -1 in. narrowly linear white beneath margins recurved tips serrulate, cones 1 in. ovoid, scales obtuse. *Abies Brunoniana*, *Lindl. in Penny Cyclop.* i. 31; *Griff. Itin. Notes* 131, No. 529. *A. dumosa*, *Loud. Arb.* iv. 2325, f. 2233, 2234. *Pinus dumosa*, *Don Prodr.* 55; *Parlat. in DC. Prodr.* xvi. ii. 429; *Lamb. Pin. Ed.* 2, ii. 7; *Ed.* 3, 80, t. 46. *P. Brunoniana*, *Wall. Cat.* 6061; *Pl. As. Rar.* iii. 24, t. 247; *Endl. Conf.* 84; *Antoine Conf.* 82, t. 32, f. 1. *P. decidua*, *Wall. mss.*—*Taxaceæ*, *Griff. Notul.* iv. 28; *Ic. Pl. Asiat.* t. 375.

TEMPERATE HIMALAYA, from Kumaon to Rhotan, alt. 8-10,500 ft.

A tree, attaining 120 ft., with 28 ft. girth of trunk; branchlets very slender; bark thick, rough. *Leaves* $\frac{1}{2}$ in. broad, caducous after the branch is cut, dark green. *Cones* terminal, erect or horizontal. *Seeds* $\frac{1}{2}$ in. long with the oblong obtuse wing; nucleus very small.

12. *ABIES*, *Juss.*

Lofty evergreen trees with tabular branches. *Leaves* more or less bifarious, linear, rarely 4-gonous, 1-nerved, jointed on to the branch. *Cone* erect, cylindric or oblong, scales very many, thin, tip hardly thickened, deciduous, leaving a woody axis as in *Cedrus*, bract more or less free under the scale and sometimes produced beyond it.—Species about 18, N. Temperate and Arctic.

A. Webblana, *Lindley in Penny Cyclop.* i. 30; leaves 1-2 in. linear flat retuse or bicuspidate rarely rounded or subacute white beneath on either side the midrib, cones oblong or cylindric dark purple, scales much longer than the bracts, seeds with a broadly obovate truncate wing. *Link in Linnæa*, xv. 532; *Forbes Pinet. Woburn.* 117, t. 41; *Griff. Notul.* iv. 19; *Ic. Pl. Asiat.* t. 371; *Brand. For. Fl.* 528; *Gamble Man. Ind. Timb.* 408. *A. densa*, *Griff. Journ.* 258; *Notul.* iv. 19 (*Itin. Notes* 141, Nos. 662, 663). *A. spectabilis*, *Spach Hist. Phaner.* xi. 422. *Picea Webbiana*, *Loud. Arboret.* iv. 2344, f. 2251-2253; *Cleghorn Pines of N.W. Himal.* t. 6. *Pinus Webbiana*, *Wall. in Lamb. Pin. Ed.* 3, 77, t. 44; *Cat.* 6058 (by error 5058); *Endl. Conf.* 106; *Antoine Conf.* 61, t. 24, f. 1; *Parlat. in DC. Prodr.* xvi. ii. 425. *P. striata*, *Ham. mss.* *P. spectabilis*, *Lamb. Pin. Ed.* 2, ii. 3, t. 2; *Don Prodr.* 55.

TEMPERATE and SUBALPINE HIMALAYA, alt. 7-12,000 ft. in the west, and 8500-13,000 ft. in the east.—DISTRIB. Afghanistan.

A lofty black stout tree, attaining 150 ft., and a girth of trunk of 30 ft.; crown cylindric, branches horizontal flat. *Leaves* spirally arranged but more or less bifarious, very variable in length, persisting for 8-10 years, flat, about $\frac{1}{2}$ in. broad, channelled down the middle, very dark green and shining, tip very variable; midrib raised beneath; petiole very short. *Male cones* sessile, solitary, or clustered.

Fem. cones 4-6 by $1\frac{1}{2}$ -3 in. diam., ripening in the same year, top and base rounded; outer margins of scales rounded. *Seeds* oblong or obovoid, with the wing $\frac{1}{2}$ -1 in. long.

VAR. *Pindrow*, Brand. For. Fl. 528; leaves longer (2-3 in.), cones usually slender and cylindric. *A. Pindrow*, *Spach l. c.* 423. *Picea Pindrow*, *Loud. Arboret.* iv. 2346, f. 2254, 2255. *P. Herbertiana*, *Madden mss.* *P. Naplita*, *Knight in Loud. Encycl. of Trees*, 1053. *Pinus Pindrow*, *Royle Ill.* 354, t. 86. *Endl. Conif.* 106; *Lamb. Pin.* iii. t. 92; *Antoine Conif.* 62, t. 24, f. 1. *P. Naphtab*, *Antoine Conif.* 80. *Taxus? Lambertiana*, *Wall. Cat.* 6056.—N.W. Himalaya, in better soil and in more sheltered places than *Webbiana proper*.—The question of the specific distinctness of *P. Pindrow* has long been a subject of doubt. Dr. Brandis has decided against its claim. *Royle* figures the cone as pale purple, $4\frac{1}{2}$ by $3\frac{1}{2}$ in., and seeds $\frac{1}{2}$ in. long.

13. **LARIX**, *Miller*.

Tall pyramidal trees. *Leaves* in dense clusters, acicular, deciduous, jointed near the base, 1-nerved. *Cones* of *Picea*, but erect, with the bract often exerted beneath the scale.—Species 8, N. Temperate and Arctic regions.

L. Griffithii, *Hook. f. & Thoms. Ill. Himal. Pl.* t. 21 (*excl. f.* 1-4); branchlets long pendulous, leaves 1 in. slender, cones cylindric, bracts exerted twice the length of the scales, with reflexed cuspidate tips. *Brand. For. Fl.* 531; *Gamble Man. Ind. Timb.* 410. *L. Griffithiana*, *Gord. Pinet.* 126; *Carrière Conif. Ed.* 2, 359. *Abies Griffithiana*, *Lindl. & Gord. in Journ. Hort. Soc. Lond.* v. 214. *Pinus Griffithii*, *Parlat. in DC. Prodr.* xvi. ii. 411.

EASTERN NEPAL, SIKKIM and BHOTAN, alt. 8-12,000 ft.

A small tree, 20-60 ft., with pale-green foliage; bark thick, brown; heart wood red. *Leaves* 30-50 in a cluster, linear, flat. *Cone* erect from the pendulous branchlets, 2-3 in. long; bracts persistent, obovate-spathulate, notched, the cusp longer than the bract. *Seeds* oblong, wing oblong twice as long as the nucleus.—The male flowers figured in "Ill. Himal. Pl." are those of *Cedrus Deodara*, which were mixed with specimens of *L. Griffithii* in Griffith's collections.

ORDER CXLV. **CYCADACEÆ**. (By W. T. Thiselton Dyer.)

Shrubs or small trees, with a thick simple (rarely forking) stem and terminal crown of leaves, or stemless with leaves arising from a tuberous simple or branched rootstock. *Leaves* in alternate series of short coriaceous scales and of palm-like pinnate rarely 2-3-pinnate leaves with membranous or coriaceous leaflets. *Flowers* diœcious; *males* in one or more terminal cones formed of numerous fleshy flat or variously peltate scales bearing beneath crowded 1-celled anthers; *females* of flat carpellary leaves (*carpophylls*) crowded round the apex of the stem (*Cycas*) or cones of flat or thickened variously peltate scales. *Ovules* large, sessile, orthotropous, either numerous and erect in notches on either margin of the carpophyll or solitary and inverted on either side of the peltate scales. *Seeds* large, drupaceous, external coat more or less fleshy, internal crustaceous or bony; albumen copious, fleshy then horny, and with one or more embryonic cavities; embryo usually single by abortion, slender, radicle superior attached to the crumpled suspensory cord, cotyledons 2.—Genera 9, species about 80, natives of the tropics and S. temperate regions.

1. **CYCAS**, L.

Shrubs or trees with a simple or rarely branched cylindric trunk clothed with the woody bases of the petioles. *Leaves* in terminal crowns, linear-oblong, pinnate; leaflets linear, 1-nerved, quite entire, involute in veneration, lower often reduced to spines. *Male cones* apparently terminal, peduncled; scales cuneate, closely imbricate, apex often long-acuminate; anthers ellipsoid, in groups of 3-5. *Carpophylls* numerous, crowded round apex of the stem, densely woolly, appressed into an apparently terminal cone, then spreading, elongate, flattened, dilated above into an entire, crenate or pectinate blade. *Ovules* 1-5 in notches on either side of the stalk of the carpophyll, distant, alternate or opposite, nearly erect. *Seeds* ellipsoid or globose.—Species about 12; Tropical Africa to Polynesia.

C. revoluta, Thunb., a Japanese species with the foliage of *C. Beddomei*, is commonly cultivated in Indian gardens.

* Margins of leaflets flat.

† Margins of blade of carpophylls spinous-toothed.

1. **C. circinalis**, Linn. *Sp. Pl.* 1658; antheriferous scales long-acuminate, acumen turned upwards, blade of carpophyll ovate or lanceolate tapering into a long acumen, crenate or more or less spinous-toothed throughout. *A. DC. Prodr.* xvi. ii. 526; *Grah. Cat. Bomb. Pl.* 198; *Dalz. & Gibs. Bomb. Fl. Suppl.* 83; *Miq. Monogr.* 27, *Anal. Bot. Ind.* ii. t. 5, f c (antheriferous scales), and *Linnæa* xix. 413, t. i. (carpophyll); *Pet. Th. Hist. Veg.* 1804, 2, t. 1 and 2; *Richard Conf.* t. 24-26; *Bot. Mag.* t. 2826 and 2827. *Thw. Enum.* 294; *De Vriese Descr.* t. 4 and 5; *Bedd. Forester's Flor.* 227. *C. sphaerica*, *Roxb. Fl. Ind.* iii. 747. *C. Thuarsii*, *Br. Prodr.* 347. *C. madagascariensis*, *Miq. Comm.* 127, in *Linnæa* xvii. 699.—Todda Panna, *Rheede Hort. Malab.* iii. 9, t. 13-21.

MALABAR COAST, *Rheede, Buchanan*. Dry hills in W. MADRAS to 3500 ft., *Beddome*. CEYLON to 1500 ft., *Thwaites*.—DISTRIB. E. Tropical Africa, Comoro Islands, Madagascar. Sumatra, Java.

An evergreen palm-like tree, 15 ft. and upwards, rarely forked when old, glabrous throughout. *Leaves* 5-9 ft. long; petiole 18 in. to 2 ft., with short distant slightly deflexed spines to near the base; leaflets 10-12 in. long, about $\frac{1}{2}$ in. wide, elongate-linear-lanceolate, subfalcate, acuminate. *Male cone* shortly peduncled, often $1\frac{1}{2}$ ft. long, cylindric-ovoid; antheriferous scales $1\frac{1}{2}$ -2 in. long, $\frac{1}{2}$ - $\frac{3}{4}$ in. wide, obovate-deltoid, prolonged into an upward curved subulate acumen about 1 in. long, clothed with a brown tomentum externally, glabrous above. *Carpophylls* about 1 ft. long, long-stalked, with 3-5 pairs of ovules above the middle, ferruginous-tomentose; blade 3-4 in. long, 1- $1\frac{1}{2}$ in. wide. *Seeds* about the size of a pigeon's egg.—From the materials at Kew obtained by Sir John Kirk and others I have no hesitation in identifying the African plant with this species; the antheriferous scales, however, figured by Du Petit Thouars and Richard have a short acumen as in *C. Rumphii*; but the African plants appear to be variable in this respect. To *C. circinalis* must also be referred a form, probably existing under unfavourable conditions, which has been several times introduced into cultivation from S. India (see Gard. Chron. Aug. 27, 1881, 270, 271). It is *C. squamosa*, Lodd. Cat.; *C. squarrosu* (*sphalmate*), Steud. Nomencl. ed. 2 (*Ind. Or.*); *Miq. Linn.* xvii. 702; *DC. Prodr.* xvi. pars 2, 529; *C. pluma*, Bull. Retail List, 1877, 4, and *C. Boddami*, Hort. I am indebted to Herr Wendland for a frond of Loddige's plant, which he informs me was originally obtained from Travancore; it agrees with a plant of low and stunted habit which appears to be not uncommon in the neighbourhood of Bangalore, and only to differ from the type in the smaller leaves with narrower leaflets.

2. C. Rumphii, *Miq. in Bull. Sc. Phys. et Nat. Néerl.* 1839, 45, *Monogr.* 29, *Anal. Bot. Ind.* ii. t. 5, f. A and B (antheriferous scales), and *Linnaea* xvii. 688; antheriferous scales shortly acuminate, blade of carpophyll ovate-rhomboid, spinous-toothed above entire below, more or less abruptly acuminate. *A. DC. Prodr.* xvi. ii. 527; *De Vriese Descr.* t. 2 and 3 (male plant); *Kurz For. Fl.* ii. 502; *Bedd. For. Flor.* 227. *C. circinalis*, *Roxb. Fl. Ind.* iii. 744; *Griff. Notul.* iv. 1 et seq.; *Ic. Pl. As.* t. 361. *C. circinalis*, *var. angustifolia*, *Miq. Comm.* 119. *C. Wallichii*, *Miq. Monogr. Cycad.* 32; in *Linnaea* xvii. 695. *C. glauca*, *Miq. Monogr.* 30. *C. macrocarpa*, *Griff. Notul.* iv. 11; *Ic. Pl. As.* t. cccxii. f. 2; *C. sp.*, *Griff. Notul.* iv. 16; *Ic. Pl. As.* t. cccx. (unnumbered figs.). *Zamia Corsoniana*, *G. Don in Gard. Mag.* 1842, 371.—*Olus calappoides*, *Rumph. Amboin.* i. 86, 87, t. 22, 23.

S. TENASSERIM, *Kurz*; Mergui, *Griffith*. MALACCA, the ANDAMAN ISLANDS and NICOBARS, *Griffith*. Often cultivated in Indian gardens.—**DISTRIB.** Moluccas, New Guinea, North Australia.

Similar in habit to the preceding species, but said to reach 20 ft. or more, and often much branched. *Leaves* usually described as somewhat shorter and with fewer leaflets. *Antheriferous scales* thickened and obliquely truncate at the apex with a short upward curved, sometimes caducous, acumen. *Carpophylls* narrower with an entire often subulate acumen. *Seeds* ellipsoid, 2–2½ in. long, 1½–1¾ in. diam.—The anatomical details given by Griffith *Icon. Pl. As.* t. cccxxvii. and cccxxviii., refer apparently to this species. Miquel figures as the carpophylls of this species (*Linn.* xxv. 589, t. ii.) monstrous states probably belonging to *C. circinalis*. *C. Scratchleyana*, F. Muell., *Victorian Naturalist*, April 1885, is only a state with the acumen of the antheriferous scales evanescent. It closely approaches in this respect a form in *Herb. Kew* from Cape York.

†† *Margins of blade of carpophylls pectinate.*

3. C. pectinata, *Griff. Notul.* iv. 10; *Ic. Pl. As.* t. cccx., f. 3; a palm-like tree 8–10 ft., leaves 5–7 ft. long recurved, leaflets 7–10 in. long narrow linear tapering into a minute spine subfalcate, blade of carpophyll broadly orbicular long-acuminate, margin deeply subulate-pectinate. *Kurz For. Fl.* ii. 503; *Gamble Man. Ind. Timb.* 415. *C. Jenkinsiana*, *Griff. Notul.* iv. 9; *Ic. Pl. As.* t. cccx., f. 1 and 2, and cccxii., f. 1. *C. dilatata*, *Griff. Notul.* iv. 15.

NEPAUL, *Wallich*. **SIKKIM**; Great Runjeet Valley, *J. D. H. & T. T. **EAST BENGAL**; Khasia, 2000 ft., *J. D. H. & T. T. **ASSAM**; Gowhatty, *Jenkins & C. B. Clarke*. **CHITTAGONG**, *J. D. H. & T. T. **MARTABAN** and **TENASSERIM**; eng and pine forests, *Kurz*.***

An evergreen palm-like tree, glabrous throughout. *Leaf-petioles* about 18 in. long with a few small distant spines, leaflets ½ in. broad. *Male cone* 18 in. long, 6 in. diam., cylindric-ovoid; antheriferous scales 1½ in. long, 1 in. diam., deltoid-clavate, apex much thickened, abruptly acuminate, acumen 1½ in. long, subulate, ascending. *Carpophylls* 6 in. long, densely tawny-villous throughout, stalk about equal in length to blade with 2–3 pairs of ovules above the middle; blade 2½–3½ in. diam., margin deeply pectinate with spinous subulate teeth ¾ in. long; acumen 1½ in. long, tapering from a flat base, with one or two spinous teeth. *Seeds* about 1½ in. long, ovoid.

4. C. siamensis, *Miq. in Bot. Zeit.* 1863, 334; an evergreen shrub or small palm-like tree, stems 2–6 ft. much swollen at the base, leaves 2–4 ft. stiff spreading, leaflets 3–8 in. linear mucronate-acuminate, blade of carpophyll ovate-rhomboid long-acuminate, margin deeply pectinate lacerate. *A. DC. Prodr.* xvi. ii. 528; *Kurz For. Fl.* ii. 503; *Regel in Ill. Hort.* t. 433; *Carrière, Rev. Hort.* 1881, 396. *C. aurea*, *Hort. Verschaaffelt*.

BURMA; dry forests of the Prome district, *Kurz*; Shan States, *Aplin*.—DISTRIB. Siam, Cochin China.

Very close to *C. pectinata*, and perhaps only a geographical form. The enlarged base of the stem calls to mind the habit of some species of *Dasyllirion*. *Antheriferous scales* about $\frac{2}{3}$ in. long, with a slender acumen of the same length. *Carpophylls* somewhat smaller than in *C. pectinata*, wholly tawny-villous when young; blade afterwards glabrescent above, marginal teeth above 1 in. long; acumen about 2 in. long, flat from a broad base and spinous dentate in Burmese specimens, almost subulate and entire in those from Cochin China. *Seeds* $1\frac{1}{2}$ long, obovoid-oblong (*Kurz*).

** Margins of leaflets revolute.

5. **C. Beddomei**, *Dyer in Linn. Trans. Ser. 2, Bot. ii. 85, t. 17*; antheriferous scales long-acuminate, acumen in upper half of cone strongly deflexed, blade of carpophyll ovate-lanceolate tapering into a long acumen strongly dentate-lobate. *C. revoluta*, *Bedd. For. Flor. 227 (not of Thunb.)*.

E. MADRAS; abundant on Cuddapah and other hills, *Beddome*.

A low shrub. *Stems* only a few inches high, clothed with the glabrescent closely imbricated leaf-bases. *Leaves* about 3 ft. long, 9 in. wide, rachis subquadrangular; petiole about 6 in. long, strongly 4-angled, with a few minute teeth in upper third clothed at base with a tufted tomentum; leaflets about $\frac{1}{2}$ in. wide, strongly revolute. *Male cone* about 1 ft. long, 3 in. diam., very shortly peduncled; antheriferous scales tapering acuminate from an oblong-deltoid base, ascending at the base of the cone, strongly deflexed in the upper half or two-thirds. *Carpophylls* 6-8 in. long, with two pairs of ovules above the middle; blade 3 in. long, 1 in. wide. *Seeds* globose, $1\frac{1}{2}$ in. diam.

CLASS, MONOCOTYLEDONES.

ORDER CXLVI. HYDROCHARIDÆÆ.

Aquatic herbs. *Leaves* undivided. *Flowers* monœcious or diœcious, enclosed in an entire or 2-leaved spathe, fem. solitary; perianth superior. *Sepals* 3, green or petaloid. *Petals* membranous or 0. *Stamens* 3-12, anthers 2-celled. *Ovary* inferior, placentas parietal or projecting and almost meeting; styles or style-arms 3-12; ovules anatropous or orthotropous. *Fruit* rarely dehiscent, membranous or fleshy, few- or many-seeded. *Seeds* exalbuminous, embryo various.

Tribe I. **Hydrilleæ**. Fresh-water herbs; stem branching, leafy. *Spathes* small, sessile.

Leaves whorled. Perianth double. Ovules anatropous . . . 1. HYDRILLA.
Leaves scattered. Perianth single. Ovules orthotropous . . . 2. LAGAROSIPHON.

Tribe II. **Vallisneriæ**. Fresh-water herbs, stemless, or with stolons only. *Leaves* sessile, long and narrow. *Spathes* on long scapes.

Flowers unisexual. Perianth single 3. VALLISNERIA.
Flowers uni- or bi-sexual. Perianth double 4. BLYXA.

Tribe III. **Stratioteæ**. Fresh-water herbs, stemless or with a creeping rootstock. *Spathes* peduncled. *Perianth* double. *Leaves* various.

Flowers unisexual. Male spathe 2-3-fld. Ovary not beaked 5. HYDROCHARIS.

Flowers unisexual, solitary. Fruit winged. 6. OTTELIA.
 Flowers unisexual. Male spathes many-fld. Ovary stoutly
 beaked 7. BOOTTIA.

Tribe IV. **Thalassieæ**. Salt-water herbs. *Spathes* 2-leaved. *Ovary*
 beaked in all.

Male spathes many-fld. Perianth double 8. ENHALUS.
 Male spathes 1-fld. Perianth single 9. HALOPHILA.

1. **HYDRILLA**, Richard.

A submerged leafy dioecious herb. *Leaves* short, 3-4-nately whorled, or the lower opposite. *Male fl.* solitary, shortly pedicelled, in a subglobose sessile muricate spathe; sepals 3, ovate or obovate, green; petals 3, oblong or cuneiform; stamens 3, anthers large reniform, opening elastically; pistillode small. *Fem. fl.* 1-2, sessile in a tubular 2-toothed spathe; perianth of the male, but leaflets narrower; ovary produced beyond the spathe in a filiform beak, 1-celled; styles 2-3, linear, undivided; stigmas 3, fimbriate; ovules anatropous. *Fruit* subulate, smooth or muricate; seeds 2-3, oblong, testa shortly produced at each end.

H. verticillata, *Casp. in Monatsber. Akad. Berl.* 1857; *Pringhs. Jahrb.* i. 493; *Boiss. Fl. Orient.* v. 8; *Benth. Fl. Austral.* vi. 259. *H. ovalifolia*, *Rich. in Mem. Inst. Fr.* 1811, ii. 76, t. 2; *Thwaites Enum.* 331; *Dalz. & Gibs. Bomb. Fl.* 377. *H. dentata*, *Casp. in Bot. Zeit.* 1854, 56. *H. Wightii*, *Planch. in Ann. Sc. Nat. Ser.* 3, xi. 79. *H. angustifolia*, *Blume Mus. Bot.* i. 82. *Leptanthes verticillata*, *Herb. Wight.* *Serpicula verticillata*, *Lim. f. Suppl.* 416; *Roxb. Fl. Ind.* iii. 578; *Cor. Pl.* ii. t. 164; *Wall. Cat.* 5048. *Vallisneria verticillata*, *Roxb. Fl. Ind.* iii. 751. *Hottonia serrata*, *Willd. Sp. Pl.* i. 816.

Still and slowly running waters throughout INDIA and CEYLON.—DISTRIB. Central Europe, Mauritius, Madagascar, Tropical Asia and Australia.

Plants forming large masses. *Leaves* $\frac{1}{4}$ – $\frac{1}{2}$ in., 4-8 in a whorl, with a short sheathing one at the base of each branch and a short pair above this, linear or oblong-linear, serrulate or entire. *Flowers* $\frac{3}{8}$ – $\frac{1}{4}$ in. long; perianth segments very variable. *Fruit* smooth or sometimes muricate or (in Ceylon, Thwaites) squarrose with filaments above the middle.—The male fl. escape from the sheath when mature, and float on the top of the water.

2. **LAGAROSIPHON**, Harv.

Submerged dioecious herbs. *Leaves* scattered, fascicled or subwhorled, lower opposite, serrulate. *Male fl.* minute, many in an ovoid 2-fid axillary sessile spathe; sepals petaloid; petals rather shorter; anthers 2 or 3, ovoid, with often 3 staminodes; pistillode 0. *Fem. fl.* solitary, sessile in a narrow oblong spathe; perianth of the male; staminodes 0; ovary oblong, produced into a filiform beak; styles 3, stout, notched; ovules many, orthotropous. *Fruit* ovoid, oblong or linear, many-seeded.—Species 5, India, Africa, and Madagascar.

L. Roxburghii, *Benth. in Gen. Pl.* iii. 451; leaves 2-4 in. scattered linear-lanceolate. *Nechamandra alternifolia*, *Thwaites Enum.* 332. *N. Roxburghii*, *Planch. in Ann. Sc. Nat. Ser.* 3, xi. 78 (*excl. syn. Roxb. Cor. Pl.*); *Dalz. & Gibs. Bomb. Fl.* 277. *Vallisneria alternifolia*, *Roxb. Fl. Ind.*

iii. 750; *Wight in Hook. Bot. Misc.* ii. 344, *Suppl.* t. 11; *Ham. in Brewst. Edinb. Journ. Sc.* i. (1824) 34.

Common in tanks throughout INDIA and CEYLON.—DISTRIB. Tropical Asia.

Stems filiform. *Leaves* 3-4 in., nerveless, acute, often twisted. *Male spathes* at length 2-valved; flower on a short spadix; anthers 2, dehiscence transverse.

3. **VALLISNERIA**, Linn.

A submerged tufted stemless stoloniferous diœcious herb. *Leaves* very long, linear. *Male fl.* very numerous, minute, in an ovoid 3-lobed shortly peduncled spathe; sepals 3; petals 0; stamens 1-3; anthers didymous; pistillode 0. *Fem. fl.* solitary in a tubular 3-toothed spathe terminating a very long filiform spiral scape; perianth of the male; staminodes 3, 2-fid; ovary narrow, not produced upwards; stigmas 3, broad, notched; ovules numerous. *Fruit* linear, included in the spathe, many-seeded.

V. spiralis, Linn. *Sp. Pl.* 1015; *Reichb. Ic. Fl. Germ.* t. 60; *Hook. Bot. Misc.* iii. 87, *Suppl.* t. 23, 24; *Benth. Fl. Austral.* vi. 259; *Boiss. Fl. Orient.* v. 3; *Wall. Cat.* 5045. *V. spiraloïdes*, *Roxb. Fl. Ind.* iii. 750.

Throughout INDIA and CEYLON.—DISTRIB. Westward to Spain, and in warm regions of the Old and New Worlds.

Very variable in size. *Leaves* long, 10 by $\frac{1}{2}$ in., or shorter according to the depth of water, green, translucent, entire or tips serrulate. *Male spathes* $\frac{1}{4}$ in., breaking off at the base, when the flowers emerge rise to and float on the surface, pedicels long slender. *Fem. spathe* carried to the surface in flower by the uncoiling of the scape, which after fertilization again coils close and brings the ovary down to ripen under water.

4. **BLYXA**, Thouars.

Submerged tufted, stemless, scapigerous, hermaph. or diœcious annuals; scapes long or short. *Leaves* linear, acute, entire or minutely serrulate. *Male fl.* several in a tubular 2-toothed spathe; sepals 3, linear; petals 3, longer, linear; stamens 3-9, 1 or more arrested, anthers narrow erect; pistillodes 3, slender. *Fem. fl.* solitary, sessile in its spathe; spathe and perianth of the male; staminodes 0, or minute; ovary very slender, beaked; style very short; stigmas 3, filiform; ovules many. *Fruit* very slender included in the ventricose ribbed spathe, many-seeded; seed with a mucilaginous testa.

Under this genus the following Indian forms occur. These present such diverse characters that it is difficult to suppose they do not represent species; on the other hand, water plants are so variable, and herbarium specimens of them are so unsatisfactory, that I must leave it to Indian botanists to work up the genus. I refrain from citing extra-Indian authorities.

* *Leaves broad at the base, narrowed upwards to the acuminate tip.*

1. **B. Roxburghii**, *Rich. in Mem. Inst. Fr.* 1811, 77, t. 5; leaves 8-24 in., flowers diœcious, stamens 8, capsule 2-4 by $\frac{1}{8}$ in., compressed? seeds small $\frac{1}{8}$ in. tubercled with or without short tails. *Vallisneria octandra*, *Roxb. Cor. Pl.* ii. 34, t. 165; *Fl. Ind.* iii. 752.

BENGAL, and the MALAY and DECCAN PENINSULAS, common in still water.—DISTRIB. Trop. Asia, Australia.

Roxburgh does not describe or figure the seeds, and I have therefore described these from the common Bengal form, which I assume is the plant he had under his eye.

2. **B. echinosperma**, *Hook. f.*; leaves $\frac{1}{2}$ –4 ft., flowers bisexual, stamens 3, capsule 2–3 by $\frac{1}{8}$ in. terete, seeds $\frac{1}{16}$ in., spinescent with a long filiform tail at each end. *Hydrotrophus echinospermus*, *Clarke in Journ. Linn. Soc. Bot.* xiv. 8, t. 1.

BENGAL, *Clarke*. CANARA, *Stocks, Talbot, &c.*

The seed including the tails is sometimes $\frac{1}{2}$ in. long.

3. **B. Griffithii**, *Planch. in Herb. Hook.*; leaves 4 in.–2 ft., scape compressed, flowers bisexual, stamens 9, capsules linear narrow, seeds $\frac{1}{8}$ in. faintly tubercled, tails 0. ? *Saivala vallisnerioides*, *Wall. Cat.* 5047. *Saivála*, *Jones in As. Research.* iv. 275.

BENGAL, CHITTAGONG, to MALACCA.—DISTRIB. Sumatra.

Sir W. Jones describes the flowers of *Saivála* as hermaphrodite, the stamens as 9, and the seeds as muricate. Parish sends fine specimens from Moulmein, with flowers and stamens as above, but no seeds. The Chittagong specimens gathered by myself are flowerless; the leaves are 4–5 in. and capsules 2 in. on short scapes. Griffith's Malacca specimens are not in flower, but have capsules 2–2½ in. on very long scapes; the leaves are 2 ft. long. Mergui specimens from Griffith in fruit only, have leaves intermediate between those of the Malacca and Chittagong forms.

4. **B. oryzetorum**, *Hook. f.*; leaves 4–6 in., flowers 2-sexual, stamens 3, capsule 1–1½ by $\frac{1}{8}$ in., scape very short, seeds $\frac{1}{12}$ in. sparsely tubercled, tails 0 or very short. *Diplosiphon oryzetorum*, *Dcne. in Jacquem. Voy. Bot.* 167, t. 167.

BANDA, *Edgeworth*. KASHMIR, *Jacquemont*. KHASIA MTS. abundant.—DISTRIB. ? Hongkong.

5. **B. ceylanica**, *Hook. f.*; leaves 6 in.–2 ft., flowers bisexual, stamens 3, capsule 1–2 by $\frac{1}{8}$ in., scape as long, seeds obscurely tubercled apiculate at both ends. *B. octandra*, *Planch. in Thw. Enum.* 332.

CEYLON, *Walker, Thwaites*.

Very near the Madagascar *B. Aubertii*, *Rich.*, which is unisexual.

** *Leaves narrowed from below the middle to the base.*

6. **B. lancifolia**, *Hook. f.*; leaves 4–6 in. linear-lanceolate, capsules 1–2 in. slender, scape as long, flower bisexual, stamens 3, seeds sparsely tubercled, tail 0 or very short.

KHASIA HILLS, alt. 5000 ft., at Myrung and Nunklow, *Clarke*.

The Myrung specimens have large seeds $\frac{1}{12}$ in. long with no tails at all, and very obscure tubercles; the Nunklow ones have much smaller and more tubercled seeds with short tails.

7. **B. Talboti**, *Hook. f.*; leaves 4–6 in. linear-lanceolate serrulate. flowers unisexual, capsules 1–2 in. by $\frac{1}{8}$ in., seeds very strongly echinate with a short tail at each end.

NORTH CANARA, *Talbot*.

I have seen only fem. fl.

5. **HYDROCHARIS**, *Linn.*

A floating herb. *Leaves* orbicular or reniform, quite entire. *Male fl.* 2-3 in a peduncled 2-leaved spathe; sepals 3, herbaceous; petals 3, membranous, white; stamens 6-9, with 3-6 staminodes; filaments forked, anther-cells basifixed. *Fem. spathe* 1-fl., flower long-peduncled; perianth of the male; staminodes 6, in pairs; ovary ovoid, 6-celled; stigmas 6, linear, 2-fl. *Fruit* ovoid or oblong, fleshy, 6-celled; seeds many, testa pulpy, full of spiral vessels; embryo ovoid.

H. Morsus-ranæ, *Linn. Sp. Pl.* 1036; *Boiss. Fl. Orient.* v. 5; *Reichb. Ic. Fl. Germ.* t. 62. *H. asiatica*, *Miquel Fl. Ind. Bat.* iii. 239.

KASHMIR, *Jacquemont*. BENGAL, Jheels at Manda, near Beaula, *Clarke*.—DISTRIB. Europe, N. Asia, China, Japan, Australia, ? Java.

Stoloniferous; roots fibrous and bulbiferous. *Leaves* 1-1½ in. diam., often reddish beneath. *Flowers* erect, 1½ in. diam.; sepals small, oblong; petals broadly obovate, rumpled, fem. with a fleshy tubercle at the base.

6. **OTTELIA**, *Pers.*

Submerged fresh-water herbs. *Leaves* crowded, the submerged narrow, the floating long-petioled ovate-lanceolate oblong or cordate. *Flowers* solitary, sessile on a tubular 2-fid spathe. *Sepals* linear or oblong. *Petals* larger obovate or orbicular, base with fleshy appendages. *Stamens* 6-15; anthers erect. *Ovary* oblong, beaked, almost 6-celled; styles 6, linear, 2-fid; ovules many, on the placentas and walls. *Fruit* oblong, 6-valved enclosed in the spathe. *Seeds* many, oblong, testa pulpy.—Species 6-7, tropical and subtropical.

O. alismoides, *Pers. Synops.* i. 400; leaves orbicular- or oblong-cordate, spathe 5-6-winged. *Rich. in Mem. Instit. Fr.* 1811, ii. t. 7; *Benth. Fl. Austral.* vi. 257. *O. indica*, *Planch. mss.*; *Dalz. & Gibs. Bomb. Fl.* 278. *Damasonium indicum*, *Willd. Sp. Pl.* ii. 276; *Roxb. Fl. Ind.* ii. 216; *Cor. Pl.* ii. 45, t. 185; *Bot. Mag.* t. 1201. *Stratiotes alismoides*, *Linn. Sp. Pl.* 535.—*Rheede Hort. Mal.* ix. t. 46.

In tanks and ditches throughout INDIA and CEYLON.—DISTRIB. Trop. Asia, Australia.

Root fibrous. *Leaves* extremely variable, from 2-6 by 1-2 in. to broadly rounded and cordate, 7 in. diam., 7-11-nerved, usually submerged; petiole 1-10 in. *Spathe* 1-1½ in.; wings waved, unequal. *Petals* 1 in. broad, white. *Fruit* oblong, crowned with the withered perianth, 6-grooved, from linear-oblong to globose, and attaining 2 in. diam.

7. **BOOTTIA**, *Wall.*

Habit and characters of *Ottelia*, but the flowers are dioecious, the males very numerous in the spathe, the fem. solitary; the ovary beaked, the styles petaloid, and the fruit ribbed but not winged.—Species 3-4, Burma and Trop. Africa.

B. cordata, *Wall. Pl. As. Rar.* i. 51, t. 65; *Cat.* 7271; *Miq. Fl. Ind. Bat.* iii. 238.

BURMA; in the Irawaddi River near Ava, and in ponds on the summit of the Taongdong Mts., *Wallich*.

Densely tufted; stem with bases of leaves 1-3 in. *Leaves* fleshy, submerged, sessile, oblong, obtuse, 12-18 by 2-3 in., green with purplish cross bands beneath, midrib very stout; upper leaves 4-6 in. long, stout, petioled, oblong-ovate, deeply cordate with overlapping rounded lobes. *Male spathe* 3 in. either way, ampulliform, compressed, mouth toothed, ribs many tuberculate. *Flowers* $1\frac{1}{4}$ in. diam., white with yellowish tinge.

8. ENHALUS, Richard.

A submerged marine monœcious or diœcious herb; rootstock crinite with the remains of old leaves. *Leaves* narrowly linear, enclosed in two or three in a basal sheath. *Male fl.* many, minute, enclosed in a short compressed subsessile 2-leaved spathe, at length escaping and floating; sepals and petals broadly elliptic; stamens 3, anthers subsessile, oblong; pistillode 0. *Fem. fl.* much larger, solitary, sessile in a longer spathe, scape spiral; sepals oblong, imbricate; petals longer, linear, subvalvate, wrinkled, staminodes 0; ovary ovoid with 6 papillose ridges, long-beaked, almost 6-celled; styles 6, bipartite, arms slender, fimbriate; ovules few on each placenta, anatropous. *Fruit* ovoid, beaked, indehiscent, deliquescent, spathe persistent, placentas nearly meeting in the centre, spongy. *Seeds* few, large, conoid, testa mucilaginous; plumule many-leaved.

E. Koenigii, Rich. in *Mem. Institut. Fr.* 1811, ii. 64; *Miq. Fl. Ind. Bat.* iii. 237. *E. acoroides*, Zoll. *Verz. Ind. Archip. Pl.* ii. 69; *Boiss. Fl. Orient.* v. 6; *Ascherson in Nuov. Giorn. Bot. Ital.* iii. 299, and in *Linnæa* xxxv. 158. *Stratiotes acoroides*, Linn. f. *Suppl.* 268. *Enhalus*, Griff. *Notul.* 175; *Ic. Pl. Asiat.* t. 249, 250. *E. marinus*, Griff. l. c. 178; *Thwaites Enum.* 332.—*Rumph. Herb. Amboin.* vi. 191, t. 75, f. 2.

Shores of the Malay Peninsula, Griffith, Beccari. CEYLON, Thwaites.—DISTRIB. Malay Seas, Australia.

Rootstock extensively creeping in sand. *Leaves* 2-3 ft. by $\frac{1}{2}$ - $\frac{3}{4}$ in., margins thickened, tip rounded denticulate. *Spathes* 2 in. long, strigose. *Ovary* with papillose margins. *Fruit* raised to the surface for ripening.

9. HALOPHILA, Thouars.

Submerged marine plants. *Leaves* in pairs from the axil of a scarious or hyaline scale at every node of a slender creeping stem, petioled, ovate or oblong, penninerved. *Spathes* of both sexes small, of 2 bracts, solitary, sessile between the pairs of leaves, 1-fl. *Male fl.* pedicelled; sepals 3; petals 0; anthers 3, alternate with the sepals, subsessile, linear-oblong, extrorse; pistillode 0. *Fem. fl.* sessile; sepals 3, minute. *Ovary* long-beaked, 1-celled; styles 3, filiform, papillose all over; ovules 2-seriate on 2 parietal placentas. *Fruit* included, subglobose, beaked. *Seeds* many, subglobose, testa membranous; embryo thick with the spiral cotyledon in a cavity at the side.

H. ovata, Gaud. in *Frey. Voy. Bot.* t. 40, f. 1; leaves elliptic-oblong or -lanceolate. *H. ovalis*, Hook. f. *Fl. Tasm.* ii. 45; *Miq. Fl. Ind. Bat.* iii. 230; *Boiss. Fl. Orient.* v. 2; *Benth. Fl. Austral.* vii. 182; *Aschers. in Nuov. Giorn. Bot. Ital.* iii. 301, and in *Linnæa* xxxv. 173. *Barkania punctata*, Ehrh. *Symb. Phys. Bot. in Abhandl. Berl. Akad.* i. 429. *Diplanthera*, Griff. *Ic. Pl. Asiat.* t. 161 C, f. 2. ? *Thalassia stipulacea*, *Miq. Fl. Ind. Bat.* iii. 226 (excl. citations). *Caulinia ovalis*, Br. *Prodr.* 339.

MADRAS, *Cleghorn, Drew.* CEYLON, at Batticaloa, *H. Nevill.*—DISTRIB. Indian, Malayan, Australian and Pacific Seas.

Stems creeping and rooting at the nodes, with 2 convolute stipular scales at each node. *Leaves* 2–2½ in., membranous, with a broad costa and slender oblique nerves.

DOUBTFUL SPECIES.

Thwaites gives (Enum. 333) *Thalassia stipulacea*, *Koen.* (*Halophila stipulacea*, *Aschers.*), as being found at Trincomalee by Dr. Harvey. I have seen no specimens from Ceylon, and suspect that *H. ovata* is intended. *H. stipulacea* is a Red Sea species with short petioles, and is remarkable for its (when dry) bullate leaves.

ORDER CXLVII. **BURMANNIACEÆ.**

Herbs. *Leaves* linear, chiefly radical, entire, or reduced to scales. *Flowers* bisexual, regular, spicate or racemed along one side of a forked rachis, each opposite a bract. *Perianth* superior, persistent, 6-lobed or cleft, rarely 3-lobed. lobes valvate. *Anthers* 3 or 6, 2-celled, sessile on the corolla. *Ovary* inferior, 3-celled or 1-celled with 3 parietal placentas; style single, stigmas various; ovules numerous. *Capsules* loculucidal, or dehiscence transverse. *Seeds* minute, testa reticulate, nucleus homogeneous. —Genera about 10, and species 54.

Stem often leafy below. Ovary 3-celled. Stamens 3 1. BURMANNIA.
Stem scaly. Ovary 1-celled. Stamens 6 2. THISMIA.

1. **BURMANNIA**, *Linn.*

Annual herbs with ensiform acuminate radical leaves (sometimes reduced to scales or 0). *Stem* simple or divided. *Flowers* solitary, or few, or more and unilateral on the branches of a forked cyme. *Calyx-tube* winged or angled, limb 3-lobed. *Petals* smaller or 0. *Anthers* 3, sessile or subsessile, cells short separated by a broad connective, crested dorsally, dehiscence transverse. *Ovary* 3-celled; style 3-lobed. *Capsule* sometimes dehiscing transversely.

I find no characters in the perianth-lobes of the species whereby to distinguish them.

* *Radical leaves ensiform.*

1. **B. disticha**, *Linn. Sp. Pl.* 287, stem short, root-leaves 1–2½ in., midrib obscure, flowers ½–¾ in. crowded and secund on the branches of an erect forked cyme oblong or elliptic in outline, wings truncate or rounded at the top. *Roxb. Cor. Pl.* iii. t. 242; *Fl. Ind.* ii. 117; *Grah. Cat. Bomb. Pl.* 223; *Don Prodr.* 44; *Wall. Cat.* 9004; *Benth. Fl. Austral.* vi. 397. *B. distachya*, *Br. Prodr.* 265; *Burm. Fl. Zeyl.* 50, t. 20, f. 1.

TROPICAL HIMALAYA; Nepal, *Wallich.* SIKKIM, *Griffith's Collector.* KHASIA MTS. abundant. The DECCAN PENINSULA; from the Concan southwards to Ceylon. —DISTRIB. China, Australia.

Root fibrous. *Leaves* many, ¼–½ in. broad. *Forks of cyme* 1–3 in.; bracts ½ in.; flowers bright blue.

VAR. sumatrana; leaves narrower more gradually tapering. *B. sumatrana*, *Miq. Fl. Ind. Bat. Suppl.* 617.—Malacca, on Mt. Ophir, *Griffith*, &c. Sumatra, Banca, China.

2. **B. longifolia**, *Beccari Malesia* i. 244, t. 13, f. 1–5; stem long

leafy, leaves 3-6 in. narrow recurved, midrib stout, flowers $\frac{1}{2}$ in. secund on the branches of a deflexed forked cyme, wing narrow.

PERAK; alt. 3-4000 ft., *Scortechini*, *King's Collector*.—DISTRIB. Borneo at 5000 ft.

Root fibrous. Leaves 1 in. broad. Forks of cyme 1 in.; bracts $\frac{1}{2}$ in.; flowers pale blue; perianth-segments long, narrow.

3. ***B. cœlestis***, *Don Prodr.* 44; stem 4-8 in. slender leafy or nearly leafless, radical leaves $\frac{1}{4}$ - $\frac{3}{8}$ in., flowers solitary or 2-3 $\frac{1}{4}$ - $\frac{1}{2}$ in. oblong obcordate or orbicular in outline blue, wings rounded truncate or retuse at the top. *Royle Ill.* 373, t. 91; *Wall. Cat.* 9005. *B. uniflora*, *Herb. Rottl.* *B. azurea*, *Griff. Notul.* iii. 236; *Ic. Pl. Asiat.* t. 272, f. 1; *Beccari Males.* i. 242, t. 15, f. 1-3. *B. javanica*, *Blume Enum. Pl. Jav.* i. 28; *Miquel Fl. Ind. Bat.* iii. 614. *B. bifurca*, *Herb. Ham.* *B. triflora*, *Rorb. Fl. Ind.* ii. 117. *Cryptonema malaccensis*, *Turcz. in Flora* 1848, i. 590. *Nephrocœlium malaccense*, *Turcz. l. c.* 1853, i. 287 (and by error *Nephrocodium* in *Walp. Ann.* vi. 41).

TROPICAL HIMALAYA; Nepal, *Wallich*. KHASIA MTS.; CHITTAGONG and southward to MALACCA and the ANDAMAN ISLANDS. CENTRAL INDIA and the DECCAN PENINSULA, from Hazarebagh, *Clarke*, to TRAVANCORE and CEYLON.—DISTRIB. Mauritius, China, the Malay Islands and N. Australia.

Very variable in size, stout or slender, leafy or almost leafless, and in the form and size of flowers; oblong or elliptic and orbicular perianths occur on the same specimen. The principal varieties are—

1. Stem 6-10 in. rather stout with numerous erect radical and cauline leaves $\frac{1}{2}$ -1 in. long, the radical narrow or short and $\frac{1}{8}$ in. broad.—Malacca, Mergui, Singapore, Borneo, China, Cochin China.

2. Stem 4-8 in. slender, leaves very few or reduced to scales in the stem.—Common. Passes into *B. pusilla*.

4. ***B. pusilla***, *Thwaites Enum.* 325; stem 2-6 in. very slender, leaves very few radical $\frac{1}{2}$ in., cauline 0 or 1-2, flowers 1-3 $\frac{1}{4}$ in. oblong orbicular or obcordate, wings rounded at the top. *Benth. Fl. Austral.* vi. 397. *Tripteranthes pusillus*, *Wall. Herb.* *Cyananthus pusilla*, *Miers in Woll. Cat.* 9008. *Gonyanthes pusilla*, *Miers in Trans. Linn. Soc.* xviii. 537, t. 38, f. 3.

TENASSERIM; at Tavoy, *Gomez*. NORTH and SOUTH CONCAN, *Law*.—DISTRIB. Cambodia.

I suspect this is a small state of *B. cœlestis*.

** *Radical leaves 0.*

5. ***B. candida***, *Griff. mss.*; stem 4-8 in. filiform naked or with a few minute subulate scales, flowers $\frac{1}{4}$ - $\frac{1}{2}$ in. solitary or 2-3 white or blue orbicular deltoid or obcordate in outline, wings rounded truncate or retuse at the top. *Gonyanthes candida*, *Blume Enum. Pl. Jav.* 29; *Miquel Fl. Ind. Bat.* iii. 615; *Miers in Trans. Linn. Soc.* xviii. 537.

KHASIA MTS., alt. 4-5000 ft., *Griffith*, &c. BURMA; at Amherst, *Wallich*. TENASSERIM, *Griffith*, *Parish*. DECCAN PENINSULA, from Canara southwards. CEYLON.—DISTRIB. Siam, Cochin, Madagascar.

This I can distinguish from small forms of *B. cœlestis* or *pusilla* only by the absence of radical leaves, possibly the effect of growing in water. The flowers are usually blue, but Griffith has given the name to a white-flowered state. I have no specimens of Blume's *Gonyanthes candida*, which he describes as being fleshy and growing on the dead roots of trees.

6. **B. nepalensis**, *Hook. f.*; stem 2-6 in. capillary 1-4-fld. naked, flowers $\frac{1}{2}$ - in. obcordate white or yellowish, wings rounded or retuse at the top. *Gonyanthes nepalensis*, *Miers in Trans. Linn. Soc.* xviii. 537, t. xxxviii. f. 1. *Cyanotis nepalensis*, *Miers in Wall. Cat.* 9006.

NEPAL, *Wallich*. KHASIA HILLS, alt. 3-4000 ft., *J. D. H. & T. T., Clarke*.—DISTRIB. Cochin China, Hong Kong.

An extremely delicate white species.

7. **B. Wallichii**, *Hook. f.*; stem 4-6 in. naked or with a few minute lanceolate scales, flowers 1-5 $\frac{1}{4}$ - $\frac{2}{3}$ in. linear triquetrous or narrowly 3-winged. *Gonyanthes Wallichii*, *Miers in Trans. Linn. Soc.* xviii. 537, t. 38, f. 2; *Benth. Fl. Hongk.* 364. *Burmattia* sp., *Griff. Ic. Pl. Asiatic.* t. 272, f. 2.

BURMA, *Wallich*. TENASSERIM; at Mergui, *Griffith* (*Kew Distrib.* 5592). TRAVANCORE; on the Anamallay Hills, *Wight*.—DISTRIB. Hong Kong.

Very variable in stature and robustness; the Mergui specimens are filiform or even capillary, the Anamallay ones quite robust and branched.

8. **B. Championii**, *Thwaites Enum.* 325; stem 4-6 in. rather stout scaly 5-12-fld., flowers subcapitate $\frac{1}{4}$ - $\frac{1}{2}$ in. tubular trigonous white. *B. pseudolata*, *Champ. mss.*

CEYLON; in forests of the Saffragan and Hinidoon Corle districts, *Champion, Thwaites*.

Apparently a very distinct species; the perianth-lobes are larger than usual in the genus, and the stigmas are on longer branches of the style.—Near *B. tuberosa*, *Beccari*, of Borneo.

2. **THISMIA**, *Griff.*

Dwarf fleshy coloured simple herbs with leaves reduced to scales. *Flowers* few or solitary, large, terminal. *Calyx-tube* produced far above the ovary, at length circumscribed, campanulate or turbinate, mouth annulate, contracted; lobes 3, recurved, subulate. *Petals* ovate oblong or subulate, recurved. *Stamens* 6, subsessile on the throat, connective very broadly dilated, connate or conniving as a deflexed membranous tube concealing the 2 parallel distinct elliptic cells. *Ovary* short, broad, 1-celled; style short, conic; stigmas 3, stout, erect; ovules many on 3 parietal placentas. *Fruit* turbinate, top falling away with the calyx-tube.—Species 7 or 8, Tropical Asiatic and American.

1. **T. Brunoniana**, *Griff. in Trans. Linn. Soc.* xix. 341, t. 39; stem several-flowered, calyx-lobes broadly ovate.

TENASSERIM; on decayed wood, *Griffith*.

A fleshy saprophyte, yellow, 4-8 in. high; stem stout, flexuous; scales scattered, ovate-lanceolate. *Flowers* racemose, pedicels stout, bracts like the scales. *Calyx-tube* $\frac{3}{4}$ in. long, yellow tessellated with scarlet, warted. *Connectives* very large, membranous, truncate and denticulate at the apex, connate for half their length, with a 2-lobed gland? at each commissure. *Fruit* broadly truncate.—Description from *Griffith*, l. c.

2. **T. Gardneriana**, *Hook. f. in Thwaites Enum.* 325; stem 1-fld., calyx-lobes rounded. *T. Brunoniana*, *Miers in Trans. Linn. Soc.* xx. t. 15, f. 20, 21 (not of *Griff.*). *Tribrachys Gardneriana*, *Champ. mss.*

CEYLON; at the roots of trees near Galle, *Champion*.

Whole plant 3-4 in. high, very closely allied to *T. Brunoniana*, but differing in the solitary flower and orbicular perianth-lobes.

ORDER CXLVIII. ORCHIDÆÆ.

Herbs of various habit, rarely shrubby, of two principal forms: 1, terrestrial, tuberous-rooted herbs, with annual herbaceous simple stems and solitary or spicate or racemose flowers; 2, epiphytes with perennial stems or branches variously thickened and forming a pseudobulb, flowering from the top sides or base of the pseudobulb. *Perianth* superior, irregular, of 6 free or variously combined pieces; 3 outer (sepals) more or less alike, the 2 lateral sometimes united into a short or long sac or spur-like base (*mentum*); 3 inner (petals) dissimilar, the 2 lateral alike, the other (*lip*) usually very differently shaped. *Stamens* and *style* united in a column opposite the lip, anther (except in *Cypripediæ*) solitary on the front or top or back of the column and free or adnate to it, 2-celled or by subdivisions 4-celled; top of the column sometimes produced in front (towards the lip) into a beak (*rostellum*); pollen grains usually cohering in each cell into 1, 2, or 4 pairs of oblong globose or pyriform waxy or powdery masses (*pollinia*) which are free or attached by pairs or fours to a viscus or gland, or a stalk (*caudicle*) that terminates in a gland and by which the pollen mass or masses may be removed entire. *Ovary* inferior, 1-celled (3-celled in *Apostasia*), usually linear and twisted; stigma a viscid surface on the top or concave face of the column, opposite the lip and below the anther (in *Cypripedium* the anthers are 2, one on each side of the base of a short style with a discoid stigma). *Seeds* minute, testa lax enclosing a homogeneous nucleus.—Genera 340, species about 5000, temperate and tropical, rarely arctic.

KEY TO THE TRIBES AND SUBTRIBES.

TRIBE I. **Epidendrææ**. *Anther* 1, opercular, usually deciduous, cells parallel, distinct. *Pollinia* waxy, 1-4 in each cell, free, or those of each cell held together at the base by a viscid appendage, not attached by their bases or by a caudicle to the rostellum. (5 *Tipularia* has caudicled pollinia, and in *Calanthe* and other *Cœlogyneæ* the long bases of the pollinia resemble caudicles.)

Subtribe 1. **MALAXEÆ**. Stems simple, leafy, rarely leafless, with often a pseudobulbous base. Inflorescence terminal. Flowers small or minute. Anther erect or inclined, usually persistent, not incumbent. Pollinia 4 (or 8), subequal, close together, usually free (without a viscid appendage).

Subtribe 2. **DENDROBIEÆ**. Inflorescence terminal, lateral, or on a leafless scape. Pollinia 4, rarely 2, 1seriate, parallel, appendage 0.

Subtribe 3. **ERIEÆ**. Inflorescence lateral, or on a leafless scape. Pollinia 8, subequal, appendage 0 or obscure.

Subtribe 4. **BLETIEÆ**. Inflorescence usually lateral. Pollinia 8, except in *Anthogonium*, usually in 2 series, parallel, ascending, connected by a granular appendage.

Subtribe 5. **CŒLOGYNEÆ**. Inflorescence terminal. Pollinia 8 or 4, subequal, connected by viscus or an appendage (in *Calanthe* and others, the pollinia are appendaged, but the appendage is an undeveloped portion of the pollen itself, and is not derived from the rostellum).

An amended Key to the Genera, &c., of the ORCHIDÆÆ will be given at the end of the Order, in Vol. VI.

TRIBE II. **Vandææ**. *Anther* 1, posticous, opercular, resting on the rostellum, cells usually confluent. *Pollinia* waxy, usually 2 or 4 in superposed pairs, attached singly or in pairs to a gland or process of the rostellum which is carried away with them when they are removed.

Subtribe 1. **EULOPHIÆ**. Leaves on pseudobulbs, plaited and nerved. Scape leafy or not. Lip spurred.

Subtribe 2. **CYMBIDIÆ**. Leaves on pseudobulbs, plaited and nerved. Scape leafy or leafless. Lip not spurred. Column not produced into a foot.

Subtribe 3. **SARCANTHÆ**. Stem without pseudobulbs, rooting. Leaves distichous (rarely 0), not plaited. Peduncle lateral or axillary.

Subtribe 4. **NOTYLIEÆ**. Stem with a 1-leaved pseudobulb, or slender. Leaves small, distichous. Anther behind and parallel to the terminal erect or inclined rarely horizontal rostellum. Pollinia with a simple or double stipes, pendulous from the tip of the rostellum.

TRIBE III. **Neottieæ**. Stem not bulbous (roots often bulbous). *Anther* 1, posticous, opercular, or erect and persistent; cells distinct, parallel. Pollen granular, powdery or in small masses.

Subtribe 1. **VANILLEÆ**. Stem tall, erect or climbing, often branched. Racemes or panicles terminal or terminal and axillary. Anther subopercular, incumbent on a short rostellum.

Subtribe 2. **CORYMBÆ**. Stem tall, sometimes branched. Leaves broad. Racemes or panicles terminal. Anther erect, parallel to the erect rostellum.

Subtribe 3. **SPIRANTHÆ**. Stem simple erect; root not tuberous. Leaves membranous or 0. Anther erect or inclined forward, parallel to the elongate rostellum.

Subtribe 4. **DIURIDÆ**. Stem simple, erect from an underground tuber. Anther erect or inclined forward; rostellum usually short.

Subtribe 5. **ARETHUSÆ**. Stem simple, erect from an underground tuber. Anther opercular, incumbent or suberect.

Subtribe 6. **LIMODOREÆ**. Stem simple, usually leafy, erect from an underground rootstock. Anther opercular, incumbent or suberect.

TRIBE IV. **Ophrydeæ**. *Anther* 1, posticous, erect, inclined or reflexed. Cells parallel or diverging, adnate to the column and often continuous with the rostellum. *Pollinia* 1, rarely 2 in each cell, granular, produced into short caudicles attached to a gland or to the rostellum.—Terrestrial herbs.

Subtribe 1. **ECOPHYDEÆ**. Anther erect. Pollinia with their glands enclosed in a pouch of the rostellum.

Subtribe 2. **HABENARIÆ**. Anther erect. Pollinia with their glands naked or partially included in a groove or fold of the rostellum.

Subtribe 3. **DISEÆ**. Anther reclinate or reflexed on the back of the column, rarely suberect. Stigma broad, subterminal or subadnate to the lip.

TRIBE V. **Cypripediæ**. *Anthers* 2, one on each side of the ros-

tellum, sessile or stipitate. *Anther* posticous. *Pollinia* granular.—
Terrestrial herbs.

KEY TO THE GENERA.

TRIBE I. **Epidendrææ.**

Subtribe 1. MALAXEÆ (and LIPARIDEÆ, *Gen. Pl.*).

1. OBERONIA. Epiphytic. Leaves distichous, fleshy, laterally compressed, nerveless. Flowers very minute, in cylindric spikes or racemes; column very short.

2. MICROSTYLIS. Terrestrial. Leaves membranous, base sheathing. Flowers small. Column very short.

3. LIPARIS. Terrestrial or epiphytic. Leaves membranous or coriaceous, base sheathing. Flowers small or medium-sized. Column long.

4. PLATYCLINIS. Epiphytic; pseudobulb 1-leaved. Flowers small; bracts rigid, glumaceous, ribbed, margins convolute. Column long or short with long or short membranous side arms.

5. TIPULARIA. Terrestrial; pseudobulb 1-leaved. Lip with a long spur.

6. OREORCHIS. Terrestrial, 1-leaved. Sepals and petals suberect. Column long.

7. CORALLORHIZA. Leafless. Root coralloid. Sepals and petals suberect. Column long.

Subtribe 2. DENDROBIEÆ.

* *Inflorescence lateral on a leafy or leafless stem, or terminal, or from the top of a 1-2-leaved pseudobulb.*

8. DENDROBIUM. Lip adnate to the produced foot of the column, contracted at the base or clawed, base erect and incumbent on the column, not mobile.

** *Inflorescence distinct from the pseudobulb.*

9. BULBOPHYLLUM. Racemes or spikes elongate, rarely 1-fld. or umbelliform. Sepals usually subequal, free. Lip jointed on the foot of the column and mobile.

10. SUNPIA. Characters of *Bulbophyllum*, but anther turned away from the rostellum and dehiscing upwards. Flower spicate, coriaceous, concealed by the concave bracts.

11. CIRRHOPETALUM. Flowers umbellate. Lateral sepals longer than the dorsal, placed under the mobile lip or connate.

12. TRIAS. Scape 1-fld. Sepals spreading equally. Anther produced into a long appendage. Very small herbs, pseudobulbs 1-leaved.

13. DRYMODA. Scape 1-fld. Lateral sepals far removed from the dorsal. Pollinia connate in pairs. Pseudobulb small, 1-leaved; leaf caducous.

14. MONOMERIA. Raceme long, lax-fld.; flowers large. Lateral sepals broad, far removed from the dorsal. Pseudobulb 1-leaved; leaf narrow, petioled, coriaceous.

15. DENDROCHILUM. Flowers small, racemose. Sepals equal, spreading. Pseudobulb 0, or on a rigid creeping stem; leaf narrow.

16. PANISEA. Scape slender, few-fld. Sepals subequal. Lip very narrow, with a long sigmoid claw. Pollinia 4, distinct. Pseudobulb narrow, crowded, 1-leaved.

17. ACROCHÆNE. Scape loosely many-fld. Mentum saccate. Petals fimbriate. Lip jointed on the base of the column. Pollinia 2, globose, connected by a granular appendage.

18. *CHRYSOGLOSSUM*. Scape tall, raceme long. Mentum saccate. Lip not jointed on the column. Anther 2-celled. Pollinia 2, not connected. Leaf plaited.

Subtribe 3. *ERIEÆ*.

19. *ERIA*. Peduncles 1-many-fl'd., axillary or subterminal on a leafy stem or on a pseudobulb. Column short, produced into a foot. Habit very various.

20. *PHREATIA*. Peduncle lateral or from a leafless rootstock, flowers minute. Column very short, produced into a foot. Stem short, leaves distichous.

21. *PACHYSTOMA*. Scape leafless. Sepals conniving. Column elongate, produced into a foot. Capsule deflexed. Pseudobulb 1-2-leaved.

22. *SPATHOGLOTTIS*. Scape distinct from the 1-2-leaved pseudobulb. Sepals spreading. Column elongate, foot 0. Capsule erect or nodding. Leaves elongate, plicate.

Subtribe 4. *BLETIÆ*.

23. *ACANTHEPHIPIUM*. Sepals connate into a broad fleshy cup. Petals included, adnate to the base of the short column, which is prolonged into a long foot. Flower large in short few-fl'd. racemes.

24. *PHAIUS*. Flowers large, racemose. Sepals free. Lip gibbous or spurred, lateral lobes embracing the long column, which is not prolonged into a foot. Leaves often large, plaited.

25. *NEPHELAPHYLLUM*. Flowers racemose on a leafless scape. Sepals free. Lip spurred. Column 2-winged, foot 0. Pseudobulb very narrowed above and jointed with the membranous leaf.

26. *TAINIA*. Flowers racemose on a leafless scape. Sepals and petals acute, caudate; lateral sepals inserted on the short foot of the column. Lip spurred or gibbous. Pseudobulbs thick, 1-leaved.

27. *ANTHOGONIUM*. Flowers racemose on a leafless scape. Sepals connate in a slender tube. Petals linear, claws free within the sepals. Column elongate, foot 0. Pollinia 4 (upper series wanting). Leaves few, grass-like, from a pseudobulb.

Subtribe 5. *CÆLOGYNÆ*.

* *Pseudobulb 0. Peduncle elongate, branched. Flowers small.*

29. *JOSEPHA*. Lateral sepals forming a mentum. Column narrowly winged, foot 0. Pollinia 4.

** *Flowers capitate. Lateral sepals forming a mentum with the foot of the column.*

29. *GLOMERA*. Stem leafy. Flowers in a dense head. Pollinia 4.

30. *AGROSTOPHYLLUM*. Stem leafy. Flowers in a dense head. Pollinia 8.

31. *CERATOSTYLIS*. Flowers in a lax head, which is adnate to the solitary leaf. Column with 2 long arms. Pollinia 8.

*** *Flowers spicate or racemose. Lateral sepals united in a mentum.*

32. *CRYPTOCHILUS*. Pseudobulbs 1-2-leaved. Sepals connate in a 3-toothed tube. Clinandrium very broad; pollinia 8.

33. *TRICHOSMA*. Stem not thickened, 2-leaved. Sepals spreading. Clinandrium elevated, toothed; pollinia 8. Flowers large.

**** *Flowers solitary, spicate or racemose. Sepals free. Column without a foot.*

34. *CÆLOGYNE*. Pseudobulbs distinct, 2-leaved. Lip sessile, its base embracing the elongate column. Pollinia 4. Flowers racemose, often large.

35. *OTOCHILUS*. Pseudobulbs superposed, uppermost 2-leaved. Lip sessile, base saccate, lateral lobes ear-like. Column elongate; pollinia 4. Peduncle terminal, sheathed.

36. *PHOLIDOTA*. Pseudobulbs 2-leaved, solitary or superposed. Lip saccate. Column short, broadly 2-winged; pollinia 4. Peduncle sheathed.

37. *CALANTHE*. Terrestrial herbs. Leaves plicate, produced after the racemose flowers. Lip usually spurred, claw connate into a tube with the column.

38. *ARUNDINA*. Terrestrial herbs; stem leafy. Sepals spreading. Lip sessile, not spurred, base concave embracing the column.

TRIBE II. *Vandæ*.

Subtribe 1. *EULOPHIÆ*.

39. *EULOPHIA*. Scape usually leafless. Petals like the dorsal sepal. Lip gibbous or saccate, rarely spurred. Gland of the rostellum usually produced into a stipes.

Subtribe 2. *CYMBIDIÆ*.

40. *CYMBIDIUM*. Sepals and petals subequal, spreading. Lobes of the lip embracing the unwinged column. Pollinia with a transverse granular appendage. Leafy stems short, pseudobulbous.

41. *CYPERORCHIS*. Lip erect from the base, narrow; lateral lobes embracing the column. Stem short, leafy. Scape sheathed, leafless.

42. *GEODORUM*. Sepals and petals erecto-patent, subequal. Lip sessile, broad from the base, ventricose, erect, almost complicate. Stem short, leafy, and leafless scapes arising from a stout subtuberous rootstock.

43. *GRAMMATOPHYLLUM*. Sepals and petals spreading. Pollinia after removal attached to the lobes or horns of a lunate or curved stipes. Stem leafy; scape many-fld., leafless.

44. *DIPODIUM*. Sepals and petals spreading. Pollinia after removal attached to 2 distinct stipes. Stems leafy or leafless; pseudobulb 0.

45. *THECOSTELE*. Sepals and petals spreading. Lip adnate to the base of the column, united at the base with it into a short tube, then spreading. Column sigmoid. Pseudobulb 1-leaved. Scape leafless, lateral, recurved.

46. *BROMHEADIA*. Sepals and petals spreading. Lip erect; lateral lobes embracing the 2-winged column. Pseudobulb 0; flowering stem with distichous leaves; peduncle terminal, sometimes branched, rachis of raceme often thickened serrate by the distichous bracts.

47. *POLYSTACHYA*. Sepals conniving or subpatent; lateral connate into a mentum with the foot of the short column. Flowering stems short, few-leaved, at length pseudobulbous, flowers small racemose or panicle.

Subtribe 3. *CYRTPODIEÆ*.

48. *PLOCOGLOTTIS*. Terrestrial. Lip saccate at the base, connate by a plaited membrane with the column. Pollinia affixed to distinct filiform stipes. Scape erect, raceme simple.

Subtribe 4. *SARCANTHÆ*.

* *Lip not spurred (see Arachnanthe). Column without a foot, short, not winged.*

49. *LUISIA*. Sepals and petals not spreading widely. Lip not jointed at the base, usually longer than the sepals. Stipes of the pollinia ovate, flat. Leaves terete; flowers in short spikes.

50. *COTTONIA*. Sepals spreading widely, broader than the petals. Lip not

jointed at the base. Stipes of the pollinia long, narrow. Flowers in simple or branched, very long peduncled racemes.

51. *STAUROPSIS*. Sepals and petals spreading widely. Lip not jointed at the base. Stipes of pollinia long, narrow. Flowers medium-sized, in simple or branched racemes.

52. *ARACHNANTHE*. Sepals and petals widely spreading. Lip jointed at the base, gibbous or shortly spurred. Stipes of the pollinia flat, acute from a broad base. Flowers large, loosely racemed.

****** *Lateral sepals adnate to the foot of the column, forming a mentum. Spur, if present, distant from the base of the lip, sometimes recurved and ascending.*

53. *PHALENOPSIS*. Lip spreading from the base or erect at the base, not spurred. Column erect, foot short. Stipes of the pollinia linear or spatulate. Flowers large, in simple or branched racemes.

54. *DORITIS*. Lip with a long claw, incumbent, 3-lobed, not spurred. Column winged, foot long. Flowers small or medium-sized, in simple or branched racemes.

55. *RHYNCHOSTYLIS*. Lip saccate at its union with the foot of the column, then narrowed, blade ovate or tongue-shaped. Column wingless, foot short. Stipes of the pollinia subfiliform. Flowers rather large, in long dense racemes.

56. *SARCOCHILUS*. Lip shortly incumbent or adnate to the base of the column, blade fleshy, top often inflexed, gibbous or shortly stoutly spurred. Stipes of the pollinia linear or oblong. Flowers usually small, in simple racemes.

57. *TRICHOLOTTIS*. Lip with a long foot adnate to the base of the column. Flowers few, small.

58. *AERIDES*. Lip jointed on to the long foot of the column, blade with an ascending or recurved hollow spur. Stipes of the pollinia narrow. Flowers in simple or branched racemes.

******* *Lip saccate or spurred at the base (not under the blade). Column wingless.*

59. *RENANTHERA*. Sepals and petals spreading widely; lateral sepals usually the largest, parallel and placed under the small lip. Stipes of the pollinia flat, narrow. Racemes branched.

60. *VANDA*. Sepals and petals fleshy, widely spreading from a narrow base. Stipes of pollinia broad. Flowers large, in simple racemes.

61. *SACCOLABIUM*. Sepals and petals widely spreading. Column without appendages. Stipes of pollinia usually slender. Flowers small, in simple or branched racemes.

62. *SCHÆNORCHIS*. Flowers of *Saccolabium*, but column with 2 erect linear appendages.

63. *UNCIFERA*. Sepals and petals erecto-patent. Spur of lip strongly incurved. Stipes of the pollinia with a dilated sub-2-lobed tip. Flowers small, in dense-fl. racemes.

64. *ACAMPE*. Sepals and petals thick, concave. Stipes of pollinia slender. Flowers small, crowded in a short rigid simple or branched peduncle.

65. *SARCANTHUS*. Sepals and petals fleshy, spreading. Spur of the lip internally divided longitudinally. Flowers small, in simple or paniced slender racemes.

66. *CLEISOSTOMA*. Spur of the lip almost closed with a callus or lamella. Flowers small, crowded in simple or branched racemes.

67. *ORNITHOCHILUS*. Sepals spreading; lateral connate at the base of the claw of the lip, and together with it forming a mentum. Lip broadly 2-3-lobed, often fimbriate. Stipes of the pollinia strap-shaped. Flowers small, in simple or branched slender racemes.

68. *TENIOPHYLLUM*. Sepals connivent or subpatent, bases often connate. Pollinia 4, distinct; stipes short. Dwarf herbs, leafless or few-leaved; flowers minute.

69. *MICROSACCUS*. Sepals and petals spreading. Pollinia 4, distinct; stipes linear. Small herbs with many small distichous leaves, and 1-2 minute flowers.

70. *DIPLOCENTRUM*. Sepals and petals widely spreading. Lip 2-spurred towards the base.

Subtribe 5. *NOTYLIEÆ*.

71. *ACRIOPSIS*. Sepals narrow, spreading; lateral connate. Petals broader. Claw of lip connate with the column, and forming a broad pitcher. Top of column hooded, membranous. Pollinia 2 or 4, stipes simple. Pseudobulbs with 1-2 narrow leaves. Flowers small, in simple or branched slender lax racemes.

72. *PODOCHILUS*. Sepals erect. Lip jointed on to the foot of the column. Stipes of the 4 pollinia 2. Leaves small, distichous; pseudobulb 0. Flowers small, in a terminal raceme.

73. *APPENDICULA*. Sepals erect. Lip continuous with the foot of the column, not jointed. Leaves distichous; pseudobulbs 0. Flowers small, in lateral or subterminal racemes.

74. *THELASIS*. Sepals erect. Lip erect, undivided. Column without a foot. Stipes of pollinia simple. Herbs with 1-leaved pseudobulbs, or leaves distichous as in *Oberonia*. Flowers minute, in terminal racemes.

TRIBE III. *Neottieæ*.

Subtribe 1. *VANILLEÆ*.

75. *GALEOLA*. Climbers. Leaves 0 or on flowerless branches. Sepals spreading or broadly concave. Lip broad, concave, loosely investing the column.

76. *VANILLA*. Climbers. Leaves 0 or coriaceous. Claw of the lip adnate to the column; limb broad, concave, embracing the column.

Subtribe 2. *CORYMBIÆ*.

77. *CORYMBIS*. Sepals and petals narrow, cohering in a tube. Lip linear. Column elongate. Flowers loosely paniced.

78. *TROPIDIA*. Lateral sepals connate, forming a mentum. Lip sessile. Column short. Spikes short, dense-fld.

Subtribe 3. *SPIRANTHÆÆ*.

* Lip spurred, or with a prominent sac.

79. *PHYSTURUS*. Lip above the spur abruptly contracted, hollow, spreading; blade entire or 2-lobed. Clinandrium hardly prominent. Leaves membranous, ovate or lanceolate.

80. *ANGECTOCHILUS*. Claw of the lip long, spreading, fimbriate; blade 2-lobed. Clinandrium cupular. Leaves subradical, ovate, often coloured.

81. *VRYDAGZINIA*. Lip sessile. Base of column with 2 processes descending into the spur. Stem leafy.

82. *CYSTORCHIS*. Lip sessile; spur obtuse or saccate; blade lanceolate, entire. Leaves subradical, ovate, often coloured.

83. *HERPYSMA*. Lip erect, concave, margins connate with the column; spur long; blade spreading. Clinandrium hooded. Pollinia with rigid caudicles. Stem leafy.

** Lip not spurred, if saccate the sac concealed by the sepals.

† Lip clawed, ventricose above the base (or sessile in *Spiranthes*).

84. *ODONTOCHILUS*. Lateral sepals connate, forming a mentum. Claw of lip toothed or fimbriate. Stem leafy; flowers loosely spiked.

85. *HÆMABIA*. Sepals free. Claw of lip concave, entire; blade 2-lobed. Clinandrium cupular. Stem leafy; flowers loosely spiked or racemed.

86. *DOSSINIA*. Sepals free. Lip with erect side lobes and a 2-fid midlobe. Column with a long appendage in front.

87. *SPIRANTHES*. Dorsal sepals and petals together forming a hood; lateral and column decurrent on the ovary or spike, lax or dense-fld., often secund or spiral.

†† *Lip not clawed (see also Spiranthes) sessile or adnate to the column; base not ventricose.*

88. *NEOTTIA*. Leafless scaly herbs. Sepals and petals free. Lip 2-fid.

89. *LISTERA*. Stem with 2*opposite or subopposite leaves. Sepals and petals free, spreading.

90. *CHEIROSTYLIS*. Stem laxly leafy. Sepals combined in a tube.

††† *Lip sessile, not clawed, often adnate to the column, usually shorter than the sepals, base ventricose (except Zeuxine).*

91. *ZEUXINE*. Sepals free, dorsal with the petals cohering in a hood. Column without appendages.

92. *HYLOPHILA*. Dorsal sepal hooded; lateral obliquely adnate to the base of the column. Lip with a small linear inflexed blade.

93. *GOODYERA*. Sepals free. Lip erect, entire. Clinandrium cup-shaped.

94. *HETERIA*. Sepals free or connate below. Lip at the base more or less adnate to the column, entire or with 2 spreading lobes.

Subtribe 4. *DIURIDEÆ*.

95. *APHYLLORCHIS*. Leafless herbs. Sepals free.

96. *CRYPTOSTYLIS*. Leaves one or few. Sepals and petals subulate, convolute. Lip superior, broad, embracing the base of the very short column.

97. *CORYSANTHES*. Dorsal sepal large; lateral small, linear or filiform. Lip tubular. Low herbs, flower solitary, very large for the plant.

Subtribe 5. *ARETHUSEÆ*.

98. *POGONIA*. Sepals erect or spreading. Lip undivided or 3-lobed. Column elongate, not winged. Flowering stem leafy, or leafless with the leaf produced afterwards.

99. *DIDYMOPLEXIS*. Perianth bilabiate, upper lip formed by the dorsal sepal and petals, lateral sepals connate, forming a 2-fid lower lip. True lip very broad undivided. Slender leafless herbs, flowers small.

100. *GASTRODIA*. Sepals and petals united into a ventricose 5-lobed tube. Lip undivided. Leafless herbs.

101. *EPIPOGUM*. Sepals narrow, free. Lip concave, saccate or shortly spurred at the base. Column short. Leafless herbs.

Subtribe 6. *LIMODOREÆ*.

102. *CEPHALANTHERA*. Sepals conniving. Lip concave or shortly spurred at the constricted base. Stem leafy; flowers and capsules erect.

103. *EPIPACTIS*. Sepals free, spreading. Lip concave above the constricted base. Stem leafy; flower and capsules nodding or pendulous.

TRIBE IV. *Ophrydeæ*.

Subtribe 1. *SERAPIEÆ*.

104. *ORCHIS*. Lip spurred. Glands of the pollinia both in one pouch.

Subtribe 2. HABENARIÆ.

105. *HERMIRIUM*. Lip not spurred. Low small-fl. herbs.
 106. *HABENARIA*. Lip spurred. Sepals equalling or exceeding the petals. Flowers spicate or racemose. Rostellum not elongate.
 107. *DIPLOMERIS*. Lip spurred. Sepals much smaller than the petals. Flowers solitary, large.
 108. *HEMIPILIA*. Lip spurred. Sepals larger than the petals. Leaf radical, solitary; raceme few-fl. Rostellum very prominent.

Subtribe 3. DISEÆ.

109. *SATYRIUM*. Lip erect, 2-spurred. Flower spicate.

Subtribe 4. CORYCIÆ.

110. *DISPERIS*. Lateral sepals spurred or saccate. Lip not spurred, tip 2-lipped or variously dilated.

TRIBE V. *Cypripediæ*.

111. *CYPRIPEDIUM*. Sepals spreading. Lip inflated. Anthers 2. Ovary 1-celled. Flowers large.
 112. *APOSTASIA*. Sepals, petals and lip all similar. Anthers 2. Ovary 3-celled. Flowers small.
 113. *NEUWIEDIA*. Sepals and petals similar. Lip rather broader. Anthers 3. Ovary 3-celled. Flowers small.

TRIBE I. *EPIDENDRÆ* (see p. 667).

1. **OBERONIA**, *Lindl.*

Tufted epiphytes. *Leaves* distichous, equitant, ensiform (very rarely terete). *Flowers* very minute in dense subcylindric spikes or racemes. *Sepals* broadly ovate or oblong, subequal. *Petals* smaller. *Lip* sessile, concave, entire or 2-4-lobed. *Column* very short; anther terminal, incumbent; pollinia 4, waxy, cohering by a viscus.—Species about 60, Tropical Asiatic, Australian and Pacific.

The flowers are generally 2 to each bract, which is lanceolate and free or broader and more or less convolute, sometimes very broad and forming a tube round both flowers; the upper flower has often a sheathing obtuse bracteole.—The genus wants a careful study of living specimens. I am far from satisfied with the following delimitation of species, the specimens being in some cases quite insufficient for a sure diagnosis.

Sect. I. **Oberonia** PROPER. *Stem* very short, rarely 2-4 in. *Leaves* ensiform, chiefly radical or subradical. *Sepals* subequal.

* Side lobes or all the lobes of lip deeply toothed or laciniate.

1. **O. iridifolia**, *Lindl. Gen. & Sp. Orchid.* 15; *Fol. Orchid.* *Oberon.* 1; stem short, leaves 3-5 in. broadly ensiform, spike long slender decurved, flowers not whorled sessile, bracts broad erose convolute sheathing the ovary, petals oblong erose, lip more or less quadrate deeply toothed tip broadly 2-fid. *Wall. Cat.* 1948/2 (*in part*). *Malaxis iridifolia*, *Reichb.f. in Walp. Ann.* vi. 208.

SIKKIM HIMALAYA, *Griffith*. SILHET and the KHASIA HILLS, *Roxburgh*, &c. TENASSERIM, *Griffith*, *Parish*. NILGHIRI and PULNEY HILLS, *Wight*, &c.

Very variable if, as I think probable, the following forms are correctly referred to it. The perianth alone is exposed from the broad sheathing scarious bract as in *O. ensiformis* and others. The rachis is stout or slender, the capsule sessile. There is such a mixture of specimens in a very bad state under Wallich No. 1948 that a reference to them is of no use.

O. IRIDIFOLIA PROPER; leaves 6–10 by $\frac{3}{4}$ –1 in., lip broader than long quadrate glabrous or pubescent. *Cymbidium iridifolium*, *Roxb. Fl. Ind.* iii. 458.—Sikkim, Silhet and Tenasserim.

Var. *denticulata*; leaves 4–5 by $\frac{3}{4}$ –1 in., scape shorter flattened, lip longer than broad more triangular glabrous less deeply toothed. *O. denticulata*, *Wight Ic.* t. 1625; *Lindl. Fol. Orchid. Oberon.* 2; *Walp. l. c.* 208.—Nilghiri and Pulney Hills.

Var. *angustifolia*; leaves 8–10 by $\frac{1}{2}$ in. straight, scape longer narrowly winged, lip short glabrous with a small square midlobe.—Khasia Hills.

Var. *brevifolia*; leaves 2–4 by $\frac{1}{2}$ – $\frac{3}{4}$ in. falcate, scape and spike shorter, lip triangular glabrous tip broadly bifid. *O. flexuosa*, *Parish mss.*—Moulmein, *Griffith*, *Parish*.

2. *O. Clarkei*, *Hook. f. Ic. Pl.* t. 1779 A; very small, stem short, leaves 1 in. linear-ensiform acute or obtuse, scape short many-bracteate and spike very slender, flowers very minute whorled subsessile longer than the broad acuminate toothed bracts, petals broadly ovate obtuse nearly as large as the sepals, lip 3-lobed about equalling the sepals, lateral lobes pectinately toothed, midlobe small obtusely truncate.

KHASIA MTS.; Shillong, alt. 5000 ft., *Clarke*.

Whole plant 2 in. high. *Leaves* about $\frac{1}{2}$ in. broad, straight. *Scape* adnate at the base to the uppermost leaf, rachis filiform; flowers red, about $\frac{1}{30}$ in.—I have seen only one specimen of this little species, which is most nearly allied to *O. Griffithiana*, *Lindl.*

3. *O. Jenkinsiana*, *Griff. mss.*; stem elongate, leaves linear, scape terete sparsely bracteate, spike decurved, flowers minute subsessile densely imbricate, bracts short erose, petals oblong, lip very short 3-lobed, lateral lobes deeply toothed, terminal small quadrate crenate. *Lindley Fol. Orchid. Oberon.* 4. *Malaxis Jenkinsiana*, *Reichb. f. in Walp. Ann.* vi. 211.

KHASIA HILLS, *Griffith*, &c., Joowye and Kumroot, alt. 4000 ft., *Clarke*, *J. D. H. & T. T.*

Stem 2–4 in. *Leaves* 3–6 by $\frac{1}{3}$ – $\frac{1}{2}$ in., straight or falcate, acuminate. *Scape* adnate to the upper leaf, with the spike 3–4 in.; flowers dark brown, about $\frac{1}{30}$ in.; lip with a concave disk.—The lip resembles that of *O. iridifolia*.

4. *O. Griffithiana*, *Lindl. Sert. Orchid.* t. 8 B; *Fol. Orchid. Oberon.* No. 44; stem elongate, leaves linear, scape slender naked, spike very slender, flowers very minute pedicelled more or less whorled, bracts lanceolate subentire, petals narrow linear, lip short 3-lobed, lobes subequal lacerate. *O. cimicina*, *Griff. Notul.* iii. 275; *Lindl. Fol. Orchid. Oberon.* 1. *Malaxis Griffithiana* & *cimicina*, *Reichb. f. in Walp. Ann.* vi. 208, 216.

PEGU, *M'Lelland*, *Kurz*. MARTABAN and TENASSERIM, *Griffith*, *Parish*.

Stem $\frac{1}{2}$ –3 in. (plant sometimes caulescent). *Leaves* 1–2 by $\frac{1}{2}$ – $\frac{1}{4}$ in., acute or obtuse, straight or falcate. *Scape* and *spike* together 2–3 in.; decurved; flowers pedicelled, purplish brown, about $\frac{1}{30}$ in., sometimes in separate whorls; lip about equalling the sepals, midlobe irregularly lacerate or more or less 2-lobed.

** Lip entire or 3-lobed, margins quite entire or erose, never pectinate.

† Petals broad elliptic oblong or ovate.

a. *Lip quadrate or orbicular entire, or if lobed with the midlobe very small and short.*

5. **O. maxima**, *Parish mss.*; leaves very long and broad, scape very stout, flowers sessile most densely imbricate round a thick straight rachis, bracts broad obtuse erose sheathing the subsessile ovary, petals short broad quite entire, lip orbicular crenulate, disk thickened.

TENASSERIM; at Moulmein, *Parish*.

This and *O. ensiformis* are the largest-leaved species, and this has the stoutest scapes, 3-4 by $\frac{1}{4}$ - $\frac{1}{2}$ in., and thickest spikes, which are 4-6 in. long. The flowers are appressed to the spike with very short ovaries. *Leaves* 12 by $1\frac{1}{2}$ in., nearly straight.

6. **O. orbicularis**, *Hook. f.*; leaves narrowly ensiform acute, scape subcompressed, flowers densely imbricate on a stout rachis, bract orbicular erose sheathing the shortly pedicelled ovary, petals broad quite entire, lip orbicular crenulate notched.

SIKKIM HIMALAYA; at Dikkeeling, alt. 3000 ft., *Clarke*.

Leaves 4-6 by $\frac{1}{4}$ - $\frac{3}{4}$ in., nearly straight. *Scape* 2-3 in.; spike 3-5 in., straight or slightly curved; flowers about $\frac{1}{2}$ in.

7. **O. brachystachys**, *Lindl. Sert. Orchid. (undert. 8); Fol. Orchid. Oberon. 4*; leaves short oblong obtuse thin, scape very short, raceme about equalling the leaves, bracts lanceolate, flowers whorled shortly pedicelled, petals broad erose, lip very short crenulate, lateral lobes large rounded terminal short truncate. *Malaxis brachystachys*, *Reichb. f. in Walp. Ann. vi. 211*.

TENASSERIM; at Mergui, *Griffith*.

Leaves 1-2 by $\frac{1}{2}$ - $\frac{1}{2}$ in. *Raceme* flexuous or decurved, rachis slender; lower bracts longer than the flowers, which are about $\frac{1}{3}$ in. *Fruit* pedicelled.

8. **O. truncata**, *Lindl. Fol. Orchid. Oberon. 3*; leaves linear ensiform subacute, scape adnate to a leaf greatly flattened above it, spike stout short lax-fl'd., flowers subwhorled sessile, bracts acuminate serrulate, petals oblong quite entire, lip much broader than long subreniform with rounded oblong lateral lobes and an obscure midlobe. *Malaxis truncata*, *Reichb. f. in Walp. Ann. vi. 210*.

CEYLON; at Hantani, *Champion*.

Leaves 3-4 by $\frac{1}{2}$ - $\frac{1}{2}$ in., straight. *Scape* above the adnate leaf very short and broad; spike $2\frac{1}{2}$ in., stout; flowers much smaller than the rachis is broad, very pale, about $\frac{1}{10}$ in.; lip quite unlike that of any other species, succulent, more than twice as broad as long, margins quite entire, midlobe a low broad rounded projection on the margin as it were of the edge furthest from the column.—Described from a single specimen.

β. *Lip oblong or obcordate, longer than the sepals, side lobes undeveloped or minute, midlobe 2-fid.*

9. **O. verticillata**, *Wight Ic. t. 1626*; leaves small narrowly ensiform acute or acuminate, scape short terete, racemes very long, flowers whorled pedicelled, bracts lanceolate, petals oblong, lip twice as long as the sepals

obcordate with rounded lobes and an acute sinus. *Lindl. Fol. Orchid. Oberon*. 3 (*excl. some vars.*). *Malaxis verticillata*, *Reichb. f. in Walp. Ann.* vi. 211.

TRAVANCORE and NILGHIRI MTS., *Wight, &c.*—DISTRIB. Java?

Leaves 2-4 by $\frac{1}{4}$ - $\frac{1}{3}$ in., rather thin, nearly straight. *Scape* 1-2 in.; racemes 4-6 in., decurved; bracts erose, about equalling the pedicels; flowers $\frac{1}{10}$ - $\frac{1}{8}$ in., pale yellow; lip with narrow rounded shoulders, contracted quite entire sides and rather diverging lobes. *Capsules* pedicelled.—The Javan plant has a much narrower lip and much larger capsules.

10. **O. pyrulifera**, *Lindl. Fol. Orchid. Oberon*. No. 15; leaves small narrowly ensiform acute or subacute, scape terete with slender subulate bracts, racemes short decurved, flowers whorled pedicelled, bracts lanceolate, petals oblong, lip oblong cleft to the middle into two parallel acute lobes. *O. verticillata*, *var. khasiana*, *Lindl. Fol. Orchid. Oberon*. 3. *Malaxis verticillata var. khasiana* and *M. pyrulifera*, *Reichb. f. in Walp. Rep.* vi. 210, 211.

KHASIA MTS., alt. 4-6000 ft., *J. D. H. & T. T. MUNNIPORE*, *Watt*.

Leaves 1-2½ by $\frac{1}{4}$ - $\frac{1}{3}$ in., straight or falcate. *Scape* and *raceme* together 2-3 in.; flowers pale yellow-green, about $\frac{1}{15}$ in.—Differs from *O. verticillata* in the small size, short racemes, very small flowers and lip with acute parallel lobes. I find no difference between *O. pyrulifera* and *O. verticillata var. khasiana*; the petals are very obscurely erose and crenulate at the tip.

11. **O. Thwaitesii**, *Hook. f.*; leaves ensiform coriaceous straight subacute, scape terete, spike long suberect rigid, flowers sessile minute in separated whorls, bracts ovate obtuse fimbriate, petals oblong erose, lip longer than the sepals gradually widening to the 2-lobed base, lobes rounded with a broad sinus. *O. verticillata*, β . *pubescens*, *Lindl. Fol. Orchid. Oberon*. 3. *Malaxis verticillata, var. pubescens*, *Reichb. f. in Walp. Ann.* vi. 210.

CEYLON, *Thwaites* (C.P. 2516 in Herb. Hook, which is the number of *Strychnos colubrina*).

Whole plant of a whitish hue when dry. *Leaves* 3-4 by $\frac{1}{2}$ in. *Scape* and *spike* 6-10 in.; rachis firm and rather stout, but not swollen; flowers few in a whorl, about $\frac{1}{20}$ in., yellow; ovary extremely short, so that the perianth is close on the rachis. *Capsules* very small, sessile, subglobose.—Very different from *O. verticillata* in the bracts, habit and minute sessile flowers; I find no trace of the pubescence described by Lindley.

12. **O. Falconeri**, *Hook. f.*; leaves short broadly ensiform acute, scape short stout bracteate, raceme stout erect or decurved, bracts ovate-lanceolate or oblong serrulate, flowers shortly pedicelled, petals ovate, lip oblong or subquadrate with small rounded or tooth-like lateral lobes, tip with two small incurved lobes separated by a broad sinus. *Hook. f. Ic. Plant.* t. 1780. *O. iridifolia*, *Wall. Cat.* 1948/1 and 3.

TROPICAL HIMALAYA, KUMAON and the Deyra Dhoon, *Falconer, Wallich*. BEHAR and Chola Nagpore, *J. D. H., Clarke*. The CONCAN; at Bombay, *Lau, &c.*

Leaves 1-2 by $\frac{1}{4}$ - $\frac{1}{2}$ in., straight or falcate, coriaceous. *Scape* terete, much shorter than the leaves; racemes longer; rachis stout, deeply grooved in fruit; flowers about $\frac{1}{20}$ in., greenish yellow. *Capsules* shortly pedicelled.—Nearly allied to *O. khasiana*, but more robust with shorter broader leaves, short lateral lobes or shoulders to the lip, the terminal lobes of which are short and distant.

13. **O. longibracteata**, *Lindl. Gen. & Sp. Orchid.* 3; *Fol. Orchid.*

Oberon. 2; stem elongate, leaves linear or oblong-linear, scape subterete above where adnate to the upper leaf, spike short, bracts subulate much exceeding the sessile flowers, petals broadly oblong entire, lip short, lateral lobes small orbicular, midlobe large rounded-obcordate obscurely 2-lobed. *Malaxis longibracteata*, *Reichb. f. in Walp. Ann.* vi. 209.

CEYLON; Hantani and Hewahetti districts, *Walker*, &c.

Stems 1-6 in., flexuose, flattened above. *Leaves* 2-3 by $\frac{1}{4}$ - $\frac{1}{3}$ in., acute. *Scape* and sharply decurved spike 1-2 in.; flowers pale red, lip red (*Thwaites*). *Capsules* subsessile.—In habit intermediate between the caulescent and stemless species.

14. **O. Helferi**, *Hook. f. Ic. Plant.* t. 1785 A; leaves small membranous ensiform acuminate, scape filiform naked, raceme about as long as the leaves filiform, bracts lanceolate, petals oblong obtuse, lip twice as long as the sepals linear-oblong with narrow lateral lobes and linear midlobe cleft to the base into two narrow parallel acute arms.

TENASSERIM, *Helfer*.

Leaves $\frac{1}{2}$ -1 in., translucent when dry. *Scape* with raceme 1-2 in., erect or curved; flowers very membranous, loosely clustered, very pale, about $\frac{1}{20}$ in. long.—The narrow lateral lobes of the lip extend about half-way down, and end in an obtuse tooth. A very delicate species.

γ . *Lip* deeply 3-lobed, side lobes broad or long, midlobe obcordate or 2-fid.

15. **O. ensiformis**, *Lindl. Fol. Orchid. Oberon.* 4; leaves very long coriaceous ensiform acuminate, scape subterete naked, spike dense-flid., bracts sheathing the flowers erose, petals broad erose, lateral lobes of erose lip broad rounded midlobe obcordate. *O. trilobata*, *Griff. Notul.* iii. 273. *O. acaulis*, *Hook. Bot. Mag.* t. 5056 (not of *Griff.*). *Malaxis ensiformis*, *Smith in Rees Encycl.*; *Reichb. f. in Walp. Ann.* vi. 212 (excl. syn.).

NEPAL, *Hamilton*. Khasia Mts., *Griffith*.

Leaves 10-18 by $\frac{1}{2}$ - $\frac{3}{4}$ in., narrowed to the tip. *Racemes* shorter than the leaves, nearly straight or curved; bracts tubular with truncate tips, perianth alone exserted, membranous; flowers about $\frac{1}{20}$ in., orange-yellow; lip hardly longer than the sepals.

16. **O. ferruginea**, *Parish mss.*; leaves long coriaceous narrowly ensiform falcate acuminate, scape short stout terete naked, spike shorter than the leaves, bracts broadly ovate subacute sheathing the subsessile flowers, petals linear-oblong fimbriate, lip short fimbriate, side lobes narrow short ascending, midlobe obcordate lobules rounded crenate sinus acute.

TENASSERIM; at Moulmein, *Parish*.

Leaves 6-10 by $\frac{1}{2}$ - $\frac{3}{4}$ in. *Scape* with raceme 4-5 in., bracts membranous; flowers about $\frac{1}{20}$ in., perianth alone exserted; lip covered with large dots, side lobes acute or obtuse.

17. **O. myriantha**, *Lindl. Fol. Orchid. Oberon.* 4; leaves narrowly ensiform straight acuminate, scape stiff terete naked or with erect subulate bracts, raceme elongate, flowers pedicelled more or less whorled, bracts erose lower subulate upper ovate, petals broad entire, lip longer than the sepals, lateral lobes broad, midlobe oblong or obcordate deeply 2-lobed lobules oblong or rounded sinus acute. *Walp. Ann.* vi. 212. *O. sikkimensis*, *Lindl. l.c.* *O. acaulis*, *Griff. Notul.* iii. 275; *It. Notes* 76

No. 1130; *Ic. Pl. Asiat.* t. 286, f. 1. *Malaxis myriantha & sikkimensis*, *Reichb. f. in Walp. Ann.* vi. 212.

SIKKIM HIMALAYA, alt. 4-5000 ft., *J. D. H., Clarke.* KHASIA MTS., alt. 3500-5000 ft., *Griffith, &c.*; Naga Hills, *Clarke.*

Leaves 4-10 by $\frac{1}{2}$ - $\frac{2}{3}$ in., coriaceous. *Scape* sometimes adnate to the uppermost leaf; spike and raceme longer or shorter than the leaves, straight or decurved, rachis slender but stiff; flowers about $\frac{1}{10}$ in., pale yellow-green, lateral lobes of lip rounded, or rather truncate and notched or crenate; terminal lobes variable in length. *Capsules* pedicelled.—Except in the shorter racemes, I find no character for *sikkimensis*, and they are as short in some specimens of *myriantha*.

18. ***O. demissa***, *Lindl. Fol. Orchid. Oberon.* 4; leaves short thin linear-oblong obtuse, scape short adnate to the uppermost leaf, bracts short ovate acute erose, spike short erect or decurved dense-fl., flowers minute subsessile, petals broadly oblong denticulate, lip very short, lateral lobes broad truncate crenate terminal short broad quadrate. *Hook. f. Ic. Plant.* t. 1785 B. *Malaxis demissa*, *Reichb. f. in Walp. Ann.* vi. 211.

SIKKIM HIMALAYA; at the foot hills, *J. D. H.*

Leaves 2 by $\frac{1}{2}$ in., obtuse. *Scape* $\frac{1}{2}$ in.; raceme $1\frac{1}{2}$ in., pale green; flowers about $\frac{1}{30}$ in., obscurely whorled; lateral sepals orbicular, much larger than the dorsal.—Specimens very few.—The species had perhaps better be referred to the group with *O. orbicularis*. Lindley describes the midlobe of the lip as ovate, acute, but I find it to be as described above in his and my own specimens.

19. ***O. recurva***, *Lindl. in Bot. Reg.* 1839, *Misc.* No. 8; *Fol. Orchid. Oberon.* 5; leaves small oblong-lanceolate acuminate, scape very short, raceme slender dense-fl., flowers very minute not whorled, bracts lanceolate, petals obovate oblong and lip erose, lateral lobes rounded midlobe 2-fid. *Hook. f. Ic. Plant.* t. 1784 A. *O. setifera*, *Lindl. l. c.* 3. *Malaxis setifera & recurva*, *Reichb. f. in Walp. Ann.* vi. 210, 212.

THE CONCAN, *Law, Dalzell, &c.*

Leaves 1-1 $\frac{1}{2}$ in., thin. *Scape* and *raceme* 2-3 in., more or less recurved or decurved; bracts shorter than the pedicels; flowers $\frac{3}{30}$ in., hyaline, sparsely gland-dotted; lip equalling or longer than the sepals; divisions of midlobe variable in breadth, sinus acute or obtuse. *Capsules* on pedicels as long as themselves.—I have failed to find in Lindley's or other specimens the setaceous petals described by that author.

†† Petals linear.

a. *Lip orbicular or quadrate, entire or obscurely lobed.*

20. ***O. zeylanica***, *Hook. f. Ic. Plant.* t. 1782 A; leaves linear ensiform obtuse, scape flattened with a small adnate leaf about the middle, spike shorter than the leaves decurved, flowers loosely imbricate, bracts ovate subentire, petals linear entire, lip quadrate quite entire or with obscure lobes at the outer angles. *O. Browneana*, *Thwaites Herb.* (C.P. 386v). *O. longibracteata*, *Thw. in part* (C.P. 543).

CEYLON; at Matelle East, *Beckett*; Hantani, *Thwaites*.

Leaves 4-7 by $\frac{1}{2}$ - $\frac{3}{4}$ in., nearly straight. *Scape* 3-4 in., about $\frac{1}{2}$ in. diam., stout, hardly compressed above the adnate leaf, which is very small. *Spike* 3 in., curved or decurved; flower $\frac{1}{10}$ in., pale. *Fruit* sessile.—I advance this species with much hesitation, for I suspect that there has been some confusion in the distribution of Thwaites' *Oberonias*, and more specimens are wanted of all.

21. **O. Wallichii**, *Hook. f.*; leaves short broad fleshy falcate obtuse, scape much flattened adnate below to a broad leaf, spike decurved, flowers densely imbricate, bracts ovate acuminate erose, lip quadrate or rounded tip retuse or 2-auricled. *O. iridifolia*, *Wall. Cat.* 1948/2 in part.

SILHET, De Silva.

Leaves 3-5 by $\frac{3}{4}$ -1 $\frac{1}{4}$ in., falcate. *Scape* $\frac{1}{4}$ in. broad above the adnate leaf. *Spike* 6 in., decurved; flowers $\frac{1}{10}$ in., sessile, sheathed in blunt bracteoles.—This is the Khasian *O. Brunoniana* of Lindley, which differs from the Peninsular plant in the very small flowers, and much shorter leaves and scapes.

22. **O. forcipata**, *Lindl. Fol. Orchid. Oberon.* 2; leaves ensiform obtuse or acute, scape slightly 2-winged short, spike long slender decurved, flowers minute sessile densely imbricate, bracts ovate acute erose or fimbriate, petals narrow, lip as broad as long quadrate entire or with obscure entire or toothed side lobes, or contracted into a forcipate terminal lobe. *Hook. f. Ic. Plant.* t. 1782 B. *Malaxis forcipata*, *Reichb. f. in Walp. Ann.* vi. 209.

CEYLON; Peradenya and Hewahetti district, alt. 1-3000 ft., *Thwaites.*

Leaves 4-5 by $\frac{1}{2}$ - $\frac{3}{4}$ in., slightly falcate. *Scape* 1-2 in., free; spike 4-7 in., covered with very pale flowers about $\frac{1}{10}$ in. long; bracts not exceeding the flowers; ovary very short; lip variable in form and when lobed in the abruptness of the line between the terminal and lateral lobes. *Capsules* short, sessile, turgid.—A very elegant species. Some specimens might almost be referred to the section with the terminal lobe of the lip produced.

23. **O. pachyrachis**, *Reichb. f. in Herb. Kew*; leaves 3-4 in. narrowly ensiform acuminate, scape very broad flat adnate to a leaf, spike straight, flowers sessile most densely imbricate on a very thick rachis, bracts very short semi-orbicular erose, petals narrow, lip orbicular or rounded-ovate quite entire.

TROPICAL HIMALAYA; Garwhal, *Falconer*. Kumaon, *Strachey & Winterbottom*. SIKIM, *J. D. H.*

Leaves 3-4 by $\frac{1}{2}$ - $\frac{1}{2}$ in., apparently flaccidly fleshy when fresh, base not broadened. *Scape* 2-4 in., very variable in breadth $\frac{1}{4}$ - $\frac{1}{2}$ in., with the adnate leaf in various positions and its free portion long and narrow or short broad and recurved; spike 4-5 in., rachis cylindric, tip slender; flowers very minute, about $\frac{1}{10}$ in., depressed on one another; lip concave towards the base. *Fruit* sessile, short, turgid, often gibbous, the ribs less prominent than usual in the genus.

β. Lip 3-lobed, side lobes large, midlobe much smaller.

24. **O. Brunoniana**, *Wight Ic.* t. 1622; leaves linear-oblong very coriaceous, scape much flattened and adnate to the upper leaf, spike erect, rachis very stout, bracts lanceolate erose, flowers sessile densely imbricate, petals narrow, lip orbicular with a short terminal auricle. *Lindl. Fol. Orchid. Oberon.* 2. *Malaxis Brunoniana*, *Reichb. f. in Walp. Ann.* vi. 209.

Mountains of CANARA, MALABAR and TRAVANCORE, *Wight, &c.*

Stem rather elongate. *Leaves* 6-14 by $\frac{3}{4}$ -1 $\frac{1}{4}$ in., succulent. *Scape* 2-8 in.; adnate leaf 1-4 in., variable in position. *Spike* 4-6 in., like a rat's tail; flowers $\frac{1}{2}$ - $\frac{1}{2}$ in.; lip dirty yellow, with an orbicular concave disk; terminal auricles variable.—Some of Wight's specimens have much longer, narrower and more acuminate leaves than those figured in his *Icones*.

25. **O. Lindleyana**, *Wight Ic.* t. 1624; leaves shortly broadly

ensiform obtuse or subacute, scape stout flattened, spike stout decurved, flowers sessile densely imbricated all round the stout rachis, bracts broadly ovate obtuse fimbriate, petals linear entire, lip rather longer than the sepals broadly 3-lobed crenate, midlobe broad rather smaller than the lateral 2-lobed. *Lindl. Fol. Orchid. Oberon.* 2. *Malaxis Lindleyana*, *Reichb. f. in Walp. Rep.* vi. 210.

NILGHIRI and TRAVANCORE MTS., *Wight, G. Thomson.*

Leaves 3-5 by $\frac{3}{4}$ -1 $\frac{1}{4}$ in., very fleshy, subfalcate, broad to the base. *Scape* with spike 4-6 in., very stout; flowers pale with an orange? centre of lip, about $\frac{1}{12}$ in. long; lip gland-dotted. *Capsules* small, sessile on the thickened rachis.—Very near *O. Brunoniana* & *Wallichiana*, but the midlobe of the lip is well developed though smaller than the side lobes together.

26. **O. platycaulon**, *Wight Ic. t.* 1623; leaves long narrowly ensiform straight subacute, scape very broad flat adnate to a leaf to the top, spike straight, flowers large densely imbricate, bracts broad sheathing the sessile ovary erose obtuse, petals narrow, lip with broad rounded lateral lobes and a very short 2-fid or 3-fid terminal one. *Lindl. Fol. Orchid. Oberon.* 2. *Malaxis platycaulon*, *Reichb. f. in Walp. Rep.* vi. 239.

On the WESTERN GHATS; from the Concan, *Graham*, to the Nilghiris, *Lobb*, and *Pulneys*, *Wight*.

Leaves 6-10 by $\frac{1}{2}$ - $\frac{3}{4}$ in., coriaceous. *Scape* shorter than the leaves, $\frac{1}{4}$ - $\frac{3}{4}$ in. broad, very coriaceous, with the apex of the adnate leaf at the base of the spike which is 3-5 in. with a stout rachis; flowers about $\frac{1}{2}$ in.; lip broader than long. *Fruit* sessile.—The largest-flowered Indian species. *O. platycaulon* of *Thwaites* is a very different species in fruit only.

27. **O. bicornis**, *Lindl. in Wall. Cat.* 1949; *Gen. & Sp. Orchid.* 16; *Fol. Orchid. Oberon.* 4; leaves very small membranous acute or obtuse, scape short very slender with subulate bracts, raceme short slender, bracts setaceous longer than the very minute flowers, petals narrow, lip much broader than long, side lobes ascending as erect horns, terminal very small quadrate. *Malaxis bicornis*, *Reichb. f. in Walp. Rep.* vi. 211.

KHASIA HILLS, *De Silva, J. D. H. & T. T.*

Leaves $\frac{1}{2}$ -1 in., straight or falcate, very thin when dry, nerveless. *Racemes* lengthening after flowering to twice the length of the leaves; rachis very slender, curved or flexuous; flowers about $\frac{1}{30}$ in., pale.

28. **O. tenuis**, *Lindl. Fol. Orchid. Oberon.* 3; leaves short linear-oblong obtuse or acute, scape bracteate and raceme very slender, bracts setaceous hyaline longer than the very minute pedicelled flowers, petals linear quite entire, lip with a very small short hatchet-shaped midlobe and linear erect incurved side lobes that form a circle round the ovary. *Hook. f. Ic. Plant. t.* 1779 B. *Malaxis tenuis*, *Reichb. f. in Walp. Ann.* vii. 211.

CEYLON; at Hittawahe, *Thwaites*.

Whole plant 2 $\frac{1}{2}$ in. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in. *Flowers* ochreous red; lip dark red. *Outer edge* of midlobes of lip truncate and obscurely 3-lobed.—Described from a single specimen and *Lindley's* drawing.

γ. Lip with no side lobes or very small or narrow ones, midlobe large or long.

29. **O. caulescens**, *Lindl. Fol. Orchid. Oberon.* 7; subcaulescent, leaves

linear acute or acuminate, scape terete bracteate, raceme very slender, bracts lanceolate, flowers subwhorled pedicelled, petals narrow, lip twice as long as the sepals obscurely lobed at the base with two acute parallel lobes at the tip and a short tooth in the sinus. *Wall. Cat.* 1950. *Malaxis caulescens*, *Reichb. f. in Walp. Ann.* vi. 215.

NEPAT, *Wallich*. KHASIA HILLS, *Lobb*, Kala Panee and Pomrang, alt. 5000 ft., *J. D. H. & T. T.*

Stem 2-3 in., rather slender. *Leaves* 2-3 by $\frac{1}{2}$ in. *Scape* with the raceme, 2-3 in.; flowers pale, about $\frac{1}{10}$ in. *Capsules* on slender pedicels.

30. **O. ruflabris**, *Lindl. Sert. Orchid.* t. 8 A; *Fol. Orchid. Oberon.* 5; leaves small narrowly oblong thin, scape short with many setaceous spreading bracts and rachis filiform, spike very slender, flowers minute very shortly pedicelled in dense separate whorls, bracts setaceous, petals linear-oblong, lip longer than the sepals oblong with filiform lateral lobes close to the narrow base and two parallel short terminal lobes with recurved acute tips and a broad lobule in the sinus. *Malaxis ruflabris*, *Reichb. f. in Walp. Ann.* vi. 213.

BURMA, *Berkeley*; at Moulmein, *Griffith*.

Leaves 1-1 $\frac{1}{2}$ in., acute or obtuse. *Scape* and *raceme* together 1-2 in.; flowers $\frac{1}{12}$ - $\frac{1}{10}$ in.; lip red-brown; column with two subulate teeth.

♂. *Lip* with broad or long side lobes and a large midlobe.

31. **O. Scortechini**, *Hook. f.*; leaves long narrowly ensiform, raceme very long slender, bracts ovate-lanceolate as long as the pedicels, petals linear, lip 3-lobed, side lobes lanceolate longer than the small orbicular or rhomboid midlobe.

PERAK, *Scortechini*, *King's Collector*.

Rootstock creeping. *Leaves* 6-10 by $\frac{1}{4}$ - $\frac{1}{2}$ in., falcate, narrowed from the base to the acuminate tip. *Scape* short, cylindric, puberulous; raceme 12-18 in.; bracts white, $\frac{1}{12}$ in.; flowers yellowish; lateral sepals revolute, oblong, obtuse.—A very remarkable species with a stout creeping rootstock, quite unlike any other in the flowers, which more resemble those of a minute-fl. *Liparis*.

32. **O. Wightiana**, *Lindl. in Bot. Reg.* 1839, *Misc.* No. 9; *Fol. Orchid. Oberon.* 5; leaves short linear-oblong or ensiform acute, scape short terete naked or sparsely bracteate, raceme slender curved or decurved, flowers shortly pedicelled, bracts oblong or lanceolate erose, petals linear, lip equalling or exceeding the sepals, lateral lobes very large oblong or rounded terminal narrow with diverging often toothed lobes. *Wight Ic.* t. 1627; *Hook. f. Ic. Plant.* t. 1784 B. *O. Arnottiana*, *Wight l. c.* 1628. *O. stachyoides*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 15, t. 1 A. *Malaxis Wightiana*, *Reichb. f. in Walp. Ann.* vi. 212.

TRAVANCORE and NILGHIRI MTS., *Wight*, &c. CEYLON, *Walker*, &c.

Leaves 1-4 by $\frac{1}{4}$ - $\frac{1}{2}$ in., acute, rarely falcate. *Scape* and *raceme* together 3-6 in., usually decurved; bracts longer or shorter than the pedicels; flowers whorled or not, very variable in size, $\frac{1}{30}$ - $\frac{1}{10}$ in., pale yellow-green. *Capsules* long-pedicelled.—Resembles strongly *O. myriantha* & *verticillata*, from the first of which the lip distinguishes it, and the narrow petals from both. *O. Arnottiana* is, I think, a longer pedicelled variety. The variety figured in *Ic. Plant.* is a very small state.

33. **O. Treutleri**, *Hook. f. Ic. Plant.* t. 1786 A; subcaulescent leaves short linear oblong or oblong-lanceolate, scape adnate below to the upper leaf flat, above it very short bracteate, spike short, bracts ovate-lanceolate

acuminate erose, flowers in dense separate whorls minute subsessile, petals linear-oblong, lip hardly longer than the sepals thick subequally 3-lobed obscurely crenate, lateral lobes oblong or rounded, midlobe very shortly obcordate.

SIKKIM HIMALAYA, alt. 6000 ft., *Treutler*.

Leaves 1-2 by $\frac{1}{4}$ - $\frac{1}{2}$ in., rather thin, subalternate on the rather elongate stem. *Scape* and *spike* together $1\frac{1}{2}$ in. (above the leaf); bracts rather longer than the whorls; flowers about $\frac{1}{10}$ in.—The specimens are few, and resemble *O. demissa*, with the same tendency to elongation of the stem, which suggests its belonging to the caulescent group. The crowded separate whorls of flowers resemble those of *obcordata* and *rufilabris*; the size of the midlobe of the lip removes it from group with *O. Brunoniana*. Reichb. f. refers it to a form of *obcordata*, as var. *latifolia*, possibly rightly, but the foliage seems different.

34. ***O. anthropophora***, *Lindl. in Wall. Cat.* 1951; *Gen. & Sp. Orchid.* 16; $\frac{1}{2}$ *Fol. Orchid. Oberon.* 7; leaves narrowly linear, scape short sparsely bracteate, flowers very minute subwhorled, bracts ovate erose, petals linear, side lobes of lip rather broad decurved, midlobe elongate ending in two parallel tails. *Malaxis anthropophora*, *Reichb. f. in Walp. Ann.* vi. 215.

TENASSERIM, *Wallich*.

Stem 2 in. *Leaves* $\frac{1}{2}$ -2 by $\frac{1}{4}$ in. *Scape* with raceme 6 in.; flowers about $\frac{1}{10}$ in.; dorsal sepal small oblong, lateral much larger.—The specimens are very few.

35. ***O. obcordata***, *Lindl. Fol. Orchid. Oberon.* 7; leaves linear acute, scape very short, spike long or short, flowers very minute densely clustered in whorls which are much exceeded by the lanceolate bracts shortly pedicelled, petals linear-oblong or linear, lip with a narrow base oblong straight or falcate and long or short lateral lobes and a large obcordately 2-lobed terminal lobe. *Hook. f. Ic. Pl. t.* 1783. *Malaxis obcordata*, *Reichb. f. in Walp. Ann.* vi. 216.

SIKKIM HIMALAYA, *Griffith, J. D. H. & T. T.*, alt. 5-9000 ft., *Clarke*. KHASIA HILLS, alt. 5000 ft., *Griffith, Clarke*.

Stem 1-2 in., flat, flexuous. *Leaves* 1-1 $\frac{1}{2}$ by $\frac{1}{6}$ - $\frac{1}{4}$ in., usually falcate. *Scape* with spike 1-1 $\frac{1}{2}$ in.; flowers $\frac{1}{10}$ in., yellow.

VAR. ? *bracteata*; larger, bracts much larger $\frac{1}{4}$ in. long, flowers pink, lateral lobes of lip longer subacute midlobe narrower with shorter lobes.—Sikkim, at the foot of the hills, *Thomson*.—Perhaps a different species. The lip is more like that of the following.

36. ***O. angustifolia***, *Lindl. Fol. Orchid. Oberon.* 5; leaves narrow linear subacute, scape very short, spike short, bracts subulate exceeding the clusters of very minute flowers, petals ovate lanceolate, lip with oblong deflexed lateral lobes and a broad obcordate midlobe. *Malaxis angustifolia*, *Reichb. f. in Walp. Ann.* vi. 213.

KHASIA HILLS, *Lobb*; at Kala Panee and Pomrang, *J. D. H. & T. T.*

Stem rather slender, 2-4 in., flat, flexuous. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{2}$ by $\frac{1}{2}$ in., usually falcate. *Scape* with raceme 1-1 $\frac{1}{2}$ in.; flowers subsessile, $\frac{1}{10}$ in., pale. *Capsules* very small, shortly pedicelled.—More materials are wanted for a satisfactory description.

Sect. II. ***Scylla***. *Stem* short or 0. *Leaves* ensiform. *Sepals* very unequal, dorsal lanceolate, lateral very much larger, orbicular.

37. ***O. Scyllæ***, *Lindl. Fol. Orchid. Oberon.* 5; leaves linear, or lanceolate acuminate, scape with filiform flaccid bracts, raceme slender erect

or decurved, bracts subulate from a lanceolate base, petals and dorsal sepal incurved green ciliate, lip very small lunate entire crinite, lateral lobes erect on each side the column narrowly lanceolate. *Hook. f. Ic. Plant. t. 1781.* *Malaxis Scyllæ, Reichb. f. in Walp. Ann. vi. 213.*

CEYLON; Maturatte and Elephant Plains, alt. 4-6000 ft., *Thwaites.*

Stem very short or 0. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ by $\frac{1}{3}$ - $\frac{1}{2}$ in. *Scape* $1\frac{1}{2}$ in., crinite (in one specimen) with filiform flaccid hyaline bracts; raceme about as long; flowers whorled, longer than the bracts, about $\frac{1}{8}$ in. long, incurved, the lanceolate acuminate dorsal sepal and two petals being all quite equal and similar and curving upwards and inwards like the beak of a bird, whilst the orbicular hyaline lateral sepals look like a globose pouch at the base of the flower; the minute lip most resembles that of *O. tenuis*; its lateral lobes resemble a pair of erect horns.—A very singular plant.

Sect. III. **Myosurus.** *Leaves* all radical, elongate, terete, fleshy.

38. **O. Myosurus**, *Lindl. in Wall. Cat. 1947; Gen. & Sp. Orchid. 16; Fol. Orchid. Oberon. 8;* leaves 3-4 by $\frac{1}{2}$ in. diam. linear terete curved, scape very short stout bracteate, spike very short dense-fl., bracts lanceolate denticulate, petals narrow linear, lateral lobes of the lip rounded sinuate toothed, midlobe oblong-quadrate with toothed sides and two curved ascending spurs from each side of the truncate or retuse tip. *Hook. f. in Ic. Plant. t. 1786 B.* *Malaxis Myosurus, Walp. Ann. vi. 216.* *Epidendrum Myosurus, Forst. Prodr. No. 317.* *Dendrobium Myosurus, Swartz in Nov. Act. Upsal. vi. 82.*

NEPAL, *Wallich.* MOULMEIN, *Parish.*—DISTRIB. ? Society Islands.

A very singular plant. The leaves are described by Parish as papillose; the short stout scape is densely clothed with subulate bracts; the spike in the only specimen seen is less than half an inch long, with crowded pale minute shortly pedicelled flowers which are shorter than the bracts.

Sect. IV. **Caulescentes.** *Stem* elongate, with many equitant short cultriform leaves.

39. **O. anceps**, *Lindl. Sert. Orchid. under t. 8; Fol. Orchid. 6;* leaves ovate-oblong tip rounded, spike stout subsessile dense-fl., bracts short broad erose, petals small broad, lip truncate tip crenulate. *O. imbricata, Wight Ic. t. 1629 (not of Blume).* *O. Griffithii, Wight Ic. v. 4.* *Malaxis anceps, Reichb. f. in Walp. Ann. vi. 214.*

TENASSERIM, *Parish.* PERAK, *Scortechini, &c.* MALACCA, *Maingay.*—DISTRIB. Malay Islands.

Stems 12-18 in., stout, tufted, $\frac{1}{2}$ - $\frac{3}{4}$ in. across the leaves. *Leaves* suberect, subincurved. *Spike* 2-3 in.; flowers about $\frac{1}{10}$ in. *Capsule* sessile, globose.

40. **O. miniata**, *Lindl. in Bot. Reg. 1843, Misc. 8; Fol. Orchid. Oberon. 6;* leaves falcate acute, spike long slender lax-fl., pedicels pubescent, bracts lanceolate, petals oblong, lip fleshy base dilated concave narrowed into a linear emarginate tip. *Malaxis miniata, Reichb. f. in Walp. Ann. vi. 215.*

SINGAPORE (Hort. Loddiges).—DISTRIB. Philippine Islands.

Leaves 1- $1\frac{1}{2}$ in. *Raceme* 4-8 in., decurved, puberulous, lax-fl.; flowers $\frac{1}{10}$ in.; pedicels slender, $\frac{1}{12}$ in., longer than the membranous bracts.

41. **O. gracilis**, *Hook. f.;* slender, leaves straight suberect lanceolate acute, spike lax-fl., flowers subsessile, bracts very short triangular-ovate,

dorsal sepal orbicular, lateral ovate, petals linear, lip with two basal oblong cylindric obtuse ascending horns and a flat quadrate obtusely 2-fid midlobe.

PERAK; at the Kinla River, *King's Collector*.

Stems 6-8 in., tufted, flexuous; roots fibrous. Leaves 1 in., membranous when dry. Spike 4-6 in., flowering to the base; flowers reddish, $\frac{3}{10}$ in.

INDETERMINABLE SPECIES.

O. GARDNERIANA, *Thwaites Enum.* 296 (C.P. 593), closely allied to *Wightiana*, but flowers pale red, petals oblong denticulate.—Ceylon, Ambagamowa district, *Gardner*.

O. PLATYCAULON, *Thwaites* (C.P. 3913), in fruit only, is not Wight's plant of that name.

O. SPIRALIS, *Griff. Notul.* iii. 275, wants description and locality.

2. MICROSTYLIS, Nutt.

Terrestrial or epiphytic, pseudobulbous or not. Leaves 1 or more, continuous with their sheath. Flowers small, in terminal racemes, resupinate. Sepals spreading or recurved. Petals as long, slender. Lip adnate to the base of the column, usually flat, sides often produced upwards beyond the column as broad or long auricles. Column very short, with short spreading arms; anther subterminal, pollinia 4.—Species about 50, temperate and tropical.

* Sides of the lip produced upwards into large auricles.

† Apex of the lip entire or notched (not serrate or pubescent).

1. **M. Wallichii**, *Lindl. in Wall. Cat.* 1938; *Gen. & Sp. Orchid.* 20; leaves 2-4, bracts spreading shorter than the ovary, auricles of the lip acute or obtuse, blade with a rounded notched or bifid tip. *Ridley in Journ. Linn. Soc.* xxiv. 337. *Malaxis acuminata*, *Don Prodr.* 29 (note in *Herb. Wall.*).

TEMPERATE and SUBTROPICAL HIMALAYA, alt. 4-7000 ft., from Simla to Sikkim. KHASIA MTS., alt. 5-6000 ft., *J. D. H. & T. T.* ANDAMAN ISLANDS, *Kurz*. TRAVANCORE; on the Anamallay Hills, *Beddome* (*Ridley*).—DISTRIB. Cambodia.

Stem 2-3 in. Leaves 3-5 in., sessile or petioled, ovate-lanceolate, often discoloured. Scape 3-8 in. Flowers about $\frac{1}{2}$ in. long, greenish purplish or yellowish; sepals oblong, dorsal 1-3-nerved, lateral 3-5-nerved; petals 3-nerved; auricles of lip very variable. The Andaman specimen has an acute lip.—A very variable plant, if, as I think, the following are varieties.

VAR. *omphaloides*, *Parish*; leaves more unequal at the base, auricles of lip rounded and overlapping, *Ridley l. c.* 338.—Moulmein, *Parish*.

VAR. *biloba*; bracts usually longer, pedicels shorter, blade of lip contracted below the level of the column, tip bifid, arms of column larger. *M. biloba*, *Lindl. in Wall. Cat.* 1940; *Gen. & Sp. Orchid.* 20; *Ridley l. c.* 337.—Nepal, &c.—Wallich's 1940 is a mixture of specimens from Kuwaon, Nepal and Burma.

VAR. *brachycheila*; leaves lanceolate, auricles acute, blade very short with a forcipate tip.—Moulmein, *Parish*.

2. **M. khasiana**, *Hook. f.*; leaves 3-4 petioled ovate or lanceolate, bracts spreading equalling the ovary, sepals broad hooded, auricles of

concave lip obtuse dilated below, blade constricted into a broadly subreniform rounded or obcordate terminal lobe.

KHASIA Mts., alt. 4-5000 ft., *Lobb, &c.*

Stem 1-2 in. *Leaves* 3-5 in. *Flowers* $\frac{1}{2}$ in. across, chestnut-red; auricles of lip shorter than or equalling the blade.—This is the chestnut-red flowered plant alluded to by Ridley under *M. Wallichiana*, from which it differs in the small flowers, short pedicels, and form of the lateral sepals and lip.

3. ***M. blaurita***, *Lindl. in Wall. Cat.* 1941; *Gen. & Sp. Orchid.* 30; leaves 3-5 rather small sessile, bracts equalling the ovary, auricles of lip narrowed into the triangular-ovate blade, arms of the sessile column large rounded crenulate. *Ridley in Journ. Linn. Soc.* xxiv. 335.

KHASIA Mts., *Wallich.* ? SOUTH ANDAMAN ISLANDS, *Kurz.*

Leaves basal, 2-3 in. *Scape* stout, 3-6 in. *Flowers* smaller than in *Wallichii*, yellow? pedicel $\frac{1}{2}$ in.; dorsal sepal narrow; lip ovate-lanceolate in outline, auricles acute.—Pundua, the locality assigned to this and other of Wallich's collections, includes the Khasia Mts.

4. ***M. purpurea***, *Lindl. Gen. & Sp. Orchid.* 20; leaves 4-6 petioled base very unequal, bracts equalling or shorter than the ovary, auricles of the concave lip dilating downwards and then narrowing to the obtusely 2-fid tip, column very short, arms obscure. *Ridley in Journ. Linn. Soc.* xxiv. 340.

CEYLON, *Macrae*; near Galle, alt. 1000 ft., *Thwaites.*

Leaves 4-5 by 2-2 $\frac{1}{2}$ in., on a stout sheathed stem 3-4 in. high. *Scape* 6-10 in. *Flowers* dark purple, $\frac{1}{2}$ in. from tip of broad flat 3-nerved dorsal sepal to tip of lip; lip rather fleshy and very concave, auricles obtuse, broad sides of blade almost like lobes.

5. ***M. Josephiana***, *Reichb. f. in Bot. Mag.* t. 6325; leaves 4-5 sessile, scape stout acutely angled few-fld., bracts much shorter than the ovary, flowers large, sepals broad revolute, lip cucullate deeply cupped, auricles short broad rounded, column very stout thickly winged. *Ridley in Journ. Linn. Soc.* xxiv. 336.

TROPICAL SIKKIM HIMALAYA, *Anderson, Gammie, Clarke.*

Pseudobulbs 2-4 in., narrowly ovoid, compressed; stem from the base of the pseudobulb, short. *Leaves* 3-4 in., elliptic-lanceolate, acuminate, plumed, often purplish-brown above. *Scape* and *raceme* 8-10 in.; pedicels $\frac{1}{2}$ in. *Flowers* $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., golden-yellow blotched with red-brown round the column; sepals connate at the base, dorsal saccate at the base, all 3-nerved; petals broadly linear, revolute; lip forming a deep hemispheric cup.—A remarkable species, like a *Eulophia*. My specimens are not good.

6. ***M. Scottii***, *Hook. f.*; leaves 2-5 sessile obliquely ovate acuminate crenate blackish brown with a broad pale dotted border, scape elongate red, bracts reflexed, lateral sepals broadly oblong half the length of the linear-oblong dorsal and petals, lip green rhomboidly orbicular, auricles erect obtuse as long as the broad rounded blade which has a contracted 2-fid apex.

PEGU; at Rangoon, *Scott.*

Leaves 3-4 in., falcate, 5-7-nerved from the base, most remarkable for their colouring. *Scape* 6-8 in. *Lip* $\frac{1}{2}$ in. long and broad.—A beautifully coloured species, which I have named after the late Mr. John Scott, of the Calcutta Botanical Garden, who discovered it at Rangoon. It is eminently worth cultivating. Described from a drawing in Herb. Calcutt.

†† *Blade of lip toothed or pectinate.*

7. ***M. plantaginea***, *Steud. Nomencl.* ii. 144; leaves about 6 long-petioled elliptic, scape short, raceme long, bracts lanceolate deflexed, lip with the long erect auricles much longer than rounded pectinate blade, column with incurved arms. *Cuzent. Tahiti* 239. *M. Rheedii*, *Lindl. Gen. & Sp. Orchid.* 21 (*excl. syn. Rheede*); *Ridley in Journ. Linn. Soc.* xxiv. 342. *M. bella*, *Reichb. f. in Gard. Chron.* 1886, 8; *Ill. Hort* t. 581. *Malaxis Rheedii*, *Swartz in Act. Holm.* 1800, 235; *Willd. Sp. Pl.* iv. i. 90. *Crepidium Rheedii*, *Blume Bijl.* 387, f. 63. *Pterochilus plantagineus*, *Hook. & Arn. Bot. Beech. Voy.* 71, t. 17. *Epidendrum resupinatum*, *Forst. Prodr.* No. 322.

PERAK, *Scortechini*, *King's Collector*.—DISTRIB. Java, Society Islands, Tahiti.

Rootstock stout, creeping; stem 1–4 in., stout. *Leaves* 4–6 in., base very unequal; petiole $\frac{1}{2}$ –2 in. *Scape* with *raceme* 4–6 in.; flowers $\frac{3}{4}$ in. long, purple or greenish; disk of lip concave, teeth incurved.—Blume, following Willdenow and Swartz, referred this to *Rheede's* xii. t. 57, which is, as Wight first showed, a very different species (see *M. Rheedii*, Wight).

8. ***M. polyodon***, *Hook. f.*; leaves 5 petioled elliptic, scape stout, bracts minute, auricles of lip broad erect, blade rounded or subquadrate pectinately toothed, column short, arms spreading. *M. Rheedii*, *Reichb. f. in Trans. Linn. Soc.* xxx. 138 (not of Wight, Lindley or Willdenow).

TENASSERIM; at MOULMEIN, *Parish*.

Stem short, stout, base tuberos. *Leaves* 3–5 in., exclusive of the broad petiole. *Scape* 4 in.; *raceme* 6 in., many-fl.; pedicels $\frac{1}{2}$ in. *Flowers* yellow, about $\frac{1}{2}$ in. across the sepals; disk of lip with a raised 3-lobed callus surrounding the central pit.—I have seen only one specimen; it is referred to *M. Rheedii* by Parish and Reichb. f., from which it differs in the minute bracts, colour of flower, and blade of lip toothed all round.

9. ***M. acutangula***, *Hook. f. Ic. Pl.* t. 1835; leaves 3–5 shortly petioled lanceolate acuminate, scape stout flowering to the base, bracts lanceolate deflexed, lip with triangular acute auricles thin outer margins terminating downwards in an acute angle, blade much narrower and shorter than the auricles deeply pectinate all round or on each side with a broad rounded sinus at the tip, arms of the column large rounded.

PERAK; at Batang Padong (*Wray in Herb. Calcutt.*).

Stem short, very stout. *Leaves* 4–7 in., 5–7-nerved, acuminate, bases subequal. *Raceme* 9 in.; lower bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., very slender; pedicels $\frac{1}{2}$ in., slender; flowers nearly $\frac{1}{2}$ in. broad, white; sepals 3-nerved; lip with a large central concavity with raised edges.

10. ***M. micrantha***, *Hook. f. Ic. Pl.* t. 1834; leaves 6–8 petioled ovate-lanceolate subacute, scape slender, bracts lanceolate deflexed, flowers minute, lip subquadrate, auricles erect subacute shorter than the broad blade which is pectinate with 3 long teeth on each side and two at the tip, arms of column small.

PERAK, *Scortechini*.

Rootstock creeping and rooting. *Leaves* 2–3 in., 5-nerved, base unequal, petiole $\frac{1}{2}$ –1 in. *Scape* and *raceme* together 7 in., slender; pedicels short; flowers $\frac{1}{2}$ in. across; sepals 3-nerved, obtuse; lip broadest below the auricles, or with the auricles diverging; laciniae all pointing downwards.—I have seen but one specimen.

** Sides of the lip not produced upwards into auricles.

† *Lip* quite entire, or bearded at the tip only.

11. **M. muscifera**, *Ridley in Journ. Linn. Soc.* xxx. 333; leaves 2 sessile or petioled, bracts equalling or shorter than the pedicels, flowers minute, lip ovate acute, margins thickened, column sessile, arms very short. *Dienia muscifera*, *Lindl. in Wall. Cat.* 1935; *Gen. & Sp. Orchid.* 23.

TEMPERATE HIMALAYA, alt. 8-12,000 ft., from Kashmir to Sikkim.—DISTRIB. Afghanistan.

Variable in size, 6-18 in.; stem tuberous at the base, sheathed. *Leaves* 2-4 in., oblong or rounded, obtuse. *Scape* about equalling the raceme, together 4-10 in.; flowers yellow green, $\frac{1}{10}$ in. broad; pedicel $\frac{1}{2}$ - $\frac{1}{3}$ in., erect.

12. **M. cylindrostachya**, *Reichb. f. in Walp. Ann.* vi. 207; leaf solitary, bracts equalling or shorter than the pedicels, lip ovate acute, margins thickened, column stout, arms none. *Ridley in Journ. Linn. Soc.* xxiv. 333. *Dienia cylindrostachya*, *Lindl. in Wall. Cat.* 1934; *Gen. & Sp. Orchid.* 22.

TEMPERATE HIMALAYA; from Simla, alt. 7-8000 ft., to Sikkim, alt. 8-12,000 ft. CENTRAL INDIA, *Hope (in Herb. Clarke)*.

Habit, &c., of *M. muscifera*, but leaf solitary, stem and scape usually more slender (but often very stout) and frequently curved or flexuous; pedicels shorter and column longer.—*Ridley* gives by error Sylhet Wallich as a locality, and omits Sikkim where it is abundant.

13. **M. discolor**, *Lindl. Gen. & Sp. Orchid.* 20; leaves 3-6 broad, margins crisped, bracts equalling or exceeding the pedicels, flowers minute, lip ovate-cordate or subreniform tip rounded, column short, arms long. *Thwaites Enum.* 297; *Ridley in Journ. Linn. Soc.* xxiv. 336; *Reichb. f. in Walp. Ann.* vi. 206; *Wight Ic. t.* 1631; *Bot. Mag. t.* 5403.

CEYLON; in the Central Province, *Walker, Thwaites*.

Stem stout below, base not tuberous. *Leaves* 2-3 in. long and broad, subcavately acuminate, dark vinous purple with a green crisped margin. *Scape* and *raceme* 2-3 in.; pedicels about $\frac{1}{12}$ in.; flowers yellow in bud, then red; lip with a yellow margin.—*Wight* represents the lip as obscurely 3-lobed.

14. **M. Maingayi**, *Hook. f. Ic. Pl. t.* 1826; leaf large radical sessile amplexicaul, scape short stout, bracts lanceolate, lip cuneate-oblong with 3-4 long teeth at each angle of the truncate tip, column rather long, arms obscure.

—PENANG, Maingay (*Kew Distrib.* 1602).

Stem very short, tuberous. *Leaf* 6 by 3½ in. or less, broadly elliptic, acuminate, very many-nerved. *Scape* and *raceme* together about equalling the leaf, stout; pedicels ½ in., filiform; flowers ½ in. long; sepals subequal, narrowly oblong, petals very narrow; lip slightly dilated towards the tip, coriaceous.

VAR. ? *Kunstleri*; lip longer, angles of tip fimbriate, flower dark blue.—Perak, alt. 3500 ft., *King's Collector*.

†† *Lip* 2-3-lobed or cleft.

15. **M. congesta**, *Reichb. f. in Walp. Ann.* vi. 206; leaves 3-6 lanceolate, bracts shorter than the very short pedicels, flowers minute, lip subquadrately ovate concave with a fold under the column and a 3-lobed apex. *Ridley in Journ. Linn. Soc.* xxiv. 334. *M. Bernaysii*, *F. Muell. Fragment.* xi. 21. *M. fusca*, *Reichb. f. l. c.* 207. *M. trilobulata*, *Kurz*

Andam. Rep. App. B. xix.; *N. E. Br. in Gard. Chron.* 1833, 392. *M. flavescens*, *Lindl. Gen. & Sp. Orchid.* 20; *Ridley l.c.* 337. *M. fusca*, *Reichb. f. in Walp. Ann.* vi. 207. *Dienia congesta*, *Lindl. in Wall. Cat.* 1936; *Gen. & Sp. Orchid.* 22; in *Bot. Reg.* under t. 825; *Reichb. f. in Bonpland.* iii. 259. *D. fusca*, *Lindl. Gen. & Sp. Orchid. l.c.* *Malaxis latifolia*, *Smith in Rees Cyclop.* *M. plicata*, *Roxb. Fl. Ind.* iii. 456. *Crepidium flavescens*, *Blume Bijl.* 388.

TROPICAL HIMALAYA; from Nepal eastwards. KHASIA MTS. and MUNNIPORE, BEHAR on Parusnath, *Clarke*. BURMA, the ANDAMAN ISLANDS, the DECCAN PENINSULA and CEYLON.—DISTRIB. Malay Islands, China, Australia.

Stem 2-6 in., stout, base tuberosus. *Leaves* 3-10 in., sessile or petioled, ovate elliptic or lanceolate. *Scape* with *raceme* 2-8 in., stout or slender; pedicel $\frac{1}{2}$ in.; ovary trigonous and grooved; flowers $\frac{1}{8}$ - $\frac{1}{10}$ in., yellow green to pale brown or purplish. *Capsules* $\frac{1}{2}$ in., crowded, erect.

16. ***M. parvula***, *Hook. f. Ic. Pl.* t. 1827 B; leaf small solitary sessile on the small globose pseudobulb ovate acuminate, bracts minute, flowers very minute, sepals broad 1-nerved, lip narrowly panduriform papillose terminating in two slender tails separated by a broad sinus, column-arms rounded spreading.

PERAK; on rocks, alt. 3-4000 ft., *King's Collector*.

Pseudobulb $\frac{1}{2}$ in. diam., sheathed. *Leaf* 1 in., membranous. *Scape* and *raceme* 2-3 in.; pedicels very short; flowers dark blue, $\frac{1}{10}$ in. across; sepals broadly oblong obtuse, and petals nearly flat; lip cellular, with an obtuse tooth or lobule between the tails, disk and 3 med. an obtuse ridges.

17. ***M. furcata***, *Hook. f. Ic. Pl.* t. 1827 A; leaf small solitary on the small subglobose pseudobulb elliptic and acute or ovate and acuminate, bracts lanceolate, flower very small, sepals obtuse 1-nerved, lip narrowly panduriform 2-lobed beyond the middle, lobes linear-oblong fimbriate on the outer edge, sinus subacute, column-arms spreading.

PERAK. *Scortechini*.

Pseudobulb $\frac{1}{2}$ in., sheathed. *Leaf* 1-2 $\frac{1}{2}$ in., membranous. *Scape* with *raceme* 2-5 in.; bracts shorter than the pedicels; flowers $\frac{1}{12}$ in. across; sepals oblong obtuse, and petals nearly flat; lip contracted at the middle, 3-nerved at the base.

††† *Lip crenulate, toothed or pectinate.*

18. ***M. Rheedii***, *Wight Ic.* t. 902 (*not of others*); stem stout, leaves 3-5 shortly petioled broadly ovate or elliptic, raceme elongate lax-flid., bracts lanceolate deflexed, lip rounded reniform or fan-shaped pectinate. *Dalz. & Gibs. Bomb. Fl.* 260 (*excl. syn.*); *Hook. f. Ic. Pl.* t. 1832. *M. versicolor*, *Lindl. Gen. & Sp. Orchid.* 21; *Wall. Cat.* 1939; *Ridley in Journ. Linn. Soc.* xxiv. 343. *Liparis prionchilus*, *Lodd. Bot. Cab.* t. 1751. ? *L. intermedia*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 17, *Malaxis Rheedii*, *Herb. Heyne*.—*Rheede Hort. Mal.* xii. t. 27.

The DECCAN PENINSULA, common in the Western Ghats.

Stem 3-6 in., slender or stout, stoloniferous. *Leaves* 3-7 by 1 $\frac{1}{2}$ -3 in., acute or acuminate, 5-7-nerved, base equal or not; petiole $\frac{1}{2}$ -3 in., rarely 0. *Scape* with *raceme* 4-12 in., stout or slender; flowers very variable in size and colour, greenish yellow or purplish, sweet-scented; sepals obtuse, dorsal often the longest and narrowest.—This is unquestionably *Rheede's* plant, to which the Javan and Pacific *M. plantaginea* has been erroneously referred. *Rheede* describes the abundant spiral vessels, which are so conspicuous in this genus and in *Liparis*.

19. **M. versicolor**, *Wight Ic. t. 901* (not of Lindl.); stem short, pseudobulb ovoid, leaves 2 rarely 3 sessile or shortly petioled ovate to lanceolate, raceme usually dense-fl., bracts lanceolate deflexed, flowers small, lip short cuneate or subreniform pectinately toothed, style-arms spreading subacute. *M. pratensis*, *Ridley in Journ. Linn. Soc. xxiv. 344*. *Liparis densiflora*, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 18, t. 1 B*.

The DECCAN PENINSULA; on the hills from the Nilghiris southwards. CEYLON; at Ratnapoora, *Thwaites*.

Nearly allied to *M. Rheedii*, but always small and pseudobulbous, with sessile or subsessile leaves and smaller flowers in denser spikes. The lip accords well, as does the column. Flowers yellow or purple. *Thwaites*, and, following him, *Ridley*, refer *Thwaites*' 2743 to *M. Rheedii*, but its habit and pseudobulbs are entirely those of *versicolor*; on the ticket *Thwaites* names it *M. luteola*, to which species also *Ridley* refers it (by oversight in one or the other case).

VAR. *luteola*; flowers larger. *M. luteola*, *Wight Ic. t. 1632*; *Ridley l. c. 345* (excl. *Hab. Ceylon*).—Nilghiri Hills, *Wight*.—I find no other difference than the size of the flower whereby to distinguish this from *M. versicolor*.

20. **M. lancifolia**, *Thwaites Enum. 269*; stemless, pseudobulb small or 0, leaves 5–8 rather long-petioled lanceolate acuminate, raceme dense-fl., bracts lanceolate suberect, flowers small, lip short almost semicircular with the convex margin to the column the other deeply 6–8-toothed, column stout, arms suberect. *Ridley in Journ. Linn. Soc. xxiv. 346*; *Hook. f. Ic. Plant. t. 1830*.

CEYLON; in the Saffragam and Ambagamowa districts, *Thwaites*.

Root fibrous. Leaves 2–4 by $\frac{1}{2}$ – $\frac{3}{4}$ in., 3-nerved; petiole $\frac{1}{4}$ – $1\frac{1}{4}$ in., rather slender. Scape and raceme 4–6 in.; flowers about $\frac{1}{2}$ in. across, yellow?—Resembles a narrow-leaved *M. versicolor* with long petioles. The suberect bract is an excellent character indicated by *Thwaites*.

21. **M. Stocksii**, *Hook. f. Ic. Pl. t. 1833*; leaves 2–3 shortly petioled ovate or ovate-lanceolate, bracts lanceolate deflexed, flowers rather large, lip much broader than long transversely oblong or very broadly flabelliform deeply palmately lobed strongly nerved, arms of column suberect rather broad. *M. luteola*, *Herb. Ind. Or. H.f. & T.* (not of *Wight*).

The DECCAN PENINSULA; on the Bababoodan Hills in Canara, *Stocks*, &c.

Stem 1–2 in. Leaves $1\frac{1}{2}$ –3 in., 3–5-nerved. Scape with raceme 2–4 in.; flowers yellow, $\frac{1}{2}$ in. across.—This differs from all the preceding species in the great breadth and deep lacinix of the lip, and further from *M. versicolor* (to the var. *luteola* of which it approaches in the large flowers) in the absence of pseudobulbs.

22. **M. crenulata**, *Ridley in Journ. Linn. Soc. xxiv. 346*; stem short hardly pseudobulbous, leaves 1 or 2 shortly petioled lanceolate, scape and raceme 4 in., bracts lanceolate deflexed, flowers small, lip shortly clawed rounded-reniform crenulate, column broader and shorter than in *M. Rheedii*.

WESTERN NILGHIRIS, *Beddome* (in *Herb. Mus. Brit.*).

The above description from the work quoted barely suffices to distinguish this from *M. Rheedii*, except by the fewer leaves, and less deeply cut lip.

3. LIPARIS, Richard.

Terrestrial or epiphytic; pseudobulbous or not. Leaves 1 or more,

membranous and continuous with their sheath, or thicker and jointed on the sheath or pseudobulb. *Flowers* small, in terminal racemes, resupinate. *Sepals* spreading, recurved or revolute, margins often revolute. *Petals* as long, very slender. *Lip* adnate to the base of the column, usually broad, deflexed from a very short base, or recurved. *Column* long, incurved, margined or winged towards the tip; anther terminal; pollinia 4.—Species about 100, temperate or tropical.

Sect. I. MOLLIFOLIÆ. *Leaves* membranous, not jointed at the base on their sheath or pseudobulb, usually broad, often petioled.

* *Lip* broad, abruptly deflexed from very base, flat or with deflexed sides. *Sepals* narrow and petals with recurved or revolute margins; lateral sepals usually placed under the lip.

† *Leaf* solitary.

1. ***L. cordifolia***, Hook. f. *Ic. Pl.* t. 1811; leaf solitary sessile broadly rounded-ovate deeply cordate amplexicaul, bracts small triangular or lanceolate, pedicels long filiform, sepals lanceolate acute 3-nerved, lip large flat obcordate or orbicular-obovate apiculate crenulate, column very slender incurved.

NORTH-WEST HIMALAYA (drawing in *Herb. Kew*). SIKKIM; at Yoksun, alt. 6000 ft., Clarke. KHASIA MTS., alt. 3-6000 ft., Griffith, J. D. H. & T. T. (*Liparis*, No. 8).

Pseudobulbs short, stout, crowded. *Stem* short, stout. *Leaves* 2-5 by $1\frac{1}{2}$ -4 in., acuminate; nerves distant, faint. *Scape* naked, with the raceme 4-5 in. *Sepals* lanceolate, 3-nerved; lip $\frac{3}{4}$ - $\frac{1}{2}$ in. long, yellow-green, base narrow, callus obscure. *Column* obscurely winged.—Referred to *L. rupestris*, Griff., by Ridley, but the flowers are large and the bracts minute.

2. ***L. rupestris***, Griff. *Notul.* iii. 276; "pseudobulb formed after flowering obpyriform sheathed, leaf solitary petioled broadly cordate acute, scape angled and winged, bracts minute lanceolate much shorter than the pedicels, flowers small resupinate, sepals linear convolute, lateral placed under the flat oblong membranous veined lip, column forming a semicircle top clavate margined."—Griffith.

KHASIA MTS.; on rocks at Nunklow, Griffith.

I know of no Khasian small-flowered plant answering to this description, nor can I follow Ridley in his reference to it of Reichenbach's *L. rostrata*, or of the Nunklow plant of myself and Thomson (which is, I think, *nepalensis*), or of Royle's and Thomson's N.W. Indian species. Ridley's var. *purpurascens*, with 2 leaves, from Sikkim, collected by myself, is *L. pulchella*.

3. ***L. Thwaitesii***, Hook. f.; leaf solitary petioled ovate-cordate acute 5-nerved, bracts lanceolate, sepals lanceolate 3-nerved, lip broadly oblong or subovate retuse base 2-toothed, column slender incurved with 2 erect teeth. *L. Wightiana* in part, *Thwaites Enum.* 294; Ridley in *Journ. Linn. Soc.* xxii. 278.

CEYLON; in the Central Province, alt. 3-5000 ft., Thwaites (C.P. 3179).

Pseudobulbs tufted; stem 1-3 in., rather slender, sheaths acute. *Leaf* 2-3 in., crenulate, nerves strong. *Scape* 2-6 in.; bracts $\frac{1}{2}$ in., shorter than the capillary pedicels; lip $\frac{1}{2}$ in. long, red-purple, covering the sepals, contracted below the narrow 2-auricled base.—Very different from Wight's *L. atropurpurea*, with which Thwaites and Ridley have united it, in the solitary petioled crenulate leaf, column, &c.

4. **L. Glossula**, *Reichb. f. in Linnæa* xli. 43; leaf sessile or shortly petioled oblong or linear-oblong obtuse or acute entire, scape stout, bracts long slender lanceolate, sepals lanceolate acute 3-nerved, lip large flat broadly obovate-oblong cuspidate crenulate, calli 0. *Ridley in Journ. Linn. Soc.* xxii. 268; *Hook. f. Ic. Pl.* t. 1809.

WESTERN and CENTRAL HIMALAYA; Kumaon, alt. 5-7500 ft., *Edgeworth, Strachey & Winterb.* (*Liparis nepalensis*), *Duthie*; Nepal, *Wallich*; Sikkim, at Chumbi, *King's Collector*.

Pseudobulbs large for the plant. *Stem* 1-3 in.; sheaths appressed, obtuse. *Leaf* 2-4 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in.; nerves many, slender. *Scape* 4-7 in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., shorter than the pedicels; lip $\frac{1}{2}$ - $\frac{3}{4}$ in. long, overlying the lateral sepals. *Column* not long, curved, wings very short.

5. **L. Gamblei**, *Hook. f. Ic. Pl.* t. 1812; leaf sessile oblong obtuse or acute often crenulate, scape stout, bracts short ovate acute, sepals oblong-lanceolate obtuse 3-nerved, lip elliptic acute crenulate sides reflexed, calli 2 small near the base, column slender incurved with notched wings.

SIKKIM HIMALAYA; at Rungbee, *Clarke*; Sinchul, alt. 6500 ft., *Gamble*.

Habit of *L. Glossula*, but leaf often crenulate, bracts much broader, flowers much smaller, and lip very different.

6. **L. diodon**, *Reichb. f. in Linnæa* xli. 43; leaf elongate spatulate fleshy membranous oblong obtuse, scape angled naked, bracts minute, sepals linear, petals filiform, lip cuneate and angled on both sides at the base then dilated subquadrate crenulate at the end and apiculate column slender curved 2-toothed at the base. *Ridley l. c.* 285.

N.W. HIMALAYA; Kumaon, in the Debra Doon, *Hort. Wil. Sanders*.

The "fleshy membranous" leaf is anomalous. *Reichenbach* places this amongst the *Mollifolia*. *Ridley* removes it to *Coriifolia*, but gives no reason.

†† Leaves 2, rarely 3.

7. **L. nepalensis**, *Lindl. in Wall. Cat.* 1945; *Bot. Reg. sub. t.* 882; *Gen. & Sp. Orchid.* 28; leaves 2 large petioled from ovate to orbicular acute base rounded or cordate, bracts large lanceolate, sepals lanceolate acuminate, lip sessile ovate or ovate-lanceolate acuminate, calli small, column incurved, wings obscure. *Ridley in Journ. Linn. Soc.* xxii. 278. *Malaxis cordifolia*, *Smith in Rees Cyclop.* *Acianthus petiolatus*, *Don Prodr.* 29.

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 3-5000 ft., *Griffith, &c.* KHASIA HILLS, *J. D. H. & T. T.*

Rootstock creeping, stout; *pseudobulbs* short, $\frac{3}{4}$ -1 in.; *stem* usually developed, $\frac{1}{2}$ -3 in. *Leaves* usually both petioled, but upper sometimes sessile on the scape. *Scape* and *raceme* 4-10 in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in.; pedicels $\frac{1}{2}$ in.; lip $\frac{1}{2}$ in. long or less, dark purple; base not amplexicaul, sides reflexed.

8. **L. pulchella**, *Hook. f. Ic. Pl.* t. 1810; leaves 2 broadly ovate-cordate subacute radical long-petioled or one sessile on the slender scape the other free, racemes few- and lax-fl., bracts lanceolate, sepals lanceolate 3-nerved green, lip flat broadly orbicular-oblong retuse or obtuse and petals purple, column very slender incurved with a small decurved rounded or tooth-like wing. *L. rupestris*, *var. purpurascens*, *Ridley l. c.* 268.

KHASIA Mts.; at Myrung, Moflong and Surureem, alt. 5-6000 ft., *J. D. H. & T. T.* (*Liparis*, No. 7). NAGA HILLS, *Prairie*.

Rootstock slender, creeping; *pseudobulbs* $\frac{1}{2}$ in.; *stem* slender, 1-3 in. *Leaves*

1½–2 in., subacute, nerves very faint; petiole as long, slender. *Scape* and *raceme* 3–6 in., slender; bracts ¼–½ in.; pedicels slender; lip ½ in. long, calli very obscure, base rounded.—Near *L. nepalensis*, but much smaller, more slender, and with lip of a different shape and a column with hooked wings.

9. ***L. rostrata***, *Reichb. f. in Linnæa* xli. 44; leaves 2 opposite sessile or petioled elliptic ovate or oblong obtuse or subacute narrowed at the base, bracts small broad, sepals lanceolate 3-nerved, lip very broadly obcordate flat crenulate apiculate yellow-green, calli 0, column short rather stout incurved with a small rounded wing. *Hook. f. Ic. Pl.* t. 1813. *L. olivacea* in part, *Herb. Ind. Or. H. f. & T.* (not of Lindl.). *L. rupestris* in part, *Ridley in Journ. Linn. Soc.* xxii. 145 (not of Griffith).

TEMPERATE HIMALAYA, *Royle*; Simla, alt. 6–8000 ft., *Thomson*; Kumaon, 5–7000 ft., *Edgeworth*.

Pseudobulb ½–¾ in., tufted on a short rootstock, broadly ovoid; stem stout, erect, 1–3 in. *Leaves* ½–3 in.; petiole broad. *Scape* stout with the *raceme* 2–6 in.; bracts ½–¾ in., base broad; pedicels slender, ¼–½ in.; lip ½–¾ in. broad, base contracted, cordate, calli 0.—Differs conspicuously from *L. olivacea* in the small bracts. *Ridley* has referred this to Griffith's *rupestris*, and gives Assam and the Khasia Mts. as localities. It cannot, however, be Griffith's *rupestris* (which has a solitary cordate leaf and lanceolate bracts), nor is it a Khasian plant. It is certainly *Reichenbach's rostrata*, under which that author refers to the specimen in *Lindley's* herbarium fastened on a sheet with *L. olivacea*.

10. ***L. Cathcartii***, *Hook. f. Ic. Pl.* t. 1808; leaves 2 opposite petioled oblong ovate or subcordate, bracts minute broad, sepals lanceolate acuminate 3-nerved, lip obcordate or rounded obovate flat entire or obscurely crenulate, calli 2 basal elongate, column long and very slender curved truncate with very obscure rounded wings. *L. rupestris* in part, *Ridley in Journ. Linn. Soc.* xxii. 145 (not of Griffith).

SIKKIM HIMALAYA, alt. 8–10 000 ft., *J. D. H., Clarke*.

Habit of *L. rostrata*, but with a narrower lip and very different column. A figure of apparently this species is amongst the *Cathcart* drawings in *Herb. Kew* with a straw-coloured lip; in my specimens the lip was pale purple.

11. ***L. olivacea***, *Lindl. in Wall. Cat.* 1942; *Gen. & Sp. Orchid.* 27; leaves 2 opposite sessile lanceolate acuminate plicate, bracts linear-lanceolate deflexed, sepals linear-oblong obtuse 5-nerved, lip flat orbicular subcrenulate, calli 2-tubercled, column rather stout slightly curved, wings very narrow. *Ridley in Journ. Linn. Soc.* xxii. 263.

NFPAL. *Wallich*.

Pseudobulb small, pyriform; stem 1 in., sheathed. *Leaves* 2½–3 in., spreading, 5-nerved. *Scape* 3–5 in., stout; pedicels about ½ in.; lip ¼ in. diam., suddenly contracted into a very short narrow neck, veined.—I have seen only *Wallich's* three specimens.

12. ***L. campylostalis***, *Reichb. f. in Linnæa* xli. 43; pseudobulb tunicate, leaves 2 cuneate oblong obtusely acute, scape angular, bracts most minute triangular, flowers as large as *L. Loeselii*, sepals linear-lanceolate, lip embracing the base of the column obtusely 5-angled behind retuse in front, callus 0, column curved broader near the fovea. *Ridley in Journ. Linn. Soc.* xxii. 273.

INDIA; locality unknown.

Evidently near *L. Cathcartii*, which, however, has an obcordate lip.

13. **L. platyphylla**, *Ridley in Journ. Linn. Soc.* xxii. 265; stem slender, leaves 2 spreading ovate or ovate-lanceolate acute 7-nerved, bracts lanceolate, at length reflexed equalling the pedicels, sepals lanceolate ligulate, lip orbicular-obovate subretuse crenulate 2-tubercled, column short thickish, wings long narrow obtuse.

TRAVANCORE; on the Anamallay Hills, alt. 3500 ft., *Beddome*.

Stem 1-2 in. *Leaves* 4 by 3 in. *Scape* a foot, weak, many-fl. — Allied to *L. olivacea*, but differing in the broader leaves and crenulate lip. Description from *Ridley*, l. c.

14. **L. Wightiana**, *Thwaites Enum.* 295; leaves 2 opposite sessile ovate-lanceolate acuminate, bracts lanceolate, sepals lanceolate acuminate 3-nerved, lip orbicular or orbicular-oblong flat dull purple entire, calli 2 minute, column very slender sigmoidly incurved, wings very obscure. *Ridley in Journ. Linn. Soc.* xxii. 278. *L. atropurpurea*, *Wight Ic.* t. 904 (not of *Lindl.*).

TRAVANCORE? on the Pulney Mts., *Wight*. CEYLON, *Walker*; Central Province, alt. 3-5000 ft., *Thwaites*.

A small delicate species. *Pseudobulbs* tufted; stem very short. *Leaves* 1½-2 in. *Scape* with *raceme* 2-4 in.; bracts ½ in. shorter than the capillary pedicels; lip ¾-1 in. long. — I have seen no Travancore specimens.

15. **L. Beddomei**, *Ridley in Journ. Linn. Soc.* xxii. 268; leaves 2 rarely 3 ovate-lanceolate acuminate, scape angled, bracts minute, sepals narrowly ligulate, lip flat orbicular-oblong obtuse green with a purple spot on the disk, column very slender arched, wings minute.

TRAVANCORE; on the Pulney Mts., alt. 5000 ft., *Beddome*.

This, which inhabits the same mountains as *L. Wightiana*, appears to differ only in the minute bracts ¼ in. long. I have seen no specimens.

16. **L. venosa**, *Ridley in Journ. Linn. Soc.* xxiv. 350; tall, stout, leaves 2 opposite, sepals broadly ovate, bracts minute, pedicels long slender, sepals lanceolate 5-nerved, lip flat obovately obcordate retuse with a semilunar ridge at the base, column short straight, wings decurrent.

MALACCA, *Maingay (Kew Distrib.* 1600). PERAK, *Scortechini*. SINGAPORE (a drawing).

Rootstock creeping, as thick as the little finger, with crowded tufts of thick roots; stem short, stout, sheathed. *Leaves* 2-3 in. broad, nerves red beneath. *Scape* and *raceme* stout, 2 ft.; flowers scattered; pedicels very slender, ½-1 in. *Sepals* nearly ½ in. long, yellow. *Lip* sessile, but not embracing the column, red purple. — The specimens are very badly preserved.

17. **L. Trimenii**, *Ridley in Journ. Linn. Soc.* xxiv. 350; small, leaves 2 unequal ovate-lanceolate, scape terete, bracts lanceolate, flowers shortly pedicelled, bracts erecto-patent, lip flat broadly elliptic obtuse, margins faintly waved, tip rounded, calli 2 small basal, column long incurved, wings minute. *Hook. f. Ic. Pl.* t. 1836.

CEYLON; at Hangkela, *Trimen*.

Pseudobulb not developed. *Leaves* 1-1½ in., 5-nerved. *Scape* with *raceme* 1-3 in.; bracts about equalling the pedicels. *Lip* sessile, not embracing the column, ½ in. long. — I am indebted to Dr. Trimen for specimens. Except by its much smaller size, it is undistinguishable from *L. Wightiana*, *Thw.*

** Lip usually broad deflexed or recurved. Lateral sepals spreading.

† *Bracts very small, short.* (See also *L. paradoxa* & *brachyglottis*.)

18. ***L. bituberculata***, *Lindl. in Bot. Reg. sub. t. 882*; stem usually tall, leaves 2 or more subopposite sessile or petioled elliptic-lanceolate acute, bracts minute broad, sepals linear-oblong obtuse, lip decurved cuneately obovate retuse purple 2-tubercled, column curved, wings narrow rounded. *Ridley in Journ. Linn. Soc. xxii. 263.* *Empusa paradoxa, Wall. Cat. 1937/2.* *Cymbidium? bituberculatum, Hook. Exot. Fl. t. 116.* *Sturmia bituberculata, Reichenb. f. in Bonplandia, ii. 22.*

SUBTROPICAL HIMALAYA; Kumaon, *Blinkworth*; Nepal, *Wallich*; Sikkim, alt. 5-7000 ft., *Griffith, J. D. H.*

Stems 2-4 in., tufted, hardly pseudobulbous. *Leaves* 3-5 in., very variable, nerves rather strong. *Scape* stout, few- or many-flid.; bracts $\frac{1}{10}$ - $\frac{1}{10}$ in., ovate, acute; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Lateral sepals* often revolute or recurved. *Lip* shorter than the sepals, margins quite entire.—*Ridley* describes the bracts as lanceolate; they are very small, by which character the species is best distinguished from all its allies but the two following.

Var. ? khasiana, leaves broader more ovate or orbicular-ovate sessile or shortly petioled, lip cuneately orbiculate, column much shorter and broader, capsule $\frac{1}{2}$ - $\frac{3}{4}$ in.—*Khasia Mts.*, alt. 4-6000 ft., *Griffith, &c.*—Perhaps a different species.

19. ***L. macrocarpa***, *Hook. f.*; tall, robust, leaves 4-6 large broadly petioled obliquely elliptic-ovate or oblong acuminate nerves 7 strong, bracts minute, capsules $1\frac{1}{4}$ - $1\frac{1}{2}$ in. elliptic-oblong.

SIKKIM HIMALAYA and the KHASIA MTS., in tropical forests, *J. D. H.*

Resembles a very large state of *L. bituberculata*, but is, I have no doubt, a very distinct species; the stem is sometimes as thick as the little finger, more or less naked and fleshy, the leaves very unequal at the base, with petioles 1-3 in., and the fruiting scape is 12-18 in. high.

20. ***L. acuminata***, *Hook. f.*; leaves 5-6 sessile erect broadly sheathing lanceolate finely acuminate, bracts minute ovate, flowers large, sepals spreading, lateral falcately oblong-lanceolate acute 5-nerved, dorsal linear, lip slightly recurved transversely oblong subcrenulate contracted into a short 2-tubercled neck, column slender incurved truncate, wings very small.

KHASIA MTS., *Griffith*.

Stem 3-5 in., many-sheathed to the base which is not swollen. *Leaves* very membranous, slightly recurved; nerves very slender. *Scape* 4-6 in.; bracts $\frac{1}{10}$ in., ovate; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in.; buds $\frac{1}{2}$ in., falcate; lip with erect sides, slightly recurved.

21. ***L. barbata***, *Lindl. Gen. & Sp. Orchid. 27*; small, leaves 2 opposite subsessile elliptic subacute, bracts minute broad, flower small pale, sepals obtuse, lateral oblong 3-nerved, dorsal rather longer and narrower 1-nerved, lip oblong, base 2-auricled 2-tubercled, tip truncate slightly dilated erose and subfimbriate, column incurved, wings short rounded toothed. *Ridley in Journ. Linn. Soc. xxii. 276.*

CEYLON, *Macrae*.

Stem $1\frac{1}{2}$ in., not pseudobulbous. *Leaves* 2 by $1\frac{1}{2}$ in., nerves very slender. *Scape* and *raceme* 2 in., pedicels $\frac{1}{2}$ in.; flower about as much across, apparently green.—Described from a solitary specimen in *Herb. Lindl.* I find in two flowers examined no trace of the hairs on the lip described by *Lindley* and *Ridley*.

†† *Bracts lanceolate* (shorter in *L. paradoxa* & *brachyglottis*).

22. **L. ferruginea**, Lindl. in *Gard. Chron.* 1848, 55; tall, leaves 4-6 subcoriaceous very narrowly linear-lanceolate acuminate, scape $1\frac{1}{2}$ -2 ft., bracts lanceolate, sepals 5-nerved, lateral falcately oblong obtuse spreading, dorsal longest linear-oblong obtuse, lip revolute cuneately obovate, base 2-auricled, apex shortly 3-lobed papillose beyond the middle, column short stout. *Ridley in Journ. Linn. Soc.* xxii. 264.

PERAK, *King's Collector*. MALACCA, *Griffith*.—DISTRIB. Borneo, Siam.

Stems tufted, swollen at the base. *Leaves* 6-12 by $\frac{1}{4}$ -1 in., subplicate, nerves strong. *Scape* sometimes as thick as a swan's quill, ribbed, nearly naked; bracts $\frac{1}{2}$ in.; pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in. *Dorsal sepals* $\frac{1}{2}$ in. long; lip yellow-brown. *Capsules* $\frac{1}{2}$ in., clavate, twice as long as their pedicels.

23. **L. Jovis pluviæ**, *Parish and Reichb. f. in Trans. Linn. Soc.* xxx. 155; stem short, leaves 2-4 sessile or petioled ovate to lanceolate acuminate, bracts lanceolate reflexed after flowering, flowers very small, sepals obtuse, lateral short falcately oblong obtuse 5-nerved, dorsal much longer lanceolate 3-nerved, lip recurved reniform crenulate base 2-tubercled, column incurved, wings short rather broad uncinatè.

TENASSERIM; at Mouhmein, *Lobb, Parish*.

Stem short, thickened, but hardly pseudobulbous below. *Leaves* 3-5 in., very membranous, 5-nerved, petiole broad if present. *Scape* 6-8 in., slender; bracts slender, $\frac{1}{2}$ in. and less; flowers about $\frac{1}{4}$ - $\frac{1}{2}$ in. diam.; lip variable in breadth, narrowed into a very short 2-auricled claw. *Capsule* clavate.—Flowers in the rainy season, whence the name.

24. **L. deflexa**, *Hook. f.*; stem short, leaves 2 opposite sessile or petioled ovate-lanceolate acuminate, scape tall, bracts slender at length deflexed, sepals 3-5-nerved obtuse, lateral oblong, dorsal longer oblong-lanceolate, lip flabelliform, calli obscure, column short straight flattened truncate, wings 0.

SIKKIM HIMALAYA; at Darjeeling, *Griffith's Collectors*.

Stem with a pseudobulbous base; sheaths few. *Leaves* 4-8 in., very membranous, 5-nerved. *Scape* and slender and many-fid. raceme 8-12 in.; bracts very slender, lower $\frac{1}{2}$ in.; pedicels $\frac{1}{2}$ in.; flower about $\frac{1}{2}$ in. across. *Lip* with a contracted 2-auricled base. *Column* compressed from back to front. *Capsule* $\frac{1}{2}$ in., clavate.—The column distinguishes this at once from *L. tuberculata* and *Jovis pluviæ*.

25. **L. stenoglossa**, *Parish and Reichb. f. in Trans. Linn. Soc.* xxx. 154; leaves 3-4 subradical petioled elliptic-lanceolate acuminate, scape slender lax-fld., bracts very long spreading lanceolate nearly as long as the ovary, sepals 5-nerved subacute, lateral spreading oblong-ovate, dorsal longer narrower, lip short reflexed cuneately obovate shortly broadly 2-lobed constricted above the middle, base 2-auricled and 2-tubercled, column incurved, wings very narrow. *Ridley in Journ. Linn. Soc.* xxii. 279.

TENASSERIM; at Moulmein, *Parish*.

Stems very short, tufted, base slightly swollen. *Leaves* 3-4 in., narrowed into a petiole $1\frac{1}{2}$ in. or shorter. *Scape* slender, 5-6 in.; bracts $\frac{1}{2}$ in.; flowers about as much across. *Lip* with a broad acute sinus at the broad tip.

26. **L. paradoxa**, *Reichb. f. in Walp. Ann.* vi. 218; leaves 1-5 sessile erect alternate sheathing lanceolate acuminate, nerves strong, scape stout

angular, bracts spreading ovate not reflexed after flowering lanceolate, flowers coriaceous, sepals short obtuse 5-nerved, lateral falcately oblong spreading and recurved, dorsal longer narrower, lip recurved cuneately obovate or obcordate, base 2-tubercled, column incurved, wings narrow. *Ridley in Journ. Linn. Soc.* xxii. 261. *L. odorata*, *Lindl. Gen. & Sp. Orchid.* 26; *Thwaites Enum.* 295. *Empusa paradoxa*, *Lindl. in Wall. Cat.* 1937 A in part; *Bot. Reg. sub. t.* 825; *Gen. & Sp. Orchid.* 17; *Miquel Prolus. Fl. Jap.* 135; *Thwaites Enum.* 426. *Empusaria* sp., *Reichb. f. Conspect.* 69. *Malaxis lancifolia*, *Smith in Rees Cyclop.* *M. odorata*, *Willd.—Rheede Hort. Mal.* xii. t. 23.

TEMPERATE and SUBTROPICAL HIMALAYA; Kumaon, alt. 6000 ft., *Blinkworth*; Nepal, *Wallich.* KHASIA MTS., alt. 4-6000 ft., *Griffith*, &c. BENGAL, at Mymeringh, *Clarke.* The CONCAN and MYSORF, *Stocks, Law*, &c. CEYLON; alt. 2-5000 ft., *Thwaites.*—DISTRIB. Java, Siam, China, Japan.

Very variable in habit, 6-18 in. high; stem tufted, base sometimes pseudobulbous. *Leaves* 2-8 in., rarely elliptic-lanceolate and narrowed into a broad petiole, membranous or subcoriaceous. *Scape* 4-10 in., naked or nearly so, rigid; bracts variable in length, $\frac{1}{2}$ in. and longer, not reflexed; pedicels usually short and stout; flowers about $\frac{1}{2}$ in. across, yellow-brown; ribs of ovary wrinkled. *Lip* variable in breadth, sides erect. *Capsules* clavate.—I follow *Ridley* in accepting the name of *paradoxa* for this plant, though, as he points out, *L. odorata* is the oldest. The latter name is, as *Thwaites* states, inapplicable. I have seen no Ceylon specimens.

VAR. *Parishii*; leaves narrowed at the base or broadly petioled flat more membranous, scape taller and flowers longer.—Tenasserim, *Lobb, Parish.*

27. ***L. Dalzellii***, *Hook. f.*; tall, stem as thick as the thumb, leaves 2-3 sessile elliptic-ovate acute, scape stout, bracts lanceolate not deflexed spreading, flowers $\frac{1}{2}$ in. across, sepals 5-nerved obtuse sides recurved, lateral falcately oblong, dorsal longer linear-oblong, lip broadly obcordate fleshy dark purple, base 2-tubercled, column stout incurved, wings rounded.

SOUTH CONCAN, *Dalzell.*

I have seen only one specimen of this remarkably gigantic species, of which the sheathed stem 4 in. long, and $\frac{3}{8}$ in. diam., terminates below in a small pseudobulb. *Leaves* 4-6 by $2\frac{1}{2}$ -3 in. *Scape* stout; bracts $\frac{1}{2}$ in. long, not deflexed; pedicels $\frac{1}{2}$ in., stout; flowers twice as large as those of *L. paradoxa*.

28. ***L. Walkeriæ***, *Graham in Bot. Mag.* t. 3770; stem stout, leaves 2-3 petioled ovate or orbicular acute, racemes many-fl., bracts lanceolate spreading, sepals obtuse 5-nerved, lateral flat falcately oblong, dorsal longer linear-oblong sides recurved, lip orbicular recurved crenulate, base contracted 2-tubercled, column incurved, wings uncinat. *Thwaites Enum.* 295; *Ridley in Journ. Linn. Soc.* xxii. 277.

DECCAN PENINSULA; on the Ghats from the Nilghiri Hills to Travancore, *Wight*, &c. CEYLON; Central Province, alt. 3-5000 ft., *Walker*, &c.

Stem 2-4 in., base pseudobulbous. *Leaves* 2-4 by $1\frac{1}{2}$ -4 in., 7-nerved, base sometimes very unequal; petiole 0-1 $\frac{1}{2}$ in. *Scape* with raceme 3-6 in.; bracts $\frac{1}{2}$ in., not deflexed; pedicels rather large; flowers about $\frac{1}{2}$ in., pale. *Lip* wrinkled and rather fleshy.—I have examined many flowers, but find no lip to be at all oblong, but always more or less rounded, as described by *Graham*; but when the lip is figured as oblong, it is because of the sides being incurved and foreshortened. It is very difficult to flatten out the lips of species in which it is recurved.

29. ***L. atropurpurea***, *Lindl. Gen. & Sp. Orchid.* 28; stem stout, leaves 3-4 petioled ovate or orbicular, base very oblique and unequal, bracts lanceolate spreading, sepals very long linear obtuse, all with recurved sides,

dorsal 3- lateral 5-nerved, lip recurved orbicular-obovate fleshy with 2 large long tubercles at the narrowed base, column very slender curved, wings large rounded. *Thwaites Enum.* 295; *Ridley in Journ. Linn. Soc.* xxii. 277 (excl. syn. *L. livida*); *Bot. Mag.* t. 5529. *L. olivacea*, and *L. Walkeriæ*, *Wight Ic.* t. 903, 905.

TRAVANCORE; on the Pulney Mts., *Wight*. CEYLON, *Macrae*; elevated parts of the Central Province, *Thwaites*, &c.

Habit and foliage of *L. Walkeriæ*, but leaves always extremely unequal at the base, with one side rounded or auricled and the other acute, margins smooth or crisped; scapes taller, racemes longer, and flowers very much larger and dark vinous purple, the dorsal sepal $\frac{3}{4}$ of an inch long.—*L. livida*, Lindl., included under *atro-purpurea* by Ridley, is a very different plant (see end of genus). Lindley has fastened on the same sheet with this in his Herbarium a specimen of *L. Walkeriæ* with the habitat “Khasia, Lobb,” which I doubt not is an error for the Nilghiri Hills, where Lobb also collected.

30. ***L. brachyglottis***, *Reichb. f. in Trimen Cat. Pl. Ceylon*; small, leaves 2 alternate petioled or the upper sessile ovate or ovate-cordate acuminate, bracts ovate concave, flowers very small, sepals obtuse 3-nerved, lateral broadly ovate-oblong, dorsal much longer lanceolate, lip short transversely oblong with obscure basal thickenings, column short straight truncate. *Ridley in Journ. Linn. Soc.* xxii. 275.

CEYLON; Central Province, alt. 5000 ft.; on Wateakelle Hill, *Thwaites*.

Stem 2-3 in., rather slender, not pseudobulbous. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ in., 5-nerved. *Scape* and *raceme* 2-3 in.; bracts $\frac{1}{2}$ in., persistent, concave, not reflexed; pedicels $\frac{1}{2}$ in.; flowers about $\frac{1}{4}$ in. across, red-purple.

31. ***L. biloba***, *Wight Ic.* vi. 1633; small, leaves 2-3 petioled ovate acute undulate, flowers small, bracts $\frac{1}{2}$ in. lanceolate, sepals oblong-lanceolate acute, lateral hardly falcate, lip cuneate straight shortly clawed 2-lobed 2-tubercled, lobes oblong or lanceolate obtuse, column slender curved, wings small obtuse. *Walp. Ann.* vi. 218; *Ridley in Journ. Linn. Soc.* xxii. 276.

NILGHIRI HILLS; at Ootacamund, *Wight*.

Whole plant purplish. *Stem* $\frac{3}{4}$ in., pseudobulb $\frac{1}{4}$ in. *Leaves* 1 by $\frac{1}{2}$ - $\frac{3}{4}$ in., green or purple. *Scape* $1\frac{1}{2}$ in.; flowers very dark purple.—Wight likens it to *L. atropurpurea*, from which the 2-lobed lip distinguishes it.

Sect. II. CORNIFOLIÆ. *Leaves* jointed at the base upon the leaf-sheath or on a pseudobulb, usually coriaceous.

* Leaf usually solitary on the pseudobulb. Lip as long as the lateral sepals or nearly so (when spread out).

† *Sepals* 3-nerved (obscurely in *L. Prainii*).

32. ***L. elegans***, *Lindl. in Wall. Cat.* 1943, in *Herb. Lindl. (in part)*, *Gen. & Sp. Orchid.* 40; leaf solitary 6-12 in. narrowly obovate-oblong or oblanceolate acute, scape tall stout many-fld., bracts setaceous, flowers very small, pedicels short, sepals obtuse revolute, lip reflexed cuneately oblong truncate, tip erose retuse, calli 0, column slender, wings very small. *Rolle in Gard. Chron.* 1886, 158; *Ridley in Journ. Linn. Soc.* xxiv. 350.

PENANG, Porter, *Maingay (Kew Distrib.* 1599). PERAK, *King's Collector*.

Rootstock stout creeping; pseudobulbs hardly developed. *Leaves* $\frac{3}{4}$ -1 in. broad, 5-7-nerved. *Scape* with *raceme* 12-18 in.; bracts $\frac{1}{2}$ in., pedicel about as long; flowers as broad, yellowish. *Lip* obscurely 5-nerved. *Capsule* $\frac{1}{2}$ in. long.—Like

L. longipes, with which it was mixed in Herb. Lindl., whilst in Herb. Wall. only fragments of the former are retained. The Perak specimens have obscure side-lobes.

33. ***L. bootanensis***, *Griff. Notul.* iii. 278; *Itin. Notes*, 98; *Ic. Pl. Asiat.* t. 287; leaf solitary sessile 5-10 in. linear- or ob-lanceolate acuminate, scape very slender flexuous margined lax-fl'd., bracts subulate shorter than the filiform pedicels, flowers rather large, sepals straight, sides revolute, lip recurved cuneately oblong, tip rather dilated truncate erose, calli 2 minute, column slender, wings hooked. *Ridley in Journ. Linn. Soc.* xxii. 285, *in part*.

SIKKIM HIMALAYA (*Ic. in Herb. Kew*); BHOTAN, at the foot of the hills, *Griffith. KHASIA MTS.*, alt. 4-6000 ft.

Pseudobulb oblong, formed after flowering. *Leaf* $\frac{3}{4}$ -1 in. broad, narrowed to the base but not petioled, many-nerved. *Scape* long; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in.; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in.; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. broad, ochreous or reddish.—*Ridley* describes the leaves as sometimes in pairs.

34. ***L. lancifolia***, *Hook. f. Ic. Pl.* t. 1855; pseudobulbs narrow, leaf linear-lanceolate acuminate narrowed into a slender petiole, scape slender naked, bracts lanceolate shorter than the slender pedicels, sepals straight, margins revolute, lip recurved cuneately obovate, tip rounded, calli obscure, column slender, wing hooked. *L. bootanensis*, *in part*, *Ridley l. c.*

KHASIA MTS.; at Churra and Pomrang, alt. 4-5000 ft., *J. D. H. & T. T. (Liparis, No. 18)*; on Shillong, alt. 6000 ft., *Clarke, Munn.*

Pseudobulbs 1-1 $\frac{1}{2}$ in., many on a creeping stock; sheaths long, acuminate. *Leaves* 5-8 in., including the 1-2 in. petiole, thin, many-nerved. *Scape* straight or curved, hardly margined; flowers dirty yellow, like those of *bootanensis*. *Capsule* $\frac{1}{2}$ in., narrowly pyriform on a decurved pedicel.—Differs from *bootanensis* in the long narrow pseudobulbs and long petioled leaves, but may prove a form of that species.

35. ***L. pachypus***, *Parish and Reichb. f. in Trans. Linn. Soc.* xxx. 155; pseudobulb large fleshy ovoid, leaf 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ in. sessile oblanceolate acuminate, scape short bracteate, bracts lanceolate shorter than the pedicels, sepals narrow obtuse straight, margins recurved, lip recurved cuneate, tip broad truncate retuse crenulate, nerves 5 outer branching, calli obscure, column slender, wings obscure. *Ridley in Journ. Linn. Soc.* xxii. 288.

TENASSEERIM; at Moulmein, *Parish*.

Pseudobulbs tufted, ovoid, 1 in. or more long and as broad. *Leaf* $\frac{3}{4}$ in. d'am., sessile, thin, midrib slender, nerves obscure. *Scape* few-fl'd.; bracts $\frac{1}{4}$ in. and less; flowers about $\frac{3}{8}$ in. across, yellow?

36. ***L. Griffithii***, *Ridley in Journ. Linn. Soc.* xxii. 285 (*in part*); leaf linear-lanceolate, scape stout and rachis broadly 2-winged, bracts very slender longer than the lower short stout pedicels, flowers small, sepals straight obtuse, sides revolute, lip recurved deltoidly obcordate with a shallow crenulate sinus, calli minute, nerves 5, lateral branched, column slender curved, wings 0. *Griff. Ic. Pl. Asiat.* t. 307, f. 1.

BHOTAN, *Griffith*.

Pseudobulb 0 on the single flowering specimen. *Leaf* 12 in., and base of short stem clothed with equitant acute sheaths. *Scape* 8 in., nearly $\frac{1}{4}$ in. broad; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., green.—*Ridley's* description includes fruiting specimens of *L. plantaginea*.

37. ***L. Prainii***, *Hook. f. Ic. Pl.* t. 1857 A; dwarf, pseudobulb small. leaf linear-oblong coriaceous keeled, scape stout strict many-fl'd., bracts

lanceolate equalling the pedicels, flowers minute, lateral sepals flat oblong obtuse obscurely 3-nerved, dorsal longest, lip recurved oblong-quadrate apiculate, base auricled embracing the column, which has minute acute apical wings.

Naga Hills in UPPER ASSAM, Prain.

Pseudobulbs $\frac{1}{2}$ in., flagon-shaped. *Leaf* 1 in., sessile, obtuse. *Scape* and *raceme* 3 in.; *bracts* $\frac{1}{2}$ in.; *flowers* $\frac{1}{10}$ in.; *petals* flat.

†† *Sepals* 1-nerved (*unknown* in *L. Mannii*).

38. **L. pusilla**, *Ridley* in *Journ. Linn. Soc.* xxii. 294; leaf 2-4 in. linear-lanceolate acute, scape slender, *raceme* dense-fl., bracts lanceolate equalling the slender pedicels, flowers minute, sepals obtuse flat or revolute, margins not recurved, lip recurved broadly oblong 5-nerved, tip rounded entire or notched, calli 0, column short incurved obscurely winged. *Hook. f. Ic. Pl.* t. 1856 A. *L. auriculata*, *Reichb. f. in Flora*, 1872, 277 (*not of Miquel*).

SIKKIM HIMALAYA; at Rungbee, *Clarke*. KHASIA MTS., alt. 4-6000 ft., common. TRAVANCORE; on the Anamallay Hills, *Beddome* (fid. *Ridley*).

Pseudobulbs $\frac{1}{2}$ - $\frac{2}{3}$ in., broad or narrowly ovoid. *Leaf* $\frac{1}{2}$ - $\frac{1}{2}$ in. broad, pale green, costa and nerves obscure. *Scape* 3-6 in., terete or margined; bracts $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. across, white. *Lip* thick, base 2-auricled, nerves simple. *Capsule* $\frac{1}{2}$ in., globose.—*Reichb.*, followed by *Ridley*, describes the lip as panduriform, but I do not find it so; and I have *Ridley's* authority for this being his *pusilla*. Name singularly inappropriate. I have seen no Travancore specimens.

39. **L. Mannii**, *Reichb. f. in Flora*, 1872, 275; *Ridley* l. c. 286; leaf chartaceous linear-lanceolate acuminate, scape 2-edged, bracts setaceous, lower longer than the pedicelled ovary, upper much shorter, sepals linear-ligulate obtuse acute, lip recurved 3-fl., side lobes $\frac{1}{2}$ -falcate, isthmus very short narrow, midlobe transversely ovate crenulate in front, column broader above, anther acute.

ASSAM; at Obres, *Mann*.

Densely caespitose; pseudobulbs cylindric, many-sheathed; upper sheath elongate, acuminate.—I have seen no specimens. *Description* is from the author.

40. **L. Duthiei**, *Hook. f. Ic. Pl.* t. 1857 B; leaf $\frac{3}{4}$ -1 in. petioled elliptic or linear-lanceolate acute 5-nerved, scape slender equalling the leaf, bracts subulate rather shorter than the ovary, flowers minute, sepals revolute, margins not or slightly recurved, lip recurved quadrately oblong 5-nerved, tip truncate crenate, calli 0, column stout curved obscurely winged.

WESTERN HIMALAYA; Kumaon, in the Gori Valley, alt. 2-3000 ft., *Duthie*.

Pseudobulbs $\frac{1}{4}$ - $\frac{1}{2}$ in., ovoid, tufted. *Leaf* $\frac{1}{4}$ - $\frac{1}{2}$ in. broad. *Raceme* 1-1 $\frac{1}{2}$ in., rather dense-fl.; bracts $\frac{1}{10}$ in.; flowers about $\frac{1}{12}$ in. across, yellowish (when dry); lip hardly auricled at the base; nerves simple.

41. **L. obscura**, *Hook. f. Ic. Pl.* t. 1886; leaf solitary 3-4 in. narrowly oblanceolate, scape equalling or shorter than the leaf, bracts equalling or exceeding the ovary, flowers very minute, sepals lanceolate acute recurved or revolute, lip broadly oblong 3-5-nerved, tip broad subacute, column short suberect, wings obscure. *L. angustifolia*, *Thwaites Enum.* 206 (*not of Lindl.*). *L. caespitosa*, *Ridley* in *Journ. Linn. Soc.* xxii. 290 (*not of Lindl.*).

CEYLON: Central Province, alt. 2-5000 ft., *Thwaites*.

Pseudobulbs tufted, 1 in., narrow. *Leaf* $\frac{1}{2}$ - $\frac{3}{4}$ in. broad, subacute. *Flowers* $\frac{1}{12}$ in.

diam., yellow; sepals revolute, but margins not recurved; petals flat; lip rather thick. Capsule $\frac{1}{10}$ – $\frac{1}{12}$ in.—Very near the Javan *L. angustifolia*, but the flowers and fruit are much smaller, and the lip shorter almost quadrate. The Mauritian *L. cæspitosa* also closely resembles it, but has a lanceolate lip. The capsules of all three are alike, broadly pyriform, with high ribs and flat nerved interstices.

** Leaves 2 or more rarely solitary on the pseudobulb or stem. Lip as long as the lateral sepals or nearly so (when spread out).

† Sepals 3-nerved (unknown in *L. Scortechini*).

42. ***L. bistriata***, *Parish and Reichb. f. in Trans. Linn. Soc.* xxx. 155; pseudobulbs elongate, leaves 2–4 in. elliptic-oblong or -lanceolate, scape longer than the leaves bracteate stout margined or winged, bracts lanceolate equalling the ovary, sepals oblong-lanceolate obtuse, sides revolute, lip recurved panduriform 5-nerved, tip dilated broadly truncate, calli 0, column slender incurved, wings usually hooked. *Ridley l. c.* 288; *Hook. f. Ic. Pl.* t. 1858.

SIKKIM HIMALAYA, *Griffith's Collector*; alt. 7000 ft., *J. D. H.* KHASIA MTS., alt. 5–6000 ft. NAGA HILLS, in Assam, *Prain*. TENASSERIM, *Parish*.

Pseudobulbs stem-like, 4–6 in., cylindric. *Leaves* $\frac{2}{3}$ in. broad, obtuse or apiculate, many-nerved, coriaceous, base narrowed. *Scape* 4–6 in.; bracts $\frac{1}{4}$ in.; flowers yellowish; lip undulate, sides with obscure rounded lobes, base auricled; side nerves branching.

Var. robusta; pseudobulbs shorter stouter with 2 large acute sheaths, scape very stout, bracts and flowers larger, lip obcordately panduriform, columnar wings rounded, capsule larger clavate.—Naga Hills, on Kohima, *Prain*.—Perhaps a different species.

43. ***L. lacerata***, *Ridley in Journ. Linn. Soc.* xxii. 284; pseudobulbs ovoid, leaves 2–8–10 in. narrowly oblanceolate acuminate, scape slender laxly many-fl., bracts lanceolate shorter than the ovary, sepals straight, sides recurved, lip recurved from the broad base, then straight oblong 7-nerved, tip with 2 lacerate lobes, column slender incurved, wings small rounded.

TENASSERIM; at Mergui, *Griffith*. Perak, *Scortechini*, *King's Collector*.—DISTRIB. BORNEO.

Pseudobulbs 1 in., oblong or ovoid. *Leaves* $\frac{2}{3}$ – $1\frac{1}{2}$ in. broad. *Scape* with the raceme 9–10 in.; pedicels $\frac{1}{3}$ – $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. across, light pink; lip red, contracted below the rounded shoulders.

44. ***L. plantaginea***, *Lindl. Gen. & Sp. Orchid.* 29; leaves 2 opposite 6–10 in. sessile linear- or oblong-lanceolate acute, scape stout not winged, bracts large ovate-lanceolate, sepals obtuse 3-nerved straight, sides revolute, lip large deflexed from the base orbicular erose or crenulate veined suddenly contracted into a 2-auricled 2-tubercled short neck, column incurved, wings 0. *Ridley in Journ. Linn. Soc.* xxii. 286. *L. selligera*, *Reichb. f. in Linnaea* xli. 42. *L. orbicularis*, *Loddiges mss.*; *Gard. Chron.* N. S. xvi. (1881) 592. *L. Griffithii* in part, *Ridley l. c.* 285.

SIKKIM HIMALAYA, alt. 1–2000 ft., *Clarke*. UPPER ASSAM; at Brahmakoond, *Griffith* (*Kew Distrib.* 5069).

Pseudobulbs 2–3 in.; sheath large, membranous, acute. *Leaves* 1– $1\frac{1}{2}$ in. broad, petioled or not, 5-nerved. *Scape* with the raceme 8–12 in., flexuous; bracts $\frac{1}{3}$ – $\frac{2}{3}$ in., green, concave; pedicels rather longer; flowers 1 in. across the sepals, greenish.—The Assam specimens are flowerless. Mr. Ridley in his monograph included them under his *L. Griffithii*, but in the Kew Herbarium has separated them, marking the Assam plant as probably a form of *L. plantaginea*. The Bhotan

habitat is an error. In Lindley's Herbarium the plant is ticketed by Griffith as from the Brahmakoond.

45. **L. Scortechini**, *Hook.f.*; pseudobulb long stout, leaf 14 by $2\frac{1}{2}$ in. linear-oblong acute 5-nerved, scape as long as the leaf flowering to the base, rachis very stout, bracts small lanceolate, sepals recurved, margins recurved, lip nearly straight longer than the sepals flabellately obcordate from a narrow 2-auricled 2-tubercled neck, lobes deeply crenate, column slender incurved, wings obscure.

PERAK, *Scortechini*.

Pseudobulb subcylindric, $4\frac{1}{2}$ by 1 in. *Leaves* sessile. *Raceme* laxly many-fl., rachis $\frac{1}{8}$ in. diam.; bracts $\frac{1}{4}$ in.; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in.—Near *L. latifolia* of Java, but the bracts are much smaller, lip with a longer narrower neck and much smaller limb. A very fine species, of which I have seen only a drawing by Father Scortechini, numbered 1518, but which does not correspond with the plant so numbered in his collection.

46. **L. flaccida**, *Reichb. f. in Linnæa* xli. 44; leaves 2 6–10 in., scape and raceme very long slender, bracts minute, pedicels decurved, flowers very small, sepals obtuse 3-nerved flattish, lateral at length revolute, lip recurved narrow oblong dilated below the middle and there ciliate, tip 2-fid, lobes triangular subacute, calli 0, column incurved, wings obscure. *Ridley in Journ. Linn. Soc.* xxii. 296.

PERAK, *King's Collector*.—DISTRIB. Java, Borneo.

Pseudobulb in Perak spns. small; in Javan very large, 2 by 1 in. *Leaves* in Perak spns. 8–10 by $\frac{3}{4}$ in., narrowed from near the lip to the base, in Javan much broader, nerves 5–9. *Scape* with *raceme* much longer than the leaves, flowering nearly to the base, bracts lanceolate membranous; pedicels $\frac{1}{4}$ – $\frac{1}{2}$ in.; flower about $\frac{1}{10}$ in. across.

†† *Sepals* 1-nerved (unknown in *L. vestita*).

47. **L. longipes**, *Lindl. in Wall. Pl. As. Rar.* i. 31, t. 35, *Cat.* 1943 (in part); *Gen. & Sp. Orchid.* 40; leaves 2 linear obovate-oblong or oblanceolate, scape many-fl., bracts small lanceolate acuminate, flowers very many small white, sepals obtuse at length revolute 1-nerved, lip recurved yellow broadly ovate subacute rather fleshy, calli 0, column incurved, wings rounded. *Ridley in Journ. Linn. Soc.* xxii. 293 (excl. syn. *L. elegans*, Lindl.); *Wight Ic.* t. 906; *Thwaites Enum.* 295. *L. pendula*, *Lindl. in Bot. Reg.* 1838, *Misc.* 180; *Regel Ind. Sem. Hort. Petrop.* 1868, 79. *L. spathulata*, *Lindl. in Bot. Reg.* 1842. ? *L. nesophila*, *Reichb. f. Ot. Hamb.* i. 56. ? *L. Boothii*, *Regel Ind. Sem. Hort. Petrop.* 1864, *Suppl.* 14.

TROPICAL HIMALAYA, alt. 1–5000 ft., from Kumaon eastwards to MUNNIPOR and the KHASIA MTS., alt. 3–5000 ft., and southwards to PERAK and PENANG. NILGHIRI HILLS and southwards. CEYLON, common below 3000 ft.—DISTRIB. Malay and Pacific Islands, China.

Pseudobulbs short and ovoid, or long sometimes 6 in. and cylindric. *Leaves* 4–12 by $1\frac{1}{2}$ – $1\frac{1}{4}$ in., obtuse, acute or acuminate, 5–7-nerved. *Scape* and *raceme* 6–10 in. with a few bracts below the flowers, slender.—Variable in habit and foliage, but constant in inflorescence and flowers. The sepals are not acute, as sometimes described. The form with short pseudobulbs (*L. spathulata*) occurs everywhere with the long pseudobulbed, and intermediates abound.

48. **L. vestita**, *Reichb. f. in Flora* 1872, 274; pseudobulbs approximate subterete rod-like 2-leaved, young clothed with broad sheaths, leaves cu-

neately oblong-ligulate acute, scape subterete naked below, raceme dense-fld., bracts lanceolate equalling the ovary, sepals ligulate obtuse, lip oblong retuse angled on both sides crenulate in front, column enlarged at the base and apex. *Ridley in Journ. Linn. Soc.* xxii. 294.

ASSAM; at Obres, Mann (*in Herb. Reichb.*).

Of this, which I have not seen, the author says that "it is not *L. longipes*, which differs in the retuse lip."

49. ***L. distans***, *Clarke in Journ. Linn. Soc.* xxv. 71, t. 29; leaves 2 very narrowly oblanceolate acuminate thin, scape slender as long as the leaves 2-winged few-fld., flowers 1 in. across, bracts membranous shorter than the long pedicels, sepals narrow linear obtuse obscurely 1-nerved, margins revolute, lip recurved spatulately obovate obtuse crenulate obscurely nerved 2-tubercled near the concave base, column slender, wings narrow. *L. macrantha*, *Hook. f. Ic. Plant.* t. 1851.

UPPER ASSAM; Naga Hills, *Prain, Clarke.*

Pseudobulb elongate, narrow, enclosed in one long sheath. *Leaves* 12 by 1 in., many-nerved, narrowed into a petiole. *Flowers* green; sepals, petals and lip $\frac{3}{4}$ in. long.—The largest-flowered Indian species. Leaves distinctly jointed in the pseudobulb where hidden by the sheath, which is 4 in. long.

50. ***L. condylobulbon***, *Reichb. f. in Hamb. Gartenzeit.* 1882, 34; leaves 2-8 in. linear-oblong, scape short, raceme dense-fld., flowers minute very shortly pedicelled, bracts as long as the short pedicels, sepals obtuse 1-nerved, lateral revolute, lip recurved oblong with an entire rounded tip fleshy nerveless, calli 0, column slender, wings small. *L. parviflora*, *Ridley in Journ. Linn. Soc.* xxii. 296.

TENASSERIM; at Moulmein, *Parish.*

Pseudobulb 1-2 in., narrow. *Leaves* 1 in. broad, 7-nerved. *Scape* with raceme 6 in. Much resembling *L. gladiata*, and with flowers yellowish when dry of the same size, but the bracts are longer, slender and membranous, and the lip is very different.—The above is from Reichenbach. Ridley makes it a synonym of the Javan *L. parviflora*, but it differs *in toto* from the description he gives of that species.

51. ***L. viridiflora***, *Lindl. Gen. & Sp. Orchid.* 31; leaves 2 3-4 in. elliptic-lanceolate or oblanceolate membranous, raceme many-fld. subsecund, bracts lanceolate, pedicels short decurved, sepals flat broad obtuse or subacute 1-nerved, lip recurved orbicular-ovate subacute very obscurely 3-lobed concave rather fleshy, calli 0, column short incurved. *Ridley in Journ. Linn. Soc.* xxii. 289; *Thwaites Enum.* 295. *L. elliptica*, *Wight Ic.* t. 1735. *L. Wightii*, *Reichb. f. in Walp. Ann.* vi. 218. *L. Hookeri*, *Ridley l. c.* 288. *Malaxis viridiflora*, *Blume Bijl.* 392, t. 54.

SIKKIM HIMALAYA, alt. 4-6000 ft. UPPER ASSAM, KHASIA, and NILGHIRI HILLS. CEYLON, alt. 3-7000 ft.—DISTRIB. JAVA.

Pseudobulbs very variable, $\frac{1}{2}$ -1 in. long, from ovoid to subcubical or subglobose. *Leaves* $\frac{3}{4}$ -1 in. broad, elliptic and sessile, or $\frac{1}{4}$ - $\frac{3}{4}$ in. broad oblanceolate and petioled, acute or acuminate; nerves many, slender. *Scape* 4-6 in., erect or recurved, with scattered filiform membranous bracts below the raceme; flowers ascending from the recurved pedicel. *Sepals* white or yellowish, not widely spreading, about $\frac{1}{10}$ in. long.—The subsecund raceme and flowers ascending from the recurved pedicel are quite peculiar to this species. I find no character whereby to separate *L. Hookeri*, nor is this species related to *L. bistriata*.

52. ***L. luteola***, *Lindl. in Wall. Cat.* 1944; *Gen. & Sp. Orchid.* 32; leaves 2 2-4 in. erect narrowly oblanceolate coriaceous, midrib stout, scape

exceeding the leaves few-fl'd., bracts lanceolate, pedicels long, sepals subfalcate lanceolate subacute, margins revolute, lip recurved cuneate truncate apiculate, base auricled, calli 2 minute, column slender curved, wings obscure. *Ridley in Journ. Linn. Soc. xxii. 289; Griffith Notul. iii. 277.*

KHASIA HILLS, alt. 4-5000 ft., common. UPPER BURMA, *Griffith. TENASSERIM, at Moulmein, Parish.*

Pseudobulbs densely tufted, very small, depressed-globose. *Leaves* $\frac{1}{2}$ - $\frac{1}{4}$ in. broad. *Scape* 2-4 in.; bracts $\frac{1}{2}$ in., green; pedicels $\frac{1}{2}$ - $\frac{1}{2}$ in.; flowers $\frac{1}{4}$ in.

*** Lip minute much shorter than the sepals quadrate. Sepals straight or lateral subfalcate, margins revolute.—A peculiar group of small species.

53. **L. resupinata**, *Ridley in Journ. Linn. Soc. xxii. 290*; leaves 3-4 1-3 in. linear-lanceolate acuminate, scape much longer than the leaves slender, bracts lanceolate green longer than the pedicels, flowers $\frac{1}{2}$ in., sepals straight broadly oblong obtuse 1-nerved, margins recurved, lip broadly ovate-oblong with rounded basal lobes 2-tubercled, tip broad rounded, column broadly winged to the base, wings with a capillary tail. *Hook. f. Ic. Plant. t. 1888.*

SIKKIM HIMALAYA, alt. 5-6000 ft., and the KHASIA Mts., common, alt. 4500-6500 ft. ? NILGHIRI Mts., *Wight.*

Pseudobulbs tufted, $\frac{1}{2}$ -1 in., narrow. *Leaves* alternate, sessile, submembranous, rather distant, 7-nerved. *Scape* bracteate, with the raceme 5-7 in., many-fl'd.; lower bracts $\frac{1}{4}$ - $\frac{1}{2}$ in.; pedicels $\frac{1}{4}$ in.; flowers yellow.—The capillary tail of each wing of the column is peculiar to this and the following species. *Ridley* gives Nilghiri Mts. Wight as a habitat, but there are no specimens in Wight's Herbarium.

54. **L. Ridleyi**, *Hook. f. Ic. Plant. t. 1887*; leaves 3-4 3-5 in. linear-lanceolate acuminate, scape much longer than the leaves slender bracteate, bracts lanceolate green shorter than the pedicels, flowers $\frac{2}{3}$ in., sepals straight obtuse 1-nerved, margins recurved, dorsal lanceolate, lateral oblong-lanceolate, lip ovate-oblong with rounded basal lobes 2-tubercled, tip rounded, column broadly winged to the base, wings with a capillary tail.

SIKKIM HIMALAYA, alt. 4-6000 ft., common.

Habit, &c., of *L. resupinata*, under which *Ridley* has placed it, but a larger plant, with flowers more than twice as large, and much narrower sepals.

55. **L. delicatula**, *Hook. f. Ic. Plant. t. 1889*; leaves 2 1-1 $\frac{1}{2}$ in. petioled elliptic-lanceolate membranous, scape much longer than the leaves filiform, bracts ovate much shorter than the pedicels, flowers $\frac{1}{2}$ in., sepals straight broadly oblong obtuse 1-nerved, margins revolute, lip straight orbicular-oblong with small rounded basal lobes and 2 tubercles, tip broad rounded abruptly caudate, column broadly winged. *L. decurrens, in part, Ridley in Journ. Linn. Soc. xxii. 291 (the Khasian plant only).*

KHASIA Mts., alt. 4-5000 ft., *Lobb, J. D. H. & T. T. MISHMI HILLS, in Upper Assam, Griffith.*

Pseudobulbs tufted, $\frac{1}{2}$ in., ovoid or oblong. *Leaves* $\frac{1}{2}$ - $\frac{1}{4}$ in. broad, pale, obscurely 3-nerved, acute or apiculate. *Scape* 3-5 in., very slender, bracteate; bracts $\frac{1}{2}$ in., acute, membranous; flowers white. *Column* with uncinate wings near the top, and narrow lateral wings (not confluent with the terminal) descending to the base.—Placed under the Javanese *L. decurrens* by *Reichb. f.* and *Ridley*, but differs from

that plant in the filiform scape, ovate bracts, and ciliate sepals and petals. Blume figures the sepals of his *Malaxis decurrens* as papillose all over.

56. ***L. platyrachis***, Hook. f. *Ic. Plant.* t. 1890; leaves 2-3 1-1½ in. petioled linear-lanceolate membranous, scape much longer than the leaves flattened or 2-winged, bracts minute subulate, flowers ½ in., sepals subfalcate oblong obtuse 1-nerved, lip recurved quadrately panduriform, basal portion 2-auricled 2-tubercled, distal with acute upper angles and a rounded sometimes apiculate base, column with small upper wings and winged sides.

SIKKIM HIMALAYA, alt. 4-5000 ft., *Treutler, Clarke*.

Habit and size of *L. delicatula*, from which it differs in the winged rachis, minute subulate bracts, and form of the lip, which, as in all the species of this group, is very difficult of analysis, being crumpled in drying.

57. ***L. perpusilla***, Hook. f. *Ic. Plant.* t. 1856 B; leaves 4-5 recurved ½-1 in. linear acute, midrib stout, margins recurved, scape much longer than the leaves, bracts ovate-lanceolate, flowers ⅓ in., sepals very broadly elliptic-oblong obtuse 1-nerved, lip minute quadrate with 2 rounded side lobes and 2 tubercles, tip very broad rounded, column short stout broadly winged.

SIKKIM HIMALAYA, on trees, alt. 7-8000 ft., *J. D. H., Clarke, Gamble*.

Pseudobulbs tufted, ½-¾ in., ovoid or oblong. *Leaves* ⅓-⅓ in. diam., coriaceous. *Scape* curved, obscurely margined, naked; bracts ⅓ in.; flowers yellow.—A singular little plant which I found in 1848 on trees upon Sinchal near Darjeeling, and made a drawing of, but have lost the specimens.

Sect. III. DISTICHÆ. Bracts of the short flat raceme distichous and imbricating, coriaceous, ensiform.

58. ***L. disticha***, *Lindl. in Bot. Reg. sub.* t. 882; leaf solitary 5-10 in. coriaceous linear, scape naked, sepals oblong-ovate acute 3-nerved, lip recurved, lateral lobes rounded and inflexed at the base, midlobe orbicular-ovate obtuse, column very short erect dorsally compressed with very broad coriaceous wings dilating downwards. *Ridley in Journ. Linn. Soc.* xxii. 292; *Miquel Fl. Ind. Bat.* iii. 623. *L. gregaria*, *Lindl. Gen. & Sp. Orchid.* 33; *Thwaites Enum.* 296. *L. mucronata*, *Lindl. l. c.* 32. *Malaxis disticha*, *Thouars Orchid. Isles Austr. d'Afrique*, t. 89. *Malaxis mucronata*, *Blume Bijl.* 391; *Moon Cat.* 467.

TENASSERIM; at Moulmein, *Parish*. CEYLON, *Walker, &c.*—DISTRIB. Malay Islands, Tinnor, Mauritius, Bourbon.

Rootstock slender, creeping; *pseudobulbs* distant, ½-¾ in., pyriform. *Leaves* ½-¾ in. broad, acuminate. *Scape* usually shorter than the leaves, stout, margined or winged; raceme ½-2 in., rachis flattened; bracts ¼-½ in.; flowers ½ in., ochreous yellow. *Lip* fleshy, with a large basal callus. *Capsule* ½ in. long, pedicelled.

59. ***L. compressa***, *Lindl. Gen. & Sp. Orchid.* 32; leaf solitary 10-12 in. linear-lanceolate strongly nerved beneath, scape naked, sepals lanceolate, lip cuneately flabelliform from a narrow 2-tubercled claw, tip broadly truncate or rounded crenulate apiculate, column slender incurved, wings 0. *Ridley in Journ. Linn. Soc.* xxii. 291; *Miquel Fl. Ind. Bat.* iii. 621. *Malaxis compressa*, *Blume Bijl.* 390, t. 54.

PEBAK, *Scortechini, King's Collector*, alt. 3000-3500 ft.—DISTRIB. Sumatra, Java.

Pseudobulb 1 in. or more. *Leaf* 1-1½ in. broad. *Scape* winged; raceme as in *L. disticha*, but bracts and flowers larger.

DOUBTFUL AND EXCLUDED SPECIES.

L. ALATA, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 17*; pseudobulbs ovoid, sheaths lax membranous acute, leaves usually 2 subpetioled sheathing membranous ovate acute entire, base rounded, spike elongate few-fl., rachis compressed winged, lip subcordate convex quite entire, base erect embracing the column.—Nilghiri Hills, moist woods at the Waterfall, *Perrottet*.—This may be either a *Liparis* or *Microstylis*.

L. BIDENTATA, *Griff. Notul. iii. 277*; *Ic. Pl. Asiat. t. 286, f. 2*, from the Naga Hills, is not a *Liparis*.

L. CUMINGII, *Ridley in Journ. Linn. Soc. xxii. 292*, founded on Cuming's No. 2141, is erroneously described as a Malaccan plant. Cuming collected it in the Island of Bopod, one of the Philippians. It is hardly different from *L. compressa*.

L. DECURSIVA, *Reichb. f. in Gard. Chron. 1884, ii. 38*; pseudobulb tumid subpyriform very obtusely angled on both sides, leaves 2 cuneate-oblong chartaceous, scape narrowly winged, bracts lanceolate acuminate keeled the lower exceeding the pedicelled ovaries, sepals triangular-ligulate, lip with a short channelled claw, blade large abruptly transversely hastate emarginate with a tooth in front serrulate, claw with a notched tubercle, column incurved dilated towards the base angled on both sides next the pit.—E. Indies (*Hort. Glasnevin*).—Description from *Reichenbach f. l. c.*

L. GROSSA, *Reichb. f. in Gard. Chron. 1883, i. 110*; pseudobulbs short stout pyriform 2-leaved, leaves broadly ligulate obtuse, tip unequal, raceme many-fl., rachis depressed, base with an acute compressed foliaceous sheath, and many scarious sheaths above, flowers yellow-brown, bracts linear-cuspidate hardly equalling the pedicelled ovary, sepals ligulate acute, lip ligulate, base minutely obtusely auricled abruptly constricted in the middle, apex divergently 2-lobed, side lobes quadrate denticulate on the outer margin, basal calli obscure. *Ridley in Journ. Linn. Soc. xxii. 288*.—Burma, *H. Low*.—Allied to *L. pachypus*, but much larger, with a very different lip. Description from *Reichb. f. l. c.* I have seen no specimens.

L. LIVIDA, *Royle Ill. 364*, name only, from Nepal.—In the Kew collection of Indian drawings there is one named by Lindley "*L. livida*," but which is so incorrectly drawn (the petals being represented as lateral sepals) that no confidence can be placed in it. It may be a form of *L. bituberculata*. In Lindley's Herbarium there is a copy of this drawing, and on the same sheets is fastened a specimen of what is clearly *L. Walkeria*, ticketed "*Khasia, Lobb*," but which is probably from the Nilghiri Hills, where Lobb also collected.

L. OBOCADATA, *Fahl. ex King Cat. of N.W. Indian plants in Atkinson's Notes on the Economic Products of N.W. India, Part V. 318*.—This is undescribed.

L. ODONTOSTOMA, *Reichb. f. in Linnea xli. 97*; *Ridley l. c. 263*; 2 ft. high, pseudobulb subterete?, leaves about 4 membranous cuneate-oblong acute, raceme many-fl., dorsal sepal lanceolate 3-nerved, lateral oblong-ligulate 4-nerved curved, claw of lip with the base obtusely angled, blade as long as the claw subquadrate emarginate and apiculate, calli 2 conical, column angled at the base and apex.—Sikkim, alt. 3-5000 ft., *J. D. H.*—I suspect this to be a form of *L. bituberculata*. The bracts are not described, and the 4-nerved lateral sepals are anomalous.

L. STACHYURUS, *Reichb. f. in Flora 1872, 274*; *Ridley l. c. 295*; pseudobulbs ligulate (2-edged?) 2-leaved, leaves cuneately oblong-ligulate acuminate, scape dense-fl., bracts setaceous about equalling the pedicelled ovaries, sepals ligulate obtuse, lip triid, side lobes semicordate at the base obtuse-angled in front, midlobe triangular, column dilated at the apex, anther acute.—Assam, *Mann*.—Placed in the section *Coriifolia* and near *L. longipes* by Ridley, who does not say that he has seen the plant. I have not.

L. STRICKLANDIANA, *Reichb. f. in Gard. Chron. 1880, i. 232*; *Ridley l. c. 295*; pseudobulbs conico-ovoid 2-(1-3)-leaved, leaves linear-ligulate acute, scape ensiform winged, raceme rather dense-fl., bracts triangular shorter than the pedicelled ovaries, sepals ligulate, petals linear retuse, lip 3-lobed from a cuneate transversely dilated base, lateral lobes rounded, midlobe short triangular, lobes all

minutely denticulate in front, calli minute, column curved hardly dilated in front.—Assum? (*Hort. Strickland*).—Unknown.

L. TRISTIS, *Loddiges Orchid.* p. 4, cult. by Loddiges, from Ceylon; name only.

LIPARIS, “Ceylon, *Loddiges*” l. c., name only. Ridley has referred to this (*Journ. Linn. Soc.* xxii. 297) as *L. “zeylanica,”* but Loddiges has given it no specific name.

4. **PLATYCLINIS**, *Benth.*

Tufted epiphytes, pseudobulbs narrow or 0. *Leaves* solitary, petioled. *Flowers* small, in a terminal raceme; bracts very rigid, straight, convolute. *Sepals* and *petals* spreading. *Lip* sessile or shortly clawed, narrow or broad. *Column* erect, short or rather long, sides produced into 2 membranous points, wings or arms, tip produced into an entire or cleft hood; anther incumbent, 2-celled; pollinia 4, waxy, ovoid, superposed, cohering in pairs in separate cells.—Species about 20, Malayan.

The rigid pale narrow convolute grooved glumaceous bracts are very characteristic of this genus.

1. **P. gracilis**, *Hook. f.*; leaves linear-lanceolate obtuse, scape very slender, bracts acute half as long as the very shortly pedicelled flowers, sepals $\frac{1}{2}$ in. long broadly lanceolate finely acuminate 3-nerved, petals as long linear-oblong, lateral lobes of lip rounded crenulate, tips lanceolate spreading, midlobe cuneate, tip rounded, disk with an elevated green coriaceous 3-furcate ridge, column slender with gladiate arms.

PERAK; alt. 4–5000 ft., *King's Collector*.

Pseudobulb 1 in., subcylindric. *Leaf* 4–6 by 1 in., petiole 1 in. *Scape* naked and *raceme* 12 in.; bracts $\frac{1}{2}$ in.; flowers yellowish-white. *Lateral nerves* of sepals and petals very faint.

2. **P. Kingii**, *Hook. f.*; leaves linear-lanceolate, raceme long-peduncled few-fl'd., bracts almost as long as the flowers, sepals $\frac{1}{4}$ in. ovate-lanceolate finely acuminate, lateral 5-nerved, lip with rounded crenulate side lobes, midlobe ovate acute veined, disk with 2 small curved calli, column very short, hood with a very thick dorsal ridge.

PERAK, *Scortechini*, *King's Collector*.—DISTRIB. ? Borneo (*Beccari*, No. 2095).

Pseudobulb $\frac{1}{2}$ –1 in., narrowly ovoid. *Leaves* 3–7 in., subacute or acuminate, rather thin; petiole 1 in. *Scape* and *raceme* about equalling the leaves; bracts $\frac{1}{4}$ in., acute; flowers $\frac{1}{2}$ in. across, pale yellow, lip light green.—The Bornean plant differs in having a longer column which has not a dorsal ridge, and its wings are longer. The column of *P. Kingii* is so minute and short that I had great difficulty in finding the wings.

5. **TIPULARIA**, *Nutt.*

Terrestrial herbs; pseudobulb small. *Leaf* solitary, ovate, petioled. *Scape* long; flowers loosely racemose. *Sepals* spreading and petals narrow, subequal. *Lip* much smaller than the sepals, sessile, suberect, lateral lobes rounded, midlobe flat; spur long, slender. *Column* slender erect, anther 2-celled with a short filiform stipes ending in a gland attached to the rostellum (as in *Vandea*); pollinia 4, distinct.—DISTRIB. The following and a N. American species.

T. Josephi, *Reichb. f. mss.*; sepals 3-nerved, petals 1-nerved, lip with large side lobes, midlobe ovate or ovate-lanceolate acute. *Lindl. in Journ. Linn. Soc.* i. 174.

TEMPERATE SIKKIM HIMALAYA; in woods of the interior, alt. 10-12,000 ft., J. D. H.

Pseudobulb $\frac{1}{2}$ in. *Leaf* 2-3 in., 5-7-nerved; *petiole* $\frac{1}{2}$ -1 in. *Scape* with the *raceme* 8-12 in., slender; bracts very minute; flower $\frac{1}{2}$ in. across. *Sepals* with revolute margins and petals obtuse; lip 3-nerved, spur rather longer than the ovary and short pedicel.—Differs from the American *T. discolor* in the much smaller flowers, shorter 3-nerved sepals, larger side lobes of the lip, ovate midlobe, and much shorter spur and column.

6. *OREORCHIS*, Lindl.

Terrestrial herbs, stem tuberous or pseudobulbous, 1-2-leaved. *Leaves* long, narrow. *Scape* slender; flowers small, racemose. *Sepals* and *petals* subsimilar, erect, 5-nerved. *Lip* adnate to the base of the column, claw erect, side lobes short, erect; midlobe spreading, entire. *Column* elongate, subclavate, truncate; anther 1-celled, with a stipes (as in *Tipularia*); pollinia 4, subglobose, distinct.—Species 4, North Asiatic.

1. *O. foliosa*, Lindl. in *Journ. Linn. Soc.* iii. 27; flowers pedicelled, dorsal sepal linear-oblong subacute, lateral falcately oblong acuminate, petals broadly oblong obtuse, base of lip produced into a sac, lateral lobes of lip large rounded, midlobe as large as both lateral rounded. *Corallorhiza* sp. with leaves, Lindl. in *Royle Ill.* 362.

TEMPERATE HIMALAYA; Simla, alt. 7800 ft., Gamble; Garwhal, Royle; Sikkim, Lachen Valley, alt. 11-12,000 ft., J. D. H.

Root a tuber rather than pseudobulb. *Leaf* 3-6 in., linear-lanceolate, nerves strong. *Scape* with *raceme* 6-12 in., few-fl'd.; sheaths 2-3, tubercled; bracts lanceolate, caducous; flowers $\frac{1}{2}$ in. long, red-brown; pedicel and ovary $\frac{1}{2}$ in.; lip many-nerved, median keels very obscure.

2. *O. indica*, Hook. f.; flowers sessile, dorsal sepal linear-lanceolate, lateral subfalcately lanceolate, petals narrowly subfalcately oblong obtuse, mentum 0, lip clawed, side lobes ear-shaped incurved obtuse, midlobe rounded entire or sub-2-lobed, disk with a raised median lamella between the lateral lobes. *Corallorhiza indica*, Lindl. in *Journ. Linn. Soc.* iii. 26 (not of Dcne.).

TEMPERATE WESTERN HIMALAYA; Simla, on Hattu, Thomson; Garwhal, alt. 8-9000 ft., Edgeworth.

Much more robust than *O. foliosa*; flowers much larger, sepals $\frac{1}{2}$ in. long.—Edgeworth's specimen has a tuberous lobed root, and a broken leaf 1 in. broad, which removes the plant from *Corallorhiza*.

3. *O. micrantha*, Lindl. in *Journ. Linn. Soc.* iii. 27; dorsal sepal obtuse, mentum 0, lip with small lanceolate falcate basal lobes, midlobe large with a 2-lobed crumpled tip, disk with a very elevated linear channelled fleshy callus.

WESTERN HIMALAYA; Kumaon, alt. 8-10,000 ft., Thomson, Strackey & Winterbottom (*Orchid.* No. 56).

Pseudobulb globose. *Leaves* 2, $\frac{1}{4}$ - $\frac{1}{2}$ in. broad, narrowly linear. *Scape* 12-18 in., with 2-3 tubular sheaths; flowers $\frac{1}{2}$ in. long.

7. *CORALLORHIZA*, Br.

Leafless, red-brown, erect, terrestrial herbs; rhizome coralloid, jointed. *Scape* simple, sheathed; flowers small, whitish, in a terminal spike or

raceme. *Sepals* and *petals* subequal, linear; petals ascending, incurved. *Lip* clawed, adnate to the base of the column, erect, entire or 3-lobed, spur minute or 0. *Column* erect, incurved; anther 4-celled; pollinia 4; ovoid, soft, cohering by a viscus.—Species about 12, in N. temperate regions.

C. innata, *Brown in Hort. Kew* v. 209; scape slender few-fl., flowers subsessile, bracts minute, lip 3-lobed, side lobes narrow, midlobe retuse. *Lindl. Gen. & Sp. Orchid.* 533; *Reichb. Ic. Fl. Germ.* xiii. t. 490. *C. Jacquemonti*, *Dene. in Jacquem. Voy. Bot.* 165, t. 165.

KASHMIR, *Jacquemont*.—DISTRIB. Europe, N. Asia, N. America.

Scape 6–10 in., slender; sheaths lax; flowers $\frac{1}{4}$ in. long; sepals ovate lanceolate, lateral deflexed; lip (in European specimens) whitish with purple blotches.

8. **DENDROBIUM**, Swartz.

Epiphytes; stems elongate or pseudobulbous. *Leaves* never plaited. *Flowers* racemose, often large and handsome. *Sepals* subequal, lateral obliquely adnate to the foot of the column, and forming with it a sac or mentum. *Lip* contracted at the base, rarely clawed, adnate to and incumbent on the foot of the column, side lobes embracing the column or spreading or 0, terminal narrow or broad, flat, convex, concave or saccate, disk often lamellate. *Column* short, foot long or short, top angled or 2-toothed; anther 2-celled; pollinia 4, free, ovoid or oblong, compressed, closely collateral in pairs in each cell.—Species about 300, Tropical Asiatic, Australasian and Polynesian.

The following attempt to arrange the Indian species of this vast and very intricate genus into definable groups is open to much criticism in detail. It has entailed many months of labour, and it must stand or fall according to the verdict of those who may use it.

Series I. Inflorescence terminal (that is, from the base of a terminal arrested internode), or both terminal and lateral. (See also some species of sect. *Aporum*; lateral in *Formosa*.)

SECT. I. SARCOPODIUM. *Pseudobulbs* short, erect, unimodal, seated singly on a stout creeping rhizome. *Leaves* 2, terminal, opposite, coriaceous, flat, persistent. *Flowers* solitary from between the leaves, or on a 1–few-fl. scape, large or medium-sized; mentum short, rounded.—Habit of *Bulbophyllum*, sect. *Sestochilus*.

SECT. II. BOLBODIUM. *Pseudobulbs* erect, as in *Sarcopodium*, but more tufted, clavate and stipitate. *Leaves* 2, terminal, opposite, coriaceous, flat, persistent. *Flowers* solitary or few from between the leaves, medium-sized, white; mentum large, longer than the lateral sepals, conical, incurved.

SECT. III. CADETIA. *Stem* branched, pendulous, branches forming chains of unimodal sessile or stipitate pseudobulbs. *Leaf* solitary, terminal, coriaceous, flat, persistent. *Flowers* 1–2 from the base of the leaf, medium-sized, white or pale; mentum short or elongate.

SECT. IV. STACHYBIUM. *Stems* tufted, forming a small polynodal pseudobulb, or more or less elongate, often compressed, simple or branched. *Leaves* many, narrow, membranous, deciduous or persistent. *Flowers* solitary, or in slender terminal or terminal and lateral racemes, small or medium-sized, often white; mentum rather long, conical, incurved, or short and obtuse; lip with often a flat keel on the disk that terminates in a truncate crenate callus on the midlobe.—Small species of this section resemble *Eria*, sect. *Bryobium*.

SECT. V. FORMOSE. *Stems* rather short, tufted, leafy, usually suberect, often with deciduous black hairs on the sheaths. *Flowers* solitary or racemose, often large,

white or pale buff with faint colouring on the lip; mentum usually long and funnel-shaped, or conical, acute, straight or incurved (short in *D. albo-sanguineum*); mid-lobe of lip often fimbriate on the margin or disk.—Similarly hairy sheaths occur in sect. *Virgatæ* and in *D. nutans* and a few others.

Series II. Inflorescence lateral on the stem or pseudobulb (terminal in some species of *Aporum*).

Sect. VI. *AP RUM*. *Stems* tufted, compressed, leafy. *Leaves* shortly ensiform distichous, sheaths equitant, imbricating, fleshy or coriaceous, nerveless, persistent. *Flowers* small, white or yellowish with pink markings, shortly pedicelled, solitary or in bracteate heads or short racemes, sometimes appearing racemose from occupying the leafless ends of the branches; mentum stout, as long as or longer than the short broad lateral sepals.

Sect. VII. *STRONGYLE*. *Stems* tufted, slender, often branched, terete. *Leaves* terete, subterete or subulate, persistent. *Flowers* small, white or pale, solitary or as if racemed on the leafless ends of the stem or branches; mentum as in *Aporum*.—This section is not very well distinguished from the preceding and following.

Sect. VIII. *VIRGATÆ*. *Stems* tufted, elongate, slender, but hard, rigid and polished, simple or branched, leafy, often swollen above the base. *Leaves* distichous, long, linear (shorter and oblong in *D. tuberiferum* & *crumenatum*), persistent. *Flowers* small or medium-sized, white or yellow with often pink or green markings, solitary or few on a leaf-opposed tubercle, or appearing racemed on the leafless ends of the stem or branches; sheaths sometimes pubescent with black hairs; mentum usually long, stout, incurved; petals and lip often very narrow.

Sect. IX. *BREVI-FLORES*. *Stems* tufted, long or short, terete or clavate, sparingly leafy. *Leaves* oblong or lanceolate, persistent or deciduous. *Flowers* few, small, in short racemes or heads, pink or yellow, often dingy; mentum large, saccate; lip very short, deeply concave or urceolate, truncate or lobes short.

Sect. X. *PEDILONIUM*. *Stems* tufted, long, terete, simple, stout or slender, erect or pendulous, leafy. *Leaves* distichous, oblong or lanceolate, coriaceous or submembranous, persistent or deciduous. *Flowers* medium-sized, pink or yellow, rarely white, in short leaf-opposed often dense-fld. secund racemes, or in corymbs or tufts, rarely solitary; mentum stout and often very long, equalling or longer (often much) than the short triangular sepals; lip usually very long and narrow, clawed, with often a small lamella, callus or spur on the claw near the base.—*D. sanguinolentum* is perhaps better referred to Sect. XII.

Sect. XI. *DISTICHOPHYLLÆ*. *Stems* tufted, elongate, stout or slender, leafy throughout. *Leaves* short, uniform, distichous, bases imbricating, persistent, emarginate or 2-fld. *Flowers* small, usually white or yellow, solitary or in short leaf-opposed racemes; mentum stout, spur-like, as long as the lateral sepals or longer; lip short, broad, sides recurved.—Habit of *Appendicula*.

Sect. XII. *EUDENDROBIUM*. *Stems* tufted, elongate, stout or slender, clavate or nodose in some species. *Leaves* various, distichous (terminal and solitary in *D. aggregatum* only), membranous or coriaceous, persistent or deciduous. *Flowers* usually large in lateral pairs, fascicles or racemes, very rarely solitary, highly coloured or white.—This section is best characterized by wanting the sum of the characters of any of the others. The species with narrow sepals, petals and a long mentum approach *Formosæ* and *Pedilonium*.

Sect. I. SARCOPODIUM (see p. 710).

* *Flowers solitary.*

1. **D. amplum**, Lindl. in Wall. Cat. 2001; Gen. & Sp. Orchid. 74; leaves petioled oblong, scape long, sepals lanceolate acuminate, lip sessile 3 lobed, side lobes short rounded, midlobe broad acute crenulate, disk

3-lamellate between the side lobes. *Wall. Pl. As. Rar.* i. 25, t. 29; *Part. Mag.* t. 121; *Griff. Notul.* iii. 307; *Ic. Pl. Asiat.* t. 304. *Sarcopodium amplum*, *Lindl. in Part. Fl. Gard.* i. 155; *Fol. Orchid.* 1. *Bolbophyllum amplum*, *Reichb. f. in Walp. Ann.* vi. 244.

TROPICAL HIMALAYA, from Nepal eastwards, ASSAM and the KHASIA MTS., alt. 4-5000 ft.

Pseudobulbs 1-2 in., oblong. *Leaves* 4-6 in., often 2 in. broad; petiole $\frac{1}{2}$ -1 in. *Flowers* white to dull green and purple; sepals $1\frac{1}{2}$ in. long; midlobe of lip dark purple, variable in size and breadth.

2. ***D. fuscescens***, *Griff. Notul.* iii. 308; *Ic. Pl. Asiat.* t. 309; leaves petioled elliptic or linear- or oblong-lanceolate, sepals ovate-lanceolate caudate-acuminate, petals shorter very narrow, lip sessile, base lamellate, side lobes oblong, midlobe larger orbicular-ovate acuminate. *Sarcopodium fuscescens*, *Lindl. in Part. Fl. Gard.* i. 155; *Fol. Orchid.* 2. *Bolbophyllum fuscescens*, *Reichb. f. in Walp. Ann.* vi. 244.

SIKKIM HIMALAYA, alt. 6500 ft., *Clarke*. KHASIA MTS., alt. 4-5000 ft., common. NAGA HILLS, alt. 6-7000 ft., *Prain*.

Pseudobulbs ovoid or ellipsoid, $\frac{1}{2}$ -1 $\frac{1}{2}$ in. *Leaves* 2-4 in. *Flowers* purplish brown; sepals 1-2 in.; bracts large, sheathing.

3. ***D. rotundatum***, *Benth. in Gen. Plant.* iii. 499; leaves elliptic-oblong notched, scape shorter than the membranous bracts, sepals and petals subequal erect ovate acute fleshy, lip sessile, base lamellate, side lobes small rounded, midlobe largest. *Fol. Orchid.* 2. *Bolbophyllum rotundatum*, *Reichb. f. in Walp. Ann.* vi. 244.

SIKKIM HIMALAYA, alt. 6-7000 ft., common. NAGA HILLS, *Prain*.

Pseudobulbs 1-2 in., ovoid or ellipsoid, sheathed. *Leaves* 4-6 in., sessile or petioled. *Flowers* pale chestnut-brown.

4. ***D. Cœlogyne***, *Reichb. f. in Gard. Chron.* 1871, 136; leaves broadly elliptic-oblong notched, flowers very large, sepals lanceolate acuminate, petals narrower, side lobes of lip narrow, midlobe trapezoidly ovate.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs very stout, $1\frac{1}{2}$ -2 in. long. *Leaves* 3-6 in., very coriaceous, sessile or petioled. *Flowers* the largest of the section, yellowish mottled with red; bracts large, sheathing; sepals $2\frac{1}{2}$ in. long; lip deep dull purple.

5. ***D. longicolle***, *Lindl. in Bot. Reg.* 1840, *Misc.* 172; pseudobulb compressed long-necked, leaf linear-oblong obtuse concave, flower solitary, sepals and petals narrowed from a broad base into purple filiform tips, lip ovate, side lobes small, midlobe plaited crisped and lobulate, disk with 2 crisped lamellæ. *Walp. Ann.* vi. 302.

SINGAPORE, *Cuming (cult. in Hort. Loddiges)*.

The only specimen I have seen is in Lindley's Herbarium, and consists of a stem as thick as a quill, composed of 2 internodes, each 3-4 in. long, a sessile leaf 5 by 1 in., and a flower with subfalcate sepals and petals $\frac{1}{2}$ in. long and three times the length of the lip; the ovary is 2 in. long, filiform and jointed on the peduncle, bracts sheathing as long as the ovary, and the pedicel and bract 1 in.—The habit is not that of a *Cadetia*. Only one leaf remains, but there appear to have been two. This is possibly a several-fl. species.

** *Scape several-fl.*

6. ***D. perakense***, *Hook. f.*; pseudobulbs short, leaves lanceolate

acuminate narrowed to the base, scape stout bracteate many-fl., sepals lanceolate acuminate many-nerved, petals linear-lanceolate, mentum short rounded, lip with rounded side lobes and a narrower ovate-lanceolate acute midlobe, disk between the side lobes with 3 crenate ridges.

PERAK, *Scortechini*.

Stem stout, woody; pseudobulbs enclosed in many acute sheaths. *Leaves* 6-9 in., broadest (1-1½ in.) in the middle, strongly nerved. *Scape* as long as the leaves; bracts short, sheathing. *Flowers* shortly pedicelled; sepals ¾ in. long; lip as long; column acute dorsally.

7. **D. macropodum**, *Hook. f.*; leaves short elliptic obtuse, scape stout much longer than the leaves 4-6-fl., pedicels very short, ovary 1½ in., sepals lanceolate and linear petals many-nerved, mentum rounded, side lobes of lip rounded, midlobe small orbicular-ovate with strongly nerved margins, disk from the base to the tip with irregular thickened ridges.

PERAK, *Scortechini*, *Wray* (in *Herb. Calcutt.*).

Stem very stout, densely sheathed; pseudobulbs ovoid, 1-1½ in. *Leaves* 2-2½ in., very coriaceous. *Scape* 8 in.; bracts small, ovate, acute; sepals ¾ in. long; lip auricled at the base. *Column* very stout, tip notched.—Remarkable for the long angular ovary, as in *D. cymbidioides*.

8. **D. geminatum**, *Lindl. mss.*; pseudobulbs small, leaves linear-oblong obtuse, scapes 2-nate shorter than the leaves 4-6-fl., sepals linear-lanceolate and narrow, petals many-nerved, mentum rounded, side lobes of short lip rounded, midlobe ovate acute, disk with thickened ridges between the side lobes.

PERAK, *Scortechini*, *King's Collector*; on rocks, alt. 3-4000 ft.—DISTRIB. Java.

Stem apparently straight as if suberect, stiff, 2-3 ft.; pseudobulbs ¼-¾ in., equidistant. *Leaves* 1½-3 in., very coriaceous, sessile. *Scape* slender; pedicels with ovary ¾ in.; bracts small; flower yellow; sepals ¾ in. long; lip coriaceous; anther 2-lobed at the tip.

9. **D. longipes**, *Hook. f.*; leaves small elliptic-oblong notched, scape very much longer than the leaves erect 3-4-fl., sepals linear-lanceolate and narrower petals many-nerved, mentum rounded, side lobes of short lip truncate with recurved edges, midlobe dagger-shaped acuminate, disk between the side lobes with 3 ridges ending in elongate tubercles.

PERAK, *Scortechini*.

Stem creeping, with very thick vermiform roots; pseudobulbs obpyriform, ¾-1 in., rather close set. *Leaves* 1½ in., very thickly coriaceous, subsessile, prominently 5-nerved beneath. *Scape* 6-8 in., pedicel with ovary 1 in.; bracts small; flowers white?; sepals 1¼ in. long; lip coriaceous.—*Scortechini* has two drawings of this, one with leaves as described above, the other with narrower longer petioled leaves.

Sect. II. BOLBODIUM (see p. 710).

10. **D. pumilum**, *Roxb. Hort. Beng.* 61; *Fl. Ind.* iii. 479 (in part); pseudobulbs oblong to cylindric, leaves short orbicular to elliptic obtuse, flowers solitary shortly pedicelled, lateral sepals broadly triangular, dorsal much smaller ovate, petals linear-oblong, mentum very large obtuse incurved, lip oblong or obovate-oblong with 2 rounded crisped terminal lobes. *Grieff. Notul.* iii. 315; *Lindl. in Journ. Linn. Soc.* iii. 6.

CHITTAGONG, Roxburgh. PEGU, at Rangoon, *lc. in Herb. Calcutt.* TENASSERIM, Griffith, &c. PERAK, *Scortechini*.—DISTRIB. Borneo.

Pseudobulbs of one many-grooved internode 1–1½ in. long, sessile or stipitate. *Leaves* ¾–1 in., coriaceous, sessile. *Flowers* 1 in. long, white; pedicel shorter; lateral sepals 7-nerved; lip with an obscurely caruncled yellow horse-shoe spot at the base of the lobes.—Roxburgh's description of this has been mixed up with that of an *Eria* in Fl. Ind., doubtless through an error of a transcriber or printer; his drawing is excellent.

11. **D. quadrangulare**, *Parish mss.*; pseudobulbs narrowly clavate acutely 4-angled stipitate, leaves linear-oblong, flowers fascicled. *D. pumilum*, *Par.* & *Reichb. f. in Trans. Linn. Soc.* xxx. 150, t. 31.

TENASSERIM; at Moulmein, *Griffith, Parish*.

Parish considered this to be different from *D. pumilum*, and his drawing seems to confirm it; the deeply 4-grooved terminal internode or pseudobulb 1½–2½ in. long and ½ in. broad, preserves its 4-angled character from its earliest stage (when only ½ in. long); it is supported on a stipes of 2–3 slender internodes. The flowers are quite like *D. pumilum*.

Sect. III. CADETIA (see p. 710).

12. **D. Macraei**, *Lindl. Gen. & Sp. Orchid.* 75; in *Journ. Linn. Soc.* iii. 6; leaf linear-oblong obtuse, flowers 2–3 shortly peduncled, sepals and petals erecto-patent linear-lanceolate acute, mentum short conic, side lobes of lip oblong obtuse, midlobe small with 2 diverging lobules crenulate and crisped, disk between the side lobes with 2 fleshy crests. *Thwaites Enum.* 297; *Dalz. & Gils. Bomb. Fl.* 260. *D. fimbriatum*, *Lindl. Gen. & Sp. Orchid.* 76 (not of Hook.). *D. nodosum*, *Dalz. in Hook. Journ. Bot.* iv. (1852) 292. *D. Rabani*, *Lindl. Journ. Linn. Soc.* l. c. 7. *D. pardalinum*, *Reichb. f. in Gard. Chron.* 1885, ii. 230. *D. Flabellum*, *Reichb. f. in Bonplandia* 1857, 56; *Xen. Orchid.* ii. t. 118. *Desmotrichum fimbriatum*, *Blume Bijl.* 329.

SIKKIM HIMALAYA, alt. 7–8000 ft. (*Herb. Hort. Calc.*). KHASIA MTS., alt. 4000 ft., *J. D. H. & T. T.* The CONCAN, at Ram Ghat, *Dalzell*. NILGHIRI HILLS, *G. Thomson*. CEYLON, not uncommon, *Thwaites*.—DISTRIB. Java.

Rootstock creeping, annulate; stems pendulous, 2–3 ft.; branches ending in fusiform pseudobulbs 2–2½ in. long. *Leaves* 4–8 in., sessile. *Flowers* ¾–1 in. long, white; pedicels ¾–1 in.; bracts basal, sheathing; side lobes of lip sprinkled with red, midlobe variable.—I find no characters whereby to distinguish the species included above under *D. Macraei*. Thwaites says of the Ceylon plant “leaves usually 2-nate,” but I have never seen more than one in any specimen or drawing.

13. **D. lonchophyllum**, *Hook. f.*; leaf linear-lanceolate acuminate, flower subsolitary, dorsal sepal ovate-oblong acute, petals linear-oblong, mentum as long as the rest of the flower upcurved, side lobes of lip triangular acute many-nerved, midlobe with a short undulate limb and two oblong divaricate rounded lobes, disk not crested or ridged.

PERAK, *Scortechini*.—DISTRIB. ? Java.

Stems slender; pseudobulbs 1–1½ in., fusiform. *Leaves* 3–5 in., base cuneate. *Flowers* ¾ in. long, nerves and cross nervules very slender. *Lip* cuneate. *Column* with incurved subulate tips; anther with a very long stipes.—Closely resembles the drawing of a Javan plant in *Herb. Lindl.*

14. **D. Kunstleri**, *Hook. f.*; leaves large elliptic-lanceolate acuminate, mentum much shorter than sepals conic acute nearly straight, lip

much larger than the sepals, side lobes triangular acute, midlobe very large quadrate-orbicular with 2 crenulate lamellæ on the disk and plaited undulate sides.

PERAK, *Scortechini, King's Collector*, alt. 500–1000 ft.

Branches long, stout; pseudobulbs 2–3 in., fusiform. *Leaf* 6–10 by 2–3½ in., very coriaceous, base narrowed. *Flower* 1 in. long, very membranous, white mottled with red, nerves and nervules very slender; sepals and petals lanceolate, acuminate; midlobe of lip $\frac{2}{3}$ in. across. *Column* with incurved subulate tips.

Sect. IV. STACHYBIUM (see p. 710).

* Stem simple or nearly so, often a small pseudobulb.

† Flowers small (except *D. ciliatum*). Petals not broader than the dorsal sepal.

§ *Side lobes of lip strongly inciso-serrate.*

15. **D. denudans**, *Don Prodr.* 34; stems 4–6 in. suberect, leaves linear-oblong caducous, racemes elongate drooping many-fl., bracts very small, sepals and petals long slender, mentum incurved obtuse, lip much shorter than the sepals, side lobes inciso-serrate, midlobe small crisped, disk 2-lamellate. *Wall. Cat.* 2014 (in part); *Lindl. Gen. & Sp. Orchid.* 84; in *Bot. Reg.* 1838, *Misc.* 156, and 1844, 61; in *Journ. Linn. Soc.* iii. 19; *Walp. Ann.* vi. 300.

SUBTROPICAL and TEMP. HIMALAYA, alt. 4–7000 ft., from Kumaon eastwards to Sikkim.

Stem clothed with broad sheaths, $\frac{1}{2}$ in. long. *Leaves* 3–8 in., obtuse or notched. *Scape* with raceme 4–6 in., very slender; flowers $\frac{2}{3}$ –1 in. long, usually white with red veins on the lip, sometimes yellowish with a green lip; dorsal sepals 3-nerved, lateral 5-nerved; petals 1-nerved.

16. **D. eriæflorum**, *Griff. Notul.* iii. 316; *Ic. Pl. Asiat.* t. 307; stem 3–4 in. erect, leaves linear-lanceolate acute or notched, racemes many-fl., bracts very small, mentum incurved obtuse, sepals lanceolate, lip nearly as long as the sepals broadly ovate, side lobes subfimbriately serrate, midlobe broad undulate, disk longitudinally crested. *Lindl. in Journ. Linn. Soc.* iii. 19.

SIKKIM HIMALAYA, alt. 6000 ft. KHASIA Mts., alt. 4–5000 ft., *Griffith, &c.*

Stem 3–8 in., basal internode sometimes thickened.—Very closely allied to *D. denudans*, but the racemes are shorter and fewer-fl., the sepals and petals shorter and broader, and the lip stronger in comparison. The colours are as variable as in that plant, between which and *D. alpestre* it is intermediate in characters.

17. **D. alpestre**, *Royle Ill.* 370, t. 88, f. 2; stem pseudobulbous, leaves 3–4 linear-oblong, scape short erect 3–5-fl., sepals ovate-lanceolate, petals oblanceolate, mentum short obtuse, lip lanceolate, side lobes inciso-serrate, midlobe small crisped acute, disk 2-lamellate. *Lindl. in Bot. Reg.* 1844, *Misc.* 61; *Walp. Ann.* vi. 300. *D. denudans*, *Wall. Cat.* 2014 (in part). ? *D. pusillum*, *Don Prodr.* 35.

TEMPERATE HIMALAYA, alt. 5–6000 ft., from Garwhal, *Royle, &c.*, to Nepal, *Wallich, &c.*

Resembles a dwarf state of *D. eriæflorum*; the flowers are fewer and smaller, but of the same colour, the sepals and petals broader in proportion to their length.—

Lindley refers Don's *D. pusillum* to his *D. pygmæum*, which is a Nepal and Wallichian plant, and agrees better with *alpestre*.

18. ***D. strongylanthum***, *Reichb. f. in Gard. Chron.* 1878, i. 462; racemes lateral dense-fl., sepals acuminate, lateral lanceolate, dorsal linear, mentum obtusely angled, lip clawed dilated triangular, sides pectinately serrate to the middle, apex narrowed with small abrupt fleshy calli on each side, disk with a depressed callus very papillose in front keeled in the middle.

INDIA (*Hort. Hincks*).

Stem 12 in., erect, as thick as a goose-quill, closely sheathed. *Flowers* rather small, yellow green; bracts lanceolate, about equalling the pedicelled ovaries; base of sepals dark violet-brown, petals spotted brown; sides and tip of lip dark violet; column 3-toothed, constricted in the middle.—Nearest to *eriaeflorum*, *denudans*, and *pycnostachyum*, *R. f. l. c.* I have seen no specimens. The lateral racemes are exceptions in the group.

§§ *Side lobes of lip entire, serrulate or crenulate.*

19. ***D. microbulbon***, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 19, t. 8*; pseudobulbs small crowded ovoid, leaves 2 linear-oblong acute, scape solitary erect 4-8-fl., bracts about equalling the pedicel, lateral sepals obtuse, petals narrowly subspathulate, mentum long incurved, lip thick, side lobes broad acute, midlobe small round crenulate, disk with a channelled ridge thickened at the end. *Lindl. in Bot. Reg.* 1844, 61; *in Journ. Linn. Soc.* iii. 19; *Dalz. & Gibbs. Bomb. Fl.* 261; *Walp. Ann.* vi. 307. *D. humile*, *Wight Ic.* t. 1643; *Walp. l. c.* 308. *D. crispum*, *Dalz. in Hook. Journ. Bot.* iv. (1852) 111; *Walp. l. c.*

DECCAN PENINSULA; on the Western Ghats, from the Concan, *Law, &c.*, to the Nilghiris, *Perrottet, &c.*, and Anamallay Hills, *Wight*.

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; sheaths membranous, which decaying leave a network of fibres. *Leaves* 2-3 in., rather thick, caducous. *Scape* 1-2 in., flowers white with a pink lip; sepals $\frac{1}{2}$ in. long; lip attached above the base of the acute or obtuse mentum.

20. ***D. porphyrochilum***, *Lindl. in Journ. Linn. Soc.* iii. 18; stem very short erect, leaves 1-4 ligulate, scape short solitary few-fl., bracts about equalling the pedicels, sepals lanceolate, petals shorter, mentum rounded, lip short ovate acute concave, disk with 2 broad plates and 3 ridges.

SIKKIM HIMALAYA, alt. 6000 ft. KHASIA MTS., alt. 4-6000 ft., *Griffith, &c.*

Stem $\frac{1}{2}$ –1 in., often pseudobulbous. *Leaves* 1-3 in., obtuse or obliquely notched. *Sepals* $\frac{1}{2}$ in. long, dirty yellow; lip brown purple.—The Sikkim specimens are in young bud only, and the bracts are longer than the flowers; it may be a different species.

21. ***D. cuspidatum***, *Lindl. in Wall. Cat.* 2015; *Gen. & Sp. Orchid.* 84; *in Bot. Reg.* 1844, *Misc.* 61; stem short stout erect, leaves 2-5 linear-oblong, scape short subsolitary erect 3-6-fl., bracts lanceolate as long as the pedicels, sepals narrowly lanceolate, petals oblanceolate, mentum short incurved, side lobes of lip large rounded, midlobe ovate acuminate quite entire, disk with a channelled ridge rising into 2 lamellæ at the base and fleshy at the tip.

TENASSERIM, *Wallich, Lobb, Parish.*

Stem 1-2 in. *Leaves* as long, rather coriaceous. *Scape* rather stout; flowers white; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. long; lip rather shorter, inserted above the base of the short mentum.

22. **D. pygmæum**, *Lindl. in Wall. Cat.* 1999; *Gen. & Sp. Orchid.* 85; in *Bot. Reg.* 1844, *Misc.* 62; pseudobulbs tufted ovoid, leaves 2-3 linear, scapes many terminal and lateral erect short dense-fl'd., bracts exceeding the ovary, sepals lanceolate, lateral decurved, petals oblanceolate, mentum long acute, lip obovate, side lobes narrow subacute, midlobe triangular crisped, disk with a crenate fleshy ridge. *D. peguannum*, *Lindl. in Journ. Linn. Soc.* iii. 19.

SIKKIM HIMALAYA, at the foot of the hills, *Gamble*. PEGU, *M'Lelland*. TENASSERIM, *Parish*.—DISTRIB. ? BORNEO.

Pseudobulbs $\frac{1}{2}$ -1 $\frac{1}{2}$ in., of several internodes. *Leaves* caducons. *Scape* with raceme 1 in.; bracts nearly $\frac{1}{4}$ in.; sepals $\frac{1}{2}$ in., white or purplish; lip with purple veins.—*Lindley* in *Gen. & Sp. Orchid.* refers *D. pusillum*, *Don*, doubtfully to this, and without a doubt in *Bot. Reg.*, but I think incorrectly (see *D. alpestre*).

23. **D. panduratum**, *Lindl. in Journ. Linn. Soc.* iii. 19; pseudobulbs ovoid, leaves subsolitary lanceolate acuminate, scape erect capillary few-fl'd., bracts minute, sepals lanceolate acuminate, petals oblanceolate, mentum long straight acute, lip panduriform, side lobes narrow acute, midlobe short rounded crenulate. *Thwaites Enum.* 293 (*excl. syn.*).

CEYLON; in the Central Province, ascending to 6000 ft., *Thwaites*.

Pseudobulb $\frac{1}{3}$ - $\frac{1}{2}$ in. *Leaf* 1-2 in. *Scapes* 1-3 in.; flowers $\frac{1}{2}$ in. long, very narrow, white tinged with purple; mentum much longer than the dorsal sepal, lip inserted much above its base.

24. **D. Diodon**, *Reichb. f. in Linnæa* xli. 89; pseudobulbs crowded, leaves linear-oblong unequally notched coriaceous, scapes 1-2 terminal few-fl'd., bracts ovate acuminate rather shorter than the pedicel, sepals lanceolate acuminate, petals subfalcately linear-oblong, mentum obtuse incurved notched, lip as long as the sepals, claw narrow dilating into a nearly rounded reticulately nerved limb, side lobes with short acute fronts, midlobe broad crenate and crisped, disk with a depressed channelled ridge with a notched tip. *D. albidulum*, *Thwaites in Trim. Cat. Ceyl. Pl.* 88.

CEYLON; at Hakgalle, *Thwaites*.

Pseudobulbs $\frac{1}{2}$ in., pyriform, of several internodes, at first enclosed in membranous sheaths. *Leaves* 1- $\frac{1}{2}$ in., base narrowed. *Scape* with the raceme 1-1 $\frac{1}{2}$ in.; pedicels $\frac{1}{2}$ in.; sepals as long, and lip? white.—The specimens are few, and flowers far advanced.

25. **D. nanum**, *Hook. f. Ic. Pl.* t. 1853; pseudobulbs ovoid, leaves 2-3 elliptic-lanceolate, scapes 1-2 terminal many-fl'd., bracts shorter than the pedicels, sepals subequal, dorsal oblong-lanceolate obtuse, lateral ovate-lanceolate decurved, petals linear-oblong obtuse, mentum incurved obtuse, lip long-clawed limb suborbicular serrulate, side lobes small, midlobe rounded disk with a broad depressed fleshy truncate ridge.

MALABAR; on the Bababoodan Hills, *Law*.

Pseudobulbs $\frac{1}{4}$ - $\frac{1}{2}$ in. *Leaves* 1-1 $\frac{1}{2}$ in., obtuse or subacute. *Scape* and raceme 1 $\frac{1}{2}$ -3 in.; pedicel and ovary $\frac{1}{2}$ - $\frac{3}{4}$ in.; bracts lanceolate; flowers $\frac{1}{2}$ in. diam., white? lip glandular ?-serrate; column very short.

26. **D. miserum**, *Reichb. f. in Gard. Chron.* 1869, 381; pseudobulbs

fusiform, leaves ligulate aristulate microscopically serrulate, raceme terminal, bracts small triangular, dorsal sepal ligulate acute, lateral triangular, petals ligulate acuminate, lip clawed ovate subacute serrulate, disk with a linear depressed keel which is dilated at the apex.

ASSAM (*Hort. Day*).

Description from the author cited. I have not seen specimens.

27. **D. Heyneanum**, *Lindl. in Wall. Cat.* 1995; *Gen. & Sp. Orchid.* 90; *in Bot. Reg.* 1839, *Misc.* 41; stem erect flexuous, leaves linear-lanceolate acute, scapes long slender, bracts shorter than the short pedicels, sepals and petals ovate-lanceolate, mentum long straight acute, side lobes of lip acute, midlobe rounded crenate, disk with a channelled ridge ending in a fleshy callus. *Wight Ic.* t. 909; *Walp. Ann.* vi. 298.

THE DECCAN PENINSULA; on the Ghats of Malabar, *Heyne, &c.*

Stem 4-8 in. *Leaves* 3-4 in. *Scapes* terminal and axillary, with the few- or many-fld. racemes as long as the leaves or longer; flowers white; sepals $\frac{1}{2}$ in. long; mentum as long as the dorsal sepal, lip inserted above its base.—Habit of *D. denudans*.

28. **D. pycnostachyum**, *Lindl. in Journ. Linn. Soc.* iii. 19; stem erect fleshy, scape terminal, raceme dense-fld., bracts lanceolate equalling the ovary, sepals and petals lanceolate, mentum short obtuse incurved, side lobes of lip very narrow, midlobe longer ovate serrate and crisped, disk with a channelled ridge 2-fld at the tip.

TENASSERIM, *Lobb*.

I have seen no good specimens, and no leaves. A drawing apparently of this species (*in Herb. Hort. Calc.*) represents a leafless stem a foot long, tapering to the tip, and ending in a many-fld. raceme 4 in. long; the flowers are shortly pedicelled, white with a green lip.

29. **D. incurvum**, *Lindl. in Journ. Linn. Soc.* iii. 18; stems usually narrowed upwards, leaves linear-oblong obliquely notched, scapes terminal and leaf-opposed shorter than the leaves flexuous few-fld., bracts membranous equalling the pedicels, sepals lanceolate, petals narrower, mentum conic acute, lip oblong-lanceolate acute or acuminate concave crisped, disk with a ridge ending in 2 teeth. *Dendrob.* No. 9, *Griff. Notul.* iii. 314. *D. Actinia*, *Lindl. in Journ. Linn. Soc.* iii. 9.—*Actinia*, *Griff. Notul.* iii. 320; *Ic. Pl. Asiut.* t. 351 A, fig. 21.

TENASSERIM; at Mergui, *Griffith, Parish*.

Stem 3-6 in., internodes $\frac{1}{2}$ - $\frac{3}{4}$ in. *Leaves* 2-3 in. *Scape* with the raceme 1-1 $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in.; pedicel with ovary twice as long; sepals $\frac{1}{4}$ in., white; lip greenish with purple veins.—Habit of *D. eriæflorum*. *Griffith's Actinia* is a Pelorian form.

30. **D. graminifolium**, *Wight Ic.* t. 1649; rhizome creeping, stem slender, leaves narrowly linear acute, racemes terminal short solitary or 2-nate capillary erect few-fld., bracts minute, sepals 5-nerved, lateral falcately lanceolate, mentum long straight spur-like, petals as long linear-lanceolate 3-nerved erose, lip with small short spreading side lobes, midlobes oblong flat crenate.

TRAVANCORE; at Courtallam, *Wight*.

Stem 4-8 in. *Leaves* 2-3 in., grass-like. *Scapes* much shorter than the leaves, 4-6-fld.; pedicels short; flowers $\frac{1}{2}$ in. long, white; lip veined.—*Wight* remarks that this differs from its allies in its long slender creeping rhizome.

31. **D. ciliatum**, *Parish in Bot. Mag. t. 5430*; tall, leaves linear unequally notched, scapes strict long terminal and axillary, racemes laxly many- and large-fld., bracts minute, lateral sepals falcate decurved, petals spatulate, mentum short conical obtuse, lip cuneately-oblong, side lobes incurved, midlobe small ovate fimbriate with long clavate hairs on the nerves. *Veitch Man. Dendrob. 30.*

TENASSERIM, *Parish*. ARRACAN, *Benson (fld. Reichb. f.)*.

Stem 12-18 in., terete, leafy above. *Leaves* 3-4 by $\frac{1}{2}$ in. *Scape* with the raceme 6-8 in., rather stout; pedicels $\frac{3}{4}$ in.; flowers nearly 1 in. long, pale green; lip yellow-green; dorsal sepal and petals erect; side lobes of lip veined with red.—In stout habit and large flowers this is very unlike others of the section.

†† *Flowers rather large. Petals much broader than the dorsal sepals.*

32. **D. chlorops**, *Lindl. in Bot. Reg. 1844, Misc. 44*; leaves oblong-lanceolate, scapes terminal and axillary stout many-fld., flowers subcorymbose, lateral sepals oblong obtuse, petals twice as broad obovate, mentum short conic incurved, lip flat, side lobes small rounded, midlobe large subquadrate, disk hairy and with a channelled ridge. *Dalz. & Gibs. Bomb. Fl. 261*; *Walp. Ann. vi. 299*; *Veitch Man. Dendrob. 27*. *D. barbatulum*, *Wight Ic. t. 910*. *Cymbidium ovatum*, *Willd. Sp. Pl. iv. i. 101*.—*Rheede Hort. Mal. xii. t. 7*.

The DECCAN PENINSULA; from the Concan to Malabar on the Ghats.

Stems 12-18 in., sometimes very stout and $\frac{3}{4}$ in. diam.; internodes 1-1 $\frac{1}{2}$ in., terete. *Leaves* 1-4 in., caducous. *Scapes* 3-5 in.; bracts small; flowers white, greenish or yellowish, $\frac{3}{4}$ in. long, very variable in size and colour.

33. **D. barbatulum**, *Lindl. in Wall. Cat. 2013*; *Gen. & Sp. Orchid. 84*; in *Journ. Linn. Soc. iii. 20*; in *Part. Fl. Gard. iii. 113*, fig. 285; leaves narrowly lanceolate acuminate, scapes stout terminal and lateral strict many-fld., lateral sepals lanceolate falcate, dorsal narrow, petals much larger elliptic-lanceolate, mentum conical acute, lip flat, side lobes small short obtuse, midlobe much larger ovate acute, disk hairy. *Bot. Mag. t. 5918*; *Dalz. & Gibs. Bomb. Fl. 261*; *Veitch Man. Dendrob. 21*; *Walp. Ann. vi. 299*.

The DECCAN PENINSULA; from the Concan to Kurg.

Stems 10-15 in., tapering to the top; internodes $\frac{3}{4}$ -1 in., swollen. *Leaves* 3-4 in., caducous. *Flowers* $\frac{1}{2}$ in. diam., whitish; bracts minute.

34. **D. Fytcheanum**, *Batem. in Gard. Chron. 1864, 100, and 1863 1317*; erect, leaves linear-lanceolate, racemes terminal and lateral many-fld., sepals lanceolate acute, petals much larger rounded-obovate, mentum long spur-like, lip subcordately obovate, side lobes minute incurved. *Veitch Man. Dendrob. 46*; *Berkeley in Gard. Chron. 1887, 209 (rar. rosea)*. *D. barbatulum*, *Batem. in Bot. Mag. t. 5444*.

ARRACAN, RANGOON, and TENASSERIM, *Parish, Berkeley*.

Stem 12-18 in. *Leaves* 3-4 in., deciduous. *Flowers* 1 $\frac{1}{2}$ -2 in. across, white or rosy; pedicels sheathed; bracts small.

** *Stems long, copiously branched. Flowers small.*

35. **D. herbaceum**, *Lindl. in Bot. Reg. 1840, Misc. 69, and 1844, Misc. 58*; leaves linear-lanceolate acuminate caducous, racemes terminal very short few-fld., sepals and petals linear-oblong obtuse 3-nerved, mentum very

short rounded, lip very small narrow, side lobes very narrow, tips rounded, midlobe shorter ovate rugose. *Walp. Ann.* vi. 295. *D. ramosissimum*, *Wight Ic. t.* 1648; *Dalz. & Gibs. Bomb. Fl.* 261; *Walp. l. c.* 300.

BEHAR; on Parusnath, *Thomson*. DECCAN PENINSULA; from the Concan to Kurg, *Jerdon*, &c.; Godaveri district, *Gamble*.

Stem pendulous, 2-3 ft. long, and lower part of branches naked, upper with short sheaths. *Leaves* (in *Wight Ic.*) 2 in. long. *Racemes* subsessile, $\frac{1}{4}$ - $\frac{1}{2}$ in. long; bracts minute, lanceolate; pedicels nearly as long, capillary; flowers yellow; sepals shorter than the pedicels.—*Wight* describes the midlobe of the lip as suborbicular, but it is not so in his figure or in the specimens. The Parusnath specimens are stouter than the Concan ones, and the Godaveri ones still more so, and shorter. The name *herbaceum* is inappropriate, but claims priority.

36. **D. parcum**, *Reichb. f. in Gard. Chron.* 1866, 1042; *Xen. Orchid.* ii. t. 169; racemes extremely short 2-4-fl., petals linear-spathulate, mentum broad obtuse much longer than the oblong obtuse 3-nerved sepals, lip exceeding the sepals straight narrow with a dilated cuneiform truncate tip dull yellow speckled with purple.

TENASSERIM, *Parish*.

Stems 12-18 in., like those of *herbaceum*. *Raceme* $\frac{1}{2}$ - $\frac{1}{3}$ in.; flowers $\frac{1}{2}$ in. long, greenish yellow.

Sect. V. FORMOSÆ (see p. 710).

37. **D. longicornu**, *Lindl. in Wall. Cat.* 1997; *Gen. & Sp. Orchid.* 80; *Bot. Reg. t.* 1315, and 1844, *Misc.* 53; in *Journ. Linn. Soc.* iii. 16; sheaths hirsute, flowers lateral and terminal, sepals lanceolate acuminate not keeled, petals narrower acuminate, mentum slender funnel-shaped straight acute as long as the dorsal sepal or longer, side lobes of lip rounded, midlobe small orbicular fringed, disk with 3 crenate or wrinkled ridges, nerves rarely papillose, ovary terete. *Veitch Man. Dendrob.* 56; *Walp. Ann.* vi. 292. *D. flexuosum*, *Griff. Notul.* iii. 317.

TEMPERATE HIMALAYA; from Nepal eastwards, ascending to 8000 ft. in Sikkim. KHASIA AND NAGA HILLS, common.

Stem 6-12 in., rather slender, flexuous; internodes 1-1 $\frac{1}{2}$ in. *Leaves* linear-lanceolate, unequally obtusely 2-fid. *Flowers* 2 in. long, white; lip variable in breadth and in the length of the fimbriæ of the midlobe.

VAR. hirsuta; usually larger leaved, sepals petals and lip broader, nerves and ridges of lip copiously setosely fimbriate. *D. hirsutum*, *Griff. Notul.* iii. 328; *Ic. Pl. Asiat.* t. 305; *Reichb. f. in Gard. Chron.* 1884, ii. 488.—Khasia Hills, alt. 4000 ft., *Griffith*, &c. Munnipore, *Watt*.—After examining many specimens, I think that Lindley was right in uniting this with *D. longicornu*, of which it is an extreme form.

38. **D. cariniferum**, *Reichb. f. in Gard. Chron.* 1869, 611; sheaths sparsely hairy, leaves linear-oblong, flowers 2-3 on a short peduncle, sepals lanceolate keeled, petals broader than the sepals elliptic-oblong apiculate, mentum as long as the dorsal sepal corniform acute incurved, side lobes of lip rounded crenate, midlobe obovate or rounded crisped papillose, disk fimbriate, ovary triquetrous. *Veitch Man. Dendrob.* 27.

MUNNIPORE, *Watt*. BURMA, at Bhamo, *Berkeley*.

Stem 6-10 in.; internodes $\frac{1}{2}$ - $\frac{3}{4}$ in. *Leaves* 2-3 in., coriaceous. *Sepals* 1 $\frac{1}{2}$ in., pale buff; disk of lip with golden streaks.—Flowers coriaceous when dry, fragrant.—*Var. lateritia*, *Reichb. f. in Gard. Chron.* 1883, i. 656, has brick-red on the lip.

39. **D. Wattii**, *Reichb. f. in Gard. Chron.* 1888, ii. 725; sheaths sparsely pubescent, leaves linear, flowers on leafless stems subsolitary white, sepals ovate-lanceolate acuminate keeled, petals broader than the sepals elliptic-oblong acute, mentum corniform as long as the dorsal sepal straight obtuse, side lobes of lip rounded, disk yellow, midlobe small oblong crisped papillose, ovary terete. *D. cariniferum*, *var. Wattii*, *Hook. f. in Bot. Mag.* t. 6715.

MUNNIPORE, *Watt.*

Very near *cariniferum*, differing in the slenderer stems, narrower less coriaceous leaves, larger flowers that are membranous when dry, and the terete ovary.

40. **D. Infundibulum**, *Lindl. in Journ. Linn. Soc.* iii. 16; sheaths pubescent above, leaves oblong or lanceolate, flowers few together large white, sepals ovate-lanceolate, petals much larger broadly obovate, mentum as long as the sepals funnel-shaped incurved, lip obovate-oblong toothed white, disk golden, side lobes rounded incurved, midlobe large shortly 2-lobed. *Bot. Mag.* t. 5446; *Gard. Chron.* 1862, 1194; *Ill. Hort.* 1874, t. 172; *Veitch Man. Dendrob.* 50.

TENASSERIM; on Thoungyun, alt. 4-5000 ft., *Lobb, Parish.*

Stem 1-2 ft. *Leaves* 3-5 in., deeply 2-fid. *Flowers* 3-4 in. diam.; pedicels $1\frac{1}{2}$ in.; bracts $\frac{1}{2}$ in.—*Var. Jamesiana*, *Veitch l. c.* (*D. Jamesianum*, *Reichb. f. in Gard. Chron.* 1869, 554; *Williams Orchid. Alb.* t. 221; *Gartenfl.* 1867, 549, f. 137; *Godef. Orchidoph.* 1886, 189, with fig.; *Flor. & Pomol.* 1869, 187, with fig.), is stouter, more rigid, side lobes of lip rough within, dull red. *Var. ornaticissima*, *Reichb. f. in Gard. Chron.* 1883, i. 656, has cinnabar markings on the lip.

41. **D. formosum**, *Roxb. in Wall. Cat.* 1998; *Fl. Ind.* iii. 485; stout, sheaths pubescent, leaves oblong, flowers very large in terminal or lateral racemes, sepals oblong-lanceolate acuminate, petals much larger suborbicular cuspidate undulate, mentum half as long as the dorsal sepal conical, lip broadly obovate entire, side lobes small rounded, midlobe dilated retuse apiculate, disk golden with 2 tubercled ridges. *Lindl. Gen. & Sp. Orchid.* 81; in *Wall. Pl. As. Rar.* 34, t. 39; in *Bot. Reg.* 1838, *Misc.* 86, 1839, t. 64; in *Journ. Linn. Soc.* iii. 16; *Part. Mag.* vi. p. 49, with fig.; *Fl. des Serres*, t. 226, t. 1633-4 (*var. gigantea*); *Williams Orchid. Alb.* vii. t. 308; *Veitch Man. Dendrob.* 44, with fig.; *Ann. de Gand.* 1848, t. 171. *D. Infundibulum*, *Reichb. f. in Gartenfl.* t. 1253.

TROPICAL HIMALAYA; from Nepal to Bhotan; the KHASIA HILLS, ASSAM, and southwards to TENASSERIM and the ANDAMAN ISLANDS.

Stem 12-18 in., as thick as the little finger. *Leaves* 3-5 by $1\frac{1}{2}$ in., subamplexicaul. *Flowers* 3-5 in. diam.; bracts short, ovate.—*Var. Berkeleyi*, *Reichb. f. in Flora* 1882, 534; in *Gard. Chron.* 1883, i. 110, 210, has smaller flowers, shorter petals, and a narrower lip. *Var. sulphurata*, *Hook. ex Reichb. f. l. c.* 1882, ii. 437, has the throat of the lip sulphur-colored. *Var. gigantea*, *Reichb. f. in Gard. Chron.* 1882, i. 369, f. 54, is a large state.

42. **D. Williamsoni**, *Day & Reichb. f. in Gard. Chron.* 1869, 78; sheaths and leaves puberulous, leaves oblong or lanceolate, flowers 1-2 on a short bracteate peduncle, sepals lanceolate acuminate, dorsal ovate acute, petals hardly broader oblanceolate, mentum funnel-shaped nearly as long as the dorsal sepal, side lobes of lip rounded, midlobe orbicular ciliate, disk obscurely 3-ridged.

ASSAM, *Williamson.* KHASIA HILLS, *Gallatly (l. c. in Herb. Calcutt.).*

Stem 6-8 in., stout, sometimes fusiform. *Flowers* yellowish without, white within, except the yellow lip, which is often dashed with red within.

43. **D. albo-sanguineum**, *Lindl. in Part. Fl. Gard.* ii. 93, t. 57 (*very inaccurate*); stems subclavate erect, leaves linear-lanceolate obtuse or subacute, racemes erect lateral or subterminal on the leafing stems, bracts very small, flowers large cream-cold with red bars on the very base of the lip, sepals oblong obtuse, petals twice as broad apiculate, mentum rounded, lip large broadly obovate expanded waved with a short convolute base. *Bot. Mag.* t. 5130.

TENASSERIM; on the Attran River, *Lobb*.

Stem 6-16 in., glabrous; internodes 1-1½ in. by ½ in. diam., lower narrower. Leaves 5-7 by 1 in. Raceme 3-4 in., stout, erect; bracts sheathing; flowers 3 in. diam., slightly scented.—The figure in Paxton's Magazine (copied in *Fl. des Serres* vii. t. 721, and *Jard. Fleur.* t. 203) is, as Lindley implies, a made up one, and differs *in toto* from that in the *Bot. Mag.*, having 2-nate lateral flowers on a very stout leafless stem. Lindley, however, cites Lobb for the flowers being racemose, as they really are.—A very anomalous plant.

44. **D. draconis**, *Reichb. f. in Bot. Zeit.* 1862, 214; *Xen. Orchid.* ii. 130, t. 146; in *Gard. Chron.* 1883, i. 598; stems clavate, sheaths pubescent, leaves coriaceous, flowers solitary or fascicled large, sepals lanceolate acuminate, mentum long straight, petals large undulate, lip lanceolate, side lobes small rounded, midlobe long acuminate crenate. *Warn. Orchid. Alb.* iii. t. 103; *Veitch Man. Dendrob.* 39. *D. eburneum*, *Reichb. f. in Bot. Mag.* t. 5459; *Rev. Hortie.* 1883, 332, *with fig.*

TENASSERIM; at Moulmein, *Parish*.—DISTRIB. Siam, Cochin China.

Near *D. longicornu*, but stems much stouter, clavate after leafing, leaves much broader, and midlobe of lip larger.

45. **D. Lubbersianum**, *Reichb. f. in Gard. Chron.* 1882, i. 460; stem hirsute with black hairs, leaves oblong hispidulous on both surfaces, sepals triangular acute carinulate, petals oblong apiculate, mentum conical rather shorter than the pedicelled ovary, lip cuneate dilated 3-fid, side lobes obtuse-angled toothed in front, midlobe short lobulate fimbriate retuse and with pectinate filiform processes, disk with a thickened grooved ridge between the side lobes.

BURMA (*Hort. Veitch*, where it no longer exists).

Sepals and petals yellowish white; lip with 3 carnation blotches.—Description from the author. I have seen no specimens.

46. **D. virgineum**, *Reichb. f. in Gard. Chron.* 1884, ii. 520; 1888, ii. 725; hirsute with black hairs, leaves oblong ligulate, tip 2-lobed, raceme terminal, lateral sepals triangular obscurely keeled, dorsal oblong obtuse, petals rhombic, mentum short conical, side lobes of lip ½-ovate crenulate, midlobe rounded notched crenulate, disk with 2 parallel depressed ridges.

BURMA (*Hort. Low*).

Like *D. Infundibulum*, but leaves nearly twice as broad, flowers one-third smaller, ivory-white, ridges of lip red.—Description from the author, l. c.

Sect. VI. APORUM (see p. 711).

* *Flowers on the leafless extremities of the branches.*

47. **D. Serra**, *Lindl. in Journ. Linn. Soc.* iii. 3; stem long, leaves short ovate acute, flowers very small very shortly pedicelled, mentum short, lip linear-oblong with 2 terminal auricles or lobules. *D. micranthum*,

Lindl. l. c.; *Walp. Ann.* vi. 279. *D. aloefolium*, *Reichb. f. l. c.* *Aporum* Serra, *Lindl. in Wall. Cat.* 2021; *Gen. & Sp. Orchid.* 71. *A. micranthum*, *Griff. in Calc. Journ. Nat. Hist.* iv. 375, t. 17, and v. 369; *Lindl. in Journ. L. S. l. c.* *Macrostomium aloefolium*, *Blume Bijdr.* 335, fig. 37. *Oxystophyllum macrostoma*, *Hassk. in Tijdsch. Nat. Gesch.* x. i. 22.

PENANG, *Porter, Maingay (Kew Distrib.* 1604). SINGAPORE, *Wallich*. PERAK, *Scortechini*.—DISTRIB. Java.

Stems 2–3 ft., naked extremities 4–8 in., sometimes branched. *Leaves* $\frac{3}{4}$ –1 in. *Flowers* $\frac{1}{10}$ in., arising from a small globose tuft of rigid bracts; sepals obtuse.—Griffith's *D. micranthum* is unquestionably *D. Serra*: the specimen he figures has lost all of the naked end of the branch but the lowest node.

48. ***D. acinaciforme***, *Roxb. Fl. Ind.* iii. 487; leaves lanceolate, flowers small, mentum as long as the rest of the flower, lip elongate-cuneate, tip rounded crenulate. *Griff. in Calc. Journ. Nat. Hist.* v. 370.

ASSAM, *Jenkins*. KHASIA MTS., alt. 3–4000 ft.: at Nowgong, *J. D. H. & T. T.*; at Bhorlasa, *Clarke*.

Stems 1–3 ft., with long naked extremities. *Leaves* $1\frac{1}{2}$ –2 in. *Flowers* $\frac{1}{2}$ in. long, yellowish white; bracts minute; pedicel as long as the flower.—Roxburgh states this to have been sent to the Calcutta Garden from Amboyna, but the Khasia plant so perfectly agrees with his description and figure, that I suspect some mistake. Lindley, who had not seen Roxburgh's drawing, nor the then unpublished 3rd vol. of the *Fl. Ind.*, doubtfully refers *D. acinaciforme* to *Serra*.

** *Flowers in terminal heads of many bracts.*

49. ***D. Leonis***, *Reichb. f. in Walp. Ann.* vi. 280; stout, leaves very thickly coriaceous broadly ovate as broad as long obtuse, head of bracts solitary fibrous, mentum very broad as long as the rest of the flower, lip linear with involute margins and a rounded crenulate tip carunculate on the disk. *Aporum indivisum*, *Lindl. in Wall. Cat.* 2018; *Gen. & Sp. Orchid.* 70 (not of Blume). *A. Leonis*, *Lindl. in Bot. Reg.* 1840, *Misc.* 59; *Griff. in Calc. Journ. Nat. Hist.* v. 368.

SINGAPORE, *Prince*. MALACCA, *Griffith*, *Maingay (Kew Distrib.* 1605). PERAK, *Scortechini*, *Wray*.

Stem 6–10 in. *Leaves* $\frac{3}{4}$ in. long and broad, not striated, margins thickened when dry. *Flowers* shortly stoutly pedicelled, $\frac{3}{4}$ in. long, dirty purplish and yellow (pale citron tinted with claret, *Wray*).—*A. indivisum*, Blume (fid. Herb. Lindley), has much longer not thickened leaves, and a transverse lamina on the lip (like *D. eulophotum*); it is Cuming's 2068.

*** *Flowers in lateral or lateral and terminal heads of many bracts.*

50. ***D. eulophotum***, *Lindl. in Journ. Linn. Soc.* iii. 5; leaves oblong or lanceolate, flowers shortly pedicelled, mentum about as long as the rest of the flower, tip broad 2-lobed, lip linear-oblong with incurved margins and a truncate broad flat lamella on the disk, and a dilated rounded crenulate tip.

TENASSERIM, *Griffith, Helfer (Kew Distrib.* 5066), *Parish*. PERAK, *Scortechini*.—DISTRIB. Java.

Stem stout, 6–10 in. *Leaves* 1–2 in., obtuse, acute or acuminate, striate when dry. *Flowers* about $\frac{1}{2}$ in., yellow and red; lamella on lip with 2 spur-like recurved processes in the Javan specimens and in a drawing by Scortechini, truncate or retuse in the Tenasserim specimens and in another drawing by Scortechini.

51. **D. grande**, *Hook. f.*; very stout, leaves lanceolate acuminate, flowers pedicelled, mentum about as long as the rest of the flower incurved, lip cuneate with a toothed lamella on the disk and a spreading fan-shaped 2-lobed tip, the lobes broadly truncate.

PERAK, *Scortechini*. PENANG (*Ic. in Herb. Kew*). ? S. ANDAMAN ISLANDS, *Kurz*.

Stem 6–18 in., very broad (1 in.) above. *Leaves* 2–2½ in. *Flowers* about ½ in. long, yellow, with red on the disk of the sepals and petals.—Described from the Kew and Scortechini's drawings.

52. **D. atropurpureum**, *Miquel Fl. Ind. Bat.* iii. 644; leaves lanceolate or linear-lanceolate acute, flowers subsessile in axillary shortly peduncled bracteate heads, mentum as long as the sepals, lip thick ciliate linear, tip dilated obscurely 3-lobed, disk caruncled. *D. concinnum*, *Miq. l.c.* *Oxystophyllum atropurpureum*, *Blume Rumph.* iv. 41, t. 193, f. 4, and 198 C; *Walp. Ann.* iii. 536. *O. carnosum*, *Blume Bijl.* 336, fig. 38; *Lindl. Gen. & Sp. Orchid.* 72. *Aporum concinnum*, *Lindl. in Wall. Cat.* 2019; *Gen. & Sp. Orchid. l.c.*

TENASSERIM; at Moulmein, *Parish*. PERAK, *Scortechini*. SINGAPORE, *Wallich*.—DISTRIB. Siam, Malay Islands.

Stem 4–6 in. *Leaves* 1–1½ in., variable, not striate. *Flowers* about ½ in., yellowish or pink; lip with a tubercle under the tip.

**** *Flowers axillary or terminal; bracts minute, inconspicuous.*

53. **D. sinuatum**, *Lindl. ex Walp. Ann.* vi. 280; leaves very many close set lanceolate acuminate, flowers axillary solitary, lip fleshy elongate cuneate with a carunculate ridge within the margin at the tip ciliate. *Aporum sinuatum*, *Lindl. in Bot. Reg.* 1841, *Misc.* 1; *Griffith in Calcutt. Journ. Nat. Hist.* v. 368; *Walp. Ann.* vi. 280.

PENANG, *Maingay (Kew Distrib.* 1603). MALACCA, *Griffith*. SINGAPORE, *Cuming (Hort. Loddiges)*.—DISTRIB. Borneo.

Resembles *D. atropurpureum*, but stems 6–10 in., leaves 1½ in., more numerous, close set and shining when dry, flowers very much larger and solitary with small basal bracts.

54. **D. anceps**, *Swartz in Act. Holm.* 1800, 246; leaves lanceolate or ovate-lanceolate acute, flowers axillary very shortly pedicelled, mentum longer than the sepals, lip cuneately oblong obscurely 3-lobed membranous veined, margins crisped. *Willd. Sp. Pl.* iv. 136; *Roxb. Fl. Ind.* iii. 487; *Walp. Ann.* vi. 279. *Aporum anceps*, *Lindl. Gen. & Sp. Orchid.* 71 (*excl. cit. Wall.*); *Bot. Reg.* t. 1239; *Bot. Mag.* t. 3608; *Lodd. Bot. Cab.* t. 1895; *Griff. in Calc. Journ. Nat. Hist.* v. 368.

GANGETIC DELTA, *Roxburgh*. Sikkim Himalaya, in hot valleys, *J. D. H.* ASSAM, *Hamilton*. TENASSERIM, *Parish*.

Stem 1–3 ft., stout, flattened, sometimes ½ in. broad. *Leaves* 1–1½ in., striate when dry. *Flowers* ½ in. long, greenish or yellowish.

55. **D. Nathanielis**, *Reichb. f. in Sehill. Cat. Orchid. Ed.* 3 (1857) 26; leaves lanceolate acuminate, flowers very small, pedicel capillary, mentum longer than the sepals, lip membranous cuneate elongate, side lobes small, midlobe broad 2-lobed. *D. cuspidatum*, *Lindl. in Journ. Linn. Soc.* iii. 4. *D. multiflorum*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 149, t. 31, f. 2. *Aporum cuspidatum*, *Wall. in Bot. Reg.* 1841, *Misc.* 2. *A. anceps*, *Lindl. in Wall. Cat.* 2020.

CACHAR, *Keenan*. TENASSERIM and MARTABAN, *Wallich, Parish*.

Habit and foliage of *A. anceps*, but the flowers are much smaller, $\frac{1}{3}$ in. long, very membranous, and have capillary pedicels. Lip with a flat ridge on the disk that ends abruptly opposite the side lobes.—Lindley (in Journ. Linn. Soc.) has confounded this with *acinaciforme*.

56. **D. terminale**, *Parish & Reichb. f. in Trans. Linn. Soc.* xxx. 149; leaves small ovate or ovate-oblong acute, flower terminal solitary large, mentum broad much longer than the rest of the flower, lip triangular-cuneate truncate, or 2-lobed.

TENASSERIM, *Parish*. MALACCA (*lc. in Herb. Calcutt.*).

Stems 4-6 in. Leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. Flower $\frac{2}{3}$ in. long, white, lip yellowish.—The large flower at once distinguishes this from its allies.

57. **D. spatella**, *Reichb. f. in Hamb. Gartenzeit.* xxi. 298; leaves not imbricating ascending fleshy triangular, flowers solitary minute, dorsal sepal triangular, lateral twice as large oblong most obtusely acute, petals $\frac{1}{2}$ -ovate acute, mentum moderate, lip spathulate or cuneately dilated $\frac{1}{2}$ -ovate in front crenulate angled, disk with 3 elevated yellow lines, column very short obtuse.—*Descript. from the author, l. c.*

ASSAM (*Hort. Day*).

Sect. VII. STRONGYLE (see p. 711).

* *Flowers terminal.*

58. **D. parviflorum**, *Reichb. f. ex Lindl. in Journ. Linn. Soc.* iii. 4; stem stout terete, leaves 2 in. straight stout obtuse, flower solitary terminal 1 in. long, dorsal sepals and petals subequal oblong obtuse half the length of the very large broad obtuse nearly straight mentum, free part of lateral sepals triangular, lip obovate truncate, tip broad crenulate and crisped. *Aporum Jenkinsii*, *Griff. in Calc. Journ. Nat. Hist.* v. 367, t. xxv.

ASSAM, *Jenkins*.

Stem 6-10 in., terete. Leaves $\frac{1}{4}$ in. diam. at the base, gradually narrowed to the obtuse tip. Flower solitary, white; disk of lip yellow; peduncle much shorter than the mentum.—I have seen no specimens.

59. **D. kentrophyllum**, *Hook. f.*; stem stout, leaves $\frac{1}{2}$ -1 in. recurved or straight stout acute, flower solitary terminal $\frac{1}{2}$ in. long, dorsal sepal ovate-oblong, lateral obtuse, petals oblanceolate, mentum more than twice as long as the dorsal sepal stout incurved narrowed to the obtuse base, lip spathulate with a long claw.

PERAK, *Scortechini*.

Near *D. parviflorum*, but distinguished by the above characters.

60. **D. aciculare**, *Lindl. in Bot. Reg.* 1840, *Misc.* 81; stem short slender tapering from a conic base, leaves few acicular, bracts many scale-like at the top of the short (1-fl. ?) peduncle, flower yellowish tinged with pink, lip 3-lobed, side lobes rounded serrulate in front, midlobe ovate serrulate. *Walp. Ann.* vi. 281.

SINGAPORE, *Cuming (Hort. Loddiges)*.—DISTRIB. Philippines.

I doubt this species being from Singapore. Cuming's herbarium specimens (No. 2112) are marked, Bohol Island (Philippines).

61. **D. junceum**, *Lindl. in Bot. Reg.* 1842, *Misc.* 11; stem very slender except at the fusiform base branched above, leaves 2-3 in. very slender pungent, flowers 2 at the ends of the branches $\frac{3}{4}$ in. long, mentum much longer than the linear-oblong very obtuse dorsal sepal broadly obtusely conical, petals linear-oblong, tips rounded, side lobes of lip rounded, midlobe orbicular emarginate, disk scabrid. *Reichb. f. in Gard. Chron.* 1873, 361; *Walp. Ann.* vi. 281.

SINGAPORE (*Hort. Loddiges*).—DISTRIB. Borneo.

Stem 12-18 in.; fusiform base 4-5 by $\frac{1}{2}$ in. Flower green, lip purple veined.

62. **D. subulatum**, *Hook. f.*; stem slender flexuous, leaves $\frac{1}{2}$ in. recurved terete fleshy acute, flowers solitary at the nodes of the leafless ends of the stems $\frac{1}{3}$ in. long, bracts membranous convolute, dorsal sepal and petals broadly oblong obtuse, mentum 3-4 times as long as the dorsal sepal very stout slightly incurved obtuse, lip cuneately obovate, tip obscurely emarginate. *Podochilus bicolor*, *Miq. Choix*, t. 22, f. 3.

PERAK, *Scortechini*.—DISTRIB. Java, Borneo.

Very near *D. acerosum*, but smaller in all its parts, and with very different sepals and petals.

63. **D. acerosum**. *Lindl. in Bot. Reg.* 1841, *Misc.* 86; stem rather slender flexuous, leaves $\frac{1}{2}$ in. recurved subacute fleshy, flowers solitary, bracts 1 in. membranous convolute ovate-lanceolate, petals narrow acute, mentum twice as long as the dorsal sepal stout incurved obtuse, lip narrowly cuneate, tip dilated retuse waved. *Walp. Ann.* vi. 281. *Aporum subteres*, *Griff. in Calc. Journ. Nat. Hist.* v. 371.

TENASSERIM, *Parish*. SINGAPORE, *Hort. Loddiges*. MALACCA, *Griffith*.—DISTRIB. Borneo.

Stem 6-10 in., including the leafless ends. Flowers $\frac{1}{2}$ in. long, pale rose-colored. —Griffith describes the flowers as racemose, but they are solitary in his specimens (in *Herb. Lindley*).

64. **D. teres**, *Lindl. in Bot. Reg.* 1840, *Misc.* 111; stem almost filiform, leaves 2-3 in. distant slender obtuse, bracts spathaceous, mentum as long as the ovate-lanceolate acuminate dorsal sepal straight conical slender, petals linear-lanceolate, lip cuneate truncate serrulate cuspidate, ridges 3 crested. *Walp. Ann.* vi. 281.

SINGAPORE, *Hort. Loddiges*.

Stem 12-16 in. Leaves? Flowers $\frac{3}{4}$ in., fragrant, whitish, tip of the lip orange. —Described from scanty materials.

Sect. VIII. VIRGATÆ (see p. 711).

* Lower nodes of stem not swollen. Mentum long or short.

65. **D. conostalix**, *Reichb. f. in Walp. Ann.* vi. 292; leaves suberect linear unequally 2-fid, sheaths hispidulous, flowers small solitary or 2-nate leaf-opposed greenish pendulous from a tubercle-like decurved bracteate peduncle, sepals ovate, lateral revolute, petals narrower linear-oblong, mentum longer than the triangular acute lateral sepals, lip linear-oblong with 2 tooth-like spreading side lobes and a small orbicular thickened midlobe. *D. calcaratum*, *Lindl. in Bot. Reg.* 1840, *Misc.* 89.

SINGAPORE and MALACCA, *Cuming*, *Lobb*, *Maingay* (*Kew Distrib.* 1606).

Stem 12-18 in., as thick as a crow-quill, internodes 1-1½ in. *Leaves* 2-3 by ½ in. *Flowers* ½ in. long, nearly straight; column with rounded tips.

66. **D. bambusæfolium**, *Parish & Reichb. f. in Trans. Linn. Soc.* xxx. 149; leaves linear-lanceolate unequally 2-fid, flowers 1-3 on a leaf-opposed tubercle, pedicel slender, dorsal sepal oblong-lanceolate, petals linear-lanceolate acute, mentum as long as the ovate acute lateral sepals cylindric-conic obtuse, lip narrowly spatulate entire or oblong membranous veined, tip rounded or emarginate, sides involute.

TENASSERIM, *Parish*.

Stem 2 ft., stouter than in *D. conostaliæ*, polished. *Leaves* 5-6 by ½ in., sheaths minutely granulate. *Flowers* ½ in. long, green or white with purple on lip, which is described by Parish as "strangely different on one and the same specimen."—Habit and foliage of *D. gemellum*, of which it may be a var. Parish figures a more oblong lip, notched at the end, unlike that which I examined; he informs me that the lip is very variable.

67. **D. hæmoglossum**, *Thwaites Enum.* 429; habit, size and characters of *D. bambusæfolium*, but pedicels shorter, flowers smaller, petals ovate lanceolate, and mentum very short depressed conical, lip tongue-shaped acute undulate.

MALABAR, *Jerdon*. CEYLON; at Matele and the Dolosbagey district, alt. 3000 ft., *Gardner, Thwaites*.

So like *D. bambusæfolium* that without the flowers the specimens seem to be inseparable.

68. **D. Cathcartii**, *Hook. f.*; leaves linear-lanceolate unequally 2-fid, flowers in leaf-opposed pairs yellow with purple on the lip, pedicel slender, dorsal sepal ovate-lanceolate acute, petals similar but narrower, mentum stout incurved shorter than the lanceolate lateral sepals, lip elliptic-oblong acute quite entire.

SIKKIM HIMALAYA (*IC. Cathcart* and *IC. Hort. Bot. Calc.*).

Stem 12-18 in., internodes 1 in. *Leaves* 4-6 by ½-¾ in. *Flowers* 1 in. long.—A very distinct species with golden flowers, three times as large as *D. bambusæfolium* according to the drawings.

69. **D. gemellum**, *Lindl. Gen. & Sp. Orchid.* 81; in *Bot. Reg.* 1840, *Misc.* 192; 1844, *Misc.* 62; leaves linear-lanceolate unequally 2-fid, flowers 2 on a leaf-opposed tubercle, "lip oval acute, tip suberisped with 3 inconspicuous serrulate ridges, 3-lobed." *Walp. Ann.* vi. 286. Pedilonium biflorum, *Blume Bijl.* 322.

SINGAPORE, *Cuming (Hort. Loddiges)*. MALACCA; at Bronang, *Griffith*.

Only seen in Herb. Lindley; the two specimens exactly resemble *bambusæfolium*, but are flowerless; a drawing accompanies them of an oblong-lanceolate acute lip, with 3 serrulate ridges (not at all spatulate as in *bambusæfolium*).

70. **D. pachyglossum**, *Parish & Reichb. f. in Trans. Linn. Soc.* xxx. 149; young sheaths hispid, leaves very slender acuminate, flowers solitary or geminate, sepals triangular-ovate, petals narrowly linear acuminate, mentum equalling the sepals recurved obtuse, side lobes of lip very small, midlobe minute retuse, disk 2-keeled.

TENASSERIM; at Moulmein, *Parish*.

Stem 6-8 in., narrowed at the base and apex. *Leaves* 2-3 by ⅓ in. *Sepals* streaked with brown. *Lip* white, with brown streaks.—Reichenbach, from whom the description is taken, says, "Very like *D. attenuatum*, Lindl."

71. **D. villosulum**, Wall. Cat. 2006 (not of Lindl.); sheaths hirsute, leaves 1 in. linear-lanceolate unequally acutely 2-fid, flowers very small solitary shortly pedicelled white, mentum cylindric obtuse longer than the oblong obtuse 3-nerved sepals, petals linear obtuse 1-nerved, lip very narrow, the long stiff claw gradually dilated into 2 narrow incurved acute side lobes, midlobe long slender rigid spur-like with a thickened tip and inflexed beak.

PENANG, Porter.

Stem as thick as a crow-quill; internodes $\frac{1}{2}$ in. Leaves rather rigid, channelled, margins recurved. Flowers $\frac{1}{2}$ in. from the tip of the dorsal sepal to that of the lip.—Lindley's Wallichian specimen was flowerless, and as the stem precisely resembles that of *D. nutans*, he referred the latter to *villosulum*.

72. **D. Lobbii**, Teijsm. & Binnend. in Nat. Tijdsch. Neerl. Ind. iii. 399; stems erect leafy terete rusty-pilose, leaves sessile lanceolate lepidote beneath, tip obliquely notched, flowers solitary leaf-opposed pendulous, sepals linear acute, petals narrower erect, lip erect with 3 ridges, side lobes acute, midlobe toothed emarginate. Walp. Ann. vi. 292.—Description from the authors, l. c.

SINGAPORE, Lobb.

** Lower internodes of stem tuberous or fusiform. Mentum equalling or exceeding the lateral sepals.

73. **D. tuberiferum**, Hook. f.; leaves short coriaceous oblong obtuse, margins recurved, flowers small hyaline 1-2 at the nodes of the leafless ends of the stems very shortly pedicelled, dorsal sepal oblong, petals narrower lanceolate falcate ciliate, mentum cylindric straight obtuse twice as long as the lateral sepals, lip obcordate with a minute ciliate lobe between the rounded side lobes and a truncate raised ridge in front.

PERAK, Scortechini (drawing only). SINGAPORE, from Guning Hijan, Murton. ? CHITTAGONG (Ic. Hort. Calcutt.).

Stem 12-18 in., often branched; internodes $\frac{1}{2}$ - $\frac{3}{4}$ in., basal tuber globose or fusiform. Leaves $1\frac{1}{2}$ -2 in. Flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. long, veins and cross-venules slender.—Scortechini's drawing represents the lateral sepals as rounded and midlobe of lip as ovate; in the Singapore specimens the former are acute, and the latter linear and longer. Very near *D. Boothii*, Teijsm. & Binnend. (Miquel Choix, t. 24, f. 2), which has larger flowers and fimbriate bracts.

74. **D. podagraria**, Hook. f.; leaves linear-oblong or linear obtuse or emarginate, flowers small solitary on bracteate tubercles at the upper nodes or leaf axils, dorsal sepal lanceolate, petals narrow oblong-lanceolate 3-nerved, mentum longer than the ovate uncinately 7-nerved lateral sepals stout incurved obtuse, lip obcordate from a narrow base, side lobes rounded, midlobe small rounded, sinus with a plate and caruncle. *D. angulatum*, Wall. Cat. 2010 (not of Lindl. Gen. & Sp. Orchid.).

BURMA; at Attran, Wallich. TENASSEEIM, Griffith, Parish.

Stem 1-3 ft., branched; internodes $1\frac{1}{2}$ in.; basal tuber 1-5 in. Leaves $1\frac{1}{2}$ -2 by $\frac{1}{4}$ - $\frac{1}{2}$ in. Flowers $\frac{1}{2}$ in. long, white with pink veins on the lip.

75. **D. clavipes**, Hook. f.; leaves erect linear, tip rounded, flowers small solitary axillary, dorsal sepal ovate obtuse, petals narrower lanceolate 3-nerved, mentum stout obtuse longer than the obtuse 7-nerved lateral

sepals, lip obcordate, with rounded side lobes, a minute midlobe, and a caruncle at the sinus.

PERAK, *Scortechini*.—DISTRIB. JAVA.

Stem as thick as a sparrow's quill, basal tuber $\frac{1}{2}$ –1 in., globose or fusiform, branches also thickened at the base. Leaves 1–1 $\frac{1}{2}$ in., strict, striate. Flowers $\frac{1}{4}$ in., white?, midlobe of lip very variable.—The Java specimens seem to have narrower petals and more acute lateral sepals than the Perak ones.

76. **D. crumenatum**, Swartz in *Act. Holm.* 1800, 246; stem tall branched, base fusiform, leaves oblong obtuse or notched, flowers many on the leafless ends of the branches large white, dorsal sepal ovate-lanceolate 7-nerved, petals linear-oblong 5-nerved, mentum equalling the lanceolate acuminate lateral sepals conical acute incurved, side lobes of lip narrow, midlobe much larger suborbicular crisped, disk with crenate ridges. *Lindl. Gen. & Sp. Orchid.* 88; in *Bot. Reg.* 1839, t. 22; in *Trans. Hort. Soc.* vii. 70; *Griff. Notul.* iii. 315; *Bot. Mag.* t. 4013; *Miquel Choix*, t. 22; *Walp. Ann.* vi. 291. *Onychium crumenatum*, *Blume Bijd.* 326.—*Rumph. Herb. Amb.* vi. t. 47, f. 2.

TENASSERIM, the ANDAMAN ISLANDS and MALAY PENINSULA, common.—DISTRIB. Malay Archipelago, S. China, Siam, &c.

Stem 2–3 ft., stout. Leaves 2–3 in., coriaceous. Flowers 1–1 $\frac{1}{4}$ in. long; sheathed peduncle $\frac{1}{4}$ – $\frac{1}{2}$ in.; pedicel $\frac{1}{2}$ in.; lip with a primrose disk and sometimes pink veins.—In a drawing in Hort. Calcutt. of a plant very like this from Penang, named *D. flexuosum*, Wall., the sepals and petals are obtuse, and the midlobe of the lip quite entire, rounded at the tip; the mentum is shorter and straight. The Ceylon locality attributed to *D. crumenatum* is no doubt an error.

Sect. IX. BREVIFLORES (see p. 711).

77. **D. bicameratum**, *Lindl. in Bot. Reg.* 1839, *Misc.* 85; leaves linear-lanceolate, flowers crowded on a short sheathed peduncle, dorsal sepal ovate-oblong subacute 5-nerved, mentum urceolate, foot of column 3-lamellate, lip broadly cuneate truncate, side lobes spreading small acute, midlobe small fleshy caruncled. *Saunders Refug. Bot.* t. 143; *Walp. Ann.* vi. 299. *D. breviflorum*, *Lindl. in Journ. Linn. Soc.* iii. 14.

SIKKIM HIMALAYA, alt. 2000 ft., *Mann (Ic. in Hort. Bot. Calc.)*. KHASIA HILLS, *Gibson*. BEHAR; on Parusnath (*Ic. in Hort. Bot. Calc.*). TENASSERIM, *Parish*.

Stem clavate, fusiform or elongate, and 12–18 in. Leaves 3–4 in., obliquely 2-fid. Flowers $\frac{1}{2}$ in. broad, yellow with stripes of red speckles; lip golden yellow.—Apparently very variable. The figure in *Refug. Bot.* has fusiform stems with internodes $\frac{1}{2}$ – $\frac{3}{4}$ in., and a rounded midlobe of the lip. The Parusnath plant has stems 6–7 in. narrowed at both ends, internodes $\frac{3}{4}$ –1 $\frac{1}{4}$ in., dirty-yellow flowers, and a narrower mentum; the midlobe of lip is very short. *Lindley's* specimen of *D. breviflorum*, erroneously supposed to be from Singapore, is a mere frustule of a stem. A note of Dr. Thomson's attached to a drawing of this species (in Hort. Calc.) states that it was introduced from Parusnath into the Calcutta Garden; it has pale rose-colored flowers. *Lindley* by an oversight says of the flowers, "A little smaller than those of *Maxillaria stapelioides*," which he figures (*Bot. Reg.* 1839, t. 17) with flowers $2\frac{1}{2}$ in. diam.

78. **D. bolboflorum**, *Falc. mss.*; stem short fusiform or subclavate, leaves oblong or lanceolate acute, flowers very small fascicled on a very short bracteate peduncle subsessile, dorsal sepal broadly ovate obtuse 7-nerved rather broader than the obovate 5–7-nerved petals, lateral sepals

triangular acute, mentum urceolate, base rounded, lip triangular broadly truncate, apex formed of the spreading acute side lobes which are longer than the very short broad sessile caruncled apiculate midlobe, column with 2 spurs at the base.

SIKKIM HIMALAYA; Rungbee, alt. 3000 ft., *Clarke*; Darjeeling, alt. 7000 ft., *Gamble*.

Stems 4-8 in., often curved or subflexuose, internodes very obscure. *Leaves* 2-3 in., many-nerved. *Flowers* $\frac{1}{2}$ in. long and broad, greenish; pedicels as long; bracts scarious; column short and broad; anther short.—The name *bolbiflorum* is attached by Falconer to a drawing of this plant in Hort. Bot. Calc., but no locality is given.

79. **D. aduncum**, *Wall. in Bot. Reg.* 1842, *Misc.* 62, 1846, t. 15; stems slender pendulous, leaves linear-lanceolate, flowers on the leafless stems in short racemes, bracts obtuse, dorsal sepal ovate acute, petals rather broader, mentum very large urceolate as long as the triangular acuminate lateral sepals, lip small cymbiform cuspidate ciliate, claw short, disk villous, column bearded in front. *Bot. Mag.* t. 6784; *Veitch Man. Dendrob.* 14; *Walp. Ann.* vi. 295.

SIKKIM HIMALAYA, alt. 7000 ft., *Pantling*. BHOTAN, *Lister*. ASSAM, *Jenkins*, &c.—DISTRIB. China.

Stems 1-2 ft. *Leaves* 2-3 in., thin, acute or obtuse. *Flowers* $\frac{1}{2}$ in. broad, translucent, rose-pink; peduncle clothed with membranous scales; perianth segments recurved; tip of column crenate; anther purple, papillose.—The Chinese *D. hercoglossum*, *Reichb. f.* in *Hamb. Gartenzeit.* xlii. 558, resembles a form of this with more acute sepals and petals, and deeper rose-colored flowers.

Sect. X. PEDILONIUM (see p. 711).

80. **D. secundum**, *Wall. Cat.* 1996; stem stout, racemes shortly peduncled secund dense-fl., bracts small membranous, dorsal sepal ovate obtuse, petals narrower linear-oblong, mentum as long as the dorsal sepal or longer, lip spathulately oblanceolate cymbiform and entire subacute, claw saccate, disk with a semilunate transverse ridge. *Lindl. Gen. & Sp. Orchid.* 81; *in Bot. Reg.* t. 1291 and 1844, *Misc.* 65; *Reichb. Fl. Exot.* t. 269; *Bot. Mag.* t. 4352; *De Vriese Illust.* t. 6; *Veitch Man. Dendrob.* 72. *Pedilonium secundum*, *Blume Bijl.* 322.

MARTABAN, *Wallich*. TENASSERIM, *Griffith, Helfer*. PENANG, *Wallich*. DISTRIB. Sumatra, Java, Cochin China.

Stem 10-24 in., pendulous, sometimes $\frac{3}{4}$ in. diam., grooved. *Leaves* very variable, 2-4 by 1-2 in., oblong to linear-oblong, obtuse or retuse. *Racemes* 2-4 in., decurved, rachis very stout; flowers hardly expand, and vary from deep red to white, with yellow on the lip.—Var. *nivea*, *Reichb. f.* in *Gard. Chron.* 1881, i. 733.

81. **D. cornutum**, *Hook. f.*; stem long slender, flowers on the leafless stems 2-3 on a very short peduncle, bracts minute, dorsal sepal oblong obtuse 5-nerved, petals narrower elliptic or oblanceolate, mentum cylindric stout 2-3 times as long as the broadly ovate lateral sepals, lip entire very narrowly spathulate, claw long with involute margins and a small fleshy tubercle near the base.

PERAK, *Scortechini*; Summit of Gunong Batu Pateh, *Wray*.

Stems 12-18 in.; internodes 1 in. *Leaves* 4 by $\frac{1}{2}$ in., linear-lanceolate, acuminate, membranous, strict; sheath $\frac{1}{2}$ in., dotted with black. *Flowers* 1 in., often arched like a bow, bright rose-colored; pedicel $\frac{3}{4}$ in., capillary; column short, tips crenu-

late, stipes of anther long subulate.—Near *D. Kuhlii*, Lindl., of Java (Bot. Reg. 1847, t. 17), which has broadly elliptic leaves.

82. **D. cumulatum**, Lindl. in *Gard. Chron.* 1855, 756; stem rather slender, racemes subcorymbose, dorsal sepal subacute, petals much broader obovate or rounded obtuse erose, mentum as long as the acute lateral sepals subcylindric incurved, lip obovate-spathulate erosely toothed, claw short with a small tubercle above the base. *Bot. Mag.* t. 5703; *Reichb. f.* in *Gard. Chron.* 1868, 6; *Veitch Man. Dendrob.* 34.

SIKKIM HIMALAYA (*l.c.* in *Herb. Calc.*). BHOTAN, *Lister*. TENASSERIM, *Parish*, *Benson*. ? PERAK, *Scortechini*.

Stem 1-2 ft., rather slender, pendulous. *Leaves* 3-4 in., oblong-lanceolate, acuminate. *Racemes* 3-4 in. long and broad; flowers 1-1½ in. broad, more expanded than in others of the section, rose-cold., vanilla-scented; lip suffused with yellow, very variable in breadth.

VAR. Jenkinsii; petals orbicular-obovate, lip with an orbicular-oblong waved imb speckled with red. *D. Jenkinsii*, *T. Anders. mss.*—Assam (*l.c.* in *Herb. Calcutt.*).

83. **D. sanguinolentum**, Lindl. in *Bot. Reg.* 1842, *Misc.* 73, 1843, t. 6, 1844, *Misc.* 52; pendulous, flowers on leafless stems 3-5 on a short, peduncle, bracts small, sepals ovate-obtuse, petals orbicular-oblong, mentum stout obtuse compressed, lip clawed, side lobes rounded, midlobe quadrate retuse trapezoid or obreniform, claw with a retrorse spine. *Veitch Man. Dendrob.* 72.

PENANG (*l.c.* in *Herb. Kew*), *Maingay* (*Kew Distrib.* 1615).

Stem 2-3 ft., sulcate; sheaths purplish. *Leaves* 2-8 in., ovate or lanceolate, red beneath. *Peduncle* ¼-½ in.; *pedicels* ¾ in.; flowers 1 in. diam., yellow with violet tips and a red blotch on the lip; mentum as long as the sepals.—The Ceylon habitat usually given is an error. An anomalous *Pedilonium*; perhaps a *Eudendrobium* near *D. Ruckeri*.

84. **D. kentrochilum**, *Hook. f.*; stem subclavate, flowers axillary 2-nate, bracts minute, lateral sepals ovate-oblong, petals suborbicular obtuse, mentum very stout, lip clawed rhombic-obovate obscurely sub- equally 3-lobed, claw with a strong spine.

PERAK; in the Balang Padung Valley, *Wray*.

Stem elongate, internodes ½-¾ in. *Leaves* 5-6 by 1¼-1½ in., coriaceous, oblong, obtuse. *Flowers* 1 in. diam., white, not veined; mentum as long as the broadly obovate dorsal sepal.—Like the Bornean *D. pictum* (Lindl. in *Gard. Chron.* 1862, 548), but the leaves and sepals are obtuse, flowers white, and lip much broader.

85. **D. megaceras**, *Hook. f.*; stem terete, racemes very short 3-5- fld., bracts minute, dorsal sepal elliptic-oblong obtuse, petals as large obovate 7-nerved, mentum very long stout, lip membranous clawed cuneate with lacerate shoulders and a small orbicular crenate midlobe, claw with a lamella on the disk.

MALACCA, *Maingay* (*Kew Distrib.* 1613).

Stem 2 ft., stout. *Leaves* 3-4 in., rather membranous, lanceolate, acuminate. *Peduncle* and *rachis* of raceme together ½ in.; bracts recurved; flowers 1½ in. long, "dull yellowish green, spur pinkish" (*Maingay*).

86. **D. rhodocentrum**, *Reichb. f.* in *Gard. Chron.* 1872, 426; stem stout, racemes subcorymbose, dorsal sepal linear-oblong, petals much broader erose, mentum as long as the acuminate lateral sepals conical,

lip very shortly clawed obovate, side lobes very short acute, midlobe large erose, claw naked, column with a tuft of hairs in front.

INDIA? (*Hort. Buller*).

Very like *D. cumulatum* in habit, foliage, and inflorescence, but mentum shorter, side lobes of lip smaller, its claw unarmed, and column bearded.—*Description from the author*.

87. **D. hymenanthum**, *Hook. f.*; flowers solitary? on the leafing stems very membranous, dorsal sepal ovate obtuse, lateral ovate-lanceolate subacute and elliptic obtuse petals 7-nerved, mentum twice as long as the dorsal sepal nearly straight obtuse, lip with a long slender channelled claw and obovate denticulate limb which has two linear-oblong calli at its base.

PERAK, alt. 3400 ft., on Gunung Patu Pateh, *Wray*.

Stems 10–12 in., internodes 1 in. Leaves 3–4 by $\frac{3}{8}$ – $\frac{3}{4}$ in., oblong-lanceolate, coriaceous, tip oblique. Flowers $\frac{3}{4}$ in. diam., “white tinted with rose and green,” *Wray*; column with recurved apical auricles that are 1-toothed on the dorsal margin.

88. **D. ionopus**, *Reichb. f. in Gard. Chron.* 1882, ii. 808; racemes short, bracts minute, flowers yellow with red blotches, sepals and petals triangular, mentum elongate falcate, claw of lip elongate thick keeled with a flat retrorse tooth, limb dilated and 3-lobed, side lobes obtuse angled, midlobe produced retuse emarginate, column trifid.—*Description from the author, l. c.*

BRUMA (*Hort. Low*).

89. **D. Perula**, *Reichb. f. in Hamb. Gartenzeit.* xxi. 298; internodes short green sheathed, flower 2-nate subterminal (of *Pedilonium*) sulphur with orange veins, dorsal sepal and petals subequal ligulate acute, lateral triangular, mentum oblong $\frac{1}{2}$ -lunate saccate elongate anteriorly, lip cuneate-oblong lobulate and crenulate in front, with $\frac{1}{2}$ -lunate calli from the thickened veins, column short unifalcate on each side.

ASSAM (*Hort. Day*). Description from the author, l. c.

Sect. XI. DISTICHOPHYLLÆ (see p. 711).

90. **D. revolutum**, *Lindl. in Bot. Reg.* xxvi. (1840), *Misc.* 53; stem stout, flowers solitary pedicelled, sepals and petals revolute, dorsal sepal ovate subacute, petals narrower oblong-lanceolate, spur longer than the ovate obtuse lateral sepals, mentum funnel-shaped nearly straight subacute, lip broad, side lobes very small, midlobe rhomboidly suborbicular emarginate, sides deflexed, disk 3-nerved. *Bot. Mag.* t. 6076; *Part. Fl. Gard.* i. 63, fig. 42; *Wulp. Ann.* vi. 291. *D. uniflorum*, *Griff. Notul.* iii. 305; *Ic. Pl. Asiat.* t. 303.

TENASSERIM, *Parish*. SINGAPORE, *Walker*. MALACCA, on Mt. Ophir, *Hallett*, *Maingay* (*Kew Distrib.* 1610).

Stem 12–18 in., internodes $\frac{1}{2}$ in., deeply channelled. Leaves 1–2 in., linear-oblong or oblong emarginate, back keeled, very variable in breadth, base cordate. Flowers 1 in. diam., white with a brown lip; pedicel $\frac{1}{2}$ in.

91. **D. bifarium**, *Lindl. in Wall. Cat.* 2002; stem rather slender, flowers solitary sessile, dorsal sepal ovate subacute 5-nerved, petals lanceolate 3-nerved and sepals erect, mentum longer than the ovate

acuminate 5-nerved lateral sepals conical obtuse, lip hardly lobed obovate-spathulate contracted about the middle, basal half 7-nerved with convex sides fleshy with 7-9 close-set crested ridges. *D. excisum*, *Lindl. in Bot. Reg.* 1841, *Misc.* 77.

PENANG, Wallich, *Maingay* (*Kew Distrib.* 1611).

Very like *D. revolutum* in habit, but stems shorter not so robust, internodes longer, leaves smaller linear-oblong unequally 2-toothed, flowers about half the size white sessile, and lip very different.—Lindley (in *Hook. Journ. Bot.* vii. (1825) 355) erroneously refers this to *Appendicula bifida*.

92. ***D. metachilinum***, *Reichb. f. in Bonplandia*, iii. 122; flowers fleshy in short corymbiform racemes, bracts short, dorsal sepal ovate obtuse 5-nerved, petals obovate oblong obscurely 3-nerved, mentum longer than the recurved acute lateral sepals conical straight obtuse, lip spathulate concave lamellate at the base, tip with two small short side lobes that overlie the subreniform small caruncled concave fleshy midlobe.

MALACCA, Cuming, *Maingay* (*Kew Distrib.* 1612).

Stem rather stout, 12-18 in., deeply grooved when dry. Leaves 2-3 in., linear-oblong, unequally 2-fid, recurved, coriaceous, complicate below, lowest sometimes longer and lanceolate. Flowers nearly $\frac{1}{2}$ in. diam., chrome yellow; bracts minute; peduncle and pedicels each $\frac{1}{4}$ - $\frac{1}{2}$ in.

Sect. XII. EUDENDROBIUM (see p. 711).

* Mentum as long or nearly as long as the dorsal sepal. Flowers like those of sect. *Formosæ*, but lateral, yellow, or white with yellow or red markings; lip usually narrower than broad, very narrow in *D. nutans*, *Jerdonianum* & *Arachnites*. (See also *D. amœnum* for long spur.)

93. ***D. xanthophlebium***, *Lindl. in Gard. Chron.* 1857, 268; in *Journ. Linn. Soc.* iii. 16; flowers on the leafless branches 2-nate white with yellow and brown veined lip, sepals and petals lanceolate acute, mentum conical acute, lip broad, side lobes large triangular subacute, midlobe orbicular crisped scabrid, disk fleshy. *Batem. in Bot. Mag. under t.* 1515; *Veitch Man. Dendrob.* 84. *D. marginatum*, *Batem. l. c. t.* 5454.

TENASSERIM; at Moulmein, alt. 4500 ft., *Parish, Lobb*.

Habit and foliage of *D. longicornu*, but stems glabrous, striped green and white, and flowers axillary, much more open, $1\frac{1}{2}$ -2 in. diam.

94. ***D. Ruckeri***, *Lindl. in Bot. Reg.* 1843, *Misc.* 8, t. 60; stems slender pendulous, flowers with the leaves solitary or 2-nate from a short sheathed peduncle shortly pedicelled, pale yellow with lip pink or yellow with red veins, dorsal sepal and narrower petals subspathulately oblong obtuse, lateral larger obtuse, mentum ventricose, tip contracted obtusely 2-lobed, lip sessile subtrapezoidly obovate, base auricled, lateral lobes large rounded convolute, midlobe orbicular crisped, disk with a villous green ridge. *Walp. Ann.* vi. 288.

KHASIA MTS. (*lc. in Herb. Calcutt.*). — DISTRIB. Philippines (fid. *Lindley*).

Stem 1-2 ft., often branched; internodes 1-2 in. Leaves 3-5 in., lanceolate, acute. Flowers $1\frac{1}{2}$ in. from tip of dorsal sepal to that of mentum, pale primrose.—Spur twisted and lip pink in the Khasia plant.

95. ***D. luteolum***, *Batem. in Gard. Chron.* 1864, 269; stem erect, leaves linear-oblong acute coriaceous, flowers 2-4 on a short axillary peduncle yellow, sepals oblong subacute, petals much broader obtuse,

mentum stout obtuse, lip broadly ovate-oblong, side lobes rounded, midlobe ovate subacute undulate, disk with 3-5 villous ridges. *Bot. Mag.* 5441; *Veitch Man. Dendrob.* 57, with fig.

TENASSERIM; on the Attran River, *Parish*.

Stem 10-12 in., furrowed, striped. *Leaves* 3-4 in., sessile. *Flowers* 2½ in. across; sheaths of peduncle obtuse; pedicels ½ in.; lip with red veins between the side lobes.—*Var. chlorocentrum*, Reichb. f. in *Gard. Chron.* 1883, i. 340, fig. 48; *Williams Orchid. Album*, vii. t. 322, has greenish hairs on the lip.

96. **D. lasioglossum**, *Reichb. f. in Gard. Chron.* 1868, 682; 1869, 277; stem slender branched, flowers on the leafing stems 2-4 on very short axillary peduncles shortly pedicelled white with a purple veined lip, sepals oblong obtuse, petals broadly obovate, mentum as long as the dorsal sepal conical incurved, side lobes of sessile lip rounded entire purple veined, midlobe shorter subquadrate crisped, disk villous, yellow or greenish. *Bot. Mag.* t. 5825; *Veitch Man. Dendrob.* 52.

BURMA, *Parish*.

Stem 10-18 in., internodes 1-2 in. *Leaves* 3-5 in., lanceolate, acuminate, base acute. *Flowers* 1½-2 in. diam.

97. **D. Jerdonianum**, *Wight Ic.* t. 1644; stems stout very slender below, leaves linear-oblong, base broad, tip broad deeply acutely cleft, sheaths hirsute, flowers 2-3 racemose on a very short peduncle yellow, sepals lanceolate acuminate, petals linear-oblong, mentum half as long as the sepals, lip linear-oblong, side lobes small, midlobe elongate, margins crisped.

NILGHIRI and KURG HILLS, *Wight*.

Stems 8-18 in., very slender below, sulcate. *Leaves* 1-2 by ½ in. *Peduncle* ¼ in.; bracts small, ovate; flowers 1-1½ in. long. *Capsules* ¾ in. long, pedicel decurved.—I can scarcely, without further evidence, unite this with *D. nutans*, as Reichenbach has done; it is a much more robust and larger-flowered plant, with broader, more oblong, deeply cleft leaves, and much larger flowers.

98. **D. nutans**, *Lindl. Gen. & Sp. Orchid.* 90; in *Bot. Reg.* 1844, *Misc.* 52; stems very slender below and linear-lanceolate acute leaves pubescent, tip narrowed obliquely notched, flowers 2-3 racemose on a short lateral peduncle, sepals and petals linear-lanceolate, lip as in *D. Jerdonianum*. *Walp. Rep.* vi. 292; *Thwaites Enum. (excl. syn. Jerdonianum)*.

CEYLON; in the Central Province, alt. 4-6000 ft., *Macrae, Walker, &c.*

Stems 6-10 in., rather slender and swollen in the middle, but hardly clavate, sulcate. *Leaves* 2-2½ by ¾-¾ in. *Flowers* ¾ in. long.—Lindley describes the peduncles as subterminal, and the flowers as white tinged with green, but in an excellent drawing by Mr. Walker they are leaf-opposed on most of the nodes, and bright ochreous yellow.

99. **D. Arachnites**, *Reichb. f. in Gard. Chron.* 1874, 354; stems very short tufted terete, leaves linear-lanceolate acute, flowers 1-3 ochreous, sepal very narrow 5-nerved, dorsal oblanceolate obtuse, lateral linear-lanceolate from a broad base subacute, petals narrower than the dorsal sepal 3-nerved, mentum very short conical, lip nearly as long as the sepals subpanduriformly lanceolate acuminate shortly clawed slightly recurved, disk 2-ridged at the very base. *Veitch Man. Dendrob.* 19.

TENASSERIM; at Moulmein, *Borall*.

Stems 2-3 in., internodes shining, slightly swollen upwards. *Leaves* 1-3 in.;

sepals spotted; petals paler, lip purple-veined.—One of the narrowest-sepaled species. I have seen only a flower.

** Mentum short conical or rounded (long in *D. amœnum*). Flowers white or more or less purple. Lip not calceolar. (*Porphyrantha*.)

† Petals as narrow as the sepals or narrower. Lip narrower than broad.

100. **D. candidum**, Wall. in Lindl. Bot. Reg. 1838, Misc. 54, and 1844, Misc. 52; stem slender erect flexuous terete, leaves lanceolate, flowers on the leafless stems 2-3 on a short sheathed peduncle erect pure white, sepals and petals subsimilar linear-oblong obtuse, mentum rounded, lip ovate-lanceolate or narrowly trapeziform, base cuneate, side lobes narrow, midlobe ovate obtuse, disk bearded and with a long callus. *Past. Fl. Gard.* i. 63, fig. 41; *Walp. Ann.* vi. 286.

TROPICAL HIMALAYA; Kumaon, alt. 3000 ft., *Strachey & Winterbottom*; Nepal, *Wallich*; Sikkim, alt. 7000 ft., *King's Collector*; Bhotan, *Griffith*. KHASIA HILLS, *Gibson* (*lc.* in *Hort. Bot. Calc.*).

Stem 6-12 in., internodes 1-1½ in. Leaves 3-5 in. Flowers 1-1¼ in., fragrant; bracts ¼ in., ovate; pedicels ¾ in.

101. **D. macrostachyum**, Lindl. Gen. & Sp. Orchid. 78; in Bot. Reg. t. 1865, and 1844, Misc. 50; stems long pendulous terete, leaves membranous ovate-oblong acute, flowers 2-3 on a short peduncle from the subleafless stems small long-pedicelled yellowish, sepals and petals lanceolate acuminate recurved, mentum rather long funnel-shaped, lip oblong acute flat with a convolute base crenulate. *Wight Ic.* t. 1647; *Walp. Ann.* vi. 286.

TRAVANCORE, *Wight*. CEYLON, common in the Central Province.

Stems 1-2 ft., rather slender. Leaves 3-4 in. Flowers 1 in. long, fragrant; bracts small; pedicels ¾ in., slender; lip with purplish veins; sepals and petals sometimes tinged with pink.

102. **D. scabrilingue**, Lindl. in Journ. Linn. Soc. iii. 25; stems erect subclavate hirsute, leaves linear-oblong broadly 2-lobed, flowers 2-nate on a short peduncle from the leafing or leafless stems white, lip yellow with green veins, sepals ovate-lanceolate subacute, petals more oblong, mentum conical green, side lobes of oblong lip narrow, midlobe oblong retuse recurved, disk scabrid and 5-ridged. *Reichb. f.* in *Trans. Linn. Soc.* xxx. 150; *Veitch Man. Dendrob.* 72. *D. hedyosmum*, *Batem.* in *Bot. Mag.* t. 5515.

TENASSERIM; at Moulmein, *Parish*.

Stems 6-12 in., internodes ¾ in., nodes sometimes ½ in. diam. Leaves 2½ in., coriaceous, unequally obtusely 2-fid. Flowers 1½ in. diam., sweet-scented; pedicels short; bracts very small.

†† Petals as narrow or narrower than the sepals. Lip as broad as long.

103. **D. primulinum**, Lindl. in Gard. Chron. 1858, 223; in Journ. Linn. Soc. iii. 12; stems short pendulous, leaves coriaceous broadly oblong, flowers solitary on the leafless stems shortly pedicelled white or pink, lip primrose, sepals and petals subequal linear-oblong obtuse, mentum rounded,

lip large shortly clawed pubescent orbicular or reniform with a short convolute base, margins everted ciliate. *Trans. Russ. Hort. Soc.* 1861, t. 52; *Regel Gartenfl.* 1861, t. 326; *Williams Orchid. Alb.* vi. t. 286; *Veitch Man. Dendrob.* 70, with fig., and var. *gigantea*, 71. *D. nobile*, var. *pallidiflora*, *Hook. Bot. Mag.* t. 5003.

TROPICAL HIMALAYA; Nepal and Sikkim.

Stems 10–12 in., often $\frac{1}{2}$ in. diam. Leaves 4 in., smaller upwards. Flowers $2\frac{1}{2}$ in. diam., odour of cowslips; bracts small; lip 2 in. diam. in var. *gigantea*, tip rounded acute or emarginate.—Near *D. Pierardi*, but stem shorter and stouter, sepals and petals narrower and subequal.

104. **D. cretaceum**, *Lindl. in Bot. Reg.* 1847, t. 62; stems stout curved pendulous, sheaths large loose, leaves lanceolate, flowers solitary on the leafless stems shortly stoutly pedicelled nearly white, lip crimson-veined, sepals and petals subequal linear-oblong obtuse, mentum conical obtuse, lip shortly clawed orbicular from a short convolute base pubescent ciliate. *Bot. Mag.* t. 4686; *Jard. Fleur.* iv. t. 344; *Fl. des Serres* viii. t. 818; *Veitch Man. Dendrob.* 33.

ASSAM, the KHASIA HILLS, and southward to TENASSERIM.

Stems 6–12 in., $\frac{3}{8}$ in. diam., internodes $\frac{1}{2}$ –1 in. Leaves 3–4 in. Flowers $1\frac{1}{2}$ –2 in. diam.; bracts small. Capsule $\frac{1}{2}$ in., clavate.

105. **D. cruentum**, *Reichb. f. in Gard. Chron.* 1884, i. 604; stems erect terete, base swollen, leaves obliquely oblong emarginate, flowers 1–2-nate axillary green, lip with crimson side lobes, bracts lanceolate convolute, sepals triangular-ovate acuminate keeled, petals linear acute, mentum rounded, lip 3-lobed, side lobes erect oblong crimson, midlobe ovate apiculate green with a tumid warted scarlet crest and 3 red ridges. *Veitch Man. Dendrob.* 33; *Warn. Orchid. Alb.* iv. t. 174.

MALAYAN PENINSULA, on the west coast (*Hort. Sanders*).

Stems 1 ft. Leaves deciduous. Flowers $1\frac{1}{2}$ –2 in. diam.; margins of midlobe of lip scarlet; column green, margins crimson.

106. **D. ramosum**, *Lindl. in Wall. Cat.* 2003; *Gen. & Sp. Orchid.* 82; stems long slender branched pendulous, leaves lanceolate acuminate, flowers in pairs on a short peduncle from the leafless stems, sepals lanceolate acuminate, petals spathulately oblong, mentum obtuse, lip broadly obcordate from a short cuneate claw 3-lobed glabrous, side lobes rounded as long as the small intermediate orbicular waved or crisped midlobe.

SILHET; at Pundua, *Wallich*.

Stems 2–3 ft., internodes $1\frac{1}{2}$ –2 in. Leaves 2–3 in., thin. Flowers 1– $1\frac{1}{2}$ in. diam., “yellow-green, lip with red lines.”—The specimens are very bad, and Lindley’s description consequently erroneous. The colours are from a note on Wallich’s specimens.

††† Petals broad. Lip narrower than broad.

a. Flowers in short few-fl. racemes (hardly racemose in *D. spathaceum*).

107. **D. Macarthiae**, *Thwaites in Bot. Mag.* t. 4886; *Enum.* 297; stems slender terete pendulous, leaves lanceolate acuminate, flowers 3–5 racemose from the leafing stems rosy, sepals lanceolate acuminate, petals ovate oblong acute, mentum stout, lip spathulately rhomboid, side lobes obscure rounded midlobe broadly ovate subacute, disk glabrous.

Warner Orch. Alb. vii. t. 319; *Veitch Man. Dendrob.* 58, with fig.; *Walp. Ann.* vi. 290.

CEYLON; in forests between Ratnapoora and Galle, *Thwaites*.

Stems 1-2 ft., internodes 1½-2 in., mottled. *Leaves* 2½-4 in., thin. *Racemes* 2-3 in.; rachis stout, flexuous; bracts ½ in.; flowers 3-4 in. long, flattened dorsally, not spreading widely; disk of lip dark purple or maroon.

108. ***D. sphegidoglossum***, *Reichb. f. in Bonpland.* ii. 58; stems rather slender grooved, leaves linear-oblong, flowers small in few-fl. racemes on the leafless stems white, sepals oblong acute lateral keeled, petals broadly ovate acute erose, mentum short, lip cuneately obovate, lobes subequal short rounded villous and ciliate with long gland-tipped hairs. *Walp. Ann.* vi. 290. *D. stuposum*, *Lindl. in Bot. Reg.* 1838, *Misc.* 52, and 1844, 52.

KHASIA HILLS, alt. 3-5000 ft. TENASSERIM, *Parish*.

Stems 6-10 in., internodes 1-1½ in. *Leaves* 3-4 in., rather thin. *Raceme* ½-¾ in.; bracts linear-oblong, obtuse; flowers ½ in. long; pedicels capillary; lip white with red veins and a yellow band.

β. Flowers solitary or 2-4 on a very short peduncle.

109. ***D. spathaceum***, *Lindl. in Journ. Linn. Soc.* iii. 15; stems very slender flexuous, leaves lanceolate obtuse, bracts lanceolate, flowers on the leafless stems 1-2 on a short sheathed peduncle white, dorsal sepals linear-oblong acute, lateral lanceolate from a broad base acuminate, petals obovate-oblong obtuse, mentum rounded, lip oblong-lanceolate subacute waved with 2 rounded lobes above the middle, disk between the lobes with 2 elongate calli.

SIKKIM HIMALAYA; on rocks by the Lachen River, alt. 6-7000 ft., *J. D. H.*

Stems 6-10 in., terete, as thick as a crow-quill, internodes 1-1½ in.; roots filiform, long and matted. *Leaves* 3 in., tip obliquely 2-fid. *Flower* odorous; pedicel ½ in., slender; sheaths of peduncle ¼-½ in., hyaline.—Apparently a very distinct species, with the habit of *D. amœnum*, of which it is perhaps a narrow-lipped state. The specimens are very scanty.

110. ***D. heterocarpum***, *Wall. in Lindl. Gen. & Sp. Orchid.* 78; *Pl. As. Rar.* ii. 84, t. 196; stems subclavate suberect, leaves oblong-lanceolate, flowers 1-3 on a very short peduncle from the leafless stem white or straw-cold, lip yellow, sepals linear-oblong acute, petals ovate-lanceolate acuminate, mentum large conical truncate, lip ovate-lanceolate acute recurved, base with incurved sides, disk pubescent. *Lindl. in Bot. Reg.* 1844, *Misc.* 49; *Bot. Mag.* t. 4708 and 4770 (var. *Henshallii*); *Fl. des Serres* viii. t. 842; *Jard. Fleur.* iv. t. 386; *Gard. Chron.* 1885, i. 472, fig. 84 B. *D. aureum*, *Lindl. Gen. & Sp. Orchid.* 77; in *Bot. Reg.* 1839, t. 20 (var. *pallida*); *Wight Ic.* t. 1646; *Veitch Man. Dendrob.* 19 with fig.; *Reichb. in Gard. Chron.* 1880, 72 (var. *philippinensis*); *Reichenbachia* ii. t. 63. *D. rhombeum*, *Lindl. in Bot. Reg.* 1843, t. 17. — *Dendrob. sp.*, *Griff. Notul.* iii. 304; *Ic Pl. Asiat.* t. 306.

TROPICAL HIMALAYA, from Nepal eastwards, ASSAM, the KHASIA and PATKOYE MTS., BURMA, MALABAR, and CEYLON.—DISTRIB. Java, Philippine Islands.

Stems 9-18 in., ribbed; internodes ¾-1½ in. *Leaves* 4-5 in., tip oblique and subacute or emarginate. *Flowers* 2-2½ in. diam., fragrant, often tinged with green; pedicels short; lip variable in colour, yellow, or white with a yellow disk and 2 red or purple blotches on the disk.

111. **D. transparens**, Wall. Cat. 2008/1; stems slender pendulous, leaves linear-lanceolate acute, flowers in pairs on the leafless stems white and pink, lip purple within, bracts very large, sepals lanceolate acute, petals broader ovate, mentum conic, lip clawed elliptic-oblong from a convolute cuneate base obtusely lobed recurved pubescent. *Lindl. Gen. & Sp. Orchid.* 79; in *Bot. Reg.* 1844, *Misc.* 62; in *Journ. Linn. Soc.* iii. 12; *Bot. Mag.* t. 4663; *Part. Fl. Gard.* i. 134, t. 27; *Jard. Fleur.* t. 68; *Veitch Man. Dendrob.* 81. *D. Henshallii*, Reichb. f. in *Bonpland.* iii. 226.—*Dendrob.*, *Griff. Notul.* 198, No. 1135.

TROPICAL HIMALAYA; from Kumaon, alt. 3000 ft., eastwards; ASSAM, the KHASIA and GARROW HILLS.

Stems 11–18 in., internodes 1–1½ in. Leaves 3–4 in. Flowers 1½ in. diam.; bracts ¼–½ in., oblong, acute; pedicels short; lip with a broad purple single or double blotch.

112. **D. amœnum**, Wall. in *Lindl. Gen. & Sp. Orchid.* 78 (excl. syn.); stems slender pendulous, leaves linear-lanceolate acuminate, flowers 2–3 on a short peduncle from the leafless stems white with violet tips and purple lip, bracts small, sepals oblong-lanceolate obtuse, petals larger ovate, mentum conic stout, lip shortly clawed ovate obtuse undulate crenate ciliolate, disk villous. *Lindl. in Bot. Reg.* 1844, 49; in *Journ. Linn. Soc.* iii. 12; *Bot. Mag.* t. 6199; *Florist. Cab.* t. 117; *Reichb. f. in Gard. Chron.* 1875, i. 305, figs. 57, 58; 1881, ii. 625, fig. 126; *Veitch Man. Dendrob.* 17. *D. mesochlorum*, *Lindl. in Bot. Reg.* 1847, under t. 36; *Part. Fl. Gard.* i. 63, fig. 43. *D. Egertoniae*, *Lindl. l. c.*; *Part. l. c.*, fig. 44.

TROPICAL HIMALAYA, from Garwhal eastwards to Bhotan, SILHET, BURMA.

Stems 1–2 ft.; internodes 1–2½ in., smooth. Leaves 2–4 in., membranous. Flowers 1½–2½ in. diam., violet-scented; bracts on the peduncle imbricating. Lip amethyst-purple bordered with white, base yellow.—Flowers very variable in size and colour.

113. **D. marmoratum**, Reichb. f. in *Gard. Chron.* 1875, 492; stems stout greyish black terete, flowers 2-nate on the leafless stems (white with purple tips, lip purplish in front), mentum short retuse, lip oblong from a cuneate base ciliate densely velvety towards the base.

BURMA, *Boxall (Hort. Low)*.

Description from the author, l. c.

†††† Petals much broader than the sepals. Lip as broad as long or broader.

§ Flowers solitary or 2–3-nate on a short peduncle or simply pedicelled. Margin of lip entire or slightly erose.

a. Internodes cylindric.

114. **D. Pierardi**, Roxb. in *Hock. Exot. Flor.* t. 9; *Fl. Ind.* iii. 482; stems slender pendulous, leaves sessile lanceolate acuminate, flowers 2–3 on a short peduncle from the usually leafless stems rose-colored, lip yellow, bracts small, sepals oblong-lanceolate subacute, petals broader oblong, mentum short, lip orbicular cucullate pubescent ciliate, base tubular. *Lindl. Gen. & Sp. Orchid.* 79; in *Bot. Reg.* t. 1756; Wall. Cat. 2007; *Bot. Mag.* t. 2584; *Wight Ic.* t. 908; *Lodd. Bot. Cab.* t. 750; *Veitch Man. Dendrob.* 69.

EASTERN TROPICAL HIMALAYA, Sikkim. BENGAL, in the Soonderbunds, and southward to TENASSERIM.

Stems 2-3 ft., smooth. Leaves 2-4 in., membranous. Flowers 1-2 in. diam., translucent—Var. *latifolia*, Fl. des Serres, t. 955, is a doubtful plant, a good deal like *D. primulinum* in the flowers.

VAR. *cucullata*; flowers smaller $1\frac{1}{2}$ in. diam., pedicels shorter, lip with a longer tubular base and short limb with incurved tip. *D. cucullatum*, Brown in Bot. Reg. t. 548; Bot. Mag. t. 2242; Lindl. in Bot. Reg. 1844, Misc. 49; Reichb. Fl. Exot. t. 65; Walp. Ann. vi. 284. *Limodorum aphyllum*, Roxb. Cor. Pl. i. 34, t. 41; Fl. Ind. iii. 462. *Cymbidium aphyllum*, Swartz in Nov. Act. Ups. vi. 73; Willd. Sp. Pl. iv. 100.—Sikkim Himalaya, J. D. H.; Coromandel, Roxburgh.—Lindley refers Roxburgh's *L. aphyllum* to *D. amœnum*. *D. cucullatum* is the earliest name for the species, but it applies to an obvious variety.

115. **D. crystallinum**, Reichb. f. in Gard. Chron. 1868, 572; Xen. Orchid. ii. 210, t. 193, f. 1; stems pendulous, leaves falcately lanceolate acute, flowers 1-3 nate on a very short peduncle long-pedicelled white, tips purple, lip orange, sepals oblong-lanceolate acute, petals much broader, mentum short, lip shortly clawed suborbicular, disk puberulous, base shortly convolute, anther elongate papillose. Bot. Mag. t. 6319; Veitch Man. Dendrob. 34.

SIKKIM HIMALAYA, alt. 3-5000 ft., J. D. H., Treutler. ARRACAN, Benson. TENASSERIM, at Moulmein, Parish.

Stems 12-18 in.; internodes 1 in., terete, striate. Leaves 4-6 in., membranous. Flowers 2 in. diam.; bracts ovate-lanceolate; pedicels $1-1\frac{1}{2}$ in.; lip with a pale margin and ochreous base.—Named from the remarkable anther.

116. **D. Bensoniæ**, Reichb. f. in Bot. Zeit. 1867, 230; stems stont, leaves linear, flowers 1-3 on a short peduncle from the leafless stems (pale yellow or white, lip yellow with 2 purple spots), bracts very small, sepals linear-oblong obtuse, petals very large, mentum short, lip large shortly clawed orbicular concave tomentose erose, base shortly convolute. Bot. Mag. t. 5679; Floral Mag. t. 355; Jennings Orchid. t. 32; Linden, iv. t. 148; Orchidoph. 1886, 49, with fig.; Veitch Man. Dendrob. 21, with fig.

PEGU; Rangoon, Kurz. ARRACAN, on the Kareen Hills. TENASSERIM, at Moulmein, Benson.

Stems 1-3 ft., suberect or drooping, terete; internodes $1-1\frac{1}{2}$ in. Leaves 2-3 in., tip notched. Flowers $2\frac{1}{2}$ in. diam.; lip with a golden disk, purple spots sometimes confluent, or obsolete.—In Jennings' figure and Veitch's Manual, the flowers are on a very short peduncle; in Bot. Mag. and specimens from Rangoon, they are 2-3 racemose on peduncle $\frac{1}{2}$ -1 in.

117. **D. aqueum**, Lindl. in Bot. Reg. 1843, Misc. 6, t. 54; 1844, Misc. 53; in Journ. Linn. Soc. iii. 14; stems decumbent compressed, leaves ovate-lanceolate acuminate, flowers 2-3-nate axillary cream-white, sepals ovate subacute, petals obovate, mentum short incurved, lip sessile rhombic pubescent erose, side lobes small incurved, midlobe broad triangular. Bot. Mag. 4640; Jard. Fleur. t. 262; Veitch Man. Dendrob. 18; Walp. Ann. vi. 289. *D. album*, Wight Ic. t. 1645; Part. Fl. Gard. ii. 175, fig. 226.

DECCAN PENINSULA; on the Nilghiri and Iyamalley Hills, Wight, &c.

Stems 10-20 in., subclavate, $\frac{1}{2}$ in. diam.; internodes $\frac{1}{2}$ -1 in. Leaves 3-5 in. thin, wavy. Flowers $1\frac{1}{2}$ -2 in. diam.; lip suffused with pale yellow.

118. **D. crepidatum**, Lindl. in *Part. Fl. Gard.* i. 63, fig. 45; stems stout erect, leaves linear-lanceolate acute, flowers 1-3-nate shortly peduncled on the leafless stems long pedicelled white or pink, lip yellow, bracts small, sepals oblong obtuse, petals more obovate, mentum short obtuse, lip shortly clawed orbicular or broadly obovate retuse pubescent or ciliate, margins waved. *Bot. Mag.* t. 4993, 5011; *Veitch Man. Dendrob.* 33. *D. Lawanum*, Lindl. in *Journ. Linn. Soc.* iii. 10; *Dalz. & Gibs. Bomb. Fl.* 261. *Dendrochilum roseum*, Dalz. in *Hook. Kew Journ.* iv. (1852) 291.

ASSAM and the KHASIA MTS. (*Ic. in Herb. Calcutt.*). The SOUTHERN CONCAN and CANARA, *Dalzell*, &c.

Stems 6-18 in., loosely sheathed, striated green and white. *Leaves* 2-3 in., subcoriaceous. *Flowers* 1-1½ in. diam., waxy; pedicels purple; lip with a basal pit and ridge across the claw.—A specimen in Herb. Kew marked Garwhal Falconer is perhaps a cultivated one.

119. **D. lituiflorum**, Lindl. in *Gard. Chron.* 1856, 372; stems slender pendulous, leaves linear-lanceolate, flowers 1-5 on a short very large-bracted peduncle from the naked stems purple or white with purple and white lip, sepals linear-oblong subacute, petals broadly elliptic, mentum short saccate, lip trumpet-shaped puberulous, mouth large orbicular, margins recurved. *Bot. Mag.* t. 6050; *Warner Sel. Orchid.* ii. t. 3; *Reichb. f. Xen. Orchid.* iii. 36, t. 214; *Veitch Man. Dendrob.* 54; *Gartenfl.* t. 1086 (*var. Farmeri*). *D. Hanburyanum*, *Reichb. f. in Bonpland.* iv. 329.

ASSAM, RANGOON and BURMA, *Griffith*, &c.

Stems 12-24 in.; internodes 1-1½ in., very smooth. *Leaves* 3-4 in. long. *Flowers* 2-2½ in. diam., variable in colouring; bracts ½-1 in., white, scarious; tube of lip ½-¾ in., purple and white; limb upcurved, deep purple within, with a broad white ring within the purple margin.—*Var. candida*, R. f. in G. C. 1880, i. 586, has white flowers with a pale yellow lip. *Var. Freemanii*, R. f. l. c. 1887, 744, has short stiff stems, and purple sepals and petals.

120. **D. nobile**, Lindl. *Gen. & Sp. Orchid.* 24; *Sert. Orchid.* t. 3; in *Bot. Reg.* 1844, *Misc.* 48; in *Journ. Linn. Soc.* iii. 12; stems erect compressed, leaves oblong obliquely notched, flowers 2-4 subracemose on a short peduncle from the leafing or leafless stems purple or white with purple tips and lip, sepals linear-oblong obtuse, petals much broader, mentum short broad, lip subsessile broadly ovate-oblong pubescent, margins recurved, base shortly convolute. *Part. Mag.* vii. t. 7; *Hartm. Parad.* i. t. 11; *Reichb. f. in Gard. Chron.* xvii. 366; *Williams Orchid. Alb.* t. 214; *Reichenbachia* ii. t. 58 (*var. Sandersiana*); *Veitch Man. Dendrob.* 63, with fig. and *var. nobilium*, 64. *D. cœrulescens*, Wall. in Lindl. *Sert. Orchid.* t. 18; *Bot. Reg.* l. c. *D. Lindleyanum*, *Griff.* *Notul.* iii. 309 (*excl. fig.*); Lindl. in *Journ. Linn. Soc.* iii. 13.

EASTERN HIMALAYA; Sikkim, ascending to 5000 ft., J. D. H.; Bhotan, *Griffith*. The KHASIA MTS., *Gilson*, &c.—DISTRIB. China.

Stems 1-2 ft. *Leaves* 3-4 in., coriaceous, "persistent for 2 years," *Veitch*. *Flowers* 2½-3 in. diam., variable in colour, almost racemose; bracts oblong, ¼ in.—A multitude of varieties have been described, and of hybrids especially with *D. heterocarpum* (see *Reichb. f. in Gard. Chron.* 1884, 338, 445, 576, and *Veitch Mau. Dendrob.* 63).

121. **D. Parishii**, *Reichb. f. in Bot. Zeit.* 1863, 237; *Xen. Orchid.* ii. 140. t. 152; stems stout decurved, leaves oblong-lanceolate, bracts rather

large, flowers 1-3 on a short peduncle from the leafless stems rose-purple or white, lip with two maroon blotches, sepals oblong acuminate, petals broadly elliptic, mentum short obtuse, lip shortly clawed convolute with a small ovate obtuse tomentose and ciliate recurved limb. *Bot. Mag.* t. 5488; *Jennings Orchid.* t. 39; *Veitch Man. Dendrob.* 68.

UPPER BURMA, *Berkeley*. TENASSERIM, *Parish*.

Stems 6-12 in.; internodes $\frac{1}{2}$ - $\frac{3}{4}$ in., when old contracted in the middle. *Leaves* 3-5 in., coriaceous. *Flowers* $1\frac{1}{2}$ -2 in. diam.; pedicels 1 in.; bracts $\frac{1}{4}$ in.; limb of lip small compared with the tube; claw with a pit and transverse ridge. *Column* white, anther purple.

122. **D. rhodopterygium**, *Reichb. f. in Gard. Chron.* 1875, i. 684; stems terete decurved, leaves linear-oblong, bracts minute, flowers 1-3-nate on a short peduncle from the leafless stems rose-purple, lip with pale border, sepals oblong-lanceolate acute, petals ovate-lanceolate, lip with a cylindric convolute base streaked with purple and an orbicular erosely ciliate mouth rough or hispid on the disk. *Veitch Man. Dendrob.* 71. *D. polyphlebium*, *Reichb. f. l. c.* 1887, i. 702; *Warner Orchid. Alb.* vii. t. 299.

TENASSERIM; at Moulmein, *Boxall, Berkeley*.

Habit, leaves and inflorescence of *D. Parishii*, but bracts smaller, flowers much larger, 3 inches in diameter, of a paler rose-purple, often mottled with white, and lip with an orbicular mouth broadly or narrowly bordered with pale yellow, no maroon blotches, the disk not downy but rough, column white, anther purple.—*Reichenbach* suggests *polyphlebium* being a hybrid between *Pierardi* and *rhodopterygium*.

123. **D. Scortechini**, *Hook. f.*; stems long, leaves oblong-lanceolate obliquely notched, flowers solitary or 2-nate on the leafing stems waxy white, lip purple, peduncle stout, sepals lanceolate acuminate, petals broadly elliptic acute erose, mentum large broadly conical obtuse, lip rose-purple with a large ventricose tube and small acute limb tomentose towards the recurved fimbriate margin on both surfaces and closely veined.

PERAK, *Scortechini*.

Stems a foot and more, as thick as a goose-quill; internodes 1 in. *Leaves* 3 in., coriaceous. *Flowers* on the leafless upper part of the leafing stems, 3-3 $\frac{1}{4}$ in. diam.; pedicels with ovary $1\frac{1}{2}$ in.; bracts small; sepals clawed, sometimes rose-pink, lip much deeper-colored; column short, "anther dark purple with a 3-lobed top," *l. c.* *Scortechini*.

. β . *Internodes swollen at the top (slightly in D. gratiosissimum).*

124. **D. pendulum**, *Rorb. Fl. Ind.* iii. 484; stems stout decurved, nodes subglobose, leaves linear-lanceolate, flowers 1-3-nate on the leafless stems stoutly pedicelled white or tips purple, lip with yellow disk, sepals linear-oblong subacute, petals much broader, mentum obscure, lip orbicular subcordate pubescent ciliate. *D. crassinode*, *Bens. & Reichb. f. in Gard. Chron.* 1869, 164; 1870, 417; 1875, 93 (var. *albiflora*); 1876, 567 (var. *Barberiana*); *Bot. Mag.* t. 5766; *Warn. Orchid. Alb.* iv. t. 152; *Veitch Man. Dendrob.* 31, with fig. ? *D. polyanthum*, *Wall. Cat.* 2009; ? *Lindl. Gen. & Sp. Orchid.* 81; in *Bot. Reg.* 1844, Misc. 57. *D. Wardianum*, *Warner Sel. Orchid. Ser.* i. t. 19; *D. melanophthalmum*, *Reichb. f. in Gard. Chron.* 1869, 164; 1870, 417.

CHITTAGONG, *Roxburgh*. ARRACAN, *Benson*.—DISTRIB. Siam.

Stems 1-2 ft.; internodes $\frac{3}{4}$ -1 $\frac{1}{2}$ in., as broad at the nodes. Leaves 4-5 in., membranous. Flowers 2-2 $\frac{1}{2}$ in. diam., variable in colour; pedicels 1-1 $\frac{1}{2}$ in.—Wallich's specimens of *D. polyanthum* are indeterminable; they are from Burma, and quite like *D. pendulum*. I doubt if Lindley's is the same plant.

125. **D. Findlayanum**, *Par. & Reichb. f. in Trans. Linn. Soc. xxx.* 149; in *Gard. Chron.* 1877, i. 334; stems flexuous, internodes long clavate, leaves lanceolate, flowers 2 on a very short peduncle from the leafless stems very long pedicelled pale lilac, lip yellow, sepals oblong-lanceolate subacute, petals much broader, mentum subcylindric, lip shortly clawed orbicular from a short convolute base pubescent, tip acute. *Bot. Mag. t.* 6438; *Warner Orchid. Alb. ii. t.* 92; *Veitch Man. Dendrob.* 43.

BURMA; in the confines of Siam, *Findlay (Parish)*.

Stems 1-2 ft.; internodes 1-2 $\frac{1}{2}$ in., compressed, $\frac{3}{4}$ in. broad above the middle. Leaves 3-4 in., obtuse, acute or unequally notched. Flowers 3 in. diam., widely spreading; pedicels 2-3 in.; bracts short.

126. **D. Falconeri**, *Hook. Bot. Mag. t.* 4944; stems slender much branched pendulous, leaves small 1-3 in. narrow acute, flowers solitary on the subleafless stems rose-cold. or white with purple tips, lip purple and orange, sepals narrowly oblong acuminate, petals ovate-lanceolate, mentum incurved, lip broadly ovate acute or acuminate from a short convolute base, mouth undulate, margins recurved pubescent ciliate. *Lindl. in Gard. Chron.* 1856, 692; *Fl. des Serres, t.* 1197; *Belg. Hort. 1874, t.* 15; *Floral Mag. N. S. t.* 226; *Ill. Hort. N. S. t.* 243; *Linden. i. t.* 4; *Williams Orchid. Alb. vi. t.* 257 (var. *gigantea*); *Veitch Man. Dendrob.* 40; *Reichb. f. in Gard. Chron.* 1876, 688, 689 (var. *albidula*); 1879, 76 (var. *robusta*). *D. Wardianum*, var. *assamica*, *Jennings Orchid. t.* 2.

BHOTAN HIMALAYA, alt. 4000 ft.; ASSAM, KHASIA MTS., MUNNIPORE and UPPER BURMA.

Stems 2-3 ft., straggling; internodes $\frac{1}{2}$ - $\frac{3}{4}$ in., contracted in the middle, striated. Leaves 1-4 in. Flowers 2-4 $\frac{1}{2}$ in. diam., colour variable; pedicel 1-1 $\frac{1}{2}$ in.; bracts large, membranous.—The var. *gigantea* rather resembles *D. Wardianum*, which may prove only a form.

127. **D. Wardianum**, *Warner Sel. Orchid. i. t.* 19; stems stout erect or pendulous, leaves 3-4 in. linear-lanceolate, flowers 1-2 on a very short peduncle from the leafless stems white or tips purple, lip ochreous with maroon blotches, sepals oblong acute, petals twice as broad, mentum rounded, lip clawed, mouth orbicular or ovate subcordate densely pubescent, margins recurved, base short convolute. *Ill. Hort. xxxvii. t.* 277; *Floral Mag. N. S. t.* 212 (var. *Lowii*); *Williams Orchid. Alb. iii. t.* 113 (var. *gigantea*); *Reichenbachia i. t.* 9; *Reichb. f. in Gard. Chron.* 1876, ii. 460 (var. *candida*); *Veitch Man. Dendrob.* 83, with fig. *D. Falconeri*, var., *Bot. Mag. t.* 5058.

ASSAM, the KHASIA MTS. and BURMA.

Very near and perhaps only a form of *Falconeri*, from which it is difficult to distinguish some of the published drawings; stem stouter, sometimes 1 in. diam., not so nodose.—I have referred to this the *D. Falconeri*, var., sepals petalisque obtusioribus, of *Bot. Mag.*, which differs from the typical *Falconeri* (t. 4944) in the much stouter (though long and pendulous) stems, larger leaves, broader more obtuse sepals and petals, shorter lip with an orbicular limb, and much shorter anther.

128. **D. gratiosissimum**, *Reichb. f. in Bot. Zeit.* 1865, 99; *Xen. Orchid.* ii. 211, t. 193; stems slender pendulous striate, leaves ovate-lanceolate acute, flowers 1-2 on a short peduncle from the leafless stems long-pedicelled white with purple tips or purplish, disk of lip yellow, sepals oblong-lanceolate acute, petals broader, mentum short conical, lip orbicular or broadly ovate from a broad cuneate base entire undulate glabrous. *Veitch Man. Dendrob.* 47. *D. Bullerianum*, *Batem. in Bot. Mag.* t. 5652. *D. Boxalli*, *Reichb. f. in Gard. Chron.* 1874, 315; *Xen. Orchid.* ii. 212, t. 194; *Floral Mag.* 1874, t. 114; *Jennings Orchid.* t. 19; *Veitch l.c.* 24.

TENASSERIM; at Moulmein, *Parish*.

Stems 1-3 ft.; internodes 1-1½ in., slightly swollen upwards; sheaths purplish. *Leaves* 3-4 in. *Flowers* 2½ in. diam.; pedicels 1 in.; bracts small; lip white with a large circular golden disk, sometimes purple-spotted or -striated.—In *Veitch's Manual* the sepals and petals of *D. Boxalli* are described as equal and similar, but I find the petals to be much the broader. In that work *D. gratiosissimum* and *Boxalli* are kept distinct, and *D. Bullerianum* referred to the latter. They all appear to me to be like forms of one species.

129. **D. Aphrodite**, *Reichb. f. in Bot. Zeit.* 1862, 246; stems branched, internodes long clavate, leaves linear-oblong subacute, flowers solitary on the leafless stems stoutly pedicelled pale primrose or white, lip orange and purple, sepals linear-oblong obtuse, petals ovate-oblong, mentum obscure, lip shortly clawed orbicular-ovate from a short convolute base pubescent entire, anther purple. *Veitch Man. Dendrob.* 17. *D. nodatum*, *Lindl. in Gard. Chron.* 1862, 177; *Bot. Mag.* t. 5470; *Flor. des Serres*, t. 1582.

TENASSERIM; at Moulmein, *Parish*.

Stem 1-2 ft.; internodes 1½ in. *Leaves* few, 2-3 in. *Flowers* 2 in. diam.; pedicel 1-1½ in.; bracts small, appressed, sometimes many and imbricate; lip bright orange with a broad pale border, and purple blotches on the tube.

§§ Flowers solitary, 2-nate or racemose. Lip fimbriate.

130. **D. Devonianum**, *Part. Mag.* vii. 169, with fig.; stems long pendulous, leaves linear-lanceolate acuminate, flowers 1-2 on a very short peduncle from the leafless stems white or pale yellow with purple-tipped sepals and lip, sepals lanceolate acute, petals broadly ovate ciliate, mentum saccate, lip orbicular-cordate from a short convolute base densely deeply fimbriate. *Bot. Mag.* t. 4129; *Lindl. in Bot. Reg.* 1844, Misc. 48; *Gard. Fleur.* t. 11; *Fl. des Serres* vii. t. 647; *Belg. Hort.* iii. t. 31; *Ill. Hort.* 1857, t. 145; *Warner Sel. Orchid.* ii. t. 11; *Veitch Man. Dendrob.* 38, with fig. *D. pictum*, *Griff. f.d. Lindl. in Journ. Linn. Soc.* iii. 12. *D. pulchellum*, *Lindl. l.c.* (not of *Lodd.*).

BHUTAN HIMALAYA, *Griffith*. ASSAM, the KHASIA and NAGA HILLS, and southwards to TENASSERIM.

Stems 2-3 ft., terete. *Leaves* 3-4 by ½ in. *Flowers* 3 in. diam.—Var. *Elliotiana*, *Reichb. f. in Gard. Chron.* 1876, i. 756, is described as having thicker sepals and denticulate petals.—Var. *rhodoneura*, *R. f. l.c.* 1868, 682, has shorter sepals, a rounded lip with violet veins, and an odour of Patchouli.—Var. *candidula*, *R. f. l.c.* 1876, i. 654, wants the purple tip.

131. **D. Dalhousieanum**, *Wall. mss. in Part. Mag.* xi. t. 115;

stems stout, leaves linear-oblong, base cordate, racemes 5-12-fl., flowers very large rosy or yellowish with crimson on the lip, sepals oblong acute, petals much broader, mentum rounded, lip shortly clawed orbicular-oblong, tip and sides densely glandular-villous, disk with 2 pectinate fringed lamellæ. *Lindl. in Bot. Reg.* 1836, t. 10; *in Journ. Linn. Soc.* iii. 18; *Flor. des Serres* vii. t. 698; *Ill. Hort.* 1864, t. 423; *Warner Sel. Orchid.* i. t. 22; *Veitch Man. Dendrob.* 35, with fig. *Dendrob. sp., Griff. Ic. Plant. Asiat.* 308.

SIKKIM HIMALAYA, J. D. H. UPPER ASSAM, Griffith. ARRACAN to TENASSERIM.

Stems 3-4 ft., purple-spotted; internodes 1-1½ in. *Leaves* 4-6 in., obtuse or acute. *Flowers* 3½-5 in. diam., on leafing and leafless stems; bracts small.—Var. *Rossiana*, Reichb. f. in *Gard. Chron.* 1882, i. 796, is a large yellow-fl. var.

132. **D. tortile**, *Lindl. in Gard. Chron.* 1847, 797, with fig.; stems subfusiform compressed, leaves narrow retuse, racemes 3-6-fl. on leafless stems, flowers pale or rose-lilac, lip yellow, sepals and petals oblong undulate and twisted, mentum conical, lip subsaccate with a dilated orbicular everted erose limb pubescent and ciliate. *Bot. Mag.* t. 4477; *De Puydt Les Orchids* 54, with fig.; *Veitch Man. Dendrob.* 81; *Walp. Ann.* vi. 284.

CHITTAGONG and BURMA to TENASSERIM, Lobb, &c.

Stems 6-12 in., ¾ in. broad, grooved and ribbed. *Leaves* 3-4 in., subcoriaceous, recurved. *Flowers* 3-3½ in. diam.—Near *primulinum* and *Pierardi*, according to Veitch, with lip like *lituiflorum*.

** Mentum short. Lip calceolar (pyriform or hemispheric with inflexed margins). Flowers pink, coppery or yellow.

133. **D. Calceolaria**, *Carey in Hook. Exot. Flor.* t. 184; stems erect terete, leaves ovate-oblong to lanceolate, flowers 6-15 in an elongate raceme from the leafing stems large many white or pink purplish or golden yellow, sepals elliptic-oblong, petals broader, mentum stout, lip calceolar pyriform or hemispheric with broadly incurved fimbriate margins. *Lindl. Gen. & Sp. Orchid.* 83; *De Puydt Les Orchid.* t. 15. *D. moschatum*, *Wall. in Don Prodr.* 34; *Pl. As. Rar.* ii. 83, t. 195; *Lindl. l. c.* 82; *in Bot. Reg.* 1844, *Misc.* 57; *in Journ. Linn. Soc.* iii. 8; *Bot. Mag.* t. 3837; *Part. Mag.* ii. t. 241 (*excl. syn. D. claratum*); *Maund. Bot.* i. t. 37; *Hort. Parad.* ii. t. 2; *Veitch Man. Dendrob.* 61; *Warner Orchid. Alb.* t. 165 var. (*cuprea*); *Walp. Ann.* vi. 296. *D. cupreum*, *Herbert in Bot. Reg.* t. 1779. *Epidendrum moschatum*, *Ham. in Syme's Embassy*, iii. 315, with fig.

TROPICAL HIMALAYA; from Kumaon, *Strachey & Winterbottom*, eastwards to ASSAM and the KHASIA Mts., and southwards to TENASSERIM.

Stems 3-5 ft.; internodes 1-1½ in. *Leaves* 3-5 in., coriaceous, acute or unequally notched. *Flowers* 2½-3½ in. diam., odour musky or sweetish; perianth reticulate, extraordinarily variable in colour, especially the lip, which has fimbriate veins within, and often 2 large purple blotches.—The name *D. Calceolaria* (1823) is much the oldest.—The examination of a very extensive series of published and unpublished drawings of this plant convinces me that the names quoted above are all referable to our plant, which is so variable that to attempt a definition of its varieties would be impossible in this work.

134. **D. chrysocreps**, *Parish & Reichb. f. in Bot. Mag.* t. 6007; *in Trans. Linn. Soc.* xxx. 150; stems subclavate above, leaves lanceolate, flowers on the leafless stems solitary or shortly peduncled golden yellow,

sepals oblong subacute, petals broadly obovate, mentum short, lip pyriform calceolar villous, disk rufously villous within. *Veitch Man. Dendrob.* 29.

TENASSERIM; at Moulmein, *Parish*.

Stems 6-10 in.; internodes sometimes 2 by $\frac{1}{2}$ in. and flattened. *Leaves* 2-3 in., acute or unequally notched. *Flowers* $1\frac{1}{2}$ in. diam., resupinate; pedicel $\frac{3}{4}$ in.—The flowers are those of a small *D. Calceolaria*, but are solitary on leafless stems.

*** Mentum short. Lip not calceolar. Stem often swollen at the very base. Flowers golden yellow (or pale pink in *D. Farmeri*). Mentum long in *D. lamellatum*.—*Xanthina* or *Holochrysa*.

† Stem terete (not clavate). Flowers racemose.

§ *Lip fimbriate*. (See also *D. Gibsonii*.)

135. ***D. fimbriatum***, *Hook. Exot. Fl.* t. 71; leaves lanceolate acuminate, racemes usually on leafing stems pendulous, flowers many orange-yellow, sepals and arose petals subequal, mentum short, lip orbicular equally deeply fringed, base truncate. *Wall. Cat.* 2001; *Lindl. Gen. & Sp. Orchid.* 83 (not 76); *Paxt. Mag.* ii. 172; *Fl. Gard.* iii. t. 84; *Veitch Man. Dendrob.* 42, with fig.; *Jard. Fleur.* t. 314; *Flor. Cab.* t. 109; *Warner Sel. Orchid. Ser.* 2, t. 19; *Walp. Ann.* vi. 293.—*Dendrob. sp.*, *Griff. Notul.* iii. 113.

SUBTROPICAL HIMALAYA, from Kuraon, alt. 5500 ft., *Strachey & Winterbottom*, eastwards, to the KHASIA HILLS, MUNNIPORE, ABBACAN and BURMA.

Stems 4-5 ft., base swollen. *Leaves* 6 in. *Racemes* 7-12-fl.; flowers 2-3 in. diam.; bracts small.

VAR. oculata, *Hook. Bot. Mag.* t. 4160; stems stouter deeply grooved, leaves 6-8 in. strongly nerved, lip with a deep purple blotch. *Ill. Hort.* 1, t. 15; *Warner Sel. Orchid.* ii. t. 19. *D. Paxtoni*, *Paxt. Mag.* vi. 169 (not of *Lindl.*); *Fl. des Serres* vii. t. 725.

136. ***D. Hookerianum***, *Lindl. in Journ. Linn Soc.* iii. 8; stems terete, leaves oblong-lanceolate acuminate, racemes on leafing stems pendulous lax-fl., flowers very large golden, lip with 2 purple blotches, sepals and entire petals subequal, mentum rounded, lip orbicular deeply equally fringed, base cuneate. *Bot. Mag.* t. 6013; *Reichb. f. in Gard. Chron.* 1857, 616; *Veitch Man. Dendrob.* 49. *D. chrysotis*, *Reichb. f. l. c.* 1870, 1311; *Ill. Hort.* 1873, t. 155; *Warner Sel. Orchid. Ser.* 3, t. 6; *Flor. & Pomol.* 1871, 145, with fig.

TROPICAL SIKKIM HIMALAYA, *J. D. H.* ASSAM and the KHASIA HILLS, alt. 2-5000 ft., common.

Stems 6-8 ft., base swollen. *Leaves* 2-6 in. *Flowers* 3-4 in. diam.; bracts short, rounded; pedicel with ovary $1\frac{1}{2}$ in. *Capsule* 3 in., fusiform.

137. ***D. Brymerianum***, *Reichb. f. in Gard. Chron.* 1875, ii. 323; 1876, i. 366; 1879, i. 475, fig. 65; 1881, ii. 689, fig. 140; stems terete, leaves lanceolate acuminate, racemes on leafless stems 2-3-fl., flowers large yellow, sepals oblong-lanceolate, petals linear-oblong entire, mentum obscure, lip 3-lobed deeply fimbriate, base subcordate, fimbriæ of the oblong midlobe much longer than the limb. *Bot. Mag.* t. 6383; *Flor. Mag. N. S.* t. 459;

Veitch Man. Dendrob. 24, with fig.; *Lindenia* iv. t. 183; *Gartenfl.* 1883, t. 371; 1887, t. 183, 548; *Orchidoph.* 1881, t. 148. ? *D. criniferum*, *Lindl. in Bot. Reg.* 1844, *Misc.* 55; *Walp. Ann.* vi. 303.

BURMA, Berkeley.

Stems 1-2 ft., narrowed below, sulcate, old subfusiform. *Leaves* 4-5 in., 5-7-nerved. *Raceme* erect; sheaths short, lower not tubular; pedicels stout, 1½-2 in. (with the ovary); flowers 3 in. diam., often triandrous.—The leaves are stated in *Veitch's Manual* to be persistent, but in the native specimens the flowers are on leafless stems.—Var. *histrionica*, *Reichb. f. l. c.* 1858, i. 104; *Veitch l. c.* 25 has more fusiform stems, smaller flowers with much shorter fimbriae on the lip or O. Of *Lindley's D. criniferum*, supposed, but erroneously, to be from Ceylon (an island credited with Orchids as natives, which were no doubt sent from its Bot. Gardens there), nothing is known beyond the description, which differs from that of *Brymerianum* in the branched stem.

138. **D. moulmeinense**, *Parish mss.*; stems slender, leaves (narrowly linear-lanceolate, *Parish*), flowers on the leafless stems lower racemose upper 1-2 on a short peduncle, pedicels slender, bracts ovate concave, sepals oblong-lanceolate acute, petals elliptic acute erose, mentum subcylindric obtuse, lip large broader than long flabellately orbicular expanded sessile, base cuneate pubescent above glabrous beneath fimbriate all round.

TENASSERIM; at Moulmein, *Parish*.

Stems about as thick as a duck's quill; internodes 1 in. *Flowers* 1½-2 in. diam., membranous; rachis of 2-4-fld. raceme ¾ in., slender, base with a lunate sheath; bracts ½ in., thin; sepals and petals pale yellow?; lip primrose-yellow with spotted bars at the very shortly convolute base; column very short.

§§ *Lip with the margin entire or erose (subfimbriate in D. Gibsonii).*

139. **D. Gibsonii**, *Lindl. in Part. Mag.* v. 169; *Fl. Gard.* ii. 133, fig. 204; stems slender, leaves lanceolate acuminate, racemes many-fld. pendulous, basal sheaths tubular, flowers orange-yellow, lip with 2 brown spots, sepals suborbicular, petals broader entire, mentum short, lip suborbicular cochleate villous obtuse, margins everted subfimbriate, base cuneate. *Veitch Man. Dendrob.* 47; *Walp. Ann.* vi. 293. *D. fuscum*, *Lindl. in Journ. Linn. Soc.* iii. 8; *Bot. Mag.* t. 6226.

SIKKIM HIMALAYA, *J. D. H.*; ASSAM, the KHASIA Mts. and BURMA, common.

Near *D. fimbriatum*, but stems shorter and more slender, flowers smaller, petals not erose, lip broader, margins rather villous than fimbriate.

140. **D. dixanthum**, *Reichb. f. in Gard. Chron.* 1865, 674; 1883, i. 814; stems long slender, leaves linear-lanceolate, racemes on the leafless stems often whorled 2-5-fld., flowers golden yellow, sepals oblong subacute, petals broader obtuse ciliolate, mentum subglobose, lip dilated from the 2-aureoled base flat puberulous ciliolate. *Bot. Mag.* t. 5564; *Veitch Man. Dendrob.* 39.

TENASSERIM; at Moulmein, *Parish*, &c.

Stems 2-3 ft., smooth. *Leaves* 4-6 by ½ in., erect, caducous. *Racemes* 3-4 at each node; bracts minute; peduncle and pedicels slender; flowers 1½ in. diam.; lip darker than the sepals, minutely barred with red at the base.

141. **D. clavatum**, *Wall. Cat.* 2004; stems stout slightly clavate, leaves linear-oblong obtuse, racemes on the leafless stems short few-fld., flowers large ochreous yellow, lip paler with blood-red disk, bracts large,

sepals linear-oblong, petals much broader, mentum short, lip with a short convolute base and transversely oblong pubescent limb, margin recurved erose. *Lindl. in Part. Fl. Gard.* ii. 104, fig. 189; *Bot. Mag.* t. 6993; *Walp. Ann.* vi. 293.

TROPICAL HIMALAYA; from Kumaon eastwards. KHASIA HILLS, alt. 5-6000 ft., Mann.

Stems $1\frac{1}{2}$ -2 $\frac{1}{2}$ ft., as thick as the finger. Leaves 3-5 in., coriaceous. Racemes with membranous oblong tubular sheaths; flowers 2-2 $\frac{1}{2}$ in. diam., glossy; petals suborbicular. Capsule 2 in., fusiform.

142. **D. binoculare**, *Reichb. f. in Gard. Chron.* 1869, 785; stems slender, leaves lanceolate acuminate, racemes ascending, bracts very small, flowers small coppery orange with 2 maroon spots on the lip, sepals elliptic-oblong, petals obovate, lip clawed reniform pubescent plicately denticulate or crenate, disk concave. *Veitch Man. Dendrob.* 23.

PEGU; hills east of Prome, Benson.

A little known plant, differing, according to Veitch, from *D. fuscatum* (Gibsoni) by its more slender stems, smaller leaves and flowers ($\frac{1}{2}$ in. diam.), and differently shaped lip.

†† Stem terete (not clavate). Flowers solitary or 2-3. (See also *D. aggregatum*.)

143. **D. chrysanthum**, *Wall. Cat.* 2012; stems pendulous, leaves lanceolate acuminate, flowers 2-4-nate on an obscure leaf-opposed peduncle fleshy yellow, lip with a blood-red spot, sepals broad concave, petals orbicular fimbriate, mentum broad crested, lip clawed orbicular from a cuneate base villous, margins toothed or subfimbriate, everted. *Lindl. Gen. & Sp. Orchid.* 80; in *Journ. Linn. Soc.* iii. 8; in *Bot. Reg.* t. 1299; *Gartenfl.* t. 446; *Trans. Hort. Soc. Russ.* 1864, t. 154; *Veitch Man. Dendrob.* 28. *D. Paxtoni*, *Lindl. in Bot. Reg.* 1839, *Misc.* 56 (not of *Part. Mag.*); *Fl. des Serres* vii. t. 725.

TROPICAL HIMALAYA, from Nepal eastwards, alt. 2-5000 ft. KHASIA HILLS, Griffith.

Stems 5-7 ft., ribbed, leafy throughout; internodes short; sheaths large, cupular. Leaves 4-7 in., 5-nerved. Flowers $1\frac{1}{2}$ -2 in. diam., waxy; back of petals suberistate; pedicel with ovary $1\frac{1}{2}$ -2 $\frac{1}{2}$ in.; bracts small, ovate, acute. Capsule 2 in., subclavate.—In Veitch's Manual the flowers are described as 4-6 and racemose, but in the native specimens they are 2-4 and hardly racemed.—Vars. *anophthalma*, *Reichb. f. in Gard. Chron.* 1883, i. 44, has an unspotted lip, and *microphthalma* *Reichb. l. c.* 1879, i. 365, has sepals without dorsal crests, petals subserrate or very shortly fimbriate.

144. **D. Harveyanum**, *Reichb. f. in Gard. Chron.* 1883, 624; stems short fusiform, leaves 2-3 ovate-oblong, flowers 3 or more on a short lateral peduncle (yellow), sepals lanceolate acute, petals larger oblong fimbriate, mentum short retuse, lip orbicular concave papillose fringed. *Veitch Man. Dendrob.* 48.

BRITISH BURMA (*Liverpool Hort. Association*).

Stems 6-9 in. or less. Flowers 2 in. diam., bright canary-yellow; petals fimbriate as in *D. Brymerianum*, but less so.—I have seen no specimens.

145. **D. ochreatum**, *Lindl. in Wall. Cat.* 7110; in *Bot. Reg.* under

t. 1765; stems short stout decumbent, leaves ovate-lanceolate acuminate, flowers 2-nate on a leaf-opposed peduncle golden yellow, disk of lip blood-red, sepals oblong obtuse, petals larger quite entire, mentum stout, lip with a convolute claw and orbicular concave blade pubescent, margins revolute erose. *Veitch Man. Dendrob.* 66; *Walp. Ann.* vi. 287. *D. Cambridgeanum*, *Pact. Mag.* vi. t. 265; *Lindl. in Bot. Reg.* 1841, *Misc.* 171; *Bot. Mag.* t. 4450.

KHASIA MTS., *Giffith*, &c. CHITTAGONG, *Wallich*.

Stems 6-9 in., internodes contracted in the middle; sheaths inflated. *Leaves* 4-5 in., base very unequal, subcordate, twisted. *Flowers* 3 in. diam.; pedicel with ovary 1-1½ in.

146. ***D. chryseum***, *Rolfe in Gard. Chron.* 1888, i. 233; stems slender erect, leaves few linear-oblong, tip notched, flowers on the leafless stems solitary or in short sheathed racemes orange-yellow, bracts large sheathing, sepals oblong-lanceolate acuminate, petals broader, mentum conical, lip broadly clawed orbicular from a cuneate base pubescent subfimbriate.

BHUTAN HIMALAYA (*Ic. in Herb. Calcutt.*). ASSAM (*Hort. Veitch*). SYLHET, *Melville (Ic. Jerdon in Herb. Kew)*.

Stems 1-2 ft., rather slender. *Leaves* 3-4, subterminal. *Flowers* 1½ in. diam.; bracts ½-¾ in., sheathing; lip with sometimes faint crimson streaks at the base.

147. ***D. normale***, *Falc. in Ann. Nat. Hist.* iii. 196 (*name only*); stems terete, leaves linear-lanceolate acuminate, flowers 2-3 subracemose on a lateral peduncle with tubular basal sheaths golden yellow, sepals equal ovate acute entire, petals and lip all equal and similar larger than the sepals broadly ovate acute serrulate, column monstrosous. *Griff. Notul.* iii. 255; *Ic. Pl. Asiat.* t. 284; *Lindl. in Journ. Linn. Soc.* iii. 10.

WESTERN HIMALAYA; Garwhal, alt. 3-6000 ft., *Falconer, Thomson*.

Stems 12-16 in., sulcate; internodes 1-1½ in. *Leaves* 4-5 in., thin. *Peduncle* or *rachis* 1-1½ in., pedicels ½ in., bracts small membranous; flowers 1½ in. diam.; sepals and petals suberect.—It can hardly be but that this evidently monstrosous form is a state of some better known plant, but I fail to detect its origin.

††† Stem clavate.

§ *Flowers* racemose or 1-2 in form of *D. aggregatum*. *Petals* in all but *lamellatum* broader than the sepals.

148. ***D. densiflorum***, *Wall. Cat.* 2090; stems narrowly clavate pendulous terete or 4-angled, leaves subterminal acute, flowers many crowded in decurved racemes white or yellow, lip orange, bracts very large membranous, sepals obtuse, petals broader erose, mentum large subglobose, lip large funnel-shaped hippocrepiform retuse in front pubescent serrulate. *Lindl. in Wall. Pl. As. Rar.* i. 34, t. 40; *Gen. & Sp. Orchid.* 90; in *Bot. Reg.* t. 1828; in *Journ. Linn. Soc.* iii. 7; *Pact. Mag.* v. 121; *Bot. Mag.* t. 3418 and t. 5780 (var. *albo-lutea*); *Fl. des Serres*, t. 1397; *Warner Sel. Orchid. Ser.* 3, t. 21 (var.); *Orchid. Alb.* vi. t. 303; *Veitch Man. Dendrob.* 37. *D. clavatum*, *Roxb. Fl. Ind.* iii. 481. *D. thyrsiflorum*, *Reichb. f. in Ill. Hort.* xxii. t. 207; *Gartenfl.* t. 1021; *Flor. Mag. N. S.* t. 449; *Veitch Man. Dendrob.* 80, with fig.; *Gard. Chron.* 1877, i. 653, fig. 105; *Lindenia* i. t. 46 *Epidendrum Dumunsattei*, *Herb. Ham.*

TROPICAL HIMALAYA; from Nepal eastwards to the KHASIA HILLS, and southwards to TENASSERIM.

Stems 12–18 in. Leaves subterminal, 4–6 in. Flowers 2 in. diam; pedicel with ovary $\frac{1}{2}$ – $\frac{3}{4}$ in.; bracts twisted and revolute, strongly nerved. Capsule 3 in.—Veitch observes that almost the only characters of *thyrsiflorum* are the terete more slender stems and white sepals and petals; he refers to it the var. *albo-lutea* of Bot. Mag. He has a var. *Walkeriana* (Warner Sel. Orchid. iii. t. 21) with longer stems and racemes and larger flowers; also a var. *Schroederi* (Flor. Mag. t. 502) of true *densiflorum*, with looser racemes, larger flowers, French white petals and sepals, and pale yellow anterior margin of the lip.

149. **D. sulcatum**, Lindl. in Bot. Reg. 1838, t. 65; stems stout compressed grooved, leaves subterminal oblong acuminate, flowers many in short racemes from the leafless stems (dull orange or paler), bracts minute, sepals oblong obtuse and rather broader obovate, petals concave, mentum broad, lip broadly ovate hirsute, base saccate convolute, margins ciliate revolute. Bot. Mag. t. 6962; Veitch Man. Dendrob. 76; Rolfe in Gard. Chron. 1887, i. 607.

KHASIA HILLS, Gibson, &c.

Stems 6–10 in.; internodes about 6, compressed, green. Leaves 4–8 in., coriaceous, 3-nerved. Flowers 1 in. diam.; sepals and petals erect.

150. **D. Griffithianum**, Lindl. in Bot. Reg. under t. 1756; stems elongate clavate grooved, leaves oblong-lanceolate obtuse, flowers many in pendulous racemes white or yellow, lip orange, bracts small, sepals ovate-lanceolate acute spreading, petals broader ciliolate, mentum rather long incurved, lip orbicular papillose, base convolute, margin denticulate. Reichenb. f. in Gard. Chron. 1877, i. 590; Veitch Man. Dendrob. 48. *D. aggregatum*, Wall. Cat. 7411 B.

BURMA; at Chappedong, Wallich, Griffith.

Stems 12–18 in., obscurely 4-angled, base very slender. Leaves few, $3\frac{1}{2}$ by $1\frac{1}{2}$ in., very coriaceous. Flowers $1\frac{1}{2}$ –2 in. diam.

VAR. *Guibertii*, Veitch l. c.; stems more abruptly narrowed below, leaves broadly elliptic, racemes longer, flowers larger brighter-coloured. *D. Guibertii*, Carriere in Rev. Hortie. 1876, t. 431; Ill. Hortie. N. S. t. 258; De Puydt Les Orchid. t. 16.

151. **D. lamellatum**, Lindl. Gen. & Sp. Orchid. 89; stems short pyriform flattened, leaves few ovate subacute, flowers 3–5 in a short drooping raceme yellow, bracts minute, sepals ovate apiculate suberect, petals smaller obovate, mentum long flattened, lip clawed cuneate truncate erose, disk many-grooved. *D. compressum*, Lindl. in Bot. Reg. 1842, Misc. 76; 1844, t. 53; Walp. Ann. vi. 307. *Onychium lamellatum*, Blume Bijdr. 526, fig. 10.

TENASSERIM; at Moulmein, Parish. PERAK, Scortechini, King's Collector.—DISTRIB. BORNEO.

Stems 3–4 by $1\frac{1}{4}$ in., proliferously branched; internodes 3–4. Leaves 1– $1\frac{1}{4}$ in.; sheaths very short, broad. Flowers $\frac{3}{4}$ in. long, yellow in lc. Bot. Reg.; petals white in lc. Herb. Kew of Bornean plant; flower pale pink with white petals in lc. Parish.—This is by error described as a native of Ceylon; if imported from that country, it was doubtless from the Bot. Gardens there.

152. **D. aggregatum**, Roxb. Fl. Ind. iii. 477; stems fusiform, leaf solitary oblong, tip notched, flowers 1–2 or many in a loose drooping

lateral raceme (yellow), bracts minute, sepals small ovate obtuse spreading, petals much broader ovate, base cuneate, mentum subglobose, lip shortly clawed transversely oblong from a short subconvolute base, disk concave pubescent, margin quite entire ciliolate. *Lindl. in Wall. Cat.* 7411 A; *in Bot. Reg.* t. 1695; *Bot. Mag.* t. 3643; *Part. Mag.* vi. t. 145; *Veitch Man. Dendrob.* 15. *D. Lindleyi*, *Steud. Nomencl.* i. 490. *D. Jenkinsii*, *Wall. in Bot. Reg.* 1839, t. 37; *Warn. Sel. Orch.* ii. t. 28; *Veitch l. c.* 50; *Walp. l. c.* 307.

ASSAM, *Jenkins*; ARRACAN, MARTABAN, TENASSERIM and PERAK.—DISTRIB. S. China.

Stems $1\frac{1}{2}$ –2 in., angled. *Leaf* 2–3 by 1 in. *Raceme* from the axil of a small scale; flowers at first primrose, at length orange, $1\frac{1}{2}$ in. diam.; column yellow. *Capsule* 4 in., fusiform.—A plant now flowering at Kew shows both *aggregatum* and *Jenkinsii* in the same clump.

153. ***D. chrysotoxum***, *Lindl. in Bot. Reg.* 1847, under t. 19 and t. 36; stems short grooved, leaves 2–8 oblong to lanceolate, tip 2-fid, flowers many in lateral slender decurved racemes (golden, lip orange streaked or blotched with red), sepals oblong obtuse, petals twice as large, mentum rounded, lip orbicular pubescent, base convolute, margin pectinately fimbriate. *Bot. Mag.* t. 5053; *Ill. Hort.* 1858, t. 164; *Veitch Man. Dendrob.* 29; *Benson in Gard. Chron.* 1870, 796; *Walp. Ann.* vi. 305. *D. suavissimum*, *Reichb. f. in Gard. Chron.* 1874, 406; *Xen. Orchid.* iii. 2, t. 202; *Warn. Orchid. Alb.* t. 13.

ARRACAN and BURMA, on the hills and plains.

Stems 3–15 in., very variable, from subglobose to narrowly clavate. *Leaves* 3–4 in., coriaceous. *Racemes* 6–9 in.; flowers 2 in. diam.—*D. suavissimum* is regarded by *Veitch* as a variety with shorter stouter stems and broader leaves.

154. ***D. Farmeri***, *Part. Mag.* xv. 241, with fig.; *Fl. Gard.* iii. 104; stems erect clavate 4–5-grooved, leaves 2–4 elliptic or oblong, flowers many in lax pendulous lateral racemes golden or pink with yellow lip, bracts small, sepals ovate-oblong, petals much broader, mentum rounded, lip shortly clawed orbicular with lateral inflexed folds pubescent, margin erose. *Bot. Mag.* t. 4659; *Fl. des Serres* vii. t. 741; *Jard. Fleur.* t. 307; *Pescatorea* i. t. 4; *Gartenfl.* t. 595; *Jennings Orchid.* t. 24; *Veitch Man. Dendrob.* 42, with fig. *D. densiflorum*, var. *Farmeri*, *Regel Gartenfl.* t. 788.

TROPICAL EASTERN HIMALAYA, and ASSAM to BURMA.

Stems 10–18 in., 4-angled, base slender. *Leaves* 4–8 in., coriaceous, striate. *Flowers* 2 in. diam., variable in colour, sepals and petals usually pink or golden yellow tinged with pink, disk ochreous.—There are two principal varieties; *aureo-flava*, *Bot. Mag.* t. 5451; *Williams Orchid. Alb.* iii. t. 99; and *albiflora*, *Belg. Hort.* 1860, t. 21; *Gartenfl.* 1868, t. 595; *Fl. des Serres* 1882, t. 2161.

155. ***D. palpebræ***, *Lindl. in Journ. Hort. Soc.* v. 33; stems clavate 4-angled, leaves 3–5 oblong-lanceolate acute, flowers in loose lateral racemes (white or rose, disk of lip orange), bracts small, sepals oblong, petals broader clawed ciliolate, mentum rounded, lip oblong softly downy, base shortly clawed convolute and villously fringed. *Part. Fl. Gard.* i. 48; *Veitch Man. Dendrob.* 67.

SIKKIM HIMALAYA; in the Teesta Valley (*l.c. in Herb. Calcutt.*). BURMA, *Lobb. Berkeley.*

Stems 7–9 in. *Leaves* 4–6 in. *Flowers* $1\frac{1}{2}$ –2½ in. diam., faintly fragrant.—Near *D. densiflorum*, but bracts very different. Nearer *D. Griffithianum*, but mentum short.

156. **D. capillipes**, *Reichb. f. in Gard. Chron.* 1867, 997; *Xen. Orchid.* ii. 164, t. 169; stem very short fusiform, leaves 1-2 lanceolate acute, flowers 1-4 on a capillary lateral peduncle golden yellow, bracts small lanceolate, sepals small oblong-lanceolate, petals much broader, mentum short, lip with a convolute base and reniform retuse undulate limb. *Veitch Man. Dendrob.* 26.

BURMA; on hills N. of Thayetmyo, *Parish*.

Stem 2-6 in., 3-4-nodal. *Leaves* small, lanceolate. *Lip* with a deep orange blotch; anther elongate, conico-pyramidal.

Var. *elegans*, *Reichb. f. in Gard. Chron.* 1880, i. 743; stems taller, base of lip dark orange.

157. **D. senile**, *Parish & Reichb. f. in Gard. Chron.* 1865, 434; pseudobulb short subclavate and 2-3 leaves softly hairy, flowers lateral solitary or 2-nate long-pedicelled golden, bracts minute, sepals lanceolate acute, petals broader, mentum rounded, lip broadly ovate obscurely 3-lobed, side lobes rounded, midlobe ovate obtuse, disk puberulous, margins quite entire glabrous. *Xen. Orchid.* ii. 143, t. 155; *Bot. Mag.* t. 5520; *Veitch Man. Dendrob.* 74.

TENASSERIM; at Moulmein, *Parish*.

Stems 2-4 in.; internodes 4-6, $\frac{1}{2}$ -1 in. *Leaves* 2-3 in., flat, subacute, subfalcate. *Flowers* 2 in. diam., ochreous between the side lobes of the lip.

158. **D. trigonopus**, *Reichb. f. in Gard. Chron.* 1887, ii. 682; stem short and leaves at first and sheaths hispidulous, leaves 1-3 subterminal, peduncle 1-fl. (? always), flowers yellow, ovary trigonous, sepals ligulate acuminate, petals shorter broader, mentum obtuse, lip clawed dilated 3-fl., side lobes quadrate and semi-orbicular, midlobe denticulate, disk very rough.

BURMA (*Hort. Low*).

Stem at length sulcate. *Leaves* oblong-ligulate. *Flowers* larger than *D. Cambridgeanum*, as thick in texture as in *Vanda tricolor*. *Lip* yellow, with a row of red transverse lines superposed on each side of the disk between the side lobes, and a green area on the midlobe.—*Descript.* from the author.

SPECIES UNKNOWN TO ME, AND AN ERRATUM.

D. ACROBATICUM, *Reichb. f. in Gard. Chron.* 1871, 802; stems with stalked bulbs on the opposite sides, leaves oblong-ligulate, racemes lateral few-fl. at the top, flowers yellowish, sepals ligulate obtuse, petals oblong with a bigibbous callus at the base within, lip rhombic obtuse-angled, claw with a transverse callus, disk minutely velvety, column hatchet-shaped on each side.—TENASSERIM (*Hort. Veitch*).—Reichenbach says of this, "Near *D. polyanthum*, Lindl.," but Lindley's *polyanthum* is a very doubtful plant, and not Wallich's. Of the growth he says, "One stalked bulb comes out of the side of the first, and the third very high up on the opposite side."

D. AURANTIACUM, *Reichb. f. in Gard. Chron.* 1887, ii. 98. I regret having omitted to compare *D. chrysseum*, Rolfe (p. 748, No. 146, with Reichenbach's previously published description of *aurantiacum*, of which there are no specimens at Kew. I have now done so with Mr. Rolfe, and we are convinced that the name *chrysseum* must give place to *aurantiacum*, Reichb. f.

D. CREPIDATUM, *Griff. Notul.* iii. 319 (not of Lindl.). Of Griffith's description Lindley rightly says, in *Journ. Linn. Soc.* iii. 21, "It is so confused and self-contradictory that I have not been able to identify the species."

D. FLORIBUNDUM, *Don Prodr.* 31; stem few-leaved, leaves linear nerved very finely serrulate, scape 6-12 in. longer than the leafing stems sheathed many-fl., flowers rose-colored, sepals lingulate obtuse flat, base elongate, petals oval-oblong, lip

oval flattish obtuse reticulate bearded crosely serrulate yellow above.—**NEPAL**, *Wallich*.—This must be in Wallich's collection, but I fail to recognize it.

D. FUGAX, *Reichb. f. in Gard. Chron.* 1871, 1257; pseudobulbs 1–2 in. stipitate short fusiform 1-leaved, leaves 5 by 1 in. cuneate-ligulate obtusely acute, flowers terminal subsolitary membranous fugacious (yellow, lip white with purple and yellow marks), dorsal sepal ligulate acute, lateral subequal broader, petals much narrower, mentum rectangular, lip dilated from a cuneate base, side lobes obtuse-angled, midlobe clawed abruptly hastate flabelliform dilated emarginate retuse, sides undulate, two membranous keels run from the base to the top of the claw crenulate and lobulate in front, column very short.—**INDIA** (*Hort. Day*).—The flowers last but a few minutes.—*Descript.* from the author, l. c., who says it is near *convexum*, Lindl., and *xantholeucum*, R. f.

D. HUGHII, *Reichb. f. in Gard. Chron.* 1882, ii. 764; stems slender, leaves linear acuminate, flowers solitary (2–3 ?) fleshy like those of *D. revolutum*, pure white with a sulphur wart on the disk of the lip, sepals ligulate acute, petals oblong rhombic, mentum conico-cylindric, lip subrhombic from a cuneate base, lower half narrower constricted and angled in the middle, upper subcordate obtusely acute, lamellæ in the outer margin free obtuse-angled extrorse and incumbent on the surface, column broader above.—**SINGAPORE**, *H. Low*.—Near *revolutum*, but leaves thinner grassy.—*Descript. from the author, l. c.* Said to be a form of *D. crumenatum*.

D. LEUCOCHLORUM, *Reichb. f. in Gard. Chron.* 1879, i. 202; pseudobulb cylindric channelled thickish stipitate, raceme 1–2-fld., sepals triangular, petals as long oblong acute, mentum conical, lip 3-lobed in the middle, side lobes obtuse, midlobe produced broad retuse, disk muricate between the side lobes, column short.—**TENASSERIM**, at Moulmein (*Hort. Veitch*).—Flowers as large as *D. sphegidoglossum*, white, mentum green, lip white, yellow green without, side lobes with purple lines.—*Descript. from the author, l. c.*

D. PARVIFLORUM, *Don Prodr.* 34; stem 1 in., leaves few $1\frac{1}{2}$ in. lanceolate acute, raceme $\frac{1}{2}$ –2 in. peduncled many-fld., bracts lanceolate shorter than the straight pedicels, flowers small ochroleucous, lip oblong obtuse concave crenulate, sepals and petals subequal lanceolate, base hardly saccate.—**NEPAL**, *Wallich*.—Perhaps an *Eria*; it must be in Wallich's collection, but I do not recognize it.

D. PRECINCTUM, *Reichb. f. in Gard. Chron.* 1871, 750; stems subterete grooved, leaves narrow cuneate-ligulate 2-toothed, peduncle 2-fld., sepals ligulate obtusely acute, petals rhombic obtuse, mentum large obtuse-angled dorsally gibbous, lip cuneate dilated 3-fld ciliate, side lobes linear-ligulate obtuse, midlobe ligulate produced velvety with crests and threads, disk with 3 angled keels, column with a triangular excavate base.—Imported with *D. Devonianum* (*Hort. Veitch*).—Stem obscurely olive-green, sheaths ashy white, flowers yellow-white, sepals and petals margined with purple, lip yellow and orange, column sulphur.—*Descript. from the author, l. c.*

D. VEXABILE, *Reichb. f. in Gard. Chron.* 1884, i. 271, is a doubtful species or hybrid, something like *D. Ruckeri*, very imperfectly described. It was seen by Prof. Reichenbach in Low's nursery amongst a multitude of *D. luteolum*.—Nothing further is known of it.

9. **BULBOPHYLLUM**, *Thouars*.

Pseudobulb from a creeping rhizome (rarely 0), 1- very rarely 2-leaved. *Scope* from the base of the pseudobulb, rarely distant from it. *Flowers* solitary, capitate, umbelled, spicate or racemose. *Sepals* subequal, or the dorsal rather shorter (rarely only half as long), lateral adnate to the foot of the column. *Petals* various, usually much smaller than the dorsal sepal. *Lip* jointed on the foot of the column, mobile, usually very small and strongly recurved. *Column* very short, often 2-aristate at the top; anther 2-celled; pollinia 4 (2 rarely suppressed).—Species about 100, tropical and subtropical, chiefly Asiatic, a few African, American and Australian.

A polymorphous genus, of which § III. A resembles *Sarcopodium* of *Dendrobium*, but differs in its mobile lip, and scape lateral on the pseudobulbs.—See under *Cirrhopetalum* for further remarks.

Sect. I. EPICRIANTHES. *Rhizome* creeping, pseudobulbous. *Flowers* solitary, axillary, very shortly pedicelled. *Petals* represented by 6-7 elongate narrowly strap-shaped stipitate pendulous mobile threads.—*Epicrianthes*, *Blume*.

1. **B. Epicrianthes**, *Hook. f.*; *Epicrianthes javanica*, *Blume Bijdr.* 306 (*Epicranthes*); *Fl. Jav. Præf.* vi.; *Lindl. Gen. & Sp. Orchid.* 61; *Miquel Fl. Ind. Bat.* iii. 654.

TENASSERIM; at Moulmein, *Parish*.—DISTRIB. JAVA.

Rhizome ascending, as thick as a crow-quill; pseudobulbs $\frac{1}{2}$ in., narrow. *Leaf* 1 in., sessile, elliptic-oblong, acute, coriaceous. *Scape* $\frac{1}{2}$ in., 1-fl.; bracts lanceolate; flowers green and red; sepals about $\frac{1}{2}$ in., subequal, ovate-lanceolate, spreading; threads of petals nearly as long; lip sessile, ovate-lanceolate, acute, warty, base 2-lobed; column truncate.—Described from a drawing and notes of *Parish*. I assume he is right in referring his plant to *Blume's E. javanica*; he describes the threads of the petals as 6, in threes, membranous, *Blume* as 7, fleshy. There being a *Bulb. javanicum*, I have adopted the generic name for the specific.

Sect. II. OXYSEPALA. *Stems* many from a rooting base, densely tufted, very slender, pendulous, much branched, clothed with scarious silvery sheaths; pseudobulbs few, minute, ovoid. *Flowers* very small, solitary or 2-nate on a very short scape which is concealed by the sheaths; bracts cymbiform. *Sepals* very slender, connivent.

2. **B. clandestinum**, *Lindl. in Bot. Reg.* 1841, *Misc.* 77; *Walp. Ann.* vi. 248. *B. trisetosum*, *Griff. Notul.* iii. 23; *Id. Pl. Asiat.* t. 293. *Oxysepala ovalifolia*, *Wight Ic.* t. 1736; *Walp. l. c.* *Epidendrum sessile*, *König in Retz. Obs.* vi. 60 (*ex Herb. Rottler*).

TENASSERIM; at Mergui, *Griffith*. PERAK, *Scortechini*. MALACCA, *Griffith* (*Kew Distrib.* 5295).—DISTRIB. Borneo.

Stems 6-12 in., as thick as a crow-quill; internodes $\frac{1}{2}$ in., sheaths appressed, ribbed. *Leaf* $\frac{1}{2}$ -1 in., oblong or linear, retuse. *Scape* capillary; bracts many, hyaline; flowers $\frac{1}{2}$ in. long, erect, cellular, yellow-white. *Sepals* subequal, lanceolate, ciliate acuminate; petals half as long, ovate-oblong, acute, 1-nerved; lip shortly stipitate, lanceolate, obtuse; column short, 2-toothed.

Sect. III. EUBULBOPHYLLUM. *Rhizome* creeping, bearing distant or approximate pseudobulbs (sometimes very small or 0, see p. 765). *Inflorescence* various. *Lip* usually strongly recurved and much shorter than the sepals.—The divisions of this section are in great measure artificial. (See remarks under *Cirrhopetalum*.)

A. *Flowers* solitary, rarely 2-3, usually large. *Scape* sometimes very short, with the pedicel of the flower long and scape-like. *Petals* and *lip* usually much larger than in other groups. (Species 3-18.)

* Column truncate, teeth at the apex in front 0, or minute.

† *Lip* sessile, i. e. foot of column not produced beyond the insertion of the lateral sepals.

3. **B. macranthum**, *Lindl. in Bot. Reg.* 1844, t. 13; scape 0, pedicel longer than the petiole of the elliptic oblong leaf, flower 2 in. diam., petals lanceolate 9-nerved as long as the sepals, lip small ovate acuminate, base

truncate. *Walp. Ann.* vi. 245. *Sarcopodium macranthum*, *Lindl. in Part. Fl. Gard.* i. 155; *Fol. Orchid.* 3.

TENASSERIM; alt. 3636 ft., *Parish*. SINGAPORE (*Hort. Loddiges*).

Rhizome stout, crinite at the nodes. *Leaf* 4-8 in. *Pedice*l 4-5 in., with appressed basal sheaths; flower ringent, rather fleshy, red-purple and spotted; anther small.

4. **B. megalanthum**, *Griff. Notul.* iii. 286; *Ic. Pl. Asiat.* t. 292; scape very short, pedicel stout shorter than the oblong-lanceolate leaf, flower $\frac{3}{4}$ in. diam., petals lanceolate long-acuminate rather shorter than lanceolate acuminate falcate sepals, lip long narrow slender, basal lobes acute. *Walp. Ann.* vi. 246.

MALACCA; on Pulo Bessar, abundant, *Griffith*.

Pseudobulbs very small. *Leaves* 4 in.; petiole short. *Pedice*l 2-3 in.; flowers pale brown, purple-spotted; sepals 3 in. long, lateral scythe-like, deflexed and crossed over the very long lip. *Fruit* 2 in. long.—Described from Griffith, who says the lip is sessile, but his figure shows a stipes.

5. **B. psittacoglossum**, *Reichb. f. mss.*; scape very short stout 1-3-lin., pedicel longer than the petiole of the broadly elliptic leaf, flower 1-1 $\frac{1}{2}$ in. diam., petals ovate 5-nerved as long as the falcately ovate lateral sepals, foot of column forked, lip with membranous toothed basal lobes. *Sarcopodium psittacoglossum*, *Reichb. f. in Bot. Mag.* t. 5408.

TENASSERIM, *Parish*.

Pseudobulbs ovoid, enclosed in a reticulate sheath. *Leaf* 2-4 in. long and broad. *Scape* 1-1 $\frac{1}{2}$ in., sheath basal; pedicel 1 in., stout; sepals greenish yellow with red nerves, dorsal incurved. *Lip* spongy, yellow and scarlet, obtuse, base deeply 2-lobed; tips of column acute.

6. **B. nasutum**, *Reichb. f. in Gard. Chron.* 1871, 1482; flower subsessile, sepals subequal triangular-ovate, petals very small linear, lip sessile as long as the sepals oblong, tip rather dilated rounded, base with a hooked incurved auricle on each side, anther conical.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs crowded, short, obturbinate. *Leaf* 2-3 in., sessile, lanceolate, very thick. *Pedice*l with ovary $\frac{1}{2}$ in.; flower 1 in. diam.; sepals and petals 5-nerved, pale yellow; lip with a red-purple base, auricles as in *B. Careyanum*.—The specimens are very insufficient.

7. **B. pileatum**, *Lindl. in Bot. Reg.* 1844, *Misc.* 73; scape 0, pedicel slender, sepals ovate-oblong obtuse, petals nearly as long narrower ovate-oblong obtuse 5-nerved, lip nearly as long as the sepals tongue-shaped obtuse with 2 mesial ridges from the base to beyond the middle, column terete, anther conical. *Walp. Ann.* vi. 246. *Sarcopodium pileatum*, *Lindl. Fol. Orchid.* 4.

SINGAPORE (*Hort. Loddiges*). PENANG, *Maingay (Kew Distrib.* 1676), and *Ic. in Herb. Kew*. PERAK, *Wray*.—DISTRIB. Sumatra (*Ic. Marsden*).

Rhizome long, rooting, and crinite at the nodes. *Leaf* 3-5 in., elliptic or obovoid-oblong, rather membranous. *Pedice*l 1-3 in., often distant from the pseudobulb; flower 1 $\frac{1}{2}$ in. diam., yellow, ridges of lip red.—The materials are very indifferent.

8. **B. Reinwardtii**, *Reichb. f. in Walp. Ann.* vi. 246; pseudobulbs long slender, leaf long-petioled, scape and pedicel slender, petals ovate-lanceolate caudate-acuminate rather shorter than the uncinately lanceolate lateral sepals, lip cordate-lanceolate. *Sarcopodium Reinwardtii*, *Lindl.*

Fol. Orchid. 4; *Miquel Fl. Ind. Bat.* iii. 652. *Dendrobium grandiflorum*, Reinwardt mss.

PERAK, alt. 3-4000 ft., *Wray, King's Collector*.—DISTRIB. Java.

Pseudobulbs 3-4 in., terete. *Leaf* 6-8 in., thin, elliptic, acuminate, many-nerved. *Peduncle* 3-4 in., distant from the bulb, sheaths several; flower $\frac{3}{4}$ in. long; mentum globose.—Colour of flowers variously described: "saffron-cold., lip white above, crimson beneath," *Wray*; "pale greenish yellow, brown inside, lip bright reddish blue," *King's Collector*; "pale pink tinted with crimson," *Wray* (1889).

†† *Lip stipitate by the produced foot of the column.*

9. **B. Lobbii**, *Lindl. in Bot. Reg.* 1847, sub. t. 29; scape 0, pedicel much exceeding the petiole of the linear-oblong leaf, petals narrow 9-nerved as long as the falcately ovate-lanceolate lateral sepals, lip large broadly ovate recurved. *Bot. Mag.* t. 4532; *Reichb. f. in Gard. Chron.* 1847, 423; *Saunders Refug. Bot.* t. 116 (var. *siamense*); *Walp. Ann.* vi. 245. *B. Henshallii*, *Lindl. in Gard. Chron.* 1852, 422. *B. siamense*, *Reichb. f. l. c.* 1867, 572. *Sarcopodium Lobbii*, *Lindl. in Paxt. Fl. Gard.* i. 155; *Jard. Fleur.* t. 183. *S. Lobbii*, var. *Henshallii*, *Henfrey in Gard. Mag. Bot.* iii. 269, with woodcut. *Sestochilos uniflorum*, *Breda Orchid. Jav.* t. 3.

TENASSERIM; on Donnatong, *Parish*.—DISTRIB. Siam, Java.

Rhizome stout; pseudobulbs ovoid. *Leaves* 4-8 in. *Pedicel* 4-6 in., speckled; sheaths loose, spotted; flowers $2\frac{1}{2}$ -4 in. diam., very variable in colour, ochreous or reddish yellow with red nerves or with yellow and pink speckles and striate with brown.

10. **B. uniflorum**, *Griff. Notul.* iii. 293; *Ic. Pl. Asiat.* t. 295; *Itin. Notes* 110, No. 138 (not of *Kuhl & Hassk.*); scape very short sheathed, pedicel very long, dorsal sepal ovate-oblong obtuse very much larger than the uncinately incurved broadly ovate lateral, petals linear 3-nerved, lip with recurved acute basal auricles. *Walp. Ann.* vi. 247. *Sarcopodium uniflorum*, *Lindl. Fol. Orchid.* 16.

BHUTAN HIMALAYA; at Dewangiri, *Griffith*. MISHMI HILLS, towards Lung, *Griffith (in Herb. Lindley)*.

Rhizome very stout; pseudobulbs 1-2 in., cylindric. *Leaf* 2-6 in., subsessile. *Pedicel* 3-4 in.; flower $\frac{3}{4}$ in. diam.; sepals orange-yellow spotted with purple; lip tipped with red and petals with white.—Very like *B. capillipes* in habit. The basal auricles of the lip are as in *B. Careyannum*.

11. **B. capillipes**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 150, t. 37; scape very short, pedicel very long slender pendulous, petals ovate obtuse 5-nerved rather shorter than the oblong dorsal sepal all much smaller than the broadly triangular-ovate obtuse 7-9-nerved lateral sepals, lip very short pyramidal, basal angles acute.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 1 in., narrowly obpyriform. *Leaf* 3-4 in., subsessile, linear. *Pedicel* 2-3 in.; flowers $\frac{3}{4}$ in. diam., yellow with red nerves; lip violet-purple.—Very like *B. uniflorum* in habit.

12. **B. striatum**, *Reichb. f. in Walp. Ann.* vi. 257; scape 1-3-flid. longer than the long petiole of the elliptic leaf, petals ovate-lanceolate acute 1-nerved half the length of the subequal oblong-lanceolate 5-nerved sepals, lip linear-oblong obtuse. *Sarcopodium striatum*, *Lindl. Fol. Orchid.* 5. *Dendrobium striatum*, *Griff. Notul.* iii. 318.

KHASIA HILLS, alt. 4000 ft., *Griffith (Kew Distrib.* 5156), *Lobb, &c.*

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in., obpyriform. *Leaf* 2–3 in.; petiole 1–2 in., rather slender. *Scape* with several ovate membranous bracts, as if normally several-fl.; flowers $\frac{1}{2}$ in. diam., yellow-green striped with purple; lip rather large and thin.

13. **B. affine**, *Lindl. in Wall. Cat.* 1982; *Gen. & Sp. Orchid.* 48; scape very short (rarely 2-fl.), pedicel longer than the petiole of the linear-oblong leaf, petals ovate-lanceolate acute 3–5-nerved about a third shorter than the reflexed falcate lanceolate lateral sepals, lip shortly stipitate. *Walp. Ann.* vi. 246. *Sarcopodium affine*, *Lindl. in Paxt. Fl. Gard.* i. 155; *Fol. Orchid.* 5.

NEPAL, *Wallich*. KHASIA HILLS, alt. 4–5000 ft., *J. D. H. & T. T. NAGA HILLS*, *Prain*.

Rhizome very stout; pseudobulbs oblong. *Leaves* 3–6 in.; petiole short. *Pedicel* 1–2 in.; basal sheaths short; flowers white, papillose, streaked with red; lip reddish-brown; column yellow.

** Column with two long teeth or spines at the top.

14. **B. leopardinum**, *Lindl. in Wall. Cat.* 1981, *Gen. & Sp. Orchid.* 48; scape very short 1–3-fl., pedicel stout shorter than the long petiole of the elliptic or oblong leaf, flower subglobose, petals broadly ovate acute 7-nerved, shorter than the similar 9-nerved sepals, lip long-stipitate with toothed basal auricles. *Walp. Ann.* vi. 247. *Sarcopodium leopardinum*, *Lindl. in Paxt. Fl. Gard.* i. 155. *Dendrobium leopardinum*, *Wall. Tent. Fl. Nep.* 39, t. 23.

NEPAL, *Wallich*. KHASIA HILLS, alt. 3–5000 ft., *H. f. & T., Clarke, &c.*

Rhizome very stout, pseudobulbs 1–1 $\frac{1}{2}$ in., crowded, narrow. *Leaf* 3–8 in.; petiole 1–2 in. *Scape* and *pedicel* about as long as the pseudobulb; bracts large; flowers 1 in. diam., greenish or yellowish, spotted purple; mentum hemispheric; columnar spurs stout; anther conic.

15. **B. Griffithii**, *Reichb. f. in Walp. Ann.* vi. 247; scape very short pedicel longer stout, petals oblong obtuse 3-nerved shorter than the ovate obtuse 5-nerved subequal sepals, lip stipitate oblong obtuse. *Sarcopodium Griffithii*, *Lindl. Fol. Orchid.* 6. *Bulboph. sp., Griff. Ic. Pl. Asiat.* t. 296, f. 2 (not of *Notul. & It. Notes*). *Dendrob. Bulbophylli, Griff. It. Notes* 65, No. 1019 (fide Lindley).

KHASIA HILLS; in Myrung Woods, alt. 5000 ft., *Griffith, H. f. & T.*

Pseudobulbs small, crowded. *Leaf* 1 $\frac{1}{2}$ –2 in., linear-oblong; scape with a short loose bract; flower 1 in. diam., greenish-yellow, spotted with brown.

16. **B. Dayanum**, *Reichb. f. in Gard. Chron.* 1865, 434; *Xen. Orchid.* 128, t. 144; scape 0, pedicel very short sigmoid, flowers ciliate with long hairs, petals oblong much smaller than the broadly ovate obtuse equal sepals, lip sessile trigonous sharply toothed, basal auricles uncinately incurved, columnar teeth short. *Bot. Mag.* t. 6119; *Reichb. f. Xen. Orchid.* ii. t. 144; *Fl. des Serres*, t. 2236; *Saunders Refug. Bot.* t. 115.

TENASSERIM; at Moulmein, *Parish, &c.*

Pseudobulbs 1 in., crowded. *Leaf* 3 in., elliptic, reddish beneath; petiole short. *Flower* 1 in. diam.; sepals green, streaked with purple specks; petals blood-red, margins yellow; lip green, disk with blood-red ridges.

17. **B. membranifolium**, *Hook. f. Ic. Pl. ined.*; leaf elliptic-lanceolate membranous narrowed into a petiole, scape short 1-bracteate, petals elliptic-lanceolate 7-nerved smaller than the ovate-lanceolate many-nerved acute lateral sepals, lip stipitate, column with long falcate decurved then ascending arms.

PERAK; on Gunong Batu Pateh, Wray.

Pseudobulb 1 in., narrow, with rigid basal fibres. *Leaf* 6-8 in., with many slender nerves and cross nervules. *Scape* with pedicel about 2 in.; bract $\frac{1}{2}$ in., lanceolate; flower nearly 1 in. long, "pale greenish yellow with dotted crimson lines, lip claret-cold," Wray.

18. **B. moniliforme**, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 151; pseudobulbs pisiform with the filiform rhizomes forming moniliform creeping tufts, scape capillary 1-fl., petals oblong 1-nerved, tip rounded much shorter than the lanceolate acute strongly 5-nerved lateral sepals, lip stipitate.

TENASSERIM; Moulmein, Parish; on trunks of Betel-nut Palms.

Leaf unknown. *Scape* $\frac{3}{4}$ -1 in.; bracts sheathing, obtuse; pedicel $\frac{1}{4}$ in. *Flower* $\frac{1}{2}$ in. diam.; dorsal sepal a third shorter than the lateral, 5-nerved; lip obtuse, auricles rounded. *Columnar spurs* long, slender.—A remarkable little species, like a small *Eria*.

B. Flowers capitate or subumbellate. (See also 57. *repens*, and 59. *xylophyllum*.)—In this division the scape is often distant from the pseudobulb. (Sp. 19-31.)

* *Sepals* 5- or 7-nerved. *Petals* 1- or 3-nerved.

19. **B. Medusæ**, Reichb. f. in *Walp. Ann.* vi. 262; scape stout loosely sheathed, flowers in a large dense globose head, bracts large lanceolate, sepals lanceolate with long capillary tips, dorsal 5-nerved more than half as long as the 7-nerved lateral, petals ovate-lanceolate 1-nerved, tips capillary, lip nearly straight. *Cirrhopetalum* Medusæ, Lindl. in *Bot. Reg.* 1842, t. 12; 1843, under t. 49; *Bot. Mag.* t. 4977; *Hort. Parad.* ii. t. 5. Belg. *Hortic.* viii. t. 12.

SINGAPORE (*Hort. Loddiges*). PERAK, *Scortechini*, Wray.

Rhizome stout; pseudobulbs 1-1 $\frac{1}{2}$ in., obpyriform, often curved. *Leaf* 5-6 in., linear-oblong, 2-fl., very coriaceous; petiole stout. *Scape* 6-8 in., curved; sheaths 1 in.; head 1 $\frac{1}{2}$ in. diam.; bracts $\frac{1}{2}$ in.; flowers 3 in. long, yellow spotted red; columnar teeth very long.

20. **B. albidum**, Hook. f.; scape stout 2-3-sheathed, umbel 6-8-fl., sepals lanceolate acuminate 5-nerved, dorsal one-third shorter than the lateral, petals elliptic-oblong 3-nerved, tip rounded, lip stipitate, posterior angles acute recurved, column shortly toothed. *Cirrhopetalum* albidum, Wight *Ic.* t. 1653.

NILGHIRI HILLS, Wight.

Rhizome very stout, copiously rooting; pseudobulbs short, broadly ovoid, golden when dry. *Leaf* 1-2 in., elliptic-oblong. *Scape* 2-3 in.; flowers pedicelled, $\frac{3}{4}$ in. long, white freckled with pale brown.

21. **B. confertum**, Hook. f. *Ic. Plant. ined.*; scape slender much shorter than the linear-lanceolate long-petioled leaf, flowers small subracemose, sepals 5-nerved finely acuminate, dorsal ovate-lanceolate about a third shorter than the lanceolate falcate 5-nerved gibbous-based lateral, mentum large rounded, petals half as long as the lateral sepals ovate-oblong acute 3-nerved serrulate, lip minute stipitate, column dorsally 3-toothed, spurs very slender.

KHASIA HILLS, Griffith (*Kew Distrib.* 5170).

Pseudobulbs $\frac{1}{2}$ -1 in., densely crowded, narrowly ovoid. *Leaf* 2 $\frac{1}{2}$ -3 in., narrowed into a slender 1 in. petiole. *Scape* 1 $\frac{1}{2}$ -2 in., naked; bracts lanceolate, shorter than the slender $\frac{1}{6}$ in. pedicels; sepals $\frac{1}{4}$ in., dorsal suberose.

** *Sepals 3-nerved. Petals 3-nerved, or 1-nerved in B. radiatum*

22. **B. radiatum**, Lindl. in Wall. Cat. 1986; Gen. & Sp. Orchid. 55; scape slender shorter than the linear-obtuse leaf, flowers umbellate long-pedicelled, sepals subequal narrowly caudate-lanceolate 3-nerved, petals half as long narrowly lanceolate from an ovate 1-3-nerved base finely acuminate, mentum 0, lip minute stipitate, columnar spurs slender. Walp. Ann. vi. 264.

TENASSERIM; at Tavoy, Wallich; Moulmein, Parish.—DISTRIB. Hong Kong.

Pseudobulbs 1 in., very narrowly conical or subcylindric, crowded on a stout rhizome. *Scape* 2-3 in.; bracts setaceous, pedicel $\frac{1}{4}$ - $\frac{1}{3}$ in., capillary; flowers yellowish; sepals $\frac{1}{2}$ in.

23. **B. stenobulbon**, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 153; scape short slender, sheaths 3-5 small, flowers fascicled on the top of the scape few very small subsessile, sepals subequal lanceolate finely acuminate 3-nerved three times as long as the oblong obtuse 3-nerved petals, lip sessile, columnar spurs long.

TENASSERIM, Helfer (Kew Distrib. 5166); at Moulmein, Parish.

Pseudobulbs $\frac{1}{2}$ -1 in., cylindric; rhizome slender. *Leaf* 1-2 in., linear, notched. *Scape* $\frac{1}{2}$ -1 in.; bracts small, lanceolate; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. long, yellow.

24. **B. cauliflorum**, Hook. f. Ic. Plant. ined.; scape capillary distant from and much shorter than the long pseudobulb, flowers small umbelled, sepals subequal lanceolate caudate-acuminate 3-nerved, petals nearly as long lanceolate 3-nerved, lip very small stipitate, columnar spurs slender.

SIKKIM HIMALAYA, Griffith's Collectors (Kew Distrib. 5165), J. D. H. KHASIA HILLS, Griffith (Kew Distrib. 5139).

Rhizome stout, branched, divaricate; pseudobulbs $1\frac{1}{2}$ -2 in., subcylindric, distant. *Leaf* 2-5 by 1-1 $\frac{1}{2}$ in., oblong, obtuse; petiole $\frac{1}{3}$ - $\frac{1}{2}$ in. *Scape* $\frac{1}{2}$ - $\frac{3}{4}$ in., bracts ovate-lanceolate, shorter than the slender $\frac{1}{2}$ in. long pedicel; flowers $\frac{1}{4}$ in. long, yellow-green, inodorous.—The slender tails of the sepals and 3-nerved petals distinguish this from *B. odoratissimum*.

25. **B. protractum**, Hook. f. Ic. Plant. ined.; scape capillary much shorter than the leaf, flowers very small umbelled, bracts setaceous sepals subequal lanceolate acute 3-nerved, petals nearly as long 3-nerved lip very small subsessile, columnar spurs slender.

TENASSERIM (on Andaman Islands), Helfer (Kew Distrib. 5164).

Rhizome long, nearly straight; pseudobulbs $\frac{3}{4}$ -1 in., narrow, distant. *Leaf* 2-3 in., shortly petioled, linear-lanceolate, acute, rather thin. *Scape* 1 in., sheath slender; pedicel $\frac{1}{10}$ in.

*** *Sepals 3-nerved. Petals 1-nerved.*

26. **B. odoratissimum**, Lindl. in Wall. Cat. 1987; Gen. & Sp. Orchid. 55; scape stout loosely sheathed, flowers in a dense globose head, bracts longer than the ovary, sepals subequal lanceolate caudate 3-nerved, tips solid obtuse, petals minute 1-nerved, lip minute sessile papillose. *Stelis odoratissima*, Smith in Rees Cyclop. xxxiv. S. caudata, Don Prodr. 32. *Tribrachia odoratissima*, Lindl. Coll. Bot. 41.

SUBTROPICAL HIMALAYA; Nepal, Wallich; Sikkim, alt. 4-7000 ft., J. D. H. KHASIA HILLS, Lobb, &c. TENASSERIM, Helfer (Kew Distrib. 5167, 5168).—DISTRIB. China.

Rhizome stout; pseudobulbs $\frac{1}{2}$ – $1\frac{1}{2}$ in., subcylindric. *Leaf* 1–3 in., linear-oblong, notched. *Scape* sometimes distant from the bulb; bracts oblong or lanceolate; heads $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; pedicels $\frac{1}{8}$ in.; flower $\frac{1}{4}$ – $\frac{1}{2}$ in. long, yellow, sweet-scented; column truncate.

27. **B. capitatum**, *Lindl. Gen. & Sp. Orchid.* 56; rhizome ascending, pseudobulbs narrow erect, scape very short, flowers few subcapitate, sepals subequal lanceolate acuminate 3-nerved much longer than the elliptic obtuse 1-nerved petals, lip small stipitate obtuse, columnar spurs long. *Miquel Fl. Ind. Bat.* iii. 649. *Diphyes capitata*, *Blume Bijl.* 314.

PERAK; on Gunong Batu Pateh, *Wray*.

Rhizome very long and apparently scandent; pseudobulbs parallel to it, i. e. erect, $\frac{3}{4}$ –1 in. *Leaf* 1–3 in., linear, striate. *Scape* $\frac{1}{4}$ – $\frac{1}{2}$ in.; flowers shortly pedicelled, yellow; sepals $\frac{1}{8}$ in. long, cellular.

28. **B. caudatum**, *Lindl. in Wall. Cat.* 1983; *Gen. & Sp. Orchid.* 56; leaf small, scape very short and stout sheathed at the base, flowers small umbellately capitate, sepals lanceolate caudate 3-nerved, lateral much longer than the dorsal and three times as long as the oblong obtuse 1-nerved petals, lip shortly stipitate, columnar spurs slender.

NEPAL, *Wallich*.

Rhizome slender; pseudobulbs $\frac{1}{4}$ – $\frac{2}{3}$ in., ovoid. *Leaf* $\frac{1}{2}$ –1 in., oblong, obtuse or retuse. *Scape* hardly longer than the pseudobulb; bracts many, ovate-lanceolate, exceeding the ovary; flowers $\frac{1}{2}$ in. long, papillose.—Near *Cirrhopetalum*.

29. **B. modestum**, *Hook. f. Ic. Pl. ined.*; scape nearly as long as the leaf filiform few-fl., flowers very small subsessile, sepals subequal lanceolate subacute 3-nerved about twice as long as the narrowly oblong obtuse 1-nerved petals, mentum rounded, lip sessile small, columnar spurs slender.

PERAK, *Scortechini*.

Rhizome slender; pseudobulbs $\frac{1}{4}$ – $\frac{1}{2}$ in., distant, narrow, curved. *Leaf* 1– $1\frac{1}{2}$ in., sessile, linear, retuse. *Scape* as long, 1-sheathed about the middle; bracts ovate-lanceolate, longer than the pedicels; flower $\frac{1}{2}$ in. long.

30. **B. leptanthum**, *Hook. f. Ic. Pl. ined.*; scape capillary equalling the cylindric pseudobulb, flowers few subracemose, bracts large finely acuminate, sepals 3-nerved lanceolate narrowed into capillary tips twice as long or more than the oblong apiculate 3-nerved sepals, lip very small stipitate, columnar spurs slender.

KEASIA HILLS, alt. 4–5000 ft., *Griffith, &c.*

Rhizome rather stout; pseudobulbs $\frac{1}{2}$ –1 in., narrow, terete, distant. *Leaf* 2–3 in., subpetioled, linear, obtuse. *Scape* 1–2 in., 2–4-fl.; bracts much longer than the pedicels; flowers $\frac{1}{2}$ in. long, sweet-scented.

VAR. ? *Gamblei*; rhizome very slender, pseudobulbs shorter, scape longer, sepals rather broader, petals longer linear-lanceolate.—Sikkim, at Goompahar, alt. 7000 ft., *Gamble*.—Probably a distinct species.

31. **B. petiolare**, *Thw. Enum.* 298; leaf obovate-oblancheolate or linear-lanceolate long-petioled, scape long slender, flowers very small fascicled, sepals subequal oblong ovate obtuse strongly 3-nerved, lateral falcate, petals ovate acuminate, lip stipitate fleshy tongue-shaped, columnar teeth broad acute.

CEYLON, *Ambagomawa*.

Pseudobulbs as in *B. purpureum*, from which this differs in the longer scape, longer petioled leaves, more fascicled rather larger flowers, larger purple lip. In one

drawing lent by Dr. Trimen, the flowers are pale pink with broad red stripes, in another yellow with slender red stripes.

C. Flowers racemose or spicate (capitate in 57. *repens*, and 59. *xylophyllum*). (Sp. 32-72.)

* Lip with recurved lateral basal auricles. Except sp. 32 and 40, all want revision.

32. **B. fusco-purpureum**, *Wight Ic. t.* 1651; scape stout, raceme few-fl., flowers large, sepals subequal ovate-oblong acuminate, petals very small tipped with a clavellate capillary awn, lip sessile broad papillose, columnar teeth short. *Walp. Ann. vi.* 256.

NILGHIRI HILLS; at the Kaitia Falls, *Jerdon, Wight*.

Rhizome stout; pseudobulbs $\frac{1}{2}$ -1 $\frac{1}{2}$ in., ovoid. *Leaf* 2-4 in., shortly petioled, oblong, obtuse. *Scape* twice as long, suberect, raceme drooping; sheaths loose; bracts short; sepals 1 in., 5-nerved, dark purple; petals subserrate; auricles of purple lip crenate.

33. **B. Kingii**, *Hook. f. Ic. Pl. ined.*; scape short stout pendulous, raceme dense-fl., bracts large, dorsal sepal ovate, lateral ovate-lanceolate acute, petals nearly as long as the dorsal sepal ovate-oblong ciliate, auricles of the lip deeply toothed, column truncate.

SIKKIM HIMALAYA, alt. 6000 ft., *King (Ic. in Herb. Calcutt.)*.

Rhizome stout; pseudobulbs 1 $\frac{1}{2}$ in. diam., globose and deeply grooved, as if lobed. *Leaf* 6 in., linear-oblong, acute; petiole 1 $\frac{1}{2}$ in. *Scape* with raceme 5 in., sheaths short ventricose, and flowers green sprinkled with red; bracts $\frac{1}{2}$ in.; flowers 1 in. diam.; lip dark green.—Described from an excellent (but probably enlarged) native drawing.

34. **B. Careyana**, *Spreng. Syst. Veg. iii.* 732; scape very stout many-sheathed longer than the pseudobulb, bracts equalling or exceeding the densely imbricating flowers, sepals oblong-ovate acute, dorsal shorter, petals minute broadly ovate aristate 1-nerved, auricles of shortly stipitate lip subentire, columnar spurs long-aristate from a broad base. *Wall. Cat.* 1990/1; *Lindl. Gen. & Sp. Orchid.* 51; *Walp. Ann. vi.* 256. Anisopetalum *Careyanum*, *Hook. Fl. Exot. t.* 149. Pleurothallis purpurea, *Don Prodr.* 33. Tribrachia purpurea, *Lindl. Coll. Bot.* 41.

TROPICAL HIMALAYA; from Nepal, *Wallich*, eastwards. KHASIA HILLS and Burma.

Rhizome very stout; pseudobulbs globose ovoid or oblong. *Leaf* 4-10 by 1-2 in., subpetioled, oblong or linear-oblong. *Scape* 3-5 in.; raceme 2-4 in., decurved; bracts $\frac{1}{2}$ in., oblong or lanceolate; flowers $\frac{1}{4}$ - $\frac{1}{2}$ in. long, orange-yellow or greenish, more or less spotted or suffused with red-brown or purple, sometimes almost all blue-purple.—I find it impossible from dried specimens to ascertain if there be more than one species here, and if the two following are, if distinct, accurately distinguished by the characters given.

VAR. *ochracea*; flowers ochraceous unspotted, lip red-brown. *B. cupreum*, *Bot. Mag. t.* 5316.—Arracan.

35. **B. crassipes**, *Hook. f.*; scape very stout shorter than the pseudobulbs concealed by ventricose sheaths, bracts sepals petals and lip as in *B. Careyana*, but column longer with short erect spurs. *B. Careyana*, *Wall. Cat.* 1990/2; *Bot. Mag. t.* 4166.

SIKKIM TERAI, *Clarke*. MARTABAN, *Wallich*. Arracan (*Herb. Calcutt.*). PENANG (*Herb. Lindl.*).

36. **B. sicyobulbon**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 152; habit and scape of *B. Careyanum*, but pseudobulbs very large, flowers orange-yellow, bracts narrower, petals subserrulate, column and its spurs as in *B. crassipes*.

TENASSERIM; at Moulmein, *Parish*.

37. **B. cupreum**, *Lindl. in Bot. Reg.* 1838, *Misc.* 95; scape slender decurved, sheaths distant, raceme elongate lax-fl., bracts narrow equalling the yellow or reddish-yellow flowers, sepals and (not aristate) petals ovate-lanceolate acuminate, lip narrow, auricles entire or obscurely toothed, columnar spurs slender. *Walp. Ann.* vi. 257; *Reichb. f. in Trans. Linn. Soc.* xxx. 152 (*var. stenopetala*).

TENASSERIM, *Parish*. MANILLA (*Hort. Loddiges*).

This again so closely resembles a lax-flowered state of *B. Careyanum*, as to be with difficulty distinguishable in the dried state. Lindley describes the flowers as copper-coloured and smelling of Valerian roots. Reichenbach's *var. stenopetala* seems hardly different; it has orange-yellow flowers. His *var. flava*, *Gard. Chron.* 1882, i. 330, of which the habitat is unknown, may be *B. nilgherrense*?

38. **B. nilgherrense**, *Wight Ic.* t. 1650; scape stout elongate, sheaths few distant, racemes lax-fl., bracts acute much shorter than the flowers, lateral sepals oblong, dorsal broadly ovate, petals triangular-ovate acuminate, auricles of lip entire or toothed, columnar spurs lanceolate. *Bot. Mag.* t. 5050; *Walp. Ann.* vi. 256.

MALABAR; on the NILGHIRI HILLS, &c., *Wight*.

Habit of *B. Careyanum*, but scape more slender, with few sheaths, racemes fewer and larger flowered, and bracts very short. Flowers described by Wight as sepals dull brownish-yellow, lip greenish-brown; in *Bot. Mag.* figure the sepals are green and purple, the lip purple. In a plant cult. at Kew apparently of this the auricles of the lip are wanting.

39. **B. ruflabrum**, *Parish mss.*; scape short, racemes many and dense-fl., bracts very small, flowers small, sepals subequal ovate-oblong obtuse, dorsal narrower, petals broadly ovate acuminate, tip serrulate, lip shortly stipitate scabrid, columnar teeth short. *B. limbatum*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 152 (*not of Lindl.*).

TENASSERIM; on trees at Mergui, *Parish*.

Rhizome slender; pseudobulb broadly ovoid or subglobose, $\frac{1}{2}$ – $\frac{3}{4}$ in. long. *Leaf* $1\frac{1}{2}$ –2 in., subsessile, elliptic or oblong. *Scape* with raceme $2\frac{1}{2}$ in., sheath loose; bracts equalling the ovary; flowers $\frac{1}{2}$ in. long, dull purple.—Colours described from *Parish's* drawing named *limbatum* by Reichenbach, who describing them from a living plant (in *Hort. Saunders*) says that the dorsal sepal is red spotted with yellow, the lateral brown spotted yellow and with a green mesial line, the lip as dark purple. The leaves he says are lurid violet beneath.

40. **B. microtepalum**, *Reichb. f. in Walp. Ann.* vi. 253; scape slender, sheaths small distant, raceme dense-fl., bracts lanceolate equalling the small flowers, sepals ovate-lanceolate acuminate, petals very broadly triangular shorter than the column, lip minute, spurs of column recurved, tips toothed.

TENASSERIM; at Moulmein, *Lobb (in Herb. Lindl.)*.

Rhizome stout; pseudobulbs 1 in., ovoid. *Leaf* 4 in., rather longer than the scape and raceme, shortly petioled, linear-oblong, obtuse, coriaceous. *Flowers* $\frac{1}{2}$ in. long; auricles of lip obscurely toothed.—The small flowers, minute petals ("tepals," *Reichb. f.*), and peculiar spurs of the column distinguish this.

** Lip without basal auricles.

† Sepals pubescent.

41. **B. lemniscatum**, *Parish mss.*; *Bot. Mag.* t. 5961; scape erect slender or thickened upwards, spike short pendulous, flowers minute globose villous, sepals orbicular-ovate connate below, midrib of each below the apex with a long slender pendulous appendage, petals linear-oblong obtuse 1-nerved, lip sessile short obtuse purple, columnar spurs stout incurved. *Fl. des Serres*, t. 2476. *B. lemniscatum* & *var. tumida*, *Reichb. f. in Trans. Linn. Soc.* xxx. 151.

TENASSERIM; at Zwabakir in Moulmein, *Parish*.

Pseudobulbs $\frac{3}{4}$ in. diam., crowded, globose, strongly tubercled. *Leaves* 3 on the shoots, lanceolate (not seen on pseudobulbs). *Scape* 4-6 in., slender below, sometimes tumid above the middle; spike $\frac{3}{4}$ in., dense-fl. ; bracts ovate, acuminate; flower green and purple, $\frac{1}{6}$ in. long; appendages three times as long, 10-angled by as many crenate lamellæ, banded white and red; lip purple.—A very curious plant. I suppress *var. tumida*, *Par.* & *Reichb.*, the characters of which apply to the type, well figured in *Bot. Mag.* l. c.

42. **B. gracile**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 152; scape and elongate suberect raceme filiform, flowers minute subglobose glandular and villous, dorsal sepals oblong shorter than the orbicular-ovate obtuse 3-nerved lateral, petals linear obtuse 1-nerved, lip subsessile oblong-lanceolate obtuse, columnar spurs slender incurved. *Reichb. f. in Gard. Chron.* 1874, ii. 162.

TENASSERIM; on Moolee-it, alt. 3000 ft., *Parish*.

Pseudobulbs $\frac{3}{4}$ in. diam., subglobose, tubercled (when dry), young 2-leaved? *Scape* with lax-fl. raceme 6 in.; bracts setaceous, longer than the very short pedicels; flowers $\frac{1}{2}$ in., green mottled with brown.

43. **B. hirtum**, *Lindl. in Wall. Cat.* 1989; *Gen. & Sp. Orchid.* 51; *Bot. Reg.* xxxiii. (184) under t. 66; scape tall stout, spike long many-fl. drooping, flowers sessile tomentose, dorsal sepal lanceolate 3-nerved rather shorter and narrower than the broad-based falcately-lanceolate 3-nerved lateral, petals small oblong obtuse ciliate, lip subsessile clawed linear-oblong truncate hispid below the middle, columnar spurs short. *B. suave*, *Griff. Notul.* iii. 292. *Stelis hirta*, *Smith in Rees Cyclop.* xxxiv. *Tribrachia hirta*, *Lindl. Collect.* 41.

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 3-6000 ft., *J. D. H.*, &c. KHASIA MTS., *Griffith*, &c. TENASSERIM, *Parish*.

Pseudobulbs 1-1 $\frac{1}{2}$ in., ovoid-oblong, terete, 2-leaved. *Leaves* 1-2, 4-8 in., oblong to lanceolate, obtuse, rather thin. *Scape* with spike 8-12 in.; flowers $\frac{1}{4}$ - $\frac{1}{2}$ in. long, yellow or greenish white, scented of *Anthozanthum*; bracts ovate, acute, exceeding the ovary; pollinia globose, one pair minute.

44. **B. comosum**, *Collett & Hemsl. in Journ. Linn. Soc. ined.*; scape robust 2-3-sheathed, raceme inclined cylindric truncate, flowers most densely crowded $\frac{2}{3}$ in. long horizontally spreading, sepals subequal hyaline subulate-lanceolate villous with flaccid hairs, petals small linear obtuse 1-nerved, lip shortly stipitate lanceolate recurved, columnar teeth short.

EASTERN BURMA; Shan Hills, alt. 6000 ft., *Collett*.

Pseudobulbs and *leaves* unknown. *Scape* 10 in., curved, as thick as a crow-quill, kneeled at the top so that the racemes form an angle of 45° with it. *Racemes* 2 $\frac{1}{2}$ by 1 $\frac{1}{2}$ in. diam., like a bottle brush, the flowers being perfectly horizontal and densely villous with unicellular hairs; bracts subulate, as long as the very short pedicel and ovary;

sepals membranous, nerves 1-3 very slender.—A very remarkable species, resembling no other, but allied to *hirtum* and *auricomum*.

45. **B. Lindleyanum**, *Griff. Notul.* iii. 287; scape tall, raceme many-fl. drooping and pedicelled flowers tomentose, sepals subequal ovate acuminate 5-nerved, lateral with an outer basal angle, petals small oblong crinate, lip shortly stipitate lanceolate villous, columnar arms slender.

TENASSERIM; shores of Mergui, *Griffith, Parish.*

Pseudobulbs 1 in. diam., depressed ovoid. *Leaf* 3-6 in., oblong-lanceolate, acute. *Scape* 4-8 in.; bracts ovate, aristately acuminate, longer than the pedicel and ovary; flowers $\frac{1}{2}$ in. diam., when closed as if spurred by the mentum; pedicels $\frac{1}{2}$ in.; sepals greenish with purple stripes and margins.

46. **B. parviflorum**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 152; scape slender, raceme elongate, bracts minute, flowers small very shortly pedicelled, sepals subequal ciliate, dorsal lanceolate 1-nerved narrower than the ovate acute sub-3-nerved lateral, petals half as long oblong obtuse ciliate, lip shortly stipitate oblong obtuse laxly hairy, columnar spurs short.

TENASSERIM; on trees in the mountains, *Parish.*

Pseudobulbs depressed globose; rhizome stout. *Leaf* 4-5 in., petioled, ligulate, obliquely 2-fl. *Scape* longer, with the raceme 6 in.; flowers $\frac{1}{10}$ in. diam., yellow?; mentum rounded.—Reichenbach describes the dorsal spur of the column as plumose. I do not find it so.

47. **B. lasianthum**, *Lindl. in Gard. Chron.* 1855, 53; scape stout many-sheathed, raceme drooping, flowers large, sepals hispid, dorsal shortest linear-oblong, lateral with an ovate concave base, petals one-third shorter lanceolate acuminate glabrous, lip broadly stipitate glabrous. *De Vriese Ill. Orchid. Ned. Ind. cum Ic.*; *Miquel Fl. Ind. Bat.* iii. 649. *Anisopetalum lasianthum*, *Kuhl mss.*

PERAK (*Scortechini*). PENANG (*Ic. in Herb. Kew*).—DISTRIB. Sumatra.

Rootstock very stout; *pseudobulbs* 2-3 in. *Leaf* large, 5-7 by 2-3 in., elliptic or linear-oblong, acute, many-nerved. *Scape* 6-10 in.; bracts $\frac{1}{2}$ in., ovate-lanceolate; flowers dark purple; sepals 1 in. long, tips slender, nerves 5 strong.—Perhaps the largest species of the genus. The flowers are described as fleshy and copiously covered with fleshy hair-pointed bristles. Lindley's *Manilla* habitat is probably an error.

48. **B. limbatum**, *Lindl. in Bot. Reg.* 1840, *Misc.* 74; rhizome very stout, *pseudobulb* depressed subglobose, scape stout many-fl., flowers small, sepals subequal ovate obtuse, sides strongly ciliate, petals spatulate villous, lip as long as the sepals sessile ovate obtuse concave, disk smooth, margins scabrid.

SINGAPORE (*Hort. Loddiges*).

Rhizome thicker than a duck's quill. *Leaf* not seen. *Scape* with spike 4 in.; bracts minute; flowers dingy purple; sepals $\frac{1}{4}$ in. long; lip dull-green purple at the base.—I have seen only a very poor specimen in *Herb. Lindl.*

49. **B. tremulum**, *Wight Ic.* t. 1749; leaf ovate-lanceolate acute, scape slender erect lax-fl., flowers large, sepals subequal linear-lanceolate, sides villously ciliate 3-nerved, petals very small fringed, lip linear-oblong straight fringed with long hairs, columnar teeth short.

NILGHIRI HILLS, *Wight*, in the Wynnad, *Jerdon.*

Pseudobulbs subglobose. *Leaf* $1\frac{1}{2}$ -2 in., sessile, base rounded. *Scape* with

raceme 6-8 in.; bracts very small; pedicels short; sepals $\frac{3}{4}$ in. long, white with broad red-purple nerves and lips; petals acuminate; anther pubescent.—Described from Wight's figure and a coloured drawing by Jerdon.

†† Sepals glabrous or faintly ciliate. Petals ciliate or serrulate. (See *B. Blepharistes* in *Cirrhopetalum*.)

50. **B. Penicillium**, *Par. & Reichb. f. in Trans. Linn. Soc. xxx.* 151; scape long stout, raceme lax-fl., bracts lanceolate, sepals narrow subequal 5-nerved long-acuminate, dorsal ovate-lanceolate, lateral lanceolate from a broad gibbous base, petals small oblong obtuse fleshy crinite, lip sessile on the broad short foot of the column lanceolate crinitely hirsute with purple hairs, columnar spurs long slender.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 1 in., stout, ovoid; rhizome stout. *Leaf* 6 in., linear, notched; petiole $1\frac{1}{2}$ in. *Scape* 12 in., lower empty bracts $\frac{1}{2}$ in., floral shorter; pedicels $\frac{1}{2}$ in.; flower $\frac{1}{2}$ in. long; mentum rounded; sepals yellow striped with purple, dorsal obscurely ciliate.

51. **B. eublepharum**, *Reichb. f. in Walp. Ann.* vi. 252; scape tall stout, raceme long lax-fl., bracts ovate-lanceolate aristate, sepals ovate-lanceolate acuminate, dorsal concave, lateral broader and longer, petals oblong obtuse erose fimbriate, lip stipitate oblong-lanceolate, columnar spurs very long.

SIKKIM HIMALAYA, alt. 7-10,000 ft., *Griffith's Collectors*, &c.

Pseudobulbs $1\frac{1}{2}$ -3 in., cylindric. *Leaf* 3-8 in., shortly petioled, linear-oblong, acute. *Scape* 10-18 in.; sheaths 3-4; raceme 4-6 in.; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in. long, white, flushed or speckled with pink; mentum rounded; lip purple, base cordate.

52. **B. gymnopus**, *Hook. f. Ic. Plant. ined.*; scape rigid flexuous, raceme elongate, bracts minute, pedicels slender, sepals lanceolate acuminate 3-nerved, lateral falcate inserted at the apex of the naked foot of the column, petals linear serrulate, lip subsessile laterally compressed, columnar teeth short. *Bulbophyll.*, *Griff. Notul.* 294; *Ic. Pl. Asiat.* t. 297; *Itin. Notes* 104, No. 65.

RHOTAN HIMALAYA, alt. 2200 ft., *Griffith (Kew Distrib.* 5133). KHASIA HILLS, *Griffith (K. D.* 5134); at Joowye, alt. 3500 ft., *Clarke*.

Rhizome very stout, sheathed, with stout runners from the base of the narrow pseudobulbs. *Leaf* 4-7 in., petioled, very thick, linear, 2-fid. *Scape* flowering to near the base; basal sheaths imbricate; bracts ovate; pedicels $\frac{1}{2}$ in.; flower pale greenish white; mentum rounded; lip obtuse, yellow.—Insertion of lateral sepals as in 62. *B. Wrayi*.

53. **B. Thomsoni**, *Hook. f. Ic. Plant. ined.*; scape flexuous, raceme elongate, flowers minute subsessile, bracts minute, sepals lanceolate acuminate 3 nerved, lateral broadest, petals oblong obtuse ciliate 1-nerved, lip stipitate much compressed obtuse loosely villous, columnar teeth short.

SIKKIM HIMALAYA, *Thomson*.

Habit and foliage of *B. gymnopus*, but pseudobulbs short and strongly curved, leaf thinner, scape not floriferous to near the base, flowers subsessile, lip hairy and above all lateral sepals in normal position. Flowers pale green, lip yellow.

54. **B. securdum**, *Hook. f. Ic. Plant. ined.*; scape very slender

much longer than the leaves, raceme secund, bracts minute, flowers small shortly pedicelled, sepals obtuse, dorsal ovate 1-nerved, lateral broadly obliquely ovate obtuse 3-nerved, mentum rounded, petals oblong obtuse ciliate, lip stipitate ovate-cordate ciliate, columnar teeth minute.

UPPER ASSAM; Naga Hills, on Kohima, *Prain*.

Pseudobulbs $\frac{1}{2}$ in. diam., subglobose. *Leaf* $1\frac{1}{2}$ – $2\frac{1}{2}$ in. petioled, linear, obtuse, nerves strong. *Scape* with raceme 5–6 in.; pedicels $\frac{1}{10}$ in.; sepals $\frac{1}{10}$ in. long, obscurely ciliate.

55. **B. auricomum**, *Lindl. in Wall. Cat.* 1935; *Gen. & Sp. Orchid.* 50; scape slender ascending, raceme long many-fl. puberulous cernuous, bracts small lanceolate, sepals elongate-lanceolate membranous 3-nerved, dorsal shorter, mentum obscure, petals ovate-oblong 1-nerved ciliate, lip shortly stipitate lanceolate, columnar teeth short. *B. fœnisecii*, *Par. ex Reichb. f. in Bot. Zeit.* 1865, 99. *Dendrobium tripetaloides*, *Roxb. Fl. Ind.* iii. 479.

RANGOON, *Carey*. TENASSERIM; Tavoy, *Wallich*; Moulmein, *Parish*.

Pseudobulbs $\frac{3}{4}$ –1 in., subcylindric, terete, or obpyriform. *Leaf* not seen. *Raceme* 3–5 in.; bracts $\frac{1}{10}$ in.; pedicels very short; flowers yellow, sweet-scented (of *Anthoxanthum*); sepals $\frac{1}{2}$ in. long.

††† Sepals and petals glabrous, eciliate.

§ *Pseudobulbs* 0, or very small.

56. **B. cylindraceum**, *Lindl. Gen. & Sp. Orchid.* 53; scape tall with usually a large upper sheath, spike erect cylindric, flowers imbricate, bracts small, dorsal sepal triangular much smaller than the oblong obtuse lateral, petals small oblong 1-nerved, lip ovate, columnar spurs short erect. *Wall. Pl. As. Rar.* i. t. 69.

NEPAL, *Wallich*. SIKKIM HIMALAYA, alt. 6–7000 ft., *Clarke*. KHASIA MTS., alt. 4–6000 ft., common.

Rhizome very stout. *Leaf* 4–10 in., obtuse; petiole 1–4 in. *Scape* 6–10 in.; sheaths 1–2; bracts ovate, acute; flowers $\frac{1}{2}$ in. long, dorsally flattened, white, pink or deep purple; dorsal sepal with sometimes a spiral tip; lip green or purple; ovary very short.—There are two forms found in both Sikkim and the Khasia Hills.

B. CYLINDRACEUM PROPER; upper sheath of scape embracing the base of the spike. *B. imbricatum*, *Griff. Notul.* iii. 289.—*Wallich's* figure is probably grossly exaggerated (made in Nepal, there are no specimens in his herbarium), with yellow flowers, leaves 10–12 by $1\frac{1}{2}$ –2 in., scape 18 in., and spike 6–8 in.

VAR. *khasiana*; upper sheath smaller distant from the spike. *B. khasianum*, *Griff. Notul.* iii. 284; *Reichb. f. in Gard. Chron.* 1878, ii. 716.

57. **B. repens**, *Griff. Notul.* iii. 293; *Ic. Pl. Asiat.* t. 294; scape slender much shorter than the leaf, flowers in a dense globose head, bracts short, sepals 3-nerved, dorsal triangular much shorter than the broadly oblong obtuse lateral, petals minute cuneately obovate 1-nerved, lip sessile oblong convex obtuse, columnar spurs simple or branched. *B. khasyanum*, *Reichb. f. in Trans. Linn. Soc.* xxx. 133 (not of *Griff.*).

KHASIA HILLS; at Myrunga, alt. 5000 ft., *Griffith*. TENASSERIM, *Parish*, *Gallatly (Ic. Herb. Calcutt.)*.

Rhizome very stout, densely fibrous. *Leaves* 2–6 by $\frac{3}{4}$ –1 in., very thick; petiole 1–3 in. *Head of flowers* $\frac{1}{2}$ in. diam.; flowers purple, $\frac{1}{4}$ in. long and broad, much flattened dorsally.—*Griffith's* drawing is a very bad one, and the specimen in *Herb. Lindley* is flowerless; the scape is much longer in the Tenasserim plants.

58. **B. conchiferum**, *Reichb. f. in Walp. Ann.* vi. 253; scape tall, spike long erect lax-fl'd., bracts ovate acuminate, dorsal sepal broadly ovate obtuse shorter than the oblong obtuse concave 3-5-nerved lateral that are connate beyond the foot of the column, petals oblong apiculate 1-nerved, lip stipitate compressed, columnar teeth very short. *B. rufinum*, *Reichb. f. Xen. Orchid.* ii. 45, t. 219.

SIKKIM HIMALAYA, alt. 3-4000 ft., *Griffith's Collectors (Kew Distrib.* 5291), *Clarke, &c.*

Leaf 6-10 in., oblanceolate, obtuse or acute; petiole 3-4 in. *Scape* 2-3-sheathed; spike 3-5 in., rachis stout; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in.; flowers distant, erect, $\frac{1}{4}$ in. long, green and yellow with purple veins; tips of lateral sepals rounded; ovary and column very short.

59. **B. xylophyllum**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 151; scape distant from the leaf slender erect, flowers capitate fleshy dorsally flattened, bracts very small, dorsal sepal with a minute spur at the base on each side ovate obtuse 3-nerved, lateral broadly falcately oblong, petals small oblong, lip oblong obtuse, columnar spurs falcate toothed dorsally.

TENASSERIM; at Moulmein, *Parish.*

Leaf $1\frac{1}{2}$ -2 by $\frac{3}{4}$ -1 in., broadly elliptic or orbicular, very thick, smooth. *Scape* 2 in., sheaths minute, head of fl. $\frac{1}{2}$ in. diam.; flowers suborbicular, $\frac{1}{10}$ in. broad, greenish, lip tumid, tip rounded.—The minute spurs at the base of the dorsal sepal answer to the much longer ones in *B. bisetum*.

60. **B. alcorne**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 151; scape slender, top decurved, spike drooping short dense-fl'd., bracts minute, flowers fleshy compressed, sepals subequal oblong obtuse 3-nerved, petals ovate-oblong 1-nerved, arms of column 3-branched.

TENASSERIM, *Parish.* BURMA, *Berkeley.*

Rhizome with annular pits at the leaf insertions. *Leaf* 2-3 in., sessile, oblanceolate or subspathulate, obtuse, very thick. *Scape* 4-5 in.; sheaths small; spike 1-1 $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. long; ovary and column very short.

61. **B. apodum**, *Hook. f. Ic. Plant. ined.*; scape much shorter than the leaf, basal sheaths large, spike lax-fl'd., bracts small, sepals subequal lanceolate acuminate 1-3-nerved, lateral falcate, petals linear-lanceolate 1-nerved, lip sessile oblong, columnar teeth minute.

MALACCA, *Maingay (Kew Distrib.* 1619). PERAK; top of Batu Kurau, *Scortechini.*

Leaf 5-8 in., linear-oblong or oblanceolate, obtuse, coriaceous; petiole 1-3 in. *Scape* 3-4 in., rigid, stout below, flowering nearly to the base; basal sheaths rigid; flowers $\frac{1}{2}$ in. diam., greenish yellow; mentum rounded.—Near *B. gymnopus*, but without pseudobulbs, and with the lateral sepals inserted all along the foot of the column.

62. **B. Wrayi**, *Hook. f. Ic. Plant. ined.*; scape tall stout erect, raceme stout lax-fl'd., bracts ovate-lanceolate, sepals 3-nerved lanceolate arched, lateral falcate inserted at the apex of the naked foot of the column, petals broadly oblong 3-nerved, lip stoutly stipitate, columnar spurs erect.

PERAK; on Gonong Brumbar Pahang, alt. 8000 ft., *Wray.*

Rhizome stout, very woody. *Leaf* 4-6 in., thick, linear-oblong, narrowed into a petiole 4 in. long. *Scape* longer than the leaf; sheaths 1-2, appressed; raceme 3 in., rachis stout; pedicel $\frac{1}{2}$ in.; flowers pale green, spotted red; sepals

$\frac{1}{2}$ in. long, subacute; lip subterete, obtuse, with large rounded basal auricles; column large.—Insertion of lateral sepals as in 52. *B. gymnopus*.

63. **B. leptosepalum**, Hook. f. *Ic. Plant. ined.*; scape capillary, raceme lax-fl'd, bracts lanceolate exceeding the ovary, sepals subequal lanceolate caudate-acuminate, lateral from a broad gibbous base, petals small linear-lanceolate, lip stipitate membranous 3-nerved, columnar spurs slender.

PENANG; on Gov't Hill, Curtis. PERAK, *Scortechini*. MALACCA, Maingay (*Kew Distrib.* 1674).

Rhizome short, tufted. *Leaves* 4–6 in., crowded, petioled, linear-lanceolate, subacute, margins recurved. *Scape* shorter than the leaves; raceme flexuous; flowers $\frac{1}{2}$ in. long, white, cellular; pedicel very short; mentum rounded; lip with rounded basal auricles.

64. **B. hymenanthum**, Hook. f. *Ic. Plant. ined.*; rhizome very slender, pseudobulbs 0, leaves small elliptic or suborbicular, scape capillary 2-fl'd., sepals subequal acuminate from a broadly ovate base 3-nerved, petals linear 1-nerved, lip stipitate oblong obtuse, column with obtuse arms.

KHASIA HILLS; at Myrung, alt. 5000 ft., J. D. H. & T. T.

Rhizome tortuous, as thick as packthread. *Leaf* $\frac{1}{2}$ – $\frac{1}{2}$ in., subpetioled, coriaceous, nerveless, tip rounded. *Scape* 1 in.; flowers $\frac{1}{2}$ in. diam. when spread out, close together, but one superposed; bracts minute, sepals and petals hyaline, colourless.—A remarkable little species.

§§ *Pseudobulbs* ovoid or globose.

65. **B. bisetum**, Lindl. in *Ann. Nat. Hist.* x. 186; scape very slender, raceme short erect dense-fl'd., bracts lanceolate recurved, sepals subequal broadly ovate obtuse dorsally winged, dorsal with a fleshy spur at the base on each side, petals narrowly spatulate 1-nerved, lip stipitate narrow acute pubescent, columnar spurs long. *B. cirrhopetaloides*, Griff. *Notul.* iii. 290. Bulb. sp., *Ic. Pl. Asiat.* t. 296, f. 1. *B. cariniflorum*, Reichb. f. in *Walp. Ann.* vi. 253.

KHASIA HILLS, alt. 4–5000 ft., Griffith (*Kew Distrib.* 5140), H. f. & T. (*Bulboph.* 23), &c.

Rhizome slender; pseudobulbs $\frac{1}{2}$ –1 in., ovoid, narrow or broad. *Leaf* 3–4 in., shortly petioled, lanceolate, obtuse. *Scape* 2–3 in. (pendulous, *Ic. Griff.*); sheaths slender; raceme $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. long, shortly pedicelled, dark purple.—The fleshy appendages at the base of the dorsal sepal are very singular, and homologous with the spurs of *B. xylophyllum*.

66. **B. Globulus**, Hook. f. *Ic. Plant. ined.*; pseudobulbs small globose, scape many-fl'd. longer than the linear-oblong coriaceous leaf, bracts minute, sepals subequal 3-nerved, dorsal linear-oblong, lateral lanceolate subacute, petals half as long ovate obtuse 1-nerved, lip very small shortly stipitate recurved acuminate, column subtruncate.

PERAK, *Scortechini*.

Pseudobulbs $\frac{1}{2}$ in. diam., crowded. *Leaf* $1\frac{1}{2}$ –2 in., obtuse. *Scape* arched; flowers $\frac{1}{2}$ in. diam., membranous.—The single specimen is indifferent, but shows the species to be quite unlike any other.

67. **B. polyrhizum**, Lindl. *Gen. & Sp. Orchid.* 53; pseudobulbs crowded globosely ovoid leafless when flowering, scape erect slender, dorsal sepal ovate-oblong obtuse rather smaller than the subfalcately oblong

obtuse lateral, petals ovate-oblong obtuse, lip sessile obtuse, columnar teeth short.

NEPAL ? , Wallich (*Ic. in Herb. Kew*). ? SIKKIM, Lister (*Ic. in Herb. Calcutt.*).

Rhizome very short, excessively branched; pseudobulbs size of a small hazel nut, rooting profusely. *Scape* with 6-8-fld. spike 3-5 in.; bracts minute; flowers green, $\frac{1}{4}$ in. long, suberect.—Of this remarkable plant there is a drawing of Wallich's artist, no doubt made in Nepal; its pseudobulbs are smooth and flowers green. A drawing of a very similar plant from Sikkim has pseudobulbs marked with superposed zones of oblong tubercles; the flowers are pale yellow flushed with pink on the dorsal sepal. Both are represented as leafless.

68. **B. suavissimum**, Rolfe in *Gard. Chron.* 1889, i. 297; scape very slender, raceme elongate decurved, flowers secund, sepals subequal narrowly linear-oblong obtuse 3-nerved, petals not half as long ovate or ovate-lanceolate obtuse 1-nerved obscurely erose, lip sessile small linear-oblong obtuse recurved, columnar teeth broad acute.

UPPER BURMA, Cooper (*Hort. C. Bill.*).

Pseudobulbs 1 in., ovoid-oblong, sheathed. *Leaf* 4 in., narrowly oblanceolate, obtuse, rather thin. *Scape* with raceme 8-10 in.; sheaths 2, membranous, appressed; bracts very small; flowers $\frac{1}{2}$ in. long, pendulous, shortly pedicelled, very sweet-scented; sepals and petals primrose; lip golden.—Very like *B. auricomum*, and as deliciously scented, but perfectly glabrous.

69. **B. purpureum**, Thw. *Enum.* 298; small, scape short, flowers minute in a dense short spike, bracts very minute, sepals subequal oblong obtuse falcate strongly 3-nerved, petals linear-oblong obtuse, lip stipitate spongy, columnar arms curved obtuse.

CEYLON; in the Ambagamowa district, Thwaites.

Rhizome slender; pseudobulbs fusiform, densely crowded. *Leaf* $\frac{1}{2}$ -1 $\frac{1}{2}$ in., obovate or spatulate, retuse, coriaceous. *Scape* sheathed; spike $\frac{1}{2}$ - $\frac{3}{4}$ in. long; pedicel deflexed; ovary erect; flower $\frac{1}{10}$ in. long.—Of three drawings kindly lent by Dr. Trimen, the sepals are in one rose-pink with deep-red nerves, in another lilac with purple nerves, in a third dull purple.

70. **B. triste**, Reichb. f. in *Walp. Ann.* vi. 253; scape slender, top decurved, spike pendulous densely many-fld., bracts minute acute, flowers small, dorsal sepal shortest triangular-ovate obtuse 3-nerved, lateral falcately oblong obtuse concave, petals ovate-oblong acute 1-nerved, lip stipitate broad convex obtuse, columnar spurs slender.

TENASSERIM; on the Toungoo Mts., Lobb, Parish, Berkeley.

Rhizome as thick as a duck's quill; pseudobulbs conico-globose, $\frac{1}{4}$ in. diam. *Leaf* not seen. *Scape* 4-5 in.; sheaths narrow; spike 1-2 in.; rachis slender; flowers $\frac{1}{2}$ in. long, purple?; ovary very short.—“Odour strong, pungently fœtid,” Berkeley.

71. **B. micranthum**, Hook. f. *Ic. Plant. ined.*; scape slender, spike decurved or pendulous densely many-fld., bracts minute acute, flowers very small, dorsal sepal shortest triangular-ovate acute 3-nerved, lateral falcately ovate acute concave 3-nerved, petals ovate acute 1-nerved, lip large stipitate, columnar spurs slender.

TENASSERIM; on Teongoo and Ta-ok, Parish.

Pseudobulbs and habit of *B. triste*, to which Parish and Reichb. f. have referred it, but the flowers are spreading, not half the size, and the sepals are acute.

72. **B. reptans**, Lindl. in *Wall. Cat.* 1988; *Gen. & Sp. Orchid.* 51; pseudobulbs obpyriform, scape shorter than the linear-obtuse leaf

sheathed, spike lax-fl., bracts oblong-lanceolate as long or half as long as the sessile flowers, sepals subequal narrowly lanceolate acute 3-nerved, lateral with a broad gibbous base, mentum rounded, petals broadly oblong obtuse 1-3-nerved, lip stipitate recurved, spurs of very minute column slender. *B. Clarkei*, *Reichb. f. in Journ. Linn. Soc.* xxv. 72. *Tribrachia reptans*, *Lindl. Coll. Bot.* t. 41 A.

TEMPERATE HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 6-7000 ft., *Griffith's Collectors* (*Kew Distrib.* 5129). KHASIA and NAGA HILLS, alt. 5-6000 ft., *Griffith* (*K. D.* 1573).

Pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in., distant; rhizome slender. *Leaf* 4-6 in., narrowed into a petiole. *Scape* and lax-fl. raceme together 2-4 in.; bracts $\frac{1}{3}$ - $\frac{1}{2}$ in.; sepals yellow green with pink nerves; lip yellow.

VAR. *subracemosa*; bracts much shorter oblong obtuse, flowers often shortly pedicelled. *B. grandiflorum*, *Griff. It. Notes* 146, n. 705; *Notul.* iii. 293; *Ic. Pl. Asiat.* t. 294, f. 1.—Sikkim, Bhotan and the Khasia Mts., *Griffith* (*Kew Distrib.* 5130), &c.—Griffith's name *grandiflorum* must be a blunder of the Editor of his works; it does not occur in Griffith's mss.

Sect. IV. IONE. *Lateral sepals* usually connate and placed under the lip. *Lip* rather large, straight, rigid. *Pollinia* 4, attached in pairs to two cartilaginous glands.

* *Flowers* $\frac{3}{4}$ -1 in. long. *Lateral sepals* 5-7-nerved.

73. **B. paleaceum**, *Benth. in Gen. Pl.* iii. 503; scape tall much longer than the leaf, bracts spathaceous much exceeding the ovary, flowers large racemose, sepals many-nerved, lateral wholly connate, petals broadly oblong 1-3-nerved, lip ovate-lanceolate. Ione paleacea, *Lindl. Fol. Orchid.* 2; *Bot. Mag.* t. 6344 (*excl. syn. Griff.*); *Walp. Ann.* vi. 636.

SIKKIM HIMALAYA; at Dorjeeling, *Griffith's Collectors* (*Kew Distrib.* 5176). DAMSONG, in Western Bhotan, alt. 5-6000 ft., *Clarke, Gamble*.

Pseudobulbs 1-1 $\frac{1}{2}$ in., obpyriform. *Leaf* 4-6 in., petioled, linear-oblong. *Scape* with the 4-6-fl. erect raceme 8-14 in.; bracts $\frac{3}{4}$ -1 in., oblong-lanceolate, acuminate; flowers $\frac{3}{4}$ -1 in. long, drooping; sepals greenish, nerves pink; petals spreading, subserrate; lip purple, entire or crenate, tip thickened or slender.

74. **B. mishmeense**, *Hook. f.*; scape tall much longer than the leaf, bracts ovate imbricate equalling the ovary, flowers large racemose, lateral sepals free, petals acute, lip ovate-cordate, tip elongate stout terete. Ione fusco-purpurea, *Lindl. Fol. Orchid. Ione* 2; *Walp. Ann.* vi. 636. *Dipodium*, *Griff. Notul.* iii. 405; *Ic. Pl. Asiat.* t. 327, *left-hand figure*.

UPPER ASSAM; Mishmee Mts., on Thumathya, *Griffith*.

Habit and stature of *B. paleaceum*, but bracts and sepals much broader and shorter; lateral sepals free, light brown, purple-veined; lip greenish brown, margin purplish.—I have seen only a mutilated specimen in Herb. Lindl.

75. **B. cirrhatum**, *Hook. f. Ic. Plant. ined.*; scape equalling the leaf, bracts cucullate exceeding the ovary, flowers large racemose, lateral sepals connate, petals rounded quite entire, lip ovate-oblong entire with two elevated lines which are clavate at the base. Ione cirrhata, *Lindl. Fol. Orchid.* 1; *Walp. Ann.* vi. 635.

SIKKIM HIMALAYA, alt. 4000 ft. (*Ic. Cathcart*).

"Very similar to *B. virens*, but leaves longer; lip not serrate, but with 2 elevated white lines. *Flowers* dirty white, with purple streaks and a deep violet lip.—Described from Cathcart's figure." *Lindl. l. c.*

76. **B. virens**, *Hook. f.*; scape longer than the leaves, bracts ovate acuminate longer than the ovary, flowers large racemose, lateral sepals connate, petals quite entire, lip oblong serrulate narrowed into a long stout terete striate point. *Ione virens*, *Lindl. Fol. Orchid.* 1; *Walp. Rep.* vi. 636. *Dipodium*, *Griff. Notul.* 405; *Ic. Pl. Asiat.* t. 328, f. 1.

UPPER ASSAM; Mishmee Hills, *Griffith*.

Closely allied to *B. paleaceum*. "Bracts whitish with purple veins; lateral sepals white, margins greenish, veins purple; petals purple and blood-red." *Griffith*.

77. **B. elegans**, *Gard. mss. in Thwaites Enum.* 298; scape very slender longer than the leaf 1-fl., flower large, dorsal sepal ovate acute half the length of the free or coherent oblong lanceolate acuminate lateral, petals ovate-lanceolate, lip with an orbicular membranous waved base traversed by a broad hard axis that terminates in a dagger-shaped apex, columnar spurs long slender.

Ceylon; in the Hantani, &c., districts, alt. 3-5000 ft., *Gardner, Thwaites*.

Pseudobulbs $\frac{1}{2}$ - $\frac{1}{2}$ in., ovoid, close-set on a slender rhizome. *Leaf* 3-4 in., linear-lanceolate. *Scape* 1-2 in.; sheath 0; bract small, acute; pedicel with ovary slender, $\frac{3}{4}$ -1 in.; flower 1- $\frac{1}{2}$ in. long, purplish green spotted, lateral sepals forming a boat-shaped body; lip yellow purple spotted.

** *Flowers* $\frac{1}{2}$ - $\frac{1}{2}$ in. long. *Lateral sepals* 3-nerved.

78. **B. bicolor**, *Hook. f.*; scape slender shorter than the leaf, bracts lanceolate longer than the ovary, flowers small, sepals subequal linear-lanceolate acuminate, lateral connate at the bases, petals ovate or oblong obscurely serrate, lip panduriform traversed by a rigid axis that terminates in a short or long rigid emarginate point, sides membranous lacerate. *Ione bicolor*, *Lindl. Fol. Orchid.* 3; *Walp. Ann.* vi. 637. *Sunipia bicolor*, *Lindl. Gen. & Sp. Orchid.* 179; *Sert. Orchid. Frontisp.* f. 5. *I. khasiana*, *Lindl. Fol. Orchid.* 2; *Reichb. f. l. c.* 636. *Dipodium khasianum*, *Griff. Notul.* 354; *Ic. Pl. Asiat.* t. 327, f. 2.

TEMPERATE HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 5-6000 ft., and Bhotan, *Griffith (Kew Distrib.* 5137), &c. KHASIA MTS., alt. 5000 ft., *Griffith (K. D.* 5133), &c.

Pseudobulbs $\frac{3}{4}$ -1 in., obpyriform, distant on a slender rhizome. *Leaf* 3-5 in., subpetioled, linear, obtuse. *Scape* with spike $1\frac{1}{2}$ -2 in.; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in.; flower very membranous, $\frac{1}{2}$ - $\frac{3}{4}$ in. long; sepals whitish with pink veins; lip purple.—Very like *B. reptans*, under which name it is alluded to by Bentham under *Ione (Gen. Pl.* iii. 503).

79. **B. candidum**, *Hook. f. Ic. Plant. ined.*; habit inflorescence and flower of *B. bicolor*, but rather smaller, sepals white, lip yellow dagger-shaped with membranous serrulate sides in the basal half. *Ione candida*, *Lindl. Fol. Orchid.* 3; *Reichb. f. in Walp. Rep.* vi. 637.

KHASIA HILLS, alt. 4-5000 ft., *J. D. H. & T. T. NAGA HILLS, Prain*.

SPECIES EXCLUDED AND UNKNOWN TO ME.

B. ADENOPETALUM, *Lindl. in Bot. Reg.* 1842, *Misc.* 85, which was supposed to be a native of Singapore, is a Philippine Island species.

B. ALOPECURUM, *Reichb. f. in Gard. Chron.* 1880, ii. 70; like *B. triste* but larger, pseudobulb spherical, flowers shorter, sepals connate conchoid equal, petals and conchoid connate equal sepals nerveless.—Burma (*Hort. Low*).

B. CRASSIFOLIUM, *Thw. mss. in Trimen Journ. Bot.* 1885, 244; pseudobulbs pisiform smooth, leaf $\frac{1}{2}$ - $\frac{3}{4}$ in. sessile fleshy-oval obtuse, flowers solitary very small shortly peduncled in the sheath of a short truncate bract, sepals subequal broadly

ovate, dorsal arched erect, lateral spreading yellow-green densely dotted with red, petals minute broad truncate, lip very small truncate obtuse white.—Ceylon; Kukul Korle in the Western Province, *Thwaites*, C.P. 3879.

B. INERS, *Reichb. f. in Gard. Chron.* 1880, i. 776; pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. brown pyriform, leaf 3 by $\frac{3}{4}$ in. cuneate-ligulate subacute thick purple beneath, scape slender, top nodding, bracts equalling the ovary, flowers subumbellate white, bracts linear acute, sepals 3-nerved, dorsal triangular shorter than the ligulate attenuate acute lateral, petals triangular 3-nerved, lip cordate-triangular, column 3-toothed.—Assam? (*Hort. Bull*).

B. OLIGOGLOSSUM, *Reichb. f. in Hamb. Gartenzeit.* xxi. 297; allied to *B. odoratissimum*, bracts scarious lanceolate 3–5-nerved longer than the pedicelled ovary, sepals oblong flat to the acuminate tips, petals 3 or 4 times shorter ovate subacute 1-nerved, lip much smaller than the petals cordate obtuse-angled 3-toothed apiculate, mid-tooth produced obtuse, column short angled on both sides.—Burma (*Hort. Low*).

B. PSYCHOON, *Reichb. f. in Gard. Chron.* 1878, ii. 170; pseudobulbs crowded ovoid furrowed, scape exserted many-bracteate at the top 1-fld. (normally umbelled), flowers pale green, dorsal sepal triangular acuminate deflexed, lateral lanceolate acuminate decurved, inner side inflexed, petals much smaller acute minutely denticulate, lip thick semisigmoid, base erect cordate, column with a tooth on each side.—Assam (*Hort. Bull*).—Allied to *B. radiatum*, L.; *odoratissimum*, L.; *oligoglossum*, R. f.

B. SCHMIDTIANUM, *Reichb. f. in Hamb. Gartenzeit.* xxi. 357; allied to *B. psittacoglossum*, raceme long-pedicelled 2-fld., flowers as large as *B. macranthum* golden spotted with brown, mentum oblique obtuse, sepals obtusely acute, dorsal oblong ligulate, lateral broader oblique, petals short ovate acuminate, lip long-clawed fleshy oblong acute, base rounded hastate with a few serratures on each side, column stout 3-toothed angled in the middle on both sides.—*Hort. Schiller, from Calcutta*.

B. SILLENIANUM, *Reichb. f. in Gard. Chron.* 1884, ii. 166; pseudobulb subglobose, leaves cuneate ligulate, peduncle longer than the leaf 1-fld., flowers nearly orange, dorsal sepal ligulate obtuse acute, lateral much broader oblong-triangular, petals ligulate falcate obtuse acute, lip long-clawed cordate 5-angled mauve above whitish beneath, tip inflexed acute, column very short broad, top obtusely angled, anther with a linear apical ridge.—Burma (*Hort. Schlim*).

9/1. **KENOSIS**, *Hook. f.*

Habit of *Bulbophyllum*, but flowers very long-pedicelled. *Sepals* adnate to the prolonged foot of the column, falcately oblong, acute. *Petals* oblong, adnate by one margin to the column throughout its length, the other decurrent on the foot of the column nearly to its apex. *Lip* articulate with the foot of the column, linear, villously fringed. *Column* membranous, elongate, forming with the longer petals a 2-winged membrane; anther marginal in the sinus between the wings, shortly stipitate, subhemispheric, 2-celled; pollinia 2, oblong, laterally flattened; clinandrium small, transverse.

H. longipes, *Hook. f. Ic. Plant. ined.*—*Bulbophyllum longipes*, *Reichb. f. in Walp. Ann.* vi. 255.

TENASSERIM; at Moulmein, alt. 4–5000 ft., *Lobb in Herb. Lindl.*

Rhizome as thick as a goose-quill, naked; pseudobulbs $\frac{1}{2}$ –1 in. long, broadly ovoid, smooth. *Leaf* 3–4 in., subsessile, elliptic-lanceolate, subacute, very coriaceous. *Scape* with raceme 9 in., very slender, 10–12-fld.; sheaths 2–3, appressed; bracts $\frac{1}{2}$ in., oblong; pedicel with ovary 1–1 $\frac{1}{2}$ in., filiform; sepals $\frac{1}{2}$ in. long, dorsal erect, subacute; lateral rather longer; foot of column $\frac{1}{2}$ in.—A curious plant; very inaccurately described by Reichenbach, who failed to perceive its remarkable structure.

10. **SUNIPIA**, Lindl.

A tufted epiphyte; rhizome creeping; pseudobulbs narrow, 1-leaved. *Leaf* coriaceous, many-nerved. *Flowers* small in a distichous spike, concealed by the imbricating bracts. *Sepals* very broad, subequal, spreading. *Petals* minute, rounded-ovate. *Lip* small, sessile on the base of the column, erect, broadly tongue-shaped; midlobe thick, oblong, concave, margins recurved. *Column* very short, broad; anther suberect, sessile, persistent, cells distant; pollinia 4, ovoid, free or cohering by a viscus.

S. scariosa, Lindl. in Wall. Cat. 7373; Gen. & Sp. Orchid. 179; Orchid. Seel. 25; Sert. Orchid. Frontisp. No. x.; Fol. Orchid. 1. Ornithidium bracteatum, Wall. mss.

SUBTROPICAL HIMALAYA; Nepal, Wallich; Sikkim, alt. 4-6000 ft., common. KHASIA Mts., alt. 3-4000 ft., Lobb, &c. TENASSERIM; at Moulmein, Parish.

Pseudobulbs 1-1½ in., ovoid. *Leaf* 4-6 by ¾-1 in., subsessile, subacute, or tip rounded. *Scape* 5-10 in., very slender; sheaths distant, tubular, truncate; spike curved, 2-6 in.; bracts ¼-½ in., very broadly ovate, acute, complicate, scariously coriaceous, nerved; flowers rosy, subsessile; ovary very short, obconic; sepals obscurely 3-nerved, and petals obtuse, very thick; disk of lip with an oblong callus.

11. **CIRRHOPETALUM**, Lindl.

Habit and characters of *Bulbophyllum*, but here distinguished by the more often and more regularly whorled flowers, and by the short dorsal sepal, rarely half the length of the almost invariably much longer lateral. *Lip* very small and stipitate in all the species.—Species 30 or more, chiefly Indian and Malayan.

The species of *Bulbophyllum* and *Cirrhopetalum* are in many cases so allied by cross affinities, that the two genera might well be regarded as one. My keeping them apart is due to the consideration of convenience, and the fact that all my attempts to commingle the species of both have resulted in a chaotic aggregate, with most unsatisfactory sectional characters; in fact, a far less natural result than the keeping them apart. The species of this genus are far the most difficult of the two, as regards analysis from dried specimens, on account of the delicacy of the perianth, and the fact that the length, form, colour, and consistence of the lateral sepals alter greatly during development. *C. viridiflorum* and *Blepharistes* have the longer dorsal sepal of *Bulbophyllum*.

A. Flowers solitary (occasionally solitary in imperfectly developed species of other groups).

1. **C. merguense**, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 154 (*Bulbophyllum*); lateral sepals 1½ in., linear-lanceolate acute 5-nerved very much longer than the ovate concave 5-nerved dorsal the tip of which is ciliate with rigid bristles, petals like the dorsal sepal 3-nerved, lip hispid, arms of column rounded.

PEGU; near Rangoon, Berkeley. TENASSERIM, Parish.

Pseudobulbs 1 in., narrow, 5-angled. *Leaf* 1½-2 in., narrowly oblong. *Scape* 2-3 in., filiform, sheaths 2; bracts linear; pedicels ¼ in., slender; flowers yellow and purple; lip purple.

2. **C. lasiochilum**, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 153 (*Bulbophyllum*); lateral sepals 1 in. spreading falcately lanceolate subacute 5-nerved twice as long as the lanceolate coriaceous ciliate dorsal, petals nearly as long as the dorsal sepal thick lanceolate scabrid ciliate obscurely 3-nerved, lip laterally strigose, columnar teeth short hooked.

TENASSERIM; at Mergui, *Griffith, Parish.*

Pseudobulbs 1 in., oblong. *Leaf* 1-2 in., very coriaceous, linear-oblong. *Scape* as long as the pedicel and ovary; bracts lanceolate. *Dorsal sepal* and *petals* dark purple; lateral sepals at the end of the naked foot of the column, connate beyond the stipes of the lip.

B. Flowers capitate.

3. **C. vaginatum**, *Lindl. in Wall. Cat.* 1979; *Gen. & Sp. Orchid.* 59; *Bot. Reg.* 1842, under t. 12, and 1843, under t. 49; scape laxly sheathed, flowers capitately racemose, bracts long lanceolate, sepals ending in capillary tails, dorsal ovate acuminate ciliate 5-nerved many times shorter than the lanceolate 5-nerved lateral, petals oblong, tip rounded ciliate faintly 3-nerved, lip oblong 2-ridged, columnar spurs long slender erect. *C. caudatum*, *Wight Ic.* t. 1658 (not of *Wallich*). *Bulbophyllum vaginatum*, *Reichb. f. in Walp. Ann.* vi. 261.

PENANG, *Curtis.* SINGAPORE, *Wallich, &c.* MALACCA, *Griffith.*—DISTRIB. Borneo.

Pseudobulb $\frac{1}{2}$ -1 in., conic, rhizome very stout. *Leaf* 2-4 in., oblong, emarginate, densely coriaceous. *Scape* 2-3 in.; bracts $\frac{1}{2}$ in., much longer than the slender pedicels; flowers 1 in. or more.—Closely allied to *Bulb. Medusæ*.

C. Flowers umbelled; umbels rarely reduced to 1-2 flowers.

* *Dorsal sepals and petals ciliate fimbriate or appendaged.*

4. **C. grandiflorum**, *Wight Ic.* t. 1656 (excl. left-hand anal.); sepals acuminate, lateral 2 in. linear 5-nerved twice as long as cymbiform ciliate 3-nerved dorsal, petals subulate-lanceolate 3-nerved ciliate, arms of large column erect 2-toothed. *Bulbophyllum Wightii*, *Reichb. f. in Walp. Ann.* vi. 262.

CEYLON; Central Province, alt. 3-6000 ft., *Walker.*

Pseudobulbs conic. *Leaf* 3-5 in., shortly petioled, linear-oblong, obtuse. *Scape* as long, stout; sheaths 2; bracts $\frac{1}{3}$ - $\frac{1}{2}$ in., lanceolate, thick; umbels few-fl.; pedicels $\frac{1}{2}$ in., stout; flowers purple.

5. **C. ornatissimum**, *Reichb. f. in Gard. Chron.* 1882, ii. 424; lateral sepals 2-4 in. linear-lanceolate with filiform tips 6-nerved much longer than the cymbiform acuminate 5-nerved dorsal, petals subulate-lanceolate falcate 3-nerved and dorsal tipped with a brush of slender red paleæ, lip strigose, columnar arms large decurved. *Warner Orchid. Alb.* t. 369.

SIKKIM HIMALAYA (*Ic. in Herb. Calcutt.*). ASSAM, *Griffith.*

Pseudobulbs 1-2 in., 3-4-angled. *Leaf* 4-6 in., linear-oblong, obtuse, petiole short. *Scape* very robust; bracts $\frac{1}{2}$ in.; pedicels $\frac{1}{4}$ in.—In the *Herb. Calcutt.* drawing the flower is 4 in. long, sepals and petals yellow-green with streaks of purple dots.

6. **C. Collettii**, *Hemsley in Journ. Linn. Soc. ined.*; lateral sepals 4-5 in. linear-lanceolate with very long filiform tips, dorsal cymbiform narrowed into a long tail fringed with large lanceolate paleæ, petals very short broad ciliate abruptly narrowed into a linear tip fringed with large cuneate-obovate toothed paleæ, lip glabrous, columnar teeth short.

EASTERN BURMA; Shan Hills, alt. 6000 ft., *Collett.*

Rhizome very stout; *pseudobulbs* very small, young enclosed in coriaceous sheaths. *Leaf* 1-1 $\frac{1}{2}$ in., sessile, ovate to elliptic-oblong, thick. *Scape* 3-6 in., very robust; umbel many-fl.; bracts $\frac{1}{4}$ - $\frac{1}{3}$ in.; pedicel with ovary $\frac{1}{4}$ - $\frac{1}{3}$ in.; dorsal sepal $\frac{3}{4}$ in.,

5-nerved, paleæ sessile or with a capillary stipes, mobil, terminal often largest; petals $\frac{1}{2}$ in., very oblique, nerves 3, distant; paleæ about 12; lip thick, obtuse, recurved, papillose, base sagittate.—A beautiful plant.

7. **C. fimbriatum**, Lindl. in *Bot. Reg.* 1839, *Misc.* 72; lateral sepals 1-1 $\frac{1}{2}$ in. linear acute flat coherent 5-nerved many times longer than the triangular-ovate caudate long-ciliate dorsal, petals triangular caudate long-ciliate 1-nerved, lip tumid, columnar arms long horizontal. *Wight Ic.* t. 1655; *Bot. Mag.* t. 4391; *Dalz. & Gibs. Bomb. Fl.* 261. *Bulbophyllum fimbriatum*, Reichb. f. in *Walp. Ann.* vi. 260. ? C. Wallichii, *Grah. Cat. Bomb. Pl.* 205.

The CONCAN and CANARA; from Bombay southwards, Law, &c.

Pseudobulbs globose, smooth, leafless when flowering. *Umbels* many-fl.; flowers subsessile, green with red cilia.

8. **C. gamosepalum**, Griff. *Notul.* iii. 296; lateral sepals $\frac{2}{3}$ in. linear-oblong or -lanceolate acute flat at first coherent 5-nerved many times longer than the ovate obtuse long-ciliate dorsal, petals longer than the dorsal sepal lanceolate caudate 3-nerved long-ciliate, lip membranous 3-nerved, columnar arms rounded. C. Andersonii, *Kurz in Report Veg. Andaman.* 51. *Bulbophyllum Griffithianum*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 153.

TENASSERIM, Griffith, Parish. PERAK, Scortechini. MALACCA, Maingay (*Kew Distrib.* 1622-3). ANDAMAN ISLANDS, Kurz.—DISTRIB. ? Borneo.

Pseudobulbs 1-1 $\frac{1}{2}$ in. *Leaf* 2-5 in., linear-oblong or oblanceolate, obtuse, trabeculate with cross nervules when dry, subpetioled. *Scape* 4 in., slender; umbels many-fl.; bracts setaceous; pedicels $\frac{1}{2}$ in.; dorsal sepal and petals bright red, lateral speckled with purple at length widely divergent.

9. **C. Roxburghii**, Lindl. *Gen. & Sp. Orchid.* 58; in *Bot. Reg.* 1843, under t. 49; lateral sepals $\frac{2}{3}$ in. linear subfalcate obtuse 3-4 times longer than the broadly ovate aristate ciliate dorsal, petals 3-nerved equalling and similar to the dorsal, lip smooth, column unarmed. *Hook. f. Ic. Plant. ined.* *Bulbophyllum Roxburghii*, Reichb. f. in *Walp. Ann.* vi. 263. *Aerides radiatum*, Roxb. *Fl. Ind.* iii. 476.

GANGETIC DELTA, Carey (Roxburgh).

Pseudobulbs small, subglobose. *Leaf* 3-4 in., linear-oblong. *Scape* longer than the leaf; umbel many-fl.; dorsal sepal and petals yellow striped with red; lateral yellow; lip red-purple.—I have seen no specimens, but an excellent drawing of Roxburgh's artist.

** *Dorsal sepal glabrous or nearly so. Petals erose ciliate or fimbriate.*

10. **C. cornutum**, Lindl. in *Bot. Reg.* 1838, *Misc.* 75; 1843, under t. 49; lateral sepals 1 $\frac{1}{2}$ in. linear-lanceolate obtuse convex coherent 5-nerved many times longer than the small cymbiform dorsal, petals ovate acute ciliate 3-nerved, lip smooth, columnar arms acute. *Bot. Mag.* t. 4753. *Bulbophyllum cornutum*, Reichb. f. in *Walp. Ann.* vi. 261.

SIKKIM HIMALAYA (*Ic. Cathcart*). KHASIA HILLS, alt. 5-6000 ft., Simons, &c.

Pseudobulbs 1-5 in., ovoid or columnar, terete. *Leaf* 6-10 in., linear-oblong, obtuse; petiole long. *Scape* long, slender; umbels many-fl.; lateral sepals red-brown, dorsal and petals green blotched with purplish brown.

11. **C. picturatum**, G. Loddiges in *Bot. Reg.* 1840, *Misc.* 49; lateral sepals 1-2 $\frac{1}{2}$ in. linear-lanceolate acuminate convex coherent 5-nerved 3-5 times longer than the cymbiform abruptly aristate dorsal, petals caudate-

acuminate erose 3-nerved, column large, arms subulate. *Lindl. in Bot. Reg.* 1843, under t. 49; *Bot. Mag.* t. 6802. *Bulbophyllum picturatum*, *Reichb. f. in Walp. Ann.* vi. 262.

TENASSERIM; at Moulmein, *Parish.*

Pseudobulbs 2-7 in., ovoid, smooth, angled. *Leaf* 3-5 in., linear-oblong, tip rounded. *Scape* 5 in., slender; bracts $\frac{1}{2}$ in., slender; pedicels as long; flowers purple, stained with dark red; lip hastate with incurved uncinuate basal lobes.

12. **C. simillimum**, *Reichb. f. Ot. Hamburg.* 49; lateral sepals $\frac{3}{4}$ -1 in. linear-lanceolate acuminate 5-nerved three times as long as the ovate-lanceolate acute 5-nerved dorsal, petals nearly as large as the dorsal sepal ovate acute 3-nerved serrulate, lip scabrid, column unarmed.

TENASSERIM; at Moulmein, *Parish.*

Pseudobulbs 1 in. *Leaf* 4 in., linear-oblong, obtuse. *Scape* slender, 4-5 in.; umbels few-fl.; bracts $\frac{1}{2}$ in., subulate; flowers spotted with purple.—My specimen is very indifferent; the absence of the awn on the dorsal sepal at once distinguishes it from the preceding, and the 3-nerved serrulate petals from *elatum*.

13. **C. cæspitosum**, *Wall. in Bot. Reg.* 1838, *Misc.* 35; lateral sepals $\frac{3}{4}$ in. linear-lanceolate obtuse 5-nerved three times as long as the cymbiform subacute 5-nerved dorsal, petals broadly ovate-oblong subacute erose 3-nerved, columnar teeth minute. *Lindl. in Bot. Reg.* 1843, under t. 49. *Bulbophyllum scabratum*, *Reichb. f. in Walp. Ann.* vi. 259.

KHASIA HILLS, *Gibson, Griffith.*

Pseudobulbs ovoid. *Leaves* 4-6 in., linear- or oblong-lanceolate. *Scape* loosely sheathed; umbel few-fl.; flowers cellular or papillose, pale ochreous yellow, nerves of sepals and petals flexuous.

*** *Dorsal sepal and petals glabrous, quite entire.*

† *Lateral sepals more than $\frac{1}{2}$ in. long.* (A very vague character; see note under generic description.)

14. **C. bootanense**, *Griff. Notul.* iii. 297; *Ic. Pl. Asiatic.* t. 299; flowers dorsally compressed coriaceous, lateral sepals dimidiate-oblong obtuse cohering in a subpanduriform blade three times as long as the suborbicular apiculate dorsal, petals oblong obtuse 3-nerved, lip shortly stipitate, columnar teeth slender erect. *Bulbophyllum bootanense*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 153, t. 32, f. 2.

BHOTAN HIMALAYA, *Griffith.* TENASSERIM, *Parish.*

Pseudobulbs $1\frac{1}{2}$ -2 in., narrow. *Leaf* 2-3 in., linear-oblong or lanceolate, notched. *Scape* stout, shorter than the leaves; umbels few-fl.; bracts large; pedicels stout; flowers rose-red sprinkled with purple.—In Griffith's drawing the flowers are umbelled, in Parish's sketch there are but two flowers, their pedicels springing from the base of the pseudobulb. This species resembles no other, and is closely related to *Bulboph. cylindraceum* and *repens*, but its flowers are normally umbelled, and the dorsal sepal is shorter.

15 **C. elatum**, *Hook. f. Ic. Plant. ined.*; lateral sepals 1- $1\frac{1}{4}$ in. linear-lanceolate subacute 5-nerved convex 3-4 times as long as the broadly ovate obtuse 5-nerved dorsal, petals broadly ovate apiculate 1-nerved, lip convex, columnar teeth very short.

SIKKIM HIMALAYA, alt. 5000 ft., *Gamble, Clarke.*

Pseudobulbs 2-4 in., ovoid or columnar. *Leaf* 8-10 in., linear-oblong, obtuse; petiole stout. *Scape* 10 in., stout, speckled with purple; sheaths 3, loose; umbels

many-fld.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in.; pedicels as long; flowers dirty yellow, speckled with purple.—Size and habit of *C. picturatum*, but the dorsal sepal has no awn, the petals are not erose, and the column has very short teeth.

16. **C. maculosum**, Lindl. in *Bot. Reg.* 1841, *Misc.* 81; 1843, under t. 49; scape much shorter than the leaf, lateral sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. falcately ovate-lanceolate from a broad base acute 7-nerved twice as long as the broadly ovate acute dorsal, petals small ovate acute 3-nerved, lip short broad stipitate, columnar teeth short. *Bulbophyllum umbellatum*, Lindl. in *Wall. Cat.* 1984; *Gen. & Sp. Orchid.* 56 (not of *Bot. Reg.* 1845, t. 44). *Bulbophyllopsis maculosa*, Reichb. f. in *Walp. Ann.* vi. 243. *B. Morphologorum*, Reichb. f. in *Bot. Zeit.* 1852, 933.

WESTERN HIMALAYA; Nepal, Wallich; Garwhal and Kumaon, alt. 3–4000 ft., Falconer, Strachey & Winterbottom, &c.

Rhizome slender. *Leaf* 5–6 in., linear, notched. *Scape* 2–3 in., stout; umbels 2–5-fld.; flowers subracemose, pale yellow-green, unspotted; bracts ovate-lanceolate.—Quite intermediate in flower between this genus and *Bulbophyllum*, but habit of this.

Var. fuscescens, flowers dull pale pink yellowish or brownish.—Nepal, Sikkim.

17. **C. guttulatum**, Hook. f.; scape equalling or exceeding the leaf, lateral sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. ovate-lanceolate from a broad base 7-nerved hardly twice as long as the broadly ovate obtuse 5-nerved dorsal, petals ovate obtuse 3-nerved, lip short nearly as broad as long, columnar spurs long slender. *Bulbophyllum umbellatum*, Lindl. in *Bot. Reg.* 1844, t. 44 (not elsewhere). *B. guttulatum*, Wall. mss.

SUBTROPICAL HIMALAYA; Nepal, Wallich; Sikkim, alt. 3–6000 ft.

Pseudobulbs 1–2 in., ovoid. *Scape* 6–10 in., sprinkled with purple; umbel few-fld.; sepals spreading, yellow or greenish, speckled with purple; lip pale purple.—The longer scape and long spurs of the column at once distinguish this from *C. maculosum*.

18. **C. retusiusculum**, Reichb. f. in *Gard. Chron.* 1869, 1182; lateral sepals 1 in. linear subacute coherent 3-nerved many times longer than the broadly oblong retuse 3-nerved dorsal, petals broadly oblong as long as the dorsal 3-nerved, tip rounded, lip lanceolate recurved, columnar spurs short erect.

TENASSEEIM; on Moolee, alt. 5–6000 ft., Benson, Parish.

Pseudobulbs $\frac{1}{2}$ –1 in., obpyriform, striate. *Leaf* 2–3 in., subspathulate, obtuse. *Scape* 3–4 in., slender; sheaths 2; umbels many-fld.; bracts $\frac{1}{4}$ in., slender; pedicel with ovary $\frac{1}{2}$ in., slender.—The specimens are poor, and colours unknown.

19. **C. Wallichii**, Lindl. in *Wall. Pl. As. Rar.* i. 53, t. 67; *Gen. & Sp. Orchid.* 59 (not of *Bot. Reg.*); lateral sepals 1–1 $\frac{1}{4}$ in. linear-lanceolate acuminate falcately incurved 5-nerved 3–4 times as long as the oblong obtuse 3-nerved dorsal, petals as long as the dorsal oblong, tip rounded or retuse 3-nerved, lip subacute, columnar teeth very short. ? *Bulbophyllum muscicola*, Reichb. f. in *Flora* 1872, 275.

TEMPERATE HIMALAYA; Nepal, Wallich; Sikkim, alt. 5–7000 ft., Griffith's Collectors, &c.

Pseudobulbs $\frac{3}{4}$ –1 in., subglobose or ovoid, or elongate. *Leaf* 2–4 in., elliptic-oblong, acute or obtuse. *Scape* slender, equalling or exceeding the leaves; umbels few-fld.; bracts subulate, $\frac{1}{4}$ – $\frac{1}{2}$ in., shorter than the pedicels; flowers red-brown.—On Jillapahar (Sikkim), alt. 7500 ft., I found and drew a species closely resembling this, but with a linear leaf 5 in. long, a small quadrate dark red ribbed dorsal sepal

and yellowish lateral sepals with red nerves. Reichenbach's *B. muscicola* (from the Eastern Himalaya, alt. 9000 ft.) is, I suspect, the same; the leaf is described as oblong ligulate, the lateral sepals coherent to the tip, the dorsal sepal and petals ovate obtusely retuse, the lip complicate sagittate, and the column as 3-toothed. It is said to be near *retusiusculum*.

20. **C. Andersoni**, *Hook. f. Ic. Plant. ined.*; lateral sepals $\frac{3}{4}$ in. dimidiate-obovate from a narrow base obtuse apiculate coherent nearly throughout five times longer than the orbicular dorsal, petals ovate acuminate.

SIKKIM HIMALAYA; near Darjeeling, alt. 7000 ft., *T. Anderson (Ic. in Herb. Calcutt.)*.

Pseudobulbs 1-1½ in., narrow. *Leaf* 4-6 in., petioled, narrowly linear-oblong, acute. *Scape* 4-5 in., slender; umbels about 6-fld.; flowers shortly pedicelled, $\frac{1}{2}$ in. across the coherent sepals, white sprinkled with red-purple.—A beautiful plant, described from a drawing in *Herb. Calcutt.*

21. **C. brevipes**, *Hook. f. Ic. Plant. ined.*; scape very short sheathed, lateral sepals 1 in. falcately lanceolate acute free, three times as long as the broadly obovate obtuse dorsal, petals broadly ovate, tip rounded.

SIKKIM HIMALAYA, between Yoksun and Jongri, alt. 8000 ft., *T. Anderson*.

Rhizome long, slender, suberect, probably scandent, bearing very distant erect narrow pseudobulbs 1-1½ in. long. *Leaf* 2 in., linear-oblong, apiculate. *Scape* $\frac{1}{2}$ -1 in.; sheaths lanceolate; umbels 3-4-fld., flowers rose-pink.—Described from a drawing in *Herb. Calcutt.* The erect habit is singular.

22. **C. aureum**, *Hook. f. Ic. Plant. ined.*; small, lateral sepals $\frac{3}{4}$ in. linear-oblong acute incurved three times as long as the orbicular ovate obtuse dorsal, petals oblong, tip rounded, column with spreading obtuse arms.

MALABAR; in the Wynaad, *Jerdon (Ic. in Herb. Kew)*.

Pseudobulbs ovoid, distant on a slender rhizome. *Leaf* 1½ in., linear-oblong. *Scape* slender, shorter than the leaf; umbel 2-fld.; flowers golden yellow; lateral sepals at first cohering.—Described from *Jerdon's* drawing. I find nothing like this beautiful little plant in any collection.

23. **C. Wightii**, *Thwaites Enum.* 299 (*in part*); lateral sepals $\frac{3}{4}$ in. linear-oblong subacute convex 5-nerved three times as long as the broadly ovate obtuse 5-nerved dorsal, petals ovate acute erose 3-nerved, columnar teeth short. *C. Macraei*, *Wight Ic. t.* 1652 (*not of Lindl.*). *Bulbophyllum Ellii*, *Reichb. f. in Walp. Ann.* vi. 263; *Trimen in Journ. Bot.* 1874, 199 *in part*.

CEYLON; Newera Elia, *Walker*; Central Province, alt. 4-7000 ft., *Thwaites*.

Rhizome stout; pseudobulbs ovoid. *Leaf* 1½-2½ in., very coriaceous, elliptic or linear-oblong; petiole short. *Scape* rather stout, shorter or longer than the leaf, green speckled with red; umbels 6-8-fld.; flowers ochreous-green; sepals with a marginal line of red specks.—There are (as *Thwaites* suggests) several species included under *Thwaites' numbers* 632, 2740, 3160, and these numbers do not apply to the same species in all herbaria, nor are they represented by sufficiently good specimens in any. I therefore hesitate to quote their numbers.

24. **C. Thwaitesii**, *Reichb. f. in Walp. Ann.* vi. 263, and in *Trimen Journ. Bot.* 1874, 198 (*Bulbophyllum*); lateral sepals $\frac{1}{2}$ in. lanceolate obtuse widely spreading 5-nerved twice as long as the ovate obtuse or acute dorsal, petals ovate acute, columnar teeth very short.

CEYLON; Newera Elia, alt. 4-7000 ft., *Thwaites*.

There are two drawings of this in *Herb. Peradenzia*, both ticketed by *Thwaites*

C. Wightii, var., C.P. 2740; in one the leaves are short broadly elliptic, the scape stout and pedicels and ovaries with red granulations, the dorsal sepal elliptic obtuse, and the petals oblong rounded; in the other the leaves are linear, the scape slender, the dorsal sepal lanceolate acuminate, and the petals ovate obtuse or acute. The flowers of both are pale straw-coloured.

25. *C. nilgherrense*, *Wight Ic. t.* 1654; lateral sepals $\frac{3}{4}$ –1 in. linear-lanceolate acuminate 5-nerved coherent thrice as long as the ovate acute 5-nerved dorsal, petals broadly oblong thickly 3-nerved, tip rounded, columnar spurs short erect. Bulbophyllum kaitiense, *Reichb. f. in Walp. Ann. vi.* 262.

NILGHIRI HILLS; at Conoor and below Kaitia, alt. 6000 ft., *Wight, Gamble*.

Pseudobulbs $\frac{3}{4}$ –1 in., ovoid. *Leaf* 3–4 $\frac{1}{2}$ in., linear-oblong, obtuse. *Scape* 3–4 in.; sheaths small; umbels many-fld.; bracts and pedicels $\frac{1}{2}$ in.; flowers papillose; sepals, pedicels and bracts yellowish mottled with red; petals with broad red nerves.—I do not find the pubescence on the lip beneath and face of the column described by Wight. Except in the much greater size in Wight's figure this hardly differs from *C. acutiflorum*.

26. *C. Gamblei*, *Hook. f. Ic. Plant. ined.*; lateral sepals $\frac{1}{2}$ in. linear-oblong subacute 5-nerved puberulous towards the base three times as long as the broadly ovate 3-nerved dorsal, petals broadly oblong 3-nerved, tip rounded, lip with rounded basal angles, columnar teeth minute.

NILGHIRI HILLS; at Conoor, alt. 6000 ft., *Gamble*. BABABOODAN HILLS, *Law*.

Pseudobulbs $\frac{1}{2}$ in., ovoid. *Leaf* 1–2 in., linear-oblong or -lanceolate. *Scape* 1–2 in., very slender; sheaths 1–2, loose; bracts and pedicels $\frac{1}{2}$ in.; flowers yellow, streaked and dotted with red.

27. *C. Thomsoni*, *Hook. f.*; lateral sepals $\frac{1}{2}$ in. falcately lanceolate acute 5-nerved three times as long as the ovate subacute 5-nerved dorsal, petals broadly oblong 3-nerved, tip rounded, column truncate.

NILGHIRI HILLS, *Wight, G. Thomson*; at Neddivuttum, alt. 7000 ft., *Clarke*.

Pseudobulbs $\frac{1}{4}$ – $\frac{1}{2}$ in., ovoid. *Leaf* 1–3 in., linear-oblong, petioled. *Scape* very slender; sheaths 2–3, small, and bracts $\frac{1}{2}$ in., ovate-lanceolate, membranous; dorsal sepal and petals purple; lateral yellow, purple at the base.—Near *C. nilgherrense*, but much smaller, leaves shorter, umbels fewer-fld., lateral sepals narrower, and colour very different.

†† *Lateral sepals about* $\frac{1}{2}$ in. long or less.

28. *C. Pumilio*, *Par. & Reichb. f. in Trans. Linn. Soc. xxx.* 153 (Bulbophyllum); bracts minute, lateral sepals $\frac{1}{2}$ in. linear-lanceolate acuminate 3-nerved three times as long as the ovate acuminate 3-nerved dorsal, petals orbicular-oblong broader than the dorsal 3-nerved, lip ovate-lanceolate spongy, columnar spurs short erect.

TENASSERIM; on trees, *Zuggick, Parish*.

Rhizome slender; pseudobulbs small, conico-globose. *Leaf* 1–1 $\frac{1}{2}$ in., linear-oblong. *Scape* 2 in., slender; bracts $\frac{1}{2}$ in.; pedicels as long, capillary; lateral sepals yellow, and dorsal and petals streaked with purple.

29. *C. parvulum*, *Hook. f. Ic. Plant. ined.*; bracts longer than the pedicel and ovary, lateral sepals $\frac{1}{2}$ in. elongate-lanceolate acuminate 3-nerved thrice as long as the elliptic obtuse 3-nerved dorsal, petals elliptic-oblong 3-nerved, tip rounded, lip subacute, columnar teeth short slender.

SIKKIM HIMALAYA; at Darjeeling (*Griffith's Collectors*).

Rhizome slender, flexuous; pseudobulbs $\frac{1}{4}$ – $\frac{1}{2}$ in., ovoid or narrower. *Leaf* 1 in., elliptic or linear-oblong obtuse; petiole short. *Scape* 2 in., naked; flowers 2–3, scarcely umbelled; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in.

30. **C. acutiflorum**, *A. Rich. in Ann. Sc. Nat. Ser. 2*, xv. 18, t. 7 (Bolbophyllum); lateral sepals $\frac{1}{2}$ in. linear-lanceolate acuminate 7-nerved twice or thrice as long as the falcately ovate-lanceolate long-acuminate 5-nerved dorsal, petals broadly oblong 3-nerved, tip rounded, lip with uncinately recurved basal lobes, columnar teeth minute. *Reichb. f. in Walp. Ann.* vi. 263.

NILGHIRI HILLS; at Ootacamund, *Perrottet*; Conoor, *Wight*.

Pseudobulbs $\frac{3}{4}$ –1 in., globose ovoid. *Leaf* $1\frac{1}{2}$ –2 in., oblong. *Scape* slender, about equalling the leaves; sheaths 2–3; umbels 6–8-flid.; bracts $\frac{1}{4}$ in., lanceolate; pedicels longer, slender; flowers greenish white or creamy.—Specimens very indifferent. Very near *Bolboph. albidum*.

D. Flowers racemose (or very shortly subumbellate in *C. Macraei*). See also *C. parvulum*, and others in Sect. C.

31. **C. refractum**, *Zollinger in Flora* 1847, 457; lateral sepals 1–2 $\frac{1}{2}$ in. strap-shaped acuminate cohering to the tips, many times longer than the lanceolate awned ciliate dorsal, petals lanceolate ciliate and pubescent, columnar spurs long slender decurved. *Walp. Ann.* i. 776. *C. Wallichii*, *Lindl. in Wall. Cat.* 1980; in *Bot. Reg.* 1839, *Misc.* 71; 1843, under t. 49 (not of *Wall. Pl. As. Rar.*). *C. tripudians*, *Par. & Reichb. f. in Gard. Chron.* 1876, 817. *Bolbophyllum tripudians*, *ejusd. in Trans. Linn. Soc.* xxx. 154. *B. refractum*, *Reichb. f. in Walp. Ann.* vi. 259.

SUBTROPICAL HIMALAYA, from Kumaon, alt. 3700 ft., *Strachey & Winterbottom*, to Sikkim, alt. 4–5000 ft., *J. D. H.*, &c. TENASSERIM, *Parish*.—DISTRIB. Java.

Pseudobulbs short, conical, crowded. *Leaves* 2 on young pseudobulbs, 4–5 in., lanceolate, acute. *Scape* stout, 4–6 in.; raceme few- or many-flid., nodding; bracts large, ovate or lanceolate; pedicels very short; dorsal sepal 3-nerved, orange; lateral 3–5-nerved, golden yellow; petals 3-nerved and lip speckled with red; lip subcylindric, hispid or glabrate.

32. **C. viridiflorum**, *Hook. f. Ic. Plant. ined.*; lateral sepals $\frac{3}{4}$ in. ovate-lanceolate acute cohering to the tips twice as long as the ovate acute dorsal, petals suborbicular, columnar arms erect hatchet-shaped apiculate.

SIKKIM HIMALAYA, alt. 6–7000 ft., *Treutler*, &c. KHASIA HILLS; at Shillong, alt. 5500 ft., *Clarke*.

Pseudobulbs 1 in., subovoid. *Leaves* 2, 4–6 in., elliptic-lanceolate, subacute. *Scape* as long; raceme 2–4 in., nodding; bracts ovate-lanceolate, membranous; flowers subsessile; sepals 5–7-nerved, green; petals 1-nerved and short lip purple.—Closely allied to *C. refractum*, though the dorsal sepal is long enough for a *Bolbophyllum*.

33. **C. Blepharistes**, *Reichb. f. in Trans. Linn. Soc.* xxx. (Bolbophyllum); lateral sepals 1 in. linear-lanceolate acuminate coherent three times as long as the lanceolate acuminate dorsal, petals broadly oblong or obovate fimbriate, columnar arms minute.

KHASIA HILLS, *Badgeley (Ic. in Herb. Calcutt.)*. TENASSERIM, *Parish*.

Pseudobulbs $1\frac{1}{2}$ –3 in., on a very stout rhizome, oblong. *Leaves* 2–3 in., oblong, very thick. *Scape* 6–12 in.; raceme short, erect, dense-flid.; rachis stout; bracts minute, acute, persistent; pedicels $\frac{3}{4}$ in., slender; lateral sepals 7-nerved, pale

yellow-green with faint red nerves, bases rounded together forming a cordate-lanceolate blade; petals 5-nerved, yellow tipped with red.—Dorsal sepal of a *Bulbophyllum*, but whole habit of *Cirrhopetalum*. The colours are taken from the drawing with obovate petals.

34. **C. Macraei**, Lindl. *Gen. & Sp. Orchid.* 59; in *Bot. Reg.* 1841, *Misc.* 52; lateral sepals 2 in. narrowly linear-lanceolate with long filiform tips coherent three times as long as the lanceolate acuminate dorsal, petals falcately ovate-lanceolate, columnar arms long broad horizontal crenate on one side. *Bot. Mag.* t. 4422. *C. Walkerianum*, *Wight Ic.* t. 1657. *Bulbophyllum Walkerianum*, *Reichb. f. in Walp. Ann.* vi. 263.

CEYLON; in the Hantani and Hewahette districts, alt. 3–4000 ft.

Pseudobulbs small, ovoid. *Leaves* 3–5 in., petioled, oblong, subacute. *Scape* 6 in., very slender; flowers between umbelled and racemose; bracts long, ovate-lanceolate; pedicels very short; sepals pale yellow and scarlet, lateral 5- dorsal 3-nerved; petals 3-nerved, scarlet.

SPECIES UNKNOWN TO ME.

B. (*Cirrhopetalum*) **MANNII**, *Reichb. f. in Flora* 1872, 275; leaf petioled cuneate-oblong obtusely acute dilated above, peduncle deflexed, umbel few-fl., mentum angled, sepals golden with many brown specks, dorsal lanceolate aristate, lateral contiguous caudately narrowed from a broad base, petals ligulate decurved awned from the middle, lip thick curved somewhat margined 2-edged with a small callus at the base of the claw, column dilated at the base, arms curved retuse, base above 1-toothed, lip 2-toothed, lower tooth obtuse.—Assam, *Mann*.—Probably near *C. cornutum*.

C. **TENOPHYLLUM**, *Par. & Reichb. f. in Trimen Journ. Bot.* 1874, 198 (*Bulbophyllum*); pseudobulb conic, top narrowed, when dry furrowed lengthwise and across, leaf cuneate ligulate obtuse acute longer than the peduncle, flowers yellow with purple dots, bracts broadly triangular 1-nerved not equalling the pedicelled ovary, dorsal sepal short triangular 1-nerved, lateral 3–4 times longer coherent, bases free acute 3-nerved, petals ligulate acute 3-nerved, lip 2-edged $\frac{1}{2}$ -lunate, column bisetose.—Tenasserim, *Parish*.

12. **TRIAS**, Lindl.

Small epiphytes with the habit and foliage of *Bulbophyllum*. *Scape* lateral, 1-fl. *Sepals* subequal, spreading, 7-nerved, lateral adnate to the foot of the column. *Petals* small, oblong or linear. *Lip* small, coriaceous or fleshy, jointed on to the foot of the column, inflexed, incumbent, mobile. *Column* short, broad, tip angled, winged or toothed; anther erect, caducous, 2-celled, produced into a long horn; pollinia subcoherent in pairs in each cell.—Species 3, all Indian.

1. **T. oblonga**, Lindl. in *Wall. Cat.* 1977; *Gen. & Sp. Orchid.* 60; leaves elliptic or oblong obtuse, sepals subacute, petals ovate, lip trulliform subacute with erect auricles, horn of anther notched at the tip. *Wall. Pl. As. Rar.* i. 55, t. 70. *Bolb. oblongum*, *Reichb. f. in Walp. Ann.* vi. 249. *Dendrobium tripterum*, *Wall. mss.*

TENASSERIM; at Moulmein, *Wallich, Griffith, Parish*.

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. *Leaves* 1–1 $\frac{1}{2}$ in. long. *Scape* very slender, $\frac{1}{2}$ –1 in. *Flower* 1 in. diam.; lip grooved in the middle.—Lindley describes the flowers as brownish green, and lip as purple. *Parish* has flowers yellow.

2. **T. picta**, *Benth. in Gen. Plant.* iii. 505; leaves ovate or elliptic-lanceolate contracted at the tip or at both ends, sepals subacute, petals obovate deflexed, lip oblong granulate, tip rounded, horn of anther entire.

Bolbophyllum pictum, *Parish & Reichb. f. in Trans. Linn. Soc.* xxx. 150.
? *B. moulmeinense*, *Reichb. f. in Walp. Ann.* vi. 249.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs $\frac{3}{4}$ in. diam. *Leaves* 2-2 $\frac{1}{2}$ in. *Flowers* $\frac{3}{4}$ in. diam.; sepals greenish white with purple spots; lip not grooved, surface convex.

3. **T. Stocksii**, *Benth. mss.*; leaves elliptic acute, sepals obtuse, petals ovate-lanceolate erect, lip oblong, shoulders convex, tip rounded, horn of anthers slender, tip entire.

The DECCAN PENINSULA; Canara, *Stocks*; N. & S. Concan, *Law*.

Pseudobulbs $\frac{3}{4}$ in. *Leaves* 1 in. *Scape* $\frac{1}{2}$ in. *Flowers* $\frac{1}{2}$ - $\frac{3}{4}$ in. diam.; lip convex, smooth.

4. **T. ovata**, *Lindl. Gen. & Sp. Orchid.* 60; leaves ovate, petals white striped with purple, lip green.

EAST INDIES, *Wallich*.

Described by Lindley as above, from a drawing, with the remark that it may be a variety of *T. oblonga*.

13. **DRYMODA**, *Lindl.*

A very small epiphyte; pseudobulbs disciform, 1-leaved. *Scape* basal, filiform, 1-fl.; sheaths 1-2 near its base, minute. *Sepals* spreading; dorsal small, broadly ovate; lateral at the end of the naked foot of the column, oblong-lanceolate. *Petals* minute, orbicular. *Lip* very small, stipitate on the foot of the column, base saccate, lobes short rounded. *Column* very short, with 2 linear-oblong decurved wings and a long naked foot; pollinia 4, globose, sessile on a large gland.

D. picta, *Lindl. Sert. Orchid.* t. 8 C; *Bot. Mag.* t. 5904; *Walp. Ann.* vi. 467.

BURMA, *Griffith*. TENASSERIM; on mountains, alt. 5000 ft., *Parish*.

Pseudobulbs $\frac{1}{2}$ in. diam., appressed to the bark. *Leaf* $\frac{1}{2}$ in., sessile, ovate, acute, fugacious. *Scape* 1 $\frac{1}{2}$ -2 in.; flower $\frac{1}{2}$ in. long; lateral sepals yellow-green with purple stripes; lip dark red-purple; column and its foot and wings green, purple-spotted.

14. **MONOMERIA**, *Lindl.*

Pseudobulbs 1-leaved, on a stout long rhizome. *Leaf* long, flat, thick, petioled. *Scape* from the rhizome long; flowers loosely racemed. *Dorsal sepal* broad, erect, complicate, acuminate; lateral much longer at the end of the naked foot of the column. *Petals* minute, broad, fimbriate. *Lip* small, jointed on the foot of the column, subcordate, margin revolute; side lobes small, horn-like, apex terete obtuse, disk broadly lamellate. *Column* very short, broad, 3-toothed; anther 1-celled; pollinia 4, cohering by a globose gland.

M. barbata, *Lindl. in Wall. Cat.* 1798; *Gen. & Sp. Orchid.* 61; *Sert. Orchid. Frontisp.* M. Crabro, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 143, t. 28. *Epicranthes barbata*, *Reichb. f. in Walp. Ann.* vi. 265.

NEPAL, *Wallich*. TENASSERIM, at Moulmein, *Parish*.

Pseudobulbs 2-3 in., ovoid, smooth. *Leaf* 8-10 in., thickly coriaceous, tip

obliquely obtusely 2-fid, narrowed into the 4-6 in. petiole. *Scape* 12-18 in., flexuous; sheaths short, distant; raceme long; bracts $\frac{1}{2}$ in.; flowers white speckled with purple, about 1 in. long; lip orange-brown.—I find no character whereby to distinguish *M. Crabro*; the analysis of the lip in the plate does not conform to mine. Possibly the Nepal habitat is an error.

15. **DENDROCHILUM**, Blume.

Epiphytes; rhizome creeping, scaly; pseudobulbs narrow, 1-leaved. *Leaf* flat, narrow, coriaceous. *Scape* lateral, slender; flowers small, in slender spikes or racemes. *Sepals* subequal, spreading; lateral adnate to the foot of the column. *Petals* smaller. *Lip* jointed on the foot of the column, subsessile, erecto-patent, oblong, base umbonate. *Column* short, with lateral or terminal teeth or arms; anther 2-celled; pollinia 4, ovoid, bases cohering by a slight viscus.—Species 3-4, Indian and Malayan.

1. **D. pallidiflorum**, Blume *Bijd.* 398, t. 52; leaf elliptic-oblong, sepals linear obtuse 1-nerved, lip oblong obtuse, base with 2 bosses, arms of column from above the middle. *Lindl. Gen. & Sp. Orchid.* 34.

TENASSERIM, *Parish*. PERAK, ascending to 4000 ft., *Scortechini*, *King's Collector*.—DISTRIB. Java.

Rhizome 2-4 ft., rigid. *Pseudobulbs* $\frac{3}{4}$ in., ovoid. *Leaf* 3-5 in., shortly petioled. *Scape* slender, bracteate below the 3-4 in. raceme; bracts shorter than the ovary, ovate, acute; flowers $\frac{1}{2}$ - $\frac{1}{2}$ in. diam.; sepals thickened beyond the middle.—Perak specimens have smaller flowers than the Tenasserim. I have seen no authentic Javan ones.

2. **D. linearifolium**, Hook. f. *Ic. Plant. ined.*; leaf narrowly linear obtuse, sepals acuminate 3-nerved, lip oblong or obovate-oblong obtuse, base 3-ridged, arms of column basal elongate.

PERAK, *Scortechini*; on Batang Padong, alt. 4900 ft., *Wray*.

Pseudobulbs $\frac{1}{2}$ in., curved. *Leaf* 1 $\frac{1}{2}$ -2 in., petioled. *Scape* 1-2 in., raceme as long, lax-fid.; bracts lanceolate, equalling the ovary; flowers $\frac{1}{2}$ in. diam., greenish; sepals and subequal petals lanceolate.

3. **D. bracteosum**, Reichb. f. in *Walp. Ann.* vi. 24; leaf elliptic-lanceolate or oblanceolate acute, sepals lanceolate acuminate 3-nerved, lip subpanduriform, base 3-ridged and with 2 recurved teeth, terminal lobe orbicular apiculate, arms of column subterminal erect acute.—*Liparis bracteosa*, *Wall. Cat.* 7406.

MALAY PENINSULA, *Finlayson*.

Rhizome short, stout, crinite; pseudobulbs 3 in., slender. *Leaf* 6 in.; petiole short. *Scape* 3-8 in., slender, curved; spike 3-7 in.; bracts obovate-oblong, equalling the ovary, truncate, scarious; flowers $\frac{1}{2}$ in. diam.; petals linear-lanceolate.

16. **PANISEA**, Lindl.

Small tufted epiphytes; pseudobulbs crowded, 2-leaved. *Leaves* plaited. *Scape* lateral; flowers few, racemed; bracts membranous. *Sepals* and *petals* subequal, narrow, erect; lateral sepals saccate at the base. *Lip* as long as the sepals, adnate to the base of the column; claw sigmoid. *Column* slender, erect, 2-winged above; anther 2-celled; pollinia 4, ovoid, free or subcoherent by a viscus.

Very near *Calogyne* (to which Bentham has referred Lindley's other species), differing chiefly in the clawed lip.

1. **P. parviflora**, *Lindl. Fol. Orchid.* 1; lip narrowly lanceolate. *P. reflexa*, *Lindl. l. c.* *Cœlogyne parviflora*, *Lindl. Gen. & Sp. Orchid.* 44. *Dendrobium demissum*, *Don Prodr.* 34.—*Androgyne*, *Griff. Notul.* iii. 279.

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkin, alt. 4–10,000 ft., *Clarke*. KHASIA MTS., *Griffith*, &c.

Pseudobulbs $\frac{1}{2}$ –1 in., narrow. *Leaves* 2–3 in., petioled, elliptic-lanceolate, acute. *Scape* filiform; bracts $\frac{1}{2}$ in., oblong, acute; raceme 3–5-fl.; flowers $\frac{3}{4}$ in. long, white; lateral sepals membranous, lanceolate, acute, 5-nerved; dorsal linear-oblong; petals ovate-lanceolate, 3-nerved, base gibbous; lip 3-nerved, subacute, tip of slender claw 2-tubercled; column pale brown, tip entire or toothed. *Capsule* $\frac{1}{2}$ in. long, turbidly obovoid.

2. **P. apiculata**, *Lindl. Fol. Orchid.* 2; lip broadly oblong apiculate. *Cœlogyne apiculata*, *Par. & Reichb. f. in Gard. Chron.* 1865, 1035.

TENASSERIM; at Moulmein, *Lobb, Parish*.

Pseudobulbs $\frac{1}{2}$ in., ovoid, 2-leaved. *Leaves* 2 $\frac{1}{2}$ –3 in., shortly petioled, linear-lanceolate. *Scape* 1–2-fl., shorter than the leaves; basal sheaths membranous; bracts shorter than the pedicel; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., greenish or white with two small brown blotches on the lip; sepals keeled, acute; petals ovate-lanceolate, acuminate; lip with a saccate sigmoid claw, sides obscurely angled, tip sometimes obtusely 3-toothed.

17. ACROCHÆNE, *Lindl.*

A large epiphyte; pseudobulbs on a stout rhizome, 1-leaved. *Leaf* long-petioled, linear-oblong, coriaceous. *Scape* lateral, erect; raceme long-lax-fl.; bracts large, membranous. *Sepals* spreading, subequal, lateral obliquely adnate to the foot of the column. *Petals* small, lacerate. *Lip* erect, shorter than the sepals, jointed to the foot of the column, claw short; side lobes induplicate, adnate to the face of the narrow oblong obtuse blade. *Column* very short, stout, foot long; anther transversely oblong, 1-celled; pollinia 2, globose, cohering by a short flat granular at length 2-partite viscus.

A. punctata, *Lindl. Fol. Orchid.* 1; *Walp. Ann.* vi. 635.

TROPICAL SIKKIM HIMALAYA, *J. D. H.*

Pseudobulbs 1 in., conic or subglobose. *Leaf* 5–6 by 1 $\frac{1}{4}$ –2 in.; petiole 3–4 in. *Scape* 6–10 in., stout, base broadly sheathed; bracts $\frac{3}{4}$ in., acute, deciduous; flowers 1 in. diam.; pedicel slender; sepals membranous, 7-nerved, dorsal oblong-ovate; lateral gibbously triangular-ovate, acuminate; petals with capillary ends of the fimbriæ; lip incurved, side lobes very convex, obtuse, adnate to the narrow short thick truncate midlobe.

18. CHRYSOGLOSSUM, *Blume*.

Terrestrial; rhizome creeping; pseudobulb narrow or 0, 1-leaved. *Leaf* solitary, elliptic-lanceolate, plaited. *Scape* lateral from the rhizome, long, erect, sheathed; flowers laxly racemed. *Sepals* subequal, lateral connate into a mentum with the base of the lip. *Petals* narrower. *Lip* erect, broadly 3-lobed and with sometimes an auricled base, disk with 3 lamellæ. *Column* incurved, margins 2-auricled or lobed about the middle; anther 2-celled; pollinia 2, free.—Species 4–5, Indian and Malayan.

Entirely resembles *Tainia* and *Plocoglottis* in habit, but pollen very different.

1. **C. villosum**, *Blume Bijdr.* 338, t. 17; *Orchid. Archip. Ind.* 162. t. 47; leaf very large shortly petioled villous on both surfaces. *De Vries* *Ill. Orchid.* 290, t. 12, f. 4; *Walp. Ann.* vi. 206.

PERAK, *Scortechini*.—DISTRIB. JAVA.

Leaf 6-12 in., broadly elliptic or ovate; petiole 1-2 in. *Scape* with *raceme* 1-2 ft., and flowers villous; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., shorter than the ovary; flowers $\frac{3}{4}$ in. diam., yellow, banded with purple; dorsal sepal linear, lateral decurved; petals up-curved; lip clawed, side lobes truncate, midlobe panduriform; lamellæ undulate or crisped. *Columnar arms* long, ascending, truncate.

2. **C. erraticum**, *Hook. f. Ic. Plant. ined.*; glabrous, leaf long-petioled, scape slender, pedicels long slender, lip hastately 3-lobed, base 2-auricled, mentum very short.

TROPICAL SIKKIM HIMALAYA; at Rishep, alt. 4000 ft., *Clarke*.

Leaf 16 by 2½ in., 5-7-nerved; petiole 3 in., ending below in a narrow pseudo-bulb. *Scape* with *raceme* 2 ft.; bracts ½ in.; pedicel with ovary 1¼ in.; flower green speckled brown; sepals and petals falcately oblong-lanceolate, acute; side lobes of lip broad, recurved, midlobe orbicular; disk 3-lamellate; auricles of column rounded.—Only one specimen seen.

3. **C. assamicum**, *Hook. f. Ic. Plant. ined.*; glabrous, leaf long-petioled, scape slender, lip cuneately 3-lobed, lobes rounded, base obscurely auricled, mentum spurred.

ASSAM, *Griffith*.

Leaf 10 by 2 in.; nerves 5, strong; petiole 4 in.; base not thickened. *Scape* with *raceme* 1½-2 ft.; bracts ½ in., as long as the pedicel and ovary; flowers ½-¾ in. diam.; sepals and petals 3-nerved, obtuse; lip with a broadly cuneate base above the rounded auricles, disk 3-lamellate; spur horn-like, free of the lateral sepals, as long as the lip, incurved, subacute; auricles of column rounded.—Only one specimen seen.

4. **C. maculatum**, *Hook. f. Ic. Plant. ined.*; glabrous, leaf short-petioled, scape stout, lip cuneately 3-lobed, base 2-auricled, mentum minute. *Ania maculata*, *Thwaites Enum.* 301.

CEYLON; in the Central Province, alt. 5000 ft., *Thwaites*.

Leaf 7-12 by 3-4 in., elliptic-lanceolate, 5-7-nerved; petiole 1-4 in., thickening into a conical elongate pseudobulb. *Scape* with *raceme* as long as the leaf or longer; bracts ½-¾ in., shorter than the ovary; sepals ½ in., 5-nerved and 3-nerved petals obtuse, pale green with lines of purple specks; lip white, base purple-spotted, side lobes and short auricles rounded; midlobe concave column with rounded side auricles and two small basal ones.

18/2. **COLLABIUM**, *Blume*.

Terrestrial?; rhizome creeping; pseudobulbs narrow, 1-leaved. *Leaf* plicate. *Scape* from the base of the pseudobulb; flowers in a long raceme. *Lateral sepals* adnate to the trumpet-shaped foot of the column. *Petals* ovate or linear. *Lip* short, articulate with the mentum or foot of the column; side lobes ear-shaped, erect; midlobe very broadly obcordate, pubescent. *Column* long, incurved, sides at top angled or with two subterminal incurved arms; anther small, hemispheric, 2-celled; pollinia 2, double, united by a viscus.

C. Wrayi, *Hook. f. Ic. Plant. ined.*; leaf lanceolate, bracts short ovate acute, mentum not spur-like, column with 2 incurved arms.

PERAK; on Waterfall Hill, *Wray, Scortechini*.

Pseudobulb 3 in., narrowly oblong, curved. *Leaf* 12 by 2 in., subacute. *Scape* with *raceme* 16 in., slender, flexuous, with many scattered bract-like sheaths; flowers ½ in. diam.; sepals acute, 5-nerved, united to the base only of the upcurved trumpet-shaped hollow foot of the column, which rises in front in 2 obtuse horns, and is open in front just over the insertion of the lip.—This species requires a modification of

the generic character, the original *C. nebulosum*, Bl. (Miq. Choix, t. 26), of Java, having broad petals, no arms to the column, and the mentum spur-like. A figure of this by Scortechini represents a pendulous plant with 2 double pollinia sessile on a broad semilunate gland? (he has no specimens). Reichenbach's Bornean *C. simplex* can hardly be a congener.

19. **ERIA**, Lindl.

Epiphytes of various habit. *Flowers* never large or bright-coloured. *Sepals* free (very rarely connate), adnate to the elongate foot of the column, and with it forming a short or long and spur-like or saccate mentum (mentum 0 in *E. leiophylla*). *Lip* sessile on the foot of the column and incumbent (mobile in *E. pulchella* and *barbata*). *Anther* imperfectly 4- or 8-celled; pollinia normally 8, pyriform or broadly obovoid, attached in fours by narrow bases to a viscus.—Species upwards of 100, Tropical Asiatic.

Perhaps the most polymorphous genus of Orchids, and very difficult of division into definable groups. Though never confounded with *Dendrobium*, the only available distinctive character between these is the oblong pollinia of the latter genus, and more or less pyriform of *Eria*. In the following descriptions of the species, I have omitted many characters of the column, anthers, and pollen that are doubtless of first-rate importance, but cannot be sufficiently well detected or examined in dried specimens as to afford safe sectional characters. I am unable to retain as sections *Urostachya* and *Cylindrolobus*. The monotypic sections *Xiphosium*, *Dilochiopsis*, and *Pellaianthus*, are aberrant. *E. pulchella*, Lindl. (*Callostylis*, Blume), should form a section (or genus), if the lip is, as Blume says, mobile; perhaps together with *E. barbata*, which, according to Griffith, has a tremulous lip. The thickened nerves, calli, &c., of the lip in many species are very variable in development; and considerable allowance must be made for faulty characters due to the unsatisfactory condition of complicated organs that have been dried for years, and restored by maceration or boiling.

KEY TO THE SECTIONS.

I. **PORPAX**, Lindl. (Gen.). Small species. *Pseudobulbs* depressed, clothed with reticulated sheaths, 2-leaved. *Leaves* sessile, membranous, caducous. *Flowers* 1-3, subsessile on the top of the pseudobulb; sepals free or connate; column very short.—Species 1-5.

II. **CONCHIDIUM**, Griff. (Gen.). Small species. *Pseudobulbs* naked or sheathed, and leaves as in *Porpax*. *Flowers* solitary or few, on a slender scape from the top of the pseudobulb.—Sp. 6-9.

III. **BRYOBIUM**, Lindl. (Gen.). Small species. *Pseudobulbs* ovoid or depressed, 2-3-leaved. *Leaves* membranous. *Scape* from between the leaves, filiform. *Flowers* racemose, small, glabrous.—Sp. 10-15.

IV. **ERIURA**, Lindl. *Stem* tall (rarely short), terete, leafy. *Leaves* distichous, long, narrow. *Flowers* minute, woolly, in subterminal spikes, racemes or fascicles; lateral sepals short, broad; column very short.—Sp. 16-20.

V. **MYCARANTHES**, Blume (Gen.). *Pseudobulbs* on a creeping rhizome, elongate, cylindric or clavate, naked. *Leaves* 2-3, terminal, narrow. *Flowers* minute, woolly, in second spikes from the side of the pseudobulb or from between the leaves.—Sp. 21, 22.

VI. **HYMENERIA**, Lindl. (and *UROSTACHYA*, Lindl.). *Pseudobulbs* short or long, 1- ∞ -noded, often forming a fleshy stem, or crowded on the creeping rhizome. *Flowers* small or medium-sized, glabrous or pubescent, rarely woolly, in lateral or subterminal spikes or racemes.

* Flowers small or minute, in dense spikes, racemes or clusters.—Sp. 23-27.

** Flowers small or medium-sized, in lax spikes or racemes.—Sp. 28-51.

*** Flowers medium-sized, 1-3, long-pedicelled, on a short subterminal scape with as many large spreading white or coloured bracts. *Stem* erect, elongate,

usually fleshy, cylindric. (*Cylindrolobus*, *Blume*, Gen.) (See also Gen. 33. *TRICHOSMA*).—Sp. 52-60.

VII. *DENDROLIRION*, *Lindl.* Stems or pseudobulbs very various. Leaves one or few, terminal or subterminal on the pseudobulbs, or on a creeping rhizome. Flowers in terminal or subterminal spikes or racemes, or subsolitary on the rhizome, woolly or densely tomentose.

* Pseudobulbs usually large. Inflorescence white-woolly.—Sp. 61-68.

** Pseudobulbs large. Inflorescence brown-tomentose.—Sp. 69-70.

*** Pseudobulbs very small or 0.—Sp. 71-76.

VIII. *BAMBUSIFOLIA*, *Hook. f.* Stem tall, terete, leafy. Leaves distichous, elliptic or lanceolate, glabrous. Flowers in leaf-opposed racemes, glabrous or tomentose.—Sp. 77-79.

IX. *TRICHOTOSIA*, *Blume* (Gen.). Stems usually long, terete, leafy (short and creeping in *E. sedifolia*), often hirsute. Leaves narrow, distichous. Flowers in leaf-opposed clusters, spikes or racemes, more or less hirsute; lip usually very narrow and stiff; mentum short.—Sp. 80-90.

X. *XIPHOSIUM*. Pseudobulb uninodal, 1-leaved. Scape from the base of the pseudobulb, clothed below with equitant sheaths, the uppermost ensiform. Flower rather large; sepals keeled; ovary and pedicel tripterous.—Sp. 91.

XI. *ARIDOSTACHYA*, *Hook. f.* Pseudobulb very short, 1-leaved, sheathed as in *Xiphosium*. Scape from the base of the pseudobulb, stout, erect. Flowers minute, in dense rusty-tomentose spikes; sepals very short; mentum long, spur-like.—Sp. 92.

XII. *DILOCHIOPSIS*, *Hook. f.* Stems tufted, tall, erect, leafy. Leaves distichous, ensiform. Flowers in a short terminal branched panicle with large deciduous rigid bracts.—Sp. 93.

XIII. *PELLAIANTHUS*, *Hook. f.* Stems terete, short, erect from a creeping rhizome. Leaves 2, terminal. Spike short, lateral; perianth very thick; column with a very short foot or 0.—Sp. 94.

Sect. I. PORPAX (see p. 785).

1. *E. reticulata*, *Benth. in Gen. Pl.* iii. 509; sepals united in a subcampanulate very short broadly 3-lobed tube, petals spathulate 5-nerved, mentum obscure, lip half the length of the petals very shortly clawed panduriform, base with a long erect spur. *Porpax reticulata*, *Lindl. in Bot. Reg.* xxxi. (1845), *Misc.* 62; *Walp. Ann.* vi. 266. *Cryptochilus reticulatus*, *Reichb. f. in Bot. Zeit.* 1862, 214. *Aggeianthus reticulatus*, *Wight Ic.* t. 1737.

The DECCAN PENINSULA; Iyamallay Hills, *Wight*. Canara; at Chandway, *Ritchie*.

Pseudobulbs $\frac{3}{4}$ in. diam., densely crowded. Leaves not seen. Flower $\frac{1}{2}$ – $\frac{3}{4}$ in. long, purple-brown, minutely hispid; pedicel very short, with a very large broad bract and many sheaths; nerves strong, petals and lip subcrenulate; pollinia 4 or 8, pyriform.

2. *E. Meirax*, *N. E. Br. in Gard. Chron.* 1880, 603; sepals glabrous 5-nerved coherent into a gibbous-based tube with free ovate acute lobes, petals broadly oblong 5-7-nerved ciliate, lip minute ovate-cordate 5-nerved serrulate. *E. Elwesii*, *Reichb. f. in Gard. Chron.* 1883, i. 402. *Cryptochilus Meirax*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148.

TENASSERIM; at Moulmein, *Parish*. SIKKIM HIMALAYA, *Elwes*.

Pseudobulbs $\frac{1}{2}$ in. diam., minutely reticulate. Leaves not seen in Moulmein specimens, in Sikkim 1 in., oblong-lanceolate, acute, petioled. Flowers $\frac{1}{2}$ in. long; bracts very large, hemispheric, with a long mucro.—Mr. Brown indicates the

probability of *E. Elwesii* not differing from *E. Meirax*, and no distinctive characters for it are given.

3. *E. Lichenora*, Lindl. in *Journ. Linn. Soc.* iii. 46; leaves orbicular-ovate ciliate, perianth 2-labiate, lateral sepals connate pubescent, petals linear 1-nerved, mentum small rounded, lip very small shortly clawed ovate-cordate, sides toothed, tip acute or subulate. *E. Jerdoniana*. Reichb. f. in *Walp. Ann.* vi. 267. *Lichenora Jerdoniana*, Wight Ic. t. 1738.

MALABAR; on the Bababoodan Hills, Jerdon, &c.; Travancore, Johnson.

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., crowded. *Leaves* 1 in., dark green or purplish. *Flowers* $\frac{1}{2}$ in. long, tawny; pedicel very short, with a very broad ciliate bract, and many subsimilar sheaths; dorsal sepal orbicular-ovate, 5-nerved, united lateral concave.

4 *E. ustulata*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 147; leaves elliptic or broadly ovate subacute ciliolate, perianth 2-labiate pubescent, lateral sepals connate, mentum obscure, petals subspathulate 3–5-nerved, lip orbicular with a short tip erosely ciliate.

TENASSERIM; at Moulmein, Parish.

Very similar to *E. Lichenora*, but the flowers are much smaller and the lip different; the latter is described by the authors of the species as oblong acute undulate umbonate at the base.

5. *E. Parishii*, Lindl. & Reichb. f. in *Trans. Linn. Soc.* xxx. 147; leaves ovate acute ciliolate, sepals free glabrous 3-nerved, dorsal large orbicular-ovate obtuse, lateral short uncinate recurved obtuse, mentum large rounded, petals lanceolate falcate 3–5-nerved, lip very small elliptic subacute at both ends.

TENASSERIM; at Moulmein, Parish.

Pseudobulbs $\frac{1}{2}$ – $\frac{1}{2}$ in. diam. *Leaves* $\frac{3}{4}$ in. *Flowers* minute; sepals $\frac{1}{10}$ in. long; pollinia pyriform.

Sect. II. CONCHIDIUM (see p. 785).

6. *E. reticosa*, Wight Ic. t. 1637; leaves lanceolate or elliptic-lanceolate, flowers rather large, sepals acute 5-nerved, dorsal linear-lanceolate, lateral falcate, mentum broad incurved, petals lanceolate acute 5–7-nerved, lip nearly as long as the sepals linear-oblong 3-lobed, side lobes rounded terminal ovate, disk with 2 crested ridges. *E. uniflora*, Dalz. in Hook. *Kew Journ. Bot.* iv. (1852) 111. *E. braccata*, Dalz. & Gibs. *Bomb. Fl.* 262 (not Lindl.).

On the WESTERN GHATS, from the Concan to the Nilghiris, Wight, &c.

7. *E. braccata*, Lindl. in *Journ. Linn. Soc.* iii. 46 (excl. syn. Wt. & Dalz.); leaves oblanceolate, flowers large, sepals obtuse 5-nerved, dorsal oblong-lanceolate, lateral nearly straight, mentum broad incurved, lip narrowly oblong entire as long as the sepals, disk with 2 crested ridges. *Dendrobium braccatum*, Lindl. *Gen. & Sp. Orchid.* 75.

CEYLON; Central Province, Walker, &c.

Pseudobulbs $\frac{1}{4}$ – $\frac{2}{3}$ in. diam., not netted. *Leaves* 1–1 $\frac{1}{2}$ in. obtuse, apiculate. *Scape* 1–1 $\frac{1}{2}$ in.; bract cucullate. *Sepals* $\frac{1}{2}$ – $\frac{2}{3}$ in. long.

8. *E. pusilla*, Lindl. in *Journ. Linn. Soc.* iii. 48; leaves 1–3 spathu-

lately obovate with a terminal seta, flowers small, sepals acuminate and linear-lanceolate petals 3-nerved, mentum large incurved, lip lanceolate obscurely serrulate. *Walp. Ann.* vi. 267. *Conchidium pusillum*, *Griff. Notul.* 321; *Ic. Pl. Asiat.* t. 310 (*greatly enlarge*). *Phreatia uniflora*, *Wight Ic.* t. 1734.

KHASIA Mts., alt. 4-5000 ft., *Griffith*, &c.

Pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., distant on the slender rhizome. *Leaves* $\frac{1}{2}$ -1 in. *Scape* $\frac{1}{2}$ -1 in., capillary, 1-fl., with often a rudimentary second within the concave bract; sepals $\frac{1}{4}$ in. long.—*Lindley* overlooked this in the *Herb. Ind. Or. H. f. & T.*, referring it to *Bolbophyllum*.

9. ***E. extinctoria***, *Oliver in Bot. Mag.* t. 5910; dorsal sepal much smaller than the lateral ovate obtuse 5-nerved, lateral triangular acute 5-nerved, mentum longer than the lateral sepals conical incurved 2-lobed, petals oblong obtuse 3-nerved, lip larger than the sepals obcordate with a 2-lobed undulate midlobe in the sinus. *Dendrobium extinctorium*, *Lindl. in Bot. Reg. under t.* 1756, and in *Journ. Linn. Soc.* iii. 11; *Walp. Ann.* vi. 308.

TENASSERIM; at Moulmein, *Griffith*, *Parish*.

Pseudobulbs crowded, $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., naked. *Leaves* not seen. *Scape* 2-3 in., filiform, with 1-2 small sheaths; mentum $\frac{1}{4}$ - $\frac{1}{2}$ in. long; disk of lip with 3 hispid ridges, lobules of midlobe orbicular, with a scarlet blotch at the base; column very short.

Sect. III. BRYOBIUM (see p. 785).

10. ***E. articulata***, *Lindl. in Journ. Linn. Soc.* iii. 47; pseudobulbs ellipsoid adhering end to end like a chain, scape from the point of juncture of the bulbs capillary, spike flexuous, bracts cymbiform, flowers minute distant, sepals obtuse lanceolate, dorsal recurved, lateral with upcurved tips, mentum large incurved, petals small lanceolate, lip minute with a long slender claw and horseshoe-shaped limb. *Alwisia tenuis*, *Lindl. Fol. Orchid.* 1; *Thwaites Enum.* 300.

CEYLON; in the Ambagamowa district, *Walker*, *Thwaites*.

Pseudobulbs $\frac{1}{4}$ - $\frac{1}{2}$ in. long. *Leaves* 1-2, $\frac{1}{2}$ -1 in. long, oblanceolate, apiculate. *Scape* 1-3 in., naked; bracts broad, cucullate, acute; flowers buff, $\frac{1}{10}$ in. long; ovary very short; nerves of sepals very obscure.

11. ***E. exilis***, *Hook. f. Ic. Plant. ined.*; pseudobulbs as in *E. articulata*, scape short capillary, flowers distant in a flexuous spike, bracts cymbiform, sepals obtuse nerveless, dorsal largest oblong, lateral short falcately decurved, tips thickened, mentum as long as the sepals very stout incurved, petals linear-oblong 1-nerved, lip minute elliptic-oblong obtuse fleshy.

TRAVANCORE, *Johnson (Herb. Wight)*.

Much smaller than *E. articulata*, but closely resembling it in scape, bracts, and spike; leaves not seen; flowers $\frac{1}{12}$ in. long; pseudobulb small, with a membranous coat.

12. ***E. perpusilla***, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148; pseudobulbs clustered depressed, scape filiform, spike rather dense-fl., bracts ovate-lanceolate, sepals obtuse 1-nerved, dorsal triangular-ovate, lateral lanceolate, mentum obscure, petals linear 1-nerved, lip lanceolate 3-nerved, margins waved.

TENASSERIM; at Moulmein, *Parish*, *Lobb (in Herb. Lindl.)*.

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., smooth. *Leaves* not seen. *Scape* 2–2 $\frac{1}{2}$ in.; *spike* $\frac{1}{2}$ – $\frac{3}{4}$ in.; *bracts* $\frac{1}{10}$ in., hyaline; *sepals* about as long.

13. **E. Dalzellii**, *Lindl. in Journ. Linn. Soc.* iii. 47; pseudobulbs clustered depressed, scape filiform, spike many-fl. second, bracts lanceolate, sepals 1–3-nerved, dorsal ovate-lanceolate, lateral falcately ovate or lanceolate subacute or acuminate, mentum short rounded, petals lanceolate 1–3-nerved, lip small panduriform with 2 thickened nerves meeting near the rounded tip. *Dalz. & Gibs. Bomb. Fl.* 262; *Walp. Ann.* vi. 268. *E. microchilos*, *Lindl. l. c.*; *Dalz. & Gibs. l. c.*; *Walp. Ann. l. c.* *E. filiformis*, *Reichb. f. l. c.* 268 (in part). *Dendrobium microchilos*, *Dalz. in Hook. Kew Journ.* iii. (1851) 345. *D. filiforme*, *Wight Ic.* t. 1642 (central and left-hand figs.).

DECCAN PENINSULA; on the Ghats from the Concan southwards.

Very variable. *Pseudobulbs* $\frac{1}{2}$ – $\frac{1}{2}$ in. diam. *Leaves* 1–4 in., linear to oblanceolate, tip rounded, apiculate. *Scape* with spike 1–3 in.; flower yellow; sepals $\frac{1}{2}$ – $\frac{1}{2}$ in. long, lateral straight or falcate.

VAR. fimbriata; petals and in a less degree the lateral sepals fringed with translucent gland-tipped hairs. *Dendrobium fimbriatum*, *Dalz. in Hook. Kew Journ.* iv. (1852) 292. *D. Dalzellii*, *Hook. l. c.*

14. **E. nana**, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xi. 19; leaves 2 elliptic-lanceolate, scape and spike short, flowers second, sepals linear-lanceolate 3-nerved, mentum short, petals linear acuminate, base 3-nerved, lip half as long as the sepals, linear slightly contracted in the middle 3-nerved, tip rounded crenulate. *Lindl. in Journ. Linn. Soc.* iii. 46; *Walp. Ann.* vi. 269. *Dendrobium filiforme*, *Wight Ic.* t. 1642 (lower right-hand fig.).

NILGHIRI HILLS on trees, *Wight, Sir F. Adam.*

Closely allied to *E. Dalzellii*, but leaves more oblong, scape shorter, flowers twice as large, and lip much narrower.—An authentic specimen in Herb. Lindl. certifies Wight's figure quoted above, and his specimens being the plant of A. Richard. Lip not acute, as described by A. Richard and Lindley.

15. **E. muscicola**, *Lindl. in Journ. Linn. Soc.* iii. 47; leaves 2–3 petioled oblanceolate apiculate, scape and raceme longer than the leaves, flowers very small, bracts ovate or lanceolate, sepals lanceolate finely acuminate 1–3-nerved, lateral falcate, petals narrowly lanceolate 1–3-nerved, mentum rounded, lip narrow lanceolate or slightly dilated in the middle. *Dendrobium muscicola*, *Lindl. in Wall. Cat.* 2017; *Gen. & Sp. Orchid.* 75.

NEPAL, *Wallich*. KHASIA MTS., alt. 3–4000 ft., *Griffith, &c.* TENASSERIM, *Parish*. CEYLON; Central Province, alt. 5–7000 ft., *Gardner*.

Very like a small state of *E. Dalzellii* (with which *Reichb.* is disposed to unite it), but the lip is never panduriform. There may be more than one species here. *Wallich's* (imperfect) specimens are very small-flowered. I do not share *Lindley's* doubts (*Journ. Lin. Soc.* l. c.) as to their being from Nepal, for the specimens bear (in his own writing) the date of 1821, the year in which *Wallich* was in that country. In Tenasserim specimens the lip has very narrow side lobes about the middle, and an obtuse tip. In the Ceylon ones the flowers are larger (sepals $\frac{1}{2}$ – $\frac{1}{2}$ in.), and lip ovate-lanceolate, subacute, margins waved. The Khasia ones are in fruit only, capsule $\frac{1}{2}$ in., pyriform.

Sect. IV. ERIURA (see p. 785).

16. **E. paniculata**, *Lindl. in Wall. Pl. As. Rar.* i. 32, t. 36; in *Bot. Reg.* xxviii. 1842, *Misc.* 38; in *Journ. Linn. Soc.* iii. 55; leaves 10–

12 in. linear fleshy nerveless, bracts ovate-lanceolate reflexed, lip sub-orbicular, side lobes falcately oblong, midlobe reniform or 2-lobed crenate, hypochile greatly thickened with a disciform elevated basal tubercle and a very large heel-like one concave towards the column on the midlobe.

SIKKIM HIMALAYA, at Kursiong, J. D. H. KHASIA MTS., alt. 4000 ft., Griffith, &c. Naga Hills in UPPER ASSAM, Prain.

Stem 1-2 ft., as thick as a goose-quill. *Leaves* $\frac{1}{2}$ - $\frac{1}{2}$ in. broad, taper-pointed, in Sikkim specimens loaded with crystalline concretions. *Branches* of panicle 6-8 in.; bracts $\frac{1}{2}$ in.; mentum short, rounded; petals elliptic, obtuse, 3-nerved.

17. **E. obliqua**, Lindl. in *Journ. Linn. Soc.* iii. 55; stem 1-2 in., sheaths coriaceous, leaves 2 in. linear subacute thickly coriaceous, raceme erect capillary tomentose, bracts ovate-lanceolate, flowers minute, lip broadly cuneate, side lobes elongate triangular-lanceolate acute, midlobe very short truncate, angles acute, disk with a large erect fleshy spur on the midlobe and pulvinus at the base. *Mycaranthes obliqua*, Lindl. in *Bot. Reg.* 1840, *Misc.* 77.

SINGAPORE, Cuming; at Kranji in Mangrove Swamps, Ridley.

Stem erect from a very stout rhizome with fibrous roots. *Leaves* $\frac{1}{2}$ - $\frac{1}{2}$ in. diam., strict, erect; sheaths $\frac{1}{2}$ in., tubular, truncate. *Racemes* terminal, 2 in., stellately tomentose; pedicels slender, longer than the membranous bracts; sepals $\frac{1}{2}$ in. long, ovate, acute; petals linear, 1-nerved; mentum rounded; lip much broader than long; midlobe very short indeed, subapiculate and thickened at the broad truncate tip; spur flattened, incurved.—A curious little species.

18. **E. Kingii**, Hook. f. *Ic. Plant. ined.*; stem stout, leaves 4-7 in. linear-lanceolate unilaterally acuminate much shorter than the 1-3 scapes, bracts minute reflexed, pedicels slender, lip suborbicular, side lobes falcately oblong with a tooth at the sinus, midlobe subreniform, axis with a thick woolly ridge leading from 1 or 2 small papillæ at the base to a woolly knob on the midlobe.

PERAK, alt. 3-4000 ft., King's Collector, Scortechini.

Stems 2-3 ft., as thick as a swan-quill. *Leaves* coriaceous, nerved. *Racemes* 8-12 in.; bracts $\frac{1}{2}$ in.; flowers blue within; mentum cylindric; petals oblanceolate, 3-nerved. *Capsule* $\frac{3}{4}$ in., linear.

19. **E. iridifolia**, Hook. f. *Ic. Plant. ined.*; leaves 12-14 by $\frac{1}{2}$ -1 in. ensiform gradually narrowed from a broad sheathing base, much longer than the several simple slender hoary scapes, flowers in dense spikes white-tomentose, bracts ovate, lip broadly oblong from a rounded base, side lobes large membranous obtuse, disk with a broad tomentose ridge ending in a minute exserted thickened tip or midlobe.

PERAK; on Gunong Batu Pateh, Wray.

Stem at base 1 in. thick. *Leaves* coriaceous, spreading, uppermost longest. *Spike* and *scape* stellately hoary or tomentose; bracts acute, nearly glabrous; perianth tomentose, about $\frac{1}{8}$ in. long; mentum shortly cylindric; lip with 2 strong nerves parallel to the central ridge, and 3 calli at the very base.

20. **E. longifolia**, Hook. f. *Ic. Plant. ined.*; stem clothed with very long sheaths, leaves 12-14 in. grass-like, spikes solitary short shortly peduncled dense-fld., bracts minute, mentum short rounded, lip minute cup-shaped obtusely pointed.

PERAK, alt. 5000 ft., Wray.

Stem swollen at the base; internodes few, long; basal sheaths long, free, acuminate, lower 3-4 in., upper 4-6 in. *Leaves* unilaterally acuminate, many-nerved. *Spike* and peduncle 2 in.; flowers $\frac{1}{10}$ in.; sepals gland-dotted; petals

elliptic; lip very curious, like a short round-bottomed cup attached by the margin with a broad oblique mouth produced in front.—Only one specimen seen.

Sect. V. MYCARANTHES (see p. 785).

21. **E. stricta**, Lindl. *Coll. Bot.* t. 41 B; in *Journ. Linn. Soc.* iii. 52; pseudobulb elongate cylindric, spikes 1-2 terminal, lip 3-lobed with a basal oblong and subapical globose woolly callus. *Walp. Ann.* vi. 271. *E. secundiflora*, Griff. *Notul.* iii. 302; *Ic. Pl. Asiat.* t. 30. *Mycaranthes stricta*, Lindl. in *Wall. Cat.* 1970; *Gen. & Sp. Orchid.* 63; *Wight Ic.* t. 1763. *Octomeria secunda*, *Wall. mss.*

EASTERN HIMALAYA; Nepal, *Wallich*; Sikkim, *Griffith's collectors*, alt. 3-4000 ft., *J. D. H.* Naga Hills in UPPER ASSAM, *Griffith*. KHASIA HILLS, alt. 4000 ft., *J. D. H. & T. T.*—DISTRIB. Siam (alt. 7000 ft., *Murton*).

Pseudobulb 1-5 in., from a stout oblique rhizome, as thick as a goose-quill, basal sheaths very large, membranous. *Leaves* 3-4 in., oblong-lanceolate. *Scape* and *raceme* 3-5 in.; bracts cupular; petals oblong, 3-nerved.—The Siam specimen has a panduriform lip.

22. **E. merguensis**, Lindl. in *Journ. Linn. Soc.* iii. 52; pseudobulb clavate, spikes lateral, lip 3-lobed with a pubescent callus on each side lobe. *Reichb. f. in Gard. Chron.* 1880, 616.

TENASSERIM; at Mergui, *Griffith* (*Kew Distrib.* 5120), *Helper* (*Kew Distrib.* 5381), *Parish*, &c.

Pseudobulb 2-3 in., stipitate. *Leaves* as long, linear-lanceolate, obtuse or acute. *Scape* with *raceme* 2-5 in.; bracts obsolete; petals elliptic, 1-nerved.

Sect. VI. HYMENERIA (see p. 785).

* Flowers small or minute in dense spikes or racemes. See also 46. *E. recurvata*.

23. **E. convallarioides**, Lindl. in *Wall. Cat.* 1975; *Gen. & Sp. Orchid.* 70; in *Bot. Reg.* 1841, t. 62, *Misc.* 58; in *Journ. Linn. Soc.* iii. 53; stem after flowering very stout, leaves elliptic-lanceolate acuminate plicate, flowers in nodding oblong spikes small densely crowded concealing the membranous bracts, sepals very broad obtuse 5-7-nerved, mentum rounded, petals 3-nerved, lip cuneate truncate or with a broadly triangular warted tip. *Walp. Ann.* vi. 276. *Octomeria spicata*, *Don Prodr.* 31. *O. convallarioides*, *Wall. mss.* *Pinalia alba*, *Ham. mss.*

TROPICAL HIMALAYA, from Kumaon, alt. 4000 ft., *Strachey & Winterbottom*, eastwards to the KHASIA and NAGA HILLS, ascending to 5000 ft. TENASSERIM, *Parish*.

Stem after flowering 2-8 in., sometimes 1 in. diam. *Leaves* 4-7 by 1-2 in., loosely sheathed. *Scape* 2-3 in., stout; spike as long, ovoid; flowers subglobose, glabrous or sparsely pilose, white or straw-colored; bracts equalling the ovary, lowest longest. *Capsule* $\frac{1}{2}$ in., ellipsoid.—Var. *major*, Lindl. in *Bot. Reg.* 1847, t. 23, is only a large specimen.

24. **E. pumila**, Lindl. in *Wall. Cat.* 1972; *Gen. & Sp. Orchid.* 68; in *Bot. Reg.* 1838, *Misc.* 79; pseudobulbs 2-3 in. subcylindric or clavate, leaves lanceolate acuminate, flowers minute subcapitate on a short lateral peduncle, sepals very broad obtuse 3-nerved, mentum rounded, petals linear acute 1-nerved, lip broadly oblong 3-nerved, side lobes long spreading lanceolate acuminate close under the small orbicular midlobe. *Walp. Ann.* vi. 278.

KHASIA HILLS, *Wallich*. TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., tufted. *Leaves* petioled, acuminate. *Spike* $\frac{1}{2}$ in., oblong; bracts very broad, membranous; flowers $\frac{1}{2}$ in. diam., subglobose. *Capsule* $\frac{1}{4}$ in., pubescent.

25. ***E. floribunda***, Lindl. in Wall. Cat. 7408; Bot. Reg. 1843, Misc. 43; 1844, t. 23; in Journ. Linn. Soc. iii. 60; stem very stout, erect terete fleshy, leaves subterminal linear-lanceolate to elliptic, flowers small very many in leaf-opposed or lateral decurved spikes, lateral sepals very short and obtuse, mentum deeply saccate, side lobes of lip basal acute separated from the small fan-shaped truncate midlobe by a strong ridge. Walp. Ann. vi. 276.

MALAYAN PENINSULA; from Tenasserim to Singapore.—DISTRIB. Sumatra, Siam, Borneo.

Stem 10–18 in., as thick as the thumb or less. *Leaves* 2–5, 5–10 by $\frac{1}{2}$ – $2\frac{1}{2}$ in., many-nerved. *Scape* short and rachis stout, pubescent; spike 3–6 in.; bracts $\frac{1}{2}$ in., broadly ovate, reflexed; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. broad, white tinged with pink; dorsal sepal small, broad, obtuse, 3–5-nerved; petals ovate-oblong, obtuse; column very short; pollinia very narrow.—The specimens present great differences in size, breadth of leaf, and the tip of the lip, but I am unable to find specific characters for the forms.

26. ***E. bipunctata***, Lindl. in Bot. Reg. 1841, Misc. 83; stem oval compressed, leaves lanceolate acuminate 11-nerved, racemes axillary cylindric densely many-fl., flowers very minute subglobose, sepals ovate obtuse broadly oblong and acute, petals 3-nerved, mentum rounded, lip short, side lobes rounded spreading narrower than the rounded fleshy convex midlobe.

KHASIA HILLS, Gibson.

Stems 2–3 in., flat, green, old light purplish. *Leaves* as in *E. floribunda*. *Racemes* drooping, slightly pubescent; bracts ovate, acuminate, reflexed; flower very shortly pedicelled; sepals membranous, $\frac{1}{10}$ in. long; lip peculiar, claw broad short continuous with the foot of the column, the lateral ribs of which run along its sides, diverge opposite the side lobes enclosing a sunk space, and there form a thickened margin to the midlobe meeting at its apex; a strong ridge or nerve traverses the axis of the lip.—I have examined flowers only (in Herb. Lindl.), and seen no leaves.

27. ***E. scabrilinguis***, Lindl. in Journ. Linn. Soc. iii. 51; quite glabrous, leaves 2 broadly elliptic-lanceolate acuminate, scape stout erect, spike dense-fl., bracts minute, sepals $\frac{1}{2}$ in. oblong-lanceolate subacute, mentum rounded incurved, petals nearly as broad falcate, lip as long as the sepals, side lobes narrow with two mesial ridges, midlobe orbicular hispid with lines of purple papillæ.

SIKKIM HIMALAYA, Ic. Cathcart in Herb. Kew.

Pseudobulbs $1\frac{1}{2}$ –2 in., ovoid or ellipsoid, green, sulcate. *Leaves* 5–7 by $1\frac{1}{2}$ – $2\frac{1}{4}$ in., 3-nerved. *Scape* from between the leaves, very short, and rachis purplish; spike $2\frac{1}{2}$ in.; ovary $\frac{1}{2}$ in.; sepals and petals white; lip with pale rosy side lobes and purple midlobe.—Described from Ic. Cathcart.

** Flowers small or medium-sized, in lax many-fl. spikes or racemes.

† Lip entire or nearly so. (See also 37. *E. vittata* and 49. *E. saccifera*.)

28. ***E. polystachya***, A. Rich. in Ann. Sc. Nat. Ser. 2, xi. 20, t. 9; pseudobulbs 2–4 in. as thick as the thumb, racemes from amongst the lanceolate leaves suberect densely pubescent, flowers $\frac{1}{4}$ in. long, sepals

narrow obtuse 3-nerved, dorsal longest, petals linear oblong-ovate obtuse 3-nerved, lip entire ovate subpanduriform subacute, side nerves forming a 2-arched thickened purple ridge towards the base. *Wight Ic.* 1635 (*E. pubescens on the plate*); *Walp. Ann.* vi. 275.

NILGHIRI HILLS; on the West slope, *Perrottet, Wight.*

Leaves 3-5 in., acute or acuminate. Racemes as long or shorter, very many-fl.; pedicels shorter than the bracts; flowers yellowish.

29. **E. pubescens**, *Wight Ic.* 1634 (*E. polystachya* on the plate); pseudobulbs short as thick as the thumb, racemes from amongst the (lanceolate) leaves drooping slightly pubescent, flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. long, sepals lanceolate acute 5-7-nerved, dorsal longest, petals linear-lanceolate 5-nerved, lip entire ovate-subcordate acute, side nerves forming arched thickened ridges. *Walp. Ann.* vi. 275.

NILGHIRI HILLS; on the West slope, *Wight.*

Readily distinguished from *E. polystachya*, by its much larger flowers, nearly glabrous racemes, and 5-7-nerved sepals, which are white with pale streaks; lip with purple blotches and yellow tip.

30. **E. mysorensis**, *Jindl. in Journ. Linn. Soc.* iii. 54; pseudobulbs short thick, racemes from amongst the (lanceolate) leaves curved glabrous, flowers $\frac{1}{2}$ in., sepals lanceolate acute, nerves 3-5 very strong and reticulate, petals lanceolate acute 3-nerved, side nerves branching, lip clawed entire from ovate- to oblong-lanceolate subpanduriform, side nerves usually forming arched thickened ridges.

MALABAR and DHARWAR; on the Bababoodan Hills, *Law.*

This will probably prove to be a form of *E. polystachya*. Lindley describes the lip (which is very variable in size, shape, and nervation) as wholly smooth, but though the arched ridges are sometimes slender, they are always present, and often very thick and even crenate.

31. **E. bicolor**, *Lindl. Gen. & Sp. Orchid.* 65 (*not elsewhere*); pseudobulb 4-6 in. columnar, leaves linear, racemes from amongst the linear sessile leaves erect puberulous, flowers $\frac{1}{2}$ in. long, sepals lanceolate acute 3-nerved, outer nerves branching, petals linear acute 3-nerved, lip entire ovate-lanceolate acute obscurely lobed at the side smooth, claw very large deeply saccate. *Thwaites Enum.* 299.

CEYLON; Central Province, alt. 4-7000 ft., *Macrae, &c.*

Readily distinguished from *mysorensis* by the narrow leaves, stout scape and raceme, and by the remarkable sac at the base of the lip, which is constant.

32. **E. ringens**, *Reichb. f. in Bonplandia*, v. 222; pseudobulb 5 in. fusiform, leaves linear-lanceolate acuminate, racemes lateral glabrous, bracts ovate much shorter than the pedicels, flowers $\frac{1}{4}$ in., sepals lanceolate and broadly linear, petals 3-nerved, lip small ovate acute 5-nerved with an oblong thickening on each side below the middle. *Walp. Ann.* vi. 275.

TENASSERIM; at Moulmein, *Parish.*

Pseudobulb as thick as the finger in the middle. Leaves 5-6 in., terminal. Raceme 2-2 $\frac{1}{2}$ in., suberect.—Lindley (in *Journ. Linn. Soc.* iii. 55) refers this to *E. ovata*, B. R. xxx. (1844) under t. 29, of the Philippines, which has ovate obtuse leaves and a pubescent raceme.

33. **E. obesa**, *Lindl. in Wall. Cat.* 1976; *Gen. & Sp. Orchid.* 68; in *Bot. Reg.* 1844, under t. 29; in *Journ. Linn. Soc.* iii. 53; pseudobulbs

1-3 in. very stoutly clavate silvery green and with scarious sheaths, racemes lateral subcorymbose few-fl. puberulous, bracts large, flowers $\frac{3}{4}$ in. long, sepals lanceolate acuminate falcate 5-nerved, mentum subconic, petals oblong-lanceolate 3-nerved, lip nearly as long as the sepals linear-oblong, sides obscurely lobed, disk with 3 thickened ridges. *Walp. Rep.* vi. 277. *E. Lindleyana*, *Griff. Notul.* iii. 300.

MARTABAN, *Wallich*. TENASSERIM; at Mergui, *Griffith, Parish*.

Leaves "lanceolate or ovate-lanceolate," *Griffith*. *Flowers* white, lip pale yellow with purple lines. *Capsule* $1\frac{1}{2}$ in. long, slender.

†† Lip 3-lobed.

§ Flowers sessile or subsessile.

34 ***E. elata***, *Hook. f. Ic. Plant.* t. 1848; leaves coriaceous 6-12 in. oblanceolate acuminate, sheaths at their base 4-5 in., scape 12-14 in. very stout lax-fl., bracts $\frac{3}{4}$ -1 in. glabrous, lateral sepals $\frac{3}{4}$ in. strongly falcate 5-7-nerved, petals oblong 5-nerved, lip semilunar with a short rough midlobe in the sinus and 3 ridges in the axis.

PERAK, *Scortechini*.

Pseudobulb 4-5 in., base tuberous. *Bracts* lanceolate, much exceeding the broad incurved flowers; ovary and base of sepals pubescent; mentum rounded, incurved; column very long and slender, foot with a few hairs at the base. — A very peculiar species, quite unlike its allies, with much the habit of sect. *Xiphosium*. Perhaps referable to sect. *Dendrolirion*, but is nearly glabrous.

35. ***E. fragrans***, *Reichb. f. in Bot. Zeit.* xxii. 415; leaves lanceolate acuminate, spikes long drooping pubescent, bracts lanceolate equalling the ovary, sepals $\frac{3}{4}$ -1 in. and narrower, petals lanceolate acuminate falcate 5-nerved, lip with 5 crenulate ridges from the base nearly to the tip, side lobes ear-like, midlobe as long lanceolate.

TENASSERIM; at Moulmein, *Falconer, Parish*.

Pseudobulb 2-3 in., ovoid, sheathed. *Leaves* 8-12 in., variable in breadth. *Spikes* longer; flowers very sweet, white; side lobes of lip red; mentum rounded, incurved; column very short.

36. ***E. vittata***, *Lindl. in Journ. Linn. Soc.* iii. 51; leaves 2 elliptic or lanceolate, spikes decurved glabrous, base sheathed, lateral sepals $\frac{1}{2}$ in. short strongly decurved acute 5-nerved, petals linear-oblong falcate 5-nerved, lip sessile oblong with 5 crenulate ridges from the base to the apex, margins waved contracted towards the tip into a very short and broad midlobe. *Reichb. f. in Gard. Chron.* 1832, i. 330.

SIKKIM HIMALAYA, *McCarty & Hort. Kew.* MUNIPORE, alt. 4000 ft., *Watt*.

Pseudobulbs 2-5 in., oblong or cylindric. *Leaves* very variable, 4-8 in. *Rachis* of spike stout; flowers broad, green striped with red; mentum nearly as long as the sepals, broadly conic or saccate; column long. — *Bracts* not seen, probably deciduous.

37. ***E. graminifolia***, *Lindl. in Journ. Linn. Soc.* iii. 54; leaves 4-6 linear-lanceolate, spikes erect puberulous, bracts broadly ovate shorter than the pubescent ovary, lateral sepals $\frac{1}{2}$ in. ovate-lanceolate subacute 3-5-nerved, petals linear-lanceolate acute 3-nerved, lip short, side lobes oblong recurved with a short ridge or auricle, midlobe orbicular, axis with sometimes a crenulate ridge from base to tip. *Hook. f. Ic. Plant.* t. 1847. *E. alba*, var. β ., *Lindl. l. c.*

SIKKIM HIMALAYA, *Griffith's Collectors* (*Kew Distrib.* 5115, *E. alba*?), alt. 5-6000 ft., *J. D. H.*

Pseudobulbs short or elongated into a naked or sheathed vermiform cylindric stem, 5-6 in., and as thick as a pencil, at first sheathed. *Leaves* 4-6 in., subovate, rigid. *Spike* shorter; flowers glabrous, white; mentum rounded; lip very variable as to ridges, &c.; its spreading and recurved side lobes are a good character.—A drawing (in *Herb. Hort. Calc.*) of a Sikkim plant which may be a form of this has small side lobes of the lip pointing upwards, a ridge on the centre only of the midlobe, and two calli? between the side lobes. The habit is entirely that of *graminifolia*.

38. **E. Andersoni**, *Hook. f. Ic. Plant. ined.*; leaves 2 narrowly linear-lanceolate, spike suberect stout pubescent, bracts large broadly ovate or ovate-lanceolate revolute, lateral sepals triangular ovate acuminate, mentum broadly conical obtuse, petals oblong-lanceolate acute, lip obovate, side lobes short erect, midlobe orbicular, disk with 2 median ridges, column short.

SIKKIM HIMALAYA; at Darjeeling, *T. Anderson* (*l.c.* in *Herb. Calcutt.*).

Pseudobulbs 2-5 in., cylindric, striate. *Leaves* 4-6 in. *Spike* much shorter than the leaves, rather dense-flid.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., green; ovary $\frac{1}{2}$ in., sessile, tomentose; lateral sepals $\frac{1}{2}$ in., pinkish; lip purplish, midlobe yellow.—Described from two drawings in *Herb. Hort. Calcutt.*

39. **E. excavata**, *Lindl. in Wall. Cat.* 1974 (*in part*); leaves 4-6 narrow strongly nerved, scape shorter and spikes pubescent, bracts lanceolate, sepals $\frac{1}{2}$ in. ovate-lanceolate falcate, petals 5-nerved, mentum 0, lip short sessile with 3 central crenate ridges, side lobes basal ovate obtuse spreading, midlobe large suborbicular or obovate or transverse, column very short broad, foot deeply excavate. *Hook. f. Ic. Pl. t.* 1846. *E. excavata*, *in part*, *Lindl. Gen. & Sp. Orchid.* '67. *E. sphærochila* and *E. flava*, *var. rubida*, *Lindl. in Journ. Linn. Soc.* iii. 54, 49. *Octomeria excavata*, *Wall. mss.*

NEPAL, *Wallich*. SIKKIM and KHASIA Mts., alt. 4-6000 ft., *J. D. H.*

Pseudobulbs 1-2 in., ovoid or subcylindric, never much elongate. *Leaves* 5-6 in., sessile, rigid, lanceolate. *Spike* few-flid.; very short pedicel with ovary $\frac{1}{2}$ - $\frac{3}{4}$ in.; flowers white, lip yellow with pink side lobes and very strong purple nerves, base saccate.—The only species of this group with basal spreading side lobes of the lip. *Wallich's* No. 1974 consists of flowering specimens of this, and flowerless of *E. confusa* (which has not an excavate column); but in the distribution of his Herbarium, Lindley received flowering specimens of *confusa* only, the character of the stem of which he introduced into that of *excavata*.

40. **E. alba**, *Lindl. Gen. & Sp. Orchid.* 67; pseudobulbs not elongating, leaves 3-5 narrow strongly nerved, scape and ovary pubescent, bracts lanceolate, sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. ovate-lanceolate 3-5-nerved glabrescent, petals linear-oblong 3-nerved, mentum rounded, lip oblong broadly clawed, side lobes about the middle pointing forward obtuse, midlobe orbicular, disk with usually 2 thick obtuse ridges between the side lobes and a slender mesial one on the rough midlobe, column short. *Hook. f. Ic. Pl. t.* 1845. *Octomeria alba*, *Wall. mss.*

SUBTROPICAL HIMALAYA; from Kumaon, alt. 3-6000 ft., *Edgeworth, Royle, Strachey & Winterbottom* (*E. excavata*), to Sikkim, alt. 6-7000 ft.

Habit of but differing from *excavata* in the pronounced mentum, and different column and lip, on which latter the ridges are sometimes obsolete or represented by 2 calli; nerves of sepals and petals sometimes anastomosing; flowers white, lip yellow and red; column small, but not broad and excavate.

41. **E. Eriopsidobulbon**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148; leaves 2-3 narrow, spike short puberulous, bracts equalling the very small glabrous flowers, lateral sepals ovate-lanceolate obtuse and linear-oblong acute petals 3-nerved, mentum short incurved, lip obovate with 2 thickened arched ridges on the disk, side lobes above the middle, midlobe small semicircular 5-ridged, column long.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 2 in., oblong or ovoid. *Leaves* 4-6 in., linear-lanceolate, nerves slender. *Spike* 2 in.; nerves of sepals and petals quite simple.

§§ Flowers pedicelled.

a. *Bracts large, lanceolate or ovate-oblong.*

42. **E. confusa**, *Hook. f. Ic. Plant.* t. 1850; pseudobulbs elongating into cylindric stems, leaves 2-8 narrow rigid strongly nerved, racemes lateral tomentose, bracts large lanceolate pubescent, sepals $\frac{1}{2}$ - $\frac{2}{3}$ in. broadly ovate-oblong obtuse 5-nerved pubescent, mentum broadly conic, petals elliptic-lanceolate 3-5-nerved, lip broadly obovate, side lobes incurved with 3 thick middle ridges, midlobe orbicular or ovate thickened, column rather long. *E. excavaea*, in part, *Lindl. Gen. & Sp. Orchid.* 67, and in *Wall. Cat.* 1974.

NEPAL, *Wallich*. SIKKIM, alt. 4-6000 ft., *J. D. H.*, &c. (*E. alba*).

Pseudobulbs 2-4-nodal, lengthening into terete striate stems 3-10 in. long, and as thick as the finger. *Leaves* lanceolate. *Racemes* 2-4 in., inclined; flowers white, lip yellow; pedicel with ovary $\frac{3}{4}$ -1 in.; bracts $\frac{1}{2}$ in.; nerves of perianth not branching.—Near *E. bractescens*, differing in the stiff narrow leaves and bracts. A drawing of it in *Herb. Calcutt.* shows no ridges on the side lobes of the lip, but 2 small spots on the disk and a mesial crest on the yellow midlobe.

43. **E. acervata**, *Lindl. in Journ. Hort. Soc.* 1851, 57, with woodcut; and in *Part. Fl. Gard.* i. 170; pseudobulbs crowded, leaves 3-5 oblanceolate flaccid, racemes and flowers glabrous, scape interfoliar, bracts lanceolate, lateral sepals ovate-lanceolate acuminate 5-7-nerved, petals linear-oblong or lanceolate 5-nerved, mentum rounded or broadly conic, lip oblong or obovate with 3 median ridges, side lobes about the middle incurved, midlobe ovate or orbicular, column very short. *Reichb. f. in Gard. Chron.* 1878, 106; *Hook. f. Ic. Pl.* t. 1849; *Walp. Ann.* vi. 269. *Dendrobium seriatum*, *Wall. mss.*

SIKKIM HIMALAYA (*Ic. in Hort. Bot. Calc.*). KHASIA HILLS, alt. 4-5000 ft., *J. D. H. & T. T.* ? TENASSERIM, *Parish*.

Pseudobulbs 1-2 in., ellipsoid, grooved or flask-like and flattened if too crowded, not lengthening into long stems. *Leaves* 4-8 in., obtuse or acute, pale green, many-nerved. *Racemes* 2-3 in., slender; pedicels with ovary $\frac{3}{4}$ -1 in.; bracts half as long; flower broad, white or yellowish, membranous.—The texture of the leaves is peculiar. In *Herb. Calcutt.* is a drawing of a Sikkim plant which I take to be a form of this with a more conical incurved mentum. *Parish's* Tenasserim plant has short broad leaves of a different texture.

44. **E. bractescens**, *Lindl. in Bot. Reg.* 1841, *Misc.* 18; 1844, t. 29; leaves 2-3 oblong, racemes slender and long-pedicelled white flowers glabrous or puberulous, bracts large, lateral sepals $\frac{1}{4}$ - $\frac{1}{2}$ in. ovate-lanceolate acuminate falcate and linear-oblong petals 5-nerved, mentum conical subacute, hypochile cuneate-obovate with 3 thickened ridges, the lateral short, side lobes pink rounded, midlobe quadrate. *Walp. Rep.* vi. 277.

SINGAPORE, *Cuming* (*Hort. Loddiges*). TENASSERIM; at Mergui, *Parish*.

Pseudobulbs 1-1½ in., crowded, oblong, 2-3-nodal. *Leaves* 3-4 in., obliquely 2-fid. *Racemes* suberect; bracts linear-oblong or elliptic, lower ¾ in., empty, margins recurved; pedicel very slender, with the ovary 1 in.; column rather long.

VAR. ? *Kurzii*; pseudobulb 2-3 by ½-1 in. diam. brown, leaves 3-5 by 1½-2 in. elliptic shortly petioled, bracts elliptic flat tipped with pink, flowers much larger white, ridges of lip yellowish, midlobe orbicular-cordate. *E. Kurzii*, *T. Anders. mss.*—Andaman Islands, *lc. in Herb. Calcutt.*

VAR. ? *affinis*; pseudobulbs elongate rugose, leaves lanceolate, bracts yellowish tinged with brown, racemes sparsely pubescent, flower white, base of green lip pale orange, foot of column red. *E. affinis*, *Griff. Notul. iii. 297.*—Mergui, *Griffith*, who suggests its being a variety of his *E. pulchella* (*Griffithii*, *R. f.*).

45. ***E. Griffithii***, *Reichb. f. Xen. Orchid. ii. 163*; leaves 2-3 shortly petioled elliptic-lanceolate, racemes erect pubescent equalling the leaves, flowers ochreous, bracts large oblong, margins revolute, lateral sepals lanceolate acute, mentum rather long, petals ovate-lanceolate, hypochile cuneate 3-ridged, side lobes rounded purple, midlobe ovate acute yellow. *E. pulchella*, *Griff. Notul. iii. 297.*

TENASSERIM; at Mergui, *Griffith, Parish*.

I cannot distinguish dried specimens of this from *E. bractescens*. There is an excellent drawing of it by Griffith in *Herb. Lindley* and by Parish at Kew.—Identified by Lindley with *bractescens*. Griffith's specimens have ovoid rugose almost grooved pseudobulbs, 2-3 in. long, and leaves narrowed into a petiole, but in his drawing the pseudobulbs are small and leaves sessile.—The endeavour to distinguish the species of this section, of which the specimens are often insufficient, has been very laborious, and the result is far from satisfactory.

46. ***E. recurvata***, *Hook. f. Ic. Plant. ined.*; pseudobulbs 6-8 in. stout terete, leaves long-petioled elliptic-lanceolate acuminate, racemes lateral many-fid. pubescent, bracts ovate-lanceolate acuminate as long as the ovaries, sepals falcately lanceolate acuminate 5-nerved and lanceolate acuminate petals recurved from the middle, mentum long 2-lobulate incurved, side lobes of lip narrow rounded, midlobe obcordate apiculate, disk with a flattened broad ridge between the side lobes.

PERAK, *Kunstler* (*lc. in Herb. Calcutt.*).

Pseudobulbs subtoruous, 3-4-nodal, grooved. *Leaves* 6-10 by 1-1½ in., plicate; petiole 1-2 in. *Racemes* 6 in., drooping; bracts yellow, flat or concave, lower 1 in.; sepals ½ in., glabrous, white with pink veins and tips; lip with purplish side lobes and a yellowish disk and midlobe; column very short.—A very fine species, perhaps better referred to the section with dense flowers (after *scabrilinguis*).

47. ***E. myristiciformis***, *Hook. Bot. Mag. t. 5415*; pseudobulbs ellipsoid, leaves 2-3 oblanceolate, racemes erect and flowers glabrous, bracts lanceolate exceeding the ovary reflexed, lateral sepals ovate acute 5-nerved, petals oblong 3-nerved, mentum rounded, lip obovate with 2 long calli between the small rounded side lobes and an ovate crested midlobe, disk ridged.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs of the size and form of nutmegs, striate. *Leaves* 5-7 in., acute. *Racemes* much shorter than the leaves; pedicels with ovary 1 in.; flowers pure white; lip yellowish; column very short.—Specimens insufficient. *Parish's E. trilophata*, *mss.*, referred by Reichenbach to *E. dasypus*, is, I think, this.

β. *Bracts small or narrow.*

48. ***E. saccifera***, *Hook. f. Ic. Plant. ined.*; pseudobulbs elongate

cylindric, leaves few 8-12 in. petioled elliptic-lanceolate, racemes slender laxly many-fl. drooping subtomentose, bracts linear-oblong shorter than the slender ovaries, flowers small, lateral sepals short acute, mentum subcylindric-sacciform, base rounded, petals elliptic acute 3-nerved, lip with a long claw expanding into a subreniform or fan-shaped rugose limb.

PERAK; on Gunong Batu Pateh, *Wray*.

Pseudobulbs 3 in., tufted, base swollen. *Leaves* 2-3, contracted into a slender 1-1½ in. petiole, plaited. *Racemes* 5 in., brown-pubescent; bracts ½ in.; pedicels with ovary longer than the saccate mentum; flowers about ½ in. diam., membranous, glabrous within, "shades of dull pink, claret, and yellow," *Wray*.—An anomalous species, with the habit of this group, but a very different lip.

49. ***E. concolor***, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148; pseudobulbs fusiform, leaves linear-lanceolate, racemes suberect few-fl. sparsely pubescent, bracts small ovate-lanceolate, lateral sepals ½ in. ovate-lanceolate acuminate and oblong acute petals 3-5-nerved, hypochile oblong, base narrow cuneate, side lobes very narrow, disk with a thick ridge, midlobe orbicular retuse apiculate.

TENASSERIM, *Parish*; on Moolyet, *Gallatly*.

Pseudobulbs 1-3 in., young clothed with truncate cupular imbricating sheaths. *Leaves* 4-6 in., very narrow, rather membranous. *Racemes* very slender; flowers 2-4, pale yellow-green; mentum obtusely triangular; epichile dirty yellow; column rather long.—Described chiefly from *Parish's* drawing. Very like *Griffithii*, except in the small bracts.

50. ***E. Maingayi***, *Hook. f. Ic. Plant. ined.*; pseudobulbs tufted fusiform, leaves 2-3 linear-lanceolate thickly coriaceous, racemes very slender lax-fl. puberulous, bracts oblong as long as the very slender pedicels, flowers small, lateral sepals triangular-ovate acute and linear-oblong obtuse petals 5-nerved, mentum stout incurved, hypochile broadly obovate-oblong 3-ridged, base rounded, side lobes rounded crenate small, midlobe orbicular.

PENANG; on Government Hill, *Maingay (Kew Distrib. 1632)*.

Pseudobulbs 1-1½ in. *Leaves* spreading rigidly horizontally. *Racemes* 2 in., flowering nearly to the base; bracts ½ in. long, nerved; sepals about ½ in. long.—*Reichenbach* has given this the mss. name of *E. anthomeniaca* (in *Herb. Kew*), the application of which I fail to see.

51. ***E. tricolor***, *Thwaites Enum.* 429; pseudobulbs tufted fusiform, leaves many 5-9 in. lanceolate, bases sheathing, racemes slender laxly many-fl. furfuvaceous, bracts small elliptic obtuse 1-nerved, sepals ovate and linear-oblong petals obtuse white, mentum broad, hypochile cuneate with subfalcate side lobes, midlobe rounded, tip recurved obtuse.

CEYLON; in higher parts of the Central Province, *Thwaites*.

Pseudobulbs 3-5 in., polynodal, brown; young clothed with many short obtuse imbricating sheaths. *Leaves* 6-8 in., forming a distichous terminal tuft, recurved. *Racemes* from the sides of the pseudobulb, erect, as long as the leaves; bracts green, shorter than the ovary; flowers ¾ in. diam.

*** Stem elongate, terete, cylindric or clavate (broad and compressed in *E. bifolia*), fleshy or rigid. *Leaves* few, usually subterminal. *Flowers* 1-3, medium-sized, usually long-pedicelled on a short sometimes obsolete lateral or subterminal peduncle; bracts large, often coloured, sessile

amongst the leaves when the peduncle is short or 0; flowers usually white.

52. **E. pauciflora**, *Wight Ic. t.* 1636; stem slender below clavate above, leaves 2 linear-oblong, flowers 1-2, pedicels very slender with 2-3 oblong bracteoles, bracts basal oblong obtuse, lateral sepals $\frac{1}{2}$ in. ovate acute glabrous 5-nerved, mentum rounded, petals oblong 3-nerved, lip sessile cuneately oblong truncate, lobes obscure, disk with 2 calli, axis ridged, column short. *Lindl. in Journ. Linn. Soc.* iii. 58 (*excl. Khasia hab.*); *Walp. Ann.* vi. 272.

NILGHIRI HILLS, *Wight*.

Stems 5-6 in., from a creeping stock; internodes $\frac{1}{2}$ -1 in.; sheaths short, truncate. *Leaves* 2-5 in., obtuse or subacute. *Scape* 1-1 $\frac{1}{2}$ in., very slender; bracts $\frac{1}{2}$ in., membranous; bracteoles scattered, $\frac{1}{3}$ - $\frac{1}{2}$ in.; flowers white; outer nerves of petals branching; lip strongly nerved.—The bracteoles are anomalous.

53. **E. Lindleyi**, *Thwaites Enum.* 299; stem elongate clavate, leaves elliptic-lanceolate, scape short 2-3-fl., bracts very large oblong, sepals ovate or lanceolate 7-9-nerved glabrous, mentum rounded, petals linear-oblong falcate obtuse 3-5-nerved, broad lateral lobes of hypochile almost as long as the suborbicular epichile, disk with 2 calli between the lobes, column long. *E. ephemera*, *Reichb. f. in Walp. Ann.* vi. 272. *E. bicolor*, *Lindl. in Journ. Linn. Soc.* iii. 58 (*not of Gen. & Sp.*). *Dendrobium bicolor*, *Lindl. Gen. & Sp. Orchid.* 90.

CEYLON; in the Central Province, ascending to 7000 ft., *Walker, Thwaites*.

Stem 6-18 in., sometimes 1 in. diam. above, smooth; internodes not swollen. *Leaves* 3-4 in. *Peduncle* 1-1 $\frac{1}{2}$ in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., very variable in shape; flowers white; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., variable in breadth.

54. **E. truncata**, *Lindl. in Journ. Linn. Soc.* iii. 58; stem subcylindric, leaves lanceolate, scape short and flowers tomentose, bracts large oblong, sepals oblong-ovate obtuse 7-nerved, mentum rounded, petals linear-oblong falcate 5-nerved, lip sessile fleshy semicircular truncate with a slender triple ridge, column rather long and broad.

TENASSERIM; on Thoung-gyun, alt. 4-5000 ft., *Lobb*.

Stem 4-6 in., covered with obtuse sheaths. *Leaves* 3-5 in., thick, acute. *Peduncle* $\frac{1}{2}$ in., stout, pedicel with ovary as long; sepals $\frac{3}{4}$ in. long, white.

55. **E. clavicaulis**, *Wall. mss. ex Lindl. Bot. Reg.* 1840, *Misc.* 90 (*not of Journ. Linn. Soc.*); stem elongate subclavate, leaves 2-4 elliptic-lanceolate, scape 2-3-fl., bracts elliptic or oblong, lateral sepals triangular acute, mentum broad rounded or incurved, petals broadly oblong 5-nerved, hypochile broadly obovate, side lobes large rounded sometimes embracing the smaller rounded crenate puberulous epichile, disk with a tomentose ridge thickened at the sinus and 2 elongate lateral calli, column long. *Walp. Ann.* vi. 278. *E. khasiana*, *Lindl. in Journ. Linn. Soc.* iii. 59.

KHASIA HILLS, *Griffith (& Ic. in Hort. Bot. Calc.)*.

Stems 6-8 in., crowded, terete; internodes 2 in.; sheaths short, acute. *Leaves* 3-4 in., terminal, acuminate. *Scape* $\frac{1}{2}$ -1 in.; pedicels about as long, slender; bracts $\frac{1}{2}$ -1 in., many-nerved; flowers glabrous, white, lateral sepals $\frac{1}{2}$ - $\frac{1}{2}$ in., and lip white with purple margins.—The habitat of Wallich's *E. clavicaulis* is not recorded; the cultivated specimens in Herb. Lindley have larger flowers than the native ones, with a broader lip.

56. ***E. amica***, *Reichb. f. Xen. Orchid.* ii. 168, t. 3, f. 6-9; stem cylindric, leaves cuneately oblong-ligulate, raceme few-fl., rachis and sepals puberulous; bracts large ovate acute, lateral sepals triangular, petals linear-lanceolate, lip cuneately dilated 3-fid, side lobes obtusely angled, isthmus narrow, midlobe obcordate, disk 3-keeled.

ASSAM, *Hort. Day*.

Pseudobulb cylindric, 4-5 by $\frac{1}{2}$ in. *Leaves* acuminate. *Bracts* 7-nerved, $\frac{1}{2}$ as long as the pedicel with the ovary. *Flowers* pale straw-colour with red nerves; lip dark purple, midlobe pale yellow; androclinium immersed, foot with two small horns in the hollow.—Description from Reichb.

57. ***E. acutifolia***, *Lindl. in Bot. Reg.* 1842, 38; stem short oblong, leaves fleshy lanceolate coriaceous very acute as long as the erect 5-6-fl. pubescent scape, bracts oblong reflexed, flowers glabrous, side lobes of hypochile very acute, epichile oblong obtuse concave with 3 fleshy nerves, column deeply hollowed. *Walp. Ann.* vi. 278.

INDIA (*Hort. Loddiges*).

Near *E. clavicaulis*. *Leaves* 2-3 in. *Flowers* white, veined with violet; lip with purple base and dull yellow tip.—Description from Lindley; I find no specimens in his Herbarium.

58. ***E. marginata***, *Rolfe in Gard. Chron.* 1889, i. 200; stem clavate slender below, leaves 3 linear-oblong obtuse, scape short 2-fl. and sepals white-tomentose, bracts large oblong, lateral sepals triangular-lanceolate acuminate 5-nerved, petals oblong obtuse 7-nerved, mentum rounded, hypochile oblong, side lobes uncinatè much shorter than the rounded crenate pubescent epichile, disk with a tomentose ridge and tubercle at the base of the epichile.

BURMA (*Hort. Bonham Carter*).

Stem 3 in. *Leaves* as long. *Scape* $\frac{1}{2}$ in., bracts $\frac{1}{2}$ in., petaloid, glabrate, yellow; pedicel with ovary as long; flower 1 in. diam., white flushed with pink; lip pale yellow, margined with red.—Described from one specimen.

59. ***E. nutans***, *Lindl. in Bot. Reg.* 1840, *Misc.* 83; in *Journ. Linn. Soc.* iii. 58; stem terete leafy sheathed throughout, leaves lanceolate acuminate, bracts broad flat fleshy acute, flower pedicelled solitary campanulate glabrescent, lateral sepals broad and petals obtuse, hypochile sessile lunate embracing the small orbicular epichile, disk with a central ridge from base to apex and two short lateral ones. *Walp. Ann.* vi. 272.

PENANG, *Maingay (Kew Distrib.* 1679, 1679/2). PERAK, *Scortechini*. SINGAPORE, *Cuming (Hort. Loddiges)*.

Stem 6-10 in.; sheaths imbricate, acute. *Leaves* 4-7 in., lanceolate, acuminate. *Bracts* flesh-cold; pedicel $\frac{1}{4}$ - $\frac{3}{4}$ in.; flowers white tinged with bright red; tips of petals and lip yellow.—Amongst Scortechini's Perak drawings is one like this (*Dendrobium*, 892), but with ovate-lanceolate spreading side lobes of lip, and a much larger orbicular midlobe.

60. ***E. biflora***, *Griff. Notul.* iii. 302 (not of Lindl.); stem clavate, internodes very short, leaves elliptic-lanceolate, scape very short lateral 2-fl., bracts ovate-cordate, flowers very small glabrous, sepals oblong-lanceolate and linear-oblong petals obtuse 3-nerved, mentum short incurved, lip elliptic obtuse, disk with 2 broad lamellæ and a median ridge, column very short.

SIKKIM HIMALAYA (*Ic. Herb. Calcutt.*). TENASSEEIM; at Mergui, *Griffith*.

Stems 4-6 in., tufted, slender below; internodes $\frac{1}{2}$ in., terete. *Leaves* 3 in.

Scape $\frac{1}{2}$ in.; bracts twice as long; flower $\frac{1}{4}$ in. diam., yellow-white.—The Sikkim habitat is from a drawing of a garden specimen. Lindley, in founding his *E. biflora* on Griffith's *Trichotosia biflora*, overlooked Griffith's *E. biflora*.

Sect. VII. DENDROLIRION (see p. 786).

* *Pseudobulbs usually large. Inflorescence white- or yellowish-tomentose or woolly.*

61. ***E. flava***, Lindl. in Wall. Cat. 1973 (in part); Gen. & Sp. Orchid. 65; in Journ. Linn. Soc. iii. 49 (excl. var. β .); pseudobulbs large 3-5-leaved, scape and sessile flowers white-tomentose, lateral sepals $\frac{3}{4}$ in ovate-lanceolate obtuse 9-nerved, mentum subcylindric, petals obtuse 3-nerved, hypochile broadly oblong puberulous, lobes short broad, epichile subquadrately rounded. *E. pubescens*, Lindl. in Bot. Reg. under t. 904. *E. laniceps*, Reichb. f. in Hamb. Gartenzeit. xix. 10. *Dendrobium pubescens*, Hook. Exot. Fl. t. 124. *Octomeria flava*, Wall. mss. *O. pubescens*, Spreng. Syst. iv. 310.

TROPICAL HIMALAYA, from Garwhal eastwards to Bhotan.

Pseudobulbs 3-4 in.; base sheathed; young leafy throughout. *Leaves* 6-10 in., petioled, acuminate, often loaded with concretions. *Scape* 6-10 in., stout; bracts $\frac{1}{2}$ -1 in., ovate, acuminate; ovary $\frac{3}{4}$ -1 in.; flowers yellow with purplish markings on the disk of the lip, which is tumid or variously thickened, claw very broad; column short, broad.—In the Fl. Exot. figure the petals are ovate-oblong, obtuse. In a Garwhal specimen marked by Reichenbach as the true plant of Fl. Exot. the claw of the lip is pointed, and the thick disk of the midlobe trifid in front. In Garwhal specimens of Falconer's marked *E. laniceps* by Reichb. the disk of the midlobe is thickened on each side with a central callus and another above the claw. Wallich's 1973 includes *E. flava*, *elongata* & *tomentosa*.

VAR. *lanata*; flowers smaller, lip narrower, midlobe purplish with thickened nerves on the disk. *E. lanata*, Griff. Notul. iii. 301; Lindl. in Journ. Linn. Soc. iii. 49.—Sikkim Himalaya, J. D. H. Tenasserim, Griffith (Kew Distrib. 5123), Helfer (Kew Distrib. 5122).

62. ***E. elongata***, Lindl. in Journ. Linn. Soc. iii. 49; characters of *E. flava*, but spikes often much longer, flowers smaller, often pedicelled, petals oblanceolate. *E. flava*, Griff. Notul. iii. 301; Wall. Cat. 1973/3 (in part).

TENASSERIM and AWA, Wallich, Griffith, Lobb, Parish.

I doubt this being more than a variety of *E. flava*, but there may be several species included under this and *E. flava*.

63. ***E. andamanica***, Hook. f. Ic. Pl. ined.; pseudobulbs as in *E. flava*, leaves elliptic-lanceolate, lateral sepals $\frac{3}{4}$ in. long acuminate 9-nerved, petals oblanceolate 5-nerved, lip 1 in. long narrowly oblong from a broad claw pubescent, side lobes narrow acute, axis thickened, midlobe as broad but much shorter subquadrate 2-fid veined, column long.

SOUTH ANDAMAN ISLANDS, Kurz.

I advance this as a species with great hesitation, but the long column, nearly half as long as the dorsal sepal, and the corresponding long lip are very strong characters (if constant).

64. ***E. pulchella***, Lindl. in Wall. Cat. 7407; in Bot. Reg. 1841, Misc. 52; in Journ. Linn. Soc. iii. 51; pseudobulbs ellipsoid or clavate, leaves 2-5 subcoriaceous, flowers few in a stout leaf-opposed white-tomentose

scape, sepals short thick spreading from the base tomentose on both surfaces, mentum 0, lip small sessile entire orbicular or subcordate, disk thickened pubescent, column long stout, foot very short with a large purple shining tubercle at the base. *Walp. Ann.* vi. 271. *E. discolor*, *Lindl. in Journ. Linn. Soc. l. c.* *Callostylis rigida*, *Blume Bijdr.* 340, f. 74; *Lindl. Gen. & Sp. Orchid.* 129. *Tylostylis*, *Blume Fl. Jav. Præf.* vi.

SIKKIM HIMALAYA, alt. 3-4000 ft., J. D. H. TENASSERIM, alt. 4000 ft., *Parish.* PERAK, *Scortechini.* MALACCA, *Cuming.*—DISTRIB. Siam, Java.

Pseudobulb 1-pluri-nodal, 2-10 in. long, contracted at both ends. *Leaves* 3-5 in., sessile, obtuse or notched. *Scape* 2-3 in., base sheathed; bracts orbicular, coriaceous; flowers yellow, $\frac{1}{2}$ - $\frac{3}{4}$ in. diam.; lateral sepals broadly ovate; petals linear-oblong, tomentose; lip with a minute claw, mobile (*Blume*).—Very distinct from its congeners in the spreading flowers, lip, and foot of column; perhaps a distinct section with *E. barbata*, which also has a mobile lip.

65. ***E. sicaria***, *Lindl. in Journ. Linn. Soc.* iii. 50; pseudobulbs narrowly oblong, leaves linear or linear-lanceolate semi-terete fleshy channelled, scape slender and flowers white-woolly, bracts ovate acuminate, lateral sepals ovate obtuse 5-7-nerved, petals linear- or obovate-oblong 5-nerved, mentum obscure, lip shortly broadly clawed, side lobes spreading rounded, midlobe obcordate, disk with a tricrural thickened ridge.

TENASSERIM; at Mergui, *Griffith, Parish.*

Pseudobulbs $1\frac{1}{2}$ -2 in. long, from a stout woody rhizome. *Leaves* 4-6 in., acuminate, tapering to the base (dry pustulate). *Scape* 4-6 in.; bracts $\frac{1}{4}$ in.; pedicel with slender ovary $\frac{3}{4}$ in.; flowers spreading, $\frac{3}{4}$ in. across, white with purple markings on the lip.

66. ***E. Dayana***, *Reichb. f. in Gard. Chron.* 1877, ii. 102; pseudobulbs ovoid, leaves 3 linear-lanceolate very coriaceous, raceme lax-fl'd. tomentose, bracts linear-lanceolate scarious equalling the lower pedicelled ovaries, sepals triangular tomentose, petals narrower, lip broad, side lobes oblong narrow, midlobe oblong emarginate, callus longitudinally ligulate with retrorse arms at the end.

EAST INDIES (*Hort. Day*).

Allied to *E. sicaria*, *Lindl.* Unknown to me. Description from *Reichb. f.*

67. ***E. dasypus***, *Reichb. f. in Bot. Zeit.* 1864, 415; pseudobulb cylindric, leaves 2-3 narrowly oblanceolate obtuse, racemes lateral slender white-woolly few-fl'd., bracts broadly ovate apiculate, pedicels slender and ovate oblong obtuse 3-4-nerved sepals woolly, petals oblong 3-nerved, lip cuneate-obovate with 3 median ridges, side lobes oblong, almost as long as the transverse midlobe, column long.

TENASSERIM; at Mergui, *Parish.*

Pseudobulbs $1\frac{1}{2}$ -2 in., as thick as the little finger, erect. *Leaves* as long. *Racemes* 1 in., very slender; bracts membranous, apiculate; pedicel $\frac{1}{2}$ in.; sepals $\frac{1}{4}$ in.; mentum rounded, subincurved.

68. ***E. pellipes***, *Reichb. f. in Herb. Kew*; pseudobulbs small very close set on the creeping rhizome 1-leaved, leaf obtuse very thick terete or subcompressed, scape slender and 1-2 flowers white-woolly, bracts small, lateral sepals triangular-ovate acute 5-nerved, mentum large saccate, petals linear 3-nerved woolly, lip coriaceous subspathulate or linguiform, tip rounded or retuse, back woolly.

PENANG, and MALACCA on Mount Ophir, *Maingay* (*Kew Distrib.* 1630/2). PERAK, *Wray*.—DISTRIB. Borneo (*Beccari*, No. 483).

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in., sessile, more or less tomentose, conic or subglobose. *Leaves* 2–3 in., straight or curved, smooth, thick and spongy; basal sheaths short, woolly. *Scape* equalling the leaf, erect; peduncle with ovary about $\frac{3}{4}$ in., lengthening to $1\frac{1}{2}$ in. in fruit; sepals about $\frac{1}{2}$ in. long; column very short; capsule $\frac{3}{4}$ in., narrowly ellipsoid.

** *Pseudobulbs large. Flowers brown-tomentose.*

69. **E. barbata**, *Reichb. f. in Walp. Ann.* vi. 270; pseudobulbs broadly ovoid 2-leaved, leaves large petioled lanceolate, scape and pedicels very long, bracts large, lateral sepals lanceolate falcate 5–7 nerved, mentum incurved, petals very narrow, lip stipitate narrowly lanceolate *Erioidea*, *Griff. It. Notes* 83. *Tainia barbata*, *Lindl. in Gard. Chron.* 1857, 68.

KHASIA HILLS; in the Suniassee Valley, *Griffith* (*Kew Distrib.* 5297); Shillong, alt. 5000 ft., *Clarke*.

Pseudobulbs 2 in. long and broad. *Leaves* 12–14 in., plicate, long-acuminate. *Scape* 3 ft., very stout below, pubescent; bracts $\frac{1}{2}$ –1 in., lanceolate; flowers distant; pedicels 1 in., lengthening in fruit; sepals $\frac{2}{3}$ in. long, yellow tessellated with blood-red (*Griff.*), dorsal linear; petals red-purple, tip spatulate; lip tremulous (*Griff.*), revolute, strongly nerved, tip scabrid; column stout; pollinia broadly pyriform, attached to a stiff viscus. *Capsule* 1 in., narrowly oblong.

70. **E. tomentosa**, *Hook. f.*; pseudobulbs large ovoid, leaves few elliptic-oblong very thick, scape terminal very stout and raceme brown-villous, bracts very large, pedicels with the long ovary 1– $1\frac{1}{2}$ in., sepals coriaceous falcate lanceolate, mentum large incurved, petals oblanceolate, lip oblong strongly nerved, claw broad, side lobes narrow, midlobe clawed subquadrately cordate. *E. ornata*, *Lindl. in Journ. Linn. Soc.* iii. 48 (not of *Gen. & Sp. Orchid.*). *E. flava*, *Wall. Cat.* 1973/2 (in part). *Epidendrum tomentosum*, *König in Retz. Obs.* vi. 53.

SILHET, *Wallich*. KHASIA HILLS, alt. 3–4000 ft., and CHITTAGONG, at Seetakoond, *J. D. H. & T. T. (E. ornata)*. TENASSERIM (*lc. in Herb. Lindl. & Parish*).

Pseudobulbs 2–4 in., from a very stout woody rhizome, 3–4-leaved when young. *Leaves* 3–6 by $1\frac{1}{2}$ –3 in., nerveless, smooth and almost spongy, contracted into a very thick petiole. *Scape* 6–12 in., as thick as a goose-quill or less, base with short coriaceous sheaths; rachis of raceme stout, scarred after fruiting; bracts 1 in. and less, oblong or lanceolate, not reflexed, coarsely veined with a broad thickened roughened central area from the base to the apiculate tip.—This differs from the Philippine Island *E. ornata* in the much shorter bracts and lip.

*** *Pseudobulbs very small or 0. (See also 68. E. pellipes.)*

71. **E. Thwaitesii**, *Hook. f.*; pale tomentose all over, rhizome very stout with short 3–7-leaved branches, leaves linear-lanceolate subacute thickly coriaceous, scapes 1–2 terminal lax-fl., bracts small, flowers small coriaceous, lateral sepals broad obtuse, petals linear subacute, lip tongue-shaped recurved fleshy tomentose, side lobes very small. *E. velutina*, *Thwaites Enum.* 299 (not of *Lodd.*).

CEYLON; in the Central Province, alt. 3000 ft., *Thwaites*.

Rhizome as thick as a swan's quill, internodes very short; sheaths woolly. *Leaves* 2–4 in., often subfalcate or oblanceolate, midrib distinct. *Scape* with raceme 3–4 in., suberect; bracts $\frac{1}{2}$ in., oblong, obtuse, woolly; pedicels very short; sepals $\frac{1}{2}$ in. long, yellow. *Capsule* $\frac{1}{2}$ in.

72. ***E. ferruginea***, Lindl. in *Bot. Reg.* 1839, t. 35; in *Journ. Linn. Soc.* iii. 57; brown-tomentose, rhizome stout, branches short 2-leaved, leaves lanceolate thickly coriaceous, escapes from the bases of the branches, bracts large, flowers coriaceous, lateral sepals very broad 9-nerved, petals obovate-oblong, hypochile broad saccate shortly clawed, lobes small, epichile short crisped, disk with large toothed crests. *Walp. Ann.* vi. 274.

KHASIA and JYNTFA HILLS, alt. 4000 ft., *Griffith*, &c.

Rhizome as thick as a swan's quill, jointed, young sheathed. Leaves 5-8 in., acuminate, base narrowed. Scape 4-6 in., base sheathed; raceme 3-5 in., rachis stout; bracts 1 in. and less, lanceolate; flowers 1 in. diam., white; lip pink; column short, stout.—Referred to sect. *Trichotosia* by Lindley.

73. ***E. pannea***, Lindl. in *Bot. Reg.* 1842, *Misc.* 64; in *Journ. Linn. Soc.* iii. 50; stems very short 1-4-leaved from a creeping rootstock, leaves linear terete fleshy, scape 1-2-fld. and large ovate bracts and sepals densely woolly, sepals ovate-lanceolate obtuse, petals linear-oblong woolly, mentum rather long obtuse, lip oblong obtuse thick concave with an oblong granulate callus at the base and near the tip. *Walp. Ann.* vi. 273. ? *E. teretifolia*, *Griff. Notul.* iii. 298; *Ic. Pl. Asiat.* t. 300.

SIKKIM HIMALAYA, *Herb. Griffith*, alt. 1-2000 ft., J. D. H. KHASIA HILLS, alt. 3-4000 ft., J. D. H. & T. T. TENASSERIM, *Parish*. PERAK, *Scortechini*. MALACCA, on Mount Ophir, *Lobb*. SINGAPORE, *Hort. Lodd.*—DISTRIB. Borneo.

Rhizome as thick as a crow-quill; stems woolly, sometimes forming small globose pseudobulbs. Leaves 1-10 in. by $\frac{1}{2}$ – $\frac{1}{4}$ in. diam., often pustulate. Scape 2-3 in.; flower sessile; lateral sepals $\frac{1}{2}$ in. long; column very short.—Griffith's *teretifolia* from Malacca, together with the Perak and Singapore plants, may be different from the Sikkim and Khasia ones, the former having narrow lanceolate and the latter broadly ovate bracts.

74. ***E. Pleurothallis***, *Par.* & *Reichb. f.* in *Trans. Linn. Soc.* xxx. 147; small, tufted, leaf solitary from a very short stem which is hidden by imbricating reticulately nerved sheaths coriaceous petioled linear-oblong or oblanceolate obtuse, scapes from sheaths on the side of the stem filiform and very small solitary flower woolly, sepals $\frac{1}{2}$ in. long broad obtuse 3-nerved, petals narrow 1-3-nerved, lip with a broad claw orbicular, side lobes and midlobe small solid globose.

TENASSERIM; on Moolyet, alt. 5000 ft., *Parish*.

Tufted, pseudobulb 0; stem $\frac{1}{2}$ in.; sheaths $\frac{1}{2}$ in., acute. Leaves when young ensiform, mature 2-2 $\frac{1}{2}$ in. Scape much shorter; bract under the flower small, membranous, sheathing; mentum large, rounded; column very short.

75. ***E. pygmæa***, *Hook. f. Ic. Plant. ined.*; size habit and inflorescence of *E. Pleurothallis*, but leaves fleshy, flowers very much larger, lateral sepals $\frac{1}{2}$ in. ovate 5-nerved, petals elliptic-oblong 5-nerved, lip very narrow, claw narrowly cuneate, side lobes short oblong obtuse, midlobe ellipsoid.

PERAK, *Wray*.

At first I was disposed to regard this as a large-fld. state of *E. Pleurothallis* but the differences in the flowers are too great.

76. ***E. lancifolia***, *Hook. f. Ic. Plant. ined.*; stems 1-2 in. tufted, pseudobulbs small appearing after flowering fleshy loosely sheathed, leaves 1-3 terminal petioled elliptic-lanceolate thin plicate, spikes from the side of the stem slender laxly many-fld. and ovary white-woolly, flowers small, lateral sepals $\frac{1}{2}$ in. triangular ovate 5-nerved, mentum rounded, petals

oblong obtuse 3-nerved, lip narrow fleshy?, side lobes tooth-like, midlobe narrow tongue-shaped or oblong.

PERAK; at low elevations, *King's Collector*.

Pseudobulbs at first the sheathed thickened lower internode of the stem, after the fall of the sheaths ovoid-oblong, $\frac{1}{2}$ – $\frac{3}{4}$ in. long; sheaths 1 in., ovate. *Leaves* 3–4 in., many-nerved, tip unequally 2-fid. *Racemes* 1–2 in., 6–10-fld.; bracts $\frac{1}{2}$ in., broadly ovate, membranous, quite glabrous, as long as the woolly ovary; “flowers waxy white, blue inside;” sepals sparsely woolly.

Sect. VIII. BAMBUSIFOLIA (see p. 786).

77. E. bambusifolia, *Lindl. in Journ. Linn. Soc.* iii. 61; leaves large linear-oblong or oblong-lanceolate, racemes as long simple or branched slender laxly many-fld. and flowers densely brown-tomentose, bracts small orbicular apiculate, lateral sepals ovate-lanceolate falcate 5-nerved, mentum long incurved, petals oblanceolate acuminate falcate 3-nerved, lip clawed ovate-oblong strongly nerved, side lobes very small, midlobe small orbicular, column long decurved.

TROPICAL SIKKIM HIMALAYA, *J. D. H. KHASIA Mts.*; at Borpanee, alt. 3–4000 ft., *Simonds, Griffith (Kew Distrib.* 5112).

Stem 2–3 ft., as thick as the thumb or less. *Leaves* a span long and less, 1–2 in. broad, acuminate, many-nerved. *Raceme* longer than the leaves; rachis slender; bracts $\frac{1}{2}$ in., reflexed; pedicel $\frac{1}{4}$ – $\frac{1}{2}$ in.; ovary slender; lateral sepals $\frac{1}{2}$ in. long. *Capsule* 1–1 $\frac{1}{2}$ in., slender, subterete, ribs slender.

78. E. crassicaulis, *Hook. f. Ic. Plant. ined.*; leaves subterminal elliptic ovate or elliptic-lanceolate, racemes as long slender laxly many-fld. and flowers brown-tomentose, bracts small orbicular; lateral sepals broadly oblong very obtuse 5-nerved, mentum short incurved, petals oblong 3-nerved, lip banded with purple shortly clawed, side lobes narrow, midlobe emarginate, base not contracted, claw axis and midlobe furfuraceous as are sometimes the 2 lateral nerves on the disk, column large decurved. *E. clavicaulis*?, *Lindl. in Journ. Linn. Soc.* iii. 59.

KHASIA Mts.; at Pomrang, alt. 4–5000 ft., *J. D. H. & T. T.*

Stem 10–12 in., as thick as the thumb or less; lower internodes 2–3 in. *Leaves* 4–6 in., acutely unequally 2-fid, coriaceous, nerved. *Racemes* as long; bracts $\frac{1}{2}$ in.; pedicels with ovary $\frac{3}{4}$ –1 in.; flowers pale, banded with purple; lateral sepals $\frac{1}{2}$ in., dorsal as long; pollinia broadly pyriform.—Much less leafy than *E. bambusifolia*, more pseudobulbous in habit, with shorter ovary and very differently shaped sepals, petals and lip; the racemes and bracts of the two are singularly alike. The Khasia specimens have only stem, leaves, raceme and bracts; the description of the flowers is from Kew Garden specimens, and a fine drawing in Herb. Calcutt. of a form with stem $\frac{1}{2}$ in. diam.

79. E. leptocarpa, *Hook. f. Ic. Plant. ined.*; leaves linear-lanceolate, tip dimidiate, peduncle subracemosely 3–5-fld., bracts ovate acute, lateral sepals ovate-lanceolate acuminate and oblong petals 3-nerved, mentum large obtuse incurved, lip broadly clawed, side lobes oblong incurved overlapping the larger broadly orbicular pubescent midlobe, axis with 3 ridges thickened at the sinus, column very short, capsule 3 in. very slender.

PERAK; *Scortechini, King's Collector*.

Stem 2–3 ft., nearly as thick below as the little finger, and hollow; internodes 1–1 $\frac{1}{2}$ in. *Leaves* 6–8 in., thinly coriaceous, obtuse, tip of one side $\frac{1}{2}$ in. longer than the other. *Peduncle* 1 in., and bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., fleshy?; flowers yellow mottled with

brown, cream-cold. within; pedicel and ovary 1 in.; lateral sepals $\frac{1}{2}$ in., falcate; anther completely 4-celled; capsule strict, $\frac{1}{8}$ in. diam., angled.—The long capsule resembles *E. nutans*.

Sect. IX. TRICHOTOSIA (see p. 786).

* *Large more or less hirsute species. Column long.*

80. ***E. vestita***, Lindl. in *Bot. Reg.* 1844, *Misc.* 76; 1845, t. 2; stem stout rufously hispid, leaves 5–7 in. thickly coriaceous glabrous above nerveless, spike long laxly many-fl., bracts large ovate, sepals lanceolate, petals linear obtuse, lip oblong shortly clawed 5–7-lamellate. *Bot. Mag.* t. 5807; *Walp. Ann.* vi. 274; *Blume Mus. Bot.* ii. 184 *Dendrob. vestitum*, Wall. *Cat.* 2005 (in part); Lindl. *Gen. & Sp. Orchid.* 82.

SINGAPORE, Wallich. MALACCA, Maingay (*Kew Distrib.* 1626). PERAK, alt. 4200 ft., Curtis.—DISTRIB. Borneo.

Stem as thick as a swan's quill. *Leaves* tomentose beneath, midrib raised, otherwise nerveless. *Spike* 6–10 in.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in.; sepals within and petals white; mentum half as long as the sepals; side lobes of lip narrow, obtuse; midlobe transverse, crisped, emarginate; column glabrous; pollinia very slender. *Capsule* 1 in., oblong, walls very thick.—Wallich's 2005 consists of detached stem, leaves and fruit of this; a good fruiting specimen of *E. ferox*, and leaves of a third species. Lindley received from him a good specimen of this, and none of *ferox*.

81. ***E. ferox***, Blume *Mus. Bot.* ii. 184; stem stout hispidly hirsute, leaves 3–4 in. many-nerved, spikes 2–3 in., bracts ovate-lanceolate, sepals ovate obtuse, petals subspathulate 3-nerved, lip cuneate-spathulate. *Trichotosia ferox*, Blume *Bijl.* 342; Lindl. *Gen. & Sp. Orchid.* 132; *De Vriese Ill.* t. 9 and t. 11, f. 5.

PENANG; Lobb, Maingay (*Kew Distrib.* 1625). PERAK, ascending to 4500 ft., Wray, &c.—DISTRIB. Java, Borneo.

Stem 4–6 ft., very stout. *Leaves* with very distinct nerves when dry. *Flowers* rather close set; bracts equalling the flowers; mentum broad, uncinat, nearly equalling the sepals; lip very variable, veined, side lobes waved, crenate, midlobe emarginate, with 2–3 rough calli; disk with 2–3 rugose nerves; foot of column flat, glabrous.

82. ***E. monticola***, Hook. f.; stem below and narrowly lanceolate leaves glabrous, flowers 2-nate on a short peduncle, bracts lanceolate nearly equalling the glabrescent rigid keeled lateral sepals, petals narrowly oblong 3-nerved, lip narrowly spathulate pubescent all over within. *E. biflora*, Lindl. in *Journ. Linn. Soc.* iii. 56 (not of Griff.). *Trichotosia biflora*, Griff. *Notul.* iii. 331, t. 315.

MALACCA; Mount Ophir, Griffith, Maingay (*Kew Distrib.* 1628/2).

Stem 12–18 in., as thick as a goose-quill, upper sheaths and young leaves hispid or villous. *Leaves* distinctly nerved when dry. *Bracts* ovate, acuminate; mentum not half as long as the sepals; lip with terminal rounded lobes, disk concave; foot of column pubescent. *Capsule* $\frac{1}{2}$ in., subglobose ellipsoid.—Griffith doubtfully refers Blume's *T. pauciflora* to this, but in that the lip is emarginate.

Var. ? *hirsuta*; leaves softly tomentose beneath, flowers hirsute, sepals not keeled, lip broader more obtusely, lobes broader.—Perak, *Scartechini*.

83. ***E. gracilis***, Hook. f. *Ic. Plant. ined.*; stem slender, leaves $1\frac{1}{2}$ –2 in. narrowly lanceolate glabrous above and beneath, peduncle $\frac{1}{2}$ in. 2–3-fl., bracts ovate-lanceolate, sepals narrow 3–5-nerved, petals linear

3-nerved, lip with a long straight claw and small flabelliform limb densely pubescent except the margin.

PERAK, *Scortechini*.

Stem 6-8 in., as thick as a duck's quill, upper sheaths hirsute. *Leaves* slightly hairy when young. *Peduncle* hirsute or glabrescent; bracts $\frac{1}{2}$ - $\frac{2}{3}$ in.; mentum half as long as the sepals; lip straight, limb thick crenate; column glabrous, foot tumid villous.—The smallest species of this sub-section.

84. **E. oligantha**, Hook. f. *Ic. Plant. ined.*; nearly glabrous, leaves 2-2 $\frac{1}{2}$ in. thickly coriaceous ovate-lanceolate glabrous above tomentose beneath, flowers 1-2 sessile glabrescent, sepals ovate acuminate 5-7-nerved, petals narrowly oblanceolate acute 3-nerved, lip narrow, claw long pubescent, limb half as long obovate villous.

PENANG, *Maingay* (*Kew Distrib.* 1629).

Stem 10-12 in., curved, as thick as a goose-quill, tips hirsute. *Leaves* with strongly recurved margins when dry, not nerved. *Flowers* $\frac{1}{2}$ in. long, at first hirsute; mentum as long as the sepals; side lobes of lip narrow, rounded; terminal thickened, crenulate, emarginate; column and its foot pubescent.

85. **E. velutina**, G. Loddiges in *Bot. Reg.* 1840, *Misc.* 86; stem above and leaves softly villous, leaves 2-3 in. thickly coriaceous oblong-lanceolate, flowers few in subsessile spikes, bracts ovate coriaceous, sepals ovate-lanceolate, petals linear obtuse 5-nerved, lip very long-clawed, glabrous with a villous cushion on the cuneate obovate limb. *Walp. Ann.* vi. 274.

SINGAPORE, *Cuming* (*Hort. Loddiges*). MALACCA, *Maingay*. TENASSERIM, *Helfer* (*Kew Distrib.* 5110).

Stem 1-2 ft., as thick as a goose-quill. *Leaves* with strongly revolute margins when dry. *Spikes* dense-fl.; mentum as long as the sepals; side lobes of lip rounded, midlobe short, 2-fid; foot of column puberulous.—The flowers are described in *Bot. Reg.* as solitary.

86. **E. pulvinata**, Lindl. in *Journ. Linn. Soc.* iii. 56; villously hirsute, stems short, leaves 1 $\frac{1}{2}$ -2 in. ovate subacute, flowers solitary hirsute, sepals ovate-lanceolate, petals linear, lip spatulate emarginate hairy and with a pubescent cushion within the tip.

TENASSERIM; at Mergui, *Griffith*.

Described by Lindley from (an evidently enlarged) drawing by Griffith. Parish has a drawing of a plant named *E. pulvinata* with tufted erect stems 6 in. long swollen at the base, flowers white 2-nate nearly 1 in. long, mentum truncate much shorter than the sepals.

87. **E. tuberosa**, Hook. f. *Ic. Plant. ined.*; stem short glabrous except the tips and base, leaves 2-2 $\frac{1}{2}$ in. lanceolate thickly coriaceous glabrous on both surfaces, flowers 2 on a short peduncle hirsute, bracts orbicular or ovate very coriaceous, sepals ovate-lanceolate falcate, petals narrowly spatulate obtuse 3-nerved, lip obovate, axis tomentose, midlobe short broad 2-winged or retuse.

PERAK, *Scortechini*.

Stems 6-8 in., as thick as a goose-quill, curved, tumid base $\frac{1}{4}$ - $\frac{1}{2}$ in. diam. *Flowers* $\frac{2}{3}$ in. long; mentum half the length of the sepals, tip swollen; side lobes of lip obscure; midlobe with thickened nerves, column and its tumid foot pubescent.

88. **E. rufinula**, Reichb. f. in *Hamb. Gartenzeit.* xix. 13; hirsute, leaves 3-4 in. narrowly lanceolate very coriaceous, spikes short 2-4-fl.

hispid, bracts long narrow recurved, sepals lanceolate, petals oblanceolate acute 3-nerved, lip glabrous except the ciliate base, claw broad, limb obcordate. *E. annulata*, Lindl. in *Journ. Linn. Soc.* iii. 57 (not of Blume).

SIKKIM HIMALAYA, alt. 5000 ft., J. D. H. CACHAR, Keenan. ? TENASSERIM, Helfer.

Stem 10-12 in., about as thick as a duck's quill. *Leaves* subfalcate, usually (in Sikkim) loaded with concretions. *Flowers* $\frac{1}{2}$ in. long, smaller than in the foregoing species; bracts ovate-lanceolate, acuminate, falcate; mentum much shorter than the sepals; lip much thickened along the mesial line and tip; foot of column glabrous.

89. *E. aporina*, Hook. f. *Ic. Plant. ined.*; short, villously hirsute, leaves $\frac{3}{4}$ -1 in. close-set lanceolate, flowers solitary sessile, bracts small ovate acute, sepals broadly ovate obtuse 3-nerved, petals narrowly subspathulate 3-nerved, lip broadly clawed panduriform ciliate, surfaces glabrous.

PERAK, alt. 3-4000 ft., King's Collector, Scortechini.

Stem 6-8 in., uniformly clothed with close-set distichous leaves; internodes $\frac{1}{4}$ in. *Leaves* with revolute margins. *Flowers* $\frac{1}{2}$ in. long, glabrescent; mentum as long as the sepals; side lobes of lip small, rounded; midlobe larger than both, emarginate, crenate; column and its foot glabrous.—Habit of sect. *Aporum* of *Dendrobium*.

** *Small species with procumbent or creeping stems, hirsute, column very short.*

90. *E. dasyphylla*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 147; hirsute all over, stems interlaced, leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. sessile fleshy elliptic-obovate, flowers very small solitary shortly peduncled.

SIKKIM HIMALAYA, Herb. Griff. (*Kew Distrib.* 5131); at the foot of the hills, J. D. H. KHASIA HILLS, alt. 1-2000 ft., J. D. H. & T. T. PEGU, Kurz. TENASSERIM, Helfer (*K. D.* 5382), Parish.

Stems as thick as a sparrow-quill. *Leaves* subacute, convex on both surfaces. *Scape* $\frac{1}{4}$ - $\frac{1}{2}$ in.; bracts cupular; sepals 5-nerved, dorsal very small, lateral triangular, acute; mentum large, rounded; petals broadly oblong, 1-3-nerved; lip large, cuneately obovate, side lobes small, midlobe broader, nerves strong; anther beaked; pollinia equal, pyriform.—Near *Trichotosia microphylla*, Blume, of Java.

Sect. X. XIPHOSIUM (see p. 786).

91. *E. carinata*, Gibs. in *Calc. Journ. Nat. Hist.* v. 365; Lindl. in *Journ. Linn. Soc.* iii. 50. *E. rosea*, Wall. Cat. 7409 (not of Lindl.); Reichb. f. in Walp. Ann. vi. 269 (in part). *E. Fordii*, Rolfe in *Gard. Chron.* 1886, ii. 584 (excl. habitat). *Xiphosium acuminatum*, Griff. *Notul.* iii. 332; *Itin. Notes* 78, No. 1153; *Ic. Plant. Asiat.* t. 316.

SIKKIM HIMALAYA, King, Elwes. KHASIA MTS., Griffith (*Kew Distrib.* 5121).

Pseudobulbs on a stout or slender rhizome, 2-4 in., ovoidly oblong, sulcate. *Leaf* thickly coriaceous, with the stout petiole 6-18 in. *Scape* 6-8 in., included up to the raceme in the sword-shaped upper sheath; bracts $1\frac{1}{2}$ in., linear-lanceolate; sepals ovate or ovate-lanceolate, green and white with red nerves, keel serrate; mentum rounded; petals rhombic, acute; lip obovate-oblong, red-brown, side lobes narrow, midlobe rounded or ovate; column short.—Very near the Hong Kong *E. rosea*.

SECT. XI. ACRIDOSTACHYA (see p. 786).

92. **E. acridostachya**, *Reichb. f. mss.*; *Lindl. in Journ. Linn. Soc.* iii. 48.

PERAK, *Scortechini*; Larut, alt. 3500–4500 ft., *King's Collector*.—DISTRIB. Java.

Rhizome very stout; sheaths 1–3 in., rigidly coriaceous; upper ensiform, sometimes 3–4 in. *Leaf* 6–12 in., petioled, acute, thickly coriaceous. *Scape* stout, 6–10 in., naked; raceme 4–6 in., cylindric; flowers spreading or deflexed, coriaceous, about $\frac{1}{2}$ in. from tip of mentum to upper sepal; bracts minute; pedicel with ovary $\frac{1}{2}$ in.; lateral sepals much longer than broad, falcate, obtuse; dorsal much smaller; petals linear-oblong, obtuse; lip sessile, coriaceous, oblong, obtuse, base concave, side lobes very small; column very short, foot long, fleshy, channelled.

SECT. XII. DILOCHIPSIS (see p. 786).

93. **E. Scortechinii**, *Hook. f. Ic. Plant. ined.*

PERAK, *Scortechini*; on trees, alt. 5–5300 ft., *King's Collector*.

Stem 3–6 ft., as thick as a goose-quill; internodes 1– $\frac{1}{2}$ in. *Leaves* 3–5 in., linear-lanceolate, tips dimidiate, nerves strong. *Panicle* 4–5 in. long and broad, tomentose; bracts at the axils $\frac{1}{2}$ – $\frac{3}{4}$ in., chartaceous, floral narrow; flowers sessile, waxy-white, bluish within; ovary very short; sepals $\frac{1}{2}$ in., orbicular-ovate, obtuse, 3-nerved, keel winged; dorsal oblong; petals broadly oblong, 3-nerved; mentum short; lip sessile, broadly cuneate; side lobes long, spreading, obtuse, midlobe transversely 2-winged, disk with a broad tomentose ridge ending in a large cushion on the midlobe; column not long.—Habit of *Arundina*, sect. *Dilochia*.

SECT. XIII. PELLAIANTHUS (see p. 786).

94. **E. leiophylla**, *Lindl. in Journ. Linn. Soc.* iii. 57. *Ceratostylis pellita*, *Reichb. f. in Herb. Kew.*

PENANG; on stones, *Maingay* (*Kew Distrib.* 1631); alt. 2000 ft., *Curtis*.—DISTRIB. Borneo.

Rhizome very stout, rusty-tomentose; pseudobulb small, depressed conical, narrowed into a cylindric sheathed 2–3-nodal fleshy erect stem 1–3 in. long. *Leaves* 2, 5–7 by $\frac{1}{2}$ –1 in., linear-oblong, obtuse or notched. *Spike* far below the leaves, very short and flowers rusty-tomentose; bracts rounded; lateral sepals $\frac{1}{2}$ in., oblong, very obtuse and linear-oblong petals fleshy or thickly coriaceous; mentum obscure; lip sessile, ovate-oblong, obtuse, entire, very thick, smooth with a furfuraceous cushion towards the base and over the tip; column very short, broad; anther low, 4-celled; pollinia 2, large, compressed, angular (and ? 2 small).—A remarkable plant, described by Lindley from an imperfect Borneau specimen, and referred to sect. *Trichotosia*.

DOUBTFUL AND EXCLUDED SPECIES.

E. Rimanni, *Reichb. f. in Gard. Chron.* 1885, ii. 712; pseudobulbs 3 by 1 in. pyriform, leaves 2–4 cuneate-oblong acute coriaceous light green 11-nerved, raceme dense-fl. drooping and inflorescence rusty-pilose, flowers pellucid sulphur-col., lateral sepals triangular, mentum long obtuse, petals oblong obtuse, lip cuneate, side lobes dimidiate-oblong, midlobe transversely oblong emarginate golden with 2 purple spots, base with a tumid callus.—Burma (*Hort. Sanders*).—Probably near *E. Griffithii*, R. f. I have seen no specimens.

E. polyura, *Lindl. in Bot. Reg.* xxviii. (1842), *Misc.* 2, is a Malayan species erroneously supposed to be a native of Ceylon.

19/1. **CLADERIA**, Hook. f.

Terrestrial; stem tall, terete, rooting on tree-trunks, leafy. *Leaves* large, ovate-lanceolate, finely acuminate, plicate, narrowed into strongly ribbed inarticulate sheaths. *Scape* terminal, erect, simple or sparingly branched, sheathed rachis of spike many-fl., very stout, rigid, tomentose; bracts short, broad, rigidly coriaceous, persistent; flowers large, coriaceous or fleshy, tomentose without. *Sepals* obtuse, dorsal oblong; lateral obliquely oblong, base saccate. *Petals* strongly falcate, oblanceolate, obtuse, costa stout. *Lip* as long as the sepals, concave, coriaceous, sessile at the base of the column; hypochile large, broadly oblong, base saccate, disk with 2 tomentose ridges and many horizontally spreading nerves, epichile small, of 2 orbicular lobes, their bases incumbent on the tip of the hypochile. *Column* long, sigmoid, thickened upwards; clinandrium concave; anther terminal, hemispheric, imperfectly 2-lobed; pollinia 2? pyriform.

C. viridiflora, Hook. f. *Ic. Plant. ined.*

PERAK; at Sunga Ryah, *King's Collector*. MALACCA, *Maingay*; in dense jungles.

Stem 8-10 ft., as thick as a goose-quill, terete; the lower part creeping and rooting, the upper erect and clinging to trees by side roots. *Leaves* 5-10 by $1\frac{1}{2}$ -3 in., 5-nerved. *Spikes* 2-5 in., very stout, strict, erect; bracts concave, $\frac{1}{2}$ in. long, sessile by a very broad base; flowers $1\frac{1}{2}$ in. diam., pale green, striped with darker; sepals and petals nearly glabrous within, strongly nerved, the nerves branching and anastomosing; lip abruptly shortly narrowed at the base.—I know nothing very like this curious plant, which I place provisionally near *Eria*.

20. **PHREATIA**, Lindl.

Tufted often very small plants, with the habit of *Oberonia*, pseudo-bulbous or not. *Leaves* distichous, articulate on equitant sheaths. *Scape* axillary or lateral, or from the rootstock, slender; flowers very minute, cellular, racemed or spicate. *Sepals* equal, connivent or spreading. *Petals* smaller. *Lip* jointed on the base of the column or its foot, sessile or clawed, broad or narrow. *Column* very short, top broad; anther low, 2-4-celled; pollinia 8, obovoid, waxy, cohering by a viscus. *Capsule* minute, ovoid, terete.—Species about 10, Indian, Malayan and Oceanic.

The flowers are of the same cellular texture as in *Thelasis*.

1. **P. Myosurus**, Lindl. in *Journ. Linn. Soc.* iii. 61; stem 0, leaves 8-12 in. strap-shaped, tip obliquely rounded, scape long, bracts ovate-lanceolate acuminate, sepals obtuse, mentum rounded, lip sessile cuneate, broad end obscurely 3-lobed. *Eria* (*Phreatia*) *Myosurus*, Reichb. f. in *Bonplandia*.

PERAK, alt. 3000-3500 ft., *King's Collector*, *Scortechini*.—DISTRIB. JAVA, *Sunatra*.

Rhizome very stout. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in. broad, flat, membranous. *Scape* and *raceme* rather longer than the leaves; bracts variable in length; flowers $\frac{1}{2}$ in. long, waxy-white.—The Javan specimens have a shorter, broader, more rhomboid lip.

2. **P. elegans**, Lindl. *Gen. & Sp. Orchid.* 63; in *Journ. Linn. Soc.* iii. 61; stem 0 or a small pseudobulb, leaves $2\frac{1}{2}$ -5 in. linear-lanceolate or oblanceolate obtuse, scape longer, bracts ovate-lanceolate exceeding the

ovary, sepals acute, mentum rounded, lip with a short saccate claw and triangular blade. *Thelasis elegans*, *Blume Mus. Bot.* ii. 187.

KHASIA MTS.; at Pomerang, alt. 4-5000 ft., *J. D. H. & T. T.* CEYLON, *Macrae*.

Stems densely tufted. *Leaves* coriaceous, obtuse, 1-nerved. *Spikes* 3-4 in., dense-flid.; flowers white; lateral sepals $\frac{1}{2}$ in. long, triangular, acute, 1-nerved; petals broadly ovate; lip obscurely 3-nerved; column very short; anther membranous; pollinia free, globose pyriform.—I do not find the hairs on the lip described by Lindley.

3. **P. perpusilla**, *Benth. in Gen. Pl.* iii. 511; pseudobulbs clustered depressed, scape filiform, bracts ovate-lanceolate, sepals obtuse, lateral lanceolate, mentum obscure, lip lanceolate, margins waved. *Eria* (*Phreatia*) *perpusilla*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148.

TENASSERIM; at Moulmein, *Lobb, Parish*.

Pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., smooth. *Leaves* not seen. *Scape* 2-2 $\frac{1}{2}$ in.; spike $\frac{1}{2}$ - $\frac{3}{4}$ in.; bracts $\frac{1}{10}$ in., hyaline; sepals about as long.

4. **P. nana**, *Hook. f. Ic. Plant. ined.*; stems short leafy, leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. narrowly ensiform acute, spikes axillary as long as the leaves capillary decurved, bracts ovate acute, sepals broadly ovate and very small petals obtuse, lip ovate obtuse.

PERAK, *Scortechini, King's Collector*.

Stems densely tufted, $1\frac{1}{2}$ -2 in., often decurved. *Leaves* about $\frac{1}{8}$ in. diam., fleshy; flowers $\frac{1}{10}$ in. diam.; ovary ellipsoid, smooth.

5. **P. minutiflora**, *Lindl. in Journ. Linn. Soc.* iii. 62; leaves equitant linear obtuse recurved, spike erect very slender as long as the leaves, bracts triangular setaceous, lip obovate concave.

SINGAPORE, *Ridley (in litt.)*.—DISTRIB. BORNEO.

Leaves about 2 in. long; flowers the smallest of the genus, in a very slender erect spike; bracts brown, setaceous, broad at the base.—Description from Lindley. I have seen no specimens.

6. **P. parvula**, *Benth. in Herb. Kew*; stem short, leaves $\frac{1}{2}$ in. imbricating subcylindric acute, scape very short, spikes axillary decurved, bracts cymbiform shorter than the ovary, mentum 0, lip and petals minute, the latter cymbiform. *Octarrhena parvula*, *Thwaites Enum.* 3072.

CEYLON; Central Province, in forests, alt. 3-4000 ft., *Thwaites*.

Stems 1 in., densely tufted, stout, leafy from the base. *Leaves* spreading. *Spikes* longer; rachis stout; flowers pale green; lateral sepals $\frac{1}{8}$ in. long, rounded, concave, nerveless; petals oblong; lip close under the broad short column; pollinia 4-8, free, globose.—A remarkable little plant overlooked by Bentham in *Gen. Plant.*, but the specimen he has placed in *Phreatia*, though there is no foot to the column or mentum. Thwaites wrongly referred it to *Vandea*.

21. **PACHYSTOMA**, *Blume*. (See 212. ITSEA.)

Terrestrial; rhizome underground, nodose. *Leaves* 1-2, often post-foliar, narrow, plaited. *Scape* sheathed; flowers rather small, racemed, pendulous; bracts large, scarious. *Sepals* subequal; lateral adnate to the base of the column. *Lip* sessile on the base of the column, erect;

side lobes oblong, midlobe small; disk with 3-5 deeply crested or fimbriate ridges. *Column* slender, clavate above, foot 0; anther 4-celled; pollinia 8, pyriform.—Species 6-8, probably forms of one, Indian, Malayan and African species.

P. senile, *Reichb. f. in Bonpland*. iii. 250; bracts ovate- or linear-lanceolate longer or shorter than the flowers. *P. Smithianum*, Edgeworthii, montanum & Lindleyanum, *Reichb. f. l. c.*; *Walp. Ann.* vi. 642, 643. *Apaturia senilis*, *Smithiana* & *montana*, *Lindl. in Wall. Cat.* 3739, 3737, 3738; *Gen. & Sp. Orchid.* 130, 131. *A Lindleyana*, *Wight Ic.* t. 1662.

Plains and foot-hills of N. INDIA, from GARHWAL to SIKKIM, the KHASIA HILLS and MUNNIPORE, and southwards to MALABAR and CEYLON.—? *DISTRIB.* Malay Islands and S. China.

Rhizome 1-2 in. *Leaf* solitary, very long and narrow. *Scape* with *raceme* 8-15 in., white or nearly so; bracts in the longest state (*P. senile* type) 2 in. long, narrow lanceolate; in the shortest state (*P. montanum*) shorter than the flowers, and spathaceous; flowers about $\frac{1}{2}$ in. long, glandular-puberulous, white, greenish or pinkish; sepals membranous, acute or acuminate, 5-nerved; petals narrowly spatulate, acuminate, 3-nerved; mentum very short; lip from oblong to nearly orbicular, claw very short; side lobes large, obtuse or subacute; midlobe as long or longer, oblong or obovate, retuse or pointed, purplish; disk with 5 (rarely 3) crested ridges from the base to the midlobe, and there thickened; column puberulous.—I cannot distinguish the plants here included under *P. senile*, they all vary so much and into one another. Clarke finds the long and short bracted states growing intermixed in the Sikkim *Teraï*.

21/2. **IPSEA**, Lindl.

Terrestrial herbs with the long narrow plicate leaves and sheathed scape of *Pachystoma*, but distinctly pseudobulbous, with few large highly-coloured flowers.—Species 3, Indian and an African.

I cannot follow Reichenbach and *Gen. Plant.* in uniting *Ipsea* with *Pachystoma*.

1. **I. speciosa**, *Lindl. Gen. & Sp. Orchid.* 124; flowers golden-yellow, lip 3-lobed, disk with 5 thick ridges, *Wight Ic.* t. 1663; *Bot. Mag.* t. 5701. *Pachystoma speciosum*, *Reichb. f. in Bonpland*. iii. 250; *Walp. Ann.* vi. 462.

CEYLON; on grassy hill-sides, alt. 4-5000 ft.

Puberulous. *Pseudobulbs* 1-1½ in., tufted, depressed. *Leaves* 6-10 in., long-petioled. *Scape* as long, 2-3-sheathed, 2-4-fld.; bracts spathaceous, equalling the ovary; flowers 2-3 in. diam.; lateral sepals ovate-oblong, subacute; lip oblong, side lobes triangular, obtuse or subacute; midlobe produced, obovate; column narrowly winged, subclavate.

2. **I. malabarica**, *Hook. f.*; midlobe of lip emarginate denticulate, disk with 5 serrated lamellæ. *Pachystoma malabaricum*, *Reichb. f. in Walp. Ann.* vi. 462.

MALABAR, *Jerdon*.

I do not know this plant. *Wight (Ic. v. 8)* says that he has a species from the Malabar Ghats, which he has not examined. I do not find it in his Herbarium.

3. **I? Wrayana**, *Hook. f.*; flowers claret-cold., lip triangular-ovate acute with 3 narrow lamellæ.

PERAK; on Gunong Batu Patch, alt. 4500 ft., *Wray*.

Scape 9 in.; bracts $\frac{3}{4}$ in.; flowers $1\frac{1}{2}$ in. diam., resupinate; dorsal sepal ovate-lanceolate, acuminate, lateral and 3-nerved petals lanceolate; mentum with the sac of the lip produced into an incurved stout round-tipped spur; side lobes of the broad lip very short, tooth-like; column rather short, winged; pollinia 8, seated on a forked thick membrane, in superposed pairs.—A very curious plant, perhaps a *Spathoglottis*.

22. SPATHOGLOTTIS, Blume.

Pseudobulbs on a creeping terrestrial rhizome, broadly conic, 1-3-leaved. *Leaves* long-petioled, elongate, narrow, plaited. *Scape*, lateral; flowers racemed, often large. *Sepals* free, subequal. *Petals* subsimilar or longer and broader. *Lip* sessile, erect; lateral lobes erect, midlobe clawed; disk at its base tubercled or crested. *Column* long, arched, subclavate above and 2-winged, foot 0; anther 2-celled; pollinia 8, slightly cohering in fours.—Species about 10, tropical Asiatic, Australian and Pacific.

* *Pseudobulbs* clothed with rigid fibres of old leaves. *Scape* tall, stout. *Petals* much broader than the sepals, many-nerved.

1. **S. plicata**, Blume *Bijd.* 401, t. 76; tall, stout, scape 2-3 ft., raceme puberulous, bracts ovate or lanceolate acuminate, flowers 1 in. diam. lilac, sepals broad acute, midlobe of lip longer than the side lobes, claw narrow dilating into a cuneately flabelliform blade. *Lindl. Gen. & Sp. Orchid.* 119; in *Wall. Cat.* 3743; *Walp. Ann.* vi. 455. *S. lilacina*, *Griff. Notul.* iii. 323; *Ic. Pl. Asiat.* t. 311, f. 3. *Bletia angustifolia*, *Gaud. in Freyc. Voy. Bot.* 421, t. 32.

MALAY PENINSULA; from Penang and Perak to Singapore, *Wallich, Griffith (Kew Distrib.* 5937, 5193), *Maingay (K. D.* 1637, 1639).—DISTRIB. Java, Manilla, New Guinea.

Pseudobulbs when full grown 2 in. diam. *Leaves* 2-4 ft. by 1-3 in., finely acuminate; petiole 6-18 in. *Raceme* 6-12 in., many-fl'd.; bracts $\frac{1}{2}$ -1 in., reflexed (in young plants flowers few and bracts larger); pedicels 1 in.; calli of lip yellow, sparsely villous. *Capsule* $1\frac{1}{2}$ in., pendulous.—*Griffith (Notul.* l. c. 324) gives the Khasia Hills as a locality (as well as Malacca), but this is a mistake.

2. **S. aurea**, *Lindl. in Part. Fl. Gard.* i. 16, and in *Journ. Hort. Soc.* v. 34; tall, stout, scape 2 ft., raceme glabrous, bracts oblong obtuse, flowers $1\frac{1}{2}$ in. diam. golden, sepals broad obtuse, midlobe of lip equalling the falcate side lobes narrowly lanceolate fleshy acute. *Walp. Ann.* vi. 455. *S. plicata*, *Griff. Notul.* iii. 325; *Ic. Pl. Asiat.* t. 311, f. 1.

MALAY PENINSULA; PERAK, on Gunong Batu Patch, *Wray*; Mount Ophir, *Griffith (Kew Distrib.* 5290), *Maingay (K. D.* 1638).—DISTRIB. Malay Islands.

Pseudobulbs $\frac{1}{2}$ -1 in. diam. *Leaves* 12-18 in., narrowly lanceolate, acuminate; petiole as long. *Raceme* 6-8 in.; bracts $\frac{1}{2}$ in., spreading, fleshy; pedicels $\frac{1}{2}$ in.; side lobes of lip narrow, falcate.

3. **S. Wrayi**, *Hook. f. Ic. Plant. ined.*; tall, scape 12-18 in., raceme glabrous, bracts large oblong, flowers $2\frac{1}{2}$ in. diam. bright yellow, sepals broad subacute, midlobe of lip longer than the straight side lobes very narrowly spatulate.

PERAK, alt. 4500 ft., *Wray*.

Habit of *S. aurea*, but flowers nearly twice as large, pedicels $1\frac{1}{2}$ in.; bracts $\frac{3}{4}$ in.—I have seen but one specimen of this splendid species, which is 3-4-fl'd. The inflorescence is probably as variable as in *S. plicata*.

4. **S. Bensoni**, Hook. f. *Ic. Plant. ined.*; tall, scape 18 in. or more, raceme elongate and flowers puberulous, bracts very small ovate-lanceolate, flowers 1 in. diam., sepals subacute, midlobe of the saccate lip hardly longer than the side lobes sessile cuneately obovate.

PEGU; on the Prome Hills, Benson (*Herb. Maingay*).

Leaf 12 in., narrowly lanceolate. Racemes 6-10 in.; flowers rather distant; bracts $\frac{1}{8}$ in., pedicels $\frac{3}{4}$ in. Capsule 1 in.—The specimens consist of a leaf and two racemes. Side lobes of lip shorter and broader than in the preceding three species; the calli together form as it were an intermediate lobe, keeled at the back.

** *Pseudobulbs small, depressed conic, naked or nearly so. Scape usually very slender. Petals equalling or broader than the sepals, 7-9-nerved.*

5. **S. Lobbii**, Reichb. f. in Walp. *Ann.* vi. 455; in *Gard. Chron.* 1876, 534; *Ot. Hamburg.* 46; raceme 4-8-fld., bracts small lanceolate pubescent, flowers $1\frac{1}{2}$ in. diam., sepals puberulous, midlobe of lip longer than the obovate oblong side lobes, claw slender suddenly dilating into an obcordately flabelliform smooth blade.

ARRACAN; at Akyab, Parish.

Pseudobulbs about 1 in. diam., with a few fibres. Leaves not seen. Scape 12-18 in.; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in., acute; flowers sulphur-yellow; pedicel 1 in., very slender; sepals and petals obtuse.—Very near to *S. pubescens*, but the flowers are larger, and the midlobe of the lip has a narrower claw and no ridges on the blade.

6. **S. pubescens**, Lindl. in Wall. *Cat.* 3744; *Gen. & Sp. Orchid.* 120; in *Bot. Reg.* 1845, under t. 19; in *Journ. Linn. Soc.* iii. 22; scape usually much longer than the very narrow leaves, racemes 6-8-fld. pubescent, bracts small lanceolate, flowers 1 in. diam., midlobe of saccate lip cuneately flabellate or obcordate longer than the broadly oblong side lobes, disk with 1-3 keeled nerves. S. Fortuni, Lindl. in *Bot. Reg. l. c.* t. 19. *Pachystoma Wightii* & Fortuni, Reichb. f. in Walp. *Ann.* vi. 464.

KHASIA and NAGA HILLS, alt. 3-5000 ft., Wallich, &c. Mts. of ARRACAN and BURMA, Lobb, Parish, Griffith, &c.—DISTRIB. China.

Pseudobulbs as large as a hazel or walnut. Leaves 2-12 in., rarely $\frac{3}{4}$ in. broad. Scape stout or slender; bracts $\frac{1}{2}$ in. or less; flowers golden yellow with red at base of the lip; pedicels and ovary $\frac{1}{2}$ -1 in.; sepals 5-7-nerved, subacute; petals very obtuse, 9-nerved; lip variable, side lobes rather membranous, calli glabrous or villous at the base within.—The Chinese *S. Fortuni* has a broader column than *pubescens*, and the commissure of the side lobes of lip always villous, but I find no other differences.

VAR. *parvifolia*; pseudobulbs very small, leaves very narrow, sometimes quite linear, scape 4-8 in. very slender 2-3-fld. *S. parvifolia*, Lindl. in *Bot. Reg. l. c.*; in *Journ. Linn. Soc.* iii. 22. *S. pubescens*, Wight *Ic.* t. 1739. *S. khasiana*, Griff. *Notul.* iii. 323; *Ic. Pl. Asiat.* t. 311, f. 1. *Pachystoma parvifolium*, Reichb. f. *l. c.* 462. *Epipactis graminifolia*, Roxb. *Fl. Ind.* iii. 456.—Khasia Mts.; at Churra, alt. 4000 ft., Griffith, J. D. H. & T. T.

VAR. *Berkeleyi*; leaf 14 by $1\frac{1}{2}$ in., raceme many-fld., flowers $\frac{3}{4}$ in. diam.—Arracan Hills, Berkeley—The leaves of *S. Fortuni* being sometimes nearly a foot long, I venture to regard this as a variety of *pubescens*, as suggested by Lindley.

7. **S. ixiolides**, Lindl. in Wall. *Cat.* 3745; *Gen. & Sp. Orchid.* 120; in *Journ. Linn. Soc.* iii. 22; scape 4-6 in. longer or shorter than the slender leaves 1-2-fld., bracts sheathing and sepals pubescent, flower $1\frac{1}{2}$ in. diam., midlobe of subsaccate lip cuneate or obcordate with a tooth or auricle on each side at its base, side lobes very broad oblong, disk pubescent. *Bot.*

Mag. t. 7060. *Pachystoma Josephi, Reichb. f. in Walp. Ann. vi.* 464. *Cymbidium ixioides, Don Prodr.* 36.

NEPAL, *Wallich, Scully*. SIKKIM, alt. 8-1000 ft., *J. D. H., Elwes*.

Possibly only a small alpine form of *S. pubescens*, which latter has not been found in the Himalaya. The accessory teeth or auricles at the base of the midlobe of the lip vary greatly in size, and are sometimes very obscure; the disk between the side lobes is pubescent; there are two short raised ridges on the disk at the base of the midlobe.

*** *Petals narrower than the sepals, 3-nerved.*

8. ***S. Handingiana***, *Par. & Reichb. f. in Ot. Hamburg. i.* 45; scape 10 in. slender longer than the elliptic-lanceolate leaf, raceme many-fl. and lanceolate bracts and ovary pubescent, sepals oblong-lanceolate 5-nerved, petals linear acuminate 3-nerved, lip very slender, side lobes a mere dilatation of the axis bearing two large erect falcate cuneate oblong calli, midlobe very long filiform recurved.

NORTH BURMA; Bhamo, *Herb. Parish*.

Pseudobulb small. *Leaf* solitary?, 5 by 1 in., acuminate. *Raceme* 4 in.; bracts $\frac{1}{2}$ in., slender; pedicel with ovary 1 in., capillary; flowers 1 in. diam., membranous; sepals and petals rose-purple, lip longer than the sepals, white with yellow purple-spotted calli; column as long as the sepals, narrowly winged above; anther narrow; pollinia narrowly clavate.—A very remarkable plant, one specimen only seen.

23. **ACANTHEPHIPIUM**, *Blume*.

Terrestrial; pseudobulbs 3-9-leaved. *Leaves* broad, plaited, petioled. *Flowers* few, large, fleshy, in very short lateral raceme; pedicels thickened after flowering. *Sepals* broad, cohering in a ventricose tube, with recurved tips, lateral adnate to the foot of the column; mentum very large, saccate. *Petals* erect, narrow, included. *Lip* very small, stipitate on the foot of the column, inflexed; lateral lobes broad, erect; midlobe recurved, entire; disk with a complex callus. *Column* short, stout; foot very long, inflexed; anther 2-celled; pollinia 8, erect, cohering by a granular mass.—Species 3-4, Indian and Malayan.

1. ***A. bicolor***, *Lindl. in Bot. Reg. t.* 1730; sepals and petals yellow with blood-red tips, side lobes of lip hatchet-shaped, midlobe short tongue-shaped, disk 3-lamellate. *Thwaites Enum.* 307; *Maund. Bot. iv. t.* 300; *Walp. Ann. vi.* 461.

CEYLON; Central region, ascending to 2000 ft.

Pseudobulbs ovoid, 2-3 in. high, smooth, elongating into a stout short fleshy stem. *Leaves* 9-18 by $2\frac{1}{2}$ -4 $\frac{1}{2}$ in., bases sheathing. *Scape* 3-7-fl., sheathed; bracts 1 in., ovate-lanceolate; flowers $1\frac{1}{2}$ in., like broad gibbous-based jugs.—Lindley figures the disk as a broad 2-lobed concave plate, Thwaites as of 3 lamellæ of which the outer are tubercled, the median slender and mucronate at both ends.

2. ***A. sylhetense***, *Lindl. Gen. & Sp.* 177; in *Journ. Linn. Soc. iii.* 21; leaves long-petioled, sepals and petals white or straw-coloured freckled with red towards the tips, side lobes of lip falcate acute, midlobe tongue-shaped, disk with 3-5 fleshy toothed lamellæ. *A. ringidorum, Griff. Notul. iii.* 347; *Ic. Pl. Asiat. t.* 325.

SYLHET and KHASIA Mts., alt. 2-4000 ft., *Wallich, J. D. H. & T. T.* UPPER ASSAM, in the Abor Mts., *Griffith*

Pseudobulbs stout, narrow, short or lengthening into a leafy stem 4-14 in. high. *Leaves* 6-10 in., elliptic-lanceolate, acuminate. *Scape* 2-6 in., very stout, sheathed; flowers $1\frac{1}{2}$ in. long, fleshy, like those of *A. bicolor*.—Lindley unites Griffith's *ringiporum* with *syhetense*, but it may be another species, having white flowers.

3. *A. striatum*, Lindl. in *Bot. Reg.* 1838, *Misc.* 45; flowers white streaked with red, mentum spur-like, side lobes of lip very broad falcate obtuse, midlobe contracted acute scarlet, lip with a single median crested ridge and thickened lateral nerves. *Walp. Ann.* vi. 460.

NEPAL (*Hort. Kew*). SIKKIM, Griffith's *Collectors* (*Kew Distrib.* 5289) and *lc.* in *Herb. Calcutt.*

Very near *A. sylhetense*, but the flowers are much shorter, and the side lobes of lip very different.

24. PHAJUS, Lour.

Terrestrial or epiphytic large stout herbs. *Leaves* plaited. *Scape* lateral on the pseudobulb, or axillary or terminal; flowers large, handsome, racemed. *Sepals* and *petals* subequal, spreading or suberect. *Lip* adnate to the base of and embracing the column, erect, base gibbous or spurred, midlobe various. *Column* long, stout; foot 0; anther incompletely 4-celled; pollinia 8, attached by fours to a large granular viscus.—Species about 14, tropics of the Old World.

I am not sure that the following arrangement according to the position of the scape, being derived from often imperfect dried specimens, will hold good.

* *Scape from the side of the pseudobulb, tall, stout.*

1. *P. Wallichii*, Lindl. in *Wall. Pl. As. Rar.* ii. 46, t. 158; *Gen. & Sp. Orchid.* 126; leaves 1-2 ft. elliptic-lanceolate acuminate, scape very tall, sepals and petals spreading lanceolate acuminate, spur slender short or long, lip with a tubular limb and ovate-lanceolate acute or acuminate sometimes truncate crisped midlobe. *Part. Mag.* vi. t. 193; *Walp. Ann.* vi. 459. ? *P. Blumei*, Lindl. *Gen. & Sp. Orchid.* 127; *Blume Orchid. Archip. Ind.* 2, t. 1; *De Vriese Illust.* t. 8. *P. bicolor*, Lindl. *l. c.* 128; *Sert. Orchid.* t. 25; *Bot. Reg.* 1839, *Misc.* 61; *Bot. Mag.* t. 4078; *Wight Ic.* t. 1659-60; *Thwaites Enum.* 300; *Blume Mus. Bot.* ii. 178; *Walp. Ann.* l. c. 458. *P. grandifolius*, Lindl. in *Wall. Cat.* 3747 (not of Loureiro). *Limodorum Tankervilleæ*, Roxb. *Fl. Ind.* iii. 466 (not of Aiton).

SIKKIM HIMALAYA; in tropical valleys, J. D. H. ASSAM and SYLHET, Wallich, &c. UPPER BURMA, Griffith. TENASSERIM, Parish. CEYLON, alt. 2-4000 ft.—DISTRIB. Malay Islands?

Pseudobulbs 1-1½ in. diam., conical, sheathed by the leaf-bases. *Leaves* 2½-8 in. broad, sometimes spotted; petiole 6-10 in. *Scape* 2-4 ft., sometimes thicker than the thumb; bracts 2 in., spathaceous, caducous; pedicel 1 in.; flowers 4-5 in. diam.; sepals and petals white greenish or rosy without, within yellow-brown with a golden margin, rarely white or concolorous; tube of lip pink or red with a yellow base, midlobe orange, red, or white and pink; spur ¼-¾ in. long. *Capsule* 2-2½ in.—Possibly a form of the Chinese *P. grandifolius*, Lour. I know of no character whereby to distinguish *P. Blumei*.

2. *P. veratrifolius*, Lindl. in *Wall. Cat.* 3746; *Gen. & Sp. Orchid.* 127; scape shorter than the leafing stem, flowers crowded, bracts cymbiform lanceolate, sepals and petals dirty-white spreading and recurved lanceolate acute, spur narrowly conical, lip short broad yellow, side lobes rounded and short retuse midlobe crenulate.

SYLHET, Wallich.

Pseudobulbs 3-5 in., elongate, naked. *Leaves* 2-3 ft. by 2-6 in. *Scape* 12-18 in.; sheaths acuminate; flowers $1\frac{1}{2}$ in. diam., in short pyramidal racemes; bracts $1\frac{1}{2}$ in. long, subsistent; pedicels short; lip longer than the sepals.—Described chiefly from drawings in Herb. Kew by Roxburgh and another.

3. **P. maculatus**, Lindl. in Wall. Cat. 3748; Gen. & Sp. Orchid. 127; leaves elliptic-lanceolate acuminate, scape with tubular sheaths, racemes many and dense-fld., flowers golden, sepals and petals erect oblong very obtuse concave, side lobes of lip narrow, midlobe very short broad crumpled, spur short conical. Lodd. Bot. Cab. t. 1803; Bot. Mag. t. 3960; Blume Mus. Bot. ii. 180; Orchid. Archip. Ind. 9. Bletia flava, Wall. mss. B. Woodfordii, Hook. Bot. Mag. t. 2719; Reichb. Fl. Exot. t. 63.

TROPICAL HIMALAYA; Nepal, Wallich; Sikkim, J. D. H. KHASIA Mts., Griffith.—DISTRIB. China, Japan.

Pseudobulbs broadly ovoid, as large as the fist. *Leaves* 1- $1\frac{1}{2}$ ft., often spotted with dull yellow. *Scape* 2-3 ft.; bracts 1- $1\frac{1}{2}$ in., obtuse; pedicels very short; sepals $1\frac{1}{2}$ in., often tipped with green; midlobe of lip orange-brown or colourous.

** *Scape from the top of the pseudobulb.*

4. **P. callosus**, Lindl. in Gard. Chron. 1848, 287 (with cut of fl.); leaves radical or subradical linear-lanceolate acuminate, scape from the top of the pseudobulb at the base of the leaves, sepals linear-oblong acute, petals linear dilated above the middle, lip with a tubular limb and short midlobe, spur short incurved. Blume Mus. Bot. ii. 178; Orchid. Archip. Ind. 4, t. 2; Reichb. f. Xen. Orchid. ii. t. 122. Limodorum callosum, Blume Bijdr. 374, t. 6.

PERAK, King's Collector.—DISTRIB. Java.

Very similar to *P. Wallichii*, but distinguished by its more oblong sepals and the broad ends of the petals. *Flowers* dull reddish brown; tube of lip yellowish white with a pink tinge, bright red towards the apex, midlobe retuse.—The colours probably vary as in *Wallichii*.

*** *Scape axillary or from amongst the leaves.*

5. **P. mishmensis**, Reichb. f. in Bonpl. v. 43; in Walp. Ann. vi. 922, 928; hardly pseudobulbous, stem tall, leaves alternate elliptic-lanceolate, scape axillary, bracts lanceolate caducous, raceme lax-fld., sepals and petals erecto-patent linear-oblong subacute concave rose-cold., lip not exceeding the sepals, side lobes rounded and small 2-lobuled midlobe quite entire, spur narrowly conical. Limatodes mishmensis, Lindl. & Pax. Fl. Gard. iii. 36.

SIKKIM HIMALAYA; in hot valleys, Clarke, (Ic. Cathcart). Mishmi Hills in UPPER ASSAM, Griffith.

Stem, in Ic. Cathcart, 3-4 ft., sheathed below, 6-8-leaved above. *Leaves* 6-12 by 4-5 in., acuminate. *Scapes* 1-2, rather slender, not exceeding the leaves; flowers erect, $1\frac{1}{2}$ in. long; pedicel and ovary as long; lip white, axis pubescent.

6. **P. luridus**, Thwaites Enum. 300; pseudobulb?, leaves lanceolate acuminate, raceme few-fld., bracts caducous, sepals and petals lanceolate acuminate, lip rounded obscurely 3-lobed, side lobes short broad rounded, midlobe waved, disk hairy, spur very short.

CEYLON; in the Saffragam district, Thwaites.

Terrestrial; stem 2 ft. *Leaves* 12-18 by 3-5 in. *Scapes* 1-2, as long as the

leaves; bracts oblong, acute; flowers 2 in. broad, greenish yellow and rufous; sepals and petals spreading; lip yellow with two red blotches.—Trimen, Syst. Cat. Ceyl. Pl. 88, refers this to *P. bicolor*, but the habit is quite different, the flowers much smaller, and lip short. I have seen no drawing of this.

**** *Raceme terminating the leafy stem.*

7. *P. albus*, Lindl. in Wall. Cat. 3749; Gen. & Sp. Orchid. 128; pseudobulb 0, leaves distichous oblong- or linear-lanceolate acuminate, raceme sessile, bracts nearly as long as the flowers persistent, sepals and petals oblong-lanceolate acuminate, lip shovel-shaped with a broad toothed and crisped midlobe, disk with 5 crested ridges, spur short. Bot. Reg. 1838, t. 33; Bot. Mag. t. 3991; Knowles & Westc. t. 125; Paxt. Mag. v. t. 125; Grah. Cat. Bomb. Pl. 205; Blume Mus. Bot. ii. 181. *P. Marshalliana*, Reichb. f. in Linnæa, xli. 65; Regel Gartenfl. t. 1098; Warn. Orchid. Alb. t. 130. *P. Dodgsoni*, Dean Floral Mag. 1878, t. 329. *Thunia alba*, Reichb. f. in Bot. Zeit. 1852, 764; Rev. Horticol. 1874, t. 450. *T. pulchra*, Reichb. f. in Gard. Chron. 1881, ii. 166. *Limodorum bracteatum*, Roxb. Fl. Ind. iii. 466.

TROPICAL HIMALAYA, alt. 2-5000 ft., from Garwhal to Sikkim, ascending to 6000 ft. KHASIA MTS., alt. 4-5000 ft. ABBACAN and BURMA. The CONCAN; on Matheran Hill, Graham, Dalzell, &c.

Stems stout, 6-18 in., densely tufted, pendulous, leafy from the slightly swollen base. Leaves 6-14 in., soft, glaucous beneath. Raceme 2-3 in., distichously 4-8-fld.; bracts $1\frac{1}{2}$ -2 $\frac{1}{2}$ in., chartaceous, narrowly cymbiform, acute; sepals and petals erectopate, 2 $\frac{1}{2}$ -3 $\frac{1}{2}$ in. long, white; lip white or pale or dark yellow with purple red or ochreous veins. Capsule 1 in. long.—Very variable in size of flower and colour of lip. See vars. *Veitchiana*, Warn. Orchid. Alb. viii. t. 326, and *Wrigleyana*, Williams.

VAR. *Bensoniæ*; flowers rose-purple, lip deep purple with a white base. *Thunia Bensoniæ*, Hook. f. Bot. Mag. t. 5694; Jennings Orchid. t. 35.

25. NEPHELAPHYLLUM, Blume.

Terrestrial creeping herbs with the habit of *Neottia*. Leaves few, petioled, ovate or cordate. Scape included in a large sheath with the leaf; flowers racemed. Sepals free, narrow, spreading or recurved. Petals linear. Lip sessile at the base of the column, erect, stoutly spurred; spur clavate, entire or 3-lobed. Column erect, 2-winged; anther 2-celled; pollinia 8, all parallel, adnate to a linear appendage.—Species 6, Indian, Malayan and Chinese.

1. *N. cordifolium*, Lindl. in Journ. Linn. Soc. iii. 23; leaves ovate-cordate acute or obtuse, racemes laxly 3-6-fld., bracts linear, lip elongate cuneate, side lobes narrow, midlobe transverse retuse, disk with 3 thickened nerves ending in flattened spines on the midlobe. *Citheris cordifolia*, Lindl. in Wall. Cat. 3750; Gen. & Sp. Orchid. 129; Blume Orchid. Archip. Ind. t. 61, f. 3, A-D.

KHASIA HILLS, alt. 4-5000 ft., Wallich, Griffith, &c.

Stem 1-10 in., succulent, ascending from the creeping rhizome; sheaths 1-4 in., membranous, hyaline. Leaves 2 $\frac{1}{2}$ -4 $\frac{1}{2}$ in., membranous, 5-7-nerved from the base; petiole 1-2 in. Scape 4-6 in.; sheath tubular; bracts $\frac{1}{2}$ in., equalling the pedicel and ovary; sepals $\frac{3}{4}$ in. long to tip of spur, and petals 3-nerved, greenish striped with purple; lip pale purple, longer than the sepals, disk pubescent from the base to the middle. Capsule $\frac{3}{4}$ in., oblong.

2. *N. pulchrum*, Blume Bijl. 372, t. 32; Orchid. Archip. Ind. 171,

t. 61, f. 1; leaves ovate or cordate, racemes densely many-fl., bracts large lanceolate, lip entire obovate-oblong with 3 crested ridges towards the rounded tip. *Lindl. Gen. & Sp. Orchid.* 24; *Reichb. f. Xen. Orchid.* i. 216, t. 88, f. 1; *Bot. Mag.* t. 5332.

PERAK, *King's Collector, Wray*.—DISTRIB. Java.

Habit of *N. cordifolium*, but stem, petioles and scape shorter, flowers in a conical spike, and lip very different. *Leaves* rather fleshy, mottled green, with a metallic lustre. *Scape* 1-3 in.; bracts $\frac{1}{2}$ in., membranous; sepals $\frac{3}{4}$ in. to the tip of the spur.—There may be two species confounded here. The *Bot. Mag.* plant has green sepals and a white lip with yellow ridges. *King's* specimens have waxy-white sepals tipped with yellow and a pink calyx; *Wray* figures an obcordate lip, cream-cold., pencilled with crimson, and dull-green sepals.

VAR. *sikkimensis*; sepals and petals narrower purplish or white spotted with pink.—Sikkim near Darjeeling (*Ic. Herb. Kew & Herb. Calcutt.*). Bhotan? *Griffith (Kew Distrib.* 5370).

3. **N. tenuiflorum**, *Blume Bijd.* 372; *Orchid. Archip. Ind.* 172, t. 61, f. 2; leaves subhastately cordate acuminate, scape tall slender lax-fl., bracts linear, lip narrowly panduriform; side lobes acute, midlobe ovate crenulate with 3 crested ridges. *De Vriese Illust. Orchid.* t. 12, f. 3 (*bad*); *Walp. Ann.* vi. 217.

PERAK, *Scortechini*.—DISTRIB. Java.

Stem 3-6 in., slender. *Leaves* $1\frac{1}{2}$ -3 in.; petiole 1 in. *Scape* 6-8 in., 1-10-fl.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., longer than the pedicel and ovary; sepals and petals very narrow, 3-nerved, dorsal strongly keeled; lip pubescent between the side lobes.

26. **TAINIA**, *Blume*.

Terrestrial glabrous herbs; caudex creeping, bearing a solitary elliptic-lanceolate long-petioled leaf on a slender or stout pseudobulb, and with a very long scape at or near its base. *Flowers* small or middle-sized, racemose. *Sepals* narrow; lateral falcate, adnate to and forming a mentum with the saccate base of the lip, or inserted above it. *Lip* adnate by its base only to that of the slender column, hastately 3-lobed, rarely entire, disk lamellate. *Anther* with often a simple or 2-lobed boss, or 2 horns; pollinia 4 or 8, free or united by a viscus, 4 sometimes smaller.—Species 15-18, Indian, Malayan and Chinese.

Very like *Chrysoglossum*, which has 2 free pollinia, *Eulophia* which has a tuberous rhizome and 4 pollinia with stipes and gland, and *Plocoglottis* in which the sides of the lip are adnate to those of the column and the pollinia are in stipitate pairs on a gland. In habit, *Tainia* is totally distinct from *Eria*, as also in the long column. *Calanthes* are many-leaved, and the caudex is rarely creeping.

* Spur of lip free from the base of the lateral sepals.

1. **T. angustifolia**, *Benth. in Gen. Plant.* iii. 515; leaf-blade much longer than the petiole, sepals $\frac{3}{4}$ in. linear obtuse 3-nerved, petals broader linear-oblong obtuse 5-nerved, spur clavellate, lip narrowly oblong, side lobes narrow, midlobe small transversely oblong, disk with 3 ridges ending in as many lamellæ as the midlobe, anther with 2 bosses. *Ania angustifolia*, *Lindl. in Wall. Cat.* 3740; *Gen. & Sp. Orchid.* 129.

TENASSERIM; at Tavoy, *Wallich*.

Differs from *A. latifolia* in the narrower leaves, larger flowers, narrower lip with the lamellæ on the midlobe, and the free globosely clavellate incurved spur of the lip; "pollinia 8, 4 smaller," *Lindl.*

2. **T. penangiana**, *Hook. f.*; leaf-blade about equalling the petiole, sepals $\frac{3}{4}$ in. linear-lanceolate acuminate and narrow petals 5-7-nerved, spur shortly conical obtuse incurved, lip oblong, side lobes subacute incurved overlapping the orbicular acuminate crisped midlobe, disk with 3 slender ridges or lamellæ thickened on the midlobe, column broadly winged.

PENANG; on stones on the top of the hill, *Maingay* (*Kew Distrib.* 1642).

Leaf 8-12 by $1\frac{1}{2}$ -2 in.; petiole slender, base not pseudobulbous. *Scape* twice as long, slender, bracts $\frac{1}{2}$ in.—The specimens are in bad condition; pollinia not seen.

3. **T. viridi-fusca**, *Benth. in Gen. Plant.* iii. 515; scape tall stout, bracts long, sepals 1 in. lanceolate acuminate and oblanceolate petals 5-7-nerved, spur short obtuse, lip obovate-oblong, side lobes incurved, disk with 5 lamellæ about the middle which sink to rise again on the small suborbicular midlobe as 5 truncate very thick ridges. *Calanthe viridi-fusca*, *Hook. Bot. Mag.* t. 4669; *Jard. Fleur.* t. 336; *Part. Fl. Gard.* iii. 118, 591.

ASSAM, *Simons*. TENASSERIM; at Moulmein, *Parish*.

Pseudobulb 2-2 $\frac{1}{2}$ in. diam. *Leaf* 20 by 3 in.; petiole as long. *Scape* 3-5 ft.; bracts $\frac{1}{2}$ -1 in., exceeding the pedicel and ovary; sepals and petals green suffused with purplish brown; lip white with yellow ridges; anther hemispheric with 2 red bosses; pollinia 8, subequal.—One specimen has a narrower lip with 3 narrow lamellæ irregularly enlarged on the midlobe.

4. **T. promensis**, *Hook. f. Ic. Plant.* t. 1883; scape tall slender, bracts long, sepals $\frac{3}{4}$ in. oblong-lanceolate acute and elliptic obtuse petals 5-7-nerved, spur rather long obtuse, lip entire spathulate erose, disk concave with a dense granular cluster of truncate calli. *Eulophia promensis*, *Lindl. in Wall. Cat.* 7365; *Gen. & Sp. Orchid.* 181.

PEGU; on the Prome Hills, *Wallich*.

Leaf on a slender sheathed stem, blade narrow, 12 by $1\frac{1}{4}$ in., shorter than the very slender petiole. *Scape* with the 6-8-fld. lax raceme as long as the petiole; sheaths 4-5, 2-3 in.; bracts 1 in., lanceolate, longer than the ovary.—I think there are 4 flattened collateral pollinia in the only flower I have been able to examine.

** Lateral sepals forming a mentum with the base of the lip.

† *Sepals and petals not produced into long tails.*

5. **T. latifolia**, *Benth. mss.*; leaf-blade longer than the petiole, sepals $\frac{1}{2}$ in. linear obtuse 3-nerved narrower than the 5-nerved petals, mentum short rounded, lip obovate-oblong, side lobes small, midlobe small orbicular or fan-shaped, disk with a narrow central and 2 broad lateral lamellæ which are evanescent on the midlobe. *Ania latifolia*, *Lindl. in Wall. Cat.* 3741; *Gen. & Sp. Orchid.* 130. *Eria Ania*, *Reichb. f. in Walp. Ann.* vi. 270.

SYLHET, CACHAR and the KHASIA MTS., *Wallich*, &c. UPPER BURMA, *Griſſth*.

Leaf 6-12 by $2\frac{1}{2}$ -3 $\frac{1}{2}$ in. *Scape* with the raceme 1-2 ft.; pedicels with ovary $\frac{1}{2}$ in. long; midlobe of lip variable, rounded or retuse; anther with 2 obscure bosses; "pollinia 8 equal," *Lindl*.

6. **T. bicornis**, *Benth. in Gen. Plant.* iii. 515; pseudobulb fusiform, leaf-blade longer than the petiole, sepals linear obtuse, mentum rounded, lip obovate, midlobe broader than the narrow side lobes, disk 2-lamellate between the side lobes 3-lamellate on the midlobe, anther 2-horned. *Ania*

bicornis, *Lindl. in Bot. Reg.* 1842, *Misc.* 37; 1844, t. 8; *Thwaites Enum.* 301. *Eria bicornis*, *Reichb. f. in Walp. Ann.* vi. 269. ? *Ania latifolia*, *Wight Ic.* t. 914. *Eria Wightii*, *Reichb. f. l. c.* 270. *Mitopetalum Wightii*, *Blume Mus. Bot.* ii. 185.

TRAVANCORE; on the Pulney Mts.?, *Wight*. CEYLON; Hantani, alt. 3000 ft., *Thwaites*.

Habit and size of flower, according to Lindley's figure, of *T. latifolia*, but leaf much smaller and described as fleshy. Wight's represents a much larger plant, with sepals 1 in. long; his description of the lip lamellæ differs so greatly from what he figures that no reliance can be placed on either. Thwaites, however, refers it to *bicornis*. According to Lindley and Thwaites, the Ceylon plant is more or less purple. Lindley figures the flower as green and reddish, the lip and column yellow spotted with red. I have seen no Ceylon specimen or flower of the Travancore plant.

7. **T. khasiana**, *Hook. f. Ic. Plant. ined.*; leaf-blade longer than the stout petiole, scape tall, sepals $\frac{3}{4}$ in. linear obtuse and broader oblong obtuse petals 3-nerved, mentum shortly conic obtuse, lip cuneately obovate, side lobes rounded at the tip, midlobe much broader than long apiculate, disk with a slender mid-nerve and two narrow lamellæ all vanishing in the midlobe, anther hemispheric with a dorsal boss.

KHASIA HILLS; below Churra, alt. 3000 ft., *J. D. H. & T. T.*

Leaf 8 by 2 in., on a fusiform pseudobulb 3 in. long with a neck 1 in. long. Scape with long raceme 2 ft.; pedicel with ovary shorter than the sepals; bracts equalling the pedicel.—Only one specimen seen; it resembles Wight's figure of *Ania latifolia* (*T. bicornis*) more than any other species, but wants the 2 conical horns of the anther.

8. **T. minor**, *Hook. f. Ic. Plant. ined.*; leaf-blade 3-5 in. much longer than the petiole, scape and few-fl'd. raceme 8-12 in. very slender, sepals linear obtuse and rather broader petals 3-nerved, mentum very short, lip cuneate-obovate, side lobes subacute, disk with a central thickened nerve and two broad lamellæ reaching the base of the orbicular crenate midlobe which has 3-5 narrow ridges, anther with 2 conic obtuse bosses.

SIKKIM HIMALAYA; at Mahalderam, alt. 7000 ft., *Clarke*.

Pseudobulb very slender, 1-2 in. Leaf $1\frac{1}{2}$ -2 in. broad, very membranous, nerves very slender; petiole 2-3 in. Scape with a narrow sheath 2 in. long below the middle; bracts $\frac{1}{4}$ in.; pedicel with ovary $\frac{1}{2}$ in., very slender; sepals $\frac{3}{4}$ in.; column slender, narrowly winged; 4 of the pollinia very small.

9. **T. hastata**, *Hook. f. Ic. Plant. ined.*; scape very slender, raceme long many- and small-fl'd., bracts filiform as long as the ovary, sepals $\frac{1}{2}$ in. linear acuminate and subequal petals 3-nerved, mentum rather long obtuse, lip oblong-obovate, side lobes subacute, disk with a central nerve and two broad lamellæ reaching the base of the rather fan-shaped apiculate midlobe which has 3 narrow ridges, anther hemispheric smooth. *Eulophia hastata*, *Lindl. in Journ. Linn. Soc.* iii. 25.

ASSAM, *Masters, Griffith*.

Scape (base wanting) 2 ft. 6 to 3 ft. Raceme 5-7 in., dense-fl'd.; bracts and pedicels $\frac{1}{4}$ - $\frac{1}{2}$ in.; column very slender, narrowly winged; 4 pollinia very small.—Lindley says of this (under *Eulophia*) that it is the smallest-flowered of the aphyllous species, and that the hastate lip is unlike that of any other. The pollen shows it to be a *Tainia*, of which the leaves, rootstock, and base of scape are unknown.

10. **T. maculata**, *Hook. f.*; pseudobulb conic, leaf lanceolate delicately nerved, scape 2 ft., sepals and petals pale green lanceolate acute, sepals with 4 petals with 6 lines of purple spots, mentum short cylindric

truncate, side lobes of white lip erect obtuse, midlobe rounded subacute concave, disk 3-lamellate, base spotted with purple, column yellow. *Ania maculata*, *Thwaites Enum.* 301.

CEYLON; at Hapootelle, alt. 5000 ft. (a single specimen), *Thwaites*.
Description from Thwaites; I have seen no specimen.

11. **T. hologlossa**, *Benth. in Gen. Plant.* iii. 515; characters of *T. latifolia*, but lip oblong entire or with faint traces of lateral lobes, margin undulate, disk with 3 thickened ridges, anther low rounded smooth. *Eria* (*Tainia*) *hologlossa*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 148.

TENASSERIM; at Moulmein, *Parish*.

12. **T. latilingua**, *Hook. f. Ic. Plant. ined.*; pseudobulb narrow, leaf as long as its petiole, scape tall, bracts as long as the ovary, sepals and petals oblong-lanceolate 3-nerved, mentum very short, lip nearly orbicular with 3 rather distant crenulate ridges from the base to near the tip, anther hemispheric smooth.

PERAK, *Scortechini*.

Leaf 8 by $2\frac{1}{2}$ in. Scape and many-fl. raceme $1\frac{1}{2}$ –2 ft.; bracts $\frac{1}{2}$ in.; column narrowly winged; pollinia 8, equal.

†† *Sepals and petals produced into long filiform tails.*

13. **T. speciosa**, *Blume Bijd.* 354; pseudobulb very slender, leaf shorter than its petiole, sepals $2\frac{1}{2}$ –3 in. long and much shorter petals 5–7-nerved, mentum triangular obtuse, lip trapezoidly ovate acuminate many-nerved, margins undulate, anther 2-horned. *Eria speciosa*, *Reichb. f. in Walp. Ann.* vi. 269. *Mitopetalum speciosum*, *Blume Fl. Jav. Præf.* 8; *Mus. Bot.* ii. 185; *Orchid. Archip. Ind.* 158, t. 50, f. 1.

PERAK, *Scortechini*; Mount Ophir, *Griffith (Kew Distrib.* 5293); *Maingay (K. D.* 1667).—DISTRIB. Java.

Leaf 4–6 by $\frac{3}{4}$ in.; petiole 6–10 in. Scape 1–2 ft.; bracts $\frac{1}{2}$ –1 in., very slender; flowers “white, tails slightly yellow,” *Maingay*; column slender; anther with erect conical obtuse horns; pollinia 4?

14. **T. Maingayi**, *Hook. f. Ic. Plant. ined.*; pseudobulbs short close-set on a stout crinite ascending rhizome, petiole very short, sepals $1\frac{1}{2}$ –2 in. and petals 5–7-nerved, lip short rhombic, lobes inciso-fimbriate, lateral truncate, midlobe triangular acute strongly nerved.

PENANG; on red earth in the jungle, *Maingay (Kew Distrib.* 1668).

Leaf 5–10 in., narrowly elliptic-lanceolate, strongly 5–7-nerved, narrowed into a 1–2 in. petiole. Scape 20 in., very slender; bracts narrow, $\frac{1}{2}$ in., as long as the ovary; column slender, incurved.—I have seen but one flowering specimen, which is remarkable in habit and form of lip.

27. **ANTHOGONIUM**, *Lindl.*

A slender herb; pseudobulb small, 1–3-leaved. *Leaves* 1–3, very narrow, petioled, plaited. *Scape* from the base of the pseudobulb; flowers in a slender, simple or branched raceme, resupinate. *Sepals* connate in a narrow gibbously-based cylinder, free tips short, of dorsal linear straight, of lateral broad revolute. *Petals* included, linear, long-clawed. *Lip* adnate to the base of the column, long-clawed, limb flabelliform. *Column* very long and slender, tip 3-toothed; anther 2-celled; pollinia 4, ovoid, parallel, connected in pairs by a granular viscus.

A. gracile, *Lindl. in Wall. Cat.* 7398; *Gen. & Sp. Orchid.* 426

Journ. Linn. Soc. iii. 22. *A. Griffithii*, *Reichb. f. in Bonpland*, ii. 99; in *Allg. Gartenzeit.* 1856, 218; in *Walp. Ann.* vi. 471.—*Anthog.*, *Griff. Notul.* iii. 383; *Ic. Pl. Asiat.* t. 345.

TEMPERATE HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 7500 ft., *Treutler*. KHASIA and NAGA HILLS, alt. 4-6000 ft., *Griffith*, &c. TENASSERIM; at Moulmein, *Lobb*.

Pseudobulb size of a hazel or walnut. *Leaves* 6-12 by $\frac{1}{4}$ -1 in., on a slender stem, lanceolate. *Scape* equalling or exceeding the leaves, slender; bracts very small; pedicel with ovary $\frac{1}{2}$ -1 in., at right angles to the perianth, both rose-cold.; tube of perianth $\frac{3}{4}$ in. long, 2-3 times as long as the free parts; limb of lip cuneate or recurved, obscurely lobed, spotted with bright red. *Capsule* 1 in., fusiform.

28. JOSEPHIA, *Wight*.

Epiphytic stemless tufted herbs; root fibres very stout. *Leaves* radical, rigidly coriaceous. *Flowers* very small, on the branches of panicked spikes. *Sepals* broad, subequal, concave, connivent. *Petals* narrower. *Lip* adnate to the base of the column, erect, fleshy, concave; lateral lobes small, erect; midlobe small, entire, papillose, with a basal callus uniting the side lobes. *Column* erect, broad, nearly as long as the sepals, shortly 2-winged above, foot 0; anther acuminate, 2-celled; pollinia 4, oblong, parallel, subcaudate, attached to the rostellum by a viscus.

1. *J. lanceolata*, *Wight* *Ic. t.* 1742; leaves petioled linear-oblong or -lanceolate subacute. *Walp. Ann.* vi. 924. *Polystachya ramosa*, *Gardn. mss.*

WESTERN GHATS; from the Concan, *Stocks*, &c., to Travancore, *Wight*, &c. CEYLON; abundant in the Central Province.

Leaves 3-5 in., narrowed into a petiole $\frac{1}{4}$ -2 in., young clothed with hyaline sheaths. *Scape* 4-12 in., slender, and its branches stiff; bracts short, ovate, appressed; flowers $\frac{1}{2}$ in. broad, white tinged with purple; sepals obtuse.—Inflorescence like that of a *Statice*. *Wight*, on *Jerdon's* authority, mentions the curious fact of the persistent continuously flowering spikes.

2. *J. latifolia*, *Wight* *Ic. t.* 1743; leaves subsessile broadly oblong obtuse. *Walp. Ann.* vi. 924.

TRAVANCORE; on the Pulney Mts., *Wight*. NILGHIRI HILLS; Wynaad, *Jerdon* (*Ic. in Herb. Kew*).

Habit of *J. lanceolata*, but leaves much broader, more coriaceous, and with a much stouter shorter petiole, purple beneath; flowers yellow with purple stripes, and tip of lip.—I have no materials for describing the flowers.

29. GLOMERA, *Blume*.

This genus, which I erroneously believed to be British Indian when I drew up the Key to the Genera, p. 670, is as hitherto known confined to the Malayan Archipelago and Pacific. It consists of two species, and is distinguished from *Agrostophyllum* solely by having only 4 pollinia. Some of the following species of the latter genus, of which I have not seen the pollen, may prove to belong to it.

30. AGROSTOPHYLLUM, *Blume*.

Epiphytes with tufted sheathed flattened leafy stem. *Leaves* distichous, linear; sheaths flattened, persistent. *Flowers* very small, white, crowded in sessile terminal heads, mixed with long paleaceous bracts, rarely in small racemes. *Sepals* erect, conniving, concave; lateral broader, adnate to the foot of the column. *Petals* narrow or broad. *Lip* adnate to the short foot of the column, short, erect, entire or 3-fid. *Column* short, stout, thickened above; anther 2-celled; pollinia 8, ovoid, free or connected in

fours by a small viscus.—Species 6–8, Indian and Malayan and Seychelle Islands.

* *Lip subentire or 3-lobed. Petals broad, 5-many-nerved.*

1. **A. callosum**, *Reichb. f. in Seem. Fl. Vit.* 296; sepals 5–7-nerved, petals orbicular many-nerved, lip broadly ovate or oblong obscurely 3-lobed concave with a large subbasal callus and 2 smaller ones at the lateral sinus.

EASTERN HIMALAYA, Sikkim and Bhotan, alt. 2–5000 ft., *Griffith (Kew Distrib.* 5215, 5217). KHASIA and NAGA HILLS, common. UPPER BURMA, *Griffith (K. D.* 5216).

Stem 12–18 in. *Leaves* 5–7 by $\frac{1}{2}$ in., narrowed from the base to the rounded notched tip; sheaths $\frac{3}{4}$ by $\frac{1}{4}$ – $\frac{1}{2}$ in., mouth truncate. *Heads* 1–1 $\frac{1}{2}$ in. diam.; flowers $\frac{1}{4}$ in. diam., pink; lip very variable, sometimes distinctly 3-lobed with the midlobe orbicular from the same head with broadly ovate obscurely lobed lips; ovary obtusely angled, much longer than the obtuse inner bracts.

** *Lip with a concave hypochile, truncate in front, a broader epichile attached by a small base to its under surface. Petals linear, 1–3-nerved.*

2. **A. khasianum**, *Griff. in Calc. Journ. Nat. Hist.* iv. 378, t. 19; leaves 4–7 by $\frac{2}{3}$ – $\frac{3}{4}$ in. base contracted, sheaths $\frac{2}{3}$ in. broad, ovary obtuse-angled not exceeding the acute linear bracts, sepals acuminate 3-nerved, petals linear-oblong 3-nerved, epichile reniform. *A. planicaule*, *Reichb. f. in Walp. Ann.* vi. 909. *Appendicula Hasseltii*, *Wight Ic.* t. 1748, f. 3 (not of Blume). *Eria planicaulis*, *Wall. mss.*

KHASIA HILLS, alt. 2000 ft., *Gibson, J. D. H. & T. T. MUNNIPORE, Clarke.* TENASSERIM; at Moulmein, *Helper*, 5219, *Griffith*, &c.

Stem 6–8 in., few-leaved. *Leaves* almost petioled, obtuse and notched; sheaths lax, mouth very oblique. *Heads* $\frac{1}{2}$ in. diam.; flowers $\frac{1}{4}$ in. diam.

3. **A. glumaceum**, *Hook. f. Ic. Plant. ined.*; stemless or nearly so, leaves 8–18 by $\frac{1}{2}$ – $\frac{3}{4}$ in., base broad, tip contracted, sheaths very long, ovary acute-angled much longer than the cymbiform acute bracts, sepals acuminate 1-nerved, petals linear acuminate 1-nerved, epichile rounded ovate, column with short triangular wings.

PERAK, *Scortechini, King's Collector.*

Stems very short, tufted. *Leaves* rather flaccid, narrowed from the upper third to the tip; sheaths 2–5 by $\frac{1}{2}$ – $\frac{2}{3}$ in., mouth truncate. *Heads* broken up into short spikelets with distichous bracts $\frac{1}{10}$ in. long; flowers $\frac{1}{4}$ in. diam.—The triangular wings of the column are peculiar to this amongst Indian species.

4. **A. majus**, *Hook. f. Ic. Plant. ined.*; leaves 5–7 by $\frac{3}{4}$ –1 in., base broad, tip rounded, sheaths 1–2 in. long, heads large, ovary acute-angled not longer than the inner bracts, sepals acuminate 1-nerved, petals lanceolate acuminate 1-nerved, epichile orbicular acuminate.

PERAK, *Scortechini, King's Collector.*

Stem robust, 2 ft. *Leaves* not contracted at base or tip; sheaths $\frac{1}{2}$ in. broad, truncate. *Heads* 1 $\frac{1}{2}$ –2 in. diam.; outer bracts very broad, inner obtuse; flowers $\frac{1}{4}$ in. diam.; column short, broad, wingless; anther 2-lobed.—Resembles a Sumatran species (Beccari, 563), also a Javan named *A. longifolia*, Blume, by Reichenbach, but which has a triangular epichile with rounded bosses at the sides, and a narrower column.

5. **A. pauciflorum**, *Hook. f. Ic. Plant. ined.*; stem slender, leaves 2 in. flaccid very narrowly linear obtuse, flowers few minute in very short axillary peduncles, sepals ovate acuminate, petals linear 1-nerved, lip clawed rhomboid.

PERAK, *Scortechini*.

Stems 18-20 in., naked below, flexuous. Leaves $\frac{1}{2}$ in. diam., thin. Peduncles $\frac{1}{12}$ in.; flowers $\frac{1}{18}$ in.

Species of doubtful position.

6. *A. ZEYLANICUM*, *Hook. f.*; leaves 4-5 by $\frac{1}{2}$ in. flaccid, base slightly contracted, tip rounded, sheath 1-2 by $\frac{1}{2}$ in. truncate, ovary obtuse-angled very much longer than the obtuse bracts.—Ceylon, *McKenzie, Walker*, "Abundant on the road to Adam's Peak on trees."—I have seen only two specimens; in one the flowers are too withered for analysis, the other is monstrous with the head filled with fascicles of setaceous bracts. The thin flaccid leaves are peculiar.

31. *CERATOSTYLIS*, *Blume*.

Epiphytic low herbs with fibrous roots; stems tufted, simple or branched, sheathed, sometimes leafless and rush-like. Leaves narrow, coriaceous, fleshy or subterete, rarely thin. Flowers minute, solitary, or few in a small cluster of bracts. Sepals erect, conniving; lateral broader, forming with the foot of the column a gibbous or short spur-like mentum. Petals narrower. Lip adnate to the foot of the column by a long incumbent claw; blade short, erecto-patent, fleshy, entire. Column short, top broad, 2-lobed, or with two spatulate erect arms; foot long; anther 2-celled; pollinia 8, small, attached in fours or all together by a small viscus.—Species 15, Indian, Malayan and Pacific.

* Stems erect, rush-like. Flowers capitate; mentum spur-like. Arms of column long, erect.

1. *C. teres*, *Reichb. f.* in *Bonpland*. ii. 89, and in *Walp. Ann.* vi. 470; flowers pubescent, lip narrowly spatulate, tip thickened concave. *Appendicula teres*, *Griff. Notul.* iii. 359; *Ic. Pl. Asiat.* t. 332.

UPPER ASSAM; near Negregam, *Griffith*. KHASIA HILLS; at Amwee, alt. 4-5000 ft., *J. D. H. & T. T.*

Stems 8-12 in., as thick as a crow-quill, from a stout fibrous rhizome, straight or curved, jointed (or with a terete leaf) at the head of flowers, clothed at the base with appressed scarios sheaths. Heads of flowers $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., sessile lateral or terminal, in a tuft of sheathing bracts; flowers $\frac{1}{12}$ in. long, very shortly exserted; bracteole cymbiform, acuminate; ovary short, ovate, acuminate; lateral sepals pubescent; petals lanceolate, acute; mentum as long as the ovary, clavate; column much shorter than its spatulate arms.

2. *C. malaccensis*, *Hook. f.* *Ic. Plant. ined.*; flowers glabrous, lip lanceolate, tip thickened acute, disk with 3 ridges.

PERAK, *Scortechini*; on Batang Padang, alt. 4900 ft., *Wray*; Mount Ophir, *Griffith* (*Kew Distrib.* 5213).

Habit of *C. teres*, but stems shorter, flowers quite glabrous, and lip with membranous margins.—This will probably prove to be a Malay Archipelago species, but I cannot identify it with any.

** Stem ascending or pendulous, sheathed throughout. Flowers in lateral tufts of bracts; mentum very short, rounded; column with a broad reniform top.

3. *C. clathrata*, *Hook. f.*; glabrous, stems densely tufted, sheaths clathrately reticulate, leaves terete channelled, flowers papillose shortly

peduncled, bracts scarious sheathing, lip quadrate or very broadly triangular.

PERAK; on Batang Padang, alt. 4900 ft., Wray, *Scortechini*.

Stems 2-3 in., rigid, branched. Leaves $\frac{1}{2}$ -1 in., recurved when dry, acute; sheaths appressed; nerves beautifully reticulate in squares. Flowers about $\frac{1}{2}$ in. long, pale brownish; bracts brown, acuminate; lateral sepals triangular, 3-nerved; dorsal much narrower; mentum rounded; petals oblong-lanceolate, 1-nerved; lip rather membranous and plaited? top of column very broadly reniform.—More flowers are wanted for a satisfactory analysis. Scortechini figures the lip as with a slender claw, and the leaves as $\frac{1}{2}$ terete. The reticulated sheaths are beautiful objects. *C. retisquama*, Reichb. f., has similar sheaths, but much longer sepals and petals.

4. *C. pendula*, Hook. f. *Ic. Plant. ined.*; glabrous, stems tufted slender creeping or pendulous loosely clothed with scarious brown ribbed sheaths, leaves linear fleshy, margins convolute when dry, flowers in clusters of oblong scarious obtuse bracts, ovary hairy, lip ovate or ovate-oblong. *Trigonanthus pendulus*, Korthals mss. (*fid. Reichb. f. in Herb. Lindl.*).

PERAK, *King's Collector*.—DISTRIB. Borneo, Celebes.

Stems 6-10 in., weak, rooting, as thick as a sparrow-quill; sheaths $\frac{1}{2}$ in., loose, subacute, tips usually broken. Leaves 1-1 $\frac{1}{2}$ in., obtuse. Flowering bracts forming stellate tufts; flowers about $\frac{1}{10}$ in. long, yellowish brown; sepals ovate, obtuse, thick, glabrous, concave, 3-nerved; petals linear, concave; mentum rounded, indistinct; lip abruptly clawed, very thick, concave, subacute, with narrow membranous margins, base rounded or subcordate; column very short, arms short obtuse.—The clawed lip resembles *Bulbophyllum*; more flowers are wanted for a satisfactory description.

5. *C. himalaica*, Hook. f. *Ic. Plant. ined.*; stems densely tufted prostrate branched clothed with scarious brown ribbed sheaths, leaves linear-lanceolate thick fleshy, flowers pedicelled surrounded by acute membranous bracts; pedicel and sepals sparsely woolly. *Eria ramosissima*, Wall. mss.

EASTERN TROPICAL HIMALAYA; E. Nepal, J. D. H.; Bhotan, Griffith (*Kew Distrib.* 5214). KHASIA MTS., Gibson (*Ic. in Herb. Calcutt.*).

Stem 4-6 in. Leaves 2-2 $\frac{1}{2}$ in., subacute, base narrowed. Flowers $\frac{1}{2}$ in. long; lateral sepals broadly ovate, acute, pale pink, 3-nerved; petals linear, acute, white streaked with purple; mentum rounded; lip obovate-oblong, obscurely 3-lobed, coriaceous, concave, with a gibbosity on the back below the papillose yellow tip; top of column broadly reniform. Capsule $\frac{1}{2}$ in. long, ellipsoid, pedicelled.—The few flowers I have analyzed are insufficient for a satisfactory description.

*** Stem erect or ascending. Flowers solitary or few; arms of column long.

6. *C. lancifolia*, Hook. f. *Ic. Plant. ined.*; stem simple slender, sheaths few 1 in. long loose, leaf terminal membranous linear-lanceolate acute, flower solitary long-pedicelled, mentum short spur-like.

PERAK, *Scortechini*.

Stem 2-4 in., tufted. Leaf 1 $\frac{1}{2}$ -4 in., rather membranous, shortly petioled. Flower $\frac{1}{2}$ in. long; pedicel erect, filiform, pubescent; bract minute, tubular; sepals linear-lanceolate, subacute, 3-nerved; petals lanceolate, 3-nerved; mentum broader than long; lip fleshy, claw short with incurved margins; hypochile narrowly oblong; epichile as long but narrower, dagger-shaped, terete, obtuse.—Near *C. Gigas*, Bl. (*Reichb. f. Xen. t. 127*), which has broader flattened stems, and a very different lip. Also near *C. braccata*, R. f., which has a very fleshy leaf and long mentum. More flowers are necessary for a reliable description.

7. **C. robusta**, Hook. f. *Ic. Plant. ined.*; rhizome stout ascending rooting and small distant erect pseudobulbs clothed with reticulate acuminate appressed sheaths, leaves 4-5 in. solitary erect linear-lanceolate acuminate, scape enclosed in the sheath with the pseudobulb very slender 1-ld., mentum cylindric, lip long clawed spatulate obtuse.

PERAK; alt. 4900 ft., *Wray*.

Rhizome as thick as a goose-quill; trabeculately reticulate, membranous. *Scape* a little longer than the pseudobulbs; bract small, broad; flower about $\frac{1}{2}$ in., from the tip of the mentum to that of the dorsal sepal, pale yellow; mentum hoary, longer than the oblong obtuse 5-nerved sepals; lip apparently quite smooth and entire, tip fleshy.—A remarkable species, probably scandent.

32. **CRYPTOCHILUS**, Wall.

Low epiphytes; pseudobulbs crowded, 1-2-leaved. *Leaves* coriaceous, base complicate or petioled. *Scape* terminal, naked; flowers close set in distichous spikes, shorter than their persistent bracts. *Sepals* connate in an equally 3-lobed ovoid or urceolate gibbous 5-toothed tube. *Petals* narrow. *Lip* included, adnate to and incumbent on the foot of the column, narrow, erect. *Column* erect, top dilated toothed; anther 2-celled; pollinia 8, obovoid or oblong, connected in fours by a small viscus.—Species 2.

1. **C. sanguinea**, Wall. *Tent. Fl. Nep.* 36, t. 26; *Cat.* 7530; flowers pubescent longer than broad bright red, sepals acuminate. *Lindl. Gen. & Sp. Orchid.* 193; in *Journ. Linn. Soc.* iii. 21; in *Bot. Reg.* 1838, t. 23; *Wight Ic.* t. 1757; *Walp. Ann.* vi. 461.

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, *J. D. H.* KHASIA and NAGA HILLS, alt. 4-5000 ft., *Griffith, Prain, &c.*

Pseudobulbs variable. *Leaves* 3-8 in., lower ensiform, upper linear-oblong, stoutly petioled. *Scape* 3-5 in., stout, naked; spike 3-5 in.; bracts linear, pubescent; petals and lip obovate; pollen green. *Capsule* $\frac{1}{2}$ in., oblong, erect.

2. **C. lutea**, *Lindl. in Journ. Linn. Soc.* iii. 20; flowers glabrous subglobose yellow, sepals obtuse. *Reichb. f. in Gard. Chron.* 1882, ii. 733.

TEMPERATE HIMALAYA; Sikkim, alt. 6000 ft., and Bhotan, *Griffith, &c.* (*Kew Distrib.* 5228, 5229, 5229/1). MUNIPORE; on Kohima, *Clarke*.

Pseudobulbs crowded, oblong. *Leaves* 1-2, 3-5 in., linear-lanceolate, acute, subsessile or petioled. *Scape* 2-4 in., rather slender; spike as long; petals and lip lanceolate; pollen whitish. *Capsule* $\frac{1}{4}$ in., ellipsoid.

33. **TRICHOSMA**, Lindl.

Epiphytic; stem tufted, sheathed, cylindric, 2-leaved. *Leaves* terminal, subopposite, petioled. *Scape* terminal; flowers few, large, white, racemed. *Sepals* subequal, spreading, lateral broader, adnate to the base of the column. *Lip* articulate with the base of the column, claw incumbent, 3-lobed, disk lamellate. *Column* short, top toothed, anther with 2-rounded appendages; pollinia 8, broadly ovate, compressed, cohering in fours by a viscus.

Very near sect. *Hymeneria* of *Eria*.

T. suavis, *Lindl. in Bot. Reg.* 1841, *Misc.* 83. *T. cylindripoda*, *Griff. Notul.* iii. 299. *Eria suavis*, *Lindl. in Journ. Linn. Soc.* iii. 52.

E. coronaria, *Reichb. f. in Walp. Ann.* vi. 272, and in *Gard. Chron.* 1876, 234. *Cœlogyne coronaria*, *Lindl. in Bot. Reg.* 1841, *Misc.* 83.

SIKKIM HIMALAYA, alt. 5-6000 ft., and KHASIA HILLS, alt. 4-5000 ft.

Stems 3-6 in., from an underground soft rhizome, as thick as a goose-quill, naked, fleshy; basal sheaths few, lax. *Leaves* ovate-lanceolate acuminate, thick, 3-nerved. *Scape* 1-2 in., 2-4-fl.; bracts large; pedicel with ovary $\frac{1}{2}$ -1 in.; flowers white, yellowish or purplish, sweet-scented; lateral sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. long, ovate-lanceolate; petals oblong; lip subsessile, ovate-oblong, streaked with purple; disk yellow, with 2 thick crenate ridges between the side lobes, and 7 on the suborbicular midlobe; anther rather fleshy.

34. **CÆLOGYNE**, *Lindl.*

Epiphytes; rhizome creeping; pseudobulbs 2-(rarely 1-)leaved. *Leaves* coriaceous, or thin and plaited. *Scape* usually short; flowers usually racemed, rarely (except in sect. *Pleione*) 2 or solitary; bracts long, sheathing, deciduous. *Sepals* subequal, lateral saccate at the base. *Petals* narrower. *Lip* sessile at the base of the column, erect and embracing it, base concave or saccate. *Column* long, erect, winged, foot 0; top hooded, membranous; anther more or less 2-celled; pollinia 4, cohering in pairs by a granular viscus.—Species about 70, Indian and Malayan.

In some species of this genus the flowers are produced from the undeveloped pseudobulbs; in others only from the fully developed; and this character is quite constant. Again, in some species which flower from the undeveloped pseudobulbs the sheaths of the flowering scape are closely imbricating, and all coriaceous or membranous; in others the inner sheaths are more or less foliaceous, or one or two may form fully developed leaves. This character does not so well limit species, but is very useful. Lastly, the presence or absence of sheaths on the scape of the species which flower from the mature pseudobulb, and their position, afford very constant characters. A consideration of these hitherto partially recognized characters suggests the following arrangement of the Indian species.

Sect. I. EUCÆLOGYNE. *Flowers* and *leaves* cœtaneous. *Lip* 3-lobed, the terminal lobe spreading.

* Flowers from an undeveloped pseudobulb at the base of the old pseudobulb. Sheaths of the scape all basal.

† Sheaths of the scape imbricating, none becoming foliaceous (except sometimes in *C. suaveolens*, *occultata*, *breviscapa* & *sulfurea*).

§ *Racemes* pendulous or decurved, many-fl. (or few-fl. in *C. cristata*).—Sp. 1-8.

§§ *Racemes* erect or inclined, rarely drooping, many- or few-fl.—Sp. 9-20.

†† Inner sheaths of the scape more or less foliaceous. (See also *C. suaveolens*, *occultata*, *breviscapa* & *sulfurea*).—Sp. 21-29.

** Flowers from the top of the mature pseudobulb.

† Scape sheathed at the base only.—Sp. 30-35.

†† Scape not sheathed either at the base or beneath the raceme.—Sp. 36-38.

††† Scape with distichous imbricating sheaths below the raceme only.—Sp. 39-47.

Sect. II. PLEIONE. *Flowers* appearing before or after the leaves (except *C. Hookeriana*) from the base of the mature pseudobulb. *Lip* large, convolute, with a shovel-shaped mouth, very obscurely 3-lobed.—Sp. 48-53.

Doubtful species.—Sp. 54-55.

Sect. I. EUCÆLOGYNE (see above).

1. ***C. Gardneriana***, *Lindl. in Wall. Pl. As. Rar.* i. 33, t. 38;

Gen. & Sp. Orchid. 41; *Fol. Orchid.* 1; pseudobulbs long narrow, leaves large petioled elliptic-lanceolate, raceme nodding, flowers large distichous white, sepals and petals narrow connivent below, base of narrow lip bisaccate. *Past. Mag.* vi. t. 73; *Walp. Ann.* vi. 222. *C. trisaccata*, *Griff. Itin. Notes* 72; *Walp. l. c.*

SUBTROPICAL HIMALAYA, alt. 4-5000 ft., eastwards, and KHASIA MTS., common.

Pseudobulbs 3-6 in., narrowly flask-shaped. *Leaves* 6-14 in. *Scape* short, closely clothed with broad obtuse sheaths; raceme 4-8 in.; bracts 1-1½ in., cymbiform, obtuse; sepals linear-oblong, acute, keeled; base saccate; petals narrower; side lobes of lip small toothed, midlobe 2-cleft rounded and erose, disk yellowish with 2 waved ridges. *Capsule* 1½ in., fusiform, 6-winged.

2. ***C. flaccida***, *Lindl. in Wall. Cat.* 1961; *Gen. & Sp. Orchid.* 39; in *Bot. Reg.* 1841, t. 31; *Fol. Orchid.* 2; pseudobulbs elongate, leaves long-petioled, sepals ¾ in. linear-oblong acute, petals narrower acuminate, side lobes of lip large rounded, midlobe small broadly ovate, disk with 3 yellow flexuous ridges. *Bot. Mag.* t. 3318; *Walp. Ann.* vi. 222.

SUBTROPICAL HIMALAYA; from Nepal, *Wallich*, eastwards. TENASSERIM; on rocks of Jook Long, *lc. Parish*.

Pseudobulbs 2-6 in., sheaths large, coriaceous, purple-brown. *Leaves* 6-12 in., linear-lanceolate, acuminate; petiole 1-3 in. *Scape* with short broad obtuse basal sheaths; raceme 4-5 in., pendulous; bracts ½-¾ in., caducous; flowers ½-¾ in. diam., white (said to smell offensively), side lobes of lip brown. *Capsule* 2½ in., clavate, broadly winged.

3. ***C. testacea***, *Lindl. in Bot. Reg.* 1842, *Misc.* 38; *Fol. Orchid.* 2; pseudobulbs narrow ovoid, leaves petioled, sepals lanceolate subacute and rather narrower petals pale brown, side lobes of lip narrow dark brown margined with white, midlobe broad rounded crenate, disk with 4 spinulose ridges. *Bot. Mag.* t. 4785; *Walp. Ann.* vi. 223.

SINGAPORE, *Hort. Loddiges*.

Pseudobulbs 3-5 in., obtusely angled; sheaths narrow. *Leaves* 6-8 in., lanceolate, 3-5-nerved. *Scape* sheathed up to the flowers; raceme many-fl., pendulous; bracts ½ in., cymbiform, acute, persistent; flowers 1½ in. diam.; column white, anther brown.

4. ***C. cristata***, *Lindl. Coll. Bot.* t. 32; in *Bot. Reg.* 1841, t. 57; *Fol. Orchid.* 8; pseudobulbs oblong, leaves sessile lanceolate, raceme few-fl., sepals and petals subequal broad obtuse white, side lobes of lip large rounded with yellow fimbriate lamellæ between them, midlobe suborbicular with 2 crenulate broad yellow plates. *Walp. Ann.* vi. 229; *Past. Fl. Gard.* iii. 171, f. 312; *Fl. des Serres*, t. 1807; *Pescatoria* i. t. 25; *Warner Sel. Orchid.* t. 35; *Orchid. Alb.* t. 54; *Jennings Orchid.* t. 7; *Gartenfl.* viii. t. 245; *Deutsche Gartenz.* 1866, t. 341. *Cymbidium speciosissimum*, *Don Prodr.* 35.

TEMPERATE HIMALAYA, alt. 5-7000 ft., from Kumaon eastwards. SYLHET, *fid. Wallich*.

Pseudobulbs 2-3 in., distant. *Leaves* 6-12 in. *Scape* with pendulous raceme 6-12 in., 3-10-fl.; bracts 1½-2 in., oblong, persistent; flowers very large; sepals 1½-2 in., undulate. *Capsule* 1½-2 in., fusiform, angles obtuse.—There are many described varieties with very slight characters, as var. *hololeuca*, R. f. in *Gard. Chron.* 1881, i. 562, which has white crests on the lip; var. *Lemoniana*, *Orchidoph.* 188, 212, with lemon-yellow on the lip; another var. *Lindenia* iv. t. 173, and *marina*, *Reichb. f.* in *Gard. Chron.* 1886, i. 398, and in *Reichenbachia* i. 13, t. 8, which differs only in its larger size.

5. **C. macrobulbon**, *Hook. f.*; pseudobulbs very long narrow, leaves petioled broad, raceme many-fl., bracts subtruncate, sepals oblong-lanceolate acuminate green, petals narrowly linear, lip white mottled with yellow-brown, side lobes narrow, disk with 3 crisped ridges, the lateral double on the ovate acuminate midlobe. *C. fuscescens*, *Wall. Cat.* 1969/2.

PENANG, *Wallicn.* PERAK, *Scortechini*, *King's Collector*.—DISTRIB. Borneo.

Pseudobulbs 4–8 in., distant, narrowed from the base upwards; sheaths short, acuminate. *Leaves* 6–8 by 2–4 in., broadly elliptic- or ob-lanceolate. *Scape* with loose membranous obtuse basal sheaths.—Probably near *Hüttneriana*; but the bulbs differ entirely from Reichenbach's description of that plant, as do the basal sheaths of the scape and obtuse bracts.

6. **C. tomentosa**, *Lindl. Fol. Orchid.* 3; pseudobulbs narrowly ovoid, leaves long long-petioled lanceolate, raceme bracts and ovary pubescent, sepals lanceolate and narrower petals pale red-brown, lip yellow, side lobes narrow streaked with brown, disk with 3 crisped ridges the outer double and coalescing in a broad caruncled area on the small midlobe. *Reichb. f. in Gard. Chron.* 1873, 1843; *Wawra Bot. Voy. Pr. Saxe-Cob.* ii. 154, t. 14; *Walp. Ann.* vi. 224.

PERAK; at Larut, *King's Collector*. MALACCA, top of Mount Ophir, *Hullett*.—DISTRIB. Borneo.

Pseudobulbs 3–6 in.; sheaths very long, lanceolate, rigid. *Leaves* 12–20 by 1–2½ in., petiole 2–3 in. *Scape* 12–18 in., scurfily pubescent; basal sheaths loose; bracts 1–1½ in., subacute, persistent in flower; sepals 1–1½ in. long.

Var. ? *penangensis*; pseudobulbs shorter, leaves 6–8 by 2–2½ in. elliptic-obovate, ridges of lip not coalescing on the midlobe.—Penang, on Government Hill, *Maingay*.

7. **C. Massangeana**, *Reichb. f. in Gard. Chron.* 1878, 684; 1882, i. 369; pseudobulbs obpyriform, leaves petioled elliptic-obovate, bracts short broad, sepals oblong-lanceolate and narrower petals pale straw-colored, side lobes of lip narrow blue-grey with purple tips, disk with 3 crisped compound ridges produced on to the yellow orbicular apiculate midlobe. *Bot. Mag.* t. 6979; *Floral Mag.* N. S. t. 373; *Warner Orchid. Alb.* t. 29.

ASSAM (fid. *Gard. Chron.*) (more probably Malayan).

Pseudobulbs 2 in. *Leaves* 4–5 by 1½–2 in. *Raceme* 12–18 in., pendulous, quite glabrous; bracts ½–¾ in., cuneiform when spread out, persistent, tip broad, rounded; sepals 1 in. long; side lobes of lip striped purple within.—See note under *C. assamica*.

8. **C. Hüttneriana**, *Reichb. f. in Flora* 1872, 277; pseudobulbs fusiform very rugose, leaves petioled oblong-lanceolate, bracts acuminate, sepals ovate-lanceolate acuminate, petals linear, side lobes of lip rounded, disk with 3 crisped ridges extended into the rounded ovate acuminate midlobe.

TENASSERIM; at Moulmein, *Parish*.

Scape in the only specimen seen 7 in.; sheaths closely imbricating, the outer purple-brown; raceme 8–10-fl., drooping; bracts 1 in., cymbiform.—I have seen no pseudobulbs or leaves; the flower is described from a specimen named by Reichenbach, who says “flower white and lip toothed with a ligulate midlobe.”

9. **C. lentiginosa**, *Lindl. Fol. Orchid.* 3; pseudobulbs linear-oblong, leaves shortly petioled elliptic-lanceolate, raceme 5–8-fl., sepals oblong-

lanceolate acute and rather narrower petals pale green, side lobes of lip oblong obtuse, margins brown, midlobe large shortly broadly clawed nearly semicircular crenate white with orange blotches, disk with 3 obscure short crenate ridges. *Bot. Mag.* t. 5958; *Reichb. f. in Trans. Linn. Soc.* xxx. 146; *Walp. Ann.* vi. 224.

TENASSERIM; at Moulmein, *Lobb, Parish.*

Pseudobulbs 3-4 in., obtusely 4-angled. *Leaves* 6-8 in. *Scape* with erect raceme 4-5 in., sheathed up to the flowers; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., lanceolate, persistent; flowers $1\frac{1}{2}$ in. diam.; ridges of lip not produced on to the midlobe, side lobes speckled with brown.

10. **C. Maingayi**, *Hook. f.*; pseudobulbs narrowly ovoid, leaves long-petioled elliptic-lanceolate, raceme many-fl., flowers large white, lateral sepals linear-oblong acute, petals subspathulate obtuse, lip deeply 3-lobed blotched with orange, side lobes large, midlobe obovoid crenate undulate, disk with 3 crested brownish ridges between the side lobes and 2 on the midlobe.

MALACCA, *Maingay (Kew Distrib.* 1636).

Pseudobulbs 4 in. *Leaves* 10 in., acute, 7-nerved; petiole 2 in. *Scape* with drooping raceme 14 in., clothed at the base with short distichous sheaths, and above up to the flowers with long tubular membranous ones; bracts $1\frac{1}{2}$ in., persistent, reflexed; flower $2\frac{1}{2}$ in. diam.—Description partly from *Maingay* mss.

11. **C. corymbosa**, *Lindl. Fol. Orchid.* 7; pseudobulbs short, leaves elliptic-lanceolate, raceme erect or drooping, sepals and narrower petals lanceolate acute white, lip white with 4 large yellow eyes bordered with orange, side lobes erose, midlobe ovate or ovate-lanceolate, disk with 3 low ridges. *Bot. Mag.* t. 6955; *Walp. Ann.* vi. 228; *Reichb. f. in Gard. Chron.* 1876; *Rolfe l. c.* 1837, ii. 73, f. 15.

TEMPERATE HIMALAYA; KHASIA MTS., alt. 6-9000 ft., from Sikkim eastwards.

Pseudobulbs $1-1\frac{1}{2}$ in., crowded, obovoid or subrhomboid. *Leaves* 4-8 in. *Scape* sheathed up to the fragrant flowers; sepals $1-1\frac{1}{2}$ in.; spots on lip variable in form, side lobes sometimes streaked with red. *Capsule* $1\frac{1}{2}$ -2 in., pyriform, angles obtuse.—Var. *heteroglossa*, R. f. in G. C. 1878, ii. 8, is described as having a broader midlobe of lip.—This species is often confounded with *C. nitida*, which flowers from the mature bulbs.

12. **C. ochracea**, *Lindl. in Bot. Reg.* 1846, t. 69; *Fol. Orchid.* 5; pseudobulbs oblong, leaves petioled elliptic-lanceolate, raceme 6-8-fl., sepals linear-oblong acute and narrower petals white, lip white with confluent orange and yellow or brownish areas, side lobes serrulate, midlobe as long broadly ovate acute, base serrulate, disk 2-ridged. *Bot. Mag.* t. 4661; *Jard. Fleur.* iv. t. 342; *Walp. Ann.* vi. 226.

TEMPERATE HIMALAYA, alt. 5-7000 ft., from Kumaon to UPPER ASSAM.

Very near *C. corymbosa*, but pseudobulbs oblong polished, leaves narrower and longer petioled, scape more exerted very long in fruit, flowers smaller, sepals only 1 in. long more obtuse, and midlobe of lip broader.—Sub-sp. *conferta*, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 146, t. 30, f. 3, with small elliptic acute leaves, shorter perianth segments, and entire side lobes of lip, may (as the authors suggest) be a different species.

13. **C. graminifolia**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 146; pseudobulbs ovoid, leaves very narrow, raceme 3-4-fl., sepals and much narrower petals oblong-lanceolate acute white, lip orange-yellow

side lobes rounded, midlobe smaller broadly ovate acute, disk with 3 dark brown or red crisped ridges. *Bot. Mag.* t. 7006; *Rolfe in Gard. Chron.* 1888, i. 168.

ASSAM, Mann. TENASSERIM; mountains near Moulmein, *Parish*.

Pseudobulbs $1\frac{1}{2}$ – $2\frac{1}{2}$ in., crowded; sheaths short. *Leaves* 10–12 by $\frac{1}{2}$ – $\frac{1}{2}$ in. *Scape* much shorter, sheathed to the middle or lower; bracts caducous; sepals 1 in.

14. *C. viscosa*, *Reichb. f. in Allgemein. Berlin Gartenz.* 1856, 218; *in Bonpland.* iv. 328; *in Gard. Chron.* 1870, 1085; pseudobulbs narrowly ovoid or fusiform shining, leaves 8–12 in. petioled linear-lanceolate, scape very short closely sheathed up to the erect few-fl. raceme, ovary viscid, sepals and narrower petals linear-lanceolate acuminate white, lip very broad rounded, side lobes streaked with brown, midlobe small ovate, disk with 3 crenulate lamellæ from the base to the middle of the midlobe.

KHASIA HILLS (*IC. in Herb. Calcutt.*).

Reichenbach describes this as "a pretty little species in the way of *C. flaccida*;" but the pseudobulbs of specimens named by him are $2\frac{1}{2}$ in. long, the scape is erect, and the flower 2 in. diam. My only materials are the above pseudobulbs and flower, another of each from Messrs. Veitch, and a rude drawing in *Herb. Calcutt.*, of what Mr. Rolfe and I take to be the same species; and if so, it is the only authority for the habitat. In the drawing the very stout rhizome bears narrowly obpyriform pseudobulbs 3 in. long with sheaths as long, the leaves are $1\frac{1}{2}$ in. broad, 3-nerved, the flowers are smaller, sepals broader, and petals and lip narrower.

15. *C. suaveolens*, *Hook. f.*; pseudobulbs ovoid, leaves sessile elliptic, margins wavy, scape sheathed up to the raceme, flowers distinct, sepals and petals incurved oblong acute white, lip white, side lobes rounded, midlobe broadly ovate or orbicular, disk with 4–6 crenate yellow ridges. *C. undulata*, *Wall. mss.* *Pholidota suaveolens*, *Lindl. in Gard. Chron.* 1856, 372.

KHASIA MTS., *Gibson (IC. in Herb. Calcutt.)*; at Mungpo, alt. 1500 ft., *Clarke*. ASSAM (*IC. in Herb. Calcutt.*).

Pseudobulbs 2–3 in., distinct on a stout sheathed rhizome. *Leaves* 6–8 in. *Scape* 6–8 in., sometimes 2-leaved, ascending, lower sheaths closely imbricate; bracts $\frac{2}{3}$ in., deciduous; sepals $\frac{1}{2}$ – $\frac{2}{3}$ in. long; column rather short. *Capsule* $1\frac{1}{2}$ in., turgid, angles acute—Habit of *Pholidota*, and the column is rather short for *Cælogyne*, though very different from *Pholidota*.

16. *C. occultata*, *Hook. f. IC. Plant. ined.*; pseudobulbs turbinate ob-ovoid, leaves 2–3 in. petioled elliptic acute, scape 3–4-fl. very short ascending thickly clothed to the top with coriaceous sheaths the upper subfoliaceous, flowers half concealed by the sheaths white, sepals and narrower petals oblanceolate acute, side lobes of lip rounded streaked with dull red, midlobe ovate-rotundate obtuse crenate, disk between the side lobes with 2 very thick yellow crenate ridges.

SIKKIM HIMALAYA, *Griŋŋth's Collectors (Kew Distrib.* 5159) (*IC. in Herb. Calcutt.*).

Rhizome very stout, sheathed; pseudobulbs $1\frac{1}{2}$ in. *Leaves* coriaceous, 5-nerved. *Scape* $1\frac{1}{2}$ in., ascending or incurved; sheaths acute; petiole $\frac{1}{2}$ – $\frac{1}{2}$ in.; bracts 1 in., oblong, acute; sepals 1 in., sometimes flanked with yellow; lip with a brown semilunar mark on each side lobe, and a brown margin to the ridges of the disk.—Described chiefly from the drawing in *Herb. Calcutt.*

17. *C. trinervis*, *Lindl. in Wall. Cat.* 1995; *Gen. & Sp. Orchid.* 41;

Fol. Orchid. 4; pseudobulbs large ovoid, leaves long-petioled elongate-lanceolate, raceme short 4-6-fld., sepals lanceolate acute and linear-lanceolate 3-nerved petals white?, lip brown, side lobes short broad, mid-lobe broadly clawed subreniform retuse bordered with white, disk with 3 narrow ridges extending into the midlobe.

TENASSERIM; at Tavoy, Wallich; Mergui, Griffith, Parish.

Pseudobulbs 2-3 in., curved; rhizome very stout. *Leaves* 10-18 in., 3-nerved; petiole 2-3 in. *Scape* with short basal sheaths; bracts lanceolate, caducous; flowers $1\frac{1}{2}$ in. diam. *Capsule* $1\frac{1}{2}$ in., narrowly pyriform, angles acute.—Lip described from a drawing by Parish. Very near *C. lentiginosa*, but leaves much longer, and longer petioled, pseudobulbs larger, petals narrower.

18. **C. breviscapa**, Lindl. *Fol. Orchid.* 4; pseudobulbs ovoid, leaves shortly petioled linear-oblong subacute, raceme few-fld., bracts persistent, sepals ovate-lanceolate acute and linear-oblong petals white, lip white?, side lobes short, midlobe large rounded apiculate or retuse, disk yellowish with 2 thickened crenate and a median slender ridge. *Thwaites Enum.* 300; *Walp. Ann.* vi. 225. *C. angustifolia*, Wight *Ic. t.* 1641, bad (not of A. Rich.).

NILGHIRI HILLS, alt. 6000 ft. CEYLON, in the Central Province, Walker, &c.

Pseudobulbs 1- $1\frac{1}{2}$ in., crowded; sheaths short, broad, brown-purple; rhizome very stout. *Leaves* 3-5 in., coriaceous, costa strong beneath. *Scape* (with sometimes 2 young leaves) with the raceme 1-2 in., lengthening to 7 in fruit; basal sheaths obtuse; bracts $\frac{3}{4}$ -1 in. long, lanceolate; flowers $\frac{3}{4}$ -1 in. diam. *Capsule* $1\frac{1}{2}$ in., narrowly fusiform.—Very near *C. odoratissima*.—Lindley, misled by Wight, describes the leaves as solitary. There is a drawing in Herb. Kew by Mrs. Walker of an allied species or variety from Ramboddi in Ceylon, with pseudobulbs 3 in., leaves 9 in., yellow flowers, and 2-lobed midlobe of lip.

19. **C. fuscescens**, Lindl. in *Wall. Cat.* 1962/1; *Gen. & Sp. Orchid.* 41; *Fol. Orchid.* 11; pseudobulbs long narrow, leaves petioled elliptic, raceme 3-8-fld., bracts deciduous, sepals oblong acute and very narrow 1-3-nerved petals yellow greenish or pink, lip mottled with brown, side lobes elongate free ends small obtuse, midlobe clawed large orbicular or quadrate, disk with 3 smooth ridges. *Bot. Mag.* 5494 (var. *brunnea*); *Walp. Ann.* vi. 231. *C. brunnea*, Lindl. in *Gard. Chron.* 1843, 71, with fig. *C. assamica*, Lindl. ex Reichb. f. in *Koch Allgemein. Gartenzeit.* 1857, 508; *Xen. Orchid.* ii. t. 134.

TROPICAL HIMALAYA, alt. 3-5000 ft., from Nepal eastwards, and the KHASIA Mts.

Pseudobulbs 4-6 in., subcylindric, grooved; sheaths short; rhizome very stout. *Leaves* 6-10 by 3-4 in., many-nerved. *Scape* with raceme 4-8 in., suberect or drooping; flowers $1\frac{1}{2}$ -2 in. diam., very variable in colouring. *Capsule* 2 in., pyriform, angles winged.

In var. *brunnea* the sinus between the mid- and side-lobes is almost obsolete. *Wall. Cat.* 1961/2 is *C. macrobulbon*.

20. **C. sulphurea**, Reichb. f. in *Bonpland.* 1857, 43; pseudobulbs obpyriform, leaf solitary petioled, scape slender 8-10-fld., bracts deciduous, flowers small pale green or sulphur-cold., sepals oblong-lanceolate acuminate, petals very narrow 1-nerved, side lobes of lip small, midlobe much broader 2-fld, disk with 2 lamellæ and an orange blotch. *Chelonanthera sulphurea*, Blume *Bijd.* 383.

PERAK, Scortechini, Wray.—DISTRIB. Java.

Pseudobulbs 1- $1\frac{1}{2}$ in., tufted; sheaths membranous. *Leaf* 6-8 by 1- $1\frac{1}{2}$ in.,

many-nerved; petiole 2-4 in. *Scape* with raceme 2-4 in., sometimes with 2 partially developed leaves; sheaths long, rather membranous; bracts longer than the hyaline flowers; sepals $\frac{1}{2}$ in.; column broadly hooded.

21. **C. cycnoches**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 147; pseudobulbs narrow, leaves sessile elliptic, raceme drooping 6-8-fld., bracts persistent, flowers greenish and brown, sepals oblong-lanceolate acuminate, petals narrowly linear 3-nerved, side lobes of lip short, midlobe orbicular apiculate or broadly ovate, disk with 5 slender ridges.

TENASSERIM; on Douna-thong, alt. 4000 ft., *Parish*.

Very like *C. fuscens*, but much smaller, pseudobulbs $1\frac{1}{2}$ -2 in., leaves 4-5 in., scape with 2 leaves emerging from the sheaths, flowers smaller, sepals $1\frac{1}{4}$ in., and side lobes of lip barred with red-brown.

22. **C. spectiosa**, *Lindl. Gen. & Sp. Orchid.* 39; in *Bot. Reg.* 1847, t. 23; *Fol. Orchid.* 11; pseudobulbs ovoid, leaves elliptic or lanceolate, scape 1-2-fld. drooping, flowers large greenish yellow and brown, sepals oblong-lanceolate acute, petals narrowly linear, side lobes of lip obtuse toothed, midlobe broadly clawed rounded erose, disk with 2 compound muricate ridges. *Bot. Mag.* t. 4889. *Chelonanthera speciosa*, *Blume Bijl.* 384, t. 51.

PERAK; on Gunong Batu Pateh, *Wray*.—DISTRIB. Java.

Pseudobulbs 1-1 $\frac{1}{2}$ in. *Leaves* 4-12 in., 5-7-nerved, petioled. *Scape* slender, with 2 leaves emerging from the sheaths; bracts deciduous; flowers variable in colour; sepals 2-2 $\frac{1}{2}$ in.; lip red-brown or vinous purple. *Capsule* 2 $\frac{1}{2}$ in., pyriform, broadly winged.

23. **C. Cumingii**, *Lindl. in Bot. Reg.* 1840, *Misc.* 76; pseudobulbs ovoid, leaves petioled lanceolate, raceme few-fld., bracts narrow persistent, sepals oblong-lanceolate acute and narrower petals white, lip white and yellow, side lobes short obtuse, midlobe large broad erose, disk with 3-5. crenulate ridges. *Bot. Reg.* 1841, t. 29; *Bot. Mag.* t. 4645; *Jard. Fleur.* iv. t. 337; *Fl. des Serres*, viii. 764; *Walp. Ann.* vi. 229.

SINGAPORE, *Cuming (Hort. Loddiges)*.

Pseudobulbs 1 $\frac{1}{2}$ in., distant. *Leaves* 4-6 in. *Scape* 3-5 in., erect; sheaths short, obtuse; leaves 2; bracts 1 $\frac{1}{2}$ in., erect; sepals 1 $\frac{1}{4}$ in.; ridges of lip ending in orange calli at the base of the midlobe, which bears 2 short crenulate plates.

24. **C. Schilleriana**, *Reichb. f. in Berl. Allgem. Gartenz.* 1858, 189; *Xen. Orchid.* ii. t. 134; pseudobulbs globosely ovoid, leaves elliptic-lanceolate, scape 1-fld., sepals oblong-lanceolate subacute and very slender petals green or ochreous, side lobes of lip short, midlobe large rounded undulate erose yellow mottled with brown. *Bot. Mag.* t. 5072; *Fl. des Serres*, t. 2302.

Pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in. diam.; rhizome stout. *Leaves* 2-4 in., coriaceous. *Scape* very short; bracts $\frac{3}{4}$ in.; sepals 1 $\frac{1}{2}$ in., lateral deflexed; disk of lip with 3 smooth ridges; column very concave.—Referred to sect. *Pleione* by its author, with which it has nothing in common.

25. **C. odoratissima**, *Lindl. in Wall. Cat.* 1960; *Gen. & Sp. Orchid.* 41; *Fol. Orchid.* 5; pseudobulbs small globose or ovoid, leaves membranous elliptic-lanceolate, raceme 2-3-fld., bracts persistent, sepals oblong-lanceolate acuminate and oblanceolate petals white, lip white, side lobes small oblong falcate obtuse, midlobe large orbicular, disk yellowish with 3 crenate ridges. *Wight Ic.* t. 1640; *Bot. Mag.* t. 5462; *Walp. Ann.* vi.

226; *Thwaites Enum.* 300. *C. angustifolia*, *A. Rich. in Ann. Sc. Nat. Ser. 2*, xv. 16, t. 6. *C. trifida*, *Reichb. f. in Hamb. Gartenzeit.* 1863, 546; *Xen. Orchid.* ii. 144, t. 155, f. 2.

NILGHIRI HILLS, alt. 8000 ft. CEYLON, in the Central Province.

Pseudobulbs very variable; sheaths hyaline. *Leaves* 2-3 in., rather thin. *Scape* flowering from both undeveloped and fully formed 2-leaved pseudobulbs; bracts membranous; sepals $\frac{2}{3}$ -1 in. *Capsule* 1 in., pyriform or ellipsoid, winged.—I am not clear as to the limits between this and *C. brevicaapa*.

26. ***C. corrugata***, *Wight Ic.* t. 1639; pseudobulbs ovoid, leaves elliptic coriaceous, raceme 2-3-fld., bracts large, sepals and subequal petals oblong-lanceolate acuminate white, lip white and yellowish, side lobes short, midlobe ovate obtuse, disk with 3 crenulate ridges. *Lindl. Fol. Orchid.* 6; *Bot. Mag.* t. 5601; *Walp. Ann.* vi. 227. *C. nervosa*, *A. Rich. in Ann. Sc. Nat. Ser. 2*, xv. 16; *Lindl. l. c.*; *Walp. l. c.* (not of *Wight*).

NILGHIRI and TRAVANCORE HILLS, *Wight, Perrottet, &c.*

Pseudobulbs 1-2½ in. long, tufted, ribbed and rugose when dry; sheaths broad, acute. *Leaves* 3-5 in. *Scape* with broad basal sheaths and 2 undeveloped leaves; bracts 1½ in., acute, caducous; sepals 1¼-1½ in. *Capsule* 1-1½ in., fusiform or pyriform; ribs prominent.—Lindley keeps up both *corrugata* and *nervosa*, but I find no difference between authentic specimens of each.

27. ***C. glandulosa***, *Lindl. Fol. Orchid.* 6; pseudobulbs large, leaves oblong-lanceolate, scape erect few-fld., sheaths large, bracts very large persistent, sepals and petals subequal ovate-oblong acute white, lip white and yellow-brown, side lobes obtuse, midlobe as long ligulate, disk with 3 gland-toothed ridges. *Walp. Ann.* vi. 227. *C. nervosa*, *Wight Ic.* t. 1638 (not of *A. Rich.*).

NILGHIRI Mts.; at Pycurrah, *Wight*.

Pseudobulbs 2-3 in., ovoid, curved; rhizome very stout. *Leaves* 4-6 in., shortly petioled. *Scape* sheathed up to the flowers, sheaths large lax, with 2 more or less developed leaves; bracts 1½ in., cymbiform, coriaceous, subacute; sepals 1-1¼ in.

28. ***C. pandurata***, *Lindl. in Gard. Chron.* 1853, 78; *Fol. Orchid.* 3; tall, pseudobulbs very large flattened, leaves shortly petioled elliptic-lanceolate, scape very stout few-fld., lateral sepals linear-oblong acute, petals subspathulate, lip panduriform, midlobe large broad crispedly waved, disk 2-lamellate between the small subbasal subrecurved side lobes confusedly caruncled on the midlobe. *Bot. Mag.* t. 5084; *Fl. des Serres*, t. 2139; *Reichb. f. Xen. Orchid.* ii. t. 121; *Warner Orchid. Alb.* t. 63; *Orchidoph.* t. 363; *Linden.* ii. t. 86.

PERAK, alt. 3500 ft., *Scortechini, King's Collector*.—DISTRIB. Borneo.

Pseudobulbs 3-5 in., oblong or suborbicular, grooved; rhizome very stout. *Leaves* 8-18 in., rigid, 5-7-nerved; petiole very stout. *Scape* with raceme 6-12 in.; sheaths lanceolate, rigid, inner more or less foliaceous; bracts 1 in., persistent; flowers waxy-green, fragrant; sepals 1½-2 in., dorsal much the largest, oblong-lanceolate, clathrately 11-nerved, lateral 5-nerved, keeled; petals clawed; lip mottled with red-purple, clathrately nerved, base cordate, midlobe subquadrate, retuse, contracted in the middle; top of column winged.—A noble species.

29. ***C. asperata***, *Lindl. in Journ. Hort. Soc.* iv. 221; *Fol. Orchid.* 3; pseudobulbs very large, leaves long-petioled elliptic-lanceolate, racemes drooping many-fld., flowers waxy-white lip mottled brown and yellow, sepals oblong-lanceolate, petals linear-lanceolate, lip as in *C. pandurata*.

Warner Orchid. Alb. t. 311. C. Lowii, Lindl. in Paxt. Mag. 1849, 225; Pescatorea, i. t. 8.

PERAK; at low elevations, *King's Collector*.—DISTRIB. Borneo.

Very near *C. pandurata*, and as large, but with much thicker narrower pseudobulbs, leaves 2 ft. and under, with the petiole 6-7 in., a many-fld. drooping raceme, larger reflexed bracts, smaller flowers, and narrower petals.—The flowers are described as in the Perak plant “waxy-white, the petals mottled brown and yellow;” in the Bornean “pale cream-coloured, except the yellow and brown lip.”

30. *C. fimbriata, Lindl. in Bot. Reg. t. 868, 1838, Misc. 92; Fol. Orchid. 12;* pseudobulbs small ovoid-oblong distant on a slender rhizome, scape 1-fld. shorter than the lanceolate leaves, sepals ovate-lanceolate yellow-green or brownish, petals filiform, lip yellow streaked with red-brown, midlobe orbicular fimbriate, disk 2-lamellate. *Lodd. Bot. Cab. t. 1425; Walp. Ann. vi. 231; Benth. Fl. Hongk. 354.*

KHASIA Mts., alt. 4000 ft., *Griffith, &c.*—DISTRIB. China.

Pseudobulbs $\frac{3}{4}$ -1 $\frac{1}{2}$ in.; rhizome as slender as a duck's quill. *Leaves* 2-5 in., sessile. *Scape* 1-2 in.; basal sheaths few, appressed; bracts deciduous; sepals $\frac{3}{4}$ in., acuminate; petals 1-nerved; side lobes of lip with fimbriate tips.

31. *C. ovalis, Lindl. in Bot. Reg. 1838, Misc. 91; Fol. Orchid. 12;* pseudobulbs fusiform distant on a slender rhizome, scape 1-3-fld. shorter than the lanceolate leaves, sepals ovate-lanceolate pale yellow-brown, petals filiform, lip white or yellowish streaked with purple, lobes and surface and margins fringed with long black hairs. *Walp. Ann. vi. 232. C. fimbriata, Lindl. in Wall. Cat. 1957. C. fimbriata? Lindl., Griff. Notul. iii. 281; Ic. Plant. Asiat. 291, fig. 1. ? C. pilosissima, Planch. Hort. Donat. 104. Broughtonia linearis, Wall. mss.*

TEMPERATE HIMALAYA, from Kumaon eastwards, alt. 4-7000 ft. KHASIA Mts., alt. 4000 ft.

Very near indeed to *C. fimbriata*, differing in the much longer ascending rhizome, narrower 2-3 in. pseudobulbs, and usually larger flowers; but it varies much in all these respects, as also in the breadth of the sepals and length of lamellæ on the lip. *Capsule* 1 in., turgidly pyriform.

Var. *latifolia*; pseudobulbs cylindric, leaves 4-5 by 1 $\frac{1}{4}$ -1 $\frac{1}{2}$ in. elliptic.—Munnipore, on Kohima, alt. 4500 ft., *Clarke*.

32. *C. fuliginosa, Lindl. in Lodd. Cat.; Fol. Orchid. 12;* habit and characters of *C. ovalis*, but raceme 3-4-fld., flowers orange-yellow, lip dark brown, lamellæ ending abruptly. *Lindl. Fol. Orchid. 12 (excl. the Khasia plant); Bot. Mag. t. 4440; Jard. Fleur. t. 7; Miquel Choix, t. 25 (1-fld. var.). ? C. triplicatula, Reichb. f. in Bot. Zeit. 1864, 415; Xen. Orchid. ii. 159, t. 166.*

TENASSERIM; at Moulmein, *Parish*.—DISTRIB. Java?

As flowered at Kew this differs from *ovalis* in the characters indicated.

33. *C. micranthum, Lindl. in Gard. Chron. 1855, 173;* pseudobulbs small oblong, leaves oblong- or linear-lanceolate, scape short erect few-fld., sepals oblong acute, petals filiform, side lobes of lip small oblong obtuse, midlobe large broadly oblong or rounded retuse, disk covered irregularly with lamellæ and tubercles rising into short spines towards the contracted base where there are 3 oblong calli. *C. papagena, Reichb. f. in Bot. Zeit. 1862, 214.*

KHASIA HILLS, alt. 3000 ft., *J. D. H. & T. T., Mann. TENASSERIM;* at Moulmein (*Hort. Low*).

Pseudobulbs $1\frac{1}{2}$ in., on a branching rhizome; sheaths membranous. *Leaves* 3- $4\frac{1}{2}$ in. *Scape* with raceme 1-2 in.; basal sheaths small, subacute; flowers $\frac{1}{2}$ in. diam., "pale brown with sooty stains on the lip," *Lindl.*; "green with black specks on the lip," *Reichb. f.*

34. **C. Treutleri**, *Hook. f. Ic. Plant. ined.*; pseudobulbs small ovoid distant, leaves small elliptic-lanceolate, scape short 1-fld., sepals lanceolate acuminate, petals narrowly linear 5-nerved, side lobes of lip small oblong, midlobe large orbicular with a broadly cuneate base, tip rounded obtusely 3-fid, disk smooth with 3 smooth lamellæ from the saccate base to the base of the midlobe.

SIKKIM HIMALAYA, *Treutler*.

Pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in., curved; rhizome as thick as a duck's quill. *Leaves* 1 in., sessile. *Scape* $\frac{3}{4}$ in., base sheathed; bracts not seen; flowers $1\frac{1}{2}$ in. diam.; sepals 7-9-nerved; petals acuminate; lip narrowed at the base, much the same shape as in *micrantha*, but much larger and perfectly smooth except for the basal lamellæ; column narrowly winged.—I have seen only one specimen of this very distinct species.

35. **C. Parishii**, *Hook. Bot. Mag. t. 5323*; pseudobulbs very long columnar angled, leaves elliptic or lanceolate, raceme 3-5-fld. drooping, flowers large green, sepals lanceolate acuminate, petals larger, lip panduriform, side lobes small, midlobe large broadly clawed broader than long undulate, disk blotched with purple, ridges 4 pectinate on the midlobe warted along the mesial line.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 4-6 in., tufted, acutely or obtusely angled; sheaths short. *Leaves* 5-7 by 2- $2\frac{1}{2}$ in., acute. *Scape* stout, basal sheaths imbricate; flowers 3 in. diam.; sepals and petals yellow-green; lip blue-green; base of midlobe truncate, side lobes like auricles; column narrowly winged.—Near *C. pandurata*.

36. **C. nitida**, *Lindl. Coll. Bot. 33*; *Gen. & Sp. Orchid. 40*; *Fol. Orchid. 5* (all in part); pseudobulbs shining, leaves lanceolate, raceme 3-6-fld. erect or drooping, sepals oblong-lanceolate and linear 3-5-nerved petals obtuse white, lip with yellow eyes on the rounded side lobes, midlobe ovate obtuse white, disk with 3 ridges and a yellow area bordered with red. *C. ocellata*, *Lindl. in Wall. Cat. 1953* (in part); *Gen. & Sp. Orchid. 40*; in *Bot. Reg. 1839, Misc. 31*; *Bot. Mag. t. 3767* (not good); *Floral Mag. N. S. t. 365*; *Walp. Ann. vi. 228*. *C. punctulata*, *Lindl. Coll. Bot. 33* (ex *Gen. & Sp. Orchid.*). *Cymbidium nitidum*, *Roxb. Hort. Beng. 63*; *Fl. Ind. iii. 459*.—? *Cœlog*, *Griff. Ic. Pl. Asiatic. t. 328, f. 2*.

TEMPERATE EASTERN HIMALAYA; Bhotan, and the Mishmi Hills in Upper Assam, *Griffith*. KHASIA HILLS, alt. 3-6000 ft., abundant.

Pseudobulbs 1-3 in., crowded, ovoid oblong obpyriform or subglobose; sheaths broad, rigid. *Leaves* 3-10 in., petioled, variable in breadth. *Scape* not sheathed; bracts deciduous; sepals $1\frac{1}{2}$ in. long; lip with a row of tubercles on each side of the midlobe, markings and spots very variable. *Capsule* 2 in., narrowly pyriform, angles obtuse.—That this is Roxburgh's *Cymbid. nitidum* (the assumed type of *Lindley's Cœlogyne nitida*) is evidenced by a specimen so named from the Calcutta Garden, and by the figure in Roxburgh's drawings, wherein, however, the colouring of the lip is imaginary. *Lindley* confounded it with *ochracea*, which flowers from the unformed pseudobulb. *Wallich's C. ocellata* is a mixture of *nitida*, *ochracea*, and *cristata*; his habitat of Sirmore is an error, as is *Lindley's* of Sikkim, which applies to *ochracea*.

37. **C. stenochila**, *Hook. f. Ic. Plant. ined.*; pseudobulb small, leaves

small sessile elliptic, scape short, raceme very long erect many-fl'd., flowers small white, lateral sepals ovate-lanceolate acuminate, petals narrowly linear 1-nerved, hypochile of lip narrow very much longer than the orbicular waved epichile, base saccate, side lobes small rounded, disk of midlobe with 3 smooth ridges running nearly to the tip.

PERAK; summit of Gunong Batu Pateh, alt. 6700 ft., Wray.

Pseudobulbs $\frac{1}{2}$ in. *Leaves* 1-1 $\frac{1}{2}$ in., subacute, rigid. *Scape* 1 in., compressed; raceme 8 in., 25-fl'd.; bracts deciduous; flowers 1 in. diam.; lip strongly nerved; column 3-lobed at the top, narrowly winged.—I have seen but one specimen of this very distinct species.

38. **C. carnea**, *Hook. f. Ic. Plant. ined.*; pseudobulbs long fusiform, leaves petioled elliptic obovate or oblanceolate, scape erect compressed 6-20-fl'd., rachis zigzag, sepals oblong acuminate 7-nerved, petals very narrow 1-nerved, lip saccate at base, side lobes rounded, hypochile narrow much longer than the orbicular midlobe, disk with 2 large fleshy lamellæ about the middle reaching to the midlobe.

PERAK, *Scortechini*.

Pseudobulbs 4-5 in., distant on the stout rhizome. *Leaves* 4-5 by 1 $\frac{1}{4}$ -1 $\frac{1}{2}$ in., subacute. *Scape* as long or longer; bracts deciduous; sepals $\frac{3}{4}$ in., nerves trabeculate and petals flesh-cold., lip the same with dark veins.

39. **C. elata**, *Lindl. in Wall. Cat. 1959; Gen. & Sp. Orchid. 40; in Wall. Pl. As. Rar. iii. 12, t. 218; in Bot. Reg. 1839, Misc. 92; Fol. Orchid. 9*; pseudobulbs very large oblong, leaves very long-petioled lanceolate, scape shorter stout, raceme short, flowers subsecund, sepals oblong-lanceolate cream-cold., petals linear, lip white with yellow blotches, side lobes narrow erose, midlobe rounded-ovate acute erose, disk between the side lobes with 2 tortuous crenulate lamellæ. *Bot. Mag. t. 5001; Walp. Ann. vi. 230. —Cælog., Griff. Ic. Pl. Asiat. t. 290.*

TROPICAL HIMALAYA; from Garwhal, *Falconer*, to Bhotan, *Griffith*. UPPER BURMA, *J. Anderson*.

Pseudobulbs 3-5 by 1-2 in., narrowed upwards or not; sheaths very large, acute; rhizome as thick as the little finger. *Leaves* 5-12 by 1 $\frac{1}{2}$ -3 in.; petiole 2-4 in. *Scape* 10 in. and under; sheaths large; flowers 1-1 $\frac{1}{2}$ in. diam. ("smell unpleasant," *Lindl.*); lamellæ of disk of lip sometimes tipped with red.

40. **C. prolifera**, *Lindl. in Wall. Cat. 1956; Gen. & Sp. Orchid. 40; Fol. Orchid. 10*; pseudobulbs ovoid or oblong compressed, leaves petioled lanceolate, scape long very many-fl'd., raceme erect interruptedly sheathed, flowers small greenish yellow, sepals oblong, petals narrow linear, side lobes of lip short obtuse, midlobe orbicular retuse toothed, disk 2-lamellate. *Walp. Ann. vi. 230.*

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 2-4000 ft., *J. D. H.* KHASIA MTS., alt. 4-5000 ft., *Griffith, &c.*

Pseudobulbs 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ in., distant; rhizome clothed with distichous scales. *Leaves* 3-7 in., acuminate. *Scape* slender, terete; sheaths short obtuse; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., 5-7-nerved; petals 1-3-nerved. *Capsule* $\frac{2}{3}$ -1 in., pyriform, angles obtuse.

41. **C. Griffithii**, *Hook. f. Ic. Plant. ined.*; pseudobulbs large linear-oblong compressed, leaves large petioled elliptic-lanceolate acuminate, scape many-fl'd., sepals broadly oblong 5-nerved, petals very slender 1-nerved, lip with very broad crenulate side lobes and a narrow truncate midlobe, disk between the lobes with 5 short lamellæ the 2 outer much the broadest.

UPPER ASSAM; summit of the Patkoye Mts., *Griffith*. MUNNIPORE, alt. 4-5000 ft., *Watt*.

Pseudobulbs 3-4 in.; rhizome as in *C. prolifera*. *Leaves* 5-10 by 2-3 in.; petiole 2 in. *Scape* 4-8 in., rachis zigzag; flowers 1 in. diam.

42. **C. barbata**, *Griff. Itin. Notes*, 721; *Notul.* iii. 280; *Ic. Pl. Asiat.* t. 291, f. 2; pseudobulb large ovoid, leaves very large petioled elliptic-lanceolate, scape and rachis very stout, flowers large white, sepals ovate-oblong acute, petals linear 3-5-nerved, lip broad, side lobes rounded white, and small ovate purple midlobe deeply fimbriate, disk with 3 fimbriate ridges. *Lindl. Fol. Orchid.* 9; *Walp. Ann.* vi. 229; *Warner Orchid. Alb.* t. 143; *Orchidoph.* 2888, p. 154; *Masters in Gard. Chron.* 1886, i. 117, fig. 23 (*f. rt.*); *Reichb. f. in Gard. Chron.* 1880, i. 8.

BHUTAN? *Griffith*. KHASIA MTS., alt. 4-5000 ft., *Griffith*, &c. NAGA and MUNNIPORE HILLS, alt. 5000 ft., *Prain, Watt*.

Pseudobulbs 3-4 in.; rhizome very stout. *Leaves* 6-12 in.; petiole 3-4 in. *Scape* as long as the leaves; sheaths $\frac{3}{4}$ in. and less; sepals $1\frac{1}{2}$ in.; lip very saccate at the base.

43. **C. flavida**, *Wall. mss.*; pseudobulbs short ovoid, leaves petioled narrowly lanceolate longer than the slender sometimes interruptedly sheathed scape, flowers small yellow, sepals oblong acute, petals filiform 1-nerved, side lobes of lip small obtuse, midlobe cuneately obcordate, disk faintly 2-ridged. *C. flavida*, *Hook. f. ex Lindl. Fol. Orchid.* 10; *Walp. Ann.* vi. 223.

SIKKIM HIMALAYA, alt. 1-4000 ft., *Griffith's Collectors*. KHASIA MTS., alt. 4-5000 ft., *Lobb*, &c. MUNNIPORE; on Kohima, *Prain*.

Pseudobulbs 1-2 in., distant on a slender scaly rhizome; sheaths narrow. *Leaves* 3-6 in., acuminate. *Scape* 8-10-fl.; flowers $\frac{1}{2}$ in. diam., suberect; side lobes of lip incumbent at the angles on the midlobe, base saccate; column narrowly winged. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., ellipsoid.—The Munnipore specimen has a very stout rhizome.

44. **C. longipes**, *Lindl. Fol. Orchid.* 10; pseudobulbs long slender cylindric or narrowly ovoid, leaves petioled lanceolate, scape slender, flowers small yellow, sepals ovate-oblong acuminate, petals very slender 1-nerved, lip contracted at the saccate base, side lobes rounded, midlobe very broadly obcordate, disk with 2 slender lamellæ. *Walp. Ann.* vi. 230.

SIKKIM HIMALAYA, alt. 7000 ft., *Treutler, Pantling*. KHASIA MTS., alt. 4-5000 ft., *Griffith*, &c. MUNNIPORE; on Kohima, *Prain*.

Pseudobulbs 3-4 in., on a stout sheathed rhizome. *Leaves* 5-7 in., acuminate; petiole 1-2 in. *Scape* about as long as the leaves; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam.; lip with waved margins; column very broadly winged above. *Capsule* $\frac{3}{4}$ -1 in., ellipsoid, angles obtuse.

45. **C. rigida**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 146; pseudobulbs large narrowly oblong, leaves petioled elliptic-lanceolate, scape very slender rigid, raceme drooping lax-fl., sepals yellow lateral oblong-lanceolate acute, dorsal much broader, petals narrowly linear, lip saccate, side lobes large rounded yellow, midlobe suborbicular retuse or 2-lobed, disk with 2 long and a mesian short red crenulate ridges.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 3-5 by 1-1 $\frac{1}{2}$ in., distant on a very stout rhizome. *Leaves* 4-6 by 1-1 $\frac{1}{2}$ in., acuminate. *Scape* with raceme 6-8 in.; bracts 1 in., deciduous, as long as the flowers; sepals $\frac{1}{2}$ in.; column broadly winged above, top crenate.

46. **C. ustulata**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 144; pseudobulbs ovoid, leaves small elliptic-lanceolate, scape very slender erect, flowers small, sepals subequal oblong acute, petals filiform, side lobes of very broad lip rounded, midlobe small suborbicular retuse, disk with 2 curved smooth ridges.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 1-1½ in.; rhizome stout. *Leaves* 1½-2 in., sessile or petioled, acuminate, rigid. *Scape* with raceme 4-5 in.; bracts ¼-½ in., deciduous; flowers amongst the smallest of the genus, yellow and brown, suberect; sepals ¼ in. long; lip saccate at the base, nearly orbicular in outline; column winged above.—Amongst *Parish's* admirable drawings is another plant named *C. ustulata*, with pseudobulbs 2-3 in., leaves 4-6 in. lanceolate undulate, bracts nearly 1 in. long, much larger flowers with narrow side lobes of lip and a much larger midlobe.

47. **C. anceps**, *Hook. f. Ic. Plant. ined.*; pseudobulbs ellipsoid, leaves shortly petioled elliptic subacute coriaceous, scape stout compressed, raceme erect, sepals linear-oblong acute, petals narrowly linear obtuse 3-nerved, lip long narrow, side lobes elongate with short free tips, midlobe orbicular, disk with 2 short lamellæ.

PERAK, *Scortechini*.

Rhizome very stout; pseudobulbs 1-1½ in., base contracted. *Leaves* 2½-4 by ½-1½ in., 7-9-nerved, stoutly petioled. *Scape* with raceme 5-10 in., sometimes narrowly winged, sheaths below the raceme ¾ in., obtuse; sepals and petals 1 in. long; lip recurved, hypochile 2-3 times as long as the epichile.

Sect. II. PLEIONE. See p. 828.

48. **C. præcox**, *Lindl. Coll. Bot.* 37; in *Wall. Cat.* 1965; *Fol. Orchid.* 16; pseudobulbs ampulliform or turbinate at length umbonate, leaf-sheaths tubercled, bracts equalling or exceeding the ovary, flowers rose-purple, lip subrepand laciniate in front, disk with 3-5 crested lamellæ, top of column 4-toothed. *Bot. Mag.* t. 4496; *Past. Mag.* xiv. t. 7; *Trans. Russ. Hort. Soc.* 1880, t. 69 (*var.*). *C. Wallichiana*, *Lindl. Gen. & Sp. Orchid.* 43; in *Wall. Plant. As. Rar.* i. 46, t. 54; *Bot. Reg.* xxvi. t. 24; *Past. Mag.* vi. t. 25; *Gartenfl.* t. 283; *Jennings Orchid.* t. 472; *Griff. Notul.* iii. 402. *Pleione præcox*, *Don Prodr.* 37. *P. Wallichii*, *Lindl. in Past. Fl. Gard.* sub. t. 51. *P. Wallichiana*, *Jard. Fleur.* t. 153. *P. birmanica*, *Reichb. f. in Gard. Chron.* 1882, ii. 840. *Epidendrum præcox*, *Smith Exot. Fl.* t. 97.

TEMPERATE HIMALAYA, alt. 5-8000 ft., from Garwhal eastwards. KHASIA Mts., alt. 4-6000 ft. *PEGU*, *Kurz*. TENASSERIM, summit of Nat-toung, *Parish*.

Pseudobulbs very variable, 1-1½ in. broad and long, at first depressed bottle-shaped, at length shortly cylindric with a depressed top conic in the middle, covered with reticulate filaments, usually dark green often blotched with red or purple. *Leaves* 1-2, 2-9 in., elliptic or lanceolate, acute; scape 3-4 in.; bracts sheathing, obtuse; flowers 2½-4 in. diam., sweet-scented; sepals and petals narrow, recurved, acute; lip 2-fid, deeply fimbriate in the Pegu and Tenasserim specimens. *Capsule* ¾-1 in., fusiform.—*C. Wallichiana* is not even a variety, and *var. sanguinea* is only characterized by the decaying leaf. A monstrous state bears imperfectly developed pseudobulbs crowned with a crinite tuft of narrow bulbs each with 2 setæ. *C. birmanica* is doubtfully described as a species by Reichenbach, distinguished by the bluish-purple pseudobulbs with many white circles and an entire border of the hood of the column.—*Fl. autumn.*

49. **C. humilis**, *Lindl. Coll. Bot.* 37; *Gen. & Sp. Orchid.* 43; in *Wall. Cat.* 1963; *Fol. Orchid.* 16; pseudobulbs flagon-shaped, leaf-sheaths smooth, bracts longer than the ovary, flowers white or very pale purple, lip obovate fimbriate speckled or striped with red purple orange or brown, disk with

fringed lamellæ, top of column truncate and toothed. *Bot. Mag.* t. 5674. *Pleione humilis*, *Don Prodr.* 37; *Pact. Fl. Gard.* t. 51; *Jard. Fleurist.* t. 153. *Epidendrum humile*, *Sm. Exot. Bot.* t. 98. *Cymbidium humile*, *Smith in Rees Cyclop.*

TEMPERATE HIMALAYA; Nepal, *Wallich*, &c. Sikkim, alt. 7-8000 ft., *J. D. H. Munnipore, Wall.*

Very near *C. præcox*, but flowers much smaller, pseudobulbs usually narrow, column truncate, and base of lip adnate to the base of the column.

Var. *tricolor*, *Reichb. f.* in *Gard. Chron.* 1880, i. 394; *Williams Orchid. Alb.* t. 102, has brown spots on the lip, and var. *altata*, *Reichb. f. l. c.* 1888, i. 392, has mauve-purple radiating lines on the lip.—*Fl. spring.*

50. **C. maculata**, *Lindl. Gen. & Sp. Orchid.* 43; in *Wall. Pl. As. Rar.* i. 45, t. 53; *Fol. Orchid.* 15; pseudobulbs stout umbonate with a conical top, sheaths of scape bullate, bracts large inflated truncate, flowers white, sepals oblong-lanceolate, petals oblanceolate, lip rounded quite entire blotched with dark purple, disk yellow and red with 5-7 pectinate ridges. *Bot. Mag.* t. 4691; *Fl. des Serres*, t. 1470; *Griff. Notul.* iii. 281. *C. candida*, *Lindl. in Wall. Cat.* 1964. *Pleione maculata*, *Lindl. in Pact. Fl. Gard.* t. 39, f. 1; *Jard. Fleur.* t. 93. ? *P. diphylla*, *Lindl. in Pact. Fl. Gard. under* t. 51; *Fol. Orchid.* 15; *Walp. Ann.* vi. 234.—*Cælog., Griff. Itin. Notes* 44, No. 684. *Gomphostylis candida*, *Wall. mss.*

NEPAL, *Wallich*. SIKKIM and BHOTAN, alt. 3500-4000 ft., *Clarke*, &c. KHASIA HILLS, alt. 4-5000 ft., *Wallich*, &c.

Pseudobulbs barrel-shaped, with a depressed top rising into a blunt cone, green spotted with purple. *Leaves* in pairs on the old pseudobulbs, 6-8 in., with bullate sheaths at the base. *Scape* very short, rarely 2-fl.; flowers 2-2½ in. diam.; sepals and petals variable in breadth.

Var. *virginæa*, *Reichb. f.* in *Gard. Chron.* 1887, ii. 681, has a light sulphur-cold. lip, with the purple lines and spots evanescent.

51. **C. lagenaria**, *Lindl. Fol. Orchid.* 15; pseudobulbs depressed broad umbonate with a thick ring and conical top, sheaths of scape bullate, bract as in *C. maculata*, sepals pale purple lateral lanceolate acuminate, petals linear-lanceolate, lip oblong toothed white with broad purple blotches, disk yellow with 7 subpectinate ridges. *Bot. Mag.* t. 5370; *Fl. des Serres*, t. 2386; *Ill. Hort.* t. 510. *Pleione lagenaria*, *Lindl. in Pact. Fl. Gard.* ii. t. 39, f. 2; *Jard. Fleurist.* t. 93; *Warner Sel. Orchid.* t. 17; *Peydt. Orchid.* t. 36; *Jennings Orchid.* t. 47/1.

INDIA (locality unknown).

Pseudobulbs 1½ in. diam., broader than long, mottled very dark and light green; the short cylindric portion swells out into a thick ring with a depressed inner border from which the cone arises. *Leaves* not seen. *Scape* 2 in.; flowers 3 in. diam.—Near *C. maculata*, but the sepals are very acuminate and the flowers much larger.

52. **C. Reichenbachiana**, *T. Moore in Gard. Chron.* 1868, 1210; pseudobulb large flagon-shaped 5-8 grooved, top conical, sheaths of scape appressed, bracts oblong-lanceolate acute, flower pale purplish, sepals linear oblong subacute, petals linear obtuse, lip white with red spots and 3 short pectinate ridges, margin toothed. *Bot. Mag.* t. 5753.

ARRACAN; at Raungoon, *Benson (Hort. Veitch)*.

Pseudobulbs 2-2½ in. high, green reticulate with black, gradually swelling upwards, 1-1½ in. diam. across the lobed base of the conical top. *Leaf* not seen. *Scape* 2-3 in., 1-2-fl., lower sheaths oblong green mottled; flowers 2½ in. diam.

53. **C. Hookeriana**, *Lindl. Fol. Orchid.* 14; pseudobulbs ovoid, flowering scape 1-leaved 1-fld., sheaths appressed, sepals and petals sub-similar oblong-lanceolate acute pale rose-purple, lip white with pale red brown blotches, disk with 5 yellow ciliate ridges, margin crisped toothed or undulate. *Bot. Mag.* t. 6388.

SIKKIM HIMALAYA, alt. 7-10,000 ft., *J. D. H.*

Pseudobulbs $\frac{3}{4}$ -1 in., narrow. *Leaf* 2-4 in., acuminate; sheaths at base appressed acute. *Scape* 1-1 $\frac{1}{2}$ in.; bract tubular, obliquely truncate, obtuse; flowers 2 in. diam.

DOUBTFUL SPECIES (bracts very small).

54. **C. ? uniflora**, *Lindl. in Wall. Cat.* 1966; *Gen. & Sp. Orchid.* 42; pseudobulbs small ovoid, sheaths scarious, leaves narrowly lanceolate, scape short 1-2-fld., bracts very small, sepals and petals lanceolate acute, lip with small acute side lobes towards the base and a subpanduriform midlobe, disk obscurely ridged. *Panisea uniflora*, *Lindl. Fol. Orchid.* 2; *Walp. Ann.* vi. 240. *Epidendrum*, *Griff. Ic. Pl. Asiat.* t. 313, f. 1.

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 3-5000 ft., *J. D. H.* KHASIA HILLS? *Griffith*. TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 1-2 in., densely crowded. *Leaves* 3-6 in., erect. *Scape* $\frac{1}{2}$ -1 in., clothed with distichous lanceolate membranous sheaths; bracts persistent; flowers white or flesh-cold; sepals 1 in.; lip with 3-7 orange spots; column rather dilated in the middle.

55. **C. ? purpurascens**, *Hook. f. Ic. Plant. ined.*; pseudobulbs very slender 1-leaved, leaf narrow coriaceous, scape from the base of the pseudobulb slender erect 1-3-fld., lip entire cymbiform. *Dendrobium purpurascens*, *Thwaites Enum.* 298.

CEYLON; in the elevated parts of the Central Province, *Thwaites*.

Pseudobulbs $\frac{1}{2}$ in., hardly thicker than the petiole; sheaths ovate, acute; roots very long, very thick, clothed with a loose inflated epidermis. *Leaf* 1-4 by $\frac{1}{2}$ - $\frac{1}{2}$ in., erect, rigid, often purplish, margins recurved when dry. *Scape* 3-4 in., sheaths few, minute; bracts minute, rounded; flowers nearly white; pedicel with ovary $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in., erecto-patent, linear-oblong, obtuse, 3-nerved; petals linear-spathulate, obtuse, 1-nerved; lip sessile, erect, spathulate base and crenulate tip saccate, disk quite smooth; column erect, narrowly winged, tip dilated with toothed sides; anther imperfectly 4-celled, persistent, purple; pollinia 4, free, 2 larger subpyriform, 2 smaller angular. *Capsule* $\frac{1}{2}$ in., narrowly oblong, 6-ribbed.—I have long puzzled over this curious little plant, for which I had proposed the generic name *Adrorhizon*, in allusion to its remarkable roots, but await more specimens before establishing it. From *Dendrobium* it differs in habit, in the long column without a foot, and in the pollen; and it is more near *Cœlogyne* or *Panisea*.

SPECIES UNKNOWN TO ME.

C. BRACHYPIERA, *Reichb. f. in Gard. Chron.* 1881, ii. 6; pseudobulb a span high tetragonous, leaves not seen, raceme several-fld., bracts equalling the ovary persistent, sepals triangular ligulate acute light parrot-green, lateral keeled in the middle, petals filiform, lip white with a brown stain, side lobes semi-ovate short triangular in front, midlobe oblong acute undulate, keels 3 all warted in front, column hooded and retuse at the top, hood crenulate.—Flowers like *C. lentiginosa*.—(Possibly *C. Parishiana*, *J. D. H.*)

C. CAULESCENS, *Griff. Notul.* iii. 282, from maritime marshes at Pulo Bisar, Malacca, cannot be a *Cœlogyne*, but may be allied to *Bromheadia*. There are in *Herb. Lindley* fragments from Griffith so named, consisting of the rachis of a raceme, which agrees with Griffith's description, and of leaves of what I take to be of another plant.

C. (Pholidota) CORNICULATA, *Reichb. f. in Gard. Chron.* 1865, 746; raceme pendulous many-fl., sheaths large, bracts oblong cucullate apiculate exceeding the ovaries, flowers honey-coloured sweet, sepals oblong acute obtusely keeled in the lower half, petals narrowly lanceolate acute, lip deep yellow angled and saccate in the middle, side lobes bordered with brown semi-ovate acute, midlobe transverse rounded retuse obsoletely acute or minutely lobulate, (column?) slender dilated on each side near the stigma, side wings subacute, dorsal wing erect subquadrate emarginate, rostellum ascending. Very curious in the angular centre of the lip.—India, probably Assam (*Hort. Day*).—(The word "column" is omitted in the text; its slenderness is quite at variance with *Pholidota*, J. D. H.)

C. GOWERI, *Reichb. f. in Gard. Chron.* 1869, 443; pseudobulbs and leaves of *C. ocellata* (*nitida*, L.), raceme flexuous erect lax-fl., bracts equalling the ovary deciduous, flowers white as large as those of *C. fimbriata*, sepals cuneate oblong acute, petals lanceolate, lip trifid, side lobes obtuse-angled serrulate in front, midlobe oblong with an inflexed tip and a tumor on each side near the base, disk ochreous with 3 entire keels the median shorter, top of column serrulate.—Assam (*Hort. Williams*).

C. LACTEA, *Reichb. f. in Gard. Chron.* 1888, i. 521; pseudobulb short thick fusiform, leaves very thick petioled cuneate oblong acuminate, raceme porrect 6-8-fl., bracts deciduous, flowers cream-white, sepals oblong obtusely acute, petals linear-lanceolate, side lobes of lip obtuse, midlobe porrect, disk with 3 crenulate keels from the base between the side lobes, top of column 2-3-fl.—Burma (*Hort. Lendy*).—(Perhaps *C. lutea*, *Purish mss.*, of which the specimens are very imperfect.)

C. PLANTAGINEA, *Lindl. in Gard. Chron.* 1855, 20; pseudobulbs 6 in. elongate terete 2-leaved, sheaths acuminate scorched, leaves 1 ft. petioled oblong-lanceolate firm waved 5-ribbed, raceme long pendulous many-fl., bracts small brown acute very deciduous, flowers greenish yellow, petals linear-lanceolate, sepals rather broader keeled, lip ovate-oblong acuminate 3-lobed white streaked with brown, disk with 3 fimbriate lamellæ between the side lobes and 4 on the midlobe.—India? (*Hort. Farnham Castle*).—Approaches nearest to *C. flaccida*.

C. (Erectæ) ROSSIANA, *Reichb. f. in Gard. Chron.* 1884, ii. 808; pseudobulbs obpyriform 4-ribbed, leaves 12 by 1½ in. long-petioled oblong-lanceolate, scape from the base of the old bulbs very short sheathed 4-fl., flowers second cream-white, bracts linear acuminate deciduous, sepals and petals linear-lanceolate, lip 3-fl., side lobes ochreous obtuse-angled, midlobe triangular dilated, disk with 3 plaited ridges produced into the midlobe where there is an additional plaited keel on each side, column white.—Burma (*Hort. Ross*).—Apparently near *C. flaccida*, J. D. H.

35. OTOCHILUS, *Lindl.*

Stem articulata, branched, formed of superposed elongate pseudobulbous internodes. *Leaves* in pairs at the nodes, elliptic or lanceolate, plaited. *Scape* subterminal on the internodes, slender, bases sheathed; flowers small, racemose; bracts scarious, sides convolute. *Sepals* and *petals* subequal, free, narrow, spreading. *Lip* sessile at the base of the column, base saccate, side lobes erect, midlobe narrow, entire. *Column* very long, slender, erect, foot 0; anther-cells distinct, subglobose; pollinia 4, ovoid or subglobose, cohering in pairs or all together by a viscus.—Species 3 or 4, Indian.

1. *O. alba*, *Lindl. in Wall. Cat.* 1967; *Gen. & Sp. Orchid.* 35; sepals and petals acute, side lobes of lip very small obtuse, midlobe linear-oblong acuminate. *Cœlogyne alba*, *Reichb. f. in Walp. Ann.* vi. 236. *Broughtonia pendula*, *Wall. mss.*

SUBTROPICAL HIMALAYA, alt. 3-5000 ft., from Nepal eastwards. The KHASIA HILLS and MUNNIPORE.

Pseudobulbs 1-3 in., subcylindric. *Leaves* 4-6 by 1½-2 in., elliptic-lanceolate.

Racemes cernuous; flowers $\frac{1}{2}$ in diam., white with a pink or green column; bracts oblong, acuminate, caducous; side lobes of lip yellow or white.

2. **O. fusca**, *Lindl. in Wall. Cat.* 1969; *Gen. & Sp. Orchid.* 35 sepals and petals obtuse, side lobes of lip reduced to small teeth, midlobe linear-oblong. *Bot. Mag.* t. 3921. *O. lancifolia*, *Griff. Notul.* iii. 278; *Ic. Plant. Asiat.* t. 289. *Cœlogyne fusca*, *Reichb. f. in Walp. Ann.* vi. 236. *Broughtonia* ? *fusca*, *Wall. mss.*

SUBTROPICAL HIMALAYA, alt. 3-6000 ft., from Nepal eastwards. ASSAM, the KHASIA HILLS and MUNNIPORE.

Pseudobulbs 1-2 in., cylindric, fusiform or clavate. *Leaves* 2-5 in., linear-lanceolate, shortly petioled. *Racemes* short or long; bracts $\frac{1}{2}$ in., subtruncate; flowers larger than in *O. alba*, pale pink; sepals $\frac{1}{2}$ in., linear-oblong; petals narrower, dilated upwards; lip concave; column red; pollinia subglobose. *Capsule* $\frac{1}{2}$ in.—The name is inappropriate.

3. **O. porrecta**, *Lindl. in Wall. Cat.* 1968; *Gen. & Sp. Orchid.* 36; sepals acuminate, side lobes of lip falcate obtuse, midlobe lanceolate. *O. latifolia*, *Griff. Notul.* iii. 279; *Ic. Plant. Asiat.* t. 289. *Cœlogyne porrecta*, *Reichb. f. in Walp. Ann.* vi. 236. *Tetrapeltis fragrans*, *Wall. mss.*

SUBTROPICAL HIMALAYA, from Nepal eastwards, alt. 3-6000 ft. The KHASIA HILLS and MUNNIPORE. TENASSERIM, alt. 5000 ft., *Parish.*

Pseudobulbs 2-4 in., subcylindric or clavate. *Leaves* 5-10 by $1\frac{1}{2}$ -2 $\frac{1}{2}$ in., elliptic-lanceolate, rather long-petioled. *Racemes* decurved; bracts broad, acute, caducous; flowers white or pale flesh-colored; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., linear; petals linear; lip with larger side lobes than in the two other species; pollinia globose. *Capsule* $\frac{3}{4}$ -1 in.

36. **PHOLIDOTA**, *Lindl.*

Perennial herbs with the habit of *Otochilus*, or with sessile 2-leaved pseudobulbs. *Scape* or rachis of raceme often flexuous; bracts distichous, rigid; flowers small, globose. *Sepals* concave. *Petals* flat, broad or narrow. *Lip* sessile on the base of the column, erect, saccate, subentire or 3-4-lobed. *Column* very short, hooded or winged; anther-cells subglobose, rarely elongate; pollinia 4, subglobose, free or cohering in pairs by a viscus.—Species about 20, Indian, Malayan and Chinese.

* *Stems* elongate, branched, formed of pseudobulbous internodes. *Scape* from the top of the pseudobulb between the leaves.

1. **P. articulata**, *Lindl. in Wall. Cat.* 1992; *Gen. & Sp. Orchid.* 38; in *Bot. Reg.* 1839, *Misc.* 44; bracts rhombic-ovate, dorsal sepal suborbicular, lateral ovate keeled, lip cymbiform with a didymous midlobe. *P. khasiana*, *Reichb. f. in Walp. Ann.* vi. 238; in *Bonpland.* 1856, 329. *Cœlogyne articulata*, *Reichb. f. in Walp. Ann.* vi. 238. *C. khasiana*, *Reichb. f. l. c.*

SUBTROPICAL HIMALAYA, alt. 3-4000 ft., from Kumaon eastwards, and the KHASIA MTS., common.

Internodes 2-4 in., as thick as the little finger, terete. *Leaves* 2, 4-6 in., sessile or petioled, elliptic-lanceolate, acute. *Racemes* 2-4 in., drooping; bracts $\frac{1}{2}$ - $\frac{2}{3}$ in., rhombic-ovate; pedicel with ovary $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in.; lip with 5 basal lamellate nerves; column narrow, rostellum acuminate. *Capsule* $\frac{2}{3}$ - $\frac{3}{4}$ in., rachis not flexuous.

2. **P. recurva**, *Lindl. Gen. & Sp. Orchid.* 37; bracts very broad

truncate, dorsal sepal suborbicular, lateral ovate obtuse faintly 3-nerved not keeled, petals oblong-ovate 1-nerved, lip cymbiform with 2 auricle-like terminal lobes. *Hook. f. Ic. Plant.* t. 1878. *Cœlogyne recurva*, *Reichb. f. in Walp. Ann.* vi. 238.

SUBTROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, *Griffith's Collectors*.

Internodes 1-2 in., as thick as a swan's quill, deeply 3-5-winged. *Leaves* 2, 2-3 in., elliptic- or linear-lanceolate, obtuse or acute, sessile. *Raceme* 2-3 in., recurved; bracts $\frac{1}{4}$ in., secund, flabelliform, persistent; flowers very small; sepals $\frac{1}{2}$ in. long; base of column narrow; rostellum short, transverse; lip with 5 lamellate basal nerves. *Capsules* $\frac{1}{2}$ in., tumid; rachis stout not flexuous.

3. **P. Griffithii**, *Hook. f. Ic. Plant.* t. 1881; bracts oblong, dorsal sepal broadly ovate or suborbicular, lateral ovate-lanceolate acute 5-nerved keeled, petals elliptic-lanceolate 3-5-nerved, lip cymbiform with a didymous terminal lobe, no side lobes.

TROPICAL SIKKIM HIMALAYA, *Griffith's Collectors*, J. D. H. KHASIA Mts.; on Kollong, alt. 5000 ft., *Clarke*.

Internodes 3-5 in., as thick as a swan's quill. *Leaves* 2, 3-5 in., oblong-lanceolate. *Racemes* 1-2 in., decurved, rachis flexuous; bracts $\frac{1}{2}$ in., oblong, obtuse; sepals $\frac{1}{2}$ in.; lip with 5 basal lamellate nerves; column suborbicular; rostellum ovate, acuminate.

4. **P. obovata**, *Hook. f.*; leaves obovate retuse or apiculate, bracts oblong acute, dorsal sepal oblong, lateral ovate acute, petals obovate, lip cymbiform with a didymous terminal lobe.

BHOTAN, *Griffith*. KHASIA HILLS (*Ic. in Herb. Calcutt.*).

Internodes 2½-4 in., cylindric. *Leaves* 2½-3½ by 1½-2 in., sessile, 5-7-nerved. *Scape* very short; *raceme* 3 in., many-fl., fruiting recurved; flowers $\frac{1}{2}$ in. diam. *Capsule* $\frac{1}{2}$ -¾ in., ellipsoid, turgid, angles acute.—The materials for this very distinct species, which may be known at first sight by the short broad leaves, consist of fruiting specimens collected by Griffith, and a very rude drawing of a flowering specimen marked as from the Khasia by Mr. Simons of Assam. The description of the flower may not be very accurate.

** *Rhizome* elongate; internodes terete, clothed with membranous sheaths and bearing slender 1-2-leaved pseudobulbs at the nodes. *Scape* from the sheaths of the internodes.

5. **P. protracta**, *Hook. f. Ic. Plant.* t. 1877; bracts broadly ovate acute, sepals ovate obtuse 3-nerved not keeled, petals elliptic obtuse 3-nerved, lip cymbiform, terminal lobe suborbicular.

TEMPERATE SIKKIM HIMALAYA, *Griffith's Collectors* (*Kew Distrib.* 5012); at Neebong, alt. 7100 ft., *Clarke*. NAGA HILLS, *Prain*.

Rhizome flexuous, as thick as a goose-quill; internodes 1½-3 in.; sheaths long, appressed; pseudobulbs 2-4 in., subcylindric. *Leaves* 5-6 in., elliptic-lanceolate, acuminate. *Racemes* 1-1½ in., sessile, flexuous; bracts $\frac{1}{2}$ in., membranous; sepals $\frac{1}{2}$ in. long, very concave; lip gibbous above the base, 5-nerved, nerves simple. *Capsule* $\frac{1}{2}$ in. long, ellipsoid.

*** *Pseudobulbs* uninodal, seated on a very stout creeping rhizome. *Scape* from the top of the pseudobulb.

† *Bracts* very broad. *Lip* with 2 free or connate terminal lobes.

6. **P. imbricata**, *Lindl. in Hook. Fl. Exot.* t. 138; in *Wall. Cat.* 1991; *Gen. & Sp. Orchid.* 37; in *Bot. Reg.* t. 1213 and 1777; bracts semi-

circular, dorsal sepal orbicular 3-nerved, lateral cymbiform, keel winged, petals linear-oblong falcate 1-nerved, lip with large broad rounded sides and 2 smaller terminal lobes. *Lodd. Bot. Cab.* t. 1934; *Wight Ic.* t. 907; *Dalz. & Gibs. Bomb. Fl.* 262. *P. pallida*, *Lindl. in Bot. Reg.* xxi. sub. t. 1777. *Cœlogyne imbricata & pallida*, *Reichb. f. in Walp. Ann.* vi. 238. *Ptilocnema bracteatum*, *Don Prodr.* 33. *Cymbidium imbricatum*, *Roxb. Fl. Ind.* iii. 460. *Ornithidium imbricatum*, *Wall. mss.*—*Rheede Hort. Mal.* xii. t. 47.

TROPICAL HIMALAYA, from Kumaon, alt. 3500 ft., *Strachey & Winterbottom*, eastwards. The KHASIA MTS., CHITTAGONG, BURMA and the ANDAMAN ISLANDS. The DECCAN PENINSULA, from the Concan southwards. CEYLON.

Pseudobulbs 1–3 in. long and narrow, or short and broad. *Leaf* solitary, 6–12 in., elliptic-lanceolate, petioled, 3-nerved. *Raceme* long-peduncled, elongate, drooping, 3–8 in. long; bracts $\frac{1}{2}$ in. broad; sepals $\frac{1}{2}$ in. long, lateral connate at the base; lip 4-lobed, 5-nerved, 3 median nerves thickened at the base; column circular when spread out, rostellum truncate. *Capsule* $\frac{3}{4}$ in., ellipsoid on a thickened (not zigzag) rachis.

VAR. ? *sessilis*; raceme sessile, rostellum 2-brachiate.—Naga Hills, on Kohima, alt. 3500–5000 ft., *Prain*.

VAR. ? *coriacea*; leaf sessile coriaceous, flowers larger, 4 lobes of lip subequal in length, the lateral rather narrower.—Perak, *Scortechini*, *King's Collector*.

7. ***P. advena***, *Reichb. f. Otia Hamburg.* 47; bracts semicircular, dorsal sepal elliptic obtuse strongly 5-nerved, lateral ovate, midrib very strong, petals elliptic-lanceolate acute 3-nerved, lip with very broad rounded sides, and 2 terminal lobes caruncled at their bases.

TENASSERIM; at Moulmein, *Helfer (Kew Distrib.* 5047), *Parish*.

Pseudobulbs stout or slender, distant on the stout rhizome. *Leaves* 1–2, elliptic-lanceolate, acuminate; nerves very slender. *Raceme* short, decurved, peduncled; bracts $\frac{1}{2}$ in. broad; sepals nearly $\frac{1}{2}$ in. long; lip 5-nerved, 3 median nerves thickened at the base, caruncled towards the apex which is produced between the terminal lobes; column very broad and short; rostellum very large, 2-glandular or -tubercled at the tip; anther very large, long, truncate, very different from that of its congeners; pollinia as in the genus.

8. ***P. calceata***, *Reichb. f. in Walp. Ann.* vi. 238; bracts ovate, dorsal sepal orbicular 3-nerved, lateral ovate faintly 3-nerved, petals linear-oblong or ovate-lanceolate 1-nerved, lip with broad ascending subacute side lobes and 2 smaller auricle-like terminal lobes. *Hook. f. Ic. Plant.* t. 1876. *Cœlogyne calceata*, *Reichb. f.*

KHASIA HILLS, alt. 4–5000 ft., *Lobb, J. D. H. & T. T.*

Pseudobulbs crowded on a rather slender densely-rooting rhizome, 1–1½ in., slender, curved, rarely short and stout. *Leaf* solitary, 3–6 in., linear-lanceolate, acute, petioled, 1-nerved. *Raceme* 2–4 in., long peduncle and drooping rachis capillary; bracts $\frac{1}{2}$ in., acute or obtuse; sepals $\frac{1}{2}$ in. long, membranous; clinandrium hippocrepiform. *Capsule* $\frac{1}{2}$ in.—Much the most slender species.

†† *Bracts* narrow. *Lip* with a simple narrow terminal lobe or 0.

9. ***P. Convallariæ***, *Hook. f. Ic. Plant.* t. 1880; leaf linear, bracts linear, raceme stout suberect, scape sheathed to the tip, dorsal sepal oblong 5-nerved, lateral ovate acuminate, midrib thick, petals broadly ovate obtuse 3-nerved, lip cymbiform nearly orbicular broader than long 3-nerved, tip emarginate. *Cœlogyne Convallariæ*, *Reichb. f. in Flora* 1872, 277.

KHASIA HILLS, alt. 3–4000 ft., *J. D. H. & T. T.* NAGA HILLS; on Kohima, alt. 4500 ft., *Prain*. TENASSERIM; at Moulmein, *Parish*.

Rhizome very stout; pseudobulbs 1-2 in., sessile by a broad base, subcylindric. *Leaves* 1-2, 5-7 in., coriaceous, obtuse. *Scape* 1-2 in. long; rachis stout; bracts $\frac{1}{2}$ in., caducous; sepals $\frac{1}{4}$ in. long; lip obscurely 3-lobed, warted within (normally?); column broadly obovate, tip contracted obtuse.

10. **P. rubra**, *Lindl. Gen. & Sp. Orchid.* 37; leaves elliptic-lanceolate, raceme decurved, bracts acute, sepals ovate acute 3-5-nerved, petals narrowly linear 1-nerved, lip slightly 3-lobed, side lobes broad rounded, midlobe broadly ovate acute, nerves 5 thickened at the base. *Wall. Pl. As. Bar.* iii. 21, t. 239; *Hook. f. Ic. Plant.* t. 1879. *P. undulata*, *Lindl. in Bot. Reg. sub.* t. 1213, and xxvii. *Misc.* 6. *Cœlogyne rubra* & *undulata*, *Walp. Ann.* vi. 238.

SUBTROPICAL HIMALAYA; Sikkim, alt. 4-6000 ft. KHASIA HILLS, alt. 4-5000 ft., *Wallich*, &c. UPPER BURMA, *Griffith (Kew Distrib.* 5387).

Pseudobulbs 2-3 in., on a stout rhizome, narrowed below. *Leaves* 1-2, 4-10 in., 5-nerved. *Scape* when flowering short and sheathed to the top, at length 6-10 in. and naked; raceme 4-8 in., flexuous, drooping, lax-fl'd.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., spreading and deflexed; sepals $\frac{1}{4}$ in. long, midrib thick; column with narrower wings than in its allies, clinandrium transversely oblong. *Capsule* $\frac{3}{8}$ in.

11. **P. micrantha**, *Hook. f. Ic. Plant.* 1891; leaves elliptic-lanceolate, raceme decurved, bracts lanceolate, sepals broadly ovate and ovate-oblong acute petals 1-nerved, lip boat-shaped subtrapezoidly ovate when spread out, gradually narrowed from the rounded side lobes into the concave 3-nerved base and ovate fleshy obtuse midlobe.

PERAK; summit of Gunong Batu Pateh, alt. 6000 ft., *Wray*.

Rhizome flexuous, scandent?, as thick as a goose-quill, sheathed; pseudobulbs $1\frac{1}{2}$ -2 in., narrow, erect, parallel to the stem. *Leaves* 1-2, $1\frac{1}{2}$ -3 in. *Scape* with raceme 3-4 in., rachis flexuous; flowers pale pink, $\frac{1}{8}$ in. long, trigonous. *Capsules* $\frac{1}{4}$ in.—Flower a good deal like the Javan *P. carnea*, but pseudobulb and lip very different.

37. CALANTHE, Br.

Terrestrial, often pseudobulbous. *Stem* short or tall, leafy. *Leaves* plaited. *Scape* axillary, terminal or from the side of the leafing pseudobulb; flowers small or medium-sized, racemed. *Sepals* subequal, spreading, rarely connivent. *Petals* broad or narrow. *Lip* adnate to the top or base of the column, 3-lobed, midlobe often deeply 2-fid, disk lamellate. *Column* long or short, obliquely truncate; anther conical or convex, 2-celled; pollinia 8, waxy, cohering in pairs by a granular viscus. *Capsules* drooping.—Species about 40, tropical or subtropical.

Sect. I. *Lip* at the top of the short stout column opposite to the stigmatic cavity.

* Bracts persistent. *Scape* usually from amongst the leaves.

† Spur 0 or minute. (See *C. gigantea* at end of genus, and *C. Mannii* in ††.)

1. **C. tricarinata**, *Lindl. in Wall. Cat.* 7339; *Gen. & Sp. Orchid.* 18; *Fol. Orchid.* 2; sepals lanceolate acuminate 7-nerved, petals nearly as broad acuminate 3-nerved, side lobes of sessile lip broadly oblong falcate, midlobe rounded or flabellate retuse or 2-fid crisped, disk with 3 large

crenulate fleshy ridges. *Walp. Ann.* vi. 912. *C. occidentalis*, *Lindl. Fol. Orchid.* 3; *Walp. l. c.*

TEMPERATE HIMALAYA, alt. 5-9000 ft.; from Kashmir, alt. 7000 ft., *Clarke*, 1cNepal, *Wallich*.

Stem 4-8 in. *Leaves* 2-3, sessile, 6-10 in., oblong, acuminate. *Scape* stout and lax-fl. raceme 12-18 in., puberulous; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., shorter than the ovary; flowers 1-1 $\frac{1}{2}$ in. across; sepals and petals greenish, sepals not aristate; lip brown-purple.—I can find no characters for *C. occidentalis*.

2. ***C. puberula***, *Lindl. in Wall. Cat.* 7342; *Gen. & Sp. Orchid.* 352; *Fol. Orchid.* 2; lateral sepals falcately oblong aristate 5-nerved, petals very narrow 3-nerved, side lobes of sessile lip broadly oblong falcate together broader than the rhombic crenate dagger-pointed midlobe. *Walp. Ann.* vi. 912.—*Bletia* sp., *Griff. Ic. Pl. Asiat.* t. 313 A.

SUBTROPICAL HIMALAYA, alt. 4-6000 ft.; from Simla, *Thomson*, eastwards. KHASIA Mts., alt. 4-6000 ft., *Griffith, & c. (Kew Distrib.* 5274). NAGA HILLS, alt. 6500 ft., *Prain*.

Stem short or 8-10 in. *Leaves* 2-7, petioled, 6-18 in., narrow or broad, caudate. *Scape* slender and lax-fl. raceme 8-14 in., puberulous; bracts 1-1 $\frac{1}{2}$ in., usually exceeding the ovary; flowers 1-1 $\frac{1}{2}$ in. broad. *Capsule* $\frac{1}{2}$ in. long.

3. ***C. brevicornu***, *Lindl. in Wall. Cat.* 7338; *Gen. & Sp. Orchid.* 251; *Sert. Orchid.* t. 9; *Fol. Orchid.* 3; lateral sepals ovate-oblong acute 5-nerved, petals oblong-lanceolate 3-nerved, side lobes of sessile lip falcate obtuse, midlobe clawed transversely oblong retuse crisped, disk with 3 fleshy tubercled lamellæ, spur very short conical. *Walp. Ann.* vi. 912.

TEMPERATE HIMALAYA; Nepal, *Wallich*; Sikkim, alt. 6-8000 ft., *J. D. H.*

Stem 4-8 in., stout. *Leaves* 2-3, sessile or petioled, oblong-lanceolate, acuminate. *Scape* and few-fl. raceme nearly glabrous; bracts $\frac{1}{2}$ in., as long as the puberulous pedicel and ovary; flowers $\frac{3}{4}$ in. broad; sepals not aristate and petals red-purple striped with gold; lip white and red.—*Lindley's* Kumaon habitat refers to *C. tricarinata*.

VAR. *Wattii*; lip with 3 small conical lamellæ on the disk of the midlobe.—Munnipore, *Watt*.

4. ***C. biloba***, *Lindl. Fol. Orchid.* 3; lateral sepals broadly ovate falcate aristate 5-7-nerved, petals oblong acuminate 3-nerved, lip with a narrowly winged claw, blade very large broad deeply 2-lobed, lobes broadly hatchet-shaped or orbicular, sinus very acute with a basal apiculus, spur very short. *Walp. Ann.* vi. 912.

TEMPERATE HIMALAYA; E. Nepal and Sikkim, alt. 5-7000 ft., *J. D. H.*

Stem short. *Leaves* 8-11 in., long-petioled, broadly elliptic or oblanceolate, caudate-acuminate. *Scape* 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ ft. with the long lax-fl. raceme, puberulous; bracts 1-1 $\frac{1}{2}$ in., very slender, equalling the ovary; flowers 1 in. diam.; sepals and petals pale purplish; lip as broad as the rest of the flower, pale pink, blade naked, inner angles of lobes subacute.

VAR. *obtusata*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 144; flowers larger, blade of lip with a rounded apex and 3 obscurely caruncled nerves at the base, disk yellowish.—Tonasserim, *Parish*.

VAR. *diptera*; lobes of lip divergent, axis and sides towards the base granulate.—Naga Hills, *Prain*.

VAR. *Treutleri*; quite glabrous, blade of lip lunately 2-lobed, base with a thickened transverse ridge at the claw, incurved lobes, and a deep rounded sinus.—Sikkim, alt. 6000 ft., *Treutler*.

†† Spur half as long as the sepals or longer (except *C. Mannii*).

§ Flowers small; sepals $\frac{1}{4}$ – $\frac{1}{2}$ in. long. (See also *C. veratrifolia* & *purpurea* in §§.

5. *C. alismæfolia*, Lindl. *Fol. Orchid.* 8; raceme short pubescent, bracts large ovate, sepals elliptic obtuse 5-nerved, petals as broad 5-nerved, lip longer than the sepals, side lobes linear, midlobe clawed obcordate naked, base with a large yellow callus, spur slender longer than the sepals. *Walp. Ann.* vi. 918.

TROPICAL HIMALAYA; Garwhal, at Mussoori, *Falconer* (*Kew Distrib.* 1055, 1056); Sikkim Terai and low valleys, *Griffith*, &c. (*K. D.* 5276) KHASIA HILLS, *J. D. H. § T. T.*

Stems very short, from a very stout woody rhizome. *Leaves* 2–3, 4–6 in., elliptic-ovate, acuminate; petiole as long or longer, slender. *Scape* from between the leaves, 4–16 in., slender, 1-sheathed; raceme 1–4 in.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., green, recurved; buds globose; pedicels short; sepals $\frac{1}{2}$ in. long, concave, and petals white, greenish or pinkish; lip whitish or yellowish.

6. *C. diploxiphion*, *Hook. f. Ic. Plant. ined.*; raceme short pubescent, bracts large broadly ovate acuminate, sepals broadly ovate subacute 5-nerved, petals ovate obtuse, lip of two pairs of similar narrowly reniform or hatchet-shaped falcately recurved obtuse lobes, the terminal pair longest, spur very slender longer than the sepals.

PERAK; at Goping, in shady places, *King's Collector*.

Stem very short, on a stout woody rhizome. *Leaves* 2, often 18 in., long lanceolate, narrowed into a very stout ribbed petiole. *Scape* from the side of the leaves, 20 in., 5-sheathed, slender above; raceme conical; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., imbricate, acuminate, green; pedicel and ovary 1–1 $\frac{1}{4}$ in., slender; flowers white; lip $\frac{1}{2}$ in. long, longer than the sepals.—I have seen only one specimen; it is allied to *alismæfolia*. An unnumbered drawing of this is amongst *Scortechini's* Perak ones.

7. *C. angusta*, Lindl. *Fol. Orchid.* 7; scape tall many-sheathed, bracts ovate, sepals broadly ovate obtuse 5-nerved, petals broad oblong 3-nerved, side lobes of lip falcately oblong obtuse caruncled at the suture, midlobe flabellately cordate naked much longer than the sepals, lobes rounded, sinus acute, spur very slender longer than the sepals. *Walp. Ann.* vi. 916.

KHASIA MTS., alt. 3000 ft., *Lobb, Clarke*. MUNNIPORE, alt. 3500 ft., *Watt*.

Stem very short, thickened. *Leaves* sessile, lanceolate. *Scape* 6–18 in., from the side of the leafing shoot which it precedes; sheaths $\frac{1}{2}$ –1 in.; raceme 1–2 in., dense-fl., puberulous; bracts $\frac{1}{2}$ – $\frac{2}{3}$ in., acuminate; pedicels short; flowers white; caruncles of lip yellow.

8. *C. vaginata*, Lindl. *Fol. Orchid.* 7; scape tall very stout many-sheathed, bracts lanceolate, sepals broadly oblong tomentose 5-nerved, petals similar 3–5-nerved, side lobes of lip caruncled at the suture broadly hatchet-shaped as long and nearly as broad as the similar spreading segments of the naked midlobe, spur longer than the sepals slender and column pubescent.

ASSAM, *Jenkins*.

Scape 18 in., swollen at base and surrounded by fibrous remains of old leaves; sheaths 1–1 $\frac{1}{2}$ in., obtuse or acute; raceme 2 in., dense-fl., pubescent; bracts $\frac{3}{4}$ –1 in.; sepals $\frac{1}{2}$ in.; lip much longer.—Only one specimen hitherto known, without leaves.

9. **C. pachystalix**, *Reichb. f. mss.*; bracts very small, sepals ovate obtuse 3-nerved, petals linear-oblong obtuse 3-nerved, lip very short, side lobes obovate larger than the linear oblong falcate obtuse segments of the midlobe, disk with 3 caruncled nerves, spur shorter than the sepals.

WESTERN HIMALAYA, *Falconer (Kew Distrib. 1054)*.

Leaves 12 in., sessile, linear-lanceolate, obtuse. *Scape* longer, naked, puberulous above; raceme 4 in., dense-fl.; bracts $\frac{1}{2}$ in., lanceolate, membranous; pedicels with ovary as long; sepals about $\frac{1}{4}$ in., longer than the broad lip; column very broad.—The single specimen is very imperfect, and in bud only.

10. **C. Mannii**, *Hook. f.*; bracts very small, sepals ovate-oblong obtuse 3-5-nerved pubescent, petals oblanceolate 1-3-nerved, side lobes of sessile lip rounded as broad or broader than the rounded retuse midlobe, disk with 2 tubercled ridges, spur short conical pubescent.

WESTERN HIMALAYA; Kumaon, below Ranikhet, *Duthie*. KHASIA HILLS, alt. 4000 ft., *Mann, Clarke*.

Stem very short. *Leaves* 2-3, lanceolate. *Scape* lateral, with the lax-fl. raceme 6-10 in., and flowers very pubescent; bracts membranous; flowers $\frac{1}{2}$ in. broad, drooping; sepals $\frac{1}{4}$ in. long.—The Kumaon specimens have sessile leaves 6-8 in. long; the Khasian have petioled leaves 12 by $1\frac{1}{2}$ in., and a smaller midlobe of the lip in comparison with the side lobes. This is one of the smallest-fl. species.

11. **C. Wrayi**, *Hook. f.*; bracts very short broad rigid revolute, sepals ovate acute 5-nerved, petals oblong-lanceolate acute 3-nerved, lip subequally 4-lobed, side lobes oblong spreading, tips rounded, midlobe cleft nearly to the base into two dimidiate-obovate crenulate segments, disk with conical calli, spur longer than the sepals.

PERAK, alt. 2000 ft., *Wray*.

Stem 0. *Leaves* 8-10 in., long-petioled, elliptic, acuminate, 5-nerved. *Scape* from amongst the leaves, with the long raceme $2\frac{1}{2}$ ft., slender, pubescent; raceme 3-6 in.; bracts $\frac{1}{4}$ in., $\frac{1}{2}$ -amplexicaul, as broad as long, acute, twisted when dry; pedicels slender, with ovary $\frac{2}{3}$ in.; flowers white tinted with lilac; sepals about $\frac{1}{2}$ in.—Described from one specimen. Resembles a Bornean species.

Var. ? *Scortechinii*; leaves smaller subsessile, scape and raceme shorter, petals much broader 5-nerved, outer nerves branching, lobes of lip much broader.—Perak, *Scortechinii*.

§§ *Flowers large; sepals $\frac{3}{4}$ -1 in. long; petals broad (except Masuca, var. fulgens).*

12. **C. alpina**, *Hook. f. in Lindl. Fol. Orchid. 4*; raceme few-fl., bracts equalling or exceeding the decurved ovary, flowers secund, sepals ovate-oblong acuminate 5-nerved, petals elliptic-lanceolate 3-nerved, lip very short indeed suborbicular inciso-fimbriate, spur equalling the sepals stout slightly incurved. *Walp. Ann. vi. 913*.

SIKKIM HIMALAYA, alt. 9-10,000 ft., *J. D. H.*

Stem very short. *Leaves* 4-7 in., sessile, elliptic-lanceolate, acuminate. *Scape* from amongst the leaves, with raceme 6-12 in., stout, and yellowish or greenish-white inodorous flowers glabrous; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., erect; perianth connivent; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., apiculate; lip white striped with purple.

13. **C. Masuca**, *Lindl. in Wall. Cat. 7337; Gen. & Sp. Orchid. 249; in Bot. Reg. 1842, Misc. 51; 1844, t. 37; Fol. Orchid. 6*; leaves glabrous or nearly so, bracts large ovate-lanceolate herbaceous, sepals lanceolate acuminate 5-nerved, petals obovate or broadly oblong 3-5-nerved, side lobes of lip falcate oblong, midlobe much larger broadly or cuneately reni-

form, disk tubercled, spur longer than the sepals. *Bot. Mag.* t. 4541; *Part. Fl. Gard.* i. 138; *Jard. Fleuriste*, t. 62; *Walp. Ann.* vi. 915. *C. versicolor*, *Lindl. Sert. Orchid.* t. 42; *Bot. Reg.* 1844, sub. t. 37; *Fol. Orchid.* 6. *C. emarginata*, *Wight Ic.* t. 918; ? *Lindl. Gen. & Sp. Orchid.* 249; *Fol. Orchid.* 5. *C. Wightii*, *Reichb. f. in Walp. l. c.* 933. ? *Amblyglottis emarginata*, *Blume Bijd.* 370. *Bletia Masuca*, *Don Prodr.* 30. *Zoduba Masuca*, *Herb. Ham.*

TROPICAL HIMALAYA, from Nepal eastwards. DECCAN PENINSULA, in the Ghats of Maisor and Malabar.—DISTRIB. Java.

Stem short, stout. *Leaves* 12–18 in., subsessile or petioled, elliptic-ovate to lanceolate, glabrous or subpubescent beneath. *Scape* lateral, stout, with the lax-fl. raceme $1\frac{1}{2}$ –3 ft., stout, pubescent; bracts $\frac{2}{3}$ –1 in.; pedicels with ovary $1\frac{1}{4}$ – $1\frac{1}{2}$ in.; flowers pale or dark purple, rarely pale rose, 2– $2\frac{1}{2}$ in. diam.; lip hardly exceeding the sepals often violet, calli yellow. *Capsule* $1\frac{1}{2}$ in.—The colour of flower and form of midlobe of lip vary much. In *C. versicolor* the perianth is white with a purple lip changing to yellow. Under *C. purpurea* (*Fol. Orchid.* 6) Lindley describes the leaves of *C. Masuca* as differing from those of *versicolor* in being pilose; but in his clavis of the species (p. 1) *Masuca* is described as glabrous.

VAR. fulgens; stem 6–8 in., leaves 12–14 by 4–5 in. at length petioled, petals narrower 3-nerved, flowers 3 in. diam., sepals almost crimson, lip deep purple. *C. fulgens*, *Lindl. Föl. Orchid.* 10.—Sikkim, alt. 2–4000 ft., J. D. H.

14. ***C. purpurea***, *Lindl. Gen. & Sp. Orchid.* 2491; in *Bot. Reg.* 1844, sub. t. 37; *Fol. Orchid.* 6; leaves softly sparsely hairy on both surfaces, scape and few-fl. raceme tomentose, bracts ovate shorter than the long pedicels, sepals ovate or oblong-lanceolate 5–7-nerved, petals broadly oblanceolate or oblong 3–5-nerved, side lobes of lip narrow or broad, midlobe broadly or narrowly cuneately obcordate, disk warted near the base, spur very long. *Walp. Ann.* vi. 915; *Trimen Cat. Pl. Ceyl.* 88. *C. Masuca*, *Thw. Enum.* 308.

CEYLON; in the Ambagamowa district, alt. 2–4000 ft., *Thwaites*.

Habit and flowers of *C. Masuca*, but much smaller in all its parts, and with leaves hairy on both surfaces, small bracts, and slender spur as long as the pedicel.

15. ***C. veratrifolia***, *Br. in Bot. Reg. sub. tab.* 573; leaves glabrous, bracts large ovate-lanceolate, racemes dense-fl., flowers white, sepals elliptic-obovate 5-nerved, petals broadly oblong or oblanceolate 3–5-nerved, side lobes of lip oblong obtuse, midlobe deeply divided into two linear-oblong falcately recurved segments, sinus acute, disk between the side lobes tubercled, spur slender. *Lindl. in Bot. Reg.* t. 720; *Gen. & Sp. Orchid.* 249; *Fol. Orchid.* 8; *Bot. Mag.* t. 2615; *Griff. Ic. Pl. Asiat.* t. 283, f. 4; *Walp. Ann.* vi. 917. *C. comosa*, *Reichb. f. in Linnæa* xix. 374. *C. Perrottetii*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 68; *Wight Ic.* t. 1664; *Lindl. Föl. Orchid.* 7. *Limodorum veratrifolium*, *Willd. Sp. Pl.* iv. 122. ? *Amblyglottis veratrifolia*, *Blume Bijd.* 270. *Bletia quadrifida*, *Herb. Ham. Orchis triplicata*, *Willem. (Steud.)*.

DECCAN PENINSULA, alt. 6–7000 ft., from Canara southwards. CEYLON, alt. 6–7000 ft.—DISTRIB. Malay Islands, Australia.

Habit of *C. Masuca*, with which it is easily confounded in the Herbarium, but leaves always petioled and glabrous beneath; raceme dense-fl.; flowers white, smaller but variable in size; spur more slender, equalling or exceeding the sepals; lip longer than the sepals, very variable in the size and proportion of the lobes and tubercles.—*Reichb. f.* refers (*Walp. Ann.* vi. 933) his *comosa* (which is Lindley var.

D. comosa) to *Perrottetii*, but the specimen so named by Lindley in Herb. Kew is certainly *veratrifolia*. Thwaites has a var. *discolor* (Enum. 308), but does not define it.

16. **C. vestita**, Lindl. in Wall. Cat. 7345; Gen. & Sp. Orchid. 250; Fol. Orchid. 10; scape from the base of a large pseudobulb and lax-flid. cernuous raceme villous, flowers rosy white or greenish, bracts large ovate, sepals ovate-lanceolate aristate 5-nerved, petals broadly oblong 5-nerved, lip very large, side lobes cuneately obovate, midlobe flabellately deeply obcordate, sinus acute, spur very long slender involute. Bot. Mag. t. 4671; Fl. des Serres, t. 816; Jard. Fleur. iv. t. 333; Part. Fl. Gard. 147 (with ic.); Mag. xvi. t. 129. *Cytheris Griffithii*, Wight Ic. t. 1751-2. *Preptanthe vestita*, Reichb. f. Bot. Zeit. xvi. 128; Walp. Ann. vi. 460.

TENASSERIM; at Moulmein, Wallich, &c.—DISTRIB. Borneo.

Pseudobulb 2-5 in., ovoid, obtusely angled, leafing after flowering. *Leaves* 12-18 in., lanceolate, glabrous. *Scape* 12-18 in., stout below; sheaths few, large, acute; bracts $\frac{3}{4}$ -1 in.; pedicels very slender with ovary $1\frac{1}{2}$ in.; sepals 1-1 $\frac{1}{2}$ in.; petals obtuse or retuse and apiculate; lip variable, exceeding the sepals; side lobes sometimes absent.—The hybrids between this and *C. rosea*, *C. labrosa*, and others, are very numerous.

§§§ *Flowers large; sepals $\frac{3}{4}$ -1 in. long; petals narrow.*

17. **C. chloroleuca**, Lindl. Fol. Orchid. 10; scape stout, bracts very small membranous, sepals ovate-lanceolate acuminate 5-nerved greenish, petals lanceolate acuminate 3-nerved yellowish, lip white, side lobes small oblong or rounded, midlobe broadly cuneately obcordate or suborbicular 2-lobed, spur stout longer than the sepals. Walp. Ann. vi. 920. *C. galeata*, Lindl. l. c.; Walp. l. c.

SIKKIM HIMALAYA, alt. 6-8000 ft., J. D. H., Treutler.

Stem 4-6 in., stout; base pseudobulbous, sheathed. *Leaves* 6-10 in., long-petioled, elliptic, acuminate. *Scape* from amongst young leaves, 6-10 in.; bracts $\frac{1}{4}$ in., ovate-lanceolate; pedicels with ovary $\frac{1}{2}$ - $\frac{3}{4}$ in., stout; sepals $\frac{2}{3}$ in. long, sometimes streaked with red; side lobes sometimes incumbent on the midlobe; spur glabrous or puberulous. *Capsule* $1\frac{1}{2}$ in.—*C. galeata* is founded on a drawing of mine, made in Sikkim, of a faded specimen with drooping flowers, and hence connivent sepals. The broad midlobe of the lip distinguishes this from *C. herbacea*.

18. **C. herbacea**, Lindl. Fol. Orchid. 10; bracts large oblong-lanceolate acute herbaceous, sepals oblong or oblanceolate acute and oblanceolate 3-nerved petals green, lip white, side lobes narrow falcate, midlobe deeply 2-fid, segments narrow spreading, sinus apiculate, base with 2 small yellow calli, spur longer than the sepals slender. Walp. Ann. vi. 920.

SIKKIM HIMALAYA, alt. 4-8000 ft., J. D. H.

Stem robust, sheathed. *Leaves* 8-10 in., elliptic-lanceolate, acuminate. *Scape* 12 in., from the side of the leafing stem; bracts $\frac{3}{4}$ in., green; sepals 1 in. long; lip small for the size of the flower; spur flexuous.

19. **C. Griffithii**, Lindl. in Part. Fl. Gard. under t. 31; Fol. Orchid. 9; bracts small lanceolate, sepals ovate-lanceolate aristate 5-nerved, petals narrowly oblanceolate 3-nerved, lip shorter than the sepals, side lobes oblong, midlobe broadly or deltoidly obcordate, disk with a solitary erect triangular lamella or callus, spur equalling or shorter than the sepals.

Walp. Ann. vi. 919. *C. plantaginea*, Griff. Notul. iii. 368; Ic. Plant. Asiat. t. 339 A. *Calanthea*, Griff. It. Notes, 174, No. 174.

BHUTAN HIMALAYA; at Panukka, Telagong and Chuka, alt. 6000 ft., Griffith.

Stem 4-6 in., sheathed. Leaves small during flowering, oblong, acute. Scape with the raceme 8-14 in., glabrous or puberulous; bracts $\frac{1}{2}$ - $\frac{1}{3}$ in.; pedicels with ovary 1 in., puberulous; sepals $\frac{3}{4}$ in. long; spur straight or coiled. —The solitary large callus on the lip is characteristic, and identifies this with Griffith's *C. plantaginea*. Perianth according to Griffith greenish brown, lip ochroleucous or straw-colored.

20. *C. uncata*, Lindl. Fol. Orchid. 6; bracts as long as the pubescent flowers, sepals lanceolate acuminate, nerves obscure, petals oblanceolate acuminate, lip longer than the sepals, base caruncled, side lobes falcately oblong obtuse, midlobe clawed 2-fid, segments spreading, disk naked, spur uncinately incurved. Walp. Ann. vi. 916.

SIKKIM HIMALAYA, Griffith's Collectors.

Stem short, sheathed. Leaves broadly elliptic, petioled. Scape longer than the leaves; bracts $\frac{1}{2}$ - $\frac{2}{3}$ in., ovate-lanceolate, lower foliaceous; sepals $\frac{1}{2}$ in. long. —Very near *C. Griffithii*, but I find no callus on the lip. I have seen only one specimen; colour of flowers unknown.

21. *C. plantaginea*, Lindl. in Wall. Cat. 7346; Gen. & Sp. Orchid. 250; Sert. Orchid. t. 24; Fol. Orchid. 9; bracts small lanceolate, sepals ovate-lanceolate 3-5-nerved, petals oblanceolate acuminate 3-nerved, side lobes of lip cuneate-obovate, midlobe cuneately-obovate subtruncate apiculate, spur very slender longer than the sepals. Walp. Ann. vi. 920.

TEMPERATE WESTERN HIMALAYA, from Garwhal, alt. 9000 ft., Royle, &c., to Nepal. BHUTAN, alt. 7-7500 ft., Griffith.

Stem 3-10 in.; sheaths long, tubular. Leaves 8-12 in., petioled, elliptic-lanceolate. Scape with raceme 6-16 in., puberulous; bracts $\frac{3}{4}$ -1 in.; pedicels with ovary 1-1 $\frac{1}{2}$ in., slender, puberulous; flowers white or pale lilac; sepals $\frac{3}{4}$ in., glabrous; lip longer than the sepals, with 3 small basal lamellæ.

22. *C. odora*, Griff. Notul. iii. 365; raceme dense-fid. radical, bracts foliaceous equalling the pubescent ovaries, flowers (before the leaves) large white smelling strongly of hyacinths, sepals ovate or oblong-ovate mucronate, petals much narrower spathulate-lanceolate mucronate, lip adnate to the column, side lobes obliquely oblong, midlobe broadly deeply obcordate white or cream-coloured, base with erect yellow lobed calli, spur one-third longer than the ovary filiform, lip unequally 2-lobed pubescent without and within. Lindl. Fol. Orchid. 11.

UPPER ASSAM; at Suddya, Griffith.

I have seen no specimens; it is, no doubt, near *C. plantaginea*.

23. *C. elytroglossa*, Reichb. f. mss.; scape and raceme pubescent, bracts large green, pedicels very long, sepals oblanceolate acute green, nerves obscure, petals narrowly oblanceolate 1-nerved, side lobes of lip ovate obtuse caruncled at the suture, midlobe broadly cuneately cordate. from a narrow base, lobes subfalcate, spur much longer than the sepals.

SIKKIM HIMALAYA, alt. 6-8000 ft., Treutler, Clarke.

Stem very short. Leaves 6-10 in., petioled, elliptic ovate or lanceolate. Scape from amongst the leaves with the raceme 2-3 ft.; bracts $\frac{3}{4}$ -1 in., acute; pedicels with ovary 1-1 $\frac{1}{2}$ in.; flower 1 $\frac{1}{2}$ in. diam., fleshy; sepals and petals green or yellow; lip white; spur 1 in., slender. —The long pedicels are characteristic.

** *Bracts* caducous as the raceme elongates, equalling or exceeding the flowers. *Scape* shorter than the leaves. *Flowers* black when dried.

24. **C. curculigoides**, *Wall. Cat.* 7340; scape and dense-fld. cylindric raceme glabrous, sheaths inflated, bracts equalling the ochreous or orange flowers, lip subhastate, side lobes small obtuse, midlobe subpanduriform, tip dilated acute, spur short stout, tip hooked. *Lindl. Gen. & Sp. Orchid.* 251; in *Bot. Reg.* 1847, t. 8; *Fol. Orchid.* 4; *Bot. Mag.* t. 6104; *Walp. Ann.* i. 792, vi. 913. *Styloglossum nervosum*, *Kuhl & Hassk. in Herb. Lindl.*; *Breda Orch. Jav.* t. 10. ? *C. pulchra*, *Lindl. Gen. & Sp. Orchid.* 250. *Amblyglottis pulchra*, *Blume Bijl.* 371.

MALAY PENINSULA; Malacca, Perak, Penang and Singapore, *Wallich, Griffith, Maingay* (*Kew Distrib.* 1659), &c.—DISTRIB. Java.

Stem 0. *Leaves* 1–2 ft., linear-lanceolate, petioled. *Scape* from the side of the leafing stem, 6–18 in., stout or slender; raceme 2–10 in.; pedicel and ovary $\frac{1}{2}$ in.; flower rather long, perianth connivent; sepals oblong, subacute.

25. **C. Foerstermanni**, *Reichb. f. in Gard. Chron.* 1883, i. 814; “raceme cylindric dense-fld., bracts about equalling the yellow flowers, midlobe of whitish-yellow lip obreniform apiculate, spur clavate half the length of the pedicelled ovary.”

EASTERN BURMA, *Foerstermann*.

I have seen no specimens of this species, which is evidently very near *C. curculigoides*.

26. **C. clavata**, *Lindl. in Wall. Cat.* 7343; *Gen. & Sp. Orchid.* 251; *Fol. Orchid.* 5; scape loosely sheathed, bracts much longer than the yellow flowers, sepals oblong acuminate, petals broad, lip short broad, base rounded, side lobes small, midlobe suborbicular emarginate, base with 2 triangular lamellæ, spur clavate as long as the ovary. *Walp. Ann.* vi. 914.

SIKKIM HIMALAYA, alt. 4000 ft., *J. D. H. KHASIA HILLS*, *Wallich, Griffith* (*Kew Distrib.* 5272, 5391, 5392). ASSAM and UPPER BURMA, *Griffith*.

Rhizome creeping; *stem* 4–8 in.; sheaths long. *Leaves* 1–2 ft., long-petioled, narrowly lanceolate; nerves strong. *Scape* lateral, 10–20 in., stout or slender; young raceme crinite with bracts which are $1\frac{1}{2}$ in. long; pedicels $\frac{1}{4}$ in., very slender; sepals $\frac{1}{2}$ in.; lip very variable. *Capsule* $\frac{1}{2}$ in., pendulous.

27. **C. angustifolia**, *Lindl. Gen. & Sp. Orchid.* 251; *Fol. Orchid.* 5; scape slender, sheaths appressed, raceme short many-fld., flowers white with a yellow centre, sepals oblong acute, petals very broad, lip as broad as long subequally 4-lobed, midlobe retuse apiculate, base with 2 triangular lamellæ, spur clavate equalling the sepals. *C. phajoides*, *Reichb. f. in Bonpland.* v. (1857) 37; *Xen. Orchid.* i. 207, t. 19. ? *Amblyglottis angustifolia*, *Blume Bijl.* 369. *Limodorum striatum*, *Reinwardt mss.*

PERAK, alt. 5–7000 ft., *Scortechini*, &c.—DISTRIB. Java.

Stem very short or 0. *Leaves* 1–2 ft., petioled, narrowly lanceolate. *Scape* basal, 6–10 in.; bracts not seen; pedicels very slender, with ovary $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in. long, 3–5-nerved; petals broader, 5-nerved, outer nerves branched. *Capsule* $\frac{3}{4}$ in., pendulous.—Near *C. clavata*, but stemless, with differently coloured flowers and different lip.

28. **C. Scortechinii**, *Hook. f.*; scape with large loose sheaths, raceme short, sepals broadly obovate-oblong aristate, petals as broad aristate 3-nerved, lip small short, side lobes very small obtuse, midlobe

deltoidly cordate retuse apiculate, base with 2 triangular lamellæ, top of column clavate, spur more or less clavate about as long as the sepals or shorter.

PERAK, *Scortechini*.

Leaf 2 ft. 6 in., long-petioled, narrowly lanceolate. *Scape* 12 in.; sheaths $1\frac{1}{2}$ –2 in.; pedicels slender, with ovary 1 in.; sepals $\frac{1}{2}$ in., 3–5-nerved; petals 3-nerved, nerves faint, outer branching; top of column (above the lip), unlike that of other species, produced backwards, rostellum very long.—I have seen but one specimen.

Sect. II. *Lip* inserted at the base of the column, which is not embraced by its side lobes. *Bracts* very long, slender, caducous. *Scape* always shorter than the leaves.

29. **C. densiflora**, *Lindl. in Wall. Cat.* 7344; *Gen. & Sp. Orchid.* 250; in *Bot. Reg.* t. 1646; *Fol. Orchid.* 9; scape radical, sheaths inflated, raceme short dense-fl., bracts lanceolate much exceeding the yellow flowers, sepals oblong acute, petals as broad, lip broadly oblong, base rounded, side lobes small, midlobe small sessile emarginate, spur cylindric. *Knowles & West Flor. Cab.* t. 23; *Walp. Ann.* vi. 919.

SIKKIM HIMALAYA, alt. 5–6000 ft., *Treutler*, &c. KHASIA HILLS, alt. 4–5000 ft., common.

Rhizome short, stout. *Leaves* 8–10 in., narrowly lanceolate; petiole as long, slender. *Scape* 4–8 in.; raceme subglobose; bracts $1\frac{1}{4}$ in., membranous; pedicels slender, with the ovary $\frac{1}{2}$ – $\frac{3}{4}$ in.; perianth connivent; sepals $\frac{3}{4}$ in.; petals 3-nerved; lip as long as the sepals, base with 2 large triangular lamellæ, column arched. *Capsule* $\frac{2}{3}$ in., turgidly ellipsoid.—Habit and spur of *C. clavata* with lip of *gracilis*.

30. **C. tubifera**, *Hook. f.*; stem tall, internodes long, sheaths cylindric, leaves many, distichous alternate narrow, scape lateral, sheaths inflated, raceme pubescent lax-fl., lip as in *C. densiflora*, spur 0.

UPPER BURMA, *Griffith*.

Stem 15 in., about as thick as the middle finger; internodes loosely clothed with tubular sheaths 3–4 in. long. *Leaves* many, 6–14 in., sessile, linear-lanceolate. *Scape* 12 in.; raceme 6 in.; bracts not seen; sepals $\frac{3}{4}$ in. long, lanceolate, acuminate; petals subsimilar; lip as long, twice as long as the column, without lamellæ, lateral nerves divergent crested, midlobe crisped.—Allied to *C. gracilis*, but much larger, with flowers twice as large and pubescent.

31. **C. gracilis**, *Lindl. in Wall. Cat.* 7341; *Gen. & Sp. Orchid.* 251; stem tall, internodes long cylindric, scape very slender, raceme laxly many-fl., bracts linear much exceeding the puberulous flowers hair-pointed, lip with 2 velvety basal patches, lateral nerves narrowly lamellate, spur 0. *Bot. Mag. t.* 4714; *Griff. Notul.* iii. 367; *Walp. Ann.* vi. 922. *Limatodes gracilis*, *Lindl. Fol. Orchid.* 1.

KHASIA HILLS, alt. 3–4000 ft., *Wallich*, &c.—DISTRIB. China.

Stems 12–18 in., tufted; sheaths 2–3 in. *Leaves* many, subterminal, 6–12 in., ovate or lanceolate, decurved. *Scape* lateral, 8–14 in.; bracts 1 in., very slender, membranous; flowers greenish yellow; sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. and petals linear, acute, recurved; lip yellow; side lobes incurved; midlobe crisped; column short, white, base tumid in front.

Sect. III. *Lip* inserted at the top of the broad short column, its side lobes convolute and embracing the column.

32. *C. rosea*, *Benth. in Gen. Plant.* iii. 521; scape from the base of a large pseudobulb and many-fl. raceme villous, bracts ovate-lanceolate persistent, flowers large rosy, lip with narrow convolute side lobes and a large obovate oblong entire spreading midlobe, spur slender shorter than the sepals. *Limatodes rosea*, *Lindl. in Paxt. Fl. Gard.* t. 81; *Fol. Orchid.* 1; *Bot. Mag.* t. 5312; *Walp. Ann.* vi. 921.

TENASSERIM; at Moulmein, *Parish*.

Pseudobulbs 4-8 in., obpyriform or fusiform, acutely keeled and grooved, leafing after flowering. *Leaves* 8-18 in., elliptic-lanceolate, acuminate. *Scape* 12-18 in., slender; pedicel and ovary $1\frac{1}{2}$ in.; bracts $\frac{1}{2}$ -1 in., green; flowers $1\frac{1}{2}$ in. across; sepals ovate-lanceolate; petals oblong, acute; lip $1\frac{1}{2}$ in. long, base yellow edged with scarlet; spur shorter, villous; column very short, pubescent.—In many respects allied to *C. vestita*, with which it hybridizes.

33. *C. labrosa*, *Hook. f.*; habit, foliage and inflorescence of *C. rosea*, but sepals yellow without, purplish within, as are the petals, lip flabelliform from a cuneate base retuse crisped pale purple with darker purple spots at the base, and spur longer than the sepals. *Limatodes labrosa*, *Reichb. f. in Gard. Chron.* 1879, i. 202.

TENASSERIM; at Moulmein (*Hort. Veitch*).

I have seen only a portion of a raceme.

DOUBTFUL SPECIES AND SPECIES OF DOUBTFUL POSITION.

34. *C. gigantea*, *Hook. f.*; stem tall, leaves alternate distichous, scape basal very tall and stout, raceme long puberulous very many-fl., bracts short $\frac{1}{2}$ -amplexicaul rigid revolute, flowers coriaceous, sepals and petals linear-lanceolate falcate caudate-acuminate, lip very small fleshy sessile opposite the stigma of the pubescent column quadrate truncate apiculate puberulous, side lobes mere coriaceous auricles, spur obsolete.

PERAK; in dense jungles, *King's Collector, Wray*.

Stem 2 ft., as thick as the middle finger. *Leaves* 6-10 in., sessile, lanceolate, acuminate. *Scape* with raceme 3-4 ft., as thick as the stem; bracts very broad with subulate tips; pedicels very short; flowers 1 in. diam., pubescent, yellow spotted with crimson; sepals spreading, many-nerved; petals narrower; sides of lip decurrent on the short almost hispid column; anther hispid, 4-celled; pollinia 8, each group of 4 consists of 2 large subhemispheric placed face to face, and 2 very much smaller, all attached to one viscus.—A remarkable plant, black when dry.

C. CARINATA, *Lindl. Gen. & Sp. Orchid.* 183 (not taken up in *Fol. Orchid.*), is founded on Willdenow's *Limodorum carinatum*, and that again on Rheede's xii. t. 26, which is possibly *C. nutans*, L.

C. SULPHUREA and *C. TRICOLOR*, *Hort. Huegel*, in *Heyne Nomencl.* ii. 105, are names only.

38. *ARUNDINA*, *Blume*.

Terrestrial erect herbs with rigid terete sheathed simple stems, and narrow grassy distichous leaves. *Flowers* large, red, in terminal erect stiff simple or branched racemes or panicles. *Sepals* free, spreading, lanceolate, acuminate, flat, many-nerved. *Petals* broader, many-nerved. *Lip* large, broad, sessile on the base of the column and embracing it. *Column* long, slender, narrowly winged; foot 0. *Anther-cells* 2, pollinia 8 in compressed superposed pairs cohering by a viscus.—Species 6-8, Indian, Malayan and Chinese.

Sect. I. EUARUNDINA. *Raceme* simple or sparingly branched; bracts small, broadly ovate, acute, persistent. *Lip* very variable but always large, oblong, broad, subentire or with obscure side lobes, a small crisped terminal lobe and 2 or more lamellate nerves at the base.

1. **A. bambusifolia**, Lindl. in Wall. Cat. 3751; *Gen. & Sp. Orchid.* 125; in *Bot. Reg.* xxvii, Misc. 2; in *Journ. Linn. Soc.* iii. 22; leaves 8-12 by $\frac{3}{4}$ -1 in., raceme 6-12 in., sepals 1-1 $\frac{1}{2}$ in., petals orbicular-obovate apiculate, side lobes of lip short or 0, midlobe small 2-fid crisped, disk with 3 lamellate nerves. *Wight Ic.* t. 1661; *Griff. Notul.* iii. 329, 331; *Ic. Pl. Asiat.* t. 314; *Walp. Ann.* vi. 457. *Cymbidium bambusifolium*, *Rorb. Fl. Ind.* iii. 460. *Bletia graminifolia*, *Don Prodr.* 29. *Limodorum graminifolium*, *Ham. mss.*

TROPICAL HIMALAYA, from Nepal eastwards. ASSAM and the KHASIA MTS. to Munnipore and Chittagong. MALABAR, *fid. Wight*.—DISTRIB. Java.

Stem 5-7 ft., sometimes as thick as the thumb below. *Raceme* stout, simple or laxly paniced; bracts $\frac{1}{2}$ in., broad, coriaceous, subacute. *Lip* brighter red than the sepals. *Capsule* decurved, 2-2 $\frac{1}{2}$ in.—Griffith at p. 331 describes the petals and sepals as white, at p. 329 as flesh-cold. Lindley errs in describing the petals as lanceolate, and Wight in giving Ceylon as the locality for his drawing, which is from a specimen in his Herbarium marked "Assam, Griffith."

2. **A. densiflora**, Lindl. in *Bot. Reg.* xxviii. t. 38, Misc. 26; in *Journ. Linn. Soc.* iii. 23; leaves 6-10 by $\frac{1}{2}$ - $\frac{1}{2}$ in., raceme very short, flowers as in *bambusifolia*, but midlobe of lip very obscure. *Walp. Ann.* vi. 456. ? *A. speciosa*, *Blume Bijl.* 401, t. 73; *Lindl. in Journ. Linn. Soc.* l. c.

PERAK, SINGAPORE and MALACCA; on Mount Ophir, Maingay, &c. (*Kew Distrib.* 1635, *A. speciosa*).

A more slender plant than *A. bambusifolia*, with a shorter raceme; but I doubt its specific difference. Perhaps the *A. speciosa*, Bl., but the petals are not lanceolate.

3. **A. chinensis**, *Blume Bijl.* 502; stem 8-12 in., leaves 4-7 by $\frac{1}{4}$ - $\frac{1}{2}$ in. spreading and recurved, racemes 1-3 in. few-fl. simple, sepals $\frac{3}{4}$ -1 $\frac{1}{2}$ in., petals ovate-oblong, lip yellow in the middle. *Hook. & Arn. Bot. Beech. Voy.* 217; *Lindl. in Hook. Kew Journ. Bot.* vii. (1855) 34; *Benth. Fl. Hongk.* 355; *Walp. Ann.* vi. 457. *A. affinis*, *Griff. Notul.* iii. 330; *Ic. Pl. Asiat.* t. 351 A, f. 28 (anther); *Lindl. in Journ. Linn. Soc.* iii. 22; *Walp. l. c.*

SIKKIM HIMALAYA, on the outer hills, J. D. H. KHASIA HILLS; in grassy places, alt. 3-5000 ft., common, Griffith (*Kew Distrib.* 5195, 6796), &c.—DISTRIB. China.

Apparently identical with the Chinese plant, and distinguished from *A. bambusifolia* by the small size and yellow on the lip. Lindley says it has only 2 ragged lamellæ on the lip instead of the 5 of the former plant, but I find 5 thickened and lamellate nerves. The raceme is rarely 7-fl., the flowers extremely variable in size. Griffith doubts its specific difference, but if so, all the Indian species (except sect. *Dilochia*) should be united, in which I might concur.

4. **A. minor**, Lindl. *Gen. & Sp. Orchid.* 125; stem 8-12 in., leaves 2-5 by $\frac{1}{6}$ - $\frac{1}{4}$ in. erect strict, raceme long peduncled few-fl., sepals and petals as in *A. chinensis*, but smaller.

CEYLON; in the Central district, ascending to 1000 ft., not uncommon.

This differs from *A. chinensis* in the shorter suberect strict leaves that are acuminate or subacute with an apiculus and smaller flowers. *Capsule* 1-1 $\frac{1}{2}$ in.

5. **A. revoluta**, *Hook. f.*; leaves 4-7 by $\frac{1}{2}$ - $\frac{1}{4}$ in. recurved, margins strongly revolute, sepals and petals white, tips light red, lip yellow within, wings purple, tip blue.

PERAK; on rocks in streams, *Scortechini*, *Wray*, *King's Collector*.

Very distinct-looking; about the size of *A. minor*, but the leaves are longer, much narrower, and the capsule only $\frac{3}{4}$ -1 in. long.

Sect. II. DILOCHIA. *Raceme* or *panicle* branched. *Bracts* large, deciduous. *Anthers* 3.

6. **A. Wallichii**, *Reichb. f. Xen. Orchid.* ii. 13, t. 105, f. 13-15; leaves elliptic-lanceolate long-acuminate, branches of panicle few erect very stout, lip with 3 ridges, anthers 3. *Dilochia Wallichii*, *Lindl. Gen. & Sp. Orchid.* 38; *Wall. Cat.* 1952; *Blume Orchid. Archip. Ind.* t. 8 and t. 5 A.

SINGAPORE, *Wallich*.—DISTRIB. Borneo.

Stem 2 ft., pendulous. *Leaves* 4-6 by $1\frac{1}{2}$ -2 in., base contracted. *Panicle* branched from the base, branches 6-8 in.; bracts 1 in., oblong, cymbiform, acute; sepals and petals 1 in., linear-oblong, obtuse, dull yellow; lip oblong, white with a red disk. *Capsules* $\frac{2}{3}$ in. long, ellipsoid, beaked.

7. **A. Cantleyi**, *Hook. f. Ic. Plant. ined.*; leaves ovate or ovate-lanceolate long-acuminate, branches of decurved panicle many divaricate, lip with 5 crenate ridges.

PERAK; on Gunong Batu, alt. 4500-5400 ft., *Cantley*, *Wray*.

Stem as in *A. Wallichii*. *Leaves* 3 by 1 in., base rounded. *Panicle* very many-fl.; bracts $\frac{1}{2}$ - $\frac{1}{3}$ in., orbicular, subacute, saccate; flowers pale yellow pencilled with crimson; sepals $\frac{2}{3}$ in. long; lip cuneate with a flabelliform midlobe.—Bears a certain resemblance to *Eria Scortechinii*. There were, I think, 3 anthers, but they have fallen away.

The Addenda and Corrigenda to the *Orchideæ*, with a revision of the Key to the Genera, will be placed at the end of the Order in Vol. VI.

ADDITIONS AND CORRECTIONS, VOL. V.

P. 102. *MYRISTICA*.—Since the publication of the Indian species of this genus in 1886, a good many additional specimens have been received, including twelve species from Singapore, collected by the late Mr. Cantley. Most of them are known species, but the following two are such remarkable novelties, that though I am unable to refer them to their sections of the genus, I think it desirable to make them known.

M. PENDULINA, *Hook. f.*; branchlets very long and young leaves beneath and panicles finely rusty-tomentose, leaves 10–14 by 2–3 in. close-set subsessile pendulous linear acuminate, nerves 30–50 pairs, fem. panicles 3–4 in. very robust, flowers shortly stoutly pedicelled $\frac{1}{4}$ in. long ellipsoid glabrous shortly 2-fid, ovary ovoid glabrous, stigma terminal minute sessile.

SINGAPORE, *Cantley*.

A tree; branches spreading, 15 ft. long, as thick as the fore-finger at the base, slender towards the tip, clothed throughout with crowded leaves; bark black when dry, except at the tips. *Leaves* rather coriaceous, old glabrous beneath, base cupate or rounded, narrowed into a very short broad petiole. *Fem. fl.* thickly coriaceous, ebracteate.—This very remarkable species resembles in the leaf *M. sylvestris*, *Houtt.*, of Ternate, but the nerves are far more numerous.

M. SPHERULA, *Hook. f.*; branches slender furrowed, tips and leaf-nerves beneath and inflorescence and fruit very finely tawny-tomentose, leaves 3–5 by $\frac{3}{4}$ –1 $\frac{1}{4}$ in. petioled narrowly linear-oblong acuminate subsilvery glaucous beneath with 10–16 pairs of very slender nerves, female fl. shortly pedicelled racemose on short very stout rugosely scarred simple peduncles urceolate 3-fid, ovary broadly ovoid silky narrowed into a short style with a lacerate stigma, fruit small spherical.

MALACCA, *Cantley*.

A tree, 20 ft. high. *Leaves* thinly coriaceous, shining above, midrib and nerves beneath reddish, base acute; petiole slender, $\frac{1}{2}$ – $\frac{1}{4}$ in. *Flowering peduncles* numerous, axillary, and on the branches $\frac{3}{4}$ – $\frac{3}{2}$ in. long, $\frac{1}{4}$ in. diam., straight, closely scarred from the base to the tip (as if continuously growing and flowering at the tips). *Fem. fl.* $\frac{1}{6}$ in. long; pedicels as long. *Fruit* exactly globose, about $\frac{1}{4}$ in. diam., apiculate.—Native name, Chindarah Padi.

P. 136. *MACHILUS*.

The loan from Dr. King of the rich collection of *Machili* in the Herbarium of the Royal Gardens, Calcutta, enables me to define better many of the species of this very perplexing genus. It leaves, however, more than it accomplishes towards finally discriminating the Indian species.

* Fruit oblong or ellipsoid. Flower quite glabrous.

1. *M. ODORATISSIMA*, *Nees* in part (p. 139); branchlets and young leaves beneath glabrous or slightly silky, leaves 4–6 in. elliptic-lanceolate impressed punctate, nerves 7–13 pairs, panicles shorter than the leaves and flowers and filaments quite glabrous, fruit $\frac{1}{2}$ – $\frac{3}{4}$ in. long.

TEMPERATE HIMALAYA from Kashmir and Hazara eastwards, alt. 5–7000 ft., to Bhotan, ascending to 8000 ft. in Sikkim. KHASIA MTS., alt. 5–6000 ft. MARTABAN, alt. 3–7000 ft., *Kurz*.

Of Wallich's *Laurus odoratissima* (Cat. 2607), as described by *Nees* under *Machilus* (Plant. As. Rar. ii. 70), letter A, from Nepal is in bud only. The panicle and buds are silkily pubescent, and it is possibly a large-leaved form of *M. bomlycina*. B from Chercole in the Deyra Dhoun (Kumaon), with perfectly glabrous panicle and old flowers and oblong fruit, is what I believe Wallich intended for

odoratissima; it is very sweet-scented both in leaf and flower, and is the plant so called by Brandis and accepted by the Forest department. C, the *L. Champa*, Herb. Ham., from Rungpore and Patgong with globose small fruit, and D? from Goalpara, are all the cultivated *M. bombycina*, King, and E? from Silhet with a silky perianth and long glaucous leaves is probably *M. Kurzii*, King. F, said to be from Singapore, is unquestionably the same as B, and the habitat is almost certainly erroneous. Meissner's *M. odoratissima* is an even greater mixture than Nees', and not worth unravelling, the specimens described being almost uniformly without fruit. Loureiro's *L. indica*, cited by both the above authors, is probably *M. rimosa*, Kurz. Kurz's *M. indica* with oblong fruit and glabrous panicles is, no doubt, *M. odoratissima*, as is Brandis' plant of the latter name, and Strachey and Winterbottom's *Ocotea ligustrina*. Gamble's is a mixture of plants from the plains up to 8000 ft. Blume's *M. odoratissima* may be anything.

2. *M. PARVIFLORA*, Meissn. (p. 137); branchlets and young leaves glabrous or faintly silky, leaves linear-lanceolate or oblanceolate often large 6-10 in. quite glabrous and very glaucous blue beneath with 6-10 pairs of distant nerves, panicles and small flowers quite glabrous, filaments short broad, fruit $\frac{3}{4}$ in. long.

KHASIA, and Diphla Hills, in ASSAM, alt. 4000 ft., common.

** Fruit globose or nearly so. Flowers silky tomentose or pubescent in all but *M. Gammieana*.

† Young leaves villously pubescent or tomentose beneath.

3. *M. VILLOSA*, Hook. f. (p. 140); nerves of leaf 6-8 pairs very strong, panicle long-peduncled, flowers about $\frac{1}{2}$ in. diam., sepals short ovate obtuse, fruit young $\frac{1}{2}$ in. diam.

NEPAL, Wallich (in Herb. Hook.). SIKKIM HIMALAYA, ascending to 6000 ft. CARROW, KHASIA, and PATKOYE HILLS.

Nees' *Phæbe glaucescens* may be a mixture of this and *M. macrantha*. There is no corresponding Nepal specimen in Wallich's Herb. to that in Herb. Hook., which was received about 1822.

4. *M. EDULIS*, King (p. 138). I have nothing to add to the description.

†† Young leaves glabrous or finely silky beneath.

5. *M. GAMMIEANA*, King (p. 137), and *M. CLARKEANA*, King (p. 137), seem to be one species; the leaves attain 10 in., glaucous beneath with many faint nerves beneath; flowers quite glabrous; the filaments are glabrous or hairy. The flowering specimens with few-nerved leaves sent with the fruiting and referred to at the end of the description of *M. Gammieana*, were those of *Phæbe lanceolata*. The quite glabrous flowers distinguish this from *M. Duthiei*.

6. *M. LISTERI*, King (p. 138). Two plants were here mixed. The true *M. Listeri* (to the description of which I have nothing to add) has cuneately obovate leaves glaucous and puberulous beneath with 10-12 pairs of parallel nerves, a short (immature) hoary panicle, and fruit 1 in. diam.; young leaves unknown. The Narainpore specimens certainly belonged to *M. Gamblei*.

7. *M. GAMBLEI*, King *ms.*; shoots and young leaves beneath finely silky, leaves 3-6 in. obovate or oblanceolate quite glabrous beneath impressed punctate on both surfaces, nerves 8-10 pairs very slender, sepals silky on both surfaces, filaments glabrate, fruit globose $\frac{1}{4}$ - $\frac{1}{2}$ in. diam.

NEPAL, Wallich. SIKKIM HIMALAYA, ascending to 7000 ft. ASSAM and the DIPHLA HILLS.

The Assam specimens have more slender panicles, and more resemble *M. bombycina*, but the leaves are glabrous beneath.

8. *M. KURZII*, King *ms.*; shoots and young leaves glabrous, leaves 3-5 in. as in *M. Gamblei*, but more glaucous with 10-12 pairs of very indistinct nerves beneath, panicle subsilky tomentose, sepals linear-oblong silky on both surfaces, filaments nearly glabrous, fruit $\frac{1}{2}$ in. diam.

SIKKIM HIMALAYA, alt. 6-9000 ft. (a large tree), King, Kurz, Clarke, &c. ? UPPER BURMA, at Lamoom, Griffith.

9. *M. BOMBYCINA*, *King mss.*; altogether like *M. Gamblei*, but with the leaves more or less finely pubescent beneath and hairy along the midrib, fruit $\frac{1}{4}$ in. diam. *M. odoratissima*, *Wall. Cat.* 2607 D. *Laurus Chaupa*, and *L. bombycina*, *Herb. Ham.*

Cultivated in the ASSAM VALLEY and along the LOWER HIMALAYA, as far west as Nepal, for silkworm-feeding. The Soom-tree of Upper Assam (*Mann*). Perhaps a cultivated form of *M. Gamblei* or *Kurzii*, or all forms of one.

10. *M. DUTHIEI*, *King mss.*; branches and young leaves glabrous or very finely silky, leaves 5-10 in. oblanceolate or elliptic-lanceolate very coriaceous 12-20-nerved pale and glaucous beneath, petiole $\frac{1}{2}$ -1 in., flowers large $\frac{1}{2}$ in. diam., sepals linear-oblong finely silky, filaments glabrous, fruit globose $\frac{1}{2}$ in. diam. in often elongate drooping panicles with thickened pedicels.

WESTERN HIMALAYA; from Chauba, alt. 6000 ft., *Thomson*, to Kunawur, alt. 7000 ft.; Simla, 5000 ft., *Brandis*, *Madden*; Kumaon, alt. 2000 ft., *Strachey & Winterbottom*. ? SIKKIM, alt. 4-5000 ft., and KHASIA MTS., *J. D. H.*, &c. (without fl. or frt.).

11. *M. FRUTICOSA*, *Kurz* (p. 140); leaves (young not seen) thickly coriaceous glabrous, nerves 10-12 pairs very slender, petiole $\frac{1}{4}$ - $\frac{1}{2}$ in., panicle long-peduncled hoary, flowers small $\frac{1}{8}$ in. diam. hoary, filaments glabrous, "fruit pisiform, pedicel elongate thickened," *Kurz*.

TENASSERIM and MARTABAN, alt. 4000 ft., *Griffith*, *Helper*, &c.

12. *M. MACRANTHA*, *Nees* (p. 140); leaves glabrous, nerves 10-12 pairs, petiole 1-1 $\frac{1}{2}$ in., panicle long- or short-peduncled hoary, flowers small $\frac{1}{8}$ - $\frac{1}{4}$ in. diam., sepals tomentose, filaments villous, fruit $\frac{1}{4}$ - $\frac{3}{4}$ in. diam.

DECCAN PENINSULA; on the Ghats, ascending to 6000 ft. from the Concan southwards.

The specific name is inappropriate. In *Herb. Calcutta* are specimens of what may be a different species from the Anamallay Hills in Travancore, with smaller more obovate shorter-petioled very coriaceous leaves and short panicles.

Species of which the fruit is unknown.

M. BOOTANICA, *Meissn.* (p. 138). I have nothing to add to the description of this very distinct plant.

M. ? EBASYANA, *Meissn.* (p. 137). This also is a very distinct plant, with leaves sometimes 11 in. long, of a thin texture, very blue beneath, and with a rusty-brown pubescence. (It may not be a *Machilus*.)

M. SERICEA, *Blume* (p. 139). The materials in the Calcutta Herbarium do not help to clear up this species, which had, perhaps, better be suppressed.

Under *L. sericea*, No. 2606 (in *Herb. Hook.* only) are specimens with white bark on the branches, and I collected apparently the same in Sikkim; the young leaves are perfectly glabrous, as are the branches of the panicle, leaves 3-5 in. elliptic, deeply punctate, flowers $\frac{1}{2}$ in. diam., sepals oblong, silky on both surfaces, filaments glabrous. It approaches *M. Gammieana*, which has sometimes white bark, but the flowers are much smaller.

M. KINGII, *Hook. f.* A small tree common in the Khasia at 4-5000 ft. elevation with very small leaf-buds, glabrous shoots and young leaves, leaves small 3-4 in. elliptic-lanceolate or oblanceolate coriaceous pale and closely punctate above with a deeply depressed costa, glaucous beneath with 8-10 pairs of very slender diverging nerves, petiole $\frac{1}{2}$ -1 in., panicle slender sparsely puberulous, flowers $\frac{1}{2}$ in. diam., sepals appressed-pubescent on both surfaces, filaments nearly glabrous.

M. RIMOSA, *Blume Mus. Bot. i.* 330? (*DC. Prodr. xv. i.* 42). Specimens of one or more species closely resembling this, but having neither mature flowers nor fruit, are in the Kew Herbarium from Burma, *Griffith*, and Chela in the Khasia Mts., *Clarke*. The branches are stout and very young leaves glabrous, leaves

5-7 in. broad and usually large, elliptic or obovate with few (8-10) strong arched nerves beneath. Meissner (in DC. l. c.) refers to this species a very much smaller-leaved plant of Lobb's from Moulmein. The identification of any of these with the Javanese *M. rimosa*, the fruit of which is undescribed, is mere guess-work. Meissner's *rimosa* from Moulmein, Lobb, is probably *M. fruticosa*. Javan specimens in Herb. Hook. are named *M. Madang* and *M. odoratissima* ϵ . *latifolia* by Miquel, who unites *rimosa* with *odoratissima*.

M. PUBESCENS, Blume Mus. Bot. i. 330; Meissn. in DC. Prodr. xv. i. 40. This is unrecognizable by description.

M. sp.?, Penang, Curtis, No. 942, is a small plant with glabrous young leaves, the old leaves 3-4 in. elliptic-lanceolate above finely reticulate beneath glaucous, nerves 10-12 pairs very slender, petiole very slender, panicle slender nearly glabrous, few-fl., flowers $\frac{1}{2}$ in. diam., sepals short nearly glabrous as are the filaments.

P. 116. After 5. *Endiandra* insert—

Perfect stamens 6; anthers 2-celled . . 5/1. MICROPORA.

P. 127. Before 6. *Syndiclis* insert—

5/1. MICROPORA, Hook. f.

A tree; branches slender. *Leaves* elliptic-oblong, acute. *Flowers* small, hermaphrodite, in slender axillary few-fl. racemes or panicles. *Perianth* very short, lobes 6 orbicular. *Stamens* 6, exserted, eglandular; anthers thick, sessile, subquadrate, 2-celled, tomentose, cells opening by minute pores; staminodes very short, thick, tomentose, opposite the stamens. *Ovary* ovoid, sessile, quite smooth, narrowed into a very short style; stigma minute.

M. CURTISII, Hook. f. Ic. Plant. t. 1547. Hexapora Curtisii, p. 189 of this volume.

PENANG; close to the Chalet, elev. 500 ft., Curtis.

Branches and racemes puberulous. *Leaves* 3-5 by $1\frac{1}{2}$ -2 in., young membranous, old coriaceous, beautifully reticulate, petiole $\frac{1}{2}$ - $\frac{3}{4}$ in. *Racemes* 1-1 $\frac{1}{2}$ in. long; flowers globose, about $\frac{1}{10}$ in. broad.

P. 182. In remarks under LINDERA, after the word Indian erase 2-celled, and insert after plants—with 2-celled anthers.

P. 185. Under *L. melastomacea* insert the following habitats:—BHOTAN, Griffith (Kew Distrib. 4319). KHASIA Mts., alt. 3-4000 ft. MUNNIPORE, alt. 4000 ft., Watt.

P. 189. In the note respecting the genus near *Endiandra* for *Hexapora* read MICROPORA, and for three anthers read six anthers.

P. 193. *D. CANNABINA*. Madden describes two forms, a white and a purple-flowered, in the Western Himalaya, inhabiting different elevations.

P. 199. To habitats of *Gyrinops Walla*, add—Tinnevely Ghats, Beddome.

P. 237. *BALANOPHORA INDICA*. In a paper on this genus by W. C. Fawcett, F.L.S., in the Linnean Transactions, Ser. 2, ii. 233, that author points out that Wallich's *B. typhina* includes *B. indica*, Wall., and *B. polyandra*, Griff.; also that *B. gigantea*, Wall., differs from *B. indica* in the rhizome having no pustules, but being tessellated rather than warted; it may, however, he observes, be a variety of *indica*.

P. 238. *B. THWAITESII*. Dr. Trimen, in Journ. Linn. Soc. xxii. 330, inclines to regard this as a well-marked var. of *B. indica*. Its chief characters which he gives are, its large size, bright yellow colour, larger stellate pustules, its longer prominent crenate flower bracts in the male, ovoid or pyriform exserted fem. heads and shortly stalked fem. fl. inserted on the pedicels and very rarely attached to the bases of the spadixes.

P. 638. Under 3. P. EUPHRATICA, for *Balsamidora* read *Balsumifera*.

P. 640. EPHEDRA. As this sheet was passing through the press, I received a copy of Dr. Stapf's elaborate "Arten der Gattung Ephedra," published in the 56th volume of the "Denkschrift der Mathem.-Naturwissenschaft. Classe der Kais. Akad. der Wissenschaft" (Wien. 1899). The conspectus of his views which I here give will enable Indian botanists to estimate the value of the characters adopted for the discrimination of the species of this most puzzling genus. With the exception of the few references between brackets (), the following is a translation from Stapf's memoir.

Sect. PSEUDOBACCATÆ. Bracts not winged, margins sometimes membranous.

Tribe SCANDENIES. Scandent or subscandent shrubs (or prostrate in *E. foliata*).

1. *E. FOLIATA* (Boiss.), Stapf l. c. 49, t. 2, and 10, f. 1-11; male spikes usually clustered rarely subsolitary, peduncles very long and unequal, anthers 3-4, fem. cones 2-fld.

Var. *α. ciliata*; branchlets dense pseudovercillate or fascicled slender. *Aitchison Fl. Kurum Valley*, 187. *E. foliata*, *Aitch. Bot. Affghan. Bound. Comm.* 112. *E. Alte*, *Brand. For. Fl.* 501, t. 69. *E. peduncularis*, *Boiss. Fl. Orient.* v. 717. *E. asparagoides*, *Griff. Notul.* ii. 340. (*E. alata* (? *Alte*), *Edgew. in Journ. Linn. Soc.* vi. 194.)—Western Panjab and Scinde (Rajpootana).—*Distrib.* Turkestan and westwards to Syria.

Tribe PACHYCLADÆ. Shrubs. Branchlets very rigid, stout, strict. Male spikes densely crowded, sessile. Tubule of ovule (and seed) twisted.

2. *E. INTERMEDIA* (Schrenk & Mey.), Stapf l. c. 61, t. 2, and 15, f. 1-9; anthers densely crowded usually sessile, bracts of fem. cone connate beyond the middle, seeds very shortly exerted plano-convex. *E. pachyclada*, *Boiss. Fl. Orient.* v. 713.

Var. *glauca*; lowly, rarely exceeding 20 in., erect or ascending from a short prostrate base, glaucous, rarely subglaucous, branchlets numerous elongate and naked above often densely subparallelly approximate, clusters of male spikes often large.—Kashmir.—*Distrib.* from Mougolia to Kashmir and Turkestan.

Var. *tibetica*; a low shrub, erect or prostrate below with sometimes long lax branchlets, internodes elongate more slender rarely short thick, bark scabrous or scaberulous glaucous sometime bluish.—Western Tibet.—*Distrib.* Afghanistan, Khoten.

Tribe LEPTOCLADÆ. Low or middle-sized shrubs, branchlets slender rigidulous, rarely subflexuous. Male spikes variously disposed. Tubule of ovule (and seed) straight or twisted.—In *E. Gerardiana* specimens occur with thick branches.

3. *E. GERARDIANA* (Wall.), Stapf l. c. 75, t. 3, and 18, f. 1-9, and 31, f. 1; a low shrub, branches short, terminal buds short usually constricted at the base, male spikes solitary or few sessile crowded, fem. cones 1-2 fld., innermost bracts scarcely connate to the middle, seeds always, sometimes much, exerted.

Var. *α. Wallichii*; branches appressed to the ground, branchlets short slender curved ascending, terminal buds much constricted at the base, male spikes solitary small. *Wall. Cat.* 6048; *Royle Ill.* 40, 348. *E. vulgaris*, *Aitch. Fl. Kurum Vall.* 186. *Brandis For. Fl.* 501.—Western Tibet, Kunawur, Garwhal, Kumaon.—*Distrib.* Central Tibet at Talatschu, Karakoram.

Var. *β. saxatilis*; taller than var. *Wallichii*, bark softer when dry more distinctly striate and usually blackening, branchlets usually arcuately

ascending rarely erect. *E. vulgaris*, *Brand. For. Fl.* 501.—Garwhal and Kumaon.

Var. *γ. sikkimensis*; branchlets 12 in. high usually erect robust but softish, furrowed when dry and brownish, sheaths of leaves elongate, male spikes larger. *E. vulgaris*, *Brandis l.c.*, the Sikkim plant. (*E. macrocephala*, *Bertolon. Misc.* xxiii. 17, t. 3.)—Sikkim.

4. *E. NEBRODENSIS* (Tineo), *Stapf l.c.* 77, t. 3, xx. f. 1-7; an erect shrub, branches slender rigid usually strict, male spikes few or solitary crowded sessile, fem. cones 1-fl., innermost bracts connate for one-third of their length.

Var. *procera*; branchlets perfectly smooth, semi-mature fem. cones narrower longer, seeds elongate-ovate.—Kuhlwar, Lahul, and Western Tibet.—*Distrib.* Afghanistan and eastward to Greece.

(With regard to *E. vulgaris*, A. Rich., to which I have referred *E. Gerardiana* and *nebrodensis* var. *procera*, Stapf describes it as *E. distachya*, Linn. It may be useful to give Stapf's diagnosis of it, so as to enable Indian botanists to compare the three, premising that he places it in tribe *Leptocladae*.

E. DISTACHYA (Linn.), *Stapf l.c.* 66, t. 2, xvii. f. 1-5; low or very low shrub, erect or ascending from a long or short prostrate base, male spikes solitary clustered or subracemously panicled, bracts of the fem. cone shorter than the two seeds, tubule of ovule (and seed) erect.)

P. 667. The Key to the genera of Orchidæ having been compiled from the Genera Plantarum before the analysis of the Indian species was far advanced, requires revision, the results of which will be given at the end of the Order in Vol. VI.

INDEX OF GENERA, SPECIES AND SYNONYMS.

The Synonyms and Species incidentally mentioned are printed in italics.

ERRATA. (See also p. 859.)

P. 142. Under *P. pallida*, for *P. glaucescens* & *fuscans* read *P. glaucescens*, var. *fulvescens*.

P. 154. For *A. leiantha* read *A. leiophylla*, Hook. f., and for *Litsæa leiantha*, Kurz, read *L. leiophylla*, Kurz.

P. 618. For *Q. Jenkinsiana* read *Q. Jenkinsii*.

P. 759 Under 3 *B. leptanthum*, for 3-nerved sepals read 1-nerved petals.

P. 784. *Chrysoglossum maculatum*. This I subsequently referred to *Tainia*, but under that genus I inadvertently omitted to refer to its description (p. 821).

P. 821. Under *T. maculata*, enter as a synonym *Chrysoglossum maculatum*, p. 784.

FLORA OF BRITISH INDIA.

ORDER CXLVIII. ORCHIDÆE.

Continued from Vol. v. p. 858.

TRIBE II. **Vandæe**. (See Vol. v. p. 671.)

39. **EULOPHIA**, Br.

Terrestrial quite glabrous herbs; rhizome tuberous, rarely pseudo-bulbous. *Leaves* appearing with or after the flowers, plaited. *Scape* lateral, flowers racemose, rarely paniced. *Sepals* and *petals* free, spreading. *Lip* erect from the base or foot of the column; base saccate or with a mentum or short spur; lateral lobes erect, embracing the column, rarely 0; midlobe spreading or recurved; disk crested, softly spinous or lamellate. *Column* short or long, top oblique, entire; anther terminal, 2-celled; pollinia 2 or 4, sessile or attached by a short strap to a discoid gland of the rostellum.—Species about 50, tropical, chiefly Asiatic.

I follow Blume, and others, in removing *Cyrtopera* from *Cyrtopodium* (where it is placed in Gen. Plant.), and including it as a section under *Eulophia*, there being a direct passage from the species with, to those without, a foot to the column. In sect. *Cyrtopera* the lateral sepals are inserted either on the foot of the column, leaving the spur or sac of the lip free, or their insertion extends along the spur, which then is technically a mentum. The perianth of *Eulophia* is undistinguishable from that of *Dipodium*, *Geodorum*, *Plocoglottis*, and *Tainia*, of which the two first might but for habit be united with it; the two latter differ in having creeping rhizomes, usually solitary leaves, and more than 2 pollinia. *Chrysoglossum* resembles a *Eulophia* with the pollinia free from the rostellum.

SECT. I. **Eulophia** PROPER. *Column* not produced into a foot.

* Leaves and flowers coetaneous, or nearly so.

† Pseudobulb very large, epigeal, green. Leaves very narrow. Scape often branched.

1. **E. virens**, Brown in Bot. Reg. sub t. 573 (*Eulophus*); leaves grass-like, bracts very small ovate acute, sepals linear-oblong subacute or obtuse, petals elliptic obtuse, lip obovate-oblong, side lobes small, disk with 5-crested nerves. Lindl. Gen. & Sp. Orchid. 182; in Journ. Linn. Soc. iii. 24; Wight Ic. t. 913; Bot. Mag. t. 5579; Walp. Ann. vi. 647. *E. carinata*, Lindl. Gen. & Sp. Orchid. 183. *Aerobium carinatum*, Spreng. Syst. Veg. iii. 718. *Serapias epidendrea*, Retz Obs. vi. 65. *Limodorum virens*, Swartz in Nov. Act. Upsal. vi. 79; Roxb. Cor. Pl. i. t. 38; Fl. Ind. iii. 467. *L. epidendroides*, Willd. Sp. Pl. iv. 124.—Rheede Hort. Mal. xii. t. 26, and p. 25.

BENGAL and the DECCAN PENINSULA; in dry ground, Roxburgh, &c. CEYLON, in the Central Province, Walker, &c.

VOL. VI.

B

D. H. HILL LIBRARY
North Carolina State College

Pseudobulb large, conico-obpyriform. *Leaves* many, 6-10 by $\frac{3}{8}$ in., midrib stout. *Scape* 1-3 ft.; sepals $\frac{2}{3}$ -1 in., and petals green with reddish nerves; lip as long as the sepals, white with red crested nerves; spur short, subcylindric or conical.—Rheede's xii. t. 26 is, I think, this; his t. 25 may be *E. graminea*.

2. *E. graminea*, *Lindl. in Wall. Cat.* 7372; *Gen. & Sp. Orchid.* 182; *in Journ. Linn. Soc.* iii. 23; leaves grass-like, bracts small lanceolate, sepals lanceolate acuminate and elliptic-lanceolate acute petals tessellate, lip obovate-oblong, side lobes small, disk with 3-5 lamellate or crested nerves which are fimbriate on the rounded midlobe. *E. inconspicua*, *Griff. Notul.* 349; *lc. Pl. Asiat.* t. 326; *Lindl. in Journ. Linn. Soc.* iii. 25.

ASSAM, *Mann.* BENGAL, *J. D. H., Clarke.* TENASSERIM, *Parish.* NICOBAR ISLANDS, *Kurz.* SINGAPORE, *Wallich.* MALACCA, *Maingay.* TRAVANCORE, *Wight.* CEYLON, at Damballa, *Trimen.*

Habit of *E. virens* and colour of flower, but leaves usually shorter, flowers much smaller, and spur cylindric with often a clavate tip.—Cuming's specimens No. 2059 are marked as from Malacca in some collections, from Bohol Island (Philippines) in others.

†† Roots tuberous, hypogæal. Leaves elliptic-lanceolate. Scape unbranched.

§ *Lip longer than broad, side lobes short or 0.*

3. *E. ochreatea*, *Lindl. in Journ. Linn. Soc.* iii. 24; leaves elliptic acuminate, scape with broad loose ochreate sheaths, bracts lanceolate equalling the ovary, sepals linear-oblong, petals broadly elliptic acute, lip broadly ovate entire, tip rounded, nerves all fimbriate. *Dalz. & Gibs. Bomb. Fl.* 265.

The CONCAN and CANARA, *Law, Dalzell, &c.*

Stem stout. *Leaves* 3-5, 4-10 in., many-nerved, sessile. *Scape* 10-12 in., very stout below; raceme many- and rather dense-fl., bracts $\frac{1}{2}$ -1 in.; sepals $\frac{2}{3}$ in. long; spur a small sac.

4. *E. herbacea*, *Lindl. Gen. & Sp. Orchid.* 182; *in Journ. Linn. Soc.* iii. 24; bracts very long, flowers large, sepals linear-lanceolate acuminate, petals elliptic or lanceolate obtuse or acute very many-nerved, lip obovate-oblong, side lobes small rounded, midlobe ovate-oblong, disk with many fimbriate nerves. *Dalz. & Gibs. Bomb. Fl.* 265. *E. brachypetala*, *Lindl. in Journ. Linn. Soc. l. c.* *E. albitoria*, *Edgew. mss.* *Limodorum bicolor*, *Roxb. Fl. Ind.* iii. 469.

WESTERN HIMALAYA; Garwhal, alt. 4-7000 ft., *Roule, Falconer, Edgeworth, &c.* BENGAL, *Roxburgh*; at Rungpore, *Clarke.* CONCAN, *Dalz. & Gibs. l. c.*

Stem 4-6 in., rather slender, sheathed. *Leaves* 6-8 in., linear-lanceolate, variable in breadth, many-nerved. *Scape* 2-3 ft., stout; sheaths large, acuminate; raceme short, 8-10-fl.; bracts $1\frac{1}{2}$ -2 in.; pedicel with ovary $\frac{1}{2}$ -1 in.; sepals $1\frac{1}{2}$ in., green; petals very variable, white, nerves purple; lip white, nerves yellow; spur very short, obtuse.—The flowers seem to be often produced before the leaves. *Lindley* gives Ceylon, Macrae, as a habitat, probably by the same error as affects *E. explanata*.

5. *E. lachnocheila*, *Hook. f.*; scape stout, raceme lax-fl., bracts equalling or exceeding the ovary subspathaceous, sepals lanceolate acuminate and shorter elliptic petals many-nerved, lip narrow pubescent, side lobes short rounded, midlobe obovate-oblong retuse, margin waved, disk densely softly spiny.

UPPER BURMA; at Maypongo, *Herb. Hort. Calcutt.*

Tuber globose. *Stem* 4-6 in. *Leaves* 2, linear-lanceolate, acuminate. *Scape* with the raceme 18 in.; sheaths 2, acuminate; raceme 6-8-fld.; bracts $\frac{2}{3}$ -1 in., membranous, linear-lanceolate, subspathaceous; flowers 1 in. diam.; lateral sepals inserted at the base of the column; lip shorter than the sepals; hypochile obovate, as long as the rather narrower epichile; spur short, cylindrical; column rather long.

6. ***E. bracteosa***, *Lindl. in Wall. Cat.* 7366; *Gen. & Sp. Orchid.* 180; *in Journ. Linn. Soc.* iii. 23; bracts very long, sepals oblong, tip rounded, petals broadly obovate very many-nerved, lip narrowly obovate-oblong, obscurely 3-lobed, disk with 5-crenulate veins. *E. grandiflora*, *Lindl. Gen. & Sp. Orchid.* 181.

KHASIA HILLS; on the north slopes, alt. 3-4000 ft., *J. D. H. & T. T. CHITTAGONG, Wallich.* TENASSERIM, alt. 3500 ft., *Parish.*

Stem 4-6 in., sheathed. *Leaves* 1-3, 10-18 in., linear-lanceolate, petioled, 3-nerved. *Scape* stout, shorter than the leaves, clothed with long sheaths; raceme short, few-fld.; flowers fleshy; bracts 1-1½ in.; sepals $\frac{2}{3}$ in., yellow; lip white or lilac, streaked; spur short, obtuse. *Capsule* 1 in.—Lindley's habitat of Ceylon for *grandiflora* is no doubt an error.

7. ***E. elata***, *Hook. f.*; bracts equalling the ovaries, sepals falcate lanceolate acuminate 5-nerved, petals elliptic-lanceolate obtuse strongly 5-nerved, lip narrowly ovate-oblong obtuse entire, disk with 3 slender moniliform nerves.

PERAK, *Scortechini*, 2023.

Leaves 12-14 in., petioled, elongate, linear-lanceolate. *Scape* 3½ ft., very stout below, sheaths appressed; raceme elongate, lax-fld.; bracts $\frac{1}{3}$ -½ in.; sepals as long, fleshy; lip equalling the sepals; spur a small sac; column short, stout, hooded; young fruit 2 in., deflexed.

8. ***E. explanata***, *Lindl. Gen. & Sp. Orchid.* 180; bracts shorter than the ovary, sepals oblong-ovate subacute and broader elliptic petals 5-nerved, lip subpanduriform, base saccate with spreading nerves, disk with two thick crenate lamellæ, midrib greatly thickened and caruncled towards the truncate emarginate tip. *Dipodium scariosum*, *Herb. Ham.*

NEPAL; at Maghada, in the Morung, *Hamilton.* NORTH-WEST INDIA (*Ic. Falconer*).

Leaves very young at the flowering time, surrounded at the base, along with 1 or 2 scapes, with short broad $\frac{1}{2}$ -1 in. long sheaths. *Scape* 4-8 in., rather stout, 10-12-fld.; bracts $\frac{1}{3}$ -½ in.; pedicels with ovary $\frac{2}{3}$ in.; perianth yellow and purplish, spreading, $\frac{3}{4}$ -¾ in. diam.; lip sessile, base adnate to the lateral sepals; sac or spur broadly conical, obtuse; column very short.—An anomalous species. Lindley's specimens being counterparts of Hamilton's, his Ceylon habitat is doubtless an error.

§§ *Lip broader than long, side lobes short or 0.*

9. ***E. obtusa***, *Hook. f.*; bracts equalling the ovaries, sepals oblong-lanceolate acute 7-nerved and broadly elliptic obovate obtuse many-nerved petals tessellate, lip clawed 3-lobed, side lobes rounded, midlobe much longer oblong, disk with 2 lobed calli at the mouth of the spur and 3-5 thickened nerves ending in calli within the apex, claw with a reniform callus on each side. *Cyrtopera obtusa*, *Lindl. Gen. & Sp. Orchid.* 190.

NORTH-WEST INDIA; on the banks of the Tonse river, *Royle.*

Leaves 12 in., narrowly ensiform. *Scape* very tall; raceme elongate, lax-fld.; bracts $\frac{1}{3}$ -½ in., ovate-lanceolate, acuminate; sepals $\frac{2}{3}$ in.; petals rather shorter, but

much broader; lip as long as the sepals; spur conic, acute, curved, placed between the lateral lobes; column short, stout.—Placed by Lindley in *Cyrtopera*, but there is no foot to the column; he also errs in describing the sepals and bracts as obtuse.

10. ***E. pratensis***, *Lindl. in Journ. Linn. Soc.* iii. 25; bracts shorter than the ovary, sepals oblong obtuse 5-nerved, petals subsimilar, lip sessile broader than long, side lobes large oblong rounded, midlobe small semi-circular, disk with three crenate nerves ending in crenate calli on the midlobe. *Dalz. & Gibs. Bomb. Fl.* 265. *E. ramentacea*, *Wight Ic.* t. 1666 (*not of Lindl.*).

The DECCAN PENINSULA; in pastures, from the Concan southwards.

Leaves few, 10–12 in., long-petioled, narrowly lanceolate, strongly 3-nerved. *Scape* 1–3 ft.; sheaths acute, appressed; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., ovate-lanceolate; sepals $\frac{3}{4}$ in., fleshy; spur conical, acute. *Capsule* $1\frac{1}{2}$ in., elliptic, turgid.—The broad lip is like that of *E. macrostachya*. Lindley and the Bombay Flora err in describing this species as leafless when flowering.

11. ***E. macrostachya***, *Lindl. Gen. & Sp. Orchid.* 183; in *Bot. Reg.* t. 1972; bracts lanceolate, sepals lanceolate acute, petals rather broader, lip broader than long, side lobes short obtuse, midlobe revolute rounded, disk 2-lamellate at the base. *Bot. Reg.* t. 1972; *Bot. Mag.* t. 6246; *Wight Ic.* t. 1667–8; *Walp. Ann.* vi. 646.

TRAVANCORE and NILGHIRI HILLS, *Wight*. CEYLON, in the Central Province, ascending to 4000 ft., *Thwaites*, &c.

Pseudobulb 2–6 in., fusiform. *Leaves* 2–3, 6–10 in., petioled, elliptic-lanceolate, 3-nerved. *Scape* stout and raceme together 2–3 ft.; sheaths appressed, obtuse; bracts caducous; sepals and petals $\frac{1}{2}$ in., green; lip golden yellow with red stripes; spur a 2-lobed green sac. *Capsule* 2 in.

12. ***E. Mannii***, *Hook. f. Ic. Plant. ined.*; scape tall, raceme many-fld., bracts shorter than the ovary, sepals oblong-lanceolate acute many-nerved, petals broader elliptic many-nerved, lip rhomboidly ovate obtuse obscurely lobed, disk with branching crested nerves. *Cyrtopera Mannii*, *Reichb. f. in Flora* 1872, 274.

UPPER ASSAM, *Mann*.

Leaves 12 by $\frac{1}{2}$ in., narrowly linear-lanceolate. *Scape* with raceme 3 ft.; sheaths appressed, acute; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate-lanceolate; sepals $\frac{3}{4}$ in. long, lip shorter; spur conical; column short, clavate.

** Flowers appearing long before the leaves. (I have not seen the leaves of any species of this subdivision.)

13. ***E. campestris***, *Wall. Cat.* 7617; bracts variable, raceme many-fld., sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. linear-lanceolate acute 5–7-nerved, petals oblanceolate 3–5-nerved, lip cuneate-obovate or oblong, side lobes short, midlobe orbicular quadrate or oblong crenulate, disk with 3 central nerves lamellate at the base and tubercled or spinulose on the midlobe. *Lindl. Gen. & Sp. Orchid.* 185; in *Journ. Linn. Soc.* iii. 24 (*excl. syn. Wight*); *Walp. Ann.* vi. 647. *E. ramentacea & rupestris*, *Lindl. in Wall. Cat.* 7367, 7368; *Gen. & Sp. Orchid.* 185; in *Journ. Linn. Soc.* iii. 25. *E. hemileuca*, *Lindl. in Journ. Linn. Soc.* iii. 25. *Limodorum ramentaceum*, *Roxb. Hort. Beng.* 63; *Fl. Ind.* iii. 467. *L. dubium*, *Ham. mss.* *Bletia Dabia*, *Don Prodr.* 30. *Dipodium ramentaceum*, *Herb. Ham.*

PLAINS OF INDIA; from the Panjab to Oudh, Bengal, Chittagong, and the Deccan.—DISTRIB. Afghanistan.

Scape 6–18 in., stout or slender from a deformed tuber; sheaths subappressed, acute; flowers many, subsecund; sepals slightly attached to the base of the lip, variable in breadth, acute or acuminate, yellow or green striped with pink; petals narrower; lip as long as the sepals, side lobes rounded or subacute, midlobe usually purple; spur conical, subclavate or subacute; column rather slender. *Capsule* $\frac{3}{4}$ in., ellipsoid.—The lip of *E. hemileuca* is rather tubercled than spinulose.

14. *E. stenopetala*, Lindl. in *Journ. Linn. Soc.* iii. 26; scape-sheaths loose, bracts longer than the ovaries, raceme few-fl., sepals $\frac{1}{2}$ in. linear-oblong 5-nerved, petals lanceolate acuminate 3-nerved, lip broadly cuneate, side lobes rounded much larger than the suborbicular crisped midlobe, disk with 3 nerves tubercled between the side lobes and on the midlobe.

BHOTAN HIMALAYA; dry hills at Punaka, Griffith.

Scape 12–18 in., slender; sheaths obtuse; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in.; lip as long as the sepals, spur clavellate.—Specimens indifferent. Very near *E. campestris*, but the lip is much broader and side lobes more spreading.

15. *E. decipiens*, Griff. in *Journ. As. Soc. Beng.* xlvii. 155, t. 13, f. 8–12; flowers secund, bracts minute, sepals and petals $\frac{1}{2}$ in. linear hardly falcate acute 5-nerved, lip obovate concave 3-lobed above the middle, midlobe much the largest, margin crisped, disk 5-nerved at the base, 10–13-nerved in the middle of which 4–5 form fleshy fibres on the midlobe, spur short slender saccate.

NICOBAR ISLANDS; at Kamorta, Kurz.

Scape 2–3 ft.; root tuberous; sheaths small, lanceolate. *Leaves* not seen. *Raceme* 3–4 in.; pedicel with ovary $\frac{1}{4}$ – $\frac{1}{2}$ in.; sepals and petals white; spur $\frac{1}{2}$ in.—“Closely resembles *Pachystoma senile*, but pollinia of *Eulophia*.” I have seen no specimens.

16. *E. densiflora*, Lindl. in *Journ. Linn. Soc.* iii. 25; scape robust, bracts shorter than the ovaries, sepals 1–1 $\frac{1}{2}$ in. narrowly oblanceolate acuminate, petals narrower, lip obovate-oblong, side lobes small rounded, midlobe orbicular, disk with 3 lamelliform nerves which are crenate or interrupted from the middle to near the apex, spur long slender.

SIKKIM HIMALAYA; at the foot of the hills, J. D. H. BHOTAN, Griffith.

Scape 1–3 ft., from a depressed tuber; lower sheaths obtuse, upper acuminate; raceme many-fl.; flowers secund, deflexed, very narrow; column short.—The long narrow flowers are very characteristic of this species.

17. *E. burmanica*, Hook. f.; scape robust, sheaths short loose, raceme many- and dense-fl., bracts filiform equalling the ovary, sepals $\frac{1}{2}$ in. oblong obtuse many-nerved, petals narrower 3-nerved, lip cuneately obovate, side lobes short rounded, midlobe small ovate, disk with 2 carunculate nerves.

UPPER BURMA; Bhamo, Griffith.

Tuber or base of scape oblong. *Scape* 14 in.; sheaths 1 in.; raceme 4 in.; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., almost capillary, reflexed; pedicel with ovary as long; spur conical; column short; pollinia globose.—A remarkable species, of which there is but one very bad specimen, with twisted scape; it is possibly near *E. macrobulbon*.

Sect. II. **Cyrtopera.** Column produced into a foot.

* *Lateral sepals inserted on the spur of the lip* (see also *C. explanata*).

18. *E. nuda*, Lindl. in *Wall. Cat.* 7371; *Gen. & Sp. Orchid.* 180; tall, raceme elongate many-fl., bracts various, flowers large green

or purple, sepals linear-oblong acute, petals shorter elliptic-oblong many-nerved, lip obovate-oblong obtuse, side lobes obscure, midlobe rounded or retuse crisped, disk crested with many crenulate or tubercled nerves. *E. bicolor*, *Dalz. in Hook. Kew Journ. Bot.* iii. (1857) 343; *Dalz. & Gibs. Bomb. Fl.* 264; *Walp. Ann.* vi. 647. *Cyrtopera fusca*, *Wight Ic.* t. 1690; *Lindl. in Journ. Linn. Soc.* iii. 31; *Thwaites Enum.* 429; *Walp. l. c.* 668. *C. plicata*, *Lindl. in Wall. Cat.* 7362; *Gen. & Sp. Orchid.* 190. *C. nuda*, *Reichb. f. in Flora* 1872, 274. *C. Gardneri*, *Thwaites Enum.* 302. *C. mysorensis*, *Lindl. in Journ. Linn. Soc.* iii. 32. *C. laxiflora*, *Gardn. mss.* *Dipodium Roniayte & plicatum*, *Herb. Ham.*—? *Rheede Hort. Malab.* xii. t. 26.

TROPICAL HIMALAYA, from Nepal eastwards, ASSAM, the Khasia Hills, MUNNIPORE, PEGU and TENASSERIM. UPPER BURMA (*Herb. Hort. Calcut.*). THE DECCAN PENINSULA; from the Concan southwards. CEYLON; in the Central Province.

Tuber large. *Leaves* 10–14 in., elliptic-lanceolate, very variable in breadth. *Scape* 1–3 ft., stout; sheaths appressed; bracts rarely equalling the ovary; sepals 1 in.; mentum rounded or conical; lip shorter than the sepals. *Capsule* $1\frac{1}{2}$ in., fusiform.—There may be more than one species here, so great are the differences in colour of the flower, from a pale green to a dull purple. There is in *Herb. Wight* a very fleshy-flowered species or variety (*C. Brunonian*, *Wight mss.*) from the Kaitea Falls (Nilghiris), with a root as large as the fist, the lip with a short horn and a linear-oblong pointed shaggy disk; its sepals are green and petals and lip white.

19. *E. squalida*, *Lindl. in Bot. Reg.* 1841, *Misc.* 77; raceme elongate many-fld., bracts equalling the ovary, sepals oblong-lanceolate acuminate, petals elliptic-oblong many-nerved, lip as broad as long subequally 3-lobed strongly closely nerved, midlobe crisped retuse, disk naked. *Cyrtopera squalida*, *Reichb. f. in Bonpland.* 1857, 38; *Lindl. in Journ. Linn. Soc.* iii. 31; *Walp. Ann.* vi. 668.

PENANG; on Govt. Hill, *Curtis*. SINGAPORE, *Ridley*.—DISTRIB. Malay Islands. *Stem* rooting from the base without a tuber. *Leaves* 8–12 by $1\frac{1}{2}$ –2 in., narrowly lanceolate, some long-petioled. *Scape* 18–24 in., stout or slender; sheaths appressed; sepals $\frac{2}{3}$ –1 in. long; lip $\frac{2}{3}$ in. across the side lobes, base rounded; mentum conical.

** *Lateral sepals inserted on the foot of the column, free of the spur of the lip or nearly so.*

20. *E. bicarinata*, *Hook. f.*; raceme oblong densely many-fld., sepals linear-oblong acute undulate, petals shorter broader many-nerved, lip obovate-oblong, side lobes narrow, midlobe large orbicular crisped, two lateral nerves forming long calli at the base of the disk and with the median nerve tubercled on the midlobe. *Cyrtopera bicarinata*, *Lindl. in Wall. Cat.* 7363; *Gen. & Sp. Orchid.* 189; in *Journ. Linn. Soc.* iii. 31 (*excl. cit. Ic. Griff.*). *Epipactis* ? *bicarinata*, *Herb. Ham.* *Cymbidium*, *Griff. Notul.* iii. 343, No. 9; *Ic. Plant. Asiat.* t. 320, f. 3 (*pollen*).

SIKKIM HIMALAYA, *Gamble*. ASSAM, *Hamilton*. KHASIA HILLS, alt. 2–3000 ft., *Clarke*. MUNNIPORE, *Watt*. UPPER BURMA, *Griffith*.

Flowering before leafing. *Scape* 8–30 in., stout or slender; sheaths inflated; bracts slender, short or long; flowers resupinate, purplish brown, greenish or yellowish; sepals $1\frac{1}{2}$ in. long; lip longer than the sepals, tip rounded or notched; spur conical, obtuse.—*Flowers* often streaked with pink. I have not seen leaves, and Griffith does not describe them; he says the flowers are purplish brown and the lip broadly obtusely spurred.

21. *E. candida*, *Hook. f.*; flowering with the leaves, scape slender,

raceme short many-fl., bracts shorter than the ovary, sepals linear-oblong, petals shorter elliptic obtuse, side lobes of lip short, midlobe large orbicular crisped, nerves of disk as in *E. bicarinata*. *Cyrtopera candida*, Lindl. in *Journ. Linn. Soc.* iii. 31 (in part).

SIKKIM HIMALAYA, alt. 3-4000 ft., J. D. H. ASSAM, Mann.

Flowering before leafing. *Leaves* 8-18 by 3-3½ in., elliptic-lanceolate, caudate, 5-nerved; petiole 6-8 in., slender. *Scape* 18-24 in.; sheaths rather loose; raceme 3-4 in.; bracts ½-¾ in., more turgid than in *E. bicarinata*; flowers 1½ in. diam., white or greenish; spur conical. *Capsule* 1 in., narrowly ellipsoid.—Perhaps a var. of *E. bicarinata*. Lindley's description is taken from a specimen gathered by myself, and a drawing of *E. nuda* (Ic. Cathcart), from which the root, the colour, and the anther are taken.

22. ***E. flava*, Hook. f.**; tall, robust, flowers very large, sepals oblong-lanceolate finely acuminate, petals as long much broader elliptic many-nerved, lip large saccate, side lobes large rounded, midlobe orbicular, disk with 2 small pyriform basal calli and 3 crenate lamellæ. *Cyrtopera flava*, Lindl. in *Wall. Cat.* 7364; *Gen. & Sp. Orchid.* 189; *Royle Ill.* 370, t. 88; *Reichb. f. in Gard. Chron.* 1870, 1407. C. Culleni, *Wight Ic.* t. 1754; *Walp. Ann.* vi. 667. *Dipodium flavum*, *Herb. Ham.*

WESTERN TROPICAL HIMALAYA; from Garwhal, alt. 4-5000 ft., to Nepal. TRAVANCORE, Cullen.—DISTRIB. Hong Kong.

Flowering before leafing. *Scape* 2-5 ft., as thick as the finger or less; raceme 1-2 ft.; bracts ½-¾ in.; flowers lemon-yellow; sepals 1-1½ in. long, variable in breadth; lip as long as the sepals; spur a broad sac; anther with a 2-fid top, and long anterior process; pollen obtusely angled.—Wight describes the leaves as 2 ft. long, lanceolate.

23. ***E. macrobulbon*, Parish & Reichb. f. in Trans. Linn. Soc.** xxx. 144; scape robust, raceme densely many-fl., bracts filiform, sepals linear-oblong acute, petals shorter elliptic obtuse many-nerved, lip cuneate, side lobes short subterminal, midlobe small orbicular crisped, disk with two nerves thickened at the base and together with the middle nerve crenate towards the apex.

SIKKIM HIMALAYA (*Ic. in Herb. Calcutt.*). TENASSERIM; at Moulmein, Parish.

Tuber large. *Scape* with raceme 18 in., as thick as the little finger; sheaths basal, oose; bracts ½-¾ in., equalling the filiform pedicels; sepals ½-¾ in. long; petals rather broader; lip shorter than the sepals; spur conic, obtuse; anther with a produced 2-fid top; pollinia oblong.—Parish describes the leaves as oblong, acuminate (more likely elliptic-lanceolate), sepals and petals brown, lip yellow, spotted red. The Sikkim drawing represents a stem as thick as the middle finger, with sessile obovate leaves 1-2 ft. long, purple beneath and on the margin; a scape as thick as a goose-quill, dark purple, as are the flowers; raceme 12 in., many-fl.; bracts very slender, as long as the ovary; sepals ¾ in. long and petals violet-purple; lip paler.

24. ***E. macrorhizon*, Hook. f.**; scape robust, raceme lax-fl., bracts long slender, sepals lanceolate acuminate and shorter obovate petals many-nerved, lip broad obtusely 3-lobed many-nerved, 3 median nerves tubercled, disk of mid- and side-lobes rough, spur conical.

SIKKIM HIMALAYA; at Ryang, alt. 2000 ft., King (in *Herb. Calcutt.*).

Rootstock elongate, as thick as the thumb, ringed. *Leaves* not seen. *Scape* 8-12 in., sheaths 3-4, loose, obtuse; raceme 2-4 in.; bracts ½-¾ in., about equalling the ovary; flowers 1 in. diam., reddish sepals adnate to the foot of the column but free of the spur of the lip; lip much shorter than the sepals, nerves slender, con-

tracted above the broad rounded base, then dilating into the rounded side lobes, margins of midlobe crisped and orenate.

25. *E. sanguinea*, *Hook. f.*; flowers large, sepals ovate-lanceolate acuminate, petals shorter elliptic apiculate many-nerved, lip short, side lobes rounded, midlobe orbicular or ovate, disk with many crenulate nerves. *Cyrtopera sanguinea*, *Lindl. in Journ. Linn. Soc.* iii. 32; *Bot. Mag.* t. 6161.

SIKKIM and BHOTAN HIMALAYA, alt. 2-5000 ft., *J. D. H.*, &c. KHASIA HILLS, alt. 5000 ft., *Mann*.

Flowering before leafing. *Scape* 6-10 in., stout; sheaths loose. *Raceme* 6-12-flid.; bracts slender, about equalling the ovaries; flowers $1\frac{1}{2}$ in. diam.; disk red purplish or brown; lip white, pink or green; spur large, broad, obtuse; petals (always?) with an apiculate notch at the apex; top of anther obscurely notched, pollinia ovoid.—Leaves unknown.

26. *E. andamanensis*, *Reichb. f. in Flora* 1872, 276; *raceme* lax-flid., bracts short, sepals linear-lanceolate 3-5-nerved acuminate, petals rather broader obtuse 3-nerved, side lobes of lip obtuse, midlobe large broadly clawed orbicular crisped retuse, disk with the 3 median nerves thickened between the side lobes, all other nerves thick divaricating and much branched.

TENASSERIM; at Moulmein, *Parish*. ANDAMAN ISLANDS, *Kurz*.

Stem at the base tuberous, with thick roots. *Leaves* short during flowering, linear-lanceolate. *Scape* 1-2 ft.; sheaths short; bracts shorter than the pedicels; sepals $\frac{3}{4}$ in. long; lip shorter than the sepals, white with green edges and nerves; spur conic, obtuse; anther 2-tubercled.—This much resembles *E. virens*, but the leaves are much broader, and the column produced into a foot.

SPECIES UNKNOWN TO ME.

CYRTOPERA RUFA, *Thwaites Enum.* 302; rootstock tuberous, leaves not seen, *scape* 2 ft. reddish, sheaths 3 distant, bracts narrowly lanceolate equalling the ovary, flowers rufous 2 in. diam., sepals oblong-lanceolate acute rather longer than the obovate acute petals, lip cucullate, nerves within pilose, side lobes obtuse, midlobe as long rounded apiculate, spur short obtuse, column linear slightly contracted in the middle, capsule $2\frac{1}{2}$ in. long oblong.—Ceylon, at Hantani, alt. 3000 ft., *Thwaites* (C.P. 3566).

E. ATRO-VIRENS, *Lindl. Gen. & Sp. Orchid.* 183, described by Lindley from a drawing made for Wallich in the Calcutta Garden, and hence supposed to be a native of India, is a Mauritian species, *E. monophylla*, *Spens. Moore in Baker's Flora of the Mauritius*, p. 360 (where it is erroneously confounded with the Brazilian *E. maculata*).

EULOPHIA sp., *Trimen Cat. Pl. Ceyl.* 89 (C.P. 3958). Not named or described.

I fail to recognize the following *Eulophias* described in Griffith's *Notulæ*, vol. iii. p. 162, and *lc. Pl. Asiat.* t. 285, f. 2; p. 263 and t. 285, f. 2; p. 266 and t. 285, f. 3; p. 350 and t. 351 B, f. 14.

40. CYMBIDIUM, Swartz.

Epiphytes, rarely terrestrial; stem very short, rarely elongate and pseudobulbous; roots tufted. *Leaves* very long, narrow and coriaceous, rarely short. *Scape* loosely sheathed; flowers often large in suberect or drooping racemes. *Sepals* and subequal *petals* free, erect or spreading. *Lip* sessile at the base of the column and embracing it upwards, base

concave, side lobes erect, midlobe recurved; disk with usually 2 pubescent median ridges. *Column* long, foot 0; anther 1- or imperfectly 2-celled; pollinia 2 deeply grooved or 4, subglobose or pyramidal, sessile on the broad strap or gland.—Species about 30, tropical and subtropical, on the Mountains of Asia, with a few African and Australian.

* Leaves rudimentary or 0 at flowering time.

1. **C. macrorhizon**, *Lindl. Gen. & Sp. Orchid.* 162; terrestrial, rootstock creeping branched, bracts narrow membranous.

N.W. INDIA, *Royle, Falconer*. KHASIA HILLS, alt. 5-6000 ft., *Lobb, &c.*; NAGA HILLS (*Herb. Calcutt.*).

Rootstock as thick as a goose-quill, branched. *Scape* very short, with the raceme 6-9 in., ascending, 6-8-fl.; basal sheaths short, or elongating to 2 in. and narrowly subfoliaceous; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in., narrow, membranous; pedicel with ovary 1 in.; flower $1\frac{1}{2}$ - $1\frac{3}{4}$ in. broad, sepals linear-lanceolate, acuminate, and rather broader petals white or pale yellowish with pink striæ; lip white spotted with crimson, side lobes narrow, midlobe ovate obtuse, disk with 2 thick ridges between the side lobes; anther papillose; pollinia 4, subhemispheric.—A remarkable species, a parasite according to Clarke. Lindley describes the rootstock as jointed, and the ridges of the lip as arcuate.

2. **C. sikkimense**, *Hook. f.*; epiphytic, bracts minute triangular-ovate.

SIKKIM HIMALAYA; Lachen Valley, alt. 6000 ft., *J. D. H.*

Rootstock very stout. *Scape* with many obtuse basal sheaths 2-3 in. long, those higher up 1 in. long; raceme 4-8 in., more or less decurved, rather stout, 20-30-fl.; bracts $\frac{1}{3}$ in.; pedicel with ovary $\frac{1}{4}$ - $\frac{2}{5}$ in.; dorsal sepal linear-oblong, obtuse; lateral lanceolate, acute, subfalcate; petals elliptic, acute; lip as broad as long, rhombic-ovate, side lobes obscure rounded, narrowed into the very short ovate midlobe, disk without ridges but with 2 obscure rounded calli.—A very distinct species, overlooked by Lindley when studying my Sikkim Orchids, and mixed up with *C. aloifolium*.

** Leaves elliptic-lanceolate.

3. **C. lancifolium**, *Hook Exot. Fl.* t. 51; leaves long-petioled plicate, scape shorter than the leaves few-fl., bracts lanceolate shorter than the ovary, flowers long-pedicelled, disk of glabrous lip with two median lamellæ between the side lobes. *Lindl. Gen. & Sp. Orchid.* 164; in *Journ. Linn. Soc.* iii. 30; *Wall. Cat.* 7351; *Lodd. Bot. Cab.* t. 927. *C. Gibsoni*, *Paxton Fl. Gard.* iii. 618, fig. 301; *Walp. Ann.* vi. 623. *C. javanicum*, *Blume Bijdr.* 380; *Lindl. l. c.* 170.—*Griff. Ic. Plant. Asiat.* t. 300, fig. 1.

SUBTROPICAL HIMALAYA; from Nepal to Mishmi. KHASIA HILLS, alt. 4-6000 ft., *Griffith, &c.* PERAK, alt. 2-4000 ft., *Scortechini, &c.*—DISTRIB. Java, China, Japan.

Stem 2-6 in., fleshy, fusiform; sheaths ovate-lanceolate, acuminate; roots very long, thick and spongy. *Leaves* 6-10 in., petiole slender, sometimes as long. *Scape* nodding, 6-8-fl.; flowers $1\frac{1}{2}$ -2 in. diam.; sepals white, yellowish or greenish, lanceolate, acuminate; petals rather broader, white with a pink midrib; lip white spotted with red-purple, side lobes narrow, midlobe ovate obtuse.

4. **C. tigrinum**, *Parish in Bot. Mag.* t. 5457; leaves short-petioled very coriaceous, scape with raceme longer than the leaves few-fl., bracts lanceolate shorter than the ovary, flower long-pedicelled, lip with 2 glabrous ridges on the disk between the side lobes.

TENASSEERIM; on Moolee-it, alt. 6000 ft., *Parish*. BURMA; on the Siam frontier, *Berkeley*.

Pseudobulbs 1-1½ in., turgidly ovoid, top contracted. *Leaves* 3-5 in., recurved, petiole rarely 1 in. *Scape* suberect, with the raceme 6-8 in., 3-5-fl.; sheaths few; bracts small, ovate-lanceolate; pedicel with ovary 1-1½ in.; flowers 2-2½ in. diam.; sepals linear, subacute, dull yellow-green; petals subsimilar; lip narrowed at the base, white spotted with red, side lobes rounded erect, midlobe oblong, tip rounded apiculate; anther smooth; pollinia 3 angular, gland broadly triangularly obtuse above, sides acute.

5. **C. Devonianum**, *Part. Mag. Bot.* x. 97, *cum ic.*; leaves stoutly petioled thickly coriaceous, petiole articulate, scape with raceme as long as the leaves drooping very many-fl., bracts very small, pedicels very short, disk of lip with two short ridges with swollen tips between the side lobes. *Warner Orchid. Alb.* t. 170; *Reichb. f. in Gard. Chron.* 1881, i. 395.

SIKKIM HIMALAYA, *Mann*. KHASIA HILLS, *Gibson*; on Kollong rock, alt. 5000 ft., *J. D. H. & T. T.*

Stem very stout at the base, obscurely pseudobulbous. *Leaves* several, 6-12 in., narrowed into a petiole 3-5 in. *Scape* very stout, 8-10 in.; basal sheaths 1½ in., imbricating; bracts ½ in.; pedicel with ovary ½-¾ in.; flowers 1½ in. diam.; sepals oblong-lanceolate and petals green speckled with red, or pale reddish yellow streaked with red; lip short, side lobes rounded narrowing into a small triangular ovate obtuse midlobe, purple with a darker blotch on each side lobe; anther and pollen as in *C. eburneum*, var. *Parishii*. *Capsule* 1½ in., turgidly ellipsoid.—The flowers appear to vary extremely in colour. *Reichenbach* describes the sepals and petals as light brown with dull mauve streaks and blotches. In a specimen from Assam the tip of the lip is white with purple spots.

*** Leaves loriform, very long, tip broadly unequally 2-lobed.

6. **C. aloifolium**, *Swartz in Nov. Act. Upsal.* vi. 73; in *Schrad. Journ. Bot.* 1779, ii. 218; racemes elongate pendulous or decurved many-fl., flowers 1½-2 in. broad, sepals and petals linear-oblong subacute, epichile broadly oblong or suborbicular equalling or shorter than the hypochile, disk with 2 curved thick lamellæ. *Roxb. Fl. Ind.* iii. 458; *Lindl. Gen. & Sp. Orchid.* 165; *Wall. Cat.* 7352 C; *Walp. Ann.* vi. 624 (excl. *Ic. Wight*). *C. pendulum*, *Swartz, & Lindl. l. c.*; *Walp. l. c.* (excl. *cit. Bot. Reg.*); *Roxb. Cor. Pl.* i. 35, t. 44; *Fl. Ind.* iii. 458. *C. crassifolium*, *Wall. Cat.* 7357. *C. Mannii*, *Reichb. f. in Flora* 1872, 274. *Epidendrum aloifolium*, *Linn. Sp. Pl.* 953. *Ærides Borassi*, *Smith in Rees Cyclop. Suppl.*—*Rheede Hort. Mal.* xii. t. 8.

TROPICAL HIMALAYA, from East Nepal eastwards. ASSAM and southwards to TENASSEERIM and the ANDAMAN ISLANDS. (? Malabar, *Rheede*).—DISTRIB. China?

Stem short, stout. *Leaves* 1-3 ft. by ¾-2 in. *Raceme* 12-18 in.; flowers variable in colour and size, usually dull purplish brown with pale borders.—I am much puzzled with this and the following species, which appear to differ, in so far as all my copious materials show, only in the comparative length of the epichile and hypochile of their lips, and in their geographical ranges, *aloifolium* being strictly northern and eastern, and *bicolor* as strictly western. These characters would be absolute were it not that *Rheede's* figure of the Malabar plant has the lip of *aloifolium*. According to drawings in *Herb. Kew* and *Calcutta*, *C. aloifolium* is very variable in other respects, and three varieties are distinguishable. 1. Racemes shorter suberect fewer-fl., sepals and petals obtuse dull purple with yellowish pale margins. This exactly resembles the Chinese? *C. aloifolium*, *Lodd. Bot. Cat.* t. 967; *Jacq. Hort. Schoenb.* iii. 69, t. 383.—2. Flowers larger, sepals and petal sub-

acute bordered with white, lip yellowish streaked with red—all as described by Rheede.—3. Swartz's *C. pendulum*, which he says is too near *C. aloifolium*; flowers small or large, sepals and petals pale dirty yellow or greenish with a more or less broad dirty purple centre, lip streaked with red. To this belongs Wallich's *C. crassifolium* with pale flowers.—Lindley distinguishes *C. pendulum* from *alioifolium* chiefly by the lamellæ of the lip of the former being interrupted clavate and arched behind, and of the latter continuous, approximate, confluent at their tips. Thwaites gives *alioifolium* as a native of Ceylon (Jaffna, Gardner), but as he cites Wight's Ic., no doubt *bicolor* is intended. Lindley's *alioifolium* of Journ. Linn. Soc. iii. 27 includes this, *bicolor* and *sikkimense*. Reichenbach's description of *C. Mannii* is that of *alioifolium*, of which there are specimens in Mann's Herb. (kindly lent to me); as to his habitat of "Obres," Mr. Mann informs me he knows of no such place.

7. **C. bicolor**, Lindl. *Gen. & Sp.* 164; characters of *C. aloifolium*, but epichile longer than the hypochile ovate-oblong narrowed towards the tip. *C. aloifolium*, Wight Ic. t. 1687-8; Dalz. & Gibs. *Bomb. Fl.* 266; Thwaites *Enum.* 308. ? *C. erectum*, Wight Ic. t. 1753. *Epidendrum aloifolium*, Bot. Mag. t. 387.

The DECCAN PENINSULA, from the Concan southwards, and CEYLON.

For remarks on this see under *C. aloifolium*, from which Lindley distinguishes it chiefly by the saccate base of the lip and sigmoidly curved clavate lamellæ, which are interrupted in the middle and callous at the base, and the smaller differently coloured flowers, none of which characters appear to me to be satisfactory. He cites the Javanese *C. aloifolium*, Blume Bijdr. t. 19, for it.—Wight's figure of *C. erectum* from the Iyamallay Hills, which has an erect raceme, and flowers nearly 2 in. diam., is, I have little doubt, an exaggeration; the sepals described as obtuse are figured as acute. The only Iyamallay Cymbidium in his herbarium is much smaller flowered, and true bicolor.

8. **C. Finlaysonianum**, Lindl. in Wall. Cat. 7358; *Gen. & Sp. Orchid.* 164; habit, foliage, inflorescence and bracts of *C. aloifolium*, but flowers larger, $2\frac{1}{2}$ in. diam., midlobe of lip oblong contracted at the base, ridges on disk straight continuous or interrupted. *C. Wallichii*, Lindl. *Gen. & Sp.* 165. *C. aloifolium*, Wall. Cat. 7352 A, B. *C. pendulum*, Bot. Reg. 1840, t. 25 (excl. syn.). *C. pendulum*, var. *brevilabris*, Lindl. in Bot. Reg. xxx. t. 24. *C. tricolor*, Miq. Choix, t. 19.

PENANG, Porter, Curtis. Singapore, Hort. Loddiges.

Leaves 1-2 ft. by $\frac{3}{8}$ - $1\frac{1}{8}$ in. Raceme 2-3 ft., slender; basal sheaths short, inflated; flowers 1-2 in. apart; sepals and petals subequal, linear-lanceolate, acute or obtuse, dull yellow; lip not saccate, side lobes acute, streaked with red, midlobe white, red-purple towards the tip.

9. **C. pubescens**, Lindl. in Bot. Reg. 1840, Misc. 75; 1841, t. 38; leaves 1-2 ft. by $\frac{1}{2}$ in. obtuse, scape short naked decurved, raceme short pendulous 6-10-fl., flowers 1- $1\frac{1}{4}$ in. broad, sepals and petals linear obtuse, lip pubescent, hypochile saccate, disk with thick arched lamellæ, side lobes acute, midlobe as long as the hypochile ovate-oblong obtuse.

SINGAPORE, Cuming (Hort. Loddiges). DISTRIB. Borneo (Ic. in Herb. Kew).

A much smaller plant with narrower leaves, shorter racemes, and fewer flowers than any other of this section. Sepals and petals similar, dark purple with a yellow or green margin; lip yellow with a broad band of red-purple, or red-purple within the margin of the midlobe.

**** Leaves linear or elongate linear-lanceolate acute or acuminate.

† Bracts very small.

10. **C. eburneum**, Lindl. in Bot. Reg. 1847, t. 67; in Journ. Linn.

Soc. iii. 28; scape suberect 2-3-fld. sheathed to the top, flowers 4-5 in. diam. white, hypochile of lip with a very thick 3-5-grooved pubescent golden ridge. *Bot. Mag.* t. 5126; *Pact. Mag. Bot.* xv. t. 145; *Warner Sel. Orchid.* t. 21; *Jennings Orchid.* t. 16; *Gartenfl.* 1880, t. 155; *Orchidoph.* 1882, 297; *Wien. Ill. Gartenz.* 1887, t. 7, 8; *Gard. Chron.* 1882, i. 496, f. 78; 1884, ii. 77, f. 17. *C. syringodorum*, *Griff. Notul.* iii. 338.

EASTERN HIMALAYA; Nepal (*Ic. in Herb. Kew*). Sikkim, alt. 1000 ft., *Clarke*. KHASIA MTS., alt. 5000 ft., *Griffith*, &c.

Leaves 12-24 by $\frac{3}{4}$ - $\frac{3}{2}$ in., acute or acutely 2-fld. *Scape* 8-12 in.; sheaths equitant, erect, lanceolate, finely acuminate; bracts acuminate; pedicel with ovary $1\frac{1}{2}$ -2 in.; flowers very odorous; sepals very variable in breadth; petals subfalcate; side lobes of lip narrow, obtuse, midlobe small, short, undulately crenate, dark yellow.

Var. Parishii; leaves broader, lip blotched with dark purple or crimson. *C. Parishii*, *Reichb. f. in Trans. Linn. Soc.* xxx. 144; *Xen. Orchid.* iii. 55, t. 224 (*very bad*); in *Gard. Chron.* 1874, i. 338, 566; 1878, ii. 74; *Warner Orchid. Alb.* t. 25.—Tenasserim, on Nat-toung, alt. 5000 ft., *Parish*.—Reichenbach distinguishes this by the callus of the lip having no velvety line, by the spots on the lip, and by acute setiferous angles of the pollinia. The sepals and petals are very much narrower than in Warner's figure.

Var. Williamsiana, *Reichb. f. in Gard. Chron.* 1881, i. 530, has the midlobe and sides of the lip light purple and column light rose-colored.

Var. Dayana; leaves 4 ft. by $\frac{1}{2}$ in. corky beneath, flowers yellow white with purple streaks. *C. Dayanum*, *Reichb. f. in Gard. Chron.* 1869, 710.—Assam (*Hort. Day*).—I have not seen this.

11. ***C. grandiflorum***, *Griff. Notul.* iii. 342; *Ic. Plant. Asiat.* t. 321; leaves 8-24 by $\frac{3}{4}$ -1 in., scape very robust decurved, sheaths lax, raceme 6-12-fld., flowers 3-4 in. diam., sepals and petals oblong-lanceolate acute green, lip yellowish pubescent and ciliate, midlobe large suborbicular waved and crenate blotched or speckled with red. *C. Hookerianum*, *Reichb. f. in Gard. Chron.* 1866, 7; *Batem. in Bot. Mag.* t. 5574. *C. giganteum*, in part, *Lindl. in Journ. Linn. Soc.* iii. 29.—*Cymbidium* sp., *Griff. Itin. Notes* 145, No. 698.

EASTERN HIMALAYA; East Nepal, Sikkim and Bhotan, alt. 5-7500 ft., *Griffith*, &c.

Leaf-sheaths 2-8 in., deeply ribbed and grooved. *Scape* 12-18 in.; lower sheaths short, obtuse, upper 4 in., acute; racemes 10-18 in., drooping; bracts very small; flowers fleshy, sweet-scented; dorsal sepal incurved, lateral recurved; lip with 2 hairy ridges on the disk between the side lobes.

12. ***C. giganteum***, *Wall. Cat.* 7355; leaves 1-2 ft. by $\frac{3}{4}$ - $1\frac{1}{2}$ in. elongate lanceolate acuminate, scape very robust 6-12-fld., decurved or suberect, flowers 2-2 $\frac{1}{2}$ in. diam., sepals and petals oblong-lanceolate acute green streaked with red, lip yellow blotched with purple pubescent and ciliate all over, midlobe large orbicular waved. *Lindl. Gen. & Sp. Orchid.* 163; *Sert. Orchid.* t. 4; *Bot. Mag.* t. 4844; *Pact. Mag. Bot.* 241, and *Fl. Gard.* ii. 14, f. 143 (*flower*); *Warner Orchid. Alb.* vi. t. 284; *Griff. Notul.* iii. 341; *Walp. Ann.* vi. 626. *Iridiorchis gigantea*, *Blume Orchid. Archip. Ind.* 91, t. 26. *Limodorum longifolium*, *Ic. Hamilt. (fid. Lindl.)*.

TROPICAL HIMALAYA; from Kumaon, ascending to 4000 ft. eastwards to Bhotan and the KHASIA MTS., alt. to 4-5000 ft.

Habit of *C. grandiflorum* and leaves nearly as broad, but flowers smaller and differently coloured.—Blume founds the genus *Iridiorchis* on the protuberant base of the column forming a small sac, a character not shown in his analysis, and which I do not find in drawings on dried specimens. There are drawings of several varieties of

this in Herb. Kew and Calcutta, varying much in the depth of colouring of the flowers. The veins of the lip are very strong, arched and purple on the broad hypophylla, which has 2 central hairy ridges, villous and diverging, and again meeting at the base of the epichile.

Var. ? *Lowiana*, Reichb. f. in Gard. Chron. 1887, i. 684; leaves 2-3 ft. by $\frac{1}{2}$ - $\frac{3}{4}$ in., finely acuminate, side lobes of lip pale yellow green, midlobe dark purple with golden margins. *C. Lowianum*, Reichb. f. in Gard. Chron. 1879, 332, 405, f. 56; *Floral Mag.* N. S. t. 353; *Berlin Gartenz.* 1885, t. 73; *Orchidoph.* 1882, 321; 1885, 145.—Burma, *Boxall* (*Hort. Low*).—Perhaps a distinct species; the leaves are more like those of *C. longifolium*. The racemes attain 5 ft. in length, the very numerous flowers vary in colour, and the lip in breadth.

13. *C. longifolium*, *Don Prodr.* 36; leaves 2-3 ft. by $\frac{1}{2}$ - $\frac{3}{4}$ in. narrowly linear finely acuminate, scape suberect or decurved many-fl., flowers 2-2 $\frac{1}{2}$ in. diam., sepals and petals linear-oblong or lanceolate acute greenish streaked with red or purple, lip papillose within not ciliate, midlobe broadly ovate or orbicular white or yellowish spotted with red. *Lindl. Gen. & Sp. Orchid.* 163; in *Journ. Linn. Soc.* iii. 29; *Reichb. f. in Gard. Chron.* 1874, 14. *C. erythræum*, *Lindl. l. c.* 30. *Limodorum angustifolium*, *Herb. Ham.* (ex *Lindl. Gen. & Sp.*).

SUBTROPICAL HIMALAYA, alt. 5-6000 ft., from Kumaon, *Blinkworth*, eastwards. KHASIA MTS., common.

Resembles *C. giganteum*, but the leaves are very narrow, flowers smaller, and their colouring different. The lip is similar in shape, in the strong purple nerves, and pubescent ridges. *Lindley's C. erythræum* is founded on a drawing of mine of the flowers and fruit of a plant gathered in Sikkim, but of which I preserved no specimens; it has a small golden midlobe of the very narrow lip, but it otherwise does not seem to differ from *longifolium*, to which the specimens of *erythræum* in *Lindley's* Herbarium certainly belong.

†† Bracts large, lanceolate or cymbiform.

14. *C. cyperifolium*, *Wall. Cat.* 7353; leaves 2-3 ft. by $\frac{1}{4}$ - $\frac{1}{2}$ in., scape erect few-fl., bracts very slender equalling or exceeding the ovary, sepals and petals linear-lanceolate acute pale green and yellow streaked with red, lip narrow glabrous, greenish or white spotted with red. *Lindl. Gen. & Sp. Orchid.* 163; in *Journ. Linn. Soc.* iii. 28. *C. hæmatodes*, *Lindl. Gen. & Sp. Orchid.* 162. *C. viridiflorum*, *Griff. Itin. Notes* 126, No. 454. *Cyperorchis* ? *Wallichii*, *Blume Orchid. Archipel. Ind.* 92. *Limodorum longifolium*, *Roxb. Fl. Ind.* iii. 468.

SUBTROPICAL HIMALAYA; from Garwhal, alt. 5000 ft., *Edgeworth*, eastwards. The KHASIA, NAGA and MUNNIPORE HILLS, alt. 3500-6500 ft.

Leaves rigid, often petioled. Scape shorter than the leaves, slender; sheaths $\frac{1}{2}$ -2 in., distant; flowers 4-7, distant, sweet-scented; lip pubescent within; pollinia 4, broadly oblong, plano-convex, each pair of a large and small placed face to face. The Roxburghian figure of *L. longiflorum*, from the Khasia Hills, agrees in every respect except that the flowers are rose-cold; it is described in the *Flora Indica* as having a fusiform bulb and calcarate lip; in the drawing the bulb is the caudex denuded of leaves, and there is no trace of a spur; the bracts, which in the drawing are $1\frac{1}{2}$ -2 in. long, are undescribed. The species approaches *Cyperorchis*, differing in habit. *Lindley* gives Ceylon, *Macrae*, as a habitat for his *C. hæmatodes* (which is certainly *cyperifolium*), probably through the same error as affects other plants attributed by him to that country and collector.

15. *C. ensifolium*, *Swartz in Nov. Act. Upsal.* vi. 77; leaves 2-3 ft., by $\frac{3}{4}$ -1 $\frac{1}{2}$ in. sessile or petioled ensiformly lanceolate, bracts shorter than the

ovary, sepals and petals lanceolate acute green streaked with red, lip glabrous white or yellowish spotted with brown or red. *Willd. Sp. Pl.* iv. 112; *Lindl. Gen. & Sp. Orchid.* 162; *Bot. Reg.* t. 1976 (var. *estriata*); *Bot. Mag.* t. 1751. *C. sinense*, *Lindl. in Journ. Linn. Soc.* iii. 30 (? *Willd.*); *Epidendrum ensifolium*, *Linn. Sp. Pl.* 90; *Smith Spicileg. Bot.* 22, t. 24; ? *Bot. Repos.* t. 344. *Limodorum ensatum*, *Thunb. Fl. Jap.* 29; *Kæmpf. Ic.* t. 3.

SIKKIM HIMALAYA; in the Terai. KHASIA HILLS, alt. 2-4000 ft., *J. D. H. & T. T.*, &c. CEYLON; in the Central Province, *Thwaites*.—DISTRIB. China, Japan.

The Khasia plant agrees very well with Kæmpfer's figure, which alone represents the leaves as narrowed into a long petiole. In the *Bot. Repos.* the leaves are only a span long and quite sessile. The *Bot. Mag.* represents a very small plant with spotted lip. The Ceylon *ensifolium* has broader inflated lanceolate bracts. The Sikkim specimen has sessile leaves, many flowers, and a white lip with pale brown bars along the margin of the midlobe (much as in the *Bot. Reg.* figure) and no spots. I doubt *C. sinense* differing from *ensifolium*. Lindley would combine them.

DOUBTFUL AND EXCLUDED SPECIES.

C. ASSAMICUM, *Linden Cat.* 1863 (*name only*), *ex Ill. Hort.* xxviii. (1881) 95.

C. CARNOSUM, *Griff. Notul.* iii. 339, is probably a *Eulophia*.

C. CHLORANTHEUM, *Lindl. in Bot. Reg.* 1843, *Misc.* 68; in *Journ. Linn. Soc.* iii. 29; *Bot. Mag.* t. 4907, is *C. variciferum*, *Reichb. f. in Bonpland.* 1854, 91, an Australian species.

C. IRIDIODES, *Don Prodr.* 36, from Nepal, *Wallich*, doubtfully referred by Lindley to *C. giganteum*, is probably a *Celogyne*.

CYMBID. sp., *Griff. Notul.* iii. 343; *Ic. Plant. Asiat.* t. 319, is *Tainia latifolia*. The reference is omitted at vol. v. p. 820.

41. CYPERORCHIS, Blume.

Habit, foliage and inflorescence of *Cymbidium*, but racemes dense-fl., perianth segments narrow and connivent below the middle or higher, lip nearly straight, erect, epichile small and very much shorter than the elongate hypochile, and pollinia usually pyriform on a short subquadrate gland.—Species 3, all Indian.

Except by the narrow lip, long hypochile, and small usually orbicular epichile (or midlobe), it is not easy to separate this genus from *Cymbidium*, for the pollinia vary much in form in both genera, and *Cyp. Mastersii* resembles very much *Cymb. eburneum*.

1. *C. elegans*, *Blume Rumph.* iv. t. 47; *Orchid. Archip. Ind.* 93, t. 48 C; raceme elongate, flowers 1-1½ in. long straw-cold. or white, lip sparsely hairy towards the base, central ridges terminating below in 2 long pubescent calli, capsule 1 in. *Bot. Mag.* t. 7007. *Cymbidium elegans*, *Lindl. in Wall. Cat.* 7354; *Gen. & Sp. Orchid.* 163; *Sert. Orchid.* t. 14; in *Journ. Linn. Soc.* iii. 28; *Reichb. f. in Gard. Chron.* 1875, i. 429. *C. densiflorum*, *Griff. Notul.* iii. 337 (the Myrung plant only).

SUBTROPICAL HIMALAYA, alt. 4-7000 ft., from Nepal to Bhotan. KHASIA Mts. and MUNNIPORE, alt. 4-6000 ft.

Leaves 1½-2 ft. by ½-1 in. Scape 6-18 in., curved, densely clothed with imbricating compressed lanceolate acuminate sheaths 2-5 in. long; raceme pendulous, 4-8 in. long; rachis slender; flowers densely imbricate, inodorous; bracts small, membranous, acute; sepals and petals linear-oblong, acute, tips concave; lip as long as the petals, very slightly recurved; hypochile narrowly cuneate, side lobes spreading, broadly oblong, obtuse, nearly as long as the suborbicular or obcordate undulate midlobe; column very slender, base hairy in front. Capsule turgidly ellipsoid.—

In Griffith's Herb. this is named *C. syringolorum*, doubtless through a misplacement of labels (see *C. eburneum*, p. 12). In Herb. Calcutt. there are drawings of 3 forms apparently of this:—1. raceme laxer-flowered, flowers larger nearly white flushed with pale pink, lip not represented; 2, leaves 12–18 in., scape stout, sheaths distant, 2 in. long, and raceme inclined, flowers few, secund, drooping, pale yellow-green, lip yellow, no ridges shown; 3, a smaller plant, leaves 9 in., scape 7 in., densely clothed with imbricating sheaths 3 in. long; raceme suberect, secund, 5-fid.; flowers yellowish, $1\frac{3}{4}$ in. long: this last is named *Cymbid. elegans*, var. *lutescens*.

2. **C. Mastersii**, Benth. in Journ. Linn. Soc. xviii. 318; raceme short, flowers 2 in. long white, lip quite glabrous purple spotted, central ridge evanescent below, column glabrous, capsule 2 in. long. *Cymbidium Mastersii*, Griff. mss. ex Lindl. in Bot. Reg. 1845, t. 50; in Gard. Chron. 1845, 643; Paxt. Fl. Gard. t. 78; Floral Mag. N. S. t. 391; Jard. Fleur. t. 289; Reichenbachia, t. 66. *C. micromeron*, Lindl. in Journ. Linn. Soc. iii. 29 (excl. lip). ? *C. affine*, Griff. Notul. iii. 336; Ic. Plant. Asiat. t. 291, f. 3; Lindl. l. c. 28.

ASSAM, Mann. KHASIA MTS., alt. 4–5000 ft., Griffith, &c.

Habit and foliage of *C. elegans*, but raceme very short, decurved at the top, flowers larger, always white with a little red on the lip and smelling of almonds, lip broader, without the basal calli and quite glabrous; column stouter and pollinia broader; capsule very much larger.—It is not easy in the case of indifferent dried specimens to distinguish this from *Cymbid. eburneum* except by the smaller flower. Lindley's *Cymbid. micromeron* consists of a flowering and fruiting specimen of this, together with the loose lip and column of a *Cœlogyne*, from which the specific character is drawn. The same author, referring to Griffith's description of *C. affine* (from Churra), to that of *C. densiflorum* from Myrung, and of another species from Surureem (all in the Khasia Mts.), observes, "It is impossible to reconcile the statements made for Griffith by his editor, without assuming that some confusion has taken place." To this confusion Lindley has added by transferring the name *affine*, Griff., from the Churra to the Surureem plant. Of the three the only one certainly recognizable by the description is *C. densiflorum*, which is certainly *Cyperorchis elegans* (I have gathered it at Myrung). *C. affine* and the unnamed one, having white flowers, are both probably *C. Mastersii*, a name which Griffith's *affine* would have superseded, had he really given it; but on referring to his mss. preserved at Kew, I find no such name, Griffith's description being headed "*Cœlog. affine*," meaning simply that it is a plant allied to *Cœlogyne*, and the Churra plant is so ticketed by himself in both his own herbarium (at Kew) and in Lindley's, to whom he sent a specimen. No doubt the error was the editor's, who replaced *Cœlog.* by *Cymbidium*. The name of *Mastersii* is an mss. one of Griffith's given to cultivated specimens which he sent from the Calcutta Gardens to the Royal Horticultural Society.

C. affine, Warner Orchid. Alb. t. 140; Floral Mag. N. S. t. 346, is certainly not the plant described and figured under that name by Griffith; it has widely spreading sepals and petals, and the lip of a true *Cymbidium*.

3. **C. cochleare**, Benth. in Journ. Linn. Soc. xviii. 318; raceme elongate, sepals and petals very narrow, flowers 2 in. long, greenish brown, lip glabrous, median ridge strong 2-fid or spatulate at the tip vanishing downwards, column very slender glabrous, pollen pyriform, capsule $1\frac{1}{2}$ in. long. *Cymbidium cochleare*, Lindl. in Journ. Linn. Soc. iii. 28.

SIKKIM HIMALAYA, alt. 4–6000 ft., J. D. H., &c. KHASIA HILLS, alt. 5–6000 ft., Clarke; at Myrung, Griffith. Tezpur in ASSAM, Mann.

Leaves 2–3 ft. by $\frac{1}{3}$ – $\frac{1}{2}$ in. Scape 12–18 in., very slender; sheaths 3–4 in., lax; sepals and revolute petals brownish green; lip yellow speckled with red, midlobo suborbicular, golden-yellow.

41/1. **CREMASTRA**, *Lindl.*

A terrestrial herb; rootstock tuberous. *Leaves* radical, elliptic, plicate. *Scape* solitary, stout, sheathed. *Flowers* in second racemes, pendulous. *Sepals* and *petals* very long, narrow, connivent in a tube below, lanceolate acuminate and spreading and recurved above. *Lip* adnate to the base of the column, erect, linear, base subsaccate, tip dilated 3-lobed, lobes linear, disk with a tongue-shaped appendage. *Column* very long, slender, straight, top dilated 3-lobed; anther shortly stipitate, 1-celled; pollinia 4, ovoid, compressed, caudicle and gland membranous.

C. Wallichiana, *Lindl. Gen. & Sp. Orchid.* 172; *Franch. & Savat. Enum. Pl. Jap.* ii. 24. *Hyacinthorchis variabilis*, *Blume Cent. Plant.* Nov. 1829, 4; *Mus. Bot.* 48, fig. 16; *Walp. Ann.* iii. 628.

TEMPERATE HIMALAYA; Nepa^l, *Wallich*. Sikkim, alt. 5-7500 ft., *J. D. H.*, &c.
—DISTRIB. Japan.

Tuber the size of a chestnut. *Leaves* 6-10 by 2-2½ in., subsessile or petioled. *Scape* with raceme 1-2 ft.; sheaths long, loose; flowers 1½ in. long, narrow, purple; pedicels short; bracts linear.—I find no evidence of Blume's "Centuria" ever having been published, or even printed; if it was so, his name has priority.

42. **GEODORUM**, *Jackson.*

Terrestrial herbs, rootstock tuberous hypogæal. *Leaves* elliptic, acute, plicate. *Scape* from the rootstock, stout, erect, sheathed, shorter than the leaves; flowers crowded in decurved racemes, bracts narrow membranous. *Sepals* and broader *petals* conniving or spreading. *Lip* sessile on the base or short foot of the column, cymbiform, membranous, margins involute, disk with or without ridges ending in calli, and with a forked basal callus. *Column* short, stout; anthers 2, cells, appendaged after dehiscence by the persistent detached faces of the cells; pollinia 2, broad foveolate sessile or subsessile on a broad strap or gland.—Species 6-8? Indian, Malayan and Australian.

I am unable to define the species from Herbarium specimens, or to reduce to any system the descriptions and drawings of Roxburgh, Brown, Lindley and Griffith. The following descriptions are provisional only. I have spent days to no purpose in endeavours to improve on it by the analysis of specimens.

1. **G. purpureum**, *Br. in Hort. Kew, Ed. 2, v. 207 (Char. reform.)*; usually tall, leaves at length petioled, sepals linear-oblong acute 3-nerved, petals rather broader obovate-oblong apiculate 5-nerved, lip subpanduriformly oblong, tip dilated 2-lobed, disk with a broad channelled ridge ending in raised calli or a crenate callus. *Lindl. Gen. & Sp. Orchid.* 175; *Dalz. & Gibs. Bomb. Fl.* 266. *G. dilatatum*, *Wall. Cat.* 7376. *Limodorum nutans*, *Roxb. Cor. Pl.* i. t. 40; *Fl. Ind.* iii. 470 (*descr. and fig. in both erroneous*). *Malaxis nutans*, *Willd. Sp. Pl.* iv. 93.

TROPICAL HIMALAYA, from Nepal eastwards; BENGAL, ASSAM, BURMA, &c. DECCAN PENINSULA and CEYLON.—DISTRIB. Malay Islands, Australia?

Brown's *G. purpureum* was founded on Roxburgh's drawing of *Limodorum nutans*, a native of the Circars, but of which no specimen is recorded to exist. It is represented and described as having the scape longer than the leaves, a lax-flid. raceme, and an acute lip; characters not hitherto found in any *Geodorum*. But if it be allowed that the elongate scape and lax-flowered raceme are due to the lengthening

of the axis of the scape after flowering, and that the appearance of an acute lip is due to the infolding of its margins towards the apex, then the *G. purpureum* is the commonest and widest-distributed Indian species. Dalzell and Gibson alone identify a plant with *G. purpureum*, Br., and I have examined authentic specimens of it, which they did not, for they give Brown's characters for the species, whilst those of their specimens are what I have given above. *G. purpureum* is the tallest and largest-leaved Indian species; its flowers vary from white veined with red-purple to pale purple with stronger veins.

2. *G. dilatatum*, Br. in *Hort. Kew*, Ed. 2, v. 207; leaves usually sessile, sepals linear-oblong subacute 3-5-nerved, petals obovate-oblong 5-7-nerved, lip broadly cymbiform, tip dilated recurved crenulate or undulate, disk smooth or with granulate nerves ending in irregular small tubercles. *Lindl. Gen. & Sp. Orchid.* 175; *Lodd. Bot. Cab. t.* 1797; ? *Wight Ic. t.* 912. *Limodorum recurvum*, Roxb. *Cor. Pl. i.*, 33 t. 39; *Fl. Ind.* iii. 469. *Malaxis cernua*, Willd. *Sp. Pl.* iv. 93. *Otandra cernua*, Salisb. in *Trans. Hort. Soc.* i. 261.

ASSAM, SILHET, BURMA, the DECCAN PENINSULA and CEYLON (all more or less doubtful).

If I am right in respect of this species, it differs from *purpureum* in its lower stature, broader petals and lip, the disk of which is smooth, granulate or subcaruncled. Wight's figure is probably an exaggeration of the flowers. Dalzell and Gibson describe it as a Concan plant; but I have seen no specimens so named by them.

3. *G. candidum*, Wall. *Cat.* 7374; flowers ascending or erect, sepals linear-oblong, petals almost orbicular 7-9-nerved, lip very broad narrowed upwards from the 2-crested dilated base, disk nearly naked, tip crenulate. *Lindl. Fol. Orchid. (in part)*: *G. attenuatum*, Griff. in *Calc. Journ. Nat. Hist.* v. 358, t. 24.

BURMA, Griffith; Tenasserim, at Moulmein, Wallich.

Griffith further describes his *G. attenuatum* (which is certainly the same as Wallich's *candidum*) as having a truncate spike, subequal sepals and petals (which they are not in his drawing in *Herb. Calcutt.*), inodorous white wide flowers, less spreading than usual, tip of lip concave, almost conduplicate, emarginate, crenate, disk with a callus, column sprinkled with cellular pubescence below the stigma and along the broad nerves of the lip, and a very short column with a bidentate tooth on each side of the apex.—It is a very distinct species. A single specimen of *G. citrinum* is on the sheet with Wallich's specimens of this.

4. *G. citrinum*, Jackson in *Andrews' Bot. Rep.* t. 626; flowers $1\frac{1}{2}$ in. diam. yellow, sepals and petals very broad acute, lip large oblong deeply saccate with an obtuse gibbosity or spur, more or less streaked with red or purple, disk nearly smooth yellow, tip rounded or emarginate. *Lindl. Gen. & Sp. Orchid.* 176; *Fol. Orchid.* 3; *Bot. Mag.* t. 2195; *Wall. Cat.* 7375; *Walp. Ann.* vi. 633.

CHITTAGONG, Wallich. MOULMEIN, Wallich, Parish. PENANG (*Ic. in Herb. Kew*).

The figure in the Bot. Repository represents a plant with bracts hardly exceeding the ovary, 4-5 pale yellow flowers $1\frac{1}{2}$ in. in diameter, a large saccate subcalcarate lip broadly oblong with recurved margins, emarginate tip, and yellow and faint purple markings on each side of the smooth disk. The *Bot. Mag.* plant has flowers as large, but pale green, the lip is similar but not emarginate, and is streaked with red nerves; the pedicels are much longer with the ovary $1\frac{1}{4}$ in. long, and there are many long bracts below, but not on, the raceme, where they are small. The *G. citrinum*, Jacks. ? of *Wall. Cat.* 7375 has the long bracts below the inflorescence of the *Bot. Mag.* plant, but very short pedicels and a smooth lip with incurved and then reflected margins.—The Penang drawing shows short pedicels, pale greenish white flowers, a saccate lip with recurved margins and red nerves; there are only one or two bracts below the

inflorescence, and the floral are as long as the ovaries.—The var. *β. albido-purpureum*, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 145, from Moulmein, has bracts as long as the flowers, but none below the inflorescence, green sepals and petals, and a dingy purple streaked lip.

DOUBTFUL SPECIES.

G. PALLIDUM, Wall. in *Don Prodr.* 31. There is no specimen of this in Wallich's Herbarium, nor is the name in his Catalogue; but there is a *Geodorum* in Herb. Kew, sent to Sir W. Hooker by Wallich from Nepal in 1818, which is, I think, *purpureum* as defined above. *G. pallidum*, Griff. l. c. 357, from Assam and Silhet, described from garden specimens, is perhaps the white-fl. *purpureum*; its flowers are described as rather small.

G. APPENDICULATUM, Griff. in *Calc. Journ. Nat. Hist.* v. 360, t. 24, is probably, as suggested by Griffith, Brown's *G. dilatatum*.

G. CANDIDUM, Lindl. *Fol. Orchid.* 3, *Limodorum candidum*, Roxb., from Silhet, Khasia and Moulmein, is probably *dilatatum*; it is certainly not *G. candidum*, Wall. Cat. 7374.

G. DILATATUM, Lindl. in *Bot. Reg.* t. 675, is, I think, pale-fl. *purpureum*.

G. FUCATUM, Lindl. in *Bot. Reg.* t. 1687; *Fol. Orchid.* 5, from Ceylon, resembles a small *G. purpureum*. Thwaites states that he has never seen it.

G. LAXIFLORUM, Griff. l. c. 356, t. 24, from Assam, *Jenkins*, strongly resembles *G. citrinum* in its broad petals, dilated undulate emarginate white lip with the disk tinged with yellow and purplish base.

G. RARIFLORUM, Lindl. *Fol. Orchid.* 3, from Assam, is, I think, certainly *G. purpureum*.

GEODORUM sp., a narrow-leaved plant, with the habit of *G. purpureum*, from Mount Ophir, Malacca, Griffith, resembles the Philippine *G. semicristatum*, Lindl.

G. JAVANICUM, Lindl. *Fol. Orchid.* 2. (*Cistella cernua*, Blume Bijdr. 293, t. 55), of Java, is a small-fl. species confidently referred by Reichenbach (*Bonpland.* 1857, 43) to *G. dilatatum*, with the observation that Wight's *G. dilatatum* is a totally different plant.

43. **GRAMMATOPHYLLUM**, Blume.

Large stout epiphytes. *Leaves* linear, distichous, jointed on their sheaths. *Scapes* lateral, long, stout; flowers large, racemose. *Sepals* and *petals* subequal, spreading. *Lip* small, adnate to the base of the column (mobile?) erect, concave; its side lobes embracing the column, midlobe short recurved. *Column* semiterete, foot 0, top incurved; anther broad, 2-celled; pollinia 2, subglobose, 2-cleft, attached one to each horn of a curved strap or gland.—Species 3 or 4, Malayan.

G. speciosum, Blume Bijdr. 377, fig. 20; *Rumph.* iv. 47, t. 191; gigantic, flowers 6 in. diam. golden spotted with brown. *Lindl. Gen. & Sp. Orchid.* 628; *Miquel Fl. Ind. Bat.* iii. 708; *Bot. Mag.* t. 5157; *Part. Fl. Gard.* ii. t. 69; *Fl. des Serres*, t. 1386; *Batem. 2nd Cent. Orchid.* t. 181; *Jard. Fleur.* t. 235; *Gard. Chron.* 1878, ii. 181, f. 36; 1890, i. 289, f. 46; *Walp. Ann.* vi. 628. *G. fastuosum*, Lindl. in *Part. Fl. Gard.* ii. 159 under t. 69. *G. macranthum*, Reichb. f. *Xen. Orchid.* ii. 16; *Walp. Ann.* l. c. *Pattonia macrantha*, Wight Ic. t. 1750. *Gabertia scripta*, Gaud. in *Freye. Voy. Bot.* 425. *Cymbidium scriptum*, Swartz in *Schrad. Diar.* 1799, 228; *Willd. Sp. Pl.* iv. 100. *Epidendrum scriptum*, Linn. *Sp. Pl.* 1351.—*Rumph. Amboin.* vi. 95, t. 42.

TENASSERIM, *Parish*. PERAK, *Scortechini*. MALACCA, Griffith (*Kew Distrib.* 5318), *Maingay* (*K. D.* 1655).—DISTRIB. Java, Borneo.

Stems 8–10 ft., tufted, as thick as the wrist. *Leaves* 1½–2 ft. by 1¼–1½ in., equitant, lorate, acute. *Scape* 4–6 ft., as thick as the finger, terete; bracts ovate; pedicels 4–6 in., as thick as a goose-quill; sepals and petals fleshy, obovate-oblong, variable in breadth, undulate, spreading and reflexed; lip half the length of the sepals, side lobes short, subacute; midlobe ovate, hirsute, disk with depressed

straight nerves and two linear ridges between the side lobes.—I cannot find characters whereby to distinguish *G. fastuosum* & *macranthum*; the latter was founded on Griffith's specimens. The flowers vary much in size, and the sepals and petals of the Perak plant are narrower than in the others.

44. **DIPODIUM**, Brown.

Stems leafy, tufted and epiphytic in the Indian species (terrestrial and leafless in Australian). *Leaves* coriaceous, jointed on their sheaths, equitant. *Racemes* long-peduncled, flowers rather large; perianth of *Grammatophyllum*, but with the base of the lip forming a small sac with the column, and the side lobes reduced to small teeth; pollinia separately stipitate on a globose gland.—Species 6, Australian, Malayan and Pacific.

1. **D. pictum**, Reichb. f. *Xen. Orchid.* ii. 15, and 20, t. 107; stem elongate scandent epiphytic from a terrestrial root, leaves spreading and recurved linear. *Walp. Ann.* iii. 562, vi. 647. *Walesia picta*, Lindl. in *Journ. Hort. Soc.* iv. (1849) 262; in *Part. Mag. Bot.* xvi. 321, with fig. *Grammatophyllum scandens*, Griff. *Notul.* iii. 345; *lc. Pl. Asiat.* t. 324. *Leopardanthus scandens*, Blume *Rumph.* iv. 47; *Mus. Bot.* i. 47, t. 15.

MALACCA, Griffith, Maingay.—DISTRIB. Java.

Leaves 12–18 in., tip oblique acute. *Peduncle* with the raceme 10–12 in., purple; bracts short, ovate; pedicels short, stout; flowers $1\frac{1}{2}$ in. diam., yellowish white blotched with crimson; sepals and petals elliptic-oblong obtuse; lip ovoid, narrowed into a broad tomentose claw; side lobes linear acute, midlobe ovate acute concave, pinkish streaked with crimson, disk and lip villous.

2. **D. paludosum**, Reichb. f. *Xen. Orchid.* ii. 15; stem and scape strict erect, leaves strict ensiform erect. *Walp. Ann.* vi. 648. *Grammatophyllum paludosum*, Griff. *Notul.* iii. 344. *G. affine*, Griff. *lc. Pl. Asiat.* t. 323. *Walesia paludosa*, Reichb. f. in *Bonpland.* 1854, 93.

MALACCA, in swamps, Griffith (*Kew Distrib.* 5317), Maingay (*K. D.* 1657) PERAK, Wray.

Stem 1–2 ft. *Peduncle* as long; bracts small, ovate, acute; pedicels very short; flowers $1\frac{1}{2}$ in. diam., sweet-scented, white blotched with purple; sepals and petals reflexed; lip lanceolate, acute, with a villous ridge from the base to the cuspidate tip; side lobes reduced to small teeth.

45. **THECOSTELE**, Reichb. f.

Epiphytes, pseudobulbous. *Leaf* 1, shortly petioled. *Scape* basal, slender; flowers racemed. *Sepals* subequal, broad. *Petals* much narrower. *Lip* connate with the foot of the column, 3-lobed; base with the foot forming a ventricose tube perforate in front; side lobes small, erect; midlobe entire or 3-lobulate, velvety. *Column* slender, arched, with incurved apical wings; anther 2-celled; pollinia 2, subglobose, separately stipitate on a scale-like gland.—Species 3.

1. **T. Zollingeri**, Reichb. f. in *Bonpland.* v. 37; *Xen. Orchid.* ii. 133, t. 147; side lobes of lip subclavate sigmoid, midlobe broadly obcordate. *T. alata*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 135. *Cymbidium alatum*, Roxb. *Fl. Ind.* iii. 459.

CHITTAGONG, Roxburgh. TENASSERIM, Parish.—DISTRIB. Borneo.

Pseudobulbs the size of a nutmeg or narrower. *Leaf* 5–9 in., oblong or linear-oblong. *Scape* with the raceme 5–8 in., decurved; bracts minute, acute, persistent; flowers $\frac{3}{4}$ in. diam., blotched with brick-red; sepals acute, dorsal lanceolate geniculately arched, lateral falcate ovate.

2. **T. Maingayi**, *Hook. f. Ic. Plant ined.*; side lobes of lip fan-shaped, midlobe broadly ovate reflexed.

MALACCA, *Maingay*.

Pseudobulbs oblong, $\frac{3}{4}$ –1 in. *Leaf* 3–5 in., from obovate- to linear-oblong. *Scape* with 6–8-fld. raceme 4 in.; flowers 1 in. diam.; sepals acuminate.—Only one specimen seen.

3. **T. quinquefida**, *Hook. f. Ic. Plant ined.*; side lobes of lip linear, midlobe deeply 3-lobulate, side lobules hatchet-shaped, mid-lobule ovate acute.

MALACCA, *Maingay*.

Pseudobulbs 1 in., oblong. *Leaf* 5–7 in., linear-oblong, tip obtuse very oblique. *Scape* with raceme 3 in.; flowers 1 in. diam.; sepals acute, lateral very broad; lip 5-fld from the deep lobing of the midlobe.

46. **BROMHEADIA**, *Lindl.*

Terrestrial erect rigid leafy herbs, pseudobulb 0. *Leaves* distant. *Flowers* in terminal simple or branched rigid racemes or panicles; bracts thick, imbricate, persistent. *Sepals* and *petals* subequal, narrow, widely spreading. *Lip* adnate to the base of and embracing the column, erect, side lobes erect, midlobe spreading, entire. *Column* membranous, broadly 2-winged, foot 0, top hooded; anther sub-2-celled; pollinia 2, ovoid, sulcate, sessile on a scale-like gland.—Species 2.

1. **B. palustris**, *Lindl. in Bot. Reg. 1841, Misc. 89; 1844, t. 18*; tall, leaves 3–5 in., racemes many-fld. *Bot. Mag. t. 4001; Wight Ic. t. 1740; Walp. Ann. vi. 630.* *B. Finlaysoniana, Reichb. f. in Walp. l. c. 882.* *Grammatophyllum?* *Finlaysonianum, Lindl. in Wall. Cat. 7561; Gen. & Sp. Orchid. 173.*

PENANG, PERAK, MALACCA and SINGAPORE (in dry exposed places, *Ridley*).—DISTRIB. Sumatra, Philippines.

Stem 4–8 ft., terete, very stout. *Leaves* 3–5 by $\frac{2}{3}$ – $\frac{1}{2}$ in., tip 2-lobed, many-nerved. *Peduncle* 6–12 in., strict; sheaths many, appressed; raceme 1–7 in., bracts ovate, obtuse, thickly coriaceous (rachis appearing serrate); pedicel with ovary 1 in.; flowers $2\frac{1}{2}$ –3 in. diam., sweet-scented; sepals linear-oblong, obtuse, spreading and recurved, white or pale pink; petals broader; lip white, disk purple, side lobes sub-acute streaked with purple; midlobe rounded apiculate, yellow, granulate; column elongate cymbiform.

? 2. **B. aporoides**, *Reichb. f. Ot. Bot. Hamb. 44*; dwarf, leaves $1\frac{1}{2}$ –2 in., peduncle very short 1–2-fld.

TENASSERIM; at Moulmein, *Parish*.

Stems tufted, 1– $1\frac{1}{2}$ in., clothed to the base with coriaceous falcate ensiform acute leaves. *Peduncle* $\frac{1}{2}$ in., clothed at the base with small coriaceous imbricate sheaths; flowers 1 in. long; sepals and petals oblong-lanceolate, acute, white; lip oblong, side lobes triangular acute streaked with red, midlobe small ovate yellow papillose; column slender; gland of pollinia lunate.—I have seen only very imperfect specimens, which differ so greatly in habit, foliage and the slender column from *B. palustris*, that I suspect the species will prove to be generally distinct. The habit is that of *Dendrobium atropurpureum*.

47. **POLYSTACHYA**, *Hook.*

Pseudobulbous leafy epiphytes. *Leaves* few, distichous, narrow, coriaceous, jointed on their sheath. *Scape* terminal, sheathed; flowers very small, in narrow panicles. *Sepals* free, dorsal ovate, lateral triangular adnate to the foot of the column. *Petals* very narrow. *Lip* superior, clawed, jointed on the foot of the column, erect, 3-lobed, side lobes small

erect, midlobe spreading or recurved. *Column* short, broad; anther 1- or sub-2-celled; pollinia 4, ovoid, cohering or connate in pairs, attached to a very short strap, or gland?—Species about 40, all tropical, chiefly American.

1. **P. Wightii**, *Reichb. f. in Walp. Ann.* vi. 640; stem 4-6 in., flowers yellow, lip broader than long, side lobes nearly as long as the short broad rounded midlobe, disk with the median ridge densely furfuraceous. *P. luteola*, *Wight Ic.* t. 1678.

MALABAR; on the Iyamallay Hills, *Wight (Kew Distrib.* 2990). ?PENANG, *Curtis.* ?CEYLON.

Leaves 2-3, 4-6 by $\frac{3}{4}$ -1 in. *Stem* stout; panicle glabrous, branches short; sheaths long, coriaceous, flattened; bracts small, acute, persistent; flowers yellow; sepals $\frac{1}{2}$ in. long, acute. *Capsule* $\frac{1}{2}$ in. long.—*P. luteola*, *Hook. Exot. Flor.* t. 105, figured from a cultivated specimen said to have been sent by Wallich, has been pronounced by Lindley (*Bot. Reg.* 1838, *Misc.* 78) to be a West Indian plant. No original specimen of it was preserved. Lindley distinguishes it from the Indian plant by the capsule being nerveless between the ribs, whilst those of the latter are reticulated. The figure in *Flor. Exot.* represents the sepals as obtuse. Much better specimens of the Indian species are wanted to determine their differences from one another and from the Mauritian and others, and the genus wants working up.

2. **P. purpurea**, *Wight Ic.* t. 1679; flowers purplish, lip longer than broad, side lobes much shorter than the large rounded midlobe, disk with a short median ridge furfuraceous. *Walp. Ann.* vi. 640.

TRAVANCORE; on the Iyamallay Hills, *Wight (Kew Distrib.* 2991).

Very near if not a variety of *P. Wightii*, but the flowers are smaller, and if my analysis is correct (the materials are unsatisfactory) the lip is much narrower.

3. **P. zeylanica**, *Lindl. in Bot. Reg.* 1838, *Misc.* 78 (*excl. Syn.*); stem 12-18 in., lip cuneate-obovate, side lobes small acute, midlobe rounded, disk furfuraceous, capsule $\frac{1}{2}$ in. reticulate between the ribs. *Walp. Ann.* vi. 639.

CEYLON, *Walker, Gardner.*

A very much larger plant than either of the former, with a stout stem, and panicle 6-10 in. long with branches 1-3 in. long, flowers larger, and leaves larger and broader upwards. The Mauritian *P. mauritiana*, *Spreng. Syst. Veg.* iii. 742 (*Dendrobium polystachys*, *Thou. Orchid. Afric.* t. 85), which Lindley referred to this more resembles *P. Wightii*.

48. **PLOCOGLOTTIS**, *Blume.*

Terrestrial herbs with the creeping rhizome, habit and inflorescence of *Tainia* and *Chrysoglossum*, from which they are only distinguishable by the short erect quadrate lip having its sides confluent with the sides of the short column, and by having the four pollinia attached in pairs by 2 stipes to a gland.—Species 4 or 5, Indian and Malayan.

1. **P. acuminata**, *Blume Mus. Bot.* i. 46; leaf solitary, bracts lanceolate as long as the pedicel or longer, raceme puberulous. *Miquel Fl. Ind. Bat.* iii. 676.

PERAK, alt. 2-3000 ft., *King's Collector.*—DISTRIB. Java, Sumatra.

Leaf-blade 10-12 by $2\frac{1}{2}$ -3 in., elliptic-lanceolate, longer than the slender petiole. *Scapes* as long or longer, slender; raceme very lax-fl., simple or with a branch from the base; bracts $\frac{1}{2}$ in., lanceolate, acuminate; pedicel with ovary as long; flowers 1 in. diam., sparsely puberulous; dorsal sepal lanceolate; erect lateral oblong-lanceolate, falcate, finely acuminate, 5-nerved; petals narrowly lanceolate, falcate; lip quadrate, contracted above the base, angles rounded, retuse in front with a long cusp; spur a conical gibbosity.—The specimen is not very good, but I think it is *P. acuminata*.

2. **P. javanica**, *Blume Bijdr.* 380, t. 21; *Orchid. Archip. Ind.* t. 14; *Mus. Bot.* i. 46; leaf solitary, bracts short ovate, raceme glabrous. *Lindl. Gen. & Sp. Orchid.* 132.

PERAK, alt. 3–1200 ft., *Scortechini, King's Collector*.—DISTRIB. Java.

Leaf-blade 10–12 by 3–4 in., as long as the very slender petiole. *Scape* much longer than the leaf, very slender; raceme 8–10 in.; bracts $\frac{1}{2}$ – $\frac{1}{4}$ in., often recurved; flowers $\frac{3}{4}$ in. diam., pale yellow speckled with red; dorsal sepal long, arched, narrowly lanceolate; lateral oblong-lanceolate, falcate, acute; petals narrowly oblanceolate, falcate; lip broadly obovate, angles and tip rounded, acuminate or cuspidate; spur a gibbosity.—A *Plocoglottis* from Malacca, *Maingay*, resembles this, but has a shorter raceme, and is described (by Maingay) as having obtuse sepals; the specimen is flowerless

49. **LUISIA**, *Gaud.*

Tufted epiphytes; stem terete, rigid, sheathed, pseudobulbs 0. *Leaves* elongate, terete, obtuse. *Flowers* drooping, small, spicate on a short or very stout erect axillary rachis; bracts very short, thick, imbricating, persistent. *Sepals* subequal or the decurved dorsal smaller. *Petals* often longer, narrower. *Lip* sessile on the base of the column, base flat concave or saccate. *Column* very short, truncate; anther 2-celled; pollinia 2, subglobose, seated on a replicate short strap. *Capsule* narrow, erect.—Species about 15, tropical Asia to N. Caledonia.

The materials at my disposal for the elucidation of this remarkable genus are, though considerable, far from being sufficient. Above all careful drawings for living plants should be obtained, when the following attempt at diagnosing the Indian species will want revision and probably correction.

* *Petals not much longer than the lateral sepals (most so in L. primulina).*

1. **L. teretifolia**, *Gaud. Bot. Freyc. Voy.* 427, t. 37; leaves 4–6 in., flowers small, lateral sepals subacute keel winged, petals linear-oblong obtuse hardly longer than the sepals, hypochile subquadrate saccate, epichile broadly cordate. *Blume Rumph.* i. t. 194, f. 3, t. 197 D; *Mus. Bot.* i. 63; *Lindl. Fol. Orchid.* 2 (excl. in all Syn. Ep. triste). *L. burmanica*, *Lindl. l. c.* *L. brachystachys*, var. *flaveola*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 144. *L. platyglossa*, *Reichb. f. in Walp. Ann.* vi. 622. *L. zeylanica*, *Lindl. l. c.* *Cymbidium triste*, *Roarb. Fl. Ind.* iii. 461 (not of Willd.); *Bot. Mag.* t. 3648; *Wight Ic.* v. 11 (text, not Ic.); *Griff. Notul.* iii. 340 (the *Mergui plant*). *C. tenuifolium*, *Wight l. c.* t. 1689 (Ic., not text).

SIKKIM HIMALAYA (*Ic. Cathcart*). The KHASIA Mts., at Churra (*Ic. Jerdon*). BENGAL; in the Sunderbunds, *Roxburgh*. PEGU and TENASSERIM, *Griffith*, &c. THE WESTERN GHATS, from Canara to Travancore. CEYLON, *Macrae*, &c.—DISTRIB. Malay Islands to New Caledonia.

Stem 6–12 in., stout; internodes $\frac{1}{2}$ – $\frac{3}{4}$ in. *Leaves* variable in thickness. *Rachis* of spike $\frac{1}{2}$ – $\frac{1}{3}$ in. *Petals* $\frac{1}{2}$ – $\frac{1}{4}$ in. long. *Lip* equalling or rather exceeding the sepals. *Column* very short. *Capsule* $\frac{3}{4}$ –1 $\frac{1}{2}$ in.—Blume erred in referring Willdenow's *Cymbidium triste* to Gaudichaud's *Luisia teretifolia*. The latter appears to accord with the Indian plant, and Wight's t. 1689 is very characteristic. Blume's t. 194 has larger flowers. A coloured drawing of Lindley's *burmanica* by Griffith is excellent. The petals vary in length and form, but never much exceed the sepals. The lip is in five Indian drawings purple. Blume figures a purple hypochile and yellow epichile with purple disk. Roxburgh describes the lip as dark purple with yellow spots. Griffith figures it green with black purple blotches. Wight says, "Flowers pale pink, lip conformable, afterwards purple." In var. *flaveola*, *Par. & R. f.*, the flowers are yellow, the hypochile purple and epichile streaked with purple. Lindley's *L. zeylanica* (*Macrae*, 1829) is identical with the Peninsular species, but there are along with its flowers of a different and a garden plant, which he referred to *Vanda trichorhiza*, Hook. Reichenbach's *L. brachystachys*, founded on Wight's t. 1689, is

consequently *teretifolia*. Lindley's *L. trichorhiza* consists of three Nilghiri specimens of *L. teretifolia* (mislabelled Khasia Mts.), and one fruiting Khasian specimen (as indicated by Reichenbach in Herb. Lindl.). For *Cymbid. triste*, Willd., see *L. tristis*.

2. *L. brachystachys*, Blume Rumph. iv. 50; Mus. Bot. i. 64; leaves 2-6 in. slender, sepals and petals as in *L. teretifolia*, lip obovate-oblong nearly flat grooved hardly constricted at the base of the broadly ovate epichile. Reichb. f. Xen. Orchid. i. 204, t. 78, f. 1; Lindl. Fol. Orchid. 3. Mesoclastes brachystachys, Lindl. in Wall. Cat. 1994; Gen. & Sp. Orchid. 45.

TROPICAL WESTERN HIMALAYA; Garwhal, Falconer; Kumaon, Stewart. SILHET and the KHASIA HILLS, Wallich. BENGAL, at Jessore and Dacca, Clarke. TENASSERIM (Ic. Parish).

A more slender plant than *L. teretifolia*, but perhaps a variety; flowers of the same size, but with a very different lip, which varies a little in breadth, and in the distinctness of the hypochile from the epichile. The lip is rather thin, with usually strong parallel grooves or nerves, though sometimes it is very thick and fleshy when the grooves are not visible (in the dried state). Column very short. Capsule $\frac{3}{4}$ -1 in.—Clarke describes the sepals green without, rose-purple within; petals rose-purple with green tip and base; lip yellow at base, black-purple for $\frac{2}{3}$ of upper part, but variable.

3. *L. trichorhiza*, Blume Mus. Bot. i. 63; leaves 4-6 in. stout, flowers twice as large as in *L. teretifolia*, petals $\frac{1}{2}$ in. long about as long as the lateral sepals, lip obovate-oblong rather longer than the sepals flat grooved constricted at the insertion of the broadly ovate epichile with the quadrate hypochile, column rather long. Lindl. Fol. Orchid. 2; Reichb. f. Xen. Orchid. t. 77. f. 878. ? *Vanda* ? *trichorhiza*, Hook. Fl. Exot. t. 72.

TROPICAL HIMALAYA, Wallich; Garwhal, Falconer.

I have seen only two native specimens of this plant, a flowering and a fruiting, from Garwhal, they bear the mss. name of *L. retusa*, Reichb. f. It is the only species that approaches the Flora Exotica *Vanda* ? *trichorhiza* in the size of the flower and length of the column, differing from it only in the lip not being longer than the sepals, which is a very variable character. Flowers of *V. ? trichorhiza* in Lindley's Herbarium closely resemble this, except in having a longer lip. A spike of flowers of *V. trichorhiza* in Herb. Hook. is presumably from the type plant; the flowers are on slender pedicels, with the lip grooved as in *brachystachys*, but with the sepals and petals narrower and more acute. Of the hairy roots of *V. trichorhiza* described in Fl. Exot. I know nothing, but Lindley, who no doubt saw the original plant, says that it has sometimes an enormous development of downy roots.

4. *L. filiformis*, Hook. f.; stem elongate slender, leaves 6-12 in., very slender, rachis of spike very stout short few-fl., flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., lateral sepals cymbiform, keel broadly winged, petals linear and lip fleshy, hypochile broad flat smooth, epichile subquadrate deeply many-grooved, tip incurved fleshy, column very short broad.

SILHET; at Terrya Ghat, Mann.

Stem probably several feet long; internodes 1-2 in. Leaves as thick as a crow quill. Petals hardly longer than the lateral sepals.—Except in the short petals this a good deal resembles *L. Grovesii*.

5. *L. micrantha*, Hook. f.; stem short robust, leaves 2 in. slender, rachis of spike short thick few-fl., flowers $\frac{1}{2}$ in. diam., lateral sepals ovate subacute midrib very stout, petals oblong obtuse, hypochile of lip oblong concave with 2 strong incurved teeth on each side, epichile lozenge-shaped fleshy, column rather long.

ASSAM, Griffith (in Herb. Wight). KHASIA HILLS, alt. 3-4000 ft., Mann.

Stem 2-5 in.; internodes $\frac{1}{2}$ - $\frac{1}{2}$ in. *Leaves* as thick as a sparrow quill. *Rachis* of spike clothed with imbricate ovate acute bracts; pedicels decurved; flowers punctulate; dorsals sepal oblong obtuse and similar petals 1-nerved; lip as long as the sepals, epichile about half as long as the hypochile both concave.—Griffiths' specimens are not in flower but appear to be the same as Mann's, which are so.

6. ***L. primulina***, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 144, t. 30, f. 1; stem short very stout, leaves 3-4 in. very stout, rachis short few-fl., sepals subequal oblong acute, petals larger obovate-spathulate obtuse, lip much longer than the lateral sepals yellow, hypochile small short saddle-shaped, epichile large triangular-ovate obtuse, margin obscurely lobulate.

TENASSERIM; at Moulmein, *Parish*.

Stem 3-4 in.; internodes short. *Leaves* $\frac{1}{2}$ in. diam. *Flowers* $\frac{2}{3}$ in. diam., pale yellow with a purple column.—Described chiefly from a drawing by *Parish*. A drawing in *Herb. Calcutt.* of apparently the same species (collected at Moolyet, Moulmein) has elliptic-acute sepals, a shorter cordate epichile, a larger hypochile with a purple disk, and a yellow column; its concave lateral sepals are spurred at the back. There are in *Herb. Kew* flowers and leaf of a cultivated plant from Burma (*Hort. Kew*), resembling this, but with a purple lip.

7. ***L. macrotis***, *Reichb. f. in Gard. Chron.* 1869, 1110; habit and leaves of *L. Psyche*, sepals triangular keeled, petals longer triangular ligulate acute flat base broad, lip much longer than the sepals violet-black triangular-ovate from a broad 2-auricled base sulcate.

ASSAM (*Hort. Day*).

I have seen only flowers of what I take to be this (*Hort. Kew*), in which the sepals are ovate-oblong, subacute, the petals much longer ($\frac{1}{2}$ in. long), linear-oblong, obtuse, and the lip very like that of *L. primulina*, and of the same size, but dark purple. The shape of the petals distinguishes it from *primulina*.

** *Petals much longer than the sepals.*

8. ***L. Psyche***, *Reichb. f. in Bot. Zeit.* 1863, 98; in *Gard. Chron.* 1865, 342; stem tall stout, leaves 3-5 in. stout, rachis short, flowers few large, petals linear-spathulate or obovate obtuse twice as long as the obtuse concave sepals, lip broadly ovate-oblong retuse, base contracted saccate 2-auricled. *Bot. Mag. t.* 5558.

TENASSERIM; at Moulmein, *Parish*. ? KHASIA HILLS, alt. 3000 ft., *Mann*.

Stem 1 ft., internodes 1 in. *Leaves* strict, $\frac{1}{2}$ in. diam. *Sepals* $\frac{1}{2}$ in. long, petals $1\frac{1}{2}$ in., variable in breadth, both pale greenish yellow. *Lip* convex, nearly 1 in. long, violet-brown, tessellated with white or yellow, auricles erect, embracing the white column. *Capsule* $1\frac{1}{2}$ -2 in. long.—*Mann's* specimen is in fruit only. It has a large clavate capsule as figured by *Parish* in his drawing of *L. Psyche*.

9. ***L. tenuifolia***, *Blume Rumph. iv.* 50; *Mus. Bot. i.* 63; stem long slender, leaves 4-7 in., rachis $\frac{1}{2}$ in., flowers few large, petals narrow twice as long as the ovate subacute concave sepals, lip narrowly panduriform convex base broad 2-auricled, lip with 2 divergent lobes. *Lindl. Fol. Orchid. 2*; *Thwaites Enum.* 302; *Dalz. & Gibs. Bomb. Fl.* 266; *Walp. Ann. vi.* 619. *L. Birchea*, *Blume Rumph. iv.* 50; *Mus. Bot. i.* 63. *L. zeylanica*, *Thwaites mss.* (C. P. 2347). *Birchea teretifolia*, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv.* 66, t. 10. *Cymbidium tenuifolium*, *Lindl. Gen. & Sp. Orchid.* 167 (*excl. Syn.*). *C. triste*, *Wight Ic. t.* 911 (*non Willd.*).

On the WESTERN GHATS, from the Concan to Travancore, *Wight*, *Dalzell*, &c. CEYLON; in the Central Province, *Macrae*, *Thwaites*.

Leaves very variable in thickness, sometimes very long and slender. *Sepals* $\frac{1}{2}$ - $\frac{2}{3}$ in. long, yellowish green stained or streaked with red; petals more green;

lip twice as long as the lateral sepals, white or greenish with deep purple base and lobes, or purple and streaked with paler lines (Dalzell), disk with 3 large calli. Macrae's Ceylon specimen is like the Malabar plant. A. Richards' figure of *Birchea teretifolia* is a very bad one. Rheede's figure in xii. t. 5, on which Linnæus' *Epidendrum tenuifolium* (*Cymbidium*, Willd.) was founded, is not a *Luisia*, the leaves are grooved, and spike very different.

10. **L. volucris**, Lindl. *Fol. Orchid.* 1; stem stout, leaves 3-5 in. stout, lateral sepals cymbiform with an acute dorsal wing, petals 2-4 times as long 1-1½ in. linear dilating to the rounded tip, hypochile oblong with incurved basal auricles, epichile as long much broader ovate-cordate obtuse fleshy. Walp. *Ann.* vi. 619.

SIKKIM HIMALAYA, J. D. H. KHASIA MTS. and SILHET, Lobb, J. D. H. & T. T. ? Chittagong Hills, *lc.* in *Hort. Calcutt.*

Stem 6-10 in., internodes ½ in. *Rachis* of spike ½ in., very stout. *Petals* and *sepals* very pale yellow-green; lip dark purple, epichile hardly cordate (as described by Lindley). *Capsules* 1 in.—Flowerless specimens closely resemble *L. teretifolia*. In the drawing of the Chittagong plant the stem is slender, the internodes are 1½ in. and leaves 7-9 in., the petals not dilated at the tip, and the epichile of the lip green and grooved.

11. **L. antennifera**, Blume *Rumph.* iv. 50; *Mus. Lugd. Bat.* i. 64; stem stout, elongate, leaves 3-4 in., rachis of spike very stout ¾-1½ in., petals linear ¾ in. long twice as long as the cymbiform sepals, lip cuneately oblong, epichile hardly distinct from hypochile which has a broadly 2-auricled base. *Reichb. f. Xen. Orchid.* i. 265, t. 78, f. 2.

PERAK, Scortechini, *King's Collector*.—DISTRIB. Borneo (Low).

Stem a foot and upwards; internodes 1 in. (the largest of the genus except *tristis*), as are the spikes. *Flowers* in Low's drawing pale green with purple lip as long as the sepals; in note by King's collector, "pale greenish white waxy inner petals dark blue," possibly the dark blue is meant for the lip. The form of lip is the same in a drawing by Scortechini of the Perak plant.

12. **L. tristis**, Hook. f.; stem stout elongate, leaves stout 3-5 in., rachis of spike very stout 1-2 in., petals ¾ in. long linear twice or thrice as long as the sepals, hypochile of lip quadrate base 2-auricled, epichile short broadly ovate-cordate grooved. *Cymbidium triste*, Willd. *Sp. Pl.* iv. 99. *Epidendrum triste*, Forst. *Prodr.* No. 314.

PENANG, Curtis.—DISTRIB. New Caledonia.

Very like *L. antennifera*, having the same stout habit, foliage, and thick long rachis of the spike, but the lip is very different, and is as far as can be judged from the indifferent specimens in Herb. Forster, identical with that of his *Epidendrum triste*.

13. **L. Grovesii**, Hook. f.; stem very slender elongate, leaves 6-10 in. filiform, rachis of spike very short few-fl., flowers 1 in. diam., lateral sepals cymbiform, petals twice or thrice as long narrowly linear obtuse, hypochile of lip subquadrate flat, epichile broadly cordate, column very short broad.

EASTERN BENGAL; in the Looshai Hills, G. B. Groves (*in Herb. Calcutt.*).

Closely resembles *L. filiformis*, but at once distinguished by the long petals.—Described from two drawings of plants cultivated in Hort. Calcutta, one of a specimen without locality, the other localized as above. The sepals and petals are pale yellowish, the hypochile and column dark purple, the epichile pale purplish in one with darker margins, greenish in the other, in both dark purple at the base.

DOUBTFUL SPECIES.

L. MICROPTERA, Reichb. f. in *Gard. Chron.* (1870) 1503; leaves terete rather stout, raceme few-fl., flowers small, sepals ligulate acute, longer than the petals, both straw-cold., lip half purplish half yellow, hypochile ovate uncinat at the base

on each side, epichile broadly triangular-ovate, column purplish, anther with 2 yellowish eyes in the centre of each half.—Assam, *Benson (Hort. Veitch)*.—Description from the author l. c. Possibly the sepals longer than the petals is an error, due to the omission of a comma in the phrase “sepals ligulatis acutis petalis longioribus.”

CYMBIDIUM TENUIFOLIUM, Willd. of *Thwaites mss.* (C. P. 3530) is certainly not *L. tenuifolia*, Bl., having short petals and a broad lip. It is probably a new species near *jiliformis*, but the specimen being solitary and only 1-fl'd. I leave it undescribed.

50. **COTTONIA**, Wight.

An epiphyte, stem leafy. *Leaves* long, narrow, coriaceous. *Scape* tall, very slender, branched. *Flowers* in short terminal racemes. *Sepals* subequal and narrower petals widely spreading. *Lip* sessile at the base of the column, much longer than the sepals, flat, spreading; side lobes minute basal; midlobe subpanduriform, retuse. *Column* short, foot 0; anther short, 2-celled; pollinia 2, pyriform, 2-cleft; strap linear, sides recurved; gland minute. *Capsule* slender, elongate.

C. macrostachya, Wight *l. c.* t. 1755; *Dalz. & Gibs. Bomb. Fl.* 263; *Lindl. in Journ. Linn. Soc.* iii. 39; *Bot. Mag.* t. 7099. *C. peduncularis*, *Reichb. f. in Cat. Orchid. Schüller* 1857, 52; *Thwaites Enum.* 303; *Walp. Ann.* vi. 860. *Vanda peduncularis*, *Lindl. Gen. & Sp. Orchid.* 216; *Part. Fl. Gard.* iii. t. 253.

The DECCAN PENINSULA; on the Ghats from the Concan southwards. CEYLON; in the Central Province.

Stem 4–8 in., leafy; internodes short. *Leaves* 5–6 by $\frac{1}{2}$ – $\frac{2}{3}$ in., lorate, recurved, unequally obtusely 2-lobed. *Scape* 12–18 in., strict, erect; branches few, tipped by short racemes; pedicels long, slender; bracts ovate; flowers $\frac{3}{4}$ in. diam.; sepals oblong and subspathulate; petals dirty orange with red streaks; lip dark purple with a broad villous golden margin; side lobes ear-like with 3 calli between them, the median pubescent, disk of midlobe with median callus; column puberulous; rostellum obscure. *Capsule* $1\frac{1}{2}$ in.—*Lip* like that of *Ophrys aranifera*.

50/1. **DIPLOPRORA**, Hook. f.

Stem short, slender. *Leaves* falcately lanceolate, acuminate. *Scape* short, simple, few-fl'd. *Sepals* widely spreading, keeled. *Petals* obovate. *Lip* as long as the petals, margins adnate to the sides of the column, cymbiform and sigmoidly curved, suddenly narrowed into a compressed 2-caudate tip, disk keeled. *Column* very short, foot 0; anther 2-celled; pollinia 2, globose; strap short linear, sides recurved; gland small. *Capsule* slender.

D. Championi, Hook. f.; *l. c.* *Plant. ined.* *Cottonia Championi*, *Lindl. in Hook. Journ. Bot.* vii. (1855) 35; *in Journ. Linn. Soc.* iii. 39; *Benth. Fl. Hongk.* 357. *Luisia bicaudata*, *Thwaites Enum.* 302. *Vanda bicaudata*, *Thwaites l. c.* 429.

BHOTAN HIMALAYA, *Gammie*. KHASIA MTS., alt. 3–4000 ft., *J. D. H. & T. T. TENASSEERIM, Parish*. CEYLON, *Thwaites*.—DISTRIB. Hong Kong.

Stem 1–3 in., ascending. *Leaves* 3–4 by $\frac{1}{2}$ – $\frac{2}{3}$ in., thin and many-nerved when dry. *Scape* 1–2 in., stout; rachis flexuous; flowers few, $\frac{1}{2}$ in. diam., yellow; lip with a deep longitudinal ridge within, sides streaked with red; column papillose. *Capsule* $1\frac{1}{2}$ in.—Very distinct from *Cottonia* in habit, foliage, inflorescence and lip, and much nearer *Phalænopsis*, but wants the appendages on the disk of the lip and the side lobes, and differs strikingly in habit.

51. **STAUROPSIS**, *Reichb. f.*

Epiphytes; stem stout, leafy. *Leaves* distichous, coriaceous, flat, 2-lobed. *Flowers* in lateral racemes. *Sepals* and similar but smaller *petals* widely spreading. *Lip* sessile, adnate to the base or sides of the column, incurved, base simple or saccate, lobes narrow, disk naked or hairy. *Column* short, thick, foot 0, top truncate; anther 1-celled; pollinia 2, subglobose, 2-cleft; strap broad, gland large.—Species about 8, Malayan.

1. **S. giganteus**, *Benth. in Gen. Plant.* iii. 572; flowers very large golden-yellow ocellately blotched with cinnamon, sepals and petals spathulately obovate, lip white hatchet-shaped obtuse, base cordate, side lobes rounded, midlobe narrow obtuse fleshy, disk with a broad conical callus. *Fieldia gigantea*, *Reichb. f. Xen. Orchid.* ii. 39; *Walp. Ann.* vi. 871. *Vanda gigantea*, *Lindl. in Wall. Cat.* 7326; *Gen. & Sp. Orchid.* 215; *Fol. Orchid.* 2; *Bot. Mag.* t. 5189. *Reichb. f. l. c.* 38, t. 112; *Ill. Hort.* 1861, 277; *Rev. Hort.* 1874, t. 291. *V. Lindleyana*, *Griff. Notul.* iii. 353.

TENASSERIM; at Moulmein, *Wallich, Griffith.*

Stem pendulous. *Leaves* 1–2 ft. by 2–3 in., very thick, flat. *Raceme* 10–15 in., decurved, many-fl.; rachis very stout; bracts short, broad; flowers 3 in. diam.; lateral sepals horned behind below the tip.—Griffith describes two sterile stamens between the lateral sepals and petals.

2. **S. undulatus**, *Benth. mss.*; flowers 1½ in. diam. nearly white, sepals and petals spathulately oblanceolate waved, base of lip saccate adnate to the sides of the column, midlobe laterally compressed 3-ridged *Vanda undulata*, *Lindl. in Journ. Linn. Soc.* iii. 42; *Reichb. f. in Gard Chron.* 1875, ii. 212; 1878, i. 168.

EASTERN SUBTROPICAL HIMALAYA; Sikkim and Bhotan, ascending to 6000 ft. The KHASIA HILLS, alt. 5–6000 ft.

Stem 6–10 in.; sheaths and scape minutely warted. *Leaves* 3–4 by ½–¾ in., unequally obtusely 2-lobed. *Scape* 5–8 in. and raceme strict, erect, laxly few-fl. near the top; bracts ¼ in. long, broad, obtuse; flowers white flushed with pink or purplish; sepals acuminate, undulate, lateral deflexed; petals similar but smaller; lip yellow, base orbicular, sides streaked with pink; midlobe linguiform; tip truncate, sometimes purplish; pollinia globose, strap short, gland large transverse.—I am very doubtful as to the affinity of this plant, which differs from *S. giganteus* in the base of the lip being adnate to the sides of the column, and forming with it a cup with a thickened rim.

52. **ARACHNANTHE**, *Blume.*

Characters of *Stauropsis*, but lip jointed on to the base of the column and mobile.—Species 5 or 6, Himalayan and Malayan.

This character of the mobile lip requires confirmation in the living plant of some species.

* *Flowers in simple racemes. Side lobes of lip much smaller than the midlobe.*

1. **A. Cathcartii**, *Benth. in Gen. Plant.* iii. 573; scape few-fl., lateral sepals and petals broadly elliptic obtuse, side lobes of lip small rounded. *Esmeralda Cathcartii*, *Reichb. f. Xen. Orchid.* ii. 38; *Walp. Ann.* vi. 871. *Vanda Cathcartii*, *Hook. f. Ill. Himal. Pl.* t. 23; *Bot. Mag.* t. 5845; *Lindl. Fol. Orchid.* 8; *Ill. Hort.* 1858, 187; *Flore des Ser.* t. 1251; *Warner Orchid. Alb.* t. 168; *Jenning's Orchid.* t. 10; *Floral Mag. N. S.* t. 66; *Gard. Chron.* 1870, 1409.

EAST NEPAL and SIKKIM HIMALAYA, alt. 3-6000 ft., *Griffith's Collectors, J. D. H., &c.* BHOTAN (*loc. in Hort. Calcutt.*).

Stem 12-18 in., stout. *Leaves* 6-9 by 1-1½ in., flaccidly coriaceous, lorate, unequally obtusely 2-lobed. *Scape* longer than the leaves, 4-6-fld.; bracts short, broad; flowers 2-2½ in. diam., fleshy; sepals whitish beneath, above yellowish closely barred with chocolate or red, dorsal obovate; lip shorter than the sepals, oblong, variable in breadth, side lobes erect speckled with red; midlobe shoe-shaped, obtuse, yellow, margins incurved sharply 2-keeled. *Capsule* 4 in., linear-oblong or subpyriform.

2. **A. bilinguis**, *Benth. in Gen. Plant.* iii. 573; scape few-fld., lateral sepals and petals oblanceolate, lip with a large recurved spur under the limb, side lobes very small rounded. *Renanthera bilinguis*, *Reichb. f. Xen. Orchid.* i. 7, t. 4. *R. labrosa*, *Reichb. f. l. c.* 88. *Arrhynchium labrosum*, *Lindl. in Part. Fl. Gard.* i. 142.

TENASSERIM; at Moulmein, *Parish*, &c. The KHASIA MTS.; at Nurtiung (*loc. Jerdon*).

Stem elongate, as thick as a swan's quill or less. *Leaves* 5-8 by ½-¾ in., keeled, coriaceous, unequally 2-lobed. *Scape* long or short, greenish brown; flowers 4-6, distant, 1½ in. diam.; sepals and petals obtuse, yellowish with broad red-brown or blotched margins; lip yellow, very narrow, recurved; spur adnate, recurved, as long as the limb, the tip of which is hence bifid with the lobes superposed; strap of pollinia short, gland large.

3. **A. Clarkei**, *Rolfe in Gard. Chron.* 1888, ii. 567; scape few-fld., sepals and petals linear-spathulate obtuse. *Bot. Mag.* t. 7077. *Esmeralda Clarkei*, *Reichb. f. in Gard. Chron.* 1886, ii. 552.

SIKKIM HIMALAYA, alt. 6000 ft., *Clarke*. BHOTAN (*loc. in Hort. Calcutt.*).

Stem 12-18 in., stout. *Leaves* 5-6 by 1¼-1½ in., flaccidly coriaceous, lorate, unequally obtusely 2-lobed. *Scape* 2-3-fld.; flowers 3½ in. diam., yellow barred with pale cinnamon-brown; lateral sepals and petals falcate; dorsal sepal erect; lip half the length of the sepals, base narrowed; side lobes short, broad, obtuse; midlobe ovate-cordate, obtuse, ridged; column speckled with red. *Capsule* 2½ in., oblong, very thick.

** *Flowers panicled. Side lobes of lip nearly equalling or exceeding the midlobe.*

4. **A. Maingayi**, *Hook. f.*; lateral sepals broadly obovate, dorsal narrower, petals linear-spathulate falcate, side lobes of clawed lip quadrate, midlobe as long oblong fleshy, spur red beneath.

MALACCA, *Maingay (Kew Distrib. 1645)*.

Stem 4-6 ft., sheaths smooth. *Leaves* 3-5 in., linear-oblong; tip narrowed, notched. *Panicle* 1-3 ft.; branches short, divaricate; pedicel and ovary stout; flowers 2 in. diam.; lip fleshy, not half as long as the sepals, yellow, sides blotched with red ("claw elastic," *Maingay*); column short, truncate; strap of large oblong furrowed pollen broadly linear, gland transverse.

5. **A. moschifera**, *Blume Rumph.* iv. t. 196, 199; lateral sepals and petals narrowly linear-spathulate falcate, dorsal sepal straight, side lobes of lip quadrate, midlobe as long obovate acuminate shortly spurred beneath. *Arachnis moschifera*, *Blume Bijdr.* 365, t. 26. *Aerides arachnites*, *Swartz in Schrad. Journ.* 1799, 233; *Willd. Sp. Pl.* iv. 131. *Renanthera Arachnitis*, *Lindl. Gen. & Sp. Orchid.* 217. *R. Flos-aeris*, *Reichb. f. Xen. Orchid.* i. 88; *Walp. Ann.* vi. 878. *Limodorum Flos-aeris*, *Swartz in Nov. Act. Upsal.* 1740, 37. *Epidendrum Flos-aeris*, *Linn. Sp. Pl.* 1348.

PERAK, alt. 4-6000 ft., *King's Collector*.—DISTRIB. Java, Borneo.

Stem 4-6 ft., as thick as a swan's quill, sheaths smooth. *Leaves* 4-7 in., loriform or linear-oblong, tip narrowly notched. *Panicle* 2-3 ft.; branches very short, divaricate, 2-3-fld.; pedicel with ovary 1 in.; flowers 3-4 in. diam., dark green or yellow barred with maroon; upper margin of side lobes recurved; anther broad, truncate; pollinia very large, flattened; strap broad with a median ridge.

53. *PHALÆNOPSIS*, Blume.

Epiphytes; stem short, leafy; pseudobulb 0. *Leaves* distichous, coriaceous. *Scape* lateral; flowers usually large, loosely racemed. *Sepals* widely spreading. *Petals* narrower or broader. *Lip* clawed or sessile, adnate to the base or foot of the column, side lobes erect, midlobe various, spur 0; disk variously appendaged, with usually a forked plate or callus. *Column* suberect, foot long short or 0; anther 2-celled; pollinia 2, sulcate or 2-partite, strap linear or spatulate, gland large or small.—Species about 25, Indian and Malayan.

The genus requires revision, and a careful examination of the lip, which is very imperfectly figured and described by the authors who have had access to living specimens. The beautiful *P. amabilis* has been sent from Singapore, where it is cultivated.

* Lateral sepals inserted by a narrow base to the base or very short foot of the column.

† *Rachis* of raceme compressed; bracts fleshy, distichous.

1. *P. Cornu-cervi*, Par. & Reichb. f. in *Hamb. Gartenz.* 1860, 116; scape 6-10 in., flowers 2 in. diam. yellow-green barred with brown. *Rolfe in Gard. Chron.* 1886, ii. 276. *Polychilus Cornu-cervi*, *Breda Orchid. Jav.* t. 1; *Bot. Mag.* t. 5570.

TENASSERIM; at Moulmein, Lobb, Parish. PERAK, *Scortechini*.—DISTRIB. Sumatra, Java, Borneo.

Leaves 3-8 in., oblanceolate. *Scape* stout, simple or branched; rachis 3-5 in.; bracts $\frac{1}{2}$ in., oblong, tip rounded; sepals oblong-lanceolate; petals shorter; lip subsessile, side lobes oblong, midlobe ovate acute with a short falcate wing on each side of the tip; disk with a broad 2-awned plate at the base, and a flattened sword-shaped compressed spur in front of it.—Habit of a *Sarcochilus*.

2. *P. violacea*, Teyssm. & Binn. in *Batav. Nat. Tydschr.* xxiv. (reprint 10); scape 2-12 in., flowers 1 in. diam. Reichb. f. in *Gard. Chron.* 1878, ii. 234; 1881, ii. 145, fig. 32, 187; *Warner Orchid. Album*, t. 182; *Flor. Mag.* N. S. t. 342; *Rolfe in Gard. Chron.* 1886, ii. 277; *Ill. Hort.* 1855, 173 (var. *Schræderi*). *Stauritis violacea*, Reichb. f. in *Hamb. Gartenzeit.* 1802, 34.

PERAK (*Scortechini*). SINGAPORE (*fid. Warner l. c.*)—DISTRIB. Sumatra.

Leaves 4-10 in., elliptic or oblanceolate, acute. *Scape* very stout, 1-7-fld.; bracts ovate, acute; lateral sepals oblong-lanceolate, unequal-sided, acute, deflexed; petals smaller, oblanceolate; lip narrow, incurved, broadly clawed or stipitate; side lobes erect, narrow, linear, truncate; midlobe cuneately obovate, apex triangular acute crenulate, disk with a bicuspidate appendage at the base; column rather long.—Colours of flower apparently very variable; *Scortechini* describes the sepals and petals as deep carnation with green tips, the side lobes of lip yellow dotted with purple, the midlobe purple; Warner's figure has a very short scape, few flowers, a violet lateral sepal with cream-cold, inner margins, cream-cold, dorsal sepals and petals, and a violet lip. According to Reichenbach the raceme is sometimes branched.—Perhaps two species are confounded under *violacea*.

†† *Rachis of raceme terete.*

3. **P. Lowii**, *Reichb. f. in Bot. Zeit.* 1862, 214; *in Gard. Chron.* 1862, 979; *Xen. Orchid.* ii. t. 151; petals fan-shaped very much larger than the oblong sepals, rostellum much longer than the column. *Bot. Mag.* t. 5351; *Fl. des Serres*, t. 1910; *Warner Select. Orchid. Ser.* 2, t. 15; *Rolfe in Gard. Chron.* 1886, ii. 276.

TENASSERIM; at Moulmein, *Parish.*

Leaves 3–5 in., ovate-oblong or lanceolate, acute. *Scape* with lax-fl. raceme 10–24 in., slender, simple or branched; flowers $1\frac{1}{2}$ –2 in. diam.; sepals white, dorsal largest and broadest; petals flushed with violet towards the base; lip sessile, as long as the lateral sepals, narrowly oblong, side lobes small, uncinately recurved yellow, midlobe obtusely oblong truncate and crenate at the tip purple; disk keeled and furnished with a transverse forked plicate callus at the base of the side lobes in front, and with some soft spines behind; column and rostellum pale purple.

4. **P. Mannii**, *Reichb. f. in Gard. Chron.* 1871, 902; 1876, 503; lateral sepals lanceolate acuminate, petals oblanceolate, lip clawed, side lobes falcately oblong, midlobe panduriform truncate with two spreading and recurved oblong caruncled apical lobules. *Rolfe in Gard. Chron.* 1886, ii. 276.

ASSAM, *Mann.*

Leaves 6–10 in., oblong-lanceolate. *Scape* 12 in., branched; flowers many, scattered, $1\frac{1}{2}$ in. diam.; sepals and petals yellow blotched with brown; lip white with purple blotches, disk with a forked appendage at the base of the midlobe, in front of which is a flattened sword-shaped spur; foot of column very short.—Flower and appendages of lip very like those of *P. Cornu-cervi*; in both the column is long, the pollinia ellipsoid.

5. **P. speciosa**, *Reichb. f. in Gard. Chron.* 1881, i. 562; 1882, ii. 744, fig. 130–132; sepals elliptic-lanceolate acute, petals similar but smaller, lip sessile, side lobes small linear-oblong truncate toothed, midlobe laterally compressed fleshy, tip dilated mallet-like papillose. *Warner Orchid. Album*, t. 158; *Gard. Chron.* 1882, ii. 745, f. 130–132; 1886, ii. 277, fig. 56–58; *Reichenbachia*, ii. t. 57; *Rolfe in Gard. Chron.* 1886, ii. 277.

AMDAMAN ISLANDS, *Berkeley.*

Leaves 8–12 in., obovate-oblong or -lanceolate. *Scape* tall, simple or branched; flowers 2 in. diam., scattered, white or rosy with darker blotches; lip with a forked callus; column long, tip toothed, foot very short; pollinia oblong.—Var. *Christiana*, R. f., has rose-madder sepals and white petals; var. *purpurata*, R. f., has rose-purple flowers.

6. **P. tetraspis**, *Reichb. f. Xen. Orchid.* ii. 146; *in Gard. Chron.* 1881, ii. 562, 656; flowers as in *P. speciosa*, but waxy white with 2 2-awned basal calli on the hairy disk. *Rolfe in Gard. Chron.* 1886, ii. 277.

ANDAMAN ISLANDS, *Col. Man.*—DISTRIB. Sumatra.

Leaves 12 by 2–4 in., cuneately obovate. *Scape* tall, stout, branched.—I have seen no flower of this.

7. **P. Kunstleri**, *Hook. f.*; sepals obovate apiculate, petals rather smaller, tip rounded, lip shortly clawed, side lobes small broadly cuneate truncate, midlobe obovate with 7 thick parallel ridges, tip rounded.

PERAK, *Kunstler.*

Leaves 4–6 in., obovate oblanceolate or elliptic-lanceolate, acute, pale green. *Scape* about equalling the leaves, 2–3-fl. at the tip; bracts very small, ovate; flowers

1 in. diam.; sepals and petals dull yellow green mottled closely with dull red for the basal half; lip small, white, side lobes erect streaked with red, midlobe red purple between the ridges; forked appendage small, with a 2-lobed callus behind it; column about half the length of the lip; pollinia globose, strap short, cuneate, gland quadrate.—Described from dried flowers and a drawing of the whole plant in Hort. Calcutt.

** Lateral sepals inserted by a broad base on the elongate foot of the column.

8. **P. Esmeralda**, *Reichb. f. in Gard. Chron.* 1874, ii. 582; lateral sepals orbicular-ovate, petals broadly obovate, claw of lip long geniculate with two narrow recurved auricles, side lobes broadly falcately obovate, midlobe oblong. *Rev. Hort.* 1877, t. 107; *Warner Orchid. Alb.* vii. t. 21. *Floral Mag.* N. S. t. 358; *Rolfe in Gard. Chron.* 1886, ii. 276; *Orchidoph.* 1881, t. 9. *P. antennifera*, *Reichb. f. in Gard. Chron.* 1878, 398; 1882, 520; *Rolfe l. c.* 1886, ii. 276.

BURMA, *Hort. Low.*—DISTRIB. Cochin China.

Leaves 4–6 in. *Scape* 1–2 ft., simple or branched, slender; rachis elongate; flowers 1 in. diam., amethystine; side lobes of lip erect, appressed, red-purple; disk with a 2-awned callus in front of the auricles, and a raised thickened fleshy ridge from the base of the side lobes to the tip of the midlobe.

9. **P. Parishii**, *Reichb. f. in Gard. Chron.* 1865, 410; 1871, 802; *Xen. Orchid.* i. 144, t. 156, f. 1. *in Saunders' Refug. Bot.* t. 85; flowers small, lateral sepals subrotund, lip short sessile, side lobes small falcate, midlobe much broader shortly stipitate reniformly cordate. *Bot. Mag.* t. 5815; *Rolfe in Gard. Chron.* 1886, ii. 276.

EASTERN HIMALAYA, *Lobb, Mann.* CACHAR, *Keenan.* TENASSERIM, *Lobb.*

Leaves 3–5 in., linear or obovate-oblong. *Scape* 3–4 in., 6–8-fld.; flowers $\frac{3}{4}$ in. diam.; sepals and obovate petals cream-cold.; lip mobile, purple-brown; disk with a narrow 4-awned appendage at the base overlapping a much broader ciliate lamina; rostellum 3-partite.—The figure in Saunders' Refug. is of var. *Lobbii*, R. f., which has a white lip with two chestnut bands.

SPECIES OF DOUBTFUL POSITION.

P. FUSCATA, *Reichb. f. in Gard. Chron.* 1874, ii. 6; “allied to *P. Cornu-cervi*, roots short, leaves very broad oblong obtuse acute, flowers medium-sized, sepals oblong obtusely acute, petals cuneately oblong obtuse, lip 3-partite, side segments ligulate retuse one toothed on each side, umbonate on the middle of the lower side, mid-segment oblong acute keeled in the middle, base with a 2-toothed callus, and with an aristate ligula on each side behind it, column not angled (*exangulata*) at the base.”—Malayan Peninsula, *Hort. Bull.*—Characters from Reichenbach l. c., who does not describe the inflorescence, or whether the column has a foot or not.

54. DORITIS, Lindl.

Characters of *Phalenopsis*, and having the same 2-awned plate on the disk of the lip, but the column is narrowly winged, its foot longer forming a spur-like mentum with the side lobes of the lip.—Species 5, Indian and Malayan.

D. pulcherrima, *Lindl. in Wall. Cat.* 7348 (*Gen. & Sp. Orchid.* 178, *Reichb. f. Xen. Orchid.* ii. 7), a Siam species, with flowers nearly 1 in. diam. in a panicle 2–3 ft. long, probably occurs in the Straits region.

1. **D. tænialis**, *Benth. in Gen. Plant.* iii. 574; scape short few-fld., mentum acute, side lobes of lip very narrow spathulate reflexed on the disk, tips of the forked appendage of the lip hooked. *Ærides tæniæle*,

Lindl. Gen. & Sp. Orchid. 239; *in Journ. Linn. Soc.* iii. 41. *Æ. carnosum*, *Griff. Notul.* iii. 365; *Ic. Plant. Asiat.* t. 338 A.

SUBTROPICAL HIMALAYA; from Kumaon, alt. 3-6000 ft., eastwards to BHOTAN, the KHASIA MTS., MUNNIPORE and BURMA.

Roots 1-3 ft., flat, $\frac{1}{8}$ - $\frac{1}{2}$ in. broad, forming large tortuous tufts. *Leaves* few, 3-5 in., obovate-oblong, obtuse or subacute, narrowed to the sessile base, soft when dry. *Scape* 1-2 in.; bracts small, broad; flowers $\frac{3}{4}$ in. diam., mauve purple; midlobe of lip dark red or purple. *Capsule* $1\frac{1}{2}$ in., fusiform.

2. **D. Wightii**, *Benth. in Gen. Plant.* iii. 574; scape elongate simple or branched, side lobes of spreading lip broad cuneate-obovate, midlobe obcordate. *Phalænopsis Wightii*, *Reichb. f. in Bot. Zeit.* 1862, 214. *Ærides latifolium*, *Thwaites Enum.* 430.

EASTERN HIMALAYA; Sikkim (*Ic. in Hort. Calcutt.*); Bhotan, *Lister. CHITTAGONG (Hort. Calcutt.)*. BURMA; Moulmein, *Parish*; Mougong, *Griffith*. The CIRCARS, *Heyne*. MALABAR, *Wight*, &c. CEYLON, *Thwaites*.

Habit of *D. tæniatis*, but leaves rather larger, scape much longer, and lip very different.

55. **RHYNCHOSTYLIS**, *Blume*.

Epiphytic, stem stout leafy, pseudobulbs 0. *Leaves* very thick, linear, 2-lobed. *Flowers* in long dense drooping cylindric racemes, bright-cold. *Sepals* and broader petals obtuse, spreading, contracted at the base. *Lip* adnate to the base of the column, deeply saccate, mouth of sac pubescent within, side lobes 0, outer margin produced into a clawed dilated limb. *Column* short stout, foot 0; rostellum shortly beaked; anther imperfectly 2-celled; pollinia 2, subglobose, 2-cleft, strap filiform, gland small.—Species 2 or 3, Indian or Malayan.

R. retusa, *Blume Bijdr.* 286, t. 49; leaves deeply channelled keeled præmorse or retuse, raceme drooping, sac cylindric much longer than the limb of the lip. *R. præmorsa*, *Blume l.c.* *R. guttata*, *Reichb. f. in Bonpland.* ii. 93. *R. Garwalica*, *Reichb. f. in Walp. Ann.* vi. 888. *Saccolabium guttatum*, *Lindl. in Wall. Cat.* 7308; *Gen. & Sp. Orchid.* 220; *in Journ. Linn. Soc.* iii. 32; *Bot. Mag.* t. 4108; *Wight Ic.* t. 1745-6; *Dalz. & Gibs. Bomb. Fl.* 263; *Hartm. Parad.* ii. t. 3; *Orchidoph.* 1888, 273 (var. *gigantea*); *De Vriese Orchid.* t. 14. *Warner Sel. Orchid. Ser.* 2, t. 18; *Griff. Ic. Pl. Asiat.* t. 819. *S. præmorsum*, *Lindl. l.c.* 221. *S. Rheedii*, *Wight Ic.* v. 19. *S. retusum*, *Fl. des Serres* xiv. 191, t. 1463-4. *S. Heathii*, *Hort., ex Gard. Chron.* 1885, 369. *S. Blumei*, *Lindl. Sert.* t. 47; *in Bot. Reg.* 1841, *Misc.* 55; *Ill. Hort.* t. 545; *Puydt. t.* 37; *Warner Orchid. Alb.* t. 169 and t. 238 (var.); *Pescator.* t. 21. *S. garwalicum*, *Lindl. in Journ. Linn. Soc.* iii. 32; *in Gard. Chron.* 1879, 102. *Sarcanthus guttatus*, *Lindl. in Bot. Reg.* t. 1443. *Ærides guttatum*, *Roxb. Fl. Ind.* iii. 471; *Regel Gartenfl.* 1863, 415. *Æ. retusum*, *Swartz in Schrad. Diar.* 1799, 130; *Willd. Sp. Pl.* iv. 130; *Grah. Cat. Bomb. Pl.* 204. *Æ. spicatum*, *Don Prodr.* 31. *Al. præmorsum*, *Willd. l.c.* *Limodorum retusum*, *Swartz in Nov. Act. Upsal.* vi. 80. *Epidendrum retusum*, *Linn. Sp. Pl.* 1351. *E. Hippium*, *Herb. Ham.—Rheede Hort. Mal.* xii. t. 1.

TROPICAL HIMALAYA, from Garwhal eastwards to Assam and Tenasserim, and southwards to BENGAL, the WESTERN PENINSULA and CEYLON.—DISTRIB. Malay Islands.

Stem stout, creeping in trees. *Leaves* 6-20 by $\frac{3}{4}$ -2 in., curved. *Racemes* 4-18 in.; bracts broad, obtuse, membranous; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., white blotched with pink or violet; lateral sepals gibbously orbicular-ovate, obtuse or apiculate, dorsal oblong;

petals elliptic, obtuse; epichile of lip very variable in size, usually cuneiform, entire or emarginate at the tip, disk flat or obscurely channelled. *Capsule* 1-1½ in., clavate.—Lindley errs in describing the fruit of *R. Garvalica* as different from *R. retusa*, also in describing the blade of the lip of *Sacc. guttatum* as lanceolate, which misled Wight, who founded his *S. Rheedii* on the difference.

SPECIES UNKNOWN TO ME.

SACCOLABIUM BERKELEYI, *Reichb. f. in Gard Chron.* 1883, i. 814; from the author's remarks (there is no description) this appears to be near *R. retusa*, but the lip is acute; the flowers are white with amethyst spots. Its habitat is unknown, but probably Indian.

SACCOLABIUM LITTORALE, *Reichb. f. l.c.* 1881, ii. 198, has very long leaves, a short raceme, and the epichile cucullate, keeled and turned obliquely on one side.

56. SARCOCHILUS, Br.

Epiphytes, stem short or long, pseudobulbs 0. *Leaves* distichous, or 0 at flowering time. *Flowers* racemose or spicate. *Sepals* spreading; lateral adnate by a narrow base to the base of the column, or by a broad base to its foot, and sometimes to the lip also. *Petals* usually narrower. *Lip* sessile or clawed, very varied in form, side lobes small or large fleshy or petaloid, midlobe sometimes reduced to a pubescent callus, disk very various with often a callus or spur within. *Column* short or long, foot more or less produced; anther 2-celled; pollinia 2, sulcate, or 4 in pairs, strap short broad. *Capsule* usually long, strict, slender.—Species about 40 known, tropical Asiatic, Australian and Pacific.

A polymorphous genus, no doubt to be dismembered when better known. The following attempt to group the Indian species possibly indicates the lines upon which some of the genera may be established.

A. Flowers loosely inserted all round the rachis of a more or less elongate raceme or spike.

* *Lateral sepals inserted by a narrow base to the base of the column, or base of the column and sides of the lip. Foot of column 0 or very short.*

Sect. I. *Lip* shortly clawed. *Column* short; rostellum minute. PTEROCERAS, *Hasselt.* (Sp. 1-4.)

Sect. II. *Lip* sessile or subsessile. *Column* long; rostellum very long, slender. STEREOCHILUS, *Lindl.* (Sp. 5.)

Sect. III. *Lip* long-clawed. *Column* short; rostellum very short. (Sp. 6-7.)

Sect. IV. *Stem* elongate, scandent. *Lip* sessile. *Column* short; rostellum very long; strap of globose pollinia very slender, gland minute. MICROPERA, *Lindl.* (Sp. 8-11.)

** *Lateral sepals inserted by a very broad base to the elongate foot of the column.*

Sect. V. Leafless when flowering. *Stem* 0. Side lobes of *lip* large, erect, midlobe a tomentose pulvinus. CHILOSCHISTA, *Lindl.* (Sp. 12-15.)

Sect. VI. Leafing and flowering together. *Lip* various. (Sp. 16-19.)

B. Flowers in very short spikes at the apex of a slender scape, bracts persistent, imbricate.

Sect. VII. FORNICARIA. (Sp. 20-26.)

C. Flowers distichous on a compressed rachis, which is pectinate from the uniform persistent laterally compressed fleshy bracts.

Sect. VIII. *Peduncles* stout, solitary. *Lip* stipitate, articulate with the foot of the column. CUCULLA. (Sp. 27-33.)

Sect. IX. *Peduncles* filiform, fascicled. *Lip* sessile. RIDLEYA. (Sp. 34.)

Sect. I. PTEROCERAS, *Hasselt* (gen.). (See above.)

1. *S. suaveolens*, *Hook. f.*; leaves lorate acutely 2-fid, raceme
VOL. VI.

elongate glabrous, side lobes of lip falcate, midlobe decurved with a recurved tip. *Ærides suaveolens*, *Roxb. Fl. Ind.* iii. 473. *Ornitharium striatum*, *Lindl. in Paxt. Fl. Gard.* iii. 473 (*figure bad*). *Ornithochilus striatulus*, *Hort. Calcutt.* *Thrixspermum teres*, *Reichb. f. Xen. Orchid.* ii. 121, 123 t. 140 (*excl. syn.*), in *Trans. Linn. Soc.* xxx. 136.

CHITTAGONG, *Roxburgh.* TENASSERIM; at Moulmein, *Parish.*

Stem slender, scandent. *Leaves* 3-5 by $\frac{3}{4}$ - $\frac{5}{4}$ in., many-nerved, coriaceous, base contracted. *Racemes* 3-6 in., shortly peduncled, lax-fl.; rachis stout; bracts small, rounded; flowers $\frac{1}{2}$ - $\frac{1}{2}$ in. diam., yellow speckled with red, very fragrant; lip rather laterally compressed; midlobe light purple or speckled with pink.—Reichenbach has referred this to the Javan *P. radicans*, Hassk. (*Dendrocolla teres*, Blume), a very much larger plant, with oblong obtusely 2-lobed or notched leaves, racemes 2-3 ft. long, and larger flowers (of which there is a drawing in Herb. Lindl.). The lip is curious, the limb being a terete spur with a minute mouth close to the claw, much as in *Micropera* and *Sarcochilus Berkeleyi*.

2. *S. muriculatus*, *Reichb. f. in Gard. Chron.* 1881, ii. 198; leaves 6-9 in. lorate, racemes very short, peduncle and rachis viscid, lip shortly clawed saccate, side lobes broadly ovate obtuse, midlobe small obtusely 2-partite pubescent.

ANDAMAN ISLANDS, *Kurz, Berkeley.*

Stem 6-8 in., stout, rooting below. *Leaves* 1-in. broad, obliquely notched or 2-lobed, lobes rounded. *Scape* with raceme $2\frac{1}{2}$ -3 in., strict; bracts broad, obtuse; flowers about $\frac{1}{2}$ in. diam., light yellow, sweet-scented; sepals and petals with two purple bars; column rather long; anther ovate, pollinia globose, strap short flat, gland small.—The lip is that of Sect. II.

3. *S. stenoglottis*, *Hook. f.*; stem very short stout, leaves broadly lorate, tip broad rounded emarginate, peduncle shorter than the leaves pendulous many-fl., sepals subsimilar oblong obtuse, petals as long narrower obovate-oblong acute, lip nearly as long as the sepals very narrow laterally flattened curved shortly clawed, with two small rounded auricles beyond the claw, an elongated cup with toothed margins along the top and an ellipsoid compressed terminal spur.

? PERAK, *Scortechini.*—DISTRIB. Sumatra, *King's Collector.*

Stem as thick as the thumb. *Leaves* decurved, 6-10 by $1\frac{1}{2}$ -2 in., nearly flat. *Peduncle*, 3 in., stout, deflexed, dull purple; bracts very small, ovate; pedicel with ovary $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., very pale primrose; sepals and petals many-nerved; lateral sepals with faint red bars near the base; lip white, the elongated cup on the upper margin is edged with pink, and extends for about two-thirds of its length, a perforation at the distal end leads to the hollow compressed ellipsoid straight spur, which is in a straight line with the body of the lip, and resembles a terminal lobe; column winged narrowly to near the base, tip acute, rostellum beaked; anther shortly beaked, membranous; pollinia long, strap spatulate, gland small.—Described from similar materials as *S. aureus*.

4. *S. brachyglottis*, *Hook. f.*; stem very short, leaves elongate oblanceolate acuminate, peduncle short few-fl., sepals spreading subequal lanceolate acuminate, tips horned at the back, petals nearly as long oblong-obovate obtuse, lip very small laterally flat as seen in profile subcuneate and obtusely 3-lobed in front, column very short subglobose, foot 0.

PERAK, *King's Collector.*

Stem 1-2 in., curved. *Leaves* 4-8 by $1-1\frac{1}{2}$ in., pendulous, finely acuminate, nearly flat, keeled beneath. *Peduncle* 1 in., stout; bracts minute, broad, persistent; flowers $\frac{1}{2}$ in. diam.; sepals and petals white with a faint pink blush, nerves obscure; lip not half the length of the sepals, adnate to the foot of the column, so compressed

that the sides are almost in contact, leaving a narrow slit along the top as the opening to the cavity; of the three short lobes seen in looking sideways at it, that towards the column represents the side lobes, a shorter below it a spur? and the intermediate the apex of the lip; there are no internal caruncles or sepals; the edges of the lip are smooth and yellow, and there are a few red spots on the side; column with a narrow base, very oblique top, sloping backwards, and very concave face; rostellum minute, erect, 2-fid; anther shortly beaked, 2-celled; pollinia globose, strap short, gland oblong.—It is impossible to describe the form of the minute lip of this curious species intelligibly. I shall hope to give figures of it and of *S. aureus* in King's "Annals of the Calcutta Botanical Gardens."

Sect. II. STEREOCHILUS, *Lindl.* (gen.). (See p. 33.)

5. *S. hirtus*, *Benth.* in *Gen. Plant.* iii. 576; leaves lorate very thick straight horizontal, raceme pubescent, lip a conical sac with short acute 2-toothed side lobes and a large double callus below the column within. *Stereochilus hirtus*, *Lindl.* in *Journ. Linn. Soc.* iii. 58.

KHASIA Mts., alt. 5000 ft., *J. D. H. & T. T. TENASSERIM, Parish.*

Stem very short. *Leaves* 3–5 in., very thick. *Racemes* 1–3 in., drooping; peduncle and rachis slender; bracts short, broad, membranous; flowers $\frac{1}{2}$ – $\frac{1}{3}$ in. diam., pink, pubescent; lateral sepals adnate to the obscure foot of the column and base of lip; petals narrower, falcate, obtuse; lip white and pink; column white; anther purple, long-beaked, 2-celled; pollinia 4, oblong, stipitate in pairs on the spatulate end of a very long slender strap, gland minute. *Capsule* not seen.—Lindley errs in describing the lip as solid with a pair of horns at the base; it is a conical cup, the mouth oblong, and the horns are the 2-fid side lobes which appear to rise out of the cup. The callus below the column is that of *Cleisostoma*, and the strap and stipitate pollinia are those of *Saccolab.* § *Uncifera*.

Sect. III. (See p. 33.)

6. *S. aureus*, *Hook. f.*; stem very short, leaves large long loriform 2-lobed, peduncle stout several-fid., flowers large, sepals lanceolate acuminate many-nerved, petals subsimilar, lip shorter than the sepals, claw long narrow rigid linear, side lobes falcately cuneate, midlobe a short erect crest at the base of the globose subdidymous spur.

PERAK, *King's Collector.*

Stem as stout as the little finger. *Leaves* 4–10 by $1\frac{1}{2}$ –2 in., very coriaceous, keeled. *Peduncle* from below the leaves, 2–7 in., stout, nearly straight; flowers scattered towards the end of the peduncle; bracts very short, broadly ovate, persistent; pedicel with ovary $\frac{3}{4}$ in., straight; sepals 1 in., and petals golden yellow; lip about $\frac{1}{3}$ shorter than the sepals, claw caruncled where it expands to meet the blade, and then perforated for the passage to the globose spur; side lobes erect, white barred with dull pink; disk with a caruncled transverse crest over the base of the spur; column stout, rostellum inconspicuous; anther very shortly beaked, pollinia globose, strap subspathulate, gland narrow.—A beautiful species, described from several drawings lent by Herb. Calcutt. and the analysis of dried flowers.

7. *S. cladostachys*, *Hook. f.*; stem very short, leaves loriform tip narrowed bifid, peduncle much shorter than the leaves clavate few-fid., sepals and petals narrowly elliptic-lanceolate finely acuminate, lip shorter than the sepals, claw narrow rigid linear, side lobes oblong obtuse, midlobe 3-fid, side lobules quadrate retuse, mid-lobule (spur?) short rounded.

MALAYA, *Kunstler* (*lc.* in *Herb. Calcutt.*). ? PERAK, *lc.* *Scortechini.*

Stem 1 in., not very stout. *Leaves* recurved and pendulous, 6–12 by $1\frac{1}{2}$ –2 in., flat, keeled. *Peduncle* $1\frac{1}{2}$ in. or more, green; bracts ovate; pedicel with ovary $\frac{1}{2}$ in.; flowers white, $1\frac{1}{2}$ in. diam.; sepals $\frac{3}{4}$ in. long, and petals spreading, cream-colored;

claw of lip spotted with purple, lateral lobes purple, midlobe cream-cold., spur speckled with purple; column rather short; anther hardly beaked, yellow, pollinia subglobose, strap short.—Described from a drawing in the Calcutta Gardens. Evidently allied to *S. aureus* in the form of the lip, but the whole plant is much smaller. The peduncle is clavate, the sepals and petals much smaller and narrower, and as well as the lip differently coloured. Scortechini's drawing is of a young plant.

Sect. IV. MICROPERA, Lindl. (gen.). (See p. 33.)

8. **S. purpureus**, Benth. mss.; raceme peduncled lax-flid., flowers pale purple, lip strongly laterally compressed hatchet-shaped, side lobes 0, sac with a strong included recurved spine under the tip. *Micropera pallida*, Wall. Cat. 7321 (in part). *Camarotis purpurea*, Lindl. in Wall. Cat. 7329; Gen. & Sp. Orchid. 219; Sert. Orchid. t. 19; in Journ. Linn. Soc. iii. 37; Part. Mag. Bot. vii. t. 25. *C. rostrata*, Reichb. f. in Walp. Ann. vi. 881. *Ærides rostratum*, Roxb. Fl. Ind. iii. 474.

KHASIA Mts., near Churra. SILHET and CHITTAGONG, Roxburgh, Wallich., &c. Stem 2-3 ft., as thick as a goose-quill. Leaves 3-4 by $\frac{1}{2}$ in., obtusely 2-lobed, toothed or notched. Racemes equalling or exceeding the leaves, laxly many-flid.; bracts short, broad; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; sepals and rather smaller petals very obtuse; beak of column turned on one side, flexuous. Capsule $1\frac{1}{2}$ –2 in. long, slender.

9. **S. Roxburghii**, Hook. f.; raceme long-peduncled decurved rather dense, flowers cream-white, lip slipper-shaped laterally compressed, side lobes large rounded, sac with an exerted spine under the tip. *Micropera pallida*, Lindl. in Bot. Reg. under t. 1522; in Wall. Cat. 7321 (in part); Gen. & Sp. Orchid. 219. *Camarotis pallida*, Lindl. in Journ. Linn. Soc. iii. 37. *Ærides pallidum*, Roxb. Fl. Ind. iii. 475 (not of Lindley).

BENGAL; at Comilla, Clarke. CHITTAGONG, Roxburgh, &c. TENASSERIM; at Mergui, Griffith (Kew Distrib. 5241), Helfer (K. D. 5254).

Stem 2-3 ft. Leaves 2-3 by $\frac{1}{2}$ in., tip rounded, notched. Peduncle with raceme longer than the leaves; bracts persistent; flowers many, $\frac{1}{2}$ in. diam.; sepals and petals as in *M. purpurea*, but nearly white; beak of column straight. The *Micropera pallida* of Wallich's Herb. in Linn. Soc. consists of one sheet of *S. purpurea*, one of *Saccolab. ramosum*, and one of *Sarcanthus secundus*; but there are specimens of *pallida* under his number 7321 in Herb. Lindley.

10. **S. obtusus**, Benth. mss.; raceme very shortly peduncled erect, lip slipper-shaped tip obtuse decurved, side lobes incurved; anticus scale erect under the truncate 3-lobed tip. *Camarotis obtusa*, Lindl. in Bot. Reg. 1884, Misc. 73; Walp. Ann. vi. 881.

TENASSERIM; at Moulmein, Griffith, Parish.

Stem 6-8 in., not so thick as a goose-quill, simple or branched. Leaves 2-3 by $\frac{2}{3}$ in., subacute, keeled, often recurved. Raceme subsessile, lax-flid.; bracts broad, acute; flowers $\frac{1}{2}$ in. diam., pale rose-cold.; sepals and petals linear-oblong, obtuse; lip yellowish with a subsaccate decurved apex, mouth with an exerted anticus lamella, midlobe minute 3-toothed; beak of column long, obliquely incurved.

11. **S. Mannii**, Hook. f.; raceme very short sessile few-flid., lip slipper-shaped obtuse decurved, side lobes obtusely triangular incurved, anticus scale truncate, close under the fleshy entire tip.

KHASIA HILLS, alt. 2-3000 ft., Maun.

Stem as thick as a goose-quill. Leaves very coriaceous, 4 by $\frac{1}{2}$ – $\frac{3}{4}$ in. Raceme $\frac{1}{2}$ – $\frac{3}{4}$ in. long; flowers $\frac{1}{2}$ in. diam., apparently pale; sepals and petals spathulately

oblong; lip with the claw as long as the saccate portion.—Very much stouter and larger more coriaceous-leaved than *S. obtusus*. Lip with a ridge along the posticous face.

Sect. V. CHILOSCHISTA, Lindl. (gen.). (See p. 33.)

12. *S. usneoides*, Reichb. f. in Walp. Ann. vi. 497; racemes elongate many-fl., flowers white, capsule $1\frac{1}{2}$ –2 in. Chiloschista usneoides, Lindl. in Wall. Cat. 7330; Gen. & Sp. Orchid. 219; Bot. Reg. under t. 1522; Sert. Orchid. Frontisp. f. 4; in Journ. Linn. Soc. iii. 43; Gard. Chron. 1846, 135. Thrixspermum usneoides, Reichb. f. Xenia, ii. 120.

TROPICAL HIMALAYA; Nepal, Wallich. SIKKIM, J. D. H.

Roots densely tufted, tortuous; stem 0. Raceme 3–6 in.; bracts ovate, acute, membranous; flowers subsessile, $\frac{1}{2}$ in. diam.; sepals spreading, oblong, obtuse; side lobes of lip linear-oblong, obtuse; disk between the lobes pubescent; midlobe truncate, emarginate; column very short; rostellum indistinct; anther broadly ovate, with 2–3 slender setae; pollinia 2, 2-lobed, strap very short broad, gland large. Capsule slender, slightly curved, glabrous.

13. *S. luniferus*, Reichb. f. in Gard. Chron. 1868, 786 (Thrixspermum); racemes elongate, many-fl. flowers yellow spotted with purple. Sarcochilus luniferus, Bot. Mag. t. 7044.

SIKKIM HIMALAYA, J. D. H.; at Mungpo (Ic. in Hort. Calcutt.). TENASSERIM; at Moulmein Parish.

Except in the colour of the flowers I can find no difference between this and *S. usneoides*, the authority for the colours of which latter is a drawing made by Wallich's artists during his visit to Nepal, and another in Sikkim. Parish observes that very small leaves are sometimes produced, and these have been seen in Kew Gardens.

14. *S. Wightii*, Hook. f.; racemes short few-fl., flowers white or cream-coloured, capsule $\frac{3}{4}$ in. long. Chiloschista usneoides, Wight Ic. t. 1741 (excl. the left-hand figure) (not of Lindl.); Walp. Ann. vi. 498. ? *Ecceceadus Retzii*, Lindl. Gen. & Sp. Orchid. 237. Epidendrum pusillum, Retz Obs. vi. 49. Limoderum pusillum, Willd. Sp. Pl. iv. 126.

MALABAR; at Cochin, Johnson. NILGIRI HILLS; on the western slope of the Wynad, Wight, &c. CEYLON, on trees in the Botanical Gardens; Trimen.

A very imperfectly known species; Wight's figure represents the side lobes of the lip as somewhat crenate, and the sepals and petals as glabrous without and hairy within, the flowers as much smaller than in *C. usneoides*, the capsules as much shorter and stouter.—The left-hand figure (No. 7) on Wight's plate represents a very different plant, which I do not recognize. There is in Herb. Kew a specimen, apparently of *S. Wightii*, from Ceylon (Herb. Hort. Peradeniya), sent by Dr. Trimen (C.P. 4017), who has since informed me of its locality.

15. *S. minimifolius*, Hook. f.; raceme few-fl., capsule $\frac{1}{3}$ in. long Cymbidium minimifolium, Thwaites mss.

CEYLON; Central Province, at Hattogodde Hill, Thwaites.

Roots much more slender than in *S. usneoides*. Leaves 2, very minute. Raceme $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers $\frac{1}{4}$ in. diam.; side lobes of lip rounded, nearly as large as the lateral sepals. Capsule much curved, pubescent.—The specimens are insufficient for a further description.

Sect. VI. (see p. 33).

16. *S. Berkeleyi*, Reichb. f. in Gard. Chron. 1882, 557 (Thrixspermum); raceme elongate decurved, lip long-clawed produced into an elongate clavate laterally compressed obtuse spur with an inflated tip, side lobes small erect, midlobe minute incurved.

NICOBAR ISLANDS; *Berkely*.

Leaves 6-9 by 1-1½ in., lorate, narrowed from above the middle to the base, obliquely obtusely 2-lobed. *Peduncle* short, compressed; raceme 4-6 in., drooping, with many erect white flowers; bracts short, broad, membranous; sepals ½ in. long, broadly ovate, lateral inserted on the long foot of the column; petals broadly obovate; midlobe of lip violet; column rather long, rostellum 2-cuspidate; anther broad, low; pollinia 2, globose, strap short broad, gland orbicular. *Capsule* 5 in., narrow, curved. —The lip is unlike that of any other species of the genus, resembling rather that of *Ærides*.

17. *S. leopardinus*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 145 (*Thrixspermum*); stem short, raceme few-fl. much shorter than the leaves, sepals broadly oblong, petals much smaller, lip sessile, side lobes wing-like oblong obtuse, midlobe small, spur large urceolate.

TENASSEEIM; at Moulmein, *Parish*.

Stem 2-3 in., curved. *Leaves* 4-6 by ¾-1 in., lorate, fleshy, narrowed from the middle downwards, obtuse, many-nerved. *Peduncle* very stout; lower sheaths annular; bracts short, broad, obtuse; flowers yellow spotted with purple; sepals ½ in. long, obtuse, lateral inserted on the long foot of the column, dorsal smallest; lip with a large dorsal callus over the mouth of the descending fleshy round-based spur; midlobe recurved, broadly ovate, caruncled, white spotted with purple; anther depressed, pollinia broadly pyriform, sessile on a small gland.

18. *S. viridiflorus*, *Hook. f.*; stem very short, leaves 2 by ¾ in. falcately oblong, raceme shorter than the leaves 4-8 fl., lip narrowly clawed, side lobes falcate obtuse as long as the cylindric obtuse spur, midlobe reduced to a broad humid carunculate lobe. *Ærides viridiflorum*, *Thwaites Enum.* 430.

CEYLON; on trees in the Central Province, *Gardner* (C.P. 3385), *Trimen* (C.P. 4016).

Leaves sessile, fleshy, nerveless, obliquely notched. *Raceme* half as long, few-fl.; bracts small, broad, obtuse, membranous; flower ½ in. diam.; lateral sepals broadly obliquely ovate, obtuse, 5-nerved, adnate to the short foot of the column for half its length, the other half forming the claw of the lip; petals linear oblong, obtuse, 1-nerved. —I have seen only one small specimen and a coloured drawing.

19. *S. hirsutus*, *Hook. f.*; stem short, leaves lorate emarginate base narrowed, peduncle and very short raceme hirsute, lateral sepals ovate obtuse, petals oblong-obovate, lip very short stipitate on the prolonged foot of the column, side lobes elongate falcate, midlobe laterally compressed, disk with a broad transverse plate in front of the side lobes.

PERAK, *Kunstler (Hort. Bot. Calc.)*

Leaves 4-8 by 1-1½ in., flat, narrowed from beyond the middle downwards, tip rounded with a notch. *Peduncle* with 4-6-fl. raceme 1-2 in.; bracts ovate; pedicel with ovary ½ in.; flower subglobose, expanded ¾ in. diam.; sepals and petals golden barred with carmine; lip pale, half as long as the sepals, claw dilated and concave at the base of the side lobes, a short serrated cupular membrane rises between the base of the side lobes over the base of the narrow compressed midlobe; column rather long, base contracted; anther shortly beaked, apiculate behind, 1-celled; pollinia globose, strap short linear, gland small. —Described from drawing in *Hort. Calcutt.*, and analysis of dried flower. It is very difficult to describe the structure of the lip; its claw may be the base of the column produced beyond the insertion of the broad-based lateral sepals.

Sect. VII. FORNICARIA, *Benth. in Gen. Plant.* iii. 575. (See p. 33.)

20. *S. Hystrix*, *Reichb. f. in Walp. Ann.* vi. 500; peduncle about as

long as the short loriform leaves, bracts erect subulate-lanceolate, side lobes of the lip glandular-hairy. *Dendrocolla Hystrix*, *Blume Bijdr.* 291. *Ærides Hystrix*, *Lindl. Gen. & Sp. Orchid.* 242. *Thrixspermum Hystrix*, *Reichb. f. in Trans. Linn. Soc.* xxx. 145. *Grosourdya Hystrix*, *Reichb. f. Xen. Orchid.* ii. 123; *in Bot. Zeit.* 1864, 297.

TENASSERIM; at Mergui, *Griffith (Kew Distrib.* 5232), *Parish.*—DISTRIB. Java.

Stem 1–3 in. *Leaves* 2–3 by $\frac{1}{2}$ – $\frac{3}{4}$ in., obtusely 2-lobed; sheaths ribbed. *Peduncle* 2–3 in., stout or slender, 2–3 sheathed; spike $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers white; sepals and petals $\frac{1}{2}$ in. long, lanceolate, acuminate; lip stoutly clawed, spotted with yellow, base saccate, side lobes triangular, midlobe truncate glandular-pubescent within; column very short; anther broad; pollinia 2 bipartite or 4 in very unequal pairs, strap broad, gland rounded. *Capsule* $2\frac{1}{2}$ –4 in., linear, straight.—*Reichenbach* is my authority for this being a Javan plant, and for the Javan synonymy.

21. ***S. pulchellus***, *Trim. Cat. Ceyl. Plants*, 89; characters of *S. Hystrix*, but side lobes of lip glabrous. *Dendrocolla pulchella*, *Thwaites Enum.* 430. *Cylindrochilus pulchellus*, *ibid. l.c.* 307.

CEYLON; in the Central Province, ascending to 2000 ft.

Bentham (*Gen. Plant.* iii. 575) suspects that this and *Hystrix* are one, but in the absence of good specimens of either I hesitate to unite them.—*Capsule* 2– $2\frac{1}{2}$ in.; the sepals and petals are lanceolate, acute, lateral inserted on the very short foot of the short column. *Capsule* $2\frac{1}{2}$ – $3\frac{1}{2}$ in., slender, straight, subacute.

22. ***S. hirtulus***, *Hook. f. Ic. Plant. ined.*; peduncles hirtulous, much shorter than the falcately lanceolate obtusely acuminate leaves, bracts minute, spur long incurved, column very long contracted at the base.

PERAK, *Scortechini. MALACCA, Maingay.*

Stem very short, or 0. *Leaves* 3–5 by $\frac{1}{2}$ – $\frac{3}{4}$ in., coriaceous, falcate, narrowed from the middle downwards, tip recurved. *Peduncle* $\frac{1}{2}$ –1 in.; spike $\frac{1}{2}$ – $\frac{3}{4}$ in.; bracts spreading; flowers membranous; lateral sepals $\frac{1}{2}$ in. long, obovate-oblong, acute, 3-nerved; petals narrower; lip clawed, side lobes very narrow, elongate, recurved, midlobe much broader than long, formed of two falcately recurved lobes with an intermediate tooth; spur swollen above the narrow apex; anther shortly beaked; pollinia 2, globose, stipitate on the cuneiform strap, gland minute. *Capsule* $1\frac{1}{2}$ in., very slender.—A curious little plant with a longer column than usual in the genus.

23. ***S. recurvus***, *Hook. f. Ic. Plant. ined.*; peduncles much longer than the shortly loriform leaves, spike oblong, bracts broadly ovate densely imbricate acuminate recurved.

PERAK; Limbo Hills, in Larut, *King's Collector.*

Stem very short. *Leaves* 1–2 in., narrowed to the base, obtuse or retuse. *Peduncles* 4–5 in., rather stout; spike $\frac{1}{2}$ – $\frac{3}{4}$ in.; bracts very coriaceous; flowers not seen.

24. ***S. trichoglottis***, *Hook. f. Ic. Plant. ined.*; stem elongate, peduncles shorter than the shortly loriform leaves, spike short, bracts ovate-lanceolate, lip sessile saccate hirsute within, side lobes rounded hairy on both surfaces, midlobe a minute tooth.

PERAK, *Scortechini, King's Collector.* SINGAPORE, *Ridley.*

Habit and foliage of *S. Hystrix*, but sepals and petals much narrower, and lip hairy.—Described from *King's* specimen and drawings by *Scortechini* and *Ridley*, who has sent me a sketch of a flower of what appears to be this species from Singapore. The lateral sepals are inserted at the base of the footless column.

25. ***S. filiformis***, *Hook. f. Ic. Plant. ined.*; stem elongate, leaves

8–10 in. filiform terete, peduncle much shorter than the leaves, lip a spur-like cylindric sac with orbicular side lobes.

PERAK; at Larut, on branches of trees, *King's Collector*.

Stem in the only specimen 3 in.; sheaths $\frac{1}{2}$ in., strongly ribbed; roots very long and slender. *Leaves* about $\frac{1}{3}$ in. diam., flexuous. *Peduncles* $1\frac{1}{2}$ –3 in.; spike $\frac{1}{4}$ – $\frac{1}{3}$ in.; bracts $\frac{1}{2}$ in., broadly ovate, obtuse, fleshy; pedicel and ovary $\frac{1}{2}$ in.; flowers white; sepals $\frac{1}{2}$ in., oblong-lanceolate, obtuse, lateral adnate to the broad foot of the column; petals obtuse, 7-nerved; lip sessile, side lobes large, midlobe the lunate apex of the subcylindric round basal sac, calli 0; column very short, foot broad fleshy.—Flowers much like those of *S. Trimeni*, but habit very different.

26. *S. merguensis*, *Hook. f. Ic. Plant. ined.*; stem short, peduncles much shorter than the small linear-oblong leaves, bracts imbricate erect, capsule $1-1\frac{1}{2}$ in. linear terete beaked.

TENASSERIM; at Mergui, *Griffith (in Herb. Lindl.)*.

A remarkable little species, with the stem $\frac{1}{2}$ in. long, clothed with the imbricating bases of the distichous leaves, which are about an inch long. *Peduncles* $\frac{1}{2}$ –1 in., filiform; raceme $\frac{1}{2}$ in.; bracts ovate, acuminate. *Capsule* shortly pedicelled, $\frac{1}{8}$ in. diam., striate, beak $1\frac{1}{2}$ in.

Sect. VIII. CUCULLA, *Benth. in Gen. Plant.* iii. 575. (See p. 33.)

27. *S. lilacinus*, *Griff. Notul.* iii. 334; *Ic. Pl. Asiat.* t. 320, f. ii.; stem elongate, leaves amplexicaul ovate-cordate, peduncle very long, sepals and petals broadly ovate many-nerved, lip saccate, side lobes falcate obtuse, midlobe small recurved, disk with a prominent callus. *Walp. Ann.* vi. 499. *S. amplexicaulis*, *Reichb. f. in Walp. l. c.* *Dendrocolla amplexicaulis*, *Blume Bijdr.* 288. *Ærides amplexicaule*, *Lindl. Gen. & Sp. Orchid.* 239. *Orsidice amplexicaulis*, *Reichb. f. in Bonpland.* ii. 93. *Thrixspermum amplexicaule & lilacinum*, *Reichb. f. Xen. Orchid.* ii. 121.

MALAY PENINSULA; from Perak to Singapore, in marshes.—DISTRIB. Malay Islands.

Stem 2–3 ft., as thick as a goose-quill, decumbent, internodes 1–2 in.; roots very slender. *Leaves* $1\frac{1}{2}$ –2 in., tip rounded, sheaths smooth. *Peduncle* 8–10 in.; sheaths obtuse, appressed; raceme 1–8 in., few or many-fl'd.; rachis 4-angled; bracts $\frac{1}{2}$ in., obtuse, not imbricating; ovary very slender; sepals $\frac{1}{2}$ in., lateral adnate to the produced foot of the column, and petals white lilac or bluish; lip white, yellowish and pubescent within, base with a tuft of hairs; column very short; anther hyaline; pollinia 4, pairs very unequal, oblong, sessile on a reniform strap. *Capsule* 4–6 in., linear, straight, angles narrowly winged.

28. *S. Scopa*, *Reichb. f. mss. in Herb. Kew* (*Thrixspermum*); leaves linear-oblong sessile obtuse, peduncle rather longer than the leaves, sepals and petals lanceolate with very long capillary tails many-nerved, lip shortly stipitate saccate, side lobes falcate acute, midlobe small acute papillose, disk with a columnar callus.

PERAK; at Larut, on branches of trees, *King's Collector*.

Stem and roots like those of *S. lilacinus*; internodes 2 in. *Leaves* 3–4 in., coriaceous. *Peduncle* 2–3 in., at right angles to the stem; raceme 1 in.; bracts $\frac{1}{2}$ in., ensiform, subacute; sepals $1\frac{1}{2}$ long and petals many-nerved, margins of lip papillose.

29. *S. Scortechini*, *Hook. f.*; leaves oblong lorate 2-lobed, peduncle very long rather slender, sepals and petals lanceolate with long narrow tips, lip saccate, side lobes short, midlobe conical obtuse fleshy.

PERAK, *Scortechini*.

Stem 6 in., very stout, covered by the sheaths, internodes $\frac{3}{4}$ in. Leaves 4-6 by 1-1 $\frac{1}{2}$ in., coriaceous. Peduncle equalling or longer than the leaves (9 in. in *lc. Scort.*); raceme 2 in., bracts close set, $\frac{2}{3}$ in. long; sepals 2 $\frac{1}{2}$ in. long, $\frac{1}{4}$ in. broad at the base and petals yellow; lip yellowish, thickly mottled with rusty red outside; pollinia 4, 2 much smaller, adnate to the larger; gland lunate, strap oblong. Capsule 4-5 by $\frac{1}{2}$ in.—I know these noble species only from a drawing and description by Scortechini.

30. **S. Arachnites**, *Reichb. f. in Walp. Ann.* vi. 498; stem elongate, leaves loriform, peduncles shorter than the leaves, sepals and petals linear-lanceolate caudately acuminate 3-5-nerved, lip saccate, side lobes falcate, midlobe tongue-shaped laterally flattened obtuse puberulous. *S. serræformis*, *Reichb. f. l.c.* *Dendrocolla Arachnites*, *Blume Bijdr.* 287, t. 67. *Ærides Arachnites*, *Lindl. Gen. & Sp. Orchid.* 238. *Liparis serræformis*, *Lindl. in Wall. Cat.* 1946; *Gen. & Sp. Orchid.* 33 (*excl. Ceylon plant*). *Thrixspermum Arachnites*, *Reichb. f. Xen. Orchid.* ii. 121.

ASSAM, *Jenkins, Mann.* KHASIA MTS., alt. 4000 ft., *Clarke.* TENASSERIM and TAYOY, *Wallich, Parish.* PENANG, *Kunstler (lc. in Hort. Calcutt.).*—DISTRIB. Java.

Stem 6-12 in., curved or tortuous, internodes short; roots most numerous and long. Leaves 3-6 by $\frac{1}{2}$ - $\frac{2}{3}$ in. Peduncles many, 2-4 in., solitary or in pairs, bracts $\frac{1}{2}$ in.; sepals and petals 1 $\frac{1}{2}$ in., yellow; lip mottled with red; column very short; pollinia oblong, curved, strap very small, quadrate, gland still smaller, lunate. Capsule 2-2 $\frac{1}{2}$ in.

31. **S. complanatus**, *Hook. f.*; habit, foliage and inflorescence of *S. Arachnites*, but flowers very much smaller, sepals and petals $\frac{1}{3}$ - $\frac{1}{2}$ in. acute not caudate, lip a small sessile cup with an incurved minute midlobe and a callus in the concavity. *Dendrocolla serræformis*, *Lindl. Gen. & Sp. Orchid.* 33 (*the Ceylon plant only*); *Thwaites Enum.* 307. *Epidendrum complanatum*, *Retz Obs.* vi. 50. *Limodorum complanatum*, *Willd. Sp. Pl.* iv. 126; *Lindl. Gen. & Sp. Orchid.* 127.

CEYLON, *Macrae, Walker*; Ambagamowa and Saffragam districts, rare, *Thwaites*.

Like *S. Arachnites*. I can distinguish it only by the very different flower and form of the lip; and for these characters I am indebted to a copy of a drawing in the Peradeniya Bot. Garden. The leaves vary from 2-7 by $\frac{1}{2}$ - $\frac{2}{3}$ in., obtuse or unequally notched; the peduncle from 1-3 in., and the raceme from 1-5 in.; capsule 2-2 $\frac{1}{2}$ in., linear, straight; pollinia 4 in unequal pairs narrow, quite distinct, and without strap or gland in the figure.—There is a specimen of this in Herb. Rottler, without habitat, named *Epidendrum complanatum*, *Retz. Obs.* vi. 50.

32. **S. brachystachys**, *Hook. f.*; stem rigid, sheaths $\frac{1}{2}$ - $\frac{3}{4}$ in. strongly ribbed when dry, leaves oblong, peduncle with the few-fl. raceme much shorter than the leaves, sepals oblong and obovate-oblong petals obtuse, side lobes of sessile lip falcate incurved, midlobe as long fleshy oblong, spur scrotiform.

PENANG; on blocks of stone amongst decayed leaves, *Maingay*.

Stem as thick as a goose-quill. Leaves 2 $\frac{1}{2}$ -3 by $\frac{2}{3}$ -1 in., obtuse, notched. Peduncles at every node with the raceme 1 in., very stout, rigid; bracts 3-4, $\frac{1}{4}$ in. long, rounded; sepals and petals about 1 in. long, keel narrowly winged; column very short; anther low, not beaked.

33. **S. pauciflorus**, *Hook. f.*; stem rigid, leaves rather distant oblong obtuse, peduncle much shorter than the leaves 2-3-fl., sepals oblong-lanceolate acute, petals nearly as large obovate-oblong obtuse, lip stipitate,

side lobes broad rounded obtuse, midlobe small fleshy obtuse with a conic callus at its base, sac or spur short recurved obtuse.

PERAK; on the Larut range, alt. 3000 ft., *Scortechini*.

Stem $\frac{1}{2}$ in. diam., flexuous. *Leaves* $2\frac{1}{2}$ –3 by $1\frac{1}{4}$ – $1\frac{1}{2}$ in., coriaceous. *Peduncle* with raceme 1 in., basal sheaths imbricate; bracts $\frac{1}{2}$ in., subacute; sepals $\frac{3}{4}$ in. long, white; lip yellow, with a broad lamella between the side lobes; column very short; anther depressed; pollinia 2, each 2-lobed, strap short.

Sect. IX. RIDLEYA, gen. ? (See p. 33.)

34. *S. notabilis*, Hook. f. *Ic. Plant. ined.*; sepals and petals filiform from a narrowly lanceolate 3-nerved base, lip sessile at the base of the column deeply saccate, mouth dilated, tip contracted into a capillary tail.

SINGAPORE, *Ridley*.

Stem very short. *Leaves* $1\frac{1}{2}$ –2 in., subsessile, elliptic oblong, strongly striate when dry. *Peduncles* 3 or more from one point on the stem, $4\frac{1}{2}$ in. long, curved, naked; raceme $2\frac{1}{2}$ in., rachis $\frac{1}{4}$ in. diam. across the ovate incurved coriaceous subacute bracts; pedicel and ovary very slender, $\frac{1}{2}$ in. long; perianth very membranous, white? sepals and petals $\frac{3}{4}$ in. long, 3-nerved at the base; lip a large sac rounded at the base, delicately veined; column very short, foot 0; anther low, membranous, 2-celled; pollinia 2, clavate, sessile on a rather large gland.—A very singular and beautiful little plant, which I hesitate to remove from *Sarcophilus* as a genus, and dedicate to its discoverer. It closely resembles in flower *S. Arachnites*, but the stemless habit, foliage, inflorescence and footless column are very different.

SPECIES UNKNOWN TO ME OR IMPERFECTLY KNOWN.

THRIXSPERMUM FREEMANI, Reichb. f. in *Gard. Chron.* 1877, 749; dwarf, roots warted, leaves 6–7 by $1\frac{1}{4}$ in. ligulate unequally 2-toothed, racemes many-fl., bracts semioval larger than the small ovary, sepals linear long narrow, petals a little shorter, lip small saccate 3-toothed, with 4 small stipitate globose warted bodies before the base, centre white, lateral parts yellow with brown streaks.—Assam, *Freeman*.—Raceme like a yellow-brownish spotted broom.

S. SILLEMIANUS, Reichb. f. in *Gard. Chron.* 1882, i. 524; habit of *Vanda teres*, leaves slender elongate terete, peduncle 2-fl., bracts very short triangular, flowers milk-white suffused with yellow, mentum long, dorsal sepals elliptic, lateral cuneate-oblong, petals obtusely rhomboid, lip erect trifid, spur corniform nearly as long as the pedicel of the ovary, side lobes subquadrate striped with purple, midlobe shorter thick retuse 4-grooved, white outside with 2 purple blotches, yellow within, calli 0, column short thick, anther inappendiculate.—Burma?

S.—Sect. *Cuculla*; resembles *S. brachystachys*, but stem much more slender, internodes $\frac{3}{4}$ –1 in., not strongly ribbed when dry.—Mergui, *Griffith* (No. 1124).

S.—Sect. *Cuculla*; resembles *S. Arachnites*, but capsule 4 in. long and proportionately stout.—Perak, *Scortechini*.

S.—Sect. *Cuculla*; a very small species; stem 1–2 in., curved, peduncle 1 in., slender, bracts few distant acute, young capsule 1 in., very slender.—Khasia Hills, at Amwee, *J. D. H. & T. T.*

57. *TRICHOGLOTTIS*, Blume.

Epiphytes; stem elongate, leafy. *Leaves* distichous, flat, narrow. *Flowers* in branched panicles or solitary or few in very short racemes. *Sepals* and *petals* widely spreading oblanceolate or subspathulate. *Lip* adnate to the sides of the very short column, narrow, base saccate or spurred; side lobes one or two pairs of narrow processes; midlobe straight, or decurved from the middle, hairy. *Column* very short, sides produced into

2 spurs or horns; anther incompletely 2-celled; pollinia 2, globose, strap rather short, gland moderate.—Species 3 or 4? Malayan.

In the absence of good materials, I am doubtful as to the correctness of the above definition of *Trichoglottis*. Bentham refers Blume's *T. retusa* to *Saccolabium*; and by replacing that author's character of "lip adnate to the whole length of the column, with a process on each side," by "lip adnate to the foot of the column and forming with it a long horizontal spur-like mentum" and omitting that of a hairy lip, he excludes the others. I am disposed to regard the hairy-lipped species figured by Blume in his *Bijdragen* (*T. retusa*, 360, fig. viii.) as the type of the genus. That this is Kurz's and Reichenbach's view appears from the plants they have referred to it. In this case *Trichoglottis* is referable to the group with no foot to the column. There are amongst Scortechini's drawings of Perak Orchids, one or two that are referable to this genus, but the analyses are insufficient.

1. **T. Dawsoniana**, *Reichb. f. in Gard. Chron.* 1872, 699; flowers panicle pale green spotted with brown or purple, sepals and petals cuspidate on the back below the concave tip, lip saccate at the base tip 2-fid. *Cleisostoma Dawsoniana*, *Reichb. f. in Gard. Chron.* 1868, 815.

TENASSERIM; at Moulmein, *Parish*.

Stem 1–2 ft., stout, rooting. *Leaves* few 3–6 by $\frac{3}{4}$ –1 in.. *Panicle* 18 in., erect, stiff, branches spreading; bracts broadly ovate; pedicel with ovary $\frac{1}{2}$ in.; flowers 1–1 $\frac{1}{2}$ in. diam.; anther 2-lobed, crested; pollinia large, strap short slender.—Near *T. fasciata*, R. f., erroneously supposed to be a native of Ceylon, of which there is a fine drawing in Hort. Calcutt., giving Manilla as the habitat.

2. **T. quadricornuta**, *Kurz in Journ. Beng. As. Soc.* xlv. 156, t. 13; glabrous, leaves linear-lanceolate subsessile acuminate, flowers solitary or 3–4-panicled, sepals obovate-oblong obtuse, petals similar but narrower, lip strongly arched inflexed 2 posterior lobes acute twice as long as the basilar, with a hirsute callus between them, terminal lobes reflexed linear 2-fid, with a callus under the tip, spur subobtuse rather longer than the midlobe.

NICOBAR ISLANDS; forests of Kamorta, *Kurz*.

Leaves 2–3 $\frac{1}{2}$ in., base narrowed, twisted. *Flowers* leaf-opposed; pedicel $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in. long, lateral subfalcate; column very short; pollinia globose.—Description from Kurz l. c., I have seen no flowers.

58. **ÆRIDES**, *Lour.*

Epiphytes; stem leafy, pseudobulbs 0. *Leaves* linear, coriaceous. *Flowers* usually many and highly coloured, in dense or lax decurved racemes (few large or sessile in Sect. 1.). *Sepals* broad, spreading, lateral adnate to the base or foot of the column. *Petals* broad, spreading. *Lip* spurred, side lobes large small or 0; midlobe larger than the side lobes or smaller and incurved between them. *Column* short, foot long or short, rostellum short or long and bifid; anther 2-celled, beaked or not, pollinia 2, globose, sulcate; strap long or short, gland large or small.—Species about 10, Eastern Asiatic.

I am indebted for aid in determining the cultivated species of Sect. ii. & iii. to Messrs. Veitch for specimens, and to great knowledge of his assistant, Mr. Kent, and of Mr. Rolfe (of the Kew Herbarium) for valuable information respecting them.

Sect. I. *Leaves* terete, grooved in front. (See also *Æ. mitratum*.) *Peduncle* 1–2-fid. *Spur* slightly incurved, with a callus half way down the tube. *Anther* shortly beaked.

1. **Æ. Vandarum**, *Reichb. f. in Gard. Chron.* 1867, 997; 1875, 590; 1885, ii. 629, fig. 143; leaves 6–10 in., peduncle stout, side lobes of lip narrowly lanceolate, outer margin toothed, midlobe clawed tip dilated 2-partite. *Æ. cylindricum*, *Hook. Bot. Mag. t.* 4982 (not of *Lindl.*); *Lindl. in Journ. Linn. Soc.* iii. 41 (*the Sikkim plant*); *Warner Orchid. Alb.* iii. t. 116.

SUBTROPICAL SIKKIM HIMALAYA, alt. 5000 ft., *J. D. H.* KHASIA HILLS, alt. 4–5000 ft., *J. D. H. & T. T.* MUNNIPORE, alt. 4000 ft., *Watt.*

Stems 1–2 ft., tufted, as thick as a goose-quill; roots $\frac{1}{4}$ in. broad, flat. *Leaves* as thick as a duck's-quill. *Peduncle* 1–1½ in.; flowers 1½–2 in. diam., white; perianth with crisped margins; sepals obovate-oblong; petals broader; side lobes of lip flexuous, as long as the cylindric spur; segments of midlobe orbicular, toothed; pollinia globose; strap narrowly cuneate, gland large. *Capsule* 1½–2½ in., fusiform.

2. **Æ. longicornu**, *Hook. f. Ic. Plant. ined.*; leaves 6–8 in., peduncle very slender, side lobes of lip 2-partite, segments elongate subulate, midlobe narrow clawed, tip slightly dilated 2-fid. *Mesoclastes uniflora*, *Lindl. in Wall. Cat.* 1993; *Gen. & Sp. Orchid.* 45. *Luisia uniflora*, *Blume Rumph.* iv. 50; *Mus. Bot.* i. 64; *Lindl. Fol. Orchid.* 3.

NEPAL, *Wallich.* UPPER ASSAM; Naga Hills, alt. 5500 ft., *Clarke.*

Much more slender than *Æ. Vandarum*. *Leaves* as thick as a sparrow-quill. *Peduncle* 1 in.; flowers 1 in. diam., white; perianth with crisped margins; lateral sepals much larger than the orbicular-oblong petals; side lobes of lip shorter than the long spur, segments curved forwards, outer shortest, midlobe membranous, lobes divaricate. *Capsule* 2 in., fusiform; peduncle and pedicel very slender.

3. **Æ. cylindricum**, *Lindl. in Wall. Cat.* 7317; *Gen. & Sp. Orchid.* 240; leaves 2–6 in., peduncle short stout, side lobes of lip oblong obtuse, midlobe short cuneiform fleshy many-ridged. *Wight Ic. t.* 1744; *Gard. Chron.* 1875, i. 537; 1886, i. 405, fig. 81. *Epidendrum subulatum*, *Retz Obs.* vi. 50. *Limodorum subulatum*, *Willd. Sp. Pl.* iv. 126. *Cymbidium elegans*, *Herb. Heyne.*

DECCAN PENINSULA; from the Coorg Hills, *Heyne*, to Travancore, *Wight*, &c.

Stem elongate, as thick as a goose-quill. *Leaves* as thick as a crow-quill, very obliquely acuminate. *Flowers* 2–3, 1½ in. diam., white or tinged with pink; sepals obovate-oblong, obtuse, lateral decurved; petals broader, shorter; side lobes of lip erect, nearly as large as the midlobe, which is yellowish at the base; spur recurved; column rather long; strap of pollinia short, broad. *Capsule* 2 in., fusiform or subclavate.—The ridged lip is that of *Vanda*.

Sect. II, *Leaves* lorate, keeled (semi-terete in *Æ. mitratum*). Side lobes of lip very small, midlobe large; spur incurved.

* *Lip horizontal or inflexed.*

4. **Æ. mitratum**, *Reichb. f. in Bot. Zeit.* 1864, 415; leaves very long filiform, side lobes of lip minute uncinate, midlobe broadly ovate retuse, spur short inflated. *Bot. Mag. t.* 5728.

TENASSERIM; at Moulmein (*Hort. Day*).

Stem 1–2 in., and roots very stout. *Leaves* 2–3 ft., $\frac{1}{2}$ in. diam., deeply grooved above. *Racemes* many, suberect, 3 in. long, cylindric; peduncle very stout; bracts minute, acute; flowers $\frac{2}{3}$ in. diam.; petals and sepals subsimilar, oblong, tips rounded, white or tipped with violet; lip longer and broader than the sepals, violet; spur contracted at the neck, inflated, compressed, base truncate, obtuse, tip pointing forwards.

5. **Æ. multiflorum**, *Roxb. Cor. Pl.* iii. 63, t. 271; *Fl. Ind.* iii. 475; midlobe of lip hastately ovate tip rounded, spur short straight. *Belg. Hortic.* 1876, 286; *Walp. Ann.* vi. 897. *Æ.* affine, *Wall. Cat.* 7316;

Lindl. Gen. & Sp. Orchid. 239; *Sert. Orchid.* t. 15; in *Journ. Linn. Soc.* iii. 41; *Bot. Mag.* t. 4049; *Warner, Sel. Orchid. Ser.* i. t. 21. *Æ. roseum*, *Lodd., ex Paxt. Fl. Gard.* ii. 109, t. 60; *Jard. Fleur.* ii. t. 200; *Gartenfl.* viii. 253, t. 267; *Ill. Hort.* iii. t. 88. *Æ. Lobbii*, *Hort. ex. Ill. Hort.* 1868, t. 559 (an *Teism. & Binn.*?). *Æ. Veitchii*, *Hort. ex Morren in Belg. Hortic.* 1876, 291; *William's Man.* 70. *Æ. trigonum*, *Klotzsch. in Otto & Dietr. Allgem. Gartenz.* 1855, 177. *Epidendrum geniculatum*, *Herb. Ham.*

TROPICAL HIMALAYA; from Garwhal eastwards, the KHASIA HILLS, and southward to TENASSERIM.

Stem 4–10 in., stout. *Leaves* 6–8 in., deeply channelled and keeled, variable in breadth, 2-lobed. *Racemes* 6–12 in., rarely branched, shortly peduncled; flowers $\frac{3}{4}$ –1 $\frac{1}{4}$ in. diam., rose purple, sometimes spotted with darker; sepals and petals subequal, oblong, tips rounded; lip twice as long, sides recurved, claw geniculately inflexed, spur $\frac{1}{4}$ as long as the midlobe, pointing forwards under it with an incurved fleshy 2-lobed callus on the base of the midlobe; column beaked; anther long-beaked, strap long slender. *Capsule* $\frac{3}{4}$ –2 in., subclavate, stoutly pedicelled.—Common and variable. Lindley overlooked Roxburgh's works. In Griffith's Eastern Himalayan collections, a fruiting specimen of which is a different species, or perhaps a very large var. of this or the following, with leaves 12–14 by 1 $\frac{1}{2}$ in., and a stout raceme 12–16 in., the capsules are of *multiflorum*.

6. *Æ. Fieldingii*, *Lodd. ex Morren in Belg. Hortic.* 1876, 286, t. 10; characters of *Æ. multiflorum*, but a much more robust plant, with a different habit of growth, and an acute apex of the hastate midlobe of the lip. *Jenning's Orchid.* t. 20; *Reichb. f. in Hamb. Gartenzeit.* 1855, 225; *Morren. Belg. Hortic.* 1876, 286. *Æ. Williamsi*, *Warner Sel. Orchid. Ser.* i. t. 21.

SIKKIM HIMALAYA and ASSAM.

I am indebted to Mr. Kent, of Messrs. Veitch's establishment, for calling my attention to the differences between this and *Æ. multiflorum*. They are difficult of detection in Herbarium specimens. According to the published figures the flowers vary in colour, white, red, and purple. *Æ. Williamsi* is a white flowered variety. The figure of *Æ. affine* in *Bot. Mag.* (cited above under *multiflorum*) is referred to *Fieldingii* by Morren, but it is of far too slender a habit.—The Foxbrush Orchid. of gardens.

7. *Æ. maculosum*, *Lindl. in Bot. Reg.* 1845, t. 58; in *Gard. Chron.* 1845, 691; midlobe of lip ovate tip broad obtuse or retuse margins undulate, spur slender uncinately incurved. *Paxt. Mag. Bot.* xii. t. 49; *Walp. Ann.* v. 897; *Pescatorea*, i. t. 33; *Lindenia*, i. t. 11. *Saccolabium speciosum*, *Wight Ic.* t. 1674, 1675.

WESTERN GHATS; from the Concan to Travancore. RAJPOOTANA; on Mt. Abo.

Near *Æ. multiflorum*, but stem shorter, leaves more flat, racemes more often branched, flowers larger but very variable in size, pale spotted with purple, tip bright rose, spur longer and more slender.—Var. *Schraderi*, *Jard. Fleurist.* t. 54; *Gardner's Mag. Bot.* ii. 121, with fig.; *Pescatorea*, t. 36. *Æ. illustre*, *Reichb. f. in Gard. Chron.* 1882, 7, is a robust form with fewer shorter leaves, and large flowers blotched with purple, and amethystine tip.

8. *Æ. crispum*, *Lindl. in Wall. Cat.* 7319; *Gen. & Sp. Orchid.* 239; in *Bot. Reg.* 1841, t. 55; in *Gard. Chron.* 1842, 711 (with fig.); in *Journ. Linn. Soc.* iii. 41; midlobe of lip large broadly ovate-oblong obscurely 3-lobed crenate or toothed, spur very short obtuse. *Bot. Mag.* t. 4427; *Dalz. & Gibs. Bomb. Fl.* 265; *Flore des Serres*, v. t. 48; *Walp. Ann.* vi. 896; *Ill. Hort.* 1847, 123; *Gard. Chron.* 1859, 24, with Fig.; *Belg. Hortic.* 1876, 287; *Warner Orchid. Alb.* vii. t. 293 (var.). *Æ. Lindleyanum*, *Wight*

Ic. t. 1677 bis.; *Lindl. in Journ. Linn. Soc.* iii. 41; *Wall. l. c.* 879. *Æ. Brookeii*, *Lindl. in Gard. Chron.* 1841, 518; 1842, 559; *Batem. in Bot. Reg.* 1841, *Misc.* 55; *Paxt. Mag. Bot.* ix. t. 145; *Flore des Serres*, t. 151. *A. Warneri*, *Hort.*

WESTERN GHATS; from the Concan to Travancore.

Stem 4–10 in., very stout. *Leaves* 4–8 in., from oblong to lorate, variable in breadth, thickly coriaceous, lobes unequal rounded. *Racemes* 8–12 in., inclined or drooping, simple or branched; pedicels very robust; flowers $1\frac{1}{2}$ in. diam., sweet-scented; sepals and petals very broad, pale rose; lip geniculately inflexed at the claw, rose or purple, 2-cornute at the base; spur much shorter than the blade, and projecting forwards under it; anther long-beaked, strap of pollinia slender below, dilated above. *Capsule* $1\frac{1}{2}$ –2 in., clavate or pyriform, angles subulate.—I find no character whereby to separate *Æ. Lindleyanum*. *Lindley* says of *Æ. Brookeii*, more odorous than *Æ. odoratum*.

9. *Æ. falcatum*, *Lindl. in Paxt. Fl. Gard.* ii. 142; side lobes of lip half as long as the clawed midlobe dimidiate oblong or falcate, midlobe ovate or ovate-cordate sides replicate erose, spur parallel to the midlobe and concealed under it. *Reichb. f. Xen. Orchid.* i. 220, t. 92; *Morren Belg. Hort.* 1876, 288; *Walp. Ann.* vi. 897. *Æ. Larpentae*, *Hort. Makoy Prix Cour.* 1862; *Reichb. f. in Otto & Dietr. Gartenz.* 1856, 219. *Æ. retrofractum*, *Wall. mss.*

TENASSERIM, *Wallich, Parish, &c.*

Stem 6–8 in., robust. *Leaves* 8–12 by $1-1\frac{1}{2}$ in. *Raceme* decurved or pendulous, lax-fid.; flowers $1-1\frac{1}{2}$ in. diam., white, pale-violet, purple or pink; sepals and petals often, tipped with a darker shade, and lip usually darker; lateral sepals with a very broad base; column beaked; foot elongate; anther long-beaked; strap of pollinia slender, gland small.

10. *Æ. crassifolium*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 145; characters of *Æ. falcatum*, but much more robust, with shorter leaves, dark purple flowers and the spur geniculate at the base and not hidden under the midlobe of the lip. *Reichb. f. in Gard. Chron.* 1877, i. 633, and ii. 492, fig. 96; *Olia Hamburg.* 43; *Warner Sel. Orchid. Ser.* 3, t. 12. *Æ. expansum*, *Reichb. f. l. c.* 1882, ii. 40.

TENASSERIM; at Moulmein, *Parish*.

Very nearly allied to *Æ. falcatum*, the chief difference being the form of the spur and that the sides of the midlobe of the lip are so reflected as that their under surfaces meet.—Var. *Leonæ*, *Reichb. f. in Bull. Soc. Tor. d'Orticult.* x. t. 14; *Williams' Orchid. Man.* t. 14, is described as having retuse side lobes of the lip and an expanded midlobe.

** *Lip deflexed.*

11. *Æ. radicosum*, *A. Rich. in Ann. Sc. Nat. Ser.* xv. 65, t. i. c.; stem short very stout, leaves 4–10 by $\frac{3}{4}-1\frac{1}{4}$ in. unequally 2-lobed, racemes or panicles very stout rarely exceeding the leaves, sepals orbicular and rather smaller petals 5-nerved, side lobes of lip minute, midlobe ovate, disk with 2 large basal calli, spur longer than the sepals stout incurved obtuse. *Saccolabium Wightianum*, *Lindl. in Wall. Cat.* 7303 (*in part*); *Gen. & Sp. Orchid.* 221 (*excl. Syn.*); *in Journ. Linn. Soc.* iii. 36 (*excl. Khasia*); *Wight Ic.* t. 917. *S. rubrum*, *Wight Ic.* 1673 (*not of Lindl.*). *S. ringens*, *Lindl. in Wall. Cat.* 7313; *Gen. & Sp. Orchid.* 220; *in Journ. Linn. Soc.* iii. 36; *Walp. Ann.* vi. 884.

The DECCAN PENINSULA; on the Nilghiri and Pulney Hills, and at Quilon, *Wight, &c.*

Stem as thick as the thumb. *Leaves* leathery, rigid, mottled with purple in

Wight's *S. rubrum*. *Peduncle* very short and stout; raceme simple or sparingly branched, rachis stout; bracts minute; flowers $\frac{3}{8}$ in. diam., bright red in Wight's *S. rubrum*, nearly white with rosy tips in his *S. Wightianum*; spur about as long as the blade of the lip, incurved, obtuse; anther beaked; strap of pollinia short, subtriangular, gland large. *Capsule* $\frac{3}{8}$ in. long, pyriform, angled and grooved.

12. *Æ. lineare*, *Hook. f.*; stem short stout, leaves 6–12 by $\frac{1}{2}$ – $\frac{3}{4}$ in. very unequally 2-lobed, panicle long peduncled much branched longer than the leaves, flowers as in *Æ. radicosum*, but rather smaller rose-cold. *Saccolabium lineare*, *Lindl. in Wall. Cat.* 7312. *S. paniculatum*, *Wight Ic. t.* 1676; *Reichb. f. in Bonpl. iii.* 225. *Cymbidium lineare*, *Herb. Heyne.*

DECCAN PENINSULA; on the Ghats from Canara southwards, alt. 5–7500 ft., *Wight, &c.* CEYLON; in the Doombura district, *Thwaites.*

As far as I can judge from dried specimen *Æ. lineare* is with difficulty distinguishable from *Æ. radicosum*, except by the more slender very much branched panicle, and rather smaller flowers. Wallich's specimens of *Sacc. lineare* are very bad.—The synonyms of this and the preceding may be mixed.

Sect. III. *Leaves* lorate, keeled. Midlobe of *lip* incurved between the much larger side lobes.

13. *Æ. odoratum*, *Lour. Fl. Coch.* 525; lobes of leaf large rounded, lateral sepals much larger than the dorsal and petals, midlobe of lip oblong-lanceolate acute entire or erose. *Lindl. Gen. & Sp. Orchid.* 239; in *Journ. Linn. Soc. iii.* 41; *Bot. Mag.* 4139; *Past. Fl. Gard. ii.* t. 143; *Flor. Cal. ii.* 75; *Maund Botanist. iv.* t. 180; *Knowles & West. t.* 75; *Hartm. Parad. ii.* t. 4; *Walp. Ann. vi.* 898, *Lindenia*, t. 14 (*var.*). *Æ. cornutum*, *Roxb. Hort. Beng.* 63; *Fl. Ind. iii.* 472; *Bot. Reg. t.* 1485.

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, *J. D. H.* The KHASIA HILLS, SILHET, CHITTAGONG and TENASSERIM. The CONCAN, *Heyne in Herb. Rottl.*—DISTRIB. Java, China, Cochin-China.

Stem 4–12 in., very stout. *Leaves* 6–10 by $\frac{3}{4}$ –1 $\frac{1}{2}$ in. *Racemes* many, 10–12 in.; peduncle and rachis stout; flowers purple to nearly white, sweet-smelling, often purple-spotted or -tipped; side lobes of lip subcuneate, midlobe short; spur very large, uncinately incurved; column short; anther obtuse; strap of pollinia not long, linear, gland small. *Capsule* 1–1 $\frac{1}{2}$ in., oblong-clavate, angles obtuse; pedicel $\frac{1}{2}$ in., very stout.

VAR. *bicuspidata*; midlobe of lip with a bicuspidate tip.—MALACCA, *Maingay (Kew Distrib.* 1648). PERAK (*Ic. in Hort. Calcut.*). A specimen of this sent from Calcutta (Garden?) to Herb. Hooker by Dr. Carey is named by the latter *Æ. cornutum*.

14. *Æ. suavissimum*, *Lindl. in Journ. Hort. Soc. iv.* 263; in *Past. Fl. Gard. ii.* 141, t. 66; differs from *Æ. odoratum* in the midlobe of the lip being longer and emarginate. *Jard. Fleur. t.* 213; *Rolfe in Gard. Chron.* 1890, i. 43; *Walp. Ann. vi.* 898. *Æ. Reichenbachii*, *Linden in Koch & Fintelm. Wochenschrift*, 1858, 61; *Reichb. f. Xen. Orchid. ii.* 11, t. 104. *Æ. nobile*, *Warner Sel. Orchid. Ser. 1. t.* 11; *Gartenfl.* 40, t. 641. *Æ. Rohanianum*, *Reichb. f. in Gard. Chron.* 1884, i. 206. *Æ. flavidum*, *Lindl. in Past. Fl. Gard. ii.* 101. *Æ. Ballantianum*, *Reichb. f. in Gard. Chron.* 1885, ii. 198.

PENANG and BURMA.

Said to be the sweetest scented species of the genus, but more definite characters are wanting to distinguish it from *Æ. odoratum*. The sepals and petals are rosy with often darker tips, the spur yellow mottled red. *Æ. Ballantianum* is an early flowering form.

15. *Æ. Emericii*, *Reichb. f. in Gard. Chron.* 1882, 586; lobes of

leaf long narrow subacute, sepals longer than the petals, midlobe of lip lanceolate acute.

ANDAMAN ISLANDS, *Berkeley*.

Stem 6-8 in. *Leaves* 10-12 by $\frac{3}{4}$ - $1\frac{1}{2}$ in., lobes much longer than in *Æ. odoratum*. *Racemes* 6-8 in.; flowers $\frac{1}{2}$ in. diam., pale lilac, pedicels 1 in., side lobes of lip rounded, entire; spur short, stout; foot of column very short; anther shortly beaked; strap of pollinia long, linear.—Much the smallest flowered of the Indian species.

SPECIES UNKNOWN TO ME.

Æ. BORASSI, *Ham. ex. Smith in Rees Cyclop.* xxxix. No. 8, is undeterminable.

Æ. DECUMBENS, *Griff. Notul.* iii. 365 (*without descript.*); *Ic. Plant. Asiat.* t. 320, fig. 1; *Lindl. in Journ. Linn. Soc.* iii. 423; from Mogoung in Burma. *Stem* very short. *Leaves* 2-4 in., elliptic, acute, many-nerved; peduncles several, short, stout, few-fl.; bracts small, triangular; pedicels with ovary $\frac{3}{4}$ in., erect; flowers $\frac{3}{4}$ in. diam.; lateral sepals very broad, obtuse.—This has the habit of a *Phalænopsis*.

Æ. LASIOPETALUM, *Willd. Sp. Pl.* iv. 130, is undeterminable.

Æ. LEPIDUM, *Reichb. f. in Gard. Chron.* 1883, i. 466; leaves lorate obtusely 2-lobed, flowers white ascending, sepals and petals subequal oblong apiculate, tips and of lip and spur purple, side lobes of lip short triangular, midlobe larger triangular, spur filiform curved as long as the pedicelled, with a slender curved ascending tooth in the middle of the cavity.—British India, *Berkeley*.

Æ. MENDALII, *Jenning's Orchid. under t.* xxx., without description, is probably *Æ. falcatum*.

Æ. PACHYPHYLLUM, *Reichb. f. in Gard. Chron.* 1880, ii. 230; leaves short most fleshy obtusely unequally 2-lobed, raceme short few-fl., sepals and rather shorter petals oblong-ligulate obtusely acute crimson-lake, side lobes of lip subtriangular short, midlobe purple triangular minute, spur white cylindric obtuse inflated longer than the pedicelled ovary, column white.—Burma (*Hort. Veitch.*).

Æ. RIGIDUM, *Ham. ex. Smith in Rees Cyclop.* xxxix. No. 12, is undeterminable.

59. **RENANTHERA**, *Lour.*

Epiphytes; stem elongate, branched, leafy; pseudobulbs 0. *Leaves* rigid, 2-lobed. *Flowers* large or medium sized, in lateral spreading panicles. *Sepals* narrow, widely spreading, dorsal erect, lateral deflexed or placed under the lip, oblanceolate or spatulate, at first parallel or connate. *Petals* narrow. *Lip* very small sessile, jointed on the base of the column, saccate, side lobes erect. *Column* short, truncate, foot 0; pollinia large, 2-grooved or 2-partite, strap short, gland transverse.—Species 5, Indian, Chinese and Malayan.

1. ***R. coccinea***, *Lour. Fl. Coch. Ch.* ii. 637; flowers 2-2 $\frac{1}{2}$ in. diam., lateral sepals free, much larger than the dorsal, midlobe of lip ovate-lanceolate recurved. *Lindl. Gen. & Sp. Orchid.* 217; *Bot. Reg.* t. 1131; *Bot. Mag.* t. 2997-8; *Part. Mag.* t. 49; *Reichb. Fl. Exot.* t. 114; *Walp. Ann.* vi. 875.

TENASSERIM; at the Moscos Isds., opposite Tavoy, *Parish*.—DISTRIB. Coch. China.

Stem 1-3 ft., stout. *Leaves* 2-4 in., distant, oblong or shortly lorate. *Peduncle* 2-3 ft., erect; branches long, divaricate, lax-fl.; bracts very small, broad; lateral sepals scarlet, dorsal and petals linear, orange-red, spotted; lip yellow, tip of small spur and midlobe scarlet; strap of pollinia linear acute.

2. ***R. elongata***, *Lindl. Gen. & Sp. Orchid.* 218; flowers $\frac{3}{4}$ in. diam., sepals subequal lateral free, midlobe of lip tongue-shaped revolute with 2

basal calli. *Reichb. f. Xen. Orchid.* i. 88; *Walp. Ann.* vi. 876. *R. matutina*, *Lindl. in Bot. Reg.* 1843, t. 41 (not of *Gen. & Sp.*); *Prescatorea*, i. t. 11. *R. micrantha*, *Blume Mus. Bot.* i. 60; *Reichb. f. l. c.* i. 87. Saccolabium reflexum, *Lindl. in Wall. Cat.* 7309; *Gen & Sp. Orchid.* 225.

SINGAPORE, *Wallich*. PERAK, *Scortechini*, &c. MALACCA, *Griffith* (*Kew Distrib.* 5212), *Maingay* (*K. d.* 1644)—DISTRIB. Malay Islands.

Habit and foliage of *R. coccinea*, but much more slender, bracts ovate reflexed, flowers much smaller and more numerous, orange yellow with red spots. *Lip* with the side lobes short, broad, margins revolute; spur large, cylindric, obtuse, somewhat recurved; strap of pollinia linear acuminate, gland small. *Capsule* 1 in., fusiform, angles acute.—King's collector describes the flowers as dark-red.

3. *R. angustifolia*, *Hook. f. Ic. Plant. ined.*; flowers $1\frac{1}{2}$ in. diam., lateral sepals lanceolate abruptly clawed, at first connate, midlobe of lip minute acute recurved.

PERAK; on Gunong Bata Pateh, *Wray*.

Stem as thick as a goose-quill. *Leaves* 4-5 by $\frac{1}{2}$ - $\frac{3}{4}$ in., linear, recurved. *Scape* long, sparingly branched; pedicel with ovary $1-1\frac{1}{4}$ in.; lateral sepals inserted by a point, and narrower dorsal acuminate; side lobes of lip very small, rounded; spur conico-cylindric; top of column hispid; pollen large, oblong, strap broad, gland large.

SPECIES UNKNOWN TO ME.

R. HISTRIONICA, *Reichb. f. in Gard. Chron.* 1878, ii. 74; low, leaves lanceolate acuminate, raceme laxly few-fl., sepals and petals cuneately ligulate obtusely acute, lip 3-fl., side lobes triangular, midlobe ligulate acute with two incumbent triangular or quadrate lamellæ at its base, spur short conic.—Singapore? or Malacca?, *Hort. Day*. Flowers yellow purple spotted and margined, lip white, side lobes spotted with purple, spur orange, column yellow and purple.—The first species with acuminate leaves.—Description from *Reichb. l. c.*

60. **VANDA**, *Br.*

Epiphytes; stem leafy. *Leaves* very coriaceous or fleshy, flat keeled or terete. *Flowers* usually large, highly coloured, in simple lax or dense racemes. *Sepals and petals* subequal, spreading or incurved, bases narrowed. *Lip* large, base usually saccate or spurred, side lobes large or small (rarely 0), placed on the sides of the sac or spur; midlobe various, fleshy, disk usually ridged or lamellate. *Column* short, stout; foot not or very shortly produced; anther 2-celled; rostellum obscure; pollinia 2, didymous, subglobose or obovoid, strap broad short or long geniculate, gland rather large (slender in § *Anotis* and gland small).—Species about 20, tropical Asiatic and Australian.

Sect. I. EUVANDA. *Sepals and petals* widely spreading (not incurved). *Lip* with erect side lobes. *Strap* of pollinia flat, geniculate, gland large.

* Leaves terete. *Scape* few-fl. See also *Ærides cylindricum*.

1. *V. teres*, *Lindl. in Wall. Cat.* 7324; *Gen. & Sp. Orchid.* 217; *Fol. Orchid.* 7; in *Bot. Reg.* t. 1809; midlobe of lip 2-fl., lobes hatchet-shaped, sac long conical. *Bot. Mag.* t. 4114; *Paxt. Mag.* v. t. 193; *Griff. Notul.* iii. 352; *Warn. Sel. Orchid. Ser.* iii. t. 2; *Reichenbachia*, i. t. 27; *Rev. Hort.* 1856, t. 22. *Dendrobium teres*, *Roxb. Fl. Ind.* iii. 485.

LOWER BENGAL; at Seeb Sagur, *Clarke*. ASSAM, SILHET, the KHASIA HILLS, CHITTAGONG and UPPER BURMA, *Roxburgh*, *Wallich*, &c.

Stem many feet long, branched, and leaves as thick as a goose-quill. *Leaves* 6-8 in. *Peduncle* 6-12 in.; bracts short, ovate; flowers 3-6, 4 in. diam., white or

rose-cold; sepals and petals undulate; lip hairy towards the base; side lobes broad, incurved, yellow within, crimson spotted; midlobe much larger, flabellately reniform purple or rose-cold., sac 1 in. long; column hairy in front. *Capsule* 1 in., clavate.

2. **V. Hookeriana**, *Reichb. f. in Bonpland*. 1856, 324; *in Gard. Chron.* 1882, ii. 488; midlobe of lip very large reniformly flabellate 3-lobed, sac very short. *Ill. Hort.* 1883, t. 484; *Orchidoph.* 1886, t. 158; *Reichenbachia*, ii. t. 74. *Warner Orchid. Alb.* t. 73, 1882.

PERAK, *Scortechini*; in swamps, *Wray*. SINGAPORE, *Ridley (in litt.)*.

Habit of *V. teres*, but leaves shorter, 2-3 in.; scape longer; flowers 3-5, 2 in. diam.; lateral sepals oblong or obovate-oblong, cream-cold; petals broader, lilac or carnation; lip towards the base and column hairy; side lobes purple; midlobe as large as the rest of the flowers, white or lilac, base 2-glandular; sac conical, obtuse. *Capsule* 4 in.

** Leaves flat or chanelled and keeled. Scape usually many-fld.

† Flowers $\frac{1}{2}$ -1 $\frac{1}{2}$ in. diam. (See also *V. Bensoni*.)

3. **V. parviflora**, *Lindl. in Bot. Reg.* xxx. Misc. 45; peduncle and raceme strict erect, flowers $\frac{1}{2}$ - $\frac{2}{3}$ in. diam., sepals oblong and spatulate petals yellow, lip rather shorter than the sepals, midlobe cuneate-obovate with a dilated truncate 2-lobed tip, disk with fleshy blue ridges, spur slender conical half as long as the lip. *Wight Ic.* t. 1669; *Reichb. f. in Gard. Chron.* 1877, 166. *Ærides Wightianum*, *Lindl. in Wall. Cat.* 7320; *Gen. & Sp. Orchid.* 238; *in Journ. Linn. Soc.* iii. 40; *Bot. Mag.* t. 5138; *Wight Ic.* v. p. 8; *Dalz. & Gibs. Bomb. Fl.* 265.

WESTERN HIMALAYA; Kumaon, Atakmunda river, alt. 3-4000 ft., *Edgeworth*. NEPAL, *Wallich*. ASSAM, *Mann*. BURMA, *Berkely*. WESTERN PENINSULA; from the Coucan to Travancore. CEYLON, *Walker, &c.*

Stem 4-6 in. Leaves 4-8 by $\frac{1}{2}$ - $\frac{3}{4}$ in., unequally obtusely 2-lobed. Peduncle and rachis stout; pedicel with ovary 1-1 $\frac{1}{2}$ in.; side lobes of lip small, ovate. *Capsule* 1-1 $\frac{1}{4}$ in., long pedicelled, clavate.

Var. *testacea*; sepals and petals brown. *V. testacea*, *Reichb. f. in Gard. Chron.* 1877, 166. *Ærides testaceum*, *Lindl. Gen. & Sp. Orchid.* 238; *Pact. Fl. Gard.* ii. t. 142; *Walp. Ann.* v. 897.—Ceylon.

Var. *albiflora*; sepals and petals white, lip white, ridges speckled with red, spur broader obtuse.—Moulmein (*Ic. Parish*).

4. **V. cœrulescens**, *Griff. Notul.* iii. 352; *Ic. Plant. Asiat.* t. 331; raceme drooping, flowers 1-1 $\frac{1}{2}$ in. diam., sepals obovate and spatulate, petals pale blue, lip rather shorter than the sepals, midlobe cuneate-obovate with a dilated truncate 2-lobed tip, disk with fleshy dark blue ridges, spur slender conical half as long as the lip. *Lindl. Fol. Orchid.* 9; *Walp. Ann.* vi. 868; *Bot. Mag.* t. 5834 and 6328; *Warner Orchid. Alb.* t. 48; *Floral Mag. N. S.* t. 256; *Orchidoph.* 1863, t. 637; *Reichb. f. in Gard. Chron.* 1869, 498; 1870, 529, f. 97.

UPPER BURMA, *Griffith*. PEGU; on hills near Prome, alt. 1500 ft., *Benson*.

Stem 6 in. Leaves 6-10 by $\frac{2}{3}$ in., much broader in cultivation, acutely 2-fid or 3-fid. Peduncle with racemes 1 ft. or less; pedicel with ovary 1-1 $\frac{1}{2}$ in.; flowers variable in colour, from blue to nearly white (vars. *Bozallii*, R. f. and *Louriana*, R. f.); spur and column blue.

5. **V. spathulata**, *Spreng. Syst. Veg.* iii. 719; leaves short, peduncle very tall, raceme terminal few-fld., flowers 1 $\frac{1}{4}$ in. diam. golden yellow, sepals and petals spatulately oblong flat, lip clawed as long as the sepals, side lobes very small, midlobe suborbicular. *Lindl. Gen. & Sp. Orchid.* 216; *Fol. Orchid.* 9; *Wight Ic.* t. 915; *Walp. Ann.* vi. 869. Epidendrum

spathulatum, *Linn. Sp. Pl.* 1348. *Limodorum spathulatum*, *Willd. Sp. Pl.* iv. 125. *Ærides maculatum*, *Smith in Rees Cyclop. Suppl.*—*Rheede Hort. Mal.* xii. t. 3.

WESTERN PENINSULA; from Malabar to Travancore and CEYLON.

Stem 2 ft. *Leaves* 2-4 by $\frac{1}{2}$ -1 $\frac{1}{4}$ in., shortly obtusely 2-lobed. *Peduncle* 12-18 in., robust, few-fl. and at the tip only; bracts large, ovate, acute; pedicel and ovary 1-1 $\frac{1}{2}$ in.; side lobes of lip broadly obovate, midlobe obscurely 3-fl.; spur conical. *Capsule* 1 $\frac{1}{2}$ -2 $\frac{1}{2}$ in., clavately fusiform.

†† *Flowers* 2 in. diam. and upwards (smaller in *V. Bensoni*).

6. **V. cœrulea**, *Griff. ex Lindl. in Bot. Reg.* 1847, under t. 30; *Fol. Orchid.* 8; peduncle elongate many-fl., flowers 3-4 in. diam. pale blue, lateral sepals obovate, petals clawed broadly obovate, lip much shorter than the sepals dark blue linear-oblong, side lobes small rounded, midlobe with 2 thickened ridges ending in a bigibbous tip. *Paxt. Fl. Gard.* t. 36; *Jard. Fleurist.* t. 102; *Fl. des Serres.* t. 609; *Reichb. f. Xen. Orchid.* i. 8, t. 5; *Pescatorea*, i. t. 29; *Ill. Hort.* vii. t. 246; *Warner Sel. Orchid.* t. 18; *Jennings Orchid.* t. 34; *Reichenbachia*, ii. 19, t. 57; *Lindenia*, iv. t. 160 *V. cœrulescens*, *Journ. Hort. Soc.* vi., *Proc.* vii. with fig. *Vanda*, *Griff. Itin. Notes*, 88, No. 1284.

KHASIA and JYNTEA MTS., on oaks, alt. 4000 ft., *Griffith*, &c.

Stem 3-6 in., very stout. *Leaves* 3-10 by $\frac{3}{4}$ -1 in., keeled, 2-lobed or tip obliquely truncate and toothed. *Peduncle* with lax-fl. 6-20-fl. raceme 1-2 ft., perianth segments somewhat waved and obscurely tessellate; lip not one-third the length of the sepals; spur conical obtuse. *Capsule* 3 in., fusiform, long pedicelled.

7. **V. Denisoniana**, *Benson & Reichb. f. in Gard. Chron.* 1869, 528; 1885, 105, f. 21; peduncle very short, flowers 2 in. diam., white, sepals and petals waved and twisted, lateral sepals largest broadly obovate falcate deflexed, petals clawed spathulate, lip longer than the sepals, side lobes large subquadrate, midlobe panduriform with two orbicular diverging and recurved terminal lobes. *Bot. Mag.* t. 5811; *Ill. Hort. N. S.* t. 105; *Lindenia*, t. 21; *Warner Orchid. Alb.* t. 248.

TENASSERIM; at Moulmein, *Parish*. ARRACAN, *Benson*.

Stem short. *Leaves* 6-10 in., deeply unequally 2-lobed. *Peduncle* stout, with the raceme 6-10 in.; pedicels with ovary 2 in.; midlobe of lip with rounded sides, and a very acute terminal sinus; disk with 5 thick obtuse ridges; side lobes concave, with orange streaks; spur short, villous within. *Capsule* 3-5 in., clavately fusiform.

8. **V. Bensoni**, *Batem. in Bot. Mag.* t. 5611; leaves narrow, peduncle tall inclined many-fl., flowers 1 $\frac{1}{2}$ -2 in. diam., sepals and petals dull yellow-green spotted with red-brown, lateral sepals broadly obovate, petals spathulately obovate, lip nearly as long as the sepals blue, side lobes triangular-ovate, much smaller than the panduriform midlobe which has 2 broad recurved terminal lobes. *Reichb. f. Xen. Orchid.* ii. 138; *Gard. Chron.* 1867, 180; *Flore des Serres*, t. 2329.

PEGU; near Rangoon, *Benson*. TENASSERIM; at Moulmein, *Parish*.

Stem short. *Leaves* 4-6 in. obliquely truncate and toothed. *Peduncle* with the raceme 18 in.; midlobe of lip with 3 obtuse ridges; spur conical obtuse.—Very near *V. Denisoniana*, but flowers much smaller, quite different in colour, not so waved, midlobe of lip more contracted, the terminal lobes uncinatè.—A form with brown flowers figured by *Parish* and called *tristis* may be this or *V. brunnea* (see end of genus).

9. **V. Parishii**, *Veitch & Reichb. in Gard. Chron.* 1867, 180, with fig.;

leaves broad obtusely 2-lobed, peduncle short stout erect, bracts large, flowers 2 in. diam., fleshy spotted mauve-brown or purple, lateral sepals broadly ovate-oblong and orbicular petals apiculate, lip half as long as the sepals, side lobes rounded, midlobe small cuneately flabelliform. *Reichb. f. Xen. Orchid.* ii. 138; in *Gard. Chron.* 1870, 890; *Warner Orchid. Alb.* t. 15, and 61 (var.).

TENASSERIM; at Moulmein, *Parish*.

Stem very short, stout. *Leaves* few, 8–10 by 2–3 in. *Peduncle* very short; raceme 6–8 in., drooping, 6–8-fld.; bracts acuminate; flowers variable in colour. The short stems and broad flat leaves are not those of *Vanda* proper, and more resemble *Stauroopsis* or *Arachnanthe*. In var. *Marriottiana*, *Reichb. f.* in *Gard. Chron.* 1880, 743; 1881, 726, the sepals and petals are mauve, the side lobes of the lip white with mauve stripes and 2 yellow blotches below the column, and the midlobe is carmine. In var. *purpurea*, N. E. Br. in *Gard. Chron.* 1883, 307, the sepals and petals are mauve-purple with white bases, and the lip bright mauve.

10. **V. bicolor**, *Griff. Notul.* iii. 354; *It. Notes*, 132, No. 546; *Ic. Plant. Asiat.* t. 330; leaves præmorse, peduncle short erect 4–6-fld., flowers 2 in. diam. brownish-purple obscurely tessellate, waved, lateral sepals obovate deflexed, dorsal small, lip nearly as long as the sepals, purple side lobes large orbicular, midlobe small panduriform, tip contracted 2-lobed. *Lindl. Fol. Orchid.* 6; *Walp. Ann.* vi. 867; *Reichb. f. in Gard. Chron.* 1875, 620.

EASTERN TROPICAL HIMALAYA; Sikkim (*Ic. in Herb. Calcutt.*); Bhotan, alt. 2000 ft. *Griffith.* ASSAM (*Ic. in Herb. Calcutt.*).

Stem 2–3 ft. *Leaves* 6–10 in., sometimes unequally rather obtusely 2-lobed. *Scape* very stout; bracts ovate, acute; dorsal sepal much the smallest, dilated in the middle; petals clawed, spatulate; side lobes of lip margined with yellow. *Capsule* almost a span long.—Near *V. Roxburghii*, but at once distinguishable by the large orbicular side lobes of the lip. A little-known species.

11. **V. Roxburghii**, *Br. in Bot. Reg.* t. 506; leaves præmorse, raceme suberect, flowers 1½–2 in. diam. tessellate with brown, sepals and petals subequal clawed obovate waved, lip nearly as long as the sepals, side lobes small acute, midlobe panduriform violet tip dilated truncate 2-lobed. *Lindl. Gen. & Sp. Orchid.* 215; *Fol. Orchid.* 3; *Wight Ic.* t. 916; *Fl. des Serres*, ii. t. 11; *Paxt. Fl. Gard.* t. 42, f. 2; *Reichb.-Fl. Exot.* t. 121; *Ill. Hort.* t. 185 (var.). *V. tesselloides*, *Reichb. f. in Walp. Ann.* vi. 864. *Cymbidium tesselloides*, *Roxb. Fl. Ind.* iii. 463. *C. tessellatum*, *Swartz in Nov. Act. Upsal.* vi. 75; *Willd. Sp. Pl.* iv. 102; *Roxb. Fl. Ind.* l. c. *C. Alagnata*, *Herb. Ham.* *Epidendrum tessellatum*. *Roxb. Cor. Pl.* i. 34, t. 42. *Ærides tessellatum*, *Wight in Wall. Cat.* 7318; *Lindl. Gen. & Sp. Orchid.* 240.—*Vanda*, *Jones in Asiat. Res.* iv. 302.

BENGAL, BEHAR and westwards to GUZERAT and the CONCAN, and southwards to TRAVANCORE, TENASSERIM and CEYLON.

Stem 1–2 ft., climbing. *Leaves* 6–8 in., narrow, complicate. *Peduncle* 6–8 in., 6–10-fld.; sepals and petals yellowish-green or blueish except from the clathrate-brown nerves, margins white; lip half as long as the sepals or more, disk of midlobe convex with fleshy ridges and white margins and mesial lines; spur conical.—*Reichenbach* in *Gard. Chron.* 1883, i. 9, describes a var. *Wightiana*, with purple lip, the side lobes with more or less developed anterior teeth. The colouring in the *Fl. des Serres*, ii. t. 11, is unlike that of any form known to me. *Roxburgh* distinguishes his *C. tessellatum* from his *C. tesselloides*, by the former having the lip with the sides incurved into a tube, and the blade tapering entire acute; whilst in the latter the lip is channelled above, concave underneath, and the tip of 2 obtuse lobes. The latter (the typical *V. Roxburghii*) is the only form known to Indian

botanists, and I suspect that the form of the lip of *C. tessellatum* is due to withering. Var. *unicolor*, Bot. Mag. t. 3416 is I suspect the Chinese *V. concolor*, Blume.

Sect. II. ANOTA, *Lindl.* Raceme dense-fl'd. Sepals and petals widely spreading. Lip without side lobes. Strap of pollinia long, slender, straight.

The two species of this section (the following and *V. violacea*) have been referred to *Saccolabium*, *Vanda*, and one of them to *Rhynchostylis*. In whichever genus placed they are aberrant; the ridged lip is quite that of *Vanda*; but the lip and strap of the pollinia is as in *Rhynchostylis*; and the spur is hardly that of *Vanda*, but rather of *Saccolabium*.

12. **V. densiflora**, *Lindl. in Paxt. Fl. Gard. under t. 42; Fol. Orchid. 2*; leaves truncately excised, lip cuneate tip shortly obtusely 3-lobed, base with 2 pubescent ridges descending into the spur. *Fl. des Serres*, t. 1765; *Reichb. f. in Gard. Chron.* 1866, 1194. *Saccolabium giganteum*, *Lindl. in Wall. Cat.* 7306; *Gen. & Sp. Orchid.* 221; *Bot. Mag. t.* 5635. *Reichenbachia* t. 22; *Jennings Orchid.* t. 8; *Lindernia*, f. 683; *Orchidopl.* 1888, t. 163.

PEGU; at Prome, *Wallich.* RANGOON, *Benson.*

Stem short, as thick as a child's wrist; roots $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. Leaves imbricating at the base, 6–12 by $1\frac{1}{2}$ –2 in., very thick, channelled, lobes acute. Peduncle very short, stout; raceme 8–14 in., cylindric, very dense-fl'd.; flowers 1–1 $\frac{1}{4}$ in. diam., white with a few purple spots at the base of the petals; lip fleshy, white with bright purple shining terminal lobes; spur short, inflated, pointing backwards.

Sect. III. CRISTATÆ. Racemes shortly peduncled, few-fl'd.; pedicels decurved. Sepals and petals incurved. Strap of pollinia very short, gland large.—Inflorescence and flowers of *Luisia*, but habit and foliage of *Vanda*.

13. **V. cristata**, *Lindl. in Wall. Cat.* 7328; *Gen. & Sp. Orchid.* 216; *Sert. Orchid. Frontisp. f.* 10; in *Bot. Reg.* 1842, t. 48; *Fol. Orchid.* 10; sepals and petals narrow yellow or green, side lobes of lip erect triangular, midlobe subpanduriform golden striped with purple, tip with 2 divaricate spindle-shaped lobes and an intermediate depressed one, spur conical. *Bot. Mag. t.* 4304; *Warner Orchid. Alb. vii. t.* 290; *Gartenfl. t.* 680; *Walp. Ann. vi.* 869. *V. striata*, *Reichb. f. Xen. Orchid. ii.* 137, t. 150. *Ærides cristatum*, *Wall. mss.* *Ærides* sp. *Griff. Itin. Notes*, 203, No. 1188.

TROPICAL HIMALAYA; from Kumaon to Bhotan, *Wallich*, &c. SILHET, *J. D. H. & T. T.*

Stem 3–6 in., very stout. Leaves 3–5 in., rigidly coriaceous, recurved, keeled, truncately 3-toothed. Raceme equalling or shorter than the leaves; bracts very short, broad; pedicels with ovary long, stout; flowers $1\frac{1}{2}$ –2 in. diam.; side lobes of lip acute truncate or toothed, midlobe as long as the sepals; spur short, obtuse. Capsule 2–2 $\frac{1}{2}$ in., narrowly clavate.

14. **V. alpina**, *Lindl. Fol. Orchid.* 10; sepals and petals narrow yellowish, side lobes of lip rounded, midlobe concave ovate obtuse or retuse pale yellow streaked with purple, spur 0. *V. Griffithii*, *Lindl. in Paxt. Fl. Gard. ii.* 22, and *Fol. Orchid.* 10 (*excl. cilat. Griffith*). *Luisia alpina*, *Lindl. in Bot. Reg.* 1858, *Misc.* 56.

SUBTROPICAL HIMALAYA, alt. 3500–5000 ft., from Garwhal, *Thomson*, to Bhotan. KHASIA HILLS, alt. 4–5000 ft., *J. D. H. & T. T.*

Habit of *V. cristata*, but smaller, leaves rather shorter, racemes always much shorter than the leaves, flowers only 1 in. diam., lip very different. Capsule not seen.—Lindley's citation of Griffith's *Itin. Notes*, No. 526, from his *V. Griffithii*, is (as he states in *Fol. Orchid.*) an error. But he again errs in referring this same plant to *Vanda bicolor*. It is his *V. undulata* (*Stauropsis undulatus*, p. 27).

15. **V. pumila**, *Hook. f.*; sepals and petals narrow pale yellowish

or white, side lobes of lip rounded, midlobe broadly ovate concave obtuse pale streaked with purple, spur conical as long as the midlobe. *V. cristata*, var. *Lindl. Fol. Orchid.* 10.

SIKKIM and BHOTAN HIMALAYA, alt. 2000 ft. (*IC. Cathcart & in Herb. Calcutt.*).

A smaller species than either *cristata* or *alpina*, with the lip of the latter, but furnished with a long conical spur. In the Cathcart drawings the leaves are 5–6 in. and sepals and petals white; in that of the Calcutta Herb. the leaves are only 3 in. long, and the sepals and petals are yellow. The latter is ticketed as from Mongpo, in Sikkim.

SPECIES UNKNOWN TO ME.

V. BRUNNEA, *Reichb. f. Xen. Orchid.* ii. 139; leaves long narrowly ligulate emarginate, flowers as large as in *V. concolor* (of China) olive within, sepals and petals cuneately oblong obtusely acute, lip and column pale yellowish white, side lobes semiround, midlobe ligulate 2-lobed retuse, spur acutely conical.—Moulmein, *Parish*.—There is a drawing at Kew, by *Parish*, of what may be this species named *V. tristis*, *Par. mss.*, the perianth is brown on both surfaces, the lip and column pale brown. (See *V. Parishii*, p. 51.)

V. STANGEANA, *Reichb. f. in Bot. Zeit.* xvi. (1858) 351; allied to *V. fusco-iridis*, *Lindl.* (of Java), auricles of the lip semiovate divergent, blade gradually narrowed from a broad semicordate base, lip slightly 2-lobed, a pair of small calli before the mouth of the spur, dorsal sepal cuneate-ovate about equalling the petals, lateral sepals larger.—Sepals and petals golden green tessellated with beautiful chestnut brown; lip and column white; lip pale violet in front, with a streak of red dots on each side of the spur, and a furrow under the column between the auricles.—Assam (*Hort. Schiller*).

V. VIPANI, *Reichb. f. in Gard. Chron.* 1882, ii. 134, 29; leaves very narrowly linear decurved deeply unequally 2-toothed, raceme few-fl., sepals and rather smaller petals cuneate-oblong obtuse undulate gradually narrowed to the base pale olive-green or ochreous barred with short brown-purple lines, lip panduriform, side lobes semiovate golden yellow, midlobe olive-green 2-callous at the base, spur conical glabrous within.—Burma, *Vipan*.

V. WIGHTII, *Reichb. f. in Walp. Ann.* vi. 932; allied to *V. Stangeana*, *Reichb. f.*, leaves more than a foot long narrowly ligulate unequally acutely 2-lobed, scape few and lax-fl., side lobes of lip subquadrate, midlobe broadly ovate, lip contracted ligulate obtusely 2-lobed, disk with 2 thick ridges, pilose at the base of the ridges and side lobes, spur conical, column slender for the genus.—Nilghiris, *Wight*.

61. **SACCOLABIUM**, *Blum.*

62. *SCHÆNORCHIS*, *Bl.* 63 *UNCIFERA*, *Lindl.* 64 *ACAMPE*, *Lindl.*

Epiphytes; pseudobulbs 0. *Leaves* flat keeled or terete. *Peduncles* lateral; flowers usually small spicate racemed panicled or subcorymbose. *Sepals* and *petals* adnate to the base of the column, spreading, subsimilar, free. *Lip* sessile at the base of the column usually consisting of a large saccate or conic cylindric spur, small lateral lobes and a small midlobe; sac or spur not septate within and without a large scale or callus within under the column (except *S. longifolium*). *Column* short, broad, truncate, rarely beaked, foot 0; anther 1- or imperfectly 2-celled; pollinia 2, entire or 2-partite.—Species about 40, Eastern Asiatic.

Of the genera enumerated above, *Schænorchis* is not British Indian, a fact which I overlooked when drawing out the key to the genera, though it is noted in *Gen. Plant.* *Uncifera* I refer to *Saccolabium*; its character of the incurved spur is insufficient; and that of the pollinia stipitate on the strap, or rather on the geniculate apex of the strap, though curious, is, considering how variable this organ is in the genus and its allies, not a dependable one for generic purposes. For *Acampe* I can find no characters whatever, and it is difficult to retain it as a section; its lip is that of sect. *Calceolaria*, as is the subcorymbose or umbellate inflorescence of most of the species.

The following sections are, I think, natural, but are not clearly definable by words.

Sect. I. MICRANTHÆ. *Leaves* flat terete or channelled. *Flowers* small, often minute, in simple or paniced racemes or spikes. *Lip* various; spur long or short. (See also Sect. vi. *Uncifera*). (Sp. 1-19).

Sect. II. CALCEOLARIA. *Leaves* lorate, flat, flaccid. *Flowers* subcorymbose on a short stout peduncle; bracts short, broad rounded. *Lip* a large hemispheric sac, with truncate or short side lobes and a short triangular or reniform adnate erose or fimbriate midlobe which is warted or echinate on the disk. *Column* very short; strap of globose pollinia linear. (Sp. 20-27).

Sect. III. ACAMPE. *Stem* usually long and very stout. *Leaves* keeled, thickly coriaceous. *Flowers* corymbose as in § *Calceolaria*, rarely in large spreading panicles. *Lip* as in § *Calceolaria*, but with a thicker warted reniform or ovate midlobe (spur cylindric in *S. ochraceum*). *Column* very short; strap of globose pollinia linear. (ACAMPE, Lindl.) (Sp. 28-34).

Sect. IV. PLATYRHIZON. *Stem* 0, or very short; roots very long, flattened. *Leaves* lorate, flaccid. *Flowers* racemed. *Lip* very small, spur saccate or conical, midlobe small reniform. *Column* very short; strap of globose pollinia linear, gland large. (MICROPERA, Dalz.) (Sp. 35-36).

Sect. V. DISTICHOPHYLLÆ. *Stem* tufted very slender pendulous, leafy throughout. *Leaves* uniform, distichous, lanceolate. *Flower* small, in very short racemes. *Lip* small, spur saccate. *Column* very short, strap of pollinia slender, gland sagittate. (Sp. 37-38).

Sect. VI. SPECIOSÆ. *Stem* very stout as are the long roots. *Leaves* linear rigid, keeled, often recurved. *Flowers* highly coloured, in dense racemes. *Lip* with a linguiform midlobe, small side lobes and a long cylindric spur. *Column* short or rather long; strap of globose pollinia slender.—Habit of *Erides* sect. II.; but there is no foot to the column. (Sp. 39-41).

Sect. VII. UNCIFERÆ. *Stem* very short. *Leaves* distichous, coriaceous. *Flowers* in dense racemes. *Lip* with a large funnel-shaped incurved spur much longer than the sepals. *Column* decurved, rostellum elongate; anther long-beaked; pollinia globose, seated near the geniculately inflexed apex of a very long slender strap with recurved margins; gland large, linear, or sagittate. UNCIFERA, Lindl. (Sp. 42, 43.)

Sect. I. MICRANTHÆ. (See p. 54.)

* Stems elongate pendulous; leaves terete, filiform, or semiterete.

1. **S. geminatum**, Lindl. in *Bot. Reg.* 1833 *Misc.* 50; leaves strongly curved terete channelled 3-toothed, racemes slender paniced, sepals ovate-oblong 1-nerved about equalling the conic obtuse spur, petals smaller obovate 1-nerved, midlobe of lip cymbiform obtuse. *Walp. Ann.* vi. 885.

EASTERN HIMALAYA, alt. 3-5000 ft.; Bhotan *Griffith*; Sikkim *J. D. H.* KHASIA and JYNTEA HILLS, alt. 2-4000 ft., common.

Stem 6-12 in., curved, rooting at the base. *Leaves* 2-4 in., fleshy, $\frac{1}{8}$ - $\frac{1}{4}$ in. diam. *Panicles* longer than the leaves, branches spreading; bracts small, acute, flowers $\frac{1}{2}$ in. long; sepals white, or purple with white tips; petals purple; lip variable, blade fleshy, sometimes laterally compressed, side lobes very small; column very short, anther ovate, strap of pollinia short, broad, gland very large. *Capsule* subsessile $\frac{1}{8}$ - $\frac{1}{4}$ in. long, oblong, curved.

2. **S. niveum**, Lindl. *Gen. & Sp. Orchid.* 224; stem short, leaves recurved semiterete channelled notched, racemes slender paniced, sepals ovate-oblong 1-nerved about equalling the ovoid obtuse spur, petals cuneately oblong truncate 1-nerved, midlobe of lip spatulate fleshy concave. *Thwaites Enum.* 304.

CEYLON; in the Central Province, alt. 3-4000 ft., *Walker, Thwaites*.

Stem stout; 1-4 in., curved. *Leaves* 2-4 in., fleshy, $\frac{1}{8}$ - $\frac{1}{4}$ in. diam. *Panicles* longer than the leaves, branches spreading; bracts minute, acute; flower $\frac{1}{2}$ in. long,

white; tips of lateral sepals fleshy at the back; lip with minute rounded side lobes; column very short; anther hemispheric; strap of pollinia very short, gland very large. *Capsule* $\frac{1}{2}$ in., oblong.—Gardner (n. 872) has a form with much broader leaves, $\frac{1}{2}$ in. diam. and stouter scapes.

3. **S. filiforme**, *Lindl. in Journ. Linn. Soc.* iii. 36; stem slender, leaves slender terete acuminate, racemes short stout simple, sepals linear, petals orbicular, shorter than the cylindric obtuse recurved spur, limb of lip ovate acute deflexed, side lobes large rounded. *Walp. Ann.* vi. 887. *Sarcanthus filiformis* & *roseus*. *Wight Ic. t.* 1684 (*excl. capsule*) 1685. *Schænonchis juncifolia*, *Thwaites Enum.* 304 (*not of Blume.*).

MALABAR and TRAVANCORE; on the Nilgiri hills, at Neddawuttum and Pycara, *Wight*; Pulney and Anamallay hill, *Cotton*, &c. CEYLON; Central Province, alt. 4-6000 ft., *Walker*, &c.

Stem 6-10 in.; internodes $\frac{1}{2}$ -2 in. *Leaves* 2-6 in., as thick as a sparrow quill or more slender. *Racemes* $1\frac{1}{2}$ -2 in., stout, subsesile, often deflexed; bracts lanceolate; flowers $\frac{1}{4}$ in. long, red, or orange streaked with crimson; sepals 1-nerved, petals with 3 nerves rugose on the back; spur of lip inflated; anther hemispheric; strap of globose pollinia short, dilated upwards, gland very large. *Capsule* $\frac{1}{2}$ in., pyriform, pedicelled.—Flowers rose coloured in *Wight's* plant, orange with red stripes in the Ceylon plants.

4. **S. perpusillum**, *Hook. f. Ic. Plant. ined.*; stem short curved, leaves terete recurved acute, racemes erect stout flowering to the base, bracts subulate persistent, flowers minute pubescent, sepals ovate-oblong, petals obovate-oblong obtuse, lip oblong slightly concave, tip with a fleshy acute subcordate appendage, spur short cylindric obtuse incurved.

SINGAPORE; at Sungei Buloh, *Ridley*.

Stem 3-5 in., as thick as a sparrow's-quill, rigid. *Leaves* 1-1 $\frac{1}{2}$ in., subsecund. *Racemes* $\frac{1}{2}$ - $\frac{3}{4}$ in.; rachis stout; flowers $\frac{1}{20}$ in. diam.; pedicel very short; sepals 1-nerved, lateral acuminate; petals as long, obtuse, glabrous, 1-nerved; lip as long as the sepals; spur large; fleshy appendage at the tip of the lip didymous on the upper face.—A remarkable little species, unlike any other.

5. **S. ? inconspicuum**, *Hook. f.*; stem rather stout, leaves 2-3 in., nearly straight terete obtuse, flowers small shortly peduncled clusters, sepals and petals broadly oblong acute, hypochile of lip hemispheric margins entire (side lobes 0), epichile broadly ovate retuse inserted on the margin of the hypochile. *Cymbidium inconspicuum*, *Wall. mss.*

LOWER ASSAM, *Jenkins (Ic. in Herb. Calcutt.)*

Stems 6-8 in. long, interlaced, flexuous, as thick as a duck's-quill; internodes $\frac{1}{2}$ in. *Leaves* rather more slender, slightly curved, but not falcate. *Flowers* $\frac{1}{2}$ in. diam., shortly pedicelled, pale green; sepals and petals subequal, spreading and recurved; lip about as long as the sepals; hypochile green suffused with purple, large for the size of the plant, margins everted, epichile as long as the hypochile, flat, smooth; column short, very stout, purple, rostellum not beaked; anther broader than long low, pollinia 2 globose, strap short, gland ovate.—The lip is like that of *sect. Calceolaria*. Described from the drawing in the Calcutta Herbarium.

** Stem short or long. Leaves flat or channelled.

† *Spur of lip longer than the sepals.* (See also 16, *S. rostellatum.*)

6. **S. Pumilio**, *Reichb. f. in Walp. Ann.* vi. 886; in *Gard. Chron.* 1875, ii. 98; stem very short, leaves falcately oblanceolate obtuse notched or 2-fid, racemes about equalling the leaves laxly many-fld., lateral sepals broadly ovate obtuse, petals oblanceolate obtuse, side lobe of lip very short rounded, midlobe large flat triangular 3-nerved smooth, spur much longer than the sepals slender incurved. *S. discolor*, *Reichb. f. Ot. Hamb.*

42. *S. pusillum*, *Lindl. in Journ. Linn. Soc.* iii. 36 (not of Blume). *Ceoclades pusilla*, *Lindl. in Wall. Cat.* 7332: *Gen. & Sp. Orchid.* 237.

SILHET, *Wallich*.

Roots very many, slender, tortuous. Leaves 2-3 by $\frac{1}{2}$ in., fleshy, thin when dry. Racemes slender; bracts ovate, membranous; flowers $\frac{1}{4}$ in. broad, pedicelled membranous; dorsal sepal obovate; column rather long, beaked in front; anther low; strap of pyriform pollinia dilated above, gland small oblong. Capsule $\frac{3}{4}$ in., shortly pedicelled, narrow, 6-ribbed.—The citation of "Herb. Wight" under *Wall. Cat.* 7332 B, is doubtless an error.

7. *S. penangianum*, *Hook. f. Ic. Plant. ined.*; leaves narrowly linear-lanceolate acuminate with a lateral notch, raceme short very stout dense-fl. pubescent, sepals broadly ovate 1-nerved, not half the length of the conical angled abruptly incurved spur, petals oblong 1-nerved, limb of lip minute, disk fleshy terminal, side lobes rounded.

PENANG; on the Sonkey River, *Curtis*. PERAK, *Kunstler (Ic. in Herb. Calcutt.)*

Stem flexuous, internodes $\frac{1}{2}$ in. Leaves $2\frac{1}{2}$ -3 by $\frac{1}{2}$ in. thick, nerve strong beneath. Racemes 1- $1\frac{1}{2}$ in., fruiting decurved; bracts subulate; flowers $\frac{1}{6}$ in., pubescent, white edged with yellow and a little pink; column short; strap of globose pollinia elongate, spatulate, gland small. Capsules $\frac{1}{4}$ in. long. oblong, sessile, crowded, reflexed.

8. *S. Helfer*, *Hook. f. Ic. Plant. ined.*; stem short, leaves loriform tip contracted notched, panicles shorter than the leaves, sepals orbicular-ovate 1-nerved shorter than the saccate broad spur, petals oblong, blade of lip reniform, half embracing the spur quite entire, lateral lobes narrow erect.

TENASSERIM, or ANDAMAN ISLANDS. *Helfer* (*Kew Distrib.* 5256). Moulmein, *Parish*; Mergui, *Griffith*.

Stem 1-3 in. Leaves few, close set, $2\frac{1}{2}$ - $3\frac{1}{2}$ by $\frac{1}{4}$ - $\frac{1}{3}$ in., sheaths short, black. Panicle about equalling the leaves, slender; bracts minute, acute; flowers $\frac{1}{6}$ in.; dorsal sepal much smaller than the lateral; blade of lip shorter than the spur; column very short; anther short, broad; pollinia globose, sessile on a large cuneate strap or gland.

9. *S. gracile*, *Lindl. Gen. & Sp. Orchid.* 225; in *Journ. Linn. Soc.* iii. 35; stem short slender, leaves elongate linear-lanceolate acuminate, racemes slender many-fl. longer than the leaves, sepals oblong obtuse 1-nerved, much shorter than the straight tubular acuminate spur, petals narrower oblong 1-nerved, blade of lip very small ovate acute, side lobes 0. *Thwaites Enum.* 304.

CEYLON; Central Province, alt. 3000 ft. *Macrae*, &c.

Stem 2-8 in., often zigzag, internodes $\frac{1}{4}$ - $\frac{1}{2}$ in. Leaves $2\frac{1}{2}$ -4 by $\frac{1}{2}$ in., straight or falcate, narrowed at base and tip, midrib obscure. Racemes 4-6 in., erect; bracts minute, subulate; flower $\frac{1}{4}$ in. long, white; mouth of spur very oblique; column short; anther short, broad, strap of globose pollinia very slender. Capsule globose, $\frac{1}{2}$ in. diam., pedicelled.

10. *S. brevifolium*, *Lindl. Gen. & Sp. Orchid.* 225, in *Journ. Linn. Soc.* iii. 35; stem rather stout scandent, leaves short linear-oblong unequally 2-lobed, racemes very short few-fl., sepals and petals subequal orbicular-ovate 1-nerved not half as long as the conico-cylindric straight obtuse spur, limb of lip very minute, side lobes 0. *Thwaites Enum.* 230. *S. virescens*, *Gardn. mss.*

CEYLON; Central Province common, *Macrae*, &c.

Stem 6-10 in., internodes $\frac{3}{4}$ in. or less. Leaves 1- $1\frac{1}{2}$ by $\frac{1}{3}$ - $\frac{1}{2}$ in., fleshy, midrib obscure. Racemes 1 in., recurved; bracts very minute; flowers $\frac{1}{2}$ in. long, rose-

purple or greenish white; spur as long as the pedicel; column short; anther very broad, apiculate, strap of globose pollinia short, gland as long very large 2-fid. Benthamin Gen. Plant. iii. 579 errs in referring *Ec. tenera* to this; it is my *Cleisostoma tenerum*.

11. **S. roseum**, Lindl. Gen. & Sp. Orchid. 225; stem very slender, leaves fleshy flat narrowly linear unequally notched, racemes very short simple, sepals ovate-oblong obtuse 1-nerved, petals as large rounded 1-nerved, spur of lip longer than the sepals cylindric obtuse, lip minute ovate acute, side lobes rounded. *Thwaites Enum.* 304. *Sarcanthus Walkerianus*, *Wight Ic. t.* 1686 (*bad*). *S. Walkerianum Reichb. f. in Walp. Ann.* vi. 887.

CEYLON; Central Province, up to 5000 ft., common; *Maaræ*, &c.

Stem curved, as thick as a pigeon's-quill. *Leaves* 2-3 by $\frac{1}{2}$ - $\frac{1}{4}$ in. *Raceme* 1-1 $\frac{1}{2}$ in., slender; bracts minute; flowers $\frac{1}{4}$ in long, rosy in *Ic. Walker*, lilac in *Ic. Thwaites*; column short; anther short broad, pollinia 2, strap short slender, gland large. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., pyriform, pedicelled.

12. **S. flavum**, Hook. f. *Ic. Plant. ined.*; stem short very stout, leaves close set loriform deeply unequally acutely 2-cleft, raceme lax-fld., sepals oblong obtuse, lip small, infundibular spur much longer than the sepals with small toothed side lobes and truncate mouth.

TENASSEERIM; at Moulmein, *Parish*.

Stem 6 in., stout. *Leaves* 4-5 by $\frac{3}{4}$ in., dark green with darker nerves, apiculate between the lobes; sheaths $\frac{1}{4}$ in., deeply grooved. *Raceme* from the base of the stem, with the slender scape 4 in.; bracts small, recurved; flowers $\frac{1}{4}$ in. diam., pale yellow; column short, broad; rostellum large, 2-lobed, apparently fleshy.—A remarkable species with the pollinia approaching that of sect. *Uncifera* (and of *Sarcanthus mirabilis*, Reichb.), but having no trace of a midlobe to the lip. Described from a beautiful drawing by Parish, who observes that there is no apparent septum in the spur. Reichenbach has (on the drawing) named it *Saccolab. buccosum* (see No. 14), alluding to the cheek-like rostellum, but it is not the plant he has described under that name (*Gard. Chron.* 1871, 1938). It closely resembles *Sarcanthus Parishii*, but the flowers are yellow. There is no midlobe of the lip and no septum in the spur.

13. **S. fragrans**, Par. & Reichb. f. in *Journ. Bot.* xii. (1874) 197; dwarf, stem very short, leaves crowded oblong obtuse very thick, raceme shortly peduncled decurved many- and dense-fld., flowers rose-red, lateral sepals orbicular-oblong, petals linear-oblong obtuse, lip large saccate, base suddenly contracted into a decurved spur longer than the sepals and with an inflated tip, limb rhomboidly subspathulate fleshy acute toothed towards the tip. *Reichb. f. Otia. Hamburg.* 41.

TENASSEERIM; at Moulmein, *Parish*.

Stem $\frac{1}{2}$ in. *Leaves* 5-8 by 1 in., bases closely imbricate, deeply channelled. *Raceme* as long as the leaves; flowers about $\frac{1}{10}$ in. long, odour of violets; lip twice as long as the sepals, with a callus at the insertion of the tumid straight blade; column very short, sides acute; anther with a recurved tip; pollinia globose, sessile on the broad end of the short strap, gland lanceolate much longer than the strap.—Described chiefly from a drawing by Parish.

†† *Spur of lip shorter than (rarely equalling) the sepals.*

14. **S. buccosum**, Reichb. f. in *Gard. Chron.* 1871, 938; stem scandent, leaves linear-oblong obtusely 2-lobed, raceme simple or branched much longer than the leaves, sepals broadly ovate much longer than the bottle-shaped spur, lip large, side lobes spreading rounded, midlobe narrowly oblong. *S. parvulum*, Lindl. in *Journ. Linn. Soc.* iii. 36 (*in note*). *Cœocladæ paniculata*, Lindl. in *Wall. Cat.* 7334; *Gen. & Sp. Orchid.* 236. *Cymbidium Satyrium*, *Herb. Ham.*

BHOTAN HIMALAYA, *Lister*. ASSAM; at Goalpara, *Hamilton*. SYLHET, *Wallich*. TENASSERIM, *Parish*.

Stem stout, rigid, internodes $\frac{1}{2}$ in. *Leaves* 3-5 by $\frac{1}{2}$ - $\frac{3}{4}$ in., fleshy, 5-nerved. *Raceme* with long slender peduncle 5-6 in., laxly many-flid.; bracts subulate; flowers $\frac{1}{2}$ in. diam., yellowish; sepals 5-nerved; petals much smaller, cuneately obovate, 3-nerved; lip yellow, mouth of spur a very narrow chink, neck contracted, base globose didymous; side lobes of elongate column broad, rounded, top recurved; anther long-pointed; strap of globose pollinia very slender arched, gland very minute.—Column and lip so different from the genus that Reichenbach l. c. suggests its separation. Lindley's name of *parvulum* is too misleading to be adopted.

15. ***S. micranthum***, *Lindl. in Wall. Cat.* 7300; *Gen. & Sp. Orchid.* 220; leaves lorate unequally obtusely 2-lobed, scape stout flowering to the base, racemes very many and dense-flid., sepals broadly ovate obtuse 3-nerved, petals oblong or lanceolate serrulate, spur of lip shorter than the sepals subtruncate, blade obovate-spathulate with 2 basal calli, lateral lobes broad obtuse. *Saunders' Refug. Bot.* t. 110.

TROPICAL HIMALAYA; from Garwhal and Kumaon, alt. 2-3000 ft., *Falconer, Duthie*; to Bhotan, *Griffith*. ASSAM, SILHET and the NAGA HILLS, *Prairie*. TENASSERIM, *Griffith, Parish*.

Stem 6-10 in., curved, as thick as a goose-quill or less. *Leaves* 3-5 by $\frac{3}{4}$ -1 in., narrowed to the base. *Raceme* equalling the leaves; bracts small, broad; flowers about $\frac{1}{2}$ in. diam.; 3-nerved sepals and petals violet; lip rose-red; column very short; anther very broad, acuminate globose; pollinia strap very short broadly cordate, gland orbicular. *Capsules* $\frac{1}{2}$ in., subfusiform.

16. ***S. rostellatum***, *Hook. f. Ic. Plant. ined.*; stem very short, leaves 4-7 in. lorate flat unequally 2-flid, raceme much shorter than the leaves, bracts minute, sepals broadly ovate-oblong obtuse, lip infundibular narrowed below into a stout obtuse spur rather longer than the sepals, side lobes truncate, midlobe an incurved beak.

SIKKIM; at Darjeeling, alt. 7000 ft., *Gamble (in Herb. Calcutt.)*.

Roots very many and long, tortuous, flat, appressed to the bark. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., nearly straight. *Peduncle* with 8-10-flid. raceme 2 in., slender; flowers $\frac{1}{2}$ in. long from the tip of the dorsal sepal to that of the spur; petals oblong, obtuse, smaller than the sepals; column very short; rostellum subulate; pollinia large, globose, cleft.

17. ***S. minimiflorum***, *Hook. f. Ic. Plant. ined.*; stem very short, leaves elliptic-lanceolate narrowed at both ends acute, scape much longer than the leaves very slender very many-flid., bracts subulate equalling the very minute flowers, sepals and petals oblong obtuse, lip conico-sacciform, side lobes 0, midlobe an incurved beak with a globose tubercle at the mouth of the sac.

PERAK, *Scortechini*.

Roots slender, tufted. *Leaves* $1\frac{1}{2}$ -2 in., black when dry, thinly coriaceous, reddish beneath. *Scape* with raceme 2-6 in., with a few subulate empty bracts below; flowers greenish yellow mottled, about $\frac{1}{10}$ in. long or broad; lip larger than the rest of the perianth, its beak-like laterally compressed terminal lobe incurved over the mouth; column short; anther long-beaked.—A curious little plant. I have had difficulty in dissecting the few available flowers, and thereby confirming a description and rude drawing by Scortechini, who mentions "a something membranous whitish which I cannot make out whether it is a rostellum or stipes." This I presume to be a recurved elongate body which appears to be attached to the base of the column.

18. ***S. Jerdonianum***, *Reichb. f. in Walp. Ann.* vi. 886; leaves linear subacute, racemes simple or branched slender, sepals ovate 1-nerved

longer than the small saccate or subglobose spur, petals linear 1-nerved, blade of lip oblong concave subtruncate, side lobes small rounded. *Taeniophyllum Jerdonianum*, *Wight Ic. t. 1756*.

MALABAR; on branches of trees, *Jerdon*.

Stem 1-3 in., tufted. *Leaves* 1-1½ by ½ in. *Racemes* much longer than the leaves; bracts ovate, acuminate; flowers ⅓ in. long; column short; anther broad; pollinia with a short strap and large narrow gland.—Described chiefly from *Wight*.

19. ***S. lanatum***, *Hook. f.*; stem short, leaves linear-oblong broadly 2-lobed, peduncle very stout longer than the leaves, spikes dense-fld. tomentose or woolly, sepals ovate tips keeled, side lobes of lip triangular, midlobe ovate bicuspidate, spur short saccate traversed by a pubescent ridge from the base of the column to that of the midlobe. *Cleisostoma lanatum*, *Lindl. in Journ. Hort. Soc. iv. 264*; *Walp. Ann. 889*.

TENASSERIM; at Moulmein, *Parish, Scott*.

Stem very stout. *Leaves* 3-4 by 1-1½ in., thickly coriaceous, keeled. *Scape* with long appressed sheaths, simple or branched; spikes 4-7 in.; bracts ½ in., large, ovate, acuminate, spreading or reflexed; flowers ½ in. long; sepals dingy purple and green; petals obovate, ciliate, yellow and purple; side lobes of lip notched on the inner margin, ciliate; midlobe with a large pubescent gibbous compressed callus descending into the spur, mouth of spur contracted to a slit with a pubescent raised border; column stout, recurved, tumid below, shortly beaked; anther beaked; pollinia globose, sulcate, strap long slender dilated and forked above, each arm spatulate and with the globose pollinia immersed in their concave tips, gland small oblong.—A remarkable plant, put by Lindley into *Cleisostoma*, but I do not find the great gland in the spur under the column.

Sect. II. CALCEOLARIA. (See p. 54.)

The species of this section wants a thorough revision with much better material than is at my disposal.

20. ***S. calceolare***, *Lindl. in Wall. Cat. 7302*; *Gen. & Sp. Orchid. 223*; *Sert. Orchid. Frontisp. 6*; in *Bot. Reg. 1883*; *Misc. 139*; in *Journ. Linn. Soc. iii. 33 (exc. syn.)*; leaves acutely unequally 2-lobed or -cleft, blade of lip reniform erose disk echinate all over. *Griff. Notul. iii. 356*; *Itin. Notes 170, No. 869*; *Ic. Plant. Asiat. t. 334*; *Walp. Ann. vi. 883*. *Aerides calceolare*, *Smith in Rees Cyclop. Suppl. Ae. leopardorum, Wall. mss.* *Gastrochilus calceolaria, Don Prodr. 32.* *Sarcochilus nepalensis, Spr. Syst. Veg. iii. 721.* *Epidendrum calceolare, Ham. mss.*

TROPICAL HIMALAYA; from Garwhal to Bhotan, ASSAM, SILHET and the KHASIA HILLS. TENASSERIM, *Parish*. PERAK, *Carter*.—DISTRIB. ? Java.

A very common plant, and, if two species are not included, very variable. *Stem* very short. *Leaves* in Wallich's 7342 A from Nepal 6-12 by ½-¾ in., strongly falcate. His B from Silhet (which is the common form elsewhere) is a much smaller plant, with nearly straight leaves 4-5 by ⅓-½ in. *Peduncle* ½-1½ in.; pedicels ¼-1 in.; flowers ½-¾ in. diam., yellow or greenish speckled barred or blotched with red brown; lip white or yellow, speckled with red. *Capsule* in 7342 A 2 in. long; in the ordinary form ¾-1 in.—Griffith's Tab. 334 represents a plant with the leaves of *intermedia* and lip of *calceolare*, but it is impossible to determine satisfactorily his *Saccolab. No. 2, 3* and 4 of *Notul. iii. 356, 357*, and his *Ic. Plant. Asiat. t. 333, 334*.

21. ***S. nilagiricum***, *Hook. f.*; leaves narrow deeply unequally 2-lobed, sepals and petals each with two series of large blotches, limb of lip fimbriately erose, disk smooth. *Vanda pulchella, Wight Ic. t. 1671*.

NILGHIRI HILLS; on the banks of the Kaitairy river and at Quelin, *Wight*.

Stem short. *Leaves* 5-10 by ½-¾ in., flexuous, lobes very unequal, obtuse, often

divaricate, the longer sometimes 1 in. long. *Flowers* $\frac{1}{2}$ in. diam.; perianth strongly incurved. *Capsule* $\frac{1}{2}$ – $\frac{2}{3}$ in.—United with *S. calceolare* by Lindley (in Journ. Linn. Soc.), but I think as different as any other of this section.

22. ***S. acutifolium***, Lindl. *Gen. & Sp. Orchid.* 223; *Sert. Orchid. Frontisp.* No. 2; in *Journ. Linn. Soc.* iii. 33; stem elongate, leaves acute or acuminate, blade of lip erose, disk naked or very sparingly tubercled. *Reichb. f. Otia Hamburg.* 42; *Walp. Ann.* vi. 883. *S. denticulatum*, *Part. Mag. Bot.* vii. t. 145; *Reichb. f. l. c.*; ? *Bot. Mag.* t. 4772. *Aerides umbellatum*, *Wall. mss.*

SIKKIM HIMALAYA, alt. 3–5000 ft. KHASIA MTS., *Gibson*.

Usually a larger plant than the small states of *S. calceolare*, with longer stems (4–8 in.) and larger leaves, 4–6 by $\frac{3}{4}$ – $1\frac{1}{2}$ in. broad, never 2-fid., but very variable. *Perianth* whole-cold. and yellowish red, or more yellow or greenish and mottled with brown; lip white, centre yellow often speckled with red. *Capsule* in Sikkim sp. 3 in. long.—Paxton's *S. denticulatum* has greenish yellow flowers speckled with brown, and the lip is described as erose. Lindley refers it to *S. acutifolium*. The lip of the *Bot. Mag.* plant, apparently derived from the same source, is not erose, but with a broad thick white fringe of long papillæ.

23. ***S. intermedium***, *Griff. mss. ex. Lindl. in Journ. Linn. Soc.* iii. 33; stem rather long, leaves very narrow acuminate or 2-toothed, blade of lip fimbriate, disk smooth. *Reichb. f. Otia Hamburg.* 42. *S. calceolare*, *Part. Mag. Bot.* vi. 97.—*Saccolab. Griff. Notul.* iii. 357; *Ic. Plant. Asiat.* t. 333.

BHOTAN HIMALAYA, *Griffith*. KHASIA HILLS, alt. 3–5000 ft., *Griffith, Gibson, J. D. H. & T. T.*

Perhaps a small form of *S. acutifolium*, but the stem is more slender, the leaves narrower, and the flowers and capsules ($\frac{3}{4}$ in.) much smaller.

24. ***S. bellinum***, *Reichb. f. in Gard. Chron.* 1844, i. 174; 187, i. 145; stem rather long, leaves deeply unequally cleft, bracts and flowers large, blade of lip erose disk echinate and with cushions of cilia at the base. *Warner Orchid. Alb.* t. 156; *Bot. Mag.* t. 7142.

BURMA, *Boxall*.

This resembles a large state of *S. calceolare*, the flowers are $1-1\frac{1}{4}$ in. diam., bright yellow with large purple blotches.

25. ***S. obliquum***, Lindl. in *Wall. Cat.* 7304; *Gen. & Sp. Orchid.* 223; in *Journ. Linn. Soc.* iii. 33; stem very short stout, leaves broad and long unequally broadly 2-fid, bracts and flowers large, blade of lip fimbriate, disk papillose with a large 2-lobed callus. *Reichb. f. Otia Hamburg.* 42. *Vanda obliqua*, *Wall. mss.*

BURMA; at Taingdong, *Wallich*. ? KHASIA HILLS, *J. D. H. & T. T.*

Leaves 6–8 by 1–2 in.; flowers 1 in. diam.; sepals and petals narrow, whole-cold., all (in *Ic. Wallich*) pale yellow, with the lip white speckled with yellow. The Khasia specimens have the shorter leaves of *bigibbum*.

26. ***S. bigibbum***, *Reichb. f. in Bot. Mag.* t. 5766; *Otia Hamburg.* 43; stem very short, leaves oblong or obovate-oblong 2-fid, bracts small, blade of lip fimbriate, disk smooth with a large 2-lobed callus.

RANGOON, *Benson, Gilbert*. PERAK, *Scortechini*.

Probably a small state of *S. obliquum*, but the leaves are shorter and broader, 3–4 by $1-1\frac{1}{4}$ in., and the large bracts seem to be wanting. *Flowers* whole-cold., pale straw-cold. in a drawing by Mr. Gilbert, bright yellow in *Bot. Mag.*

27. ***S. acaule***, *Hook f.*; stem very short, leaves unequally 2-lobed, sepals obovate, limb of lip broadly ovate acute toothed and erose, disk rough

thickened. *Cleisostoma acaulis*, *Lindl. Gen. & Sp. Orchid.* 227. *Vanda fimbriata*, *Gardn. mss.*

CEYLON, *Macrae*; at Hantani, *Gardner*.

Leaves 5-6 by $\frac{1}{3}$ - $\frac{1}{2}$ in. Peduncle and pedicels very short, $\frac{1}{2}$ in., stout; flowers $\frac{1}{3}$ in. diam., apparently very fleshy.—Possibly a form of *S. nilagiricum*, but the leaves and lip appear to be very different. The specimens are very scanty and poor.

Sect. III. ACAMPE. (See p. 54.)

The species of this section are very difficult of discrimination in a dried state, and the following diagnoses and citation are not very reliable, owing to imperfection of specimens and vagueness of published descriptions. (See two species at the end of the genus.)

* *Peduncle rather slender; flowers in large panicles. Spur of lip cylindric; midlobe ovate.*

28. ***S. ochraceum***, *Lindl. in Bot. Reg.* 1842, *Misc.* 2. *S. lineolatum*, *Thwaites Enum.* 304. *Acampe dentata*, *Lindl. Fol. Orchid.* 3; *Reichb. f. in Gard. Chron.* 1872, 1752; *Walp. Ann.* vi. 894. *A. Wightiana* var. *longepedunculata*, *Thwaites l. c.* 303.

EASTERN TROPICAL HIMALAYA; Sikkim, *J. D. H.*, Bhotan, *Griffith (Kew Distrib.* 5233). KHASIA MTS. and TENASSERIM, *Griffith, &c.* MALABAR, *lc. Jerdon*. CEYLON, *Walker, &c.*

Stem 1-2 ft. Leaves 7-9 by 1- $1\frac{1}{2}$ in. Panicle longer or shorter than the leaves, branches distant lax-fl'd.; flowers $\frac{1}{3}$ - $\frac{1}{2}$ in. diam.; midlobe of lip ovate, crenate, 2-auricled and with fleshy teeth at the base; spur cylindric, as long as the limb, hairy within. Capsule 1- $1\frac{1}{2}$ in., fusiform.—Bentham in *Gen. Plant.* iii. 581, misled by a mixture of specimens of different species, errs in referring *S. lineolatum* to *Cleisostoma maculosum*; it is clearly this plant.

** *Peduncle very stout, simple or very sparingly branched. Lip a hemispheric or conic sac, midlobe reniform.*

29. ***S. longifolium***, *Hook. f.*; leaves 6-16 in., peduncle 6-7 in., internodes long, flowers subcorymbose, midlobe of lip ovate obtuse, sac broad conical with an erect dorsal hairy plate in the cavity. *Acampe ? longifolia*, *Lindl. Fol. Orchid.* 1. ? *A. multiflora*, *Lindl. l. c.* *Vanda longifolia*, *Lindl. in Wall. Cat.* 7322; *Gen. & Sp. Orchid.* 215; in *Journ. Hort. Soc.* vii. 267; *Walp. Ann.* vi. 872. *V. multiflora*, *Lindl. Collect.* t. 38.

TROPICAL SIKKIM HIMALAYA (*lc. in Hort. Calcutt.*). UPPER ASSAM, *Mann*. TENASSERIM, *Wallich, &c.*—DISTRIB. China. ?

Stem very stout. Leaves $1\frac{1}{2}$ -2 in. broad. Peduncle with racemes 6-7 in., as thick as a swan's quill, with often a few short lateral branches; bracts annular; flowers crowded, $\frac{3}{4}$ in. diam., golden yellow banded with red on both surfaces. The dorsal plate in the cavity of the lip recalls *Cleisostoma*.

30. ***S. Wightianum***, *Hook. f.*; leaves 4-6 in., peduncle 1-3 in., internodes very close, midlobe of lip ovate keeled, sac rounded papillose within. *S. papillosum*, *Dalz. & Gibs. Bomb. Fl.* 264 (*excl. some syn.*). *Acampe Wightiana*, *Lindl. Fol. Orchid.* 2. *Vanda Wightiana*, *Lindl. mss.* ? in *Wight l. c.* t. 1670; *Thwaites Enum.* 303; *Walp. Ann.* vi. 873. *V. fasciata*, *Gardn. mss.*—*Rheede Hort. Mal.* xii. t. 4.

WESTERN GHATS; from the Concan southward. CEYLON, *Gardner, &c.*

Stem 12-18 in. Leaves $\frac{2}{3}$ - $1\frac{1}{4}$ in. broad. Scape very stout; bracts very broadly ovate, acute; flowers $\frac{2}{3}$ -1 in. diam., subcorymbose, yellow barred with crimson, not papillose. Capsule 2- $2\frac{1}{2}$ in., fusiform.

31. ***S. præmorsum***, *Hook. f.*; leaves 5-7 in. narrow, scape 1-2 in.

very stout, internodes short, sheaths annular, bracts semicircular, flowers papillose, midlobe of lip broadly ovate or rounded, sac rounded tubercled and pubescent at the base within. *Acampe excavata*, *Lindl. Fol. Orchid.* 3; *Walp. Ann.* vi. 874. *Cymbidium præmorsum*, *Swartz in Nov. Act. Upsal.* vi. 75; *Willd. Sp. Pl.* iv. 103; *Roxb. Fl. Ind.* iii. 465. *Epidendrum præmorsum*, *Roxb. Cor. Pl.* i. 34, t. 43.—*Rheede Hort. Mal.* xii. t. 4. *Aerides undulata*, *Smith in Rees Cyclop.* xxxix.

WESTERN PENINSULA; in the Circars, *Roxburgh*; the Concan, *Law*.

Apparently near *S. Wightianum*, but more slender, leaves narrower, lip deeply lobed, very complicate, flowers small, papillose all over, $\frac{1}{2}$ – $\frac{2}{3}$ in. diam. *Capsule* $2\frac{1}{2}$ in.

32. ***S. papillosum***, *Lindl. in Bot. Reg.* t. 1552 (*excl. syn.*); *Gen. & Sp. Orchid.* 222; stem elongate branched scandent, leaves 3–4 in., scape 1–2 in., internodes close, bracts semicircular, midlobe of lip ovate, spur conical pubescent within. *S. carinatum*, *Griff. Notul.* iii. 354. *Acampe papillosa*, *Lindl. Fol. Orchid.* 2; *Walp. Ann.* vi. 873. *Sarcochilus præmorsus*, *Spreng. Syst. Pl.* iii. 721, *fid Steudel*.

BENGAL and the lower HIMALAYA MTS., from Sikkim eastwards. ASSAM, the GANGETIC DELTA, the CIRCARS and TENASSERIM.

Stem 2–3 ft., as thick as a goose-quill. *Leaves* obliquely notched. *Scape* closely scarred to the base; flowers $\frac{2}{3}$ in. diam.; ovary very short. *Capsule* $1\frac{1}{4}$ in., fusi-form.—The lip is broader in Lindley's figure than in Sylhet specimens, in which they are oblong-ovate.

33. ***S. cephalotes***, *Hook. f.*; stem very short, leaves 3–5 in. narrow with a unilateral semicircular sinus at the tip, peduncle 1 in., midlobe of lip broadly ovate crenulate, sac conic hairy within. *Acampe cephalotes* *Lindl. Fol. Orchid.* 3; *Walp. Ann.* vi. 873.

SILHET; *H. f. & T.*

A small species, of which there are very few specimens; it appears to differ from *S. papillosum* in the short stems, longer crowded leaves and small yellow green flowers barred with purple; lip pale rose with darker spots, disk fimbriate.

34. ***S. congestum***, *Hook. f.*; stem short very stout, leaves 6–8 in., scape $1\frac{1}{2}$ –2 in., internodes very short, bracts broadly ovate acute, flowers crowded, limb of lip rhomboid acute-angled, spur shortly conical or saccate hairy within. *S. papillosum*, *Wight Ic.* t. 1672 (*not of Lindl.*). *Acampe congesta*, *Lindl. Fol. Orchid.* 3; *Walp. Ann.* vi. 873. *Vanda congesta*, *Lindl. in Bot. Reg.* 1839, *Misc.* 61.

MALABAR, *Wight*. CEYLON (*Hort. Loddiges*).

Lindley's *V. congesta* from Ceylon is described as having obliquely mucronulate leaves, yellow and brown flowers, lip with an excavate pubescent base, and column with mucronate angles (a single flower only is in *Herb. Lindl.*). *Wight S. papillosum*, is figured with deeply 2-lobed leaves and a curved spur; his specimens (*in Herb. Lindl.* 1019/1836) have curved leaves 8–10 by 1–1 $\frac{1}{4}$ in.

Sect. IV. PLATYRHIZON. (See p. 54).

35. ***S. viridiflorum***, *Lindl. in Journ. Linn. Soc.* iii. 36; leaves 1–2 $\frac{1}{4}$ in., racemes shorter than the leaves subcorymbose, spur acute glabrous within parallel to the blade of the lip. *Dalz. & Gibs. Bomb. Fl.* 263; *Walp. Ann.* vi. 885. *Micropera viridiflora*, *Dalz. in Hook. Journ. Bot.* iii. (1851), 282.

The SOUTHERN CONCAN; in the Western Ghats, *Law*, *Dalzell*. CEYLON, near Kandy (*Ic. in Herb. Kew*).

Leaves $\frac{1}{2}$ – $\frac{1}{2}$ in. broad. *Raceme* 3–5-fl.; bracts short, broad, obtuse; flowers

$\frac{1}{2}$ – $\frac{1}{2}$ in. diam., greenish white; lip clouded with rose-colour, blade situated at the mouth of the spur which it embraces, broadly deflexed flabelliform membranous outer margins crenulate or trifid, side lobes free rounded; spur very short, conical, incurved.

36. **S. maculatum**, *Hook. f.*; leaves 4–6 in., raceme elongate much longer than the leaves laxly many-fl'd., spur obtuse villous within. *Micropera muculata*. *Dalz. in Hook. Journ. Bot.* iii. (1851), 282; *Dalz. & Gibs. Bomb. Fl.* 263; *Lindl. in Journ. Linn. Soc.* iii. 38. *Sarcophilus maculatus*, *Benth. in Gen. Plant.* iii. 575.

The SOUTHERN CONCAN and CANARA; on the Western Ghats, *Dalzell, Stocks, Ritchie*, &c.

Leaves 1–2 in., broad, linear-oblong to cuneately oblong, 2-lobed. *Raceme* 8–12 in., very shortly peduncled; bracts short, broad; rachis stout; flowers $\frac{1}{2}$ in. diam., subsessile; sepals and petals yellow with a central purple spot; lip white and rose-colored, blade situated below the mouth of the short saccate obtuse spur, which it overlaps, very coriaceous, entire; side lobes connate below, narrow, erect and recurved. *Capsule* $1\frac{1}{2}$ in., fusiform, 6-ribbed.—Allied, I think, to *S. viridiflorum*, and not a *Sarcophilus*, to which Benthham has referred it.

Sect. V. DISTICHA. (See p. 54.)

37. **S. distichum**, *Lindl. in Journ. Linn. Soc.* iii. 36; leaves 1 in. lanceolate acuminate or 2–3-cuspidate, peduncle 2–3-fl'd., sepals and petals obovate-oblong, lip with a saccate subhemispheric spur, midlobe small semi-circular fleshy entire with a didymous callus at the base. *Reichb. f. Otia Hamburg*, 43.

SIKKIM HIMALAYA, alt. 6–8000 ft., *Griffith's Collectors*. KHASIA HILLS, alt. 5–6000 ft., *J. D. H. & T. T. MUNIPORE*, alt. 6900 ft., *Watt*.

Stems 4–8 in., filiform. *Leaves* very fleshy. *Peduncle* rarely longer than the leaves; flowers racemose, $\frac{1}{3}$ – $\frac{1}{2}$ in. diam.; bracts small; sepals and petals green or yellowish spotted with purple; side lobes of lip 0; column very short. *Capsule* $\frac{2}{3}$ in., fusiform.

38. **S. tenuicaule**, *Hook. f. Ic. Plant. ined.*; leaves 3–4 in. linear-lanceolate, flowers shortly pedicelled on a tubercle of the stem, sepals broadly obliquely ovate acute, petals smaller, side lobes of lip erect subacute nearly as long as the lanceolate incurved bicuspidate midlobe, spur short constricted above the saccate incurved base, villous within at the constriction.

PENANG; on West Hill, *Curtis*. PERAK, *Scortechini, Wray*.

Stem 8–12 in., as thick as a crow-quill, simple or branched, rooting at the base only, deeply grooved. *Leaves* $\frac{1}{4}$ – $\frac{1}{3}$ in. broad, strict. *Flowers* $\frac{1}{4}$ in. diam., pale green; sepals thin, nerves 3 faint; petals 1-nerved; column stout; midlobe of lip cymbiform smooth. *Column* short, anther membranous, almost flat, acuminate; rostellum projected, styliform; strap of small reniform pollinia broad, with a dilated subreniform apex, gland small.

Sect. VI. SPECIOSÆ. (See p. 54.)

39. **S. ampullaceum**, *Lindl. in Wall. Cat.* 7307; *Sert. Orchid.* t. 17; *in Journ. Linn. Soc.* iii. 35 (*excl. syn.*); leaves suberect acutely 2-fl'd. or truncate and toothed, raceme subsessile, shorter than the leaves, spur straight. *Pact. Mag. Bot.* xiii. t. 49; *Bot. Mag.* t. 5595; *Warner Orchid. Alb.* t. 191. *Ærides ampullaceum*, *Roxb. Fl. Ind.* iii. 476.

TROPICAL HIMALAYA, alt. 1–3000 ft., from Nepal eastwards. SILHET, MUNIPORE, BURMA, and TENASSERIM.

Stem short, stout. *Leaves* 2–6 in., deeply channelled. *Racemes* shorter than the leaves, cylindric; bracts minute; flowers $\frac{3}{4}$ in. diam., rose-red; sepals and petals broadly obovate, widely spreading; spur longer than the blade of the lip.

Capsule 1 in., subclavate, angles acute, pedicel $\frac{1}{2}$ in.—Lindley in Journ. Linn. Soc. by oversight probably, refers his *S. rubrum* to this instead of to *curvifolium*.

40. ***S. curvifolium***, Lindl. *Gen. & Sp. Orchid.* 222; leaves strongly recurved very narrow, racemes much shorter than the leaves, spur straight. Lindl. *Gen. & Sp. Orchid.* 222; *Ill. Hort.* xii. t. 493; *Warner Orchid.* Alb. t. 107; *Puydt Orchid.* t. 38. *S. rubrum*, Lindl. in *Wall. Cat.* 7310; *Gen. & Sp. Orchid.* 222. *S. miniatum*, Hook. *Bot. Mag.* t. 5326 (not of Lindl.).

ASSAM; *Ic. in Hort. Calcutt.* BURMA, Wallich, Griffith, &c.—DISTRIB. Java.

Very closely allied to *S. ampullaceum*, but the leaves are twice as long, much narrowed and strongly recurved, the flowers more scarlet with a golden lip.—The strap of the pollen is figured in Bot. Mag. as broadly triangular, it should be very slender. Lindley's habitat of Ceylon is no doubt an error, or referable to a cultivated specimen; or an *Aerides* may have been intended.

41. ***S. trichromum***, Reichb. f. in *Hamb. Gartenzeit.* 1859, 51; *Xen. Orchid.* 119, t. 139; leaves spreading obtusely 2-lobed, racemes much shorter than the leaves, flowers subsecund, spur incurved. *S. pallens*, Lindl. (not Cathcart) in *Journ. Linn. Soc.* iii. 35.

SIKKIM HIMALAYA (*Ic. Cathcart*). BHOTAN and ASSAM (*Ic. in Herb. Calcutt.*).

Stem 1-3 ft. *Leaves* $\frac{3}{4}$ -1 in. broad. *Racemes* 3-5 in., lax-flid., shortly peduncled; pedicel with ovary $\frac{3}{4}$ in., sigmoid; sepals linear-oblong, acute and broader shorter petals yellowish-white with a rose-cold. midrib; lip yellowish or rose-cold., speckled with pink; spur $\frac{1}{2}$ - $\frac{3}{4}$ in. long, horn-like; limb short, acute, with a flattened hooked callus at the throat.

Sect. VI. UNCIFERA. (See p. 55.)

42. ***S. obtusifolium***, Hook. f. *Ic. Plant. ined.*; leaves broadly lorate 2-lobed, raceme elongate, lip cymbiform subacute or bifid, spur incurved upon the side of the lip, tip thickened. *Uncifera obtusifolia*, Lindl. in *Journ. Linn. Soc.* iii. 40.

SIKKIM HIMALAYA, alt. 5000 ft., Clarke. BHOTAN; in the Gheet Valley, Lister. KHASIA HILLS; Churra, alt. 4000 ft., J. D. H. & T. T.

Stem 2-4 in., as thick as a goose-quill; roots very many and long. *Leaves* flat, 4-6 by $\frac{3}{4}$ -1 in., very thick, lobes obtuse. *Peduncle* with raceme very stout, 2-3 in.; bracts rather large, ovate, persistent, at length reflexed; pedicel with ovary $\frac{1}{4}$ in.; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., pale lemon-coloured, at first greenish; limb of lip shorter than the obovate-oblong obscurely nerved sepals, tip of lip thickened, side lobes truncate; column very short, rostellum beaked; anther long-beaked; pollinia small on the face of the refracted end of the elongate spatulate strap, the margins of which are recurved, gland very long.

43. ***S. acuminatum***, Hook. f.; *Ic. Plant. ined.*; leaves linear- or oblong-lanceolate obliquely acuminate, raceme short, lip cymbiform obtuse, spur arcuate, tip acute. *Uncifera acuminata*, Lindl. in *Journ. Linn. Soc.* iii. 40.

SIKKIM HIMALAYA, alt. 6-7000 ft., Gamble. KHASIA HILLS, Griffith (*Kew Distrib.* 5257), &c.

A much more slender plant than *S. obtusifolium*, with narrower shorter leaves and shorter racemes, a much less curved spur, flowers about the same size and colour,

but spur not so long or so much incurved, gland of the pollinia smaller. *Capsule* $\frac{1}{2}$ –1 in., narrowly fusiform, shortly pedicelled.

DOUBTFUL AND IMPERFECTLY KNOWN SPECIES.

S. CLAVATUM, *Lindl. Gen. & Sp. Orchid.* 223. (*Epidendrum clavatum*, *Retz Obs.* vi. 50. *Limodorum clavatum*, *Willd. Sp. Pl.* iv. 126; caulescent, pendulous, leaves linear clavate 2-toothed, spikes leaf-opposed, lip inflated bearded.—East Indies, on trees.—It is impossible to say what this is; it had better be suppressed.

S. DASYPOGON, *Lindl. Gen. & Sp. Orchid.* 222. (*Aerides dasypogon*, *Smith in Rees Cyclop. Suppl.* *Epidendrum umbellatum*, *Ham. mss.*); stemless, leaves ovate-oblong acute obliquely 2-toothed, corymbs subumbellate, sepals and petals incurved linear-oblong green without blood-red within, lip white dotted with blood-red, limb dilated subcordate toothed.—Nepal, *Hamilton*.—(Probably *S. calceolare*).

S. PECHÉI, *Reichb. f. in Gard. Chron.* 1887, i. 447; leaves very broad 7 by 2 in. ligulate obtusely 2-lobed, raceme few-fl., flowers as in Sect. *Calceolaria*, as large as *S. bellinum*, sepals and petals cuneately oblong ochreous spotted with red, lip a cupular spur, side lobes retuse and angular over the transversely triangular midlobe, blade white and yellow base of the spur spotted with red.—Moulmein, *Peché*.—(I have seen only imperfect cultivated specimens in Herb. Kew. It appears to be a very distinct large-leaved species of Sect. *Calceolaria*, J. D. H.)

ACAMPE GRIFFITHII, *Reichb. f. in Flora*, 1872, 277; near *A. dentata*, spur cylindric hairy within, midlobe of lip triangular angled on each side at the base protruding, two intermarginal lamellæ ("lineatis apice lobosis"), disk warted all over.—The rest as in *A. dentata*, *Lindl.*—Bhotan, *Griffith*.

ACAMPE INTERMEDIA, *Reichb. f. in Otto. & Dietr. Allgemein. Gartenzeit.* 1856, 217; near *A. multiflora*, *Lindl.*; flowers like those of *A. papillosa*, *Lindl.*, leaves shorter ovate lip equally 2-lobed, raceme short corymbose, lip ("labello aplectro"), canal between the lateral lobes hairy, midlobe oval acute tubercled.

65. *SARCANTHUS*, *Lindl.*

Characters of *Saccolabium*, but spur with a dorsal usually 2-lobed callus or an erect plate within, inserted under the column, and with the cavity more or less divided by a vertical septum.—Species about 20, Tropical Asiatic.

But for the inconvenience attending the substitution of a new generic name for the numerous species of this genus, I should unhesitatingly unite it to *Cleisostoma*, and both to *Saccolabium*. The only character whereby its species can be distinguished is the more or less septate cavity of the spur, often a very obscure one, and almost inappreciable when the septum is reduced to a mere ridge.

* Leaves elongate, filiform.

1. *S. filiformis*, *Lindl. in Bot. Reg.* 1842, *Misc.* 61; leaves 8–10 in., racemes long lax-fl., sepals oblong obtuse, petals smaller and narrower, lip broadly conically, saccate base 2-lobed, side lobes acute incurved, midlobe short broad toothed on each side at the base. *Bot. Mag.* t. 4639; *Jard. Fleur.* 266.

SIKKIM HIMALAYA, *Griffith's Collector*. KHASIA HILLS, *Lobb*. TENASSERIM, *Parish*.

Stem pendulous, as thick as a duck's quill, terete. *Leaves* distant, $\frac{1}{2}$ in. diam., obtuse. *Racemes* 6–10 in., curved; bracts minute, ovate; pedicels very short; flowers $\frac{1}{2}$ in. diam.; sepals and petals dark purple, margins and midrib green; lip fleshy, white, base broad yellow, midlobe white, sac with a narrow lamina from the base of the midlobe downwards; and a very large-lobed hispid callus below the very broad, thick, yellow column; strap of oblong pollinia rather broad, gland angular.

2. **S. Williamsoni**, *Reichb. f. in Hamb. Gartenzeit.* 1865, 333; in *Gard. Chron.* 1865, 674; leaves 4-5 in., racemes long laxly many-fl., sepals ovate-oblong, petals smaller oblong, side lobes of lip erect oblong obtuse subfalcate, midlobe incurved fleshy thickly clawed acuminate, spur globose.

TENASSERIM; at Moulmein, *Parish.* ANDAMAN ISLANDS, *Berkeley.*

Stem nearly as thick as a goose-quill. *Leaves* $\frac{1}{2}$ in. diam., curved, obtuse. *Racemes* 6-8 in., slender, sometimes branched; bracts ovate-lanceolate; flowers $\frac{1}{2}$ in. diam., pedicelled, amethystine; spur with a narrow lamella from the base of the lip downwards and a large lobed pubescent dorsal callus; anther short; pollinia very minute subglobose, strap broadly obcordate (short, slender in *Ic. Parish*).

3. **S. appendiculatus**, *Hook. f.*; leaves 3 in., racemes short few-fl., sepals oblong, petals smaller and narrower, side lobes of lip triangular acuminate, midlobe short incurved, column pubescent at the base in front, spur funnel-shaped slightly curved obtuse. *S. teretifolius*, *Reichb. f. in Trans. Linn. Soc.* xxx. 136 (not of *Lindl.*). *Aerides appendiculatum*, *Wall. Cat.* 7315; *Lindl. Gen. & Sp. Orchid.* 242.

TAVOY, *Wallich.* TENASSERIM; at Moulmein, *Griffith, Parish.*

Stem as thick as a duck's quill, rigid. *Leaves* $\frac{1}{2}$ in. diam., obtuse. *Racemes* 1-2 in.; bracts minute; pedicels short; flowers $\frac{1}{2}$ in. diam.; petals and sepals reflexed, yellow-green; lip rose-pink, spur 2-celled below the middle by a lamina descending from the base of the midlobe; dorsal callus very large, lobed, pubescent at the base; anther short; pollinia very large, strap broadly triangular-ovate.—Very near *S. teretifolius* of China, but flowers very much smaller and spur longer.

** Leaves flat or channelled.

† *Stem elongate, scandent or pendulous.*

4. **S. secundus**, *Griff. Notul.* iii. 362; *Ic. Pl. Asiat.* t. 336; stem slender elongate, leaves 4-7 in. narrowly linear-lanceolate acuminate, racemes slender, flowers subsecund, sepals oblong obtuse, petals smaller, side lobes of lip tooth-like, midlobe small ovate acute concave, spur conico-infundibular obtuse gibbous dorsally. *Micropera pallida*, *Lindl. in Wall. Cat.* 7321 (in part), (not of *Gen. & Sp. Orchid.*).

SILHET, *Wallich.* UPPER ASSAM, *Griffith.*

Leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. broad, rigid, 5-nerved; sheaths $\frac{3}{4}$ -1 in., deeply grooved when dry. *Racemes* shorter than the leaves, peduncle and rachis slender; bracts minute, pedicel with ovary $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. diam.; sepals and petals red with white or yellowish margins and central band; lip rose-colored, very fleshy, spur white with a longitudinal septum, dorsal callus 2-lobed; column stout, short, rostellum subulate; anther long-beaked, strap of globose pollinia slender, dilated above, gland minute. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., ellipsoid or oblong, ribs low.—Referred to under *S. peninsularis* as possibly that plant by Lindley (in *Journ. Linn. Soc.* iii. 39), but is very different. From a so-named drawing in *Herb. Calcutt.* this would seem to be the original *S. oxyphyllus*, of *Wallich's* mss.; and that Lindley inadvertently transferred that name to No. 16.

5. **S. peninsularis**, *Dalz. in Hook. Kew Journ.* iii. (1857), 243; racemes 1-6 in., flowers reflexed, sepals and smaller petals obovate-oblong obtuse, side lobes of lip short erect subacute, midlobe small incurved acute, spur conical subacute dilated above. *Lindl. in Journ. Linn. Soc.* iii. 39; *Walp. Ann.* vi. 891; *Dalz. & Gibs. Bomb. Fl.* 264. *S. pauciflorus*, *Wight Ic.* t. 1747 (bad). *Saccolabium acuminatum*, *Thwaites Enum.* 34.

THE DECCAN PENINSULA; on the Ghats from the Concan to Travancore. Ceylon; in the Saffragam district.

Stem 10–12 in., as thick as a duck's quill, flexuous, pendulous. *Leaves* uniform, 6–8 by $\frac{1}{2}$ – $\frac{3}{4}$ in., rigid, strict or curved, 3–5-nerved, acuminate, tip obtuse, sheaths ribbed. *Racemes* slender, bracts minute; flowers $\frac{1}{2}$ in. diam., greenish or yellow with pink margins and a violet lip; sepals and petals rather spreading; spur more or less perfectly 2-celled, dorsal callus small; column short; anther beaked, pollinia didymous, strap slender dilated upwards, gland small. *Capsule* $\frac{3}{4}$ – $\frac{1}{2}$ in., deflexed, narrowly oblong.

6. **S. insectifer**, *Reichb. f. in Bot. Zeit.* 1857, 159; leaves many $\frac{1}{2}$ by $\frac{2}{3}$ in. oblong amplexicaul, spikes very short stout few-fl., sepals ovate-oblong obtuse, petals oblong, side lobes of lip rounded, midlobe large triangular-obovate fleshy, spur short broadly conical.

BEHAR; at Burkutta, *J. D. H.* CACHAR, *Mann.* CHITTAGONG (*l.c. in Hort. Calcutt.*). TENASSERIM, *Parish.*

Stem a foot and upwards, robust, scandent, thicker than a goose-quill. *Leaves* subimbricate, obliquely obtusely 2-lobed with sometimes an intermediate apiculus, thickly coriaceous. *Spikes* $\frac{1}{2}$ in., sessile; bracts small, deciduous; flowers $\frac{1}{2}$ in. diam., greenish-yellow striped with red-brown; lip white and pink or purple, midlobe acute or acuminate, spur semiseptate mouth with a pubescent ridge, dorsal callus large; column very short, stout, tip reclinate and with uncinate recurved arms; anther truncate, pollinia globose didymous, strap short very broad, gland transverse.

7. **S. Scortechinii**, *Hook. f.*; leaves 3–5 by $1\frac{1}{4}$ in. subpetioled oblong-lanceolate acute flat, spike about equalling the leaves very stout many-fl., sepals oblong acute, petals half as broad, side lobes of lip obsolete, midlobe hastately deltoid, spur longer than the sepals conical obtuse curved.

PERAK, *Scortechinii*; on rocks, *Wray.*

Stem elongate, robust, as thick as a goose-quill. *Leaves* very thick. *Spikes* 2–6 in., flowers $\frac{1}{2}$ in. diam.; sepals and petals lurid purple with green midrib and margins; lip $\frac{1}{2}$ in., yellowish, spur 2-celled, dorsal callus large; column short; anther obtusely beaked; pollinia 4, broadly oblong, strap linear. *Capsules* 1 in., linear-oblong, deflexed.—Described from fruiting specimens and a drawing by *Scortechinii*.

8. **S. pallidus**, *Lindl. in Bot. Reg.* 1840, *Misc.* 78; in *Journ. Linn. Soc.* iii. 39; leaves 10–14 in. lorate flat, panicle very large copiously branched laxly many-fl., sepals and smaller petals oblong obtuse, side lobes of lip triangular acuminate, midlobe a small incurved ovate acute fleshy beak, spur a cylindric obtuse sac. *S. racemifer*, *Reichb. f. in Wulp. Ann.* vi. 891. *S. tricolor*, *R. f. in Bonpland.* ii. 214. *Saccolabium racemiferum*, *Lindl. Gen. & Sp. Orchid.* 224. *Aerides racemiferum*, *Wall. mss.*

EAST NEPAL, alt. 4000 ft., *J. D. H.* BHOTAN and the KHASIA HILLS, alt. 4–6000 ft., *Wallich, &c.* BURMA, *Berkeley.*

Stem as thick as the thumb; roots very stout. *Leaves* very coriaceous, 2 in. broad, deeply obtusely 2-lobed. *Panicle* with the stout peduncle 2–3 ft., branches long, slender; bracts at the forks ovate-lanceolate, floral subulate, persistent; pedicel with ovary $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. diam.; sepals and petals dark purple edged with yellow; lip white, spur thick-walled, about as long as the sepals, semiseptals longitudinally, dorsal callus 2-lobed; column short, stout, rostellum obscure; anther broad, acute, pollinia oblong, strap dilated above, gland small. *Capsule* $\frac{3}{4}$ in., ellipsoid or clavate.—The E. Nepal specimen has shorter leaves and an ellipsoid capsule.

†† *Stem short or 0.*

9. **S. erinaceus**, *Reichb. f. in Bot. Zeit.* 1864, 298; leaves linear-oblong subacute channelled, racemes longer than the leaves pendulous laxly many-fld. hirsute, sepals and smaller petals oblong-obovate white, side lobes of lip broad midlobe ovate-oblong obtuse, spur shorter than the sepals saccate. *Bot. Mag. t.* 5630. *S. Stowellianus*, *Batem. mss.*

TENASSERIM; at Moulmein, *Parish.*

Stem short, as thick as the little finger. *Leaves* close set, 2-3 by $\frac{2}{3}$ in., recurved, coriaceous. *Racemes* 4-6 in., rachis slender purple; bracts minute; flowers $\frac{2}{3}$ in. diam.; pedicel with ovary $\frac{1}{2}$ - $\frac{2}{3}$ in.; side lobes of lip with acute outer angles, spur with a sinuous ridge at the mouth, and with a broad plate extending downwards from the base of the pink midlobe, dorsal callus didymous; column stout, recurved, beak decurved, base broad; anther long-beaked, strap of pollinia very slender, gland minute.

10. **S. latus**, *Reichb. f. in Bot. Zeit.* 1886, 378; in *Saunders Refug. Bot. t.* 109; leaves very short broad fleshy, raceme 6-8 in., sepals broadly oblong obtuse, petals obovate-oblong, side lobes of lip erect, midlobe very short obtuse concave, spur broadly conical obtuse.

TENASSERIM; at Moulmein, *Griffith, Parish.*

Stem 0. *Leaves* $2\frac{1}{2}$ -3 by 1-1 $\frac{1}{4}$ in., linear-oblong, obtusely 2-lobed, clouded with purple beneath. *Peduncle* slender, branched at the base, very lax-fld.; bracts minute; pedicel with ovary horizontal, $\frac{2}{3}$ in. long; flowers yellow, resupinate; spur with a narrow longitudinal plate at the base within; dorsal callus 2-lobed, glabrous; column rather long rostellum elongate, deflexed; strap of globose pollinia very long, slender, gland minute.—Very near *S. erinaceus*. There are two specimens in Herb. Kew., both from the Royal Gardens; in one the sepals and petals are much broader than in the other, and the raceme much longer. A drawing of a flower of this species is in Herb. Lindl., marked "India (Griffith) Loddiges." The ridge within the spur hardly amounts to a septum, and the species is therefore intermediate between *Sarcanthus* and *Cleisostoma*.

11. **S. Parishii**, *Hook. Bot. Mag. t.* 5217; leaves 4-6 in. lorate keeled unequally obtusely 2-fld, racemes or panicles elongate many and lax-fld., sepals ovate obtuse, petals smaller narrower oblong, side lobes of lip rounded, midlobe broadly ovate, straight or recurved, spur longer than the sepals narrowly conical curved.

TENASSERIM; at Moulmein, *Parish.*

Stem 1-2 in., roots very stout. *Leaves* few, divaricate, bases closely imbricating. *Racemes* 6-16 in.; bracts minute, ovate, acute; flowers $\frac{1}{2}$ in. diam., golden yellow; sepals and petals striated with red; spur septate below the middle, dorsal callus large; column short; anther acuminate, pollinia didymous oblong shortly stipitate below the tip of the narrowly spatulate strap (as in sect. *Uncifera* of *Saccolabium*), gland minute.

12. **S. lorifolius**, *Parish mss.*; leaves very thick curved linear channelled keeled obtusely notched, scape flexuous and rachis of panicle dense-fld. spikes stout, bracts reflexed, lateral sepals broadly obovate, petals more oblong obtuse, side lobes of lip subulate, midlobe ovate concave, spur longer than the sepals. *Hook. f. Ic. Plant. ined.*

TENASSERIM; at Moulmein, *Parish.*

Stem 3-4 in., stout, few leaved. *Leaves* 4- by $\frac{1}{2}$ - $\frac{3}{4}$ in., sheath very short. *Peduncle* 4 in., green, sheaths obtuse; spikes 3-4 in.; bracts ovate-subulate; sepals and petals yellow with red; spur white, half 2-celled by vertical lunella, dorsal callus didymous; column short; anther short, broad, pollinia didymous, strap not long

gland ovate.—Described from an excellent drawing by Parish. Habit, spike and bracts of *Cleisostoma spicatum*; but the flowers are smaller, yellow, and the spur distinctly septate within.

13. *S. oxyphyllus*, Wall. ex Lindl. in *Bot. Reg.* 1840, *Misc.* 58; leaves 6-12 by $\frac{1}{2}$ - $\frac{3}{4}$ in. rigid acuminate, racemes short dense-fld., sepals oblong obtuse, petals smaller obovate-oblong, side lobes of lip acuminate, midlobe small ovate incurved, spur much longer than the sepals subcylindric obtuse. ? *Cleisostoma subulatum*, *Blume Bijl.* 362. *Angræcum pugioniforme*, *Klotzsch in Cat. Sem. Hort. Berol.*

TENASSERIM; at Moulmein, Parish.

Stem short. *Leaves* thickly coriaceous, margins recurved, narrowed to both ends. *Raceme* 4-6 in.; bracts minute, acute; flowers $\frac{1}{4}$ in. diam., dull purple, with yellow disk and margins; spur large, obtuse, septate below the middle, dorsal callus large lobed; column rather long, rostellum minute; anther acuminate, pollinia didymous, strap very slender, gland minute.—Very near *S. pugioniformis*, Reichb. f. in *Otto and Diet. Gartenzeit.* 1856, 219, but the leaves in that are broader and racemes much longer. Lindley (*Bot. Reg.* l. c.) says that *oxyphyllus* is nothing but a narrow leaved var. of the Chinese *S. rostratus*, but as noted under *S. secundus* there has been a misapplication or transference of Wallich's name of *oxyphyllus* by Lindley or Wallich.

SPECIES UNKNOWN TO ME.

S. ARIETINUS, Reichb. f. in *Gard. Chron.* 1869, 416; stem 5 in., leaves 3 in. straight stout terete as thick as a quill, raceme small deflexed many-fld., bracts triangular not half the length of the pedicelled ovary, flowers small greenish, lip rosy, sepals oblong, petals ligulate obtusely acute, lip 3-fid, side lobes obtuse-angled plaited in the middle, midlobe triangular acute yellowish, spur retrorse with an erect lamellate grooved callus under the column, column slender velvety at the angles of the lip near the fovea. Assam (*Hort. Day*). Stiff, as if made of tin.

S. ASPERSUS, Reichb. f. in *Hamb. Gartenzeit.* 1865, 297; near *S. Parishii*; leaves ligulate broadly 2-toothed, peduncle long slender, flowers racemed equalling *S. paniculatus*, sepals green, lip purple-spotted, sepals ovate apiculate, petals spur curved with a longitudinal septum, side lobes semi-ovate involute auricled at the isthmus and at the base, midlobe sessile triangular.—Burma, *Hort. Soc.*

S. CHRYSOMELAS, Reichb. f. in *Gard. Chron.* 1869, 662; leaves broadly lorate unequally 2-lobed, panicle simple, bracts triangular much shorter than the pedicelled ovaries, flowers yellowish, disk of sepals and petals blackish-purple, sepals and subequal petals oblong, side lobes of lip triangular with an ascending awn, midlobe triangular, spur straight conical, septum running from the posticous base of the spur along the anticous and excurrent on the midlobes, callus under the column bicural, column slender, base puberulous.—Tenasserim, at Moulmein, *Benson (Hort. Veitch.)* *S. paniculatus* has a 3-fid midlobe of the lip; *S. racemifer* (*Saccolab. racemiferum* and *Sarcanth. pallidus*, Lindl.), has a totally different column anther, callus, and different side lobes of lip.

S. MACRODON, Reichb. f. in *Gard. Chron.* 1872, 1555; leaves short oblong-ligulate with 2 triangular forcipate teeth, raceme elongate laxly many-fld., bracts most minute, pedicelled ovary and cylindric spur equal, sepals and petals oblong straight ribbed on the back, lip 3-fid, side lobes subquadrate anticous angle folded inwards, midlobe triangular concave, column short with a styliform deflexed process on each side next to the elongate deflexed linear triangular rostellum.—Madras Presidency, *Benson (Hort. Veitch.)*.

S. MIRABILIS, Reichb. f. in *Gard. Chron.* 1878, ii. 300; leaves $5\frac{1}{2}$ by $\frac{3}{4}$ in. ligulate 2-fid, lobes ligulate obtuse, panicle $1\frac{1}{2}$ in. elongate slender, branches distant erect ends racemose, bracts most minute, flowers small yellowish, spur purple, sepals oblong acute dorsal arched gibbous, petals ligulate, lip 3-fid, side lobes short erect oblong acute, midlobe triangular horizontal, spur cylindric semicurved grooved septate, dorsal callus forked, strap of pollinia oblong bent over the compressed androclinium, pollinia blue on a forked appendage of the strap.—Burma? (*Hort. Hobart*).—Near *S.*

Parishii, with even more remarkable pollinia. [The strap of the stipitate pollinia must resemble that of *Saccolab. sect. Uncifera*, J. D. H.].

CLEISOSTOMA, Blume.

Differs from *Sarcanthus* only in the spur not being septate, and from *Saccolabium* in having a dorsal scale or callus within the spur beneath the column.—Species (known) probably 15 or 20.

Under *Sarcanthus* I have given my reason for not bringing that genus under this; to which I may add that if both were brought under *Saccolabium*, the result would be perhaps more satisfactory still. There are no characters of habit or habitat whereby the three can be distinguished, and the structural are very minute and often obscure. In *Cleisostoma* and *Sarcanthus* the dorsal appendage within the spur is either a 2-lobed callus or a thin scale, suggesting the propriety of rearranging the species of both genera by this character, but it is one so difficult of accurate observation in dried specimens that I hesitate to adopt it.

* *Stem more or less elongate. Peduncle stout, usually longer than the leaves, branched, erect; flowers in short spikes or racemes terminating the branches, (as in Sarcanthus pallidus).*

1. *C. latifolium*, Lindl. in Bot. Reg. 1840, Misc. 60; stem very stout, leaves $2\frac{1}{2}$ –9 by $1\frac{1}{2}$ –2 in., from oblong to lorate, peduncle very stout, side lobes of lip short truncate, midlobe reniformly ovate caruncled towards the base, spur saccate. Walp. Ann. vi. 889. *C. fuscum*, Lindl. in Journ. Hort. Soc. 1850, 80; Walp. l.c.

PERAK, Wray, (Ic. Scortechini); SINGAPORE and MALACCA, Griffith. (Kew Distrib. 9235), Maingay, (K.d. 1647).

Stem 6–10 in., as thick as the middle finger. *Leaves* thickly coriaceous, flat, obtusely broadly 2-lobed, base narrowed. *Peduncle* 12–18 in., rather flexuous; sheaths annular; branches 1–2 in.; rachis of spikes very stout, bracts minute, broad; flowers $\frac{1}{2}$ in. diam.; sepals and petals obovate-oblong, greenish margined or spotted with red-brown; spur sometimes inflated below, dorsal scale truncate erose; column very short, rostellum inconspicuous; anther low, broad, strap of globose pollinia linear, gland small. *Capsule* 1 in., fusiform.—Of Lindley's *C. latifolium* there is no specimen in his Herbarium. It was described from a Singapore plant cultivated by Loddiges, and agrees in characters with *C. fuscum*, of which Lindley himself says it is probably only a form of *latifolium*.

2. *C. andamanicum*, Hook. f.; leaves 4–6 by $\frac{1}{2}$ – $\frac{3}{4}$ in. lorate, peduncle equalling or exceeding the leaves, side lobes of lip short truncate, midlobe very short reniform, spur cylindric.

SOUTH ANDAMAN ISLANDS, Kurz.

Stem as thick as a goose-quill. *Leaves* very coriaceous, recurved, obtusely unequally 2-lobed. *Peduncle* 5–7 in.; sheaths annular and bracts and flowers as in *C. latifolium*; flowers $\frac{1}{2}$ in. diam., pale greenish-yellow with a purple band within the margin; lip yellow, spur spotted with red, dorsal callus retuse; column very short, rostellum large, prominent; anther ovate, acuminate, strap of globose pollinia slender, gland medium-sized.—Closely allied to *latifolium*, but much more slender, leaves smaller and narrower and spur cylindric.

3. *C. maculosum*, Lindl. Gen. & Sp. Orchid. 227; in Bot. Reg. 1840, Misc. 37; leaves 6–7 by $\frac{2}{3}$ – $\frac{3}{4}$ in. narrowly lorate, peduncle stout shorter or about equalling the leaves, side lobes of lip short truncate, midlobe very short ovate papillose, spur saccate. Walp. Ann. vi. 888. *C. galeatum*, Thwaites Enum. 305. *Saccolabium galeatum*, Gardn. mss.

CEYLON; in the Central Province, *Macrae*, &c.

Stem as thick as a swan's quill. *Leaves* coriaceous, obtusely unequally 2-lobed. *Peduncle* with annular sheaths; bracts short, broad; flowers $\frac{1}{2}$ in. diam., yellow spotted with red; spur much smaller than the obovate-oblong sepals, dorsal scale truncate; column very short, rostellum short; anther small, strap of globose pollinia linear, gland small. *Capsule* $1\frac{1}{2}$ in., narrowly clavate.—Bentham (*Gen. Plant.* iii. 580) erroneously unites Thwaites' *Saccolabium lineolatum*, C.P. 2741 (*S. ochraceum*, Lindl.) with Lindley's *C. maculosum*.

4. ***C. crassifolium***, Lindl. in *Part. Fl. Gard.* iii. 125, t. 99; leaves 8–10 in. obtuse keeled, peduncle long stout branched, spikes recurved, lip with a pubescent ridge at the mouth of the cylindric spur, side lobes rounded, midlobe broadly ovate, lateral angles acute recurved. *Jard. Fleur.* iv. t. 397; *Walp. Ann.* vi. 889; *Lindema* iii. t. 139.

TENASSEEIM? (*Hort. Veitch*).

Stem as thick as the thumb. *Leaves* recurved, very thick, channelled above. *Peduncle* equalling the leaves; flowers $\frac{1}{2}$ in. diam.; sepals oblong, obtuse, and petals green and spotted; lip rose-cold., mouth of spur closed by the thickened ridge, disk of midlobe thickened; dorsal callus compressed, decurved; column very short; anther acuminate, pollinia 4, subglobose, strap linear, gland small.

** *Stem* short. *Peduncle* slender; flowers scattered on the slender branches of the panicle.

5. ***C. ramosum***, Hook. f.; stem short, leaves loriform obliquely 2-lobed, panicles broad, sepals obovate equalling the conical spur, side lobes of lip very small, midlobe triangular-ovate obtuse, disk at base and short spur within pubescent. *Saccolabium ramosum*, Lindl. *Gen. & Sp. Orchid.* 224. *S. flexuosum*, Lindl. in *Journ. Linn. Soc.* iii. 36. *Ceoclades flexuosa*, Lindl. in *Wall. Cat.* 7333; *Gen. & Sp. Orchid.* 236. *Aerides ramosum*, Wall. mss.

SIKKIM HIMALAYA; in hot valleys, J. D. H. LOWER BENGAL and the Sunderbunds, Wallich, Clarke. BURMA; on the Attran River, Wallich; Moulmein, Parish.

Stem 1–3 in. *Leaves* 3–5 by $\frac{1}{2}$ – $\frac{1}{3}$ in. *Panicle* erect; bracts minute; flowers $\frac{1}{2}$ in. diam., buff, or yellowish flushed or faintly blotched with red, or dull red with green margins; sepals and smaller obovate petals 3-nerved; lip white, flushed with pink or banded with yellow; dorsal scale in spur erect 2-fid. pubescent; column very short, broad; anther short very broad, pollinia (4, 2 very small, Clarke), strap dilated upwards and suddenly contracted at the tip. *Capsule* $\frac{1}{2}$ in., fusiform.—Wallich's specimens from Burma have very narrow leaves.

*** *Stem* usually elongate. *Peduncle* slender or stout rarely branched, usually shorter than the leaves.

6. ***C. spicatum***, Lindl. in *Bot. Reg.* 1847, under t. 32; leaves 4–8 by $\frac{1}{2}$ –2 in., spike stout simple dense-fld., bracts ovate-subulate deflexed, side lobes of lip broad rounded, midlobe small ovate fleshy, spur contracted above the inflated 4-lobulate base. *Sarcanthus densiflorus*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 136. *Saccolabium densiflorum*, Lindl. in *Wall. Cat.* 7311; *Gen. & Sp. Orchid.* 220; in *Bot. Reg.* 1838, *Misc.* 56. *Aerides densiflorum*, Wall. mss.

TENASSEEIM; at Moulmein, Parish. PENANG, Wallich, Curtis.—DISTRIB. BORNEO.

Stem as thick as the middle finger in Penang, more slender in Moulmein. *Leaves* oblong or linear-oblong, broadly unequally 2-lobed. *Spike* decurved or pendulous; flowers $\frac{1}{2}$ in. diam., glabrous or subfurfuraceous; sepals and petals broad,

dull red with a pale central band; lip yellowish flushed with red, midlobe incurved, spur sometimes transversely septate towards the base, dorsal callus forked; column very short, rostellum short; anther beaked, strap of globose pollinia slender, dilated upwards, gland small.—The spur is like that of *Saccolab. buccosum*.

7. *C. tenerum*, Hook. f.; stem scandent, leaves 1–2 in. oblong, base cordate, raceme few-fld. on a short stout leaf-opposed peduncle, side lobes of lip large truncate crenulate, midlobe ovate obtusely 3-lobed fleshy, spur very short conical incurved. *Ceoclares tenera*, Lindl. *Gen. & Sp. Orchid.* 236; *Wight Ic. t.* 1680; *Thwaites Enum.* 306; *Walp. Ann.* vi. 895. *Ceonia* ? *alata*, A. Rich. in *Ann. Sc. Nat. Ser.* 3, xv. 67, t. 7. *Saccolabium* ? *tenerum*, Lindl. in *Journ. Linn. Soc.* iii. 36.

NILGHIRI HILLS; in woods near Neddubetta, *Perrottet*. CEYLON; in the Central Province, alt. 3–5000 ft., *Macrae*, &c.

Stem 1–2 ft., as thick as a duck's quill. *Leaves* scattered, fleshy, tip rounded or notched. *Peduncle* $\frac{1}{2}$ – $\frac{3}{4}$ in., woody; basal sheaths cupular; bracts cymbiform; flowers $\frac{3}{4}$ in. diam., fleshy, yellow or greenish, nerves red; sepals and petals oblanceolate obtuse, lateral sepals decurved; midlobe of lip white, dorsal callus fleshy; column rather long; anther short broad acute, strap of globose pollinia slender, gland small. *Capsule* 1 in., turgid, elliptic-oblong or pyriform.—Erroneously referred to *Saccolab. brevifolium* in *Gen. Plant.* (iii. 579). I have seen no Nilghiri specimen.

8. *C. bipunctatum*, Hook. f.; stem slender scandent, leaves 4–6 by $\frac{1}{2}$ – $\frac{2}{3}$ in. subacute, peduncle very short, 1–2 fld. side lobes of lip small subfalcate, midlobe large ovate-lanceolate, spur very small incurved obtuse, saccate. *Saccolabium bipunctatum*, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 145.

TENASSERIM; at Moulmein, *Parish*.

Stem about as thick as a duck's quill. *Leaves* lorate, laterally notched towards the tip; costa stout beneath. *Flowers* about $\frac{1}{2}$ in. diam., yellow and purplish; bracts obscure; sepals oblong-lanceolate, acute, 3-nerved, and linear-oblong 1-nerved petals falcate; midlobe of lip longer than the sepals, white, 3-nerved with a basal callus, dorsal scale membranous toothed; column very short; anther short, very broad, strap of subglobose pollinia linear, gland small.—I have seen only a very small specimen. Reichenbach, though describing the scale in the spur, places this in *Saccolabium*.

9. *C. brevipes*, Hook. f.; stem elongate, leaves 4 in. distichous uniform linear-lanceolate acute fleshy, spike short sessile dense-fld., rachis very thick, bracts short, flowers $\frac{3}{4}$ in. diam., sepals and petals subsimilar ovate-oblong obtuse orange-yellow with two purple bands, lip pale yellow, side lobes falcate acute, midlobe short hastate with a membranous 2-awned tip, disk thickened, spur a short sac tip rounded.

SIKKIM HIMALAYA, (*Ic. in Hort. Calcutt.*); alt. 5000 ft. *Gamble*. ASSAM, (*Hort. N. Campany*.)

Stems tufted, 8–12 in., as thick as a goose-quill, internodes $\frac{1}{2}$ – $\frac{3}{4}$ in., rugulose. *Leaves* erecto-patent, sessile, $\frac{3}{4}$ in. diam., flat, hard, tip micronate. *Spike* 1–1 $\frac{1}{2}$ in.; basal sheaths short, annular, and bracts brown; ovary $\frac{1}{2}$ in., green striped with dull purple; sac of lip shining, thickened disk extending backward to meet the thick callus at the base of the column, thus closing the orifice of the sac; column short, stout, pollinia subquadrate, strap compressed, gland large, 2-partite. *Capsule* 1–1 $\frac{1}{2}$ in., fusiform, terete, fleshy, striate.—Described from fresh cultivated specimens sent to Kew.

**** *Stem very short. Leaves subradical. Peduncle and raceme or spike much shorter than the leaves.*

10. **C. undulatum**, *Reichb. f. in Flora*, 1872, 274; leaves 4-8 by $\frac{3}{4}$ -1 $\frac{1}{4}$ in. lorate narrowed at both ends undulate, raceme many-fld., sepals oblong, side lobes of lip orbicular, midlobe suborbicular caruncled obscurely 3-lobed, spur short globose. *Saccolabium undulatum*, *Lindl. in Wall. Cat.* 7301; *Gen. & Sp. Orchid.* 222.

SILHET, *Wallich*. CHITTAGONG, hill tracts, *Gamble*.

Stem 1-1 $\frac{1}{2}$ in., roots fascicled. *Leaves* unequally obtusely 2-lobed, often falcate, sheath very short, flattened, midrib beneath strong. *Raceme* $\frac{3}{4}$ -1 in.; bracts minute; flowers $\frac{1}{6}$ in. diam., yellow blotched with red; sepals faintly 3-nerved; petals spatulately obovate, obtuse, 1-nerved; spur contracted at the mouth, membranous, dorsal scale erect bifid; column very short, rostellum minute, deflexed; anther broad, membranous; 1-celled, strap of globose pollinia slender, gland minute. *Capsule* $\frac{2}{3}$ in. long, linear-oblong.

11. **C. uteriferum**, *Hook. f.*; stemless, leaves 6-8 by 1 $\frac{1}{2}$ in. lorate tip broad rounded or retuse margins undulate, spike stoutly peduncled shorter than the leaves dense-fld., sepals obovate-oblong undulate tip rounded, petals smaller and narrower, side lobes of lip truncate, midlobe very small ovate fleshy, spur a large inflated subglobose sac sulcate in front, neck contracted.

PERAK, *Kunstler (Hort. Bot. Calc.)*.

Leaves flat, base hardly contracted. *Spike* with peduncle 3 in.; rachis very stout, strict; bracts minute; ovary very short, $\frac{1}{2}$ in.; flowers $\frac{1}{4}$ in. diam., thick, sepals and petals dirty yellow, dull red towards the base, nerves obscure; lip shorter, spur longer than the sepals, slightly incurved, grooved down the front, walls thin, dorsal scale large semicircular convex entire; column very short indeed, rostellum small, protruded; anther broad, truncate, 1-celled, pollinia globose, seated on the contracted apex of a rather broad lanceolate strap, gland oblong.—Near *C. undulatum* and *Wendlandorum*, but with a much larger inflated spur, smaller midlobe of lip, and broad strap of the pollinia. Described from an analysis of dried flowers and a fine drawing in the Calcutta Herbarium.

12. **C. Wendlandorum**, *Reichb. f. in Otto & Dietr. Allgemein. Gartenzeit.* 1856, 219; leaves 6-10 by 1-1 $\frac{1}{2}$ in., broadly lorate, raceme simple or branched many-fld., sepals obovate-oblong, petals narrower, side lobes of lip obscure rounded, midlobe small orbicular fleshy, spur short inflated. *C. callosum*, *Reichb. f. in Bonpland (not of Blume.)* *Pomatocalpa spicatum*, *Kuhl & Hasselt. ex. R. f. in Otto & Dietr. Allgemein. Gartenzeit.* l. c.

CACHAR; *Keenan*. TENASSERIM, *Parish*. ANDAMAN ISLANDS, *Berkeley*.

Stem 1-1 $\frac{1}{2}$ in., very stout; roots fascicled. *Leaves* coriaceous, 2-lobed, nerveless, midrib beneath slender. *Raceme* or *panicle* 4-6 in.; bracts obscure; flowers $\frac{1}{10}$ in. broad, yellow, papillose; spur very short broad truncate, dorsal scale semicircular erose; column very short, rostellum beaked; anther broad, strap of globose pollinia linear, gland small. *Capsule* (in Cachar) 1 in., linear-oblong.—A much larger plant than *C. undulatum*, named after the two Wendlands of Herrenhausen, father and son.

13. **C. Mannii**, *Reichb. f. in Flora*, 1872, 273; leaves lorate narrowed at both ends, raceme simple or branched many-fld., sepals and petals obovate, side lobes of lip truncate obtusely angled, midlobe orbicular-ovate, spur short inflated.

ASSAM, Mann. SIKKIM? (*Ic. in Herb. Calcutt.*)

I have seen but one specimen; it is as small as *C. undulatum*, from which it differs in the much longer stouter peduncle and raceme, and very small flowers about $\frac{1}{10}$ in. diam. (pale golden yellow flushed with red at the base of the sepals and petals, according to the Sikkim drawing). Dorsal scale of spur erect, 2-fid; column very short, anther broad, obtuse, pollinia subglobose, strap dilated upwards, rather long, gland small.

14. *C. decipiens*, Lindl. in *Bot. Reg.* 1884, *Misc.* 11; leaves 8-10 by 1 in. thick purple dotted beneath, peduncle simple or branched, spike many-fld., sepals and petals ovate or oblong-ovate, lip broader than long entire, spur short broad gibbous. *C. maculosum*, *Thwaites Enum.* 304 (*C. P.* 3885) (*not of Lindl.*) *C. Thwaitesianum*, *Trimen in Journ. Bot.* 1885, 244.

CEYLON; on trees in the low country, *Thwaites* (*C.P.* 3193).

A drawing of this plant from the Perideniya Herbarium represents the stem $\frac{1}{2}$ in. long, the leaves 5-6 by $\frac{3}{4}$ -1 in., lorate, unequally obtusely 2-lobed, sheaths $\frac{1}{2}$ in. long, and underside of leaf speckled with purple. *Flowering peduncle* stout, speckled with purple, with the dense-fld. spike 2 in., lengthening to 6 in. in fruit; bracts minute, subulate; flowers $\frac{1}{2}$ in. diam., yellowish, more or less suffused with red. *Capsule* sessile, $\frac{3}{4}$ in., linear-oblong.—The specimen in Lindley's herbarium (from Hort. Loddiges) consists of an imperfect leaf 4 by $\frac{3}{4}$ in. and a few inches of a branched panicle, the flowers not $\frac{1}{2}$ in. diam., are crowded in elongate spikes with a stout rachis. The sepals as drawn by Lindley are obovate-oblong, obtuse, reddish-brown, with a broad golden margin; side lobes of lip erect, truncate, midlobe white, spur yellowish; dorsal scale of spur broad erect; column and rostellum very short; strap of globose pollinia linear, with an apiculate tip.—Trimen rightly suspects his *Thwaitesianum* to be Lindley's *decipiens*.

15. *C. bicuspidatum*, Hook. f.; leaves 3-4 by $\frac{1}{2}$ -1 in. acutely 2-fid, raceme lax-fld. much shorter than the leaves, sepals orbicular-obovate obtuse, petals oblong-obovate, side lobes of lip plicate truncate, midlobe very stout ovate acute incurved, spur cylindric longer than the sepals obtuse.

SIKKIM HIMALAYA; near Darjeeling, *Anderson* (*in Herb. Calcutt.*). KHASIA HILLS; alt. 2000 ft., *Mann*. TENASSERIM, *Parish* (*Ic. in Hort. Calcutt.*).

Stem very short. *Leaves* flat, narrowed towards the base, lobes very acute, often unequal, the longer $\frac{3}{4}$ in. *Peduncle* with 5-6-fld. simple or branched raceme 2-5 in.; bracts small, ovate; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., spreading or reflexed; sepals and petals yellowish-green, with a median stripe; lip white, speckled or flushed with rose, spur longer than the sepals, mouth infundibular with a thickened ridge, dorsal callus 2-lobed; column very short, rostellum long decurved; anther beaked; strap of globose pollinia dilated upwards, tip rounded produced beyond the pollinia, margins recurved, gland minute.

SPECIES UNKNOWN TO ME.

C. DISCOLOR, Lindl. in *Bot. Reg.* 1845, *Misc.* 59; leaves oblong channelled obliquely truncate, peduncle long slender dull purple branched at the extremity, sepals orbicular-ovate 5-nerved, and petals elliptic, both dull yellow with a greenish tinge, lip 3-fid, side lobes plicate with a conical caruncle in the inner faces within, dorsal tooth undivided keeled, spur longer than the sepals obtuse nearly white.—*India* (*Hort. Loddiges*). In Lindley's fragment the leaf is $3\frac{1}{2}$ by nearly 1 in., the very slender peduncle has some small ovate obtuse sheaths; bracts small, broad, membranous; fl. buds about $\frac{1}{2}$ in. diam., membranous; spur cylindric, longer than the broad sepals, walls thin; side lobes of lip truncate, subcrenate; midlobe very short continuous with the side lobes, incurved, ovate, acute, concave, thin, without calli; callus below the column 2-lobed, puberulous; pollinia each didymous, strap clavate with recurved margins, gland very small.

C. LORATUM, Reichb. f. in *Flora*, 1872, 273; stem short, leaves cuneately lorate obliquely acuminate, racemes stout strict, flowers small, bracts small triangular persistent, sepals and petals ligulate obtusely acute, side lobes of lip transverse retuse with a minute callus at each internal angle, spur short hemispheric, scale under column sharply 2-fid to the middle, limb ovate obtusely acute.—Assam.

ECHIOGLOSSUM STRIATUM, Reichb. f. in *Gard. Chron.* 1879, 390; stem erect strict branched, sheaths very rough (arphyllaceous), leaves linear-ligulate unequally acute very coriaceous keeled towards the tip, racemes short drooping, flowers small dense yellow streaked with red, sepals and narrower petals oblong obtusely acute, lip obtusely conic, side lobes triangular erect, midlobe bastately triangular, tip acutely 2-toothed, callus below the column ligulate, strap of pollen linear, gland very large, hippocrepiform. Sikkim Himalaya (*Hort. Mackay*)—(*Echiglossum* is reduced to *Cleisostoma* in Gen. Plant.)

67. *ORNITHOCHILUS*, Wall.

Epiphytes: *Stem* very short, pseudobulb 0. *Leaves* few, broad, flat. *Scapes* lateral, slender; flowers small, racemed or paniced. *Sepals* spreading, subequal, lateral obliquely obovate. *Petals* linear. *Lip* much larger than the sepals, clawed, side lobes subquadrate, midlobe clawed inflexed lobulate and fimbriate, with a velvety flap over the mouth of the short incurved spur, which is distant from the base. *Column* short, foot 0, rostellum forcipate; anther low 2-celled, pollinia 2, subglobose or oblong, grooved, strap obcuneate.—Species 1 or 2, Indian and Chinese.

O. fuscus, Wall. in *Lindl. Gen. & Sp. Orchid.* 242. *O. cublepharum*, Hance in *Journ. Bot.* xxii. (1884), 364. *Aerides difforme*, Wall. in *Lindl. l. c.* 242, *Sert. Orchid. Frontisp.* f. 7; Reichb. f. in *Gard. Chron.* 1865, 698; *Lindl. in Journ. Linn. Soc.* iii. 41; *Walp. Ann.* vi. 899; *A. Hystrix*, *Lindl. in J. L. S.* 42 (not of *Gen. & Sp. Orchid.*).

TROPICAL HIMALAYA; from Garwhal? Falconer, to SIKKIM, and the KHASIA HILLS, alt. 4-5000 ft. TENASSERIM; at Moulmein, Parish.—DISTRIB. China.

Stem $\frac{1}{2}$ – $\frac{3}{4}$ in., 2-3-leaved. *Leaves* 3-7 by 1- $1\frac{1}{2}$ in., obliquely elliptic-oblong, acute, many nerved, base narrowed. *Racemes* simple or sparingly branched, 6-12 in., lax-fld.; bracts small, subulate; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. broad; sepals and petals yellow streaked with red; side lobes of lip striped with brown, midlobe variable in breadth, red, its lobules reflexed, the mid-one entire or fimbriate. *Capsule* 1 in., fusiform, pedicelled.

68. *TÆNIOPHYLLUM*, Blume.

Small stemless epiphytes, leafless when flowering, roots flattened pseudobulbs 0. *Leaves* linear or few or 0. *Peduncle* very short, filiform, simple, flowers very minute, spicate. *Sepals* and *petals* subequal, free or connate at the base. *Lip* sessile, saccate or spurred; side lobes short, broad, midlobe small fleshy. *Column* short, broad, foot 0; anther 2-celled; pollinia 4, in superposed pairs, strap linear, gland small.—Species about 6, Indian, Malayan, Australian and Pacific.

There are several Perak plants in Scortechini collections that are probably *Tæniophylla*; but the species are obscure, minute, and very imperfectly known, and there are no doubt many to be discovered.

1. *T. Alwisii*, *Lindl. in Journ. Linn. Soc.* iii. 42; peduncle glabrous, sepals and petals connate, lip cymbiform. *Thwaites Enum.* 305. Reichb. f. *Xen. Orchid.* 67, t. 116.

CEYLON; in the Ambagamowa district, *De Alwis*.

Roots fleshy. *Peduncle* $\frac{1}{2}$ in.; bracts keeled; flowers most minute, pale green; sepals, petals and lip connate into an acutely 6-toothed perianth; margins of lip free; column short; anther square, sub-4-celled; pollinia 4, pyriform, sessile on the gland.—Description from Thwaites.

2. **T. scaberulum**, *Hook. f.*; peduncle $\frac{1}{2}$ in. scaberulous, sepals petals and lip connate at the base, lip deeply saccate with a minute incurved midlobe.

TRAVANCORE; on teak branches, at Cottayam, *Johnson*.

Roots about $\frac{1}{10}$ in. diam., compressed. *Peduncle* 2-3-fld.; bracts broad; flowers sessile, $\frac{1}{10}$ in. diam.; sepals and petals oblong-lanceolate, obtuse, fleshy; sac or spur nearly as long as the limb of the lip, base rounded; column very short; anther truncate in front, pollinia pyriform. *Capsule* (young), $\frac{1}{4}$ in., slender, curved, scaberulous.

3. **T. serrula**, *Hook. f.*; leafless, spike sessile many-fld. appearing serrulate from the number and regularity of the very minute subdistichous bracts, sepals and petals free or nearly so, lip, cymbiform, side lobes low rounded, midlobe very short thick, spur scrotiform.

PERAK; at Larut, *King's Collector*.

Roots stout, $\frac{1}{2}$ in. diam. *Spikes* $\frac{1}{2}$ -1 in.; bracts concave, obtuse; flowers about $\frac{1}{2}$ in. diam., reddish-yellow; sepals lanceolate, obtuse and narrower petals with one thick nerve; side lobes of lip incurved; column very short, papillose. *Capsule* $\frac{3}{4}$ -1 $\frac{1}{2}$ in., trigonous.

69. **MICROSACCUS**, *Blume*.

Small densely tufted epiphytes; stems densely leafy. *Leaves* distichous, narrow or scalpelliform, fleshy. *Flowers* minute, subsessile or very shortly racemose. *Sepals* and *petals* subequal, widely spreading. *Lip* small, adnate to the base of the column, base broadly saccate; side lobes small or 0, midlobe broad subentire. *Column* very short, truncate; anther obtuse; pollinia 4, distinct, ellipsoid or globose, sessile on the slender strap, gland small or medium sized. *Capsule* small.—Species 3 or 4, Malayan.

1. **M. javensis**, *Blume Bijdr.* 367; leaves equitant scalpelliform, flowers subsolitary. *Lindl. Gen. & Sp. Orchid.* 219. *Saccolabium Griffithii*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 145.

TENASSERIM; at Mergui, *Griffith* (*Kew Distrib.* 5244), *Helper* (*Kew Distrib.* 5384). *Parish. PERAK, Scortechini*.—DISTRIB. Malay Islands, Cambodia.

Stems 2-4 in., curved, $\frac{1}{2}$ in. diam. across the leaves. *Leaves* broadly ovate, obtuse, somewhat recurved, wrinkled when dry. *Flowers* $\frac{1}{8}$ in. diam., almost concealed by the leaves, cellular, white; bracts scarious, sheathing; sepals lanceolate; petals rather narrower; lip obtusely 3-lobed. *Capsule* $\frac{1}{2}$ in., sessile, ellipsoid.—Description of flower from a drawing by Griffith in *Herb. Lindl.* I have seen no authentic Javan specimen, but the Indian plant agrees well with Blume's description.

2. **M. virens**, *Hook. f.*; leaves linear-oblong trigonous, flowers in very short racemes. ? *Adenoncos virens*, *Blume Bijdr.* 381; *Lindl. Gen. & Sp. Orchid.* 235.

PERAK, *Scortechini*.—DISTRIB. Java, Borneo.

Stems 4-8 in., very stout, strongly incurved. *Leaves* 1-1 $\frac{1}{2}$ by $\frac{1}{2}$ in., very thick and fleshy, subacute. *Racemes* much shorter than the leaves, 3-6-fld.; bracts distichous, ovate, acute, very coriaceous and persistent; flowers coriaceous, about $\frac{1}{4}$ in.

diam.; sepals lanceolate, greenish; petals shorter and narrower; lip orbicular, apiculate, thick, greenish, base constricted into 2 obscure side lobes; pollinia 4, globose, gland rather large.—Described chiefly from a drawing and description by Scortechini. The Java and Bornean specimens are not in flower, but otherwise agrees with the Indian.

70. **DIPLOCENTRUM**, Lindl.

Epiphytes; stems short leafy, pseudobulbs 0. *Leaves* distichous, narrow, fleshy, subterete or complicate. *Peduncle* lateral, often branched; flowers small, in long subspiciform racemes. *Sepals* free, connivent, subequal or the lateral larger. *Petals* like the dorsal sepal. *Lip* sessile, jointed on the base of the column, spreading, entire, shortly 2-spurred, disk fleshy. *Column* very short, 2-auricled, truncate; anther 2-celled; pollinia 2, ovoid, sulcate or 2-partite, attached by a broad strap to a broad gland.—Species 2–3, Indian.

1. **D. recurvum**, Lindl. in *Bot. Reg. under t.* 1522; in *Wall. Cat.* 7331; *Gen. & Sp. Orchid.* 218; leaves 4–6 in. linear, panicle long-peduncled, branches spreading. *Wight Ic. t.* 1680, and *D. longifolium*, *Wight l. c. t.* 1681. *Cymbidium alofolium*, *Herb. Heyne*.

NILGHERY and TRAVANCORE, *Wight, &c.* CEYLON, in the Central Province.

Stem 2–6 in., densely leafy. *Leaves* linear, keeled, $\frac{1}{4}$ – $\frac{1}{2}$ in. broad, unequally obtusely 2-fid, recurved. *Panicle* with peduncle 5–8 in.; flowers $\frac{1}{2}$ in. diam., densely crowded towards the ends of the spreading branches; bracts minute, acute; sepals and petals deep pink or brownish tinged with pink; lip ovate-oblong, longer than the petals, entire, pinkish lilac or crimson spur much shorter than the blade of the lip, conical, incurved, obtuse; column very stout, auricles incurved, rostellum inconspicuous; anther truncate, cells basal, strap of pollinia narrowed from the broad base upwards. *Capsule* $\frac{1}{2}$ in., clavate.

2. **D. congestum**, *Wight Ic. t.* 1682; leaves 2–3 in. broadly oblong, spike very stout stoutly peduncled simple or shortly branched at the base.

TRAVANCORE; in the Iyamallay Hills, *Wight*.

Stem very short. *Leaves* $\frac{1}{2}$ – $\frac{2}{3}$ in. broad, deeply unequally 2-lobed, lobes obtuse. *Peduncle* with dense-fid. spike 4–6 in., rachis very stout; bracts minute, acute; flowers about $\frac{1}{2}$ in. diam.; colour, lip, spurs, column, anther and pollen much like *D. recurvum*.

70/2. **MYSTACIDIUM**, Lindl.

Epiphytes, pseudobulbs 0. *Leaves* few, distichous, linear, coriaceous. *Flowers* in axillary racemes, small. *Sepals* and *petals* subequal, free, spreading. *Lip* adnate to the base of the column, 3-lobed, spurred. *Column* very short, foot 0; anther hinged on to the top of the column; pollinia 2, globose, attached by separate straps to the gland.—Species about 20, tropical African and one Cingalese.

This genus should, I think, be reduced to *Angraecum*.

M. zeylanicum, *Trimen. Cat. Ceylon Pl.* 90. *Angraecum zeylanicum*, *Lindl. in Journ. Linn. Soc.* iii. 40; *Thwaites Enum.* 306.

CEYLON; near Galle, *Champion*.

Stem 3–4 in. *Leaves* 6–10 by $\frac{2}{3}$ – $\frac{3}{4}$ in., flat, narrowed to the acuminate apex, rigid, many-nerved. *Scapes* many, shorter than the leaves, very slender, rigid,

lax-fld. ; bracts minute, truncate, membranous ; pedicel with ovary $\frac{1}{8}$ in. ; sepals as long, lanceolate, 5-nerved ; petals narrower, 3-nerved ; lip nearly as long as the sepals, broadly ovate, finely acuminate, cymbiform, quite entire ; spur as long as the sepals, suberect, slightly clavate ; anther firmly attached by a point to the column. *Capsule* $\frac{2}{3}$ in., pedicelled, narrowly ellipsoid, ribs slender.—I have seen only indifferent specimens, from which the pollen was gone. Dr. Trimen informs me that it is found in several parts of Ceylon.

71. **ACRIOPSIS**, *Reinwdt.*

Epiphytes ; pseudobulbs clustered, 1-3-leaved. *Leaves* flat, linear, not plaited. *Scape* from the base of the bulb, slender, simple or branched ; racemelax-fld. ; bracts small acute. *Sepals* narrow, spathulately obovate, obtuse, dorsal arched, lateral connate placed under the lip. *Lip* adnate to the column above its middle, spreading, more or less 3-lobed, disk with 2 short erect lamellæ on the mesial line. *Column* incurved with 2 styliform horizontal or decurved processes on each side of the stigma, and a cucullate top concealing the anther ; rostellum suberect, acute ; anther membranous, 2-celled ; pollinia 2 or 4 in 2 pairs, narrowly pyriform attached by a strap to a small gland.—Species 5 or 6, Indian and Malayan.

In Herb. Calcutta is a fine drawing of what may be a new species from Moulmein, with a large quadrate clawed pubescent lip ; it may be intended for *A. javanica*.

1. **A. javanica**, *Reinwdt. in Flora Literat.* 1825, ii. 4 ; *in Syllog. Ratisb.* 1828 ; side lobes of lip broad rounded or subtriangular, midlobe very small clawed oblong concave, claw lamellate. *Blume Bijdr.* 377 ; *Lindl. Gen. & Sp. Orchid.* 140 ; *Walp. Ann.* vi. 492. *A. picta*, *Lindl. in Bot. Reg.* xxix., *Misc.* 105. *A. Griffithii*, *Reichb. f. in Bonpland.* ii. 92 ; *Walp. l. c.* *A. crispa*, *Griff. Notul.* iii. 333 ; *l. c.* *Plant. Asiat.* t. 318. ? *Spathoglottis* ? *trivalvis*, *Wall. Cat.* 3742 ; *Lindl. Gen. & Sp.* 120.

TENASSERIM, *Parish.* PERAK, *Scortechini*, and SINGAPORE, *Wallich, &c.* MALACCA, *Griffith, Maingay.*—DISTRIB. Java, Philippines.

Pseudobulbs $\frac{3}{4}$ –1 $\frac{1}{2}$ in., oblong or ovoid. *Leaves* 4–6 by $\frac{1}{2}$ – $\frac{1}{2}$ in., 2-dentate. *Scape* 6–18 in., simple or branched ; pedicels $\frac{1}{8}$ in., capillary ; sepals $\frac{1}{2}$ – $\frac{1}{2}$ in., white with purple tip and central broad or narrow band ; petals subsimilar ; lip white with a purple band and lamella. *Capsule* $\frac{1}{2}$ in., broadly ellipsoid.—It is difficult to reconcile Griffith's figure with the above description of the lip, but his habitat being that of Maingay's plant (Orchard trees, Malacca) seems to identify it.

2. **A. indica**, *Wight. Ic. t.* 1748 (*bad*) ; lip oblong subpanduriform tip rounded, lamellæ opposite the contraction. *Walp. Ann.* vi. 492.

TENASSERIM, *Griffith (in Herb. Lindl.)*, *Parish.* PENANG, *Maingay.*

A much smaller plant than *A. javanica*, with more densely tufted pseudobulbs, very narrow leaves, scapes shorter, more branched, and smaller flowers ; the sepals are $\frac{1}{8}$ in. long and the very different lip is inserted higher up, just under the column.—Wight who had lost the locality of the species he figured probably received it from Griffith. In a drawing by Parish the flowers are yellow green faintly blotched with purple. Wight's figure of the lip is quite unlike that of the specimen he depicted, which is now in Herb. Kew.

3. **A. Ridleyi**, *Hook. f.* ; lip with small oblong obtuse side lobes and a large orbicular or transversely oblong clawed smooth midlobe, lamellæ on the claw.

SINGAPORE; at Bukit Mandi, *Ridley*.

Pseudobulbs broadly ovoid, compressed. *Leaves* 3-4 in., linear, olive green. *Scape* simple (always?); *raceme* lax-flid.; flowers yellow, sparsely spotted with crimson; lip white, lamellæ crimson.

72. **PODOCHILUS**, *Blume*.

Stems tufted, erect or diffuse. *Leaves* many, uniform, distichous, flat or equitant and laterally compressed. *Peduncles* terminal or leaf-opposed; flowers minute, racemed or spicate; bracts persistent. *Lateral sepals* adnate with the prolonged foot of the column and together at the base, forming a mentum. *Petals* broad or narrow. *Lip* clawed, jointed to the foot of the column, mobile (always?) erect, with a basal appendage. *Column* very short; *rostellum* terminal, triangular, erect, bifid or bipartite; *anther* erect; *pollinia* 4, each pair half enclosed in a calyptriform stipe fixed by a gland to the top of the rostellum. *Capsule* very small, ellipsoid.—Species 12 or more, Indian and Malayan.

The flowers of all the species want careful examination on a living state. There are great differences in the columnar structure and pollinia that cannot be satisfactorily determined from dried specimens. These last are almost in all cases deficient in flowers, which are easily detached, and so minute as to escape the notice of collectors.

* *Leaves* equitant, laterally compressed, not articulate with the sheath. *Flowers* secund, on inclined or decurved lax-flid. racemes.

1. ***P. cultratus***, *Lindl. in Wall. Cat.* 7336; *Gen. & Sp. Orchid.* 234; *in Journ. Linn. Soc.* iii. 37; leaves ensiform subfalcate acute, lip cuneately oblong truncate 5-nerved, base saccate.

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, *J. D. H.* ASSAM, *Masters*. CACHAR, *Clarke*. TENASSERIM; the Attran River, *Parish*.

Stem 3-7 in., with the leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. broad. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., many nerved. *Peduncle* short, decurved; bracts ovate-lanceolate; flowers $\frac{1}{2}$ in. long; dorsal sepal broad, 5-nerved, lateral subacute; petals broadly obovate, acute, 3-nerved; mentum saccate; base of lip broad. *Capsule* $\frac{1}{4}$ in.—The lip resembles that of an *Appendicula*; I doubt its being articulate and mobile.

2. ***P. falcatus***, *Lindl. Gen. & Sp. Orchid.* 234: leaves ensiform obtuse, lip narrowly clawed oblanceolate 3-nerved, base with a short notched appendage. *Thwaites Enum.* 306.

CEYLON; Central Province, alt. 3-6000 ft., common.

Habit of *P. cultratus*, but stems longer, 6-12 in. *Rostellum* with an involute top, round which the capillary tails of the pollinia are curved, gland minute. In var. *angustata*, *Thw.* (C.P. 3889), the leaves are so closely appressed to one another, that not even the points are free, and the breadth of the stem across the leaves is only $\frac{1}{2}$ in.

3. ***P. malabaricus***, *Wight Ic. t.* 1748, fig. 2; leaves obtuse, spike many-flid. much longer than the leaves, mentum very short, lip linear-lanceolate obtuse contracted in the middle. *Walp. Ann.* vi. 893.

MALABAR, *Jerdon*; Wynnad jungles, *Drew*. TRAVANCORE, *Johnson*.

Stem 3-5 in., fleshy, $\frac{1}{2}$ in. across the leaves. *Leaves* $\frac{1}{2}$ in., straight. *Spike* 1-1 $\frac{1}{2}$ in., inclined or horizontal, few-flid.; bracts broadly ovate; flowers white tipped with pink; petals lanceolate; lip constricted in the middle.—I have seen no flowers. *Wight's* expression of lip contracted in the middle probably implied that the basal appendage is as large as the blade. Probably not different from *P. falcatus*.

4. **P. saxatilis**, *Lindl. Gen. & Sp. Orchid.* 235; leaves short recurved obtuse, lip oblanceolate obtuse 3-nerved. *Thwaites Enum.* 307.

Ceylon; Hantani and Ambagamowa districts, *Macrae, Thwaites*.

Stems 2-3 in., fleshy. Leaves $\frac{1}{4}$ - $\frac{1}{2}$ in. Peduncle terminal, $\frac{1}{2}$ in., drooping, few-fl.; bracts ovate, smaller than the yellow flowers; lip red in the middle; lateral sepals obtuse; petal obovate-oblong, obtuse; mentum short.—Description of flowers from a drawing by Lindley.

** Leaves flat, not equitant or laterally compressed.

† Leaves broad. Scapes lateral.

5. **P. unciiferus**, *Hook. f. Ic. Plant. ined.*; leaves $\frac{3}{4}$ -1 $\frac{1}{4}$ by $\frac{1}{2}$ - $\frac{3}{4}$ in. oblong, tip rounded, peduncles many very slender flowering at the tips, lip spatulate, basal appendage long slender uncinately recurved.

PERAK, *Scortechini*.—DISTRIB. Borneo, Philippines.

Stem erect, 18-24 in. Leaves $\frac{1}{2}$ -amplexicaul, shining, tip minutely mucronately toothed. Peduncle longer than the leaves, erecto-patent, flexuous, with scattered acicular sheaths; raceme terminal, capillary, 1-2-fl.; bracts orbicular; flowers $\frac{1}{2}$ in. long; dorsal sepal broad, 3-nerved, lateral acuminate; mentum cylindric; petals broad, acute, 3-nerved; claw of lip slender, jointed on the shortly free foot of the column; basal appendage grooved, truncate; column unarmed.

†† Leaves very small, linear acicular or lanceolate. Scape terminal or nearly so.

6. **P. microphyllus**, *Lindl. in Wall. Cat.* 7335 A; *Gen. & Sp. Orchid.* 234 in part; stems filiform diffuse, leaves $\frac{1}{8}$ - $\frac{1}{4}$ in. elliptic-lanceolate awned, spike as long as the leaves capillary flexuous 3-4-fl., bracts most minute, lip ovate oblong or lanceolate 3-nerved, basal appendage quadrate.

TENASSERIM; at Mergui, *Parish*. MALAY PENINSULA, common.—DISTRIB. Borneo, Cambodia.

Stems 6-8 in., flexuous, rarely branched. Leaves articulate on the sheaths, 7-9-nerved. Flowers $\frac{1}{10}$ in. long, white and purplish; mentum very variable, saccate, sometimes constricted at the top and 2-lobed at the base; dorsal sepal ovate, 1-nerved, lateral subacute; petals oblong, obtuse, 1-nerved; lip variable, obtuse or subacute; basal appendage erect, $\frac{1}{4}$ - $\frac{1}{2}$ the length of the blade, concave or margins convolute; rostellum narrow; anther lanceolate, acute. Capsule $\frac{1}{8}$ in., ellipsoid.—*Scortechini* mss. describes hyaline wings of the column, which I have not detected. Blume's *P. similis* of Borneo is very near this.

7. **P. khasianus**, *Hook. f. Ic. Plant. ined.*; stems suberect slender, leaves $\frac{1}{2}$ - $\frac{1}{2}$ in. linear acute, spike very short few-fl., bracts as long as the flowers ovate-lanceolate, lip narrowly oblong emarginate 3-nerved, base cordate. *P. microphyllus*, *Wall. Cat.* 7335 B; *Lindl. Gen. & Sp. Orchid.* 234 in part; in *Journ. Linn. Soc.* iii. 37.

SILHET, *Wallich*. KHASIA HILLS; at Amwee, *J. D. H. & T. T.*

Stems 4-6 in., simple, suberect. Leaves articulate on the sheath, rigid, often twisted. Peduncle shorter than the leaves; bracts rigid, strongly nerved; flowers $\frac{1}{5}$ in. long; lateral sepals acute, nerve strong; mentum globose; petals obovate-oblong, obtuse, 1-nerved; claw of lip inserted I think at the base of the column (not of its foot), I failed to discover the appendage; column very short, winged, divided (after flowering) to the base into two long erect arms concave posteriorly, much longer than the shortly calyptrate pollinia, the stipe of which is very short; anther very short, 2-cuspidate.—This differs in every respect of foliage and habit from *microphyllus*, but especially in the structure of the column.

8. **P. *lucescens***, *Blume Bijdr.* 295, t. 12; *Rumphia* iv. 43 (in *Obs.*); stem slender erect, leaves $\frac{1}{2}$ – $\frac{3}{4}$ in. elliptic- or linear-oblong obtuse or apiculate, spikes elongate many-fld., bracts spreading and incurved, lip obovate or oblong obtuse, base sagittate. *Lindl. Gen. & Sp. Orchid.* 234; *Reichb. f. in Bonpland.* v. (1857) 41; *Ot. Bot. Hamb.* 45; in *Trans. Linn. Soc.* xxx. 145.

TENASSERIM; at Mergui, *Helper, Parish.*—DISTRIB. Sumatra, Java, Borneo.

Stems 4–8 in., rigid. Leaves black when dry, opaque, many-nerved. Spike $\frac{1}{2}$ –1 in., flexuous, flowering to the base; bracts $\frac{1}{10}$ in., strongly nerved; flowers $\frac{1}{10}$ in. diam.

9. **P. *acicularis***, *Hook. f. Ic. Plant. ined.*; stems densely tufted filiform, leaves $\frac{1}{2}$ – $\frac{1}{4}$ in. acicular, spike very short 3–4-fld., lip broadly oblong or obovate 3-nerved, base cordate with an incurved horn on each side.

PENANG, *Maingay (Kew Distrib.* 1653/2). PERAK, *Scortechini, &c.*

Stems 6–8 in., flexuous, diffuse. Leaves suberect, finely acuminate. Flowers $\frac{1}{2}$ in. long, white; bracts very minute; sepals obtuse or acute; petals linear, obtuse, 1-nerved; mentum short, rounded, sometimes globose and 2-lobed; columnar arms ensiform, obliquely truncate, tips at first cohering with the bidentate tip of the rostellum, and carrying away the pollinia; anther ovate-cordate, at length 2-fld; each pair of pollinia half enclosed in a calyptriform caudicle which is attached by a slender stipe to a linear gland.—Very near a Bornean species, with a cuneate 5-nerved lip truncate at the base, and shorter columnar wings.

73. **APPENDICULA**, *Blume.*

Stems tufted, leafy, often compressed. Leaves numerous, distichous, uniform, vertical, jointed on their sheaths. Peduncles terminal and leaf-opposed; flowers minute, racemed spicate or capitate; bracts persistent. Sepals connivent, lateral connate at the base and adnate to the produced foot of the column, forming a mentum. Petals various. Lip erect, inserted on the foot of the column or with its sides adnate to it. Column very short, rostellum erect 2-fld.; anther dorsal, erect; pollinia 8, 4 often imperfect, clavate, attached in fours to the tip of the rostellum by a point or gland. Capsule very small.—Species 20 or more, Tropical Asiatic, Australian, and Polynesian.

* Lip adnate below by a broad saccate claw to the sides and face of the foot of the column.

† Limb of lip with a large callus on the disk.

1. **A. *bifaria***, *Lindl. in Hook. Kew Journ.* vii. (1855), 35; leaves 1– $1\frac{1}{2}$ by $\frac{1}{2}$ in. oblong obtusely 2-toothed, racemes chiefly terminal very short, mentum saccate rounded, lip ovate-oblong base calceolar, sides of column produced into ensiform processes as long as the rostellum. *Benth. Fl. Hongk.* 358; *Walp. Rep.* vi. 893. *A. reduplicata*, *Reichb. f. in Ot. Bot. Hamb.* 45.

CACHAR, *Keenan.* TENASSERIM, *Helper.* SINGAPORE, *Ridley.*—DISTRIB. China, Borneo?

Stem 10–24 in., simple. Leaves often apiculate between the obtuse apical teeth. Racemes terminal, rarely lateral or leaf-opposed, 6–8-fld.; bracts reflexed, oblong; flowers about $\frac{1}{2}$ in. long; sepals obtuse; petals obovate-oblong, 3-nerved; lip calceolar at the base, that is having a horse-shoe membrane within the border, slightly constricted beyond the middle, callus on its disk globose or oblong, entire;

arms of column obliquely truncate or 2-lobed. *Capsule* $\frac{1}{4}$ in. long, turgidly ellipsoid.—Lindley in describing the Chinese plant assumed it to be the *Dendrobium bifarium* of Wall. Cat. 2002, which consists of two very distinct Penang plants, a *Dendrobium* (*D. bifarium*, *Lindl.*, see v. V. p. 732) and an *Appendicula* in fruit only, very like indeed the Chinese plant, but differing in the numerous lateral racemes. Specimens from Perak in flower exactly accord in foliage with Wallich's Penang in having many racemes, but differ in having a more 3-lobed lip, a broader margin to the base of the lip, and a 2-lobed callus. Assuming that the Perak and Wallich's Penang plant are the same, they may be either a different species from *bifaria*, or a variety. For the present it is safer to assume the latter and to call it:—

VAR. ? *Wallichiana*; racemes numerous lateral, lip with a broad rounded base surrounding the calceolar membrane, callus of disk 2-lobed in front. *Dendrobium bifarium*, *Lindl. in Wall. Cat. 2002, in part.*—Penang, *Wallich*. Perak, *Scortechini*.

†† *Lip without a median callus on the disk.*

2. **A. callosa**, *Blume Bijdr.* 303; leaves $\frac{1}{2}$ –1 by $\frac{1}{8}$ in. oblong strongly 2-fld., sheaths 2-cuspidate, flowers in terminal bracteate heads, lip very shortly ovate with a large transverse basal appendage. *Lindl. Gen. & Sp. Orchid.* 230; *Griff. in Calc. Journ. Nat. Hist.* v. 362, t. 62; *Saunders Refug. Bot.* t. 45; *Reichb. f. Oria Bot. Hamb.* 45. *A. stipulata*, *Griff. Notul.* iii. 358; *Ic. Plant. Asiat.* t. 335, f. 2.

TENASSERIM, *Griffith, Parish*. PENANG, *Walker, &c.* PERAK, *Scortechini, &c.*—DISTRIB. Java, Borneo.

Stem 6–18 in., simple. *Leaves* close together, coriaceous, base truncate, tip not contracted. *Heads of flowers* sessile; bracts lanceolate, scarious, obtuse, many-nerved; flowers $\frac{1}{2}$ in. long, erect, cream-cold.; mentum saccate; petals linear, obtuse; claw of lip as long as the foot of the column and adnate to it throughout its length; limb broadly ovate, narrower than the appendage, which has divergent lobes and is tubercled in the sinus; column with short truncate wings.—The leaves are often curiously pitted.

3. **A. Lewisii**, *Griff. in Calc. Journ. Nat. Hist.* iv. 378, t. 19; *Notul.* iii. 360; *Ic. Plant. Asiat.* t. 337; leaves 1–3 by $\frac{1}{2}$ – $\frac{2}{3}$ in. linear- or oblong-lanceolate 2-dentate, racemes very short leaf-opposed, mentum subglobose, lip ovate many-nerved, base calceolar. *Walp. Ann.* vi. 893. *A. cyathifera*, *Reichb. f. mss.* *Metachilum cyathiferum*, *Lindl. in Wall. Cat.* 2022; *Gen. & Sp. Orchid.* 74. *Dendrobium vaginatum*, *Wall. mss.*

PENANG, *Maingay* (*Kew Distrib.* 1616). *Curtis*. PERAK, *Scortechini, Wray*. SINGAPORE, *Wallich*.

Stem 6–18 in., unbranched, flattened, $\frac{1}{2}$ in. broad. *Leaves* rather distant and membranous; sheaths 1 in. long. *Racemes* axillary and terminal, 1–1 $\frac{1}{2}$ in., many-fld.; bracts small, ovate-lanceolate, reflexed; flowers about $\frac{1}{2}$ in. long, yellow-green; sepals acute; petals elliptic, 1-nerved; claw of lip adnate throughout its length to the foot of the column; column without arms. *Capsule* $\frac{1}{2}$ in., subcylindric.

** Lip attached by a short free claw to the apex only of the foot of the column.

4. **A. cordata**, *Hook. f. Ic. Plant. ined.*; leaves 1 by $\frac{1}{2}$ in. oblong obtusely bidentate, spikes very short incurved few-fld., mentum obscure, foot of column very short, lip ovate-cordate 3-nerved with a semilunar ridge towards the base.

PERAK, *Scortechini*.

Stem (of the only specimen) 7 in., unbranched. *Leaves* rather membranous,

apiculate between the teeth, sheaths $\frac{1}{3}$ – $\frac{1}{2}$ in. Spikes $\frac{1}{4}$ in., 3–4-fld.; bracts sheathing the rachis, erect during flowering, then reflexed, strongly nerved; flowers about $\frac{1}{10}$ in. long, dotted; sepals ovate, obtuse, 1-nerved, base of lateral gibbous; petals large, obovate, 1-nerved; column unarmed; rostellum very large, ovate.—The curious incurved spikes and spreading nearly symmetrical lateral sepals, and short foot of the column, are all unlike other species of the genus. The solitary specimen may not represent the plant fairly.

5. **A. Koenigii**, Hook. f. *Ic. Plant. ined.*; leaves $\frac{3}{4}$ by $\frac{1}{6}$ in. oblong-lanceolate obtuse and minutely obtusely 2-fld., racemes minute leaf-opposed 2–3 fld., flowers most minute, mentum globose, lip ovate or oblong 5-nerved base calceolar. Epidendrum hexandrum, *Kœnig in Retz Obs.* vi. 45.

INDIA, *Herb. Rottler* (1779).

Stem densely tufted, 4–6 in., very slender. *Leaves* close set, membranous, base rounded; sheaths $\frac{1}{4}$ in. *Racemes* $\frac{1}{4}$ – $\frac{1}{2}$ in., decurved; rachis slender, flexuous; bracts lanceolate, reflexed after flowering; flowers $\frac{1}{10}$ in. long; sepals ovate, acute, and elliptic petals 1-nerved; lip saccate at the base; column unarmed.—Of this very distinct species I have seen only one specimen in Rottler's Herbarium, now at Kew. In its slender tufted habit (upwards of twenty stems on a tuft) and minute racemes and flowers it is like no other; no locality is attached, to the specimen or to Kœnig's description, and as Rottler received (through Heyne) plants of both Indian Peninsulas, none can be assumed.

6. **A. torta**, *Blume Bijdr.* 303; leaves $\frac{1}{2}$ by $\frac{1}{4}$ in. oblong tip rounded emarginate, bracts of terminal sessile spike as long as the leaves densely equitantly imbricate acute falcately recurved complicate and enclosing the solitary flowers, mentum cylindric, lip narrowly panduriform twisted, margins incurved waved, narrow base calceolar suddenly dilated into a broad transversely oblong retuse serrulate concave terminal lobe. *Lindl. Gen. & Sp. Orchid.* 230; *Reichb. f. Xen. Orchid.* ii. 117, t. 138.

PERAK, *Scortechini*.—DISTRIB. Java, Borneo.

Stem 6–18 in., simple or branched, compressed, $\frac{1}{6}$ in. broad. *Leaves* close-set, shining, thin, base rounded; sheaths $\frac{1}{4}$ – $\frac{1}{2}$ in. *Bracts* of spike membranous, forming a terminal flattened coloured crest as broad as the rest of the branch, and coterminous with it; flowers $\frac{1}{6}$ in. long, quite sessile; lateral sepals erect, aristately acuminate, midrib very stout; petals oblong-lanceolate, strongly 3-nerved; column unarmed, rostellum slender, deeply 2-fld.—Blume's description is very meagre, but I cannot doubt belongs to this plant, of which there is an unnamed specimen in Herb. Kew, collected in Borneo by *Lobb*.

7. **A. xytriophora**, *Reichb. f. in Seem. Fl. Viti* 299; leaves $\frac{3}{4}$ – $1\frac{1}{4}$ by $\frac{1}{3}$ – $\frac{1}{2}$ in. oblong- or elliptic-lanceolate obtuse apiculate, raceme elongate terminal slender laxly many-fld., mentum broad incurved, lip obovate subtruncate 5-nerved base narrowed calceolar.

PERAK, *Scortechini*.—DISTRIB. Philippine Islands.

Stem 12–18 in., simple, compressed. *Leaves* rather close-set, membranous; base $\frac{1}{2}$ -amplexicaul. *Racemes* 2–5 in., suberect; bracts oblong-lanceolate, membranous, obtuse, 5-nerved; flowers $\frac{1}{4}$ in. long; sepals greenish tips purple; petals elliptic, obtuse, 3-nerved; lip concave, yellow and purple; column unarmed; anther short. *Capsule* $\frac{1}{2}$ in., slender.

8. **A. lancifolia**, *Hook. f. Ic. Plant. ined.*; tall, leaves 3–4 by $\frac{3}{4}$ – $\frac{3}{4}$ in. lanceolate obtuse 2-dentate, racemes elongate simple or branched stout many- and dense-fld., mentum cylindric, lip obovate-oblong 3-lobed, side lobes small rounded, midlobe broadly ovate acute, base narrowly calceolar.

PERAK; on Gunong Batu Pateh, alt. 3-4000 ft., on rocks, *King's Collector*.

Stem 12-24 in., stout, terete. *Leaves* rather thin, base semi-amplexicaul; sheaths $\frac{1}{2}$ in. *Racemes* 3-6 in., terminal and leaf-opposed, sessile or peduncled, erect; rachis stout; bracts $\frac{1}{5}$ in., oblong, obtuse, coriaceous, recurved, strongly nerved; flowers $\frac{1}{2}$ in. long, bright yellow with a red centre; lateral sepals recurved, acute; petals obovate-oblong, 3-nerved; column unarmed; anther as broad as long. *Capsule* $\frac{1}{2}$ in., fusiform, strongly ribbed, claret-coloured.—Very like *A. cristata*, Blume, of Java, but the limb of the lip is not "rounded emarginate and crested on either side."

9. **A. Maingayi**, *Hook. f. Ic. Plant. ined.*; leaves 2-3 by $\frac{1}{6}$ - $\frac{1}{2}$ in. linear-lanceolate tip dilated apiculate, racemes terminal many and dense-fl., bracts spreading and incurved, mentum sub-cylindric or shorter, lip elliptic-or ovate-oblong 5-nerved, base calceolar, tip rounded.

PERAK, *Scortechini*. PENANG, *Maingay*, (*Kew Distrib.* 1617).

Stems 6-16 in., rather slender or stout, unbranched. *Leaves* suberect, narrowed at the base, tip minutely 2-fid or rounded. *Racemes* 1-2 in., simple or branched at the base, suberect, flexuous; bracts $\frac{1}{2}$ - $\frac{1}{5}$ in., deflexed, then incurved, coriaceous, subacute, 5-ribbed; flowers $\frac{1}{10}$ in. long; lateral sepals broad, obtuse, nerve slender; petals linear- or obovate-oblong, 3-nerved; lip concave; column unarmed, rostellum short, triangular; anther ovate, acuminate. *Capsule* $\frac{1}{3}$ in., fusiform.—The Perak specimens are more slender than the Penang, the mentum is longer and more cylindric, the petals narrower, 1-nerved. The species should be compared with *A. graminifolia*, Teysm. and Binnend.

IMPERFECTLY KNOWN SPECIES.

10. **A. echinocarpa**, *Hook. f. Ic. Plant. ined.*; leaves $\frac{1}{3}$ - $\frac{1}{2}$ in. close set orbicular-oblong coriaceous margin thickened upper base reflexed, spike short terminal few-fl., bracts orbicular concave, capsule ellipsoid, valves densely clothed with soft bristles.

PERAK; lower camp in Gunong Batu Pateh, alt. 3400 ft., *Wray*.

Stem 4-6 in., slender but rigid; internode $\frac{1}{8}$ in. *Leaves* semi-amplexicaul, pale, opaque, rather wavy; tip rounded, obscurely 2-fid. with incumbent teeth; upper base usually reflexed, like an ear. *Capsule* $\frac{1}{4}$ in. long, turgid.—A very remarkable species.

A. LONGIFOLIA, *Blume Bijdr.* 304; *Lindl. Gen. & Sp. Orchid.* 230? *Thwaites Enum.* 806. CEYLON, Ambagamowa district, rare, *Thwaites* (C.P. 3208). Of the plant thus doubtfully referred by Thwaites to the Javan *A. longifolia*, this author says that the flowers are not in a sufficiently perfect state for analysis. Blume thus describes *longifolia*, "Stems simple compressed, leaves linear-lanceolate retuse, flowers densely capitate." Thwaites adds, "leaves 3-5 by $\frac{1}{2}$ in., retuse, mucronate." Can the Ceylon plant be an *Agrostophyllum* or *Phreatia*?

A. TERES, *Griff. Notul.* iii. 359; *Ic. Plant. Asiat.* t. 332, is *Ceratostylis teres*, R. f. see v. v. p. 825.

A. SP., *Griff. Notul.* 359; *Ic. Plant. Asiat.* 335, fig. 1, analysis only, from Afghanistan, cannot (as Lindley in *Hook. Kew Journ.* vii. 36 observes) be an *Appendicula*.

74. **THELASIS**, *Blume*.

Epiphytes, with either small 1-2-leaved pseudobulbs, or with short compressed stems clothed with equitant leaf-sheaths. *Leaves* oblong or linear-oblong flat, or loriform and jointed on the sheath. *Scape* from the base of the pseudobulb, or lateral on the stem, with 1-3 small sheaths; flowers very minute, spicate, cellular. *Sepals* connivent, dorsal flat, lateral concave keeled or winged. *Petals* narrow, membranous. *Lip* sessile at the

base of the column, erect, ovate or oblong. *Column* very short, sessile, foot 0; rostellum terminal, large, erect; anther elongate, dorsal, erect, base 2-4 celled; pollinia very minute, globose, attached by long threads to the tip of the rostellum, gland small. *Capsule* very small, turgidly ovoid. —Species about 10, tropical Asiatic and Pacific.

I am not well satisfied as to the character of lateral sepals in this genus, as to their being winged or not; the sepals are very soft, and their exact structure not very clear in specimens that have been dried, and again moistened.

Sect. I. EUTHELASIS. *Pseudobulbs* 1-2-leaved.

* *Lateral sepals distinctly strongly keeled or winged.*

1. **T. pygmæa**, Lindl. in *Journ. Linn. Soc.* iii. 63; scape 1-2 in. longer than the solitary linear leaf, spike very short lax-fld., lip ovate acute contracted towards the tip. *Par. g. Reichb. f. in Trans. Linn. Soc.* xxx. 145; *Walp. Ann.* vi. 923; *Euproboscis pygmæa Griff. in Calc. Journ. Nat. Hist.* v. 371; t. 72; *Wight Ic.* t. 1732.

NEPAL (*Cult. in Hort. Bot. Calc. fid. Griffith.*) MALABAR, *Jerdan.* TENASSERIM, at Moulemin, *Parish.*

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. *Scape* very slender, curved; spikes $\frac{1}{2}$ – $\frac{1}{2}$ in. long; bracts ovate, acuminate; flowers $\frac{1}{10}$ in. long; dorsal sepal ovate-lanceolate acute, lateral linear-oblong; lip 3-nerved, with rounded sides from the middle to the base; rostellum 2-fid.—The Malabar plant seems the same as the Tenasserim, but is in a Peloria state, triandrous, with the petals and lip similar, ovate-lanceolate, 1-nerved; ovary with imperfect ovules.

Var. *multiflora*; leaf larger 3-4 by $\frac{1}{2}$ in., scape stouter 4-5 in., spike $1\frac{1}{2}$ –2 in. —Sikkim Himalaya, alt. 1000 ft., *Treutler.*

2. **T. ? capitata**, *Blume Bijdr.* 386; scape 4-6 in. stout longer than the solitary linear leaf, spike cylindric dense-fld., rachis pitted, lip oblong-ovate obtuse.

PERAK, *Scortechini.*—DISTRIB. Sumatra, Java.

Pseudobulbs small, oblong, on a stout creeping rhizome. *Leaf* 3-4 in., obtuse or subacute. *Spike* 1 in.; bracts very close set, ovate, acute, recurved; flowers $\frac{1}{10}$ in. long; dorsal sepal ovate-lanceolate, lateral oblong concave thickly keeled or shortly winged; petals lanceolate, acuminate; rostellum elongate, subulate, entire.—Differs from the Sumatran *capitata* in the long spike, acuminate petals and entire rostellum. It more resembles the raceme of *P. triptera*, R.f. of Manilla, which has an ovate lip narrowed to the apex.

3. **T. elongata**, *Blume Orchid. Archip. Ind.* 23, t. 7, f. 2, and t. 5, fig. C; scape 4-6 in. longer or shorter than the solitary linear leaf, spike cylindric dense-fld., lip ovate acute or acuminate.

SINGAPORE; at Johore, &c., *Ridley.* LANGKAWI, *Curtis.*

Pseudobulb very various in form. *Leaves* and spike as in *T. capitata*, from which it differs in the form of the tip. *Blume's* figure is a very bad one, and does not show the strong keels on the lateral sepals and angles of the ovary.—The species of this section are very difficult of discrimination in a dried state, and possibly *capitata*, *elongata*, *triptera* and others are all forms of one.

** *Lateral sepals not strongly keeled or winged.*

4. **T. bifolia**, *Hook. f. Ic. Plant. ined.*; scape 8 in. much longer than the two opposite elliptic-lanceolate acuminate leaves, spike very lax-fld., lip broadly elliptic obtuse.

KHASIA MTS., Lobb.

Pseudobulb $\frac{2}{3}$ in. diam. *Leaves* $3\frac{1}{2}$ by $1\frac{1}{2}$ in., spreading, base contracted. *Spike* 2 in.; bracts broadly ovate, obtuse; flowers $\frac{1}{2}$ in. long; sepals broad, obtuse; petals obovate-oblong, 1-nerved; lip obscurely 5-nerved, broadest in the middle; rostellum very long, acuminate, entire.

5. **T. khasiana**, Hook. f. *Ic. Plant. ined.*; scape with spike 3–5 in. about equalling the solitary petioled linear leaf, spike elongate lax-flid., lip elliptic-ovate subacute. *T. pygmæa*, Lindl. in *Journ. Linn. Soc.* iii. 62 (in part).

KHASIA MTS., alt. 3–4000 ft., Lobb, J. D. H. & T. T.

Pseudobulbs $\frac{3}{4}$ -in., depressed-globose. *Leaves* 2–4 by $\frac{1}{2}$ – $\frac{2}{3}$ in. *Scape* and *spike* rather stout; bracts ovate-lanceolate; sepals ovate-lanceolate, obtuse; petals lanceolate, obtuse; lip 3-nerved, broadest rather nearer the base than tip; rostellum large, acute. —Very like *T. pygmæa*, but a much larger plant, without keel or wing on the sepals.

6. **T. longifolia**, Hook. f. *Ic. Plant. ined.*; scape stout with the spike 6–9 in. about equalling the solitary leaf, spike elongate lax-flid., lip elliptic-ovate acute.

KHASIA MTS. J. D. H. & T. T.

Differs from *T. khasiana* in being very much larger, and in the acute lip. *Pseudobulb* $\frac{3}{4}$ – $1\frac{1}{4}$ in. diam., depressed-globose. *Leaf* sometimes falcate, $\frac{2}{3}$ – $1\frac{1}{4}$ in. broad; *flowers* $\frac{1}{2}$ in. long.

Sect. II. OXYANTHERA, Brongn. (Gen.). *Pseudobulb* 0; stem short, clothed with the equitant sheaths of the linear leaves which are jointed at the sheath. (Oxyanthera is a very natural group).

7. **T. elata**, Hook. f. *Ic. Plant. ined.*; leaves 10–14 by 1 – $1\frac{1}{4}$ in. tip rounded, scape equalling or exceeding the leaves, raceme long slender lax-flid.

PERAK, on decayed wood, King's Collector.

Rootstock as thick as the little finger. *Leaves* few, sheaths 2 – $2\frac{1}{2}$ by $\frac{1}{2}$ in., complicate, coriaceous. *Scape* very slender, flexuous; sheaths 3–4, $\frac{1}{2}$ in. long, membranous, lanceolate; bracts ovate, acuminate, spreading and reflexed; flowers $\frac{1}{4}$ in., narrow, shortly pedicelled; sepals linear-oblong, acute, 1-nerved, venation distinct; petals lanceolate, acute; lip erect, claw short broad, limb linear subacute, margins waved, base broadly 2-auricled, auricles revolute; rostellum 2-partite, segments obtuse; pollinia 8, shortly obovoid. —Near *T. carinata*, Bl. (of which I have seen no flowers), but the leaves are very much longer, the scape very slender, raceme long, and bracts acuminate.

8. **T. decurva**, Hook. f. *Ic. Plant. ined.*; leaves 4–6 in., tip narrow or rounded and obtusely notched or subacute, scape very slender, raceme very short decurved, bracts reflexed, lip dagger-shaped from a concave cuneate base terete and fleshy beyond the middle with the crisped margins inflexed and close to the mesial line.

SINGAPORE; at Krangi, Ridley. PENANG, or Government Hill, Maingay.

Leaves $\frac{1}{2}$ – $\frac{2}{3}$ in. broad. *Scape* shorter than the leaves, filiform, flexuous, sheaths 1–2 lanceolate; raceme $\frac{1}{2}$ in.; pedicels $\frac{1}{6}$ in., longer than the oblong bracts; flowers $\frac{1}{2}$ in. long, pale fawn colour; sepals ovate-lanceolate acute and narrowly oblong obtuse petals 1-nerved. —This much resembles the figure of *O. micrantha* Brong., which is figured as having a stout broadly ovate obtuse lip narrowed into a broad short claw, base concave. The leaves of some specimens are narrow at the tip, others have 2 rounded lobes.

DOUBTFUL SPECIES.

T. carinata, Reichb. f. in *Trans. Linn. Soc.* xxx. 137; ? of *Blume Bijdr.* 385 & *Lindl. Gen. & Sp. Orchid.* 253. In the absence of flowers it is impossible to say what species this may be; it differs greatly from the figure of Blume's *T. carinata* (from Java) in its small size, slender scape, short decurved raceme, and bracts, in all which, as in foliage, it closely resembles *T. decurva*, and is nearer to the Moluccan *O. micrantha*, Brong. (in *Duperrey Voy. Bot.* 198, t. 37 B.) than to *T. carinata*.

Tribe III. **NEOTTIÆ.** (See vol. v., p. 668.)75. **GALEOLA**, Lour.

Leafless, rarely leafy, yellow or brown, climbing or erect herbs; stem or branches terminating in loosely paniced often drooping racemes or panicles; flowers rather large. *Sepals* subequal, concave, connivent or spreading. *Petals* as long, narrower or broader. *Lip* sessile at the base of and loosely embracing the column by its base, short, broad, concave; lateral lobes short or 0; midlobe broad. *Column* short or long, incurved, top dilated membranous; anther 2-celled; pollinia hippocrepiform, powdery or subwaxy. *Capsule* usually 2-4 valved, without septa; seeds winged or not.—Species 8 or 9, Indian, Malayan and Australian.

* Stem simple, erect.

1. **G. Lindleyana**, Reichb. f. *Xen. Orchid.* ii. 78; tall, very robust, sepals broadly ovate-oblong strongly ribbed dorsally, anther recurved clothed with long papillæ. *Cyrtosia Lindleyana*, Hook. f. & Thoms. in *Ill. Himal. Plant.* t. 22. *Erythorchis Lindleyana*, Reichb. f. in *Bonpland*, v. 37.

SIKKIM HIMALAYA, alt. 4-7000 ft., J. D. H., &c. ? KHASIA HILLS, alt. 4000 ft., J. D. H. & T. T. NAGA HILLS, *Prair.*

Rootstock elongate, very stout, 1-1½ in. diam., tortuous, dark pink; roots very stout simple fibres. *Stem* 2-3 ft., glabrous, with short ½-amplexicaul obtuse sheaths below, brown purple. *Panicle* loosely branched, branches horizontal, and yellow flowers furfuraceously tomentose; bracts small; perianth subglobose, 1 in. diam.; petals broadly ovate, tip obtuse, crenate; lip nearly hemispheric, margins and short expanded rounded limb erosely fimbriate, glabrous without, almost bearded within. *Capsule* 5-6 by ¾ in., fusiform, subacute, obtusely trigonous, red-brown, tardily dehiscing.

2. **G. Falconeri**, Hook. f.; tall, very robust, sepals broadly ovate dorsally nearly smooth, anther glabrous. *Pogochilus*, *Falc. in Hook. Journ. Bot.* iv. (1842), 73.

SUBTROPICAL HIMALAYA; from Garwhal, *Falconer*, to Sikkim, *Thomson*, &c.

Habit and stature of *G. Lindleyana*, but differing in the larger flowers and the characters given above. The rootstock is sometimes as thick as the wrist. Possibly only a form of *Lindleyana*, but recognized as distinct by all collectors in Sikkim. I did not find it myself.

3. **G. javanica**, Benth. in *Gen. Plant.* iii. 590; dwarf, stem very stout glabrous below furfuraceous above, sepals oblong membranous, anther subhemispheric. *Cyrtosia javanica*, *Blume Bijdr.* 396, t. 6; *Rumph.* i. 199, t. 69; *Lindl. Gen. & Sp. Orchid.* 438; *Reichb. f. Xen. Orchid.* ii. 76, t. 120.

ASSAM, *Masters (Ic. in Hort. Calcutt.)*.—DISTRIB. Java.

Stem a span high from branching tubers. *Flowers* $\frac{3}{4}$ in. diam.—The identification of the Assam drawing with Blume's figure and description is necessarily imperfect; but as far as it goes there is no reason to suppose that these represent two species.

4. ? **G. pusilla**, *Hook. f.*; stem flexuous from a woody nodose rootstock, with several short tubular basal sheaths and two open ones higher up 3-fld., bracts lanceolate equalling the ovary, sepals broadly ovate-oblong subacute, petals as large obtuse, lip orbicular concave retuse with a very small obtuse apical lobe in the sinus, disk papillose with 3 central low ridges.

PEGU; on the Pookee ridges, *Kurz (in Herb. Calcutt.)*.

Whole plant 5 in. high, white; rootstock tortuous, woody, as thick as a sparrow's quill, with woody roots as thick as the stock. *Stem* slender, basal sheaths $\frac{1}{2}$ – $\frac{3}{4}$ in., truncate, funnel-shaped; bracts $\frac{1}{2}$ in. long, membranous; flowers about $\frac{3}{4}$ in. diam.; sepals and petals 5–7-nerved; lip with a brown lunate band, apical lobe recurved; column long, semiterete; anther erect, oblong, 2-celled; pollinia hypocrepiiform?; stigma below the clinandrium in front.—I have seen but one specimen of this curious little plant, as to the genus of which I am doubtful.

** *Stem branched, scandent.*

5. **G. altissima**, *Reichb. f. Xen. Orchid. ii. 77*; quite glabrous, stem very slender, spikes very many-flowered, sepals and petals linear-oblong, lip with a broad fleshy ridge and a 2-lobed woolly mass on the disk. *Cyrtosia altissima*, *Blume Bijdr. 396*; *Rumph. i. t. 70*; *Lindl. Gen. & Sp. Orchid. 26*. *Erythorchis altissima*, *Blume Rumph. i. 200*; *Lindl. l. c. 438, in part*. *Hæmatorchis altissima*, *Blume l. c. iv. t. 200 B*.

PENANG, *Curtis*. PERAK, *Scortechini*.—DISTRIB. Malay Islands.

Root of fleshy thick fibres. *Stem* 50–120 ft., excessively branched, flexuous, fleshy and hard, reddish, branches slender, internodes swollen; spikes 6–10 in., pendulous; flowers $\frac{1}{2}$ in. long; sepals obtuse, 5-nerved, and narrower 3-nerved petals with rounded tips; lip cymbiform, tip rounded erosely waved, disk with a median broad fleshy puberulous disk reaching to the middle, beyond which is a 2-lobed woolly mass; sides of lip thin, transversely barred with purple, with slender nerves and impressed hairs; column rather long; anther mitriform. *Capsule* linear, 3–10 in. long, acuminate, valves membranous.

6. **G. Hydra**, *Reichb. f. Xen. Orchid. ii. 77*; furfuraceously puberulous, lateral sepals obliquely ovate, dorsal oblong, petals elliptic, lip cymbiform erose papillose within and with a compressed erect grooved callus towards the base. *G. altissima?*, *Reichb. f. in Trans. Linn. Soc. xxx. 135*. *Vanilla pterosperma*, *Lindl. in Wall. Cat. 7402*. ? *V. rubiginosa*, *Griff. Notul. iii. 247*. *Erythorchis altissima*, *Lindl. Gen. & Sp. Orchid. 438, in part (not of Blume)*.

SIKKIM HIMALAYA; in the Rishap Valley, *King*. TENASSERIM; at Moulmein, *Parish*. PENANG, *Curtis*. PERAK, SINGAPORE, and MALACCA, *Wallich, &c.*—DISTRIB. Java, Sumatra.

A lofty climber; branches much stouter than in *G. altissima*; inflorescence loosely branched; flowers much larger, $\frac{3}{4}$ in. diam., sepals and petals broader, and lip without the flat ridge and tuft of wool.—Blume's specimens of *G. altissima* in Herb. Kew consists of fruit of that plant and flowering branches of this.

7. **G. Cathcartii**, *Hook. f.*; branches very robust, sepals and petals linear-oblong revolute, lip cymbiform acute, margins everted undulate and ciliate, disk naked.

SIKKIM HIMALAYA (*IC. Cathcart*).

Mr. Cathcart's drawing represents a portion of a stem as thick as the little finger, bearing a branched panicle a foot long, which, as well as the flowers, is dull yellow and furfureous; the flowers are 1-1½ in. diam., the lip not nearly as concave as in *G. Hydra*, yellow with red veins.—A remarkable plant, very unlike its congeners, but the drawing of the habit, column, anther, and pollen leave no doubt as to its genus.

76. **VANILLA**, Swartz.

Climbing, rooting, branched, leafy or leafless shrubs; stems terete or angled. *Leaves* subsessile, coriaceous or fleshy. *Peduncles* short, axillary; flowers large. *Sepals* and petals subequal, spreading. *Lip* with the claw adnate to the column, which is embraced by its broad concave limb. *Column* elongate; anther incumbent, cells separate; pollen granular. *Capsule* long, fleshy, 1-celled, loculicidally 3-valved, without septa.—Species about 20, tropical.

The Indian species of this genus are most scantily represented in Herbaria, and imperfectly by drawings or descriptions.

* *Stem leafless.*

1. **V. Walkeriæ**, *Wight Ic. t.* 932; stem very stout, flowers 2 in. long, sepals oblanceolate, petals broader spathulately obovate acute margins undulate, epichile of lip ovate acute margins undulate, disk with two ridges below the middle. *Thwaites Enum.* 311.

TRAVANCORE and TREVANDEUM, *Wight*. CEYLON, *Walker*.

Stem as thick as the thumb. *Racemes* 5-6 in., many-fl. ; flowers white ; bracts ovate.

2. **V. Wightiana**, *Lindl. in Wight Cat.* 2091; flowers 1 in. long, sepals linear-oblong, petals lanceolate, epichile of lip ovate, its disk fringed with long hairs. *V. aphylla*, *Lindl. Gen. & Sp. Orchid.* 436, *in part* (not of *Blume*).

The DECCAN PENINSULA, *Wight*.

The specimens are very imperfect, and the description of the flowers is taken from a rude sketch by Lindley. The flowers are not half the size of those of *V. Walkeriæ*.

3. **V. Parishii**, *Reichb. f. Otia Bot. Hamb.* 39; flowers 1-1½ in. long, sepals linear-oblong, tips dilated cuspidate, petals broadly oblanceolate acuminate, lip trumpet-shaped, epichile small ovate or rounded crisped with a thick belt of long hairs down the centre and a dense brush at the base, side lobes with long scattered hairs within.

TENASSERIM, *Parish*.

This may prove the same as *V. Wightiana*, *Lindl.* It is very near the Javanese *V. aphylla*, *Blume*.

** *Stem leafy.*

4. **V. Moonii**, *Thwaites Enum.* 312; leaves elliptic- or linear-oblong often falcate obtusely acuminate, lip with a broad crenulate undulate apex, a thick pencil of excessively fine hairs on the disk, and beyond it towards the apex some loose flexuous bristles.

Leaves 5-7 in., many-nerved, subsessile. *Spikes* 1-3 in., very stout, many-fl.; bracts ovate, ½ in., obtuse; sepals about 1 in. long; pencil of hairs on the disk terminating below in a stout stipe, hairs of equal length forming a truncate brush.

5. **V. albida**, *Blume Bijdr.* 422, t. 34; *Rumph.* i. 197, t. 67; leaves ovate lanceolate elliptic or oblong cuspidate or acuminate, lip oblong subpanduriform margins undulate and serrate, disk of hypochile with a large globose woolly ball, epichile retuse or 2-lobed strongly echinately caruncled. *Lindl. Gen. & Sp. Orchid.* 435. *V. Griffithii*, *Reichb. f. in Bonpland.* ii. (1854), 88. *Vanilla*, *sp. Griff.* *Notul.* iii. 207; *Ic. Plant. Asiat.* t. 281. *Vanilla*, *Wall. Cat.* 7401.

PENANG, *Wallich, Curtis.* PERAK, SINGAPORE, and MALACCA, *Griffith, &c.*—DISTRIB. Java.

Climbing to 50 ft. *Leaves* very variable, 3–7 by $1\frac{1}{2}$ –4 in., sessile or shortly petioled. *Spikes* 2–3 in., very many- and dense-fl.; bracts $\frac{1}{2}$ in., oblong; flowers waxy white; sepals $\frac{3}{4}$ in. long, concave, obovate, obtuse, very thick; petals as long, but thinner and many-nerved, with a thick dorsal grooved keel that abruptly ends below the apex; column rather long; anther appressed to the woolly ball of the lip.

DOUBTFUL SPECIES.

V. APHYLLA, *Blume?*, ex *Wight Ic.* t. 931; leafless, stem angular, peduncle elongate as thick as a swan's quill, racemes 3–4 in. very stout many-fl., bracts ovate acute, pedicel with ovary 2 in, sepals as long oblanceolate-oblong acute, petals very much broader obovate acute margins crenulate, hypochile of lip with rounded angles and two rows of bristles on the disk, epichile ovate acuminate crisped naked. —Travancore, near Trevandrum, *Wight*.—From *Wight's* remarks under it I suspect this to be a most rude representation of *Lindley's V. Wightiana*; if so, the flowers are greatly exaggerated, and the hairs of the epichile are transferred to the hypochile.

77. CORYMBIS, *Thouars.*

Tall, terrestrial, rigid, leafy herbs, roots fibrous. *Leaves* broad, plaited. *Flowers* in short axillary stiff sessile spreading panicles. *Sepals and petals* very narrow, linear, at first cohering in a tube with spreading tips, persistent. *Lip* erect from the base of the column, linear, channelled, tip dilated and recurved. *Column* usually as long as the petals, erect, terete, tip clavate and 2-lobed or auricled; rostellum at length 2-fid.; stigma erect, transverse, saccate; anther narrow, erect, acuminate, 2-celled; pollinia clavate, attached by a subulate caudicle to a peltate gland. *Capsule* linear or fusiform.—Species 6–7, tropical.

1. **C. veratrifolia**, *Blume Orchid. Archip. Ind.* 125, t. 42 E, 43 f. 1 (Corymborchis); leaves elliptic-lanceolate caudate-acuminate, flowers 1–1 $\frac{1}{2}$ in. long, sepals and petals subsimilar narrowly oblanceolate, blade of lip lanceolate acuminate, ribs of capsule smooth. *C. disticha*, *Lindl. Fol. Orchid.* 1 (in part). *Macrostylis disticha*, *Breda Gen. & Sp. Orchid. Javan.* t. 2. *Hysteria veratrifolia*, *Reinw. in Bot. Zeit.* 1825, ii. 5; *Lindl. Gen. & Sp. Orchid.* 439. *Rhyncanthera paniculata*, *Blume Bijdr.* t. 78. *Corymborchis assamica*, *Blume Orchid. Archip. Ind.* 126, t. 43, f. 2 A.

SIKKIM HIMALAYA; in tropical ravines, *J. D. H. ASSAM, Griffith, Jenkins.* CHITTAGONG, *J. D. H. & T. T. ANDAMAN ISLANDS, King's Collector.* MALAY PENINSULA, *Maingay, &c.* MALABAR; the Nilghiri Hills and Courtallam, *Wight.* CEYLON; Matturatte, *Moon.*—DISTRIB. Java, Sumatra, Borneo.

Stem 4 ft. high, as thick as a swan's quill. *Leaves* 12–18 in., sessile on the sheaths, nerves very many* and strong. *Panicles* 4–6 in. long and broad; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., ovate-lanceolate; flowers greenish white; column long. *Capsule*, in *Ic.* *Blume*, 2 in. long.—I am not sure that the plants from the above localities are all of one species. The Sikkim and Assam ones are in a young state only; the Perak and

Nilghiri in flower only. The ripe fruit of the Andaman species is 1 in. long. The Ceylon one has much shorter points to the leaves, but the fruit is as large as in Blume's figure. Blume distinguishes *C. assamica* by the column being as long as the capsule; which they are in typical *veratrifolia*.

2. ***C. longiflora***, Hook. f.; leaves elliptic-lanceolate acuminate, flowers $1\frac{1}{2}$ –2 in. long, sepals very slender with very narrow blades, petals oblanceolate, blade of lip orbicular cuspidate.

PERAK, Scortechini, King's Collector. MALACCA, Maingay (Kew Distrib. 1661).

Stem 8–10 ft. high, as thick as the little finger; leaves much broader than in *C. veratrifolia*, and flowers twice as large, white. Column long. Fruit not seen.

3. ***C. rhytidocarpa***, Hook. f.; leaves lanceolate acuminate, flowers 1 in. long, sepals narrowly oblanceolate, petals oblanceolate crenate, blade of lip triangular-ovate acuminate, ribs of fruit strong wrinkled.

PERAK, Scortechini, King's Collector, Wray.

Stem 4 ft. high and leaves as in *C. veratrifolia*, from which the broader petals, form of the lip, and deeply ridged fruit $1\text{--}1\frac{1}{2}$ in. long with wrinkled ribs distinguish it. Column long.

4. ***C. brevistylis***, Hook. f.; leaves 5–6 in. elliptic acuminate subpetioled, column $\frac{1}{2}$ in. long.

PERAK; on limestone rocks, King's Collector.

Stem 1–2 ft., slender. Leaves 7-nerved, 2–3 in. broad. Panicles few-fl. Young fruit 1 in. long.—A very distinct species, probably the same as an undescribed Javan one.

78. **TROPIDIA**, Lindl.

Terrestrial, glabrous, leafy herbs. Stem often branched, roots rigid. Leaves sessile, membranous, subplicate; petiole sheathing. Flowers small, in axillary and terminal sessile or peduncled spikes; bracts coriaceous, often imbricate, strongly nerved. Sepals connivent, lateral more or less connate, dorsal free. Petals as long, or shorter, broad or narrow. Lip superior, sessile at the base of the column, cymbiform or produced into an obtuse spur, undivided, acute or with a reflexed tip, disk with short or long intramarginal ridges on lamellæ; column short or long; rostellum long, erect, at length 2-fid; stigma anticus; anther erect, acute or acuminate, cells contiguous; pollinia 2, clavate, 2-cleft, caudicle long or short, gland small. Capsule cylindric-oblong.—Species 6–8, Indian, Malayan, and Chinese.

Sect. I. CNEMIDIA. Lip spurred. Spike terminal, peduncled.

1. ***T. angulosa***, Blume Orchid. Archip. Ind. 122; leaves elliptic or ovate acuminate 9–11-nerved, spike many-fl., bracts slender spreading, lip oblong. *T. Govindovii* & *semilibera*, Blume l. c. *Decaisnea angulosa*, Lindl. in Wall. Cat. 7388. *Cnemidia angulosa* & *semilibera*, Lindl. Gen. & Sp. Orchid. 463. *Govindovia nervosa*, Wight Ic. t. 2090.

SIKKIM HIMALAYA, alt. 1000 ft., Clarke, King. SILHET, Wallich. TENASSERIM, Parish. UPPER BURMA, Griffith. MALABAR and TRAVANCORE, Wight, &c.

Stem 8–12 in. Leaves 3–5 by 2–3 in., base rounded or cordate. Peduncle short; spike 1–2 in.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., as long as the flowers; sepals 3–5-nerved, lateral lanceolate, acuminate, connate nearly to the apex, dorsal linear-lanceolate, acute; petals rather narrower, ovate-lanceolate, obtuse, 3–5-nerved, midnerve very

stout; lip nearly as long as the petals, obtuse, lateral nerves narrowly lamellate below the middle; column with a long slender rostellum; anther narrowly lanceolate; pollinia clavate, grains lamelliform, caudicle long slender, gland minute.—I have examined Lindley's specimen of *T. semilibera*, and find that he was in error in supposing that the lateral sepals are free to below the middle; it does not differ from *T. angulosa*.

Sect. II. TROPIDIA PROPER. *Lip* cymbiform, not spurred.

* *Flowers in short sessile axillary or axillary and terminal spikes.*

2. **T. curculigoides**, Lindl. in Wall. Cat. 7386 A; Gen. & Sp. Orchid. 497; bracts ovate acuminate, lip with a reflexed tip a thickened midnerve and intramarginal ridges from beyond the middle to the base of the reflexed tip. *T. assamica*, Blume Orchid. Archip. Ind. 124, t. 41, f. 2.

SIKKIM HIMALAYA, King. SILHET, ASSAM, and BURMA, Wallich, &c ? PERAK, Wray.

Stem 1-2 ft. *Leaves* 6-10 by 1-1½ in., elliptic- or linear-lanceolate, caudate-acuminate, 5-nerved. *Spikes* ½-¾ in., erect or decurved; bracts imbricate, ½ in., ovate-lanceolate, upper narrower; sepals ½ in. long, strongly 5-nerved, dorsal linear-lanceolate, lateral strongly recurved, lanceolate from an ovate base, taper-pointed; petals rather shorter, obliquely ovate-oblong, obtuse, 5-nerved; lip much shorter than the sepals. *Capsule* ¾ in. long.—Bentham in Flora of Hong Kong has referred Schauer's *Ptychochilus septemnervis* of China to this, but according to Schauer's figure it differs in the much smaller flowers with ovate acute sepals, and a lip without the reflexed tip. Wallich's 7386 B from Burma is a different species, but in too imperfect a state for analysis.

3. **T. graminea**, Blume Orchid. Archip. Ind. 124, t. 41; leaves lanceolate strongly 3-5-nerved, spikes very small and few-fl'd., lip obtuse with short intramarginal lamellæ towards the middle, tip shortly recurved. *Miquel Fl. Ind. Bat.* iii. 747.

MALAY PENINSULA; on Mount Ophir, Griffith, Lobb.—DISTRIB. Java.

Stem 18 in., slender. *Leaves* 6-8 by 1-1½ in., acuminate as in *C. curculigoides*. *Spikes* ½ in. long, 1-2-fl'd.; bracts ½ in., about equalling the ovary; flowers ½ in. long, strongly recurved; sepals lanceolate, acuminate, 3-nerved; petals falcately gibbously lanceolate, 1-2-nerved; lip ovate, subacute, margins undulate towards the apex tip recurved.—Described from a single specimen. Blume's figure represents the leaves shorter and broader, and the spikes as with rather more flowers and terminal only.

** *Flowers in peduncled spikes.*

4. **T. Maingayi**, Hook. f.; spikes terminal and axillary, bracts subulate, lip with a median and intramarginal lamellæ extending from the base nearly to the acute tip.

MALAY PENINSULA; on Mount Ophir, Maingay.

Stem 12-18 in. *Leaves* 4-6 by ¾-1 in., elliptic-lanceolate, acuminate, 5-nerved. *Peduncle* 1½-2 in., flexuous, sheathed; spike short; bracts very variable, lower 1½ in., upper smaller; flowers ¼ in. long; sepals oblong-ovate, subacute, lateral 5-nerved, dorsal narrow; petals obliquely oblong, 3-4-nerved; lip with no reflexed tip.—Very like *T. pedunculata*, Blume, of Sumatra, but the flowers are not furfuraceous, the sepals are 5-nerved, and the intramarginal lamellæ of the lip are continuous.

5. **T. Thwaitesii**, Hook. f.; spike terminal subcapitate, bracts

subulate, lip ovate intramarginal lamellæ continuous to the base of the reflexed apex. *Cnemidia* circuligoides, *Thwaites Enum.* 315 (not of *Lindl.*).

CEYLON; in hot dry places, *Macrae*, *Thwaites*.

Stem 6-12 in., slender. *Leaves* 3-6 by $\frac{1}{2}$ - $\frac{3}{4}$ in., narrowly linear-lanceolate, acuminate, 3-5-nerved. *Peduncle* 1 in., naked; spike $\frac{1}{2}$ in.; bracts rather longer than the smooth ovaries; flowers $\frac{1}{2}$ - $\frac{1}{4}$ in. long; sepals with very thick midnerves, dorsal oblong 3-nerved, lateral ovate-lanceolate acuminate 5-nerved; petals oblong, obtuse, 3-nerved; lip rather thick.

IMPERFECTLY KNOWN SPECIES.

CNEMIDIA BAMBUSEFOLIA, *Thwaites Enum.* 314; stem 2-3 ft., leaves few 6-8 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in. elliptic-lanceolate caudate-acuminate 5-nerved, spike terminal sessile $\frac{3}{4}$ in. long, bracts crowded lanceolate lower narrower $\frac{1}{2}$ in. long.

CEYLON; Suffragan district, *Thwaites*.—Descript. from *Thwaites*.

TROPIDIA sp. (*T. curculigoides*, Kurz, from the Andaman Islands), a small slender species, with lanceolate subacute 3-nerved leaves 2-3 by $\frac{1}{2}$ - $\frac{3}{4}$ in.

TROPIDIA sp.; from Sikkim, alt. 1500 ft. (*King in Herb. Calcutt.*).—Resembles *T. curculigoides*, but is much larger, with 7-9-nerved leaves 7-11 in. long by 2-2 $\frac{1}{2}$ broad, and small fruit $\frac{1}{2}$ in. long.

79. **PHYSURUS**, *Richard*.

Terrestrial, leafy herbs; stem below creeping; roots fibrous. *Leaves* petioled, membranous, ovate or lanceolate. *Flowers* small, spicate. *Sepals* free, dorsal smaller forming a hood with the petals. *Lip* erect from the base of the column, spreading or recurved; spur exserted beyond the bases of the sepals. *Column* very short, not appendaged in front, rostellum 2-fid; stigma anticous, prominent; anther erect, 2-celled; pollinia 2, clavate.—Species about 20, Asiatic and American.

1. **P. Blumei**, *Lindl. in Wall. Cat.* 7397; *Gen. & Sp. Orchid.* 504; in *Journ. Linn. Soc.* i. 181; bracts equalling the ovary, lip short, terminal lobe transversely oblong entire, spur much shorter than the ovary 2-lobed. *Thwaites Enum.* 314. *P. humilis*, *Blume Orchid. Archip.* t. 27, f. 2.

SILHET, *Wallich*. CEYLON; in the Central Province, *Macrae*, &c.—DISTRIB. Java.

Stem 1-2 ft., slender, glabrous below. *Leaves* scattered, $2\frac{1}{2}$ -3 in., petioled, obliquely ovate or subcordate, acute, 3-nerved. *Scape* pubescent; sheaths distant, finely acuminate; spike 2-5 in., villous; sepals $\frac{1}{2}$ in. long, brownish-red, obtuse, 1-nerved; petals spatulate, 1-nerved; lip white, contracted at the base of the terminal lobe, spur subcylindric or inflated, nerves strong hooked.

2. **P. hirsutus**, *Lindl. in Journ. Linn. Soc.* i. 180; tall, stout, villously hirsute, leaves ovate acuminate 7-nerved subglaucous beneath, base acute. *Goodyera hirsuta*, *Griff. Notul.* iii. 393; *Ic. Plant. Asiat.* t. 347.

ASSAM; on the Burmese frontier, *Griffith*.

Stem as thick as a goose quill. *Leaves* 4-5 in., oblique. *Sepals*, *petals*, and *lip* brownish, blade of the latter white.—A very imperfectly known plant, of which there are no specimens in Griffiths' Herbarium at Kew.

80. **ANÆCTOCHILUS**, *Blume*.

Terrestrial herbs; stem below creeping. *Leaves* petioled, ovate or lanceolate. *Flowers* in glandular-pubescent spikes. *Sepals* free, dorsal

smaller and forming a hood with the narrow acuminate petals, lateral spreading. *Lip* adnate to the base of the column, contracted into an entire toothed or pectinate claw beyond the saccate spurred base, and having two rarely four terminal wing-like lobes; spur exerted beyond the bases of the sepals, and with 2 calli within. *Column* short, appendaged in front, stigmatic lobes lateral; anther 2-celled; pollinia narrowed into short or long caudicles.—Species 8, Indian and Malayan.

* *Claw of lip deeply fimbriate.*

1. ***A. regalis***, *Blume Orchid. Archip. Ind.* 46, t. 17 D; spur as long as the sepals, terminal lobes of the lip short quadrate much shorter than the claw. *A. setaceus*, *Lindl. in Bot. Reg.* t. 2010; *Gen. & Sp. Orchid.* 499; *Bot. Mag.* t. 5208; *Fl. des Serres*, ii. t. 15. *Satyrium repens*. *Linn. Sp. Pl.* 1339.

CEYLON; ascending to 3000 ft.

Stem 6–10 in. *Leaves* 1–1½ in., ovate-cordate, acute, usually dark velvety green and netted with golden nerves. *Scape* stout or slender, sheaths 2; spike 3–5 fld.; bracts lanceolate; sepals ½ in. long, ovate, subacute, green; petals broadly falcate, white; fimbriæ of white lip as long as the claw, spur inflated, tip subacute notched; column with 2 vertical lamellæ in front.—Without an examination of living plants it is impossible to say whether Blume is correct in separating the Ceylon from the original Javanese *A. setaceus*.—Var. *inornata*, *Hook. Bot. Mag.* t. 5208 is a variety with whole coloured coppery-purple leaves.

2. ***A. Roxburghii***, *Lindl. in Wall. Cat.* 7387; *Gen. & Sp. Orchid.* 499; spur as long as the sepals, terminal lobes of lip cuneately obovate as long as the claw. *Blume Orchid. Archip. Ind.* 50, t. 12 B, f. 2. *Chrysobaphus Roxburghii*, *Wall. Tent. Fl. Nep.* t. 27.

TROPICAL HIMALAYA; from Simla to Bhotan. ASSAM, SILHET, and MUNNIPORE.—DISTRIB. China.

Very near *A. regalis*, and leaves similarly netted with golden nerves, and has a variety (var. *β. Lobbiana*, *Blume l. c.*), with nearly whole-coloured leaves which have a rosy disk passing into yellowish-white.

3. ***A. elatior***, *Lindl. in Journ. Linn. Soc.* i. 178; very tall, spur of lip as long as the sepals, base of claw hastate, terminal lobes of lip oblong shorter than the claw fringes very long.

NILGHIRI HILLS; near Walla Ghaut, *M'Ivor*.

Leaves 1½ in. diam., orbicular-ovate, shortly petioled. *Scape* 12 in.; spike 3–4 fld., bracts ½ in., broadly ovate-lanceolate; flowers much larger than in *A. Roxburghii*; lip ¾ in. long, fimbriæ longer; spur inflated, tip subacute emarginate; column larger, with a didymous large hatchet-shaped appendage in front; rostellum long; anther large, lanceolate, acuminate.—The column differs a good deal from that of *regalis* and *Roxburghii*. Only one specimen seen.

4. ***A. Reinwardtii***, *Blume Orchid. Archip. Ind.* 48, t. 12, f. 2; spur of lip nearly as long as the sepals, terminal lobes of lip falcately oblong, base of claw cordate, fringes very long.

PENANG; on Government Hill, *Curtis*. PERAK, *Scortechini*; on Maxwell's Hill, *Wray*.—DISTRIB. Sumatra.

Leaves 1½–2 in., orbicular- or elliptic-ovate, netted with golden nerves or not. *Scape* 4–6 in., often very stout; flowers as in *A. elatior*; column with a long process descending into the spur.

5. ***A. brevilabris***, *Lindl. Gen. & Sp. Orchid.* 499; spur of lip saccate

much shorter than the sepals, terminal lobes obtusely hatchet-shaped, claw of lip very short, fringes few. *A. albolineatus*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 141. *Dossinia marmorata*, *Lindl. in Journ. Linn. Soc.* i. 185 (not of *Morren*).

SIKKIM HIMALAYA (*lc. Cathcart & J. D. H.*). KHASIA HILLS, alt. 4-5000 ft., *Mack, &c. TENASSERIM, Parish.*

Leaves ovate, green with a white mesial band and golden nerves, red beneath. *Spike* as in *A. Reinwardtii*; sepals and petals green tinged with pink; lip white; column very large with a forcipate appendage projecting from the base.

** *Claw of lip entire or nearly so.*

6. *A. Griffithii*, *Hook. f. Ic. Plant. ined.*; claw of lip entire or with a membranous toothed margin and a trapeziform base, terminal lobes hatchet-shaped lobulate or toothed.

EASTERN HIMALAYA, *Griffith*. Naga Hills, in UPPER ASSAM, *Prain*.

Leaves $1\frac{1}{2}$ - $1\frac{3}{4}$ in., orbicular-ovate, apiculate. *Scape* 4-6 in.; spike 10-20-fl.; lobes of lip equalling or longer than the claw; column short with a broad folded appendage in front and a flap over the mouth of the very short saccate 2-flid spur; anther short.—The margin of the claw of the lip is broader and more toothed in the only Naga specimen I have seen.

7. *A. tetrapterus*, *Hook. f. Ic. Plant. ined.*; claw of lip quite entire, terminal lobes each 2-partite.

MUNNIPORE; at Eerung, alt. 2000 ft., *Clarke*.

Leaves 2 in., shortly petioled, ovate, caudate-acuminate. *Scape* 2 in., and few-flid. spike tomentose; sheaths and bracts large; claw of lip arched, narrow; lobules cuneate-obovate, terminal pair smallest; column with broad auricles in front that terminate in a 2-flid membrane overhanging the mouth of the very short conical obtuse spur; anther lanceolate, acuminate.

81. *VRYDAGZYNEA*, *Blume*.

Terrestrial, leafy herbs; stem below creeping, roots fibrous. *Leaves* petioled, ovate. *Flowers* small, spicate, suberect. *Sepals* subequal, free, dorsal smaller forming a hood with the petals. *Lip* included, sessile at the base of the column, membranous, concave, entire; spur large, inflated, exerted beyond the base of the sepals, with 2 stipitate calli within. *Column* short, inappendiculate; stigmatic lobes lateral; rostellum short; anther short, cells distant; pollinia 2, sessile on a large gland.—Species 8-10, Indian, Malayan and Pacific.

This genus is described as having two stipitate calli descending from the base of the column into the sac or spur of the lip; the stipites appear to me to be always more or less adnate to the walls of the sac, and represent two vascular bundles or nerves.—The name is variously spelled. All the species want revision and description from living plants.

1. *V. viridiflora*, *Hook. f.*; bracts ovate-lanceolate acuminate, lip orbicular-oblong tip truncate, disk with a high median ridge from the base to the middle, spur inflated. ? *Physurus viridiflorus*, *Lindl. in Journ. Linn. Soc.* i. 180 (*excl. Syn.* *Neottia viridiflora*, *Bl.*, which is a *Goodyera*).

LOWER BENGAL; Luckempore, on the Megua, *Clarke*.—DISTRIB. ? Java.

A span high. *Leaves* $1\frac{1}{2}$ -2 in., ovate to ovate-lanceolate, acute, membranous, shortly petioled. *Scape* 1- $1\frac{1}{2}$ in.; spike few-flid., rachis pubescent; bracts $\frac{1}{2}$ in. and

sheaths membranous; flowers $\frac{1}{2}$ in. long, pale yellow and pink; blade of lip as long as the oblong inflated spur, margins incurved.—Only one specimen seen.

2. *V. albida*, *Blume Orchid. Archip. Ind.* 75, t. 19, f. 2, 3; bracts subacute, lip oblong retuse with a short obtuse tooth, disk with a low hispidulous ridge from the base to beyond the middle. *Etæria albida*, *Blume Bijdr.* 410; *Lindl. Gen. & Sp. Orchid.* 491.

PERAK; in the Padang Valley, *Wray*.—DISTRIB. JAVA.

Whole plant 8–10 in. high, glabrous. *Leaves* $1\frac{1}{2}$ –2 in. long, ovate or elliptic, subacute. *Scape* slender, 1–3 in.; sheaths broadly acuminate, membranous; spike very many-fl. ; bracts $\frac{1}{2}$ in. long, exceeding the pale green flowers; sepals $\frac{1}{3}$ in. long, obtuse; blade of lip as long as the inflated spur. *Capsule* $\frac{1}{2}$ in. long.—The specimen as in fruit, but the withered flowers are well preserved. A drawing apparently of this by Scortechini represents the leaves as more lanceolate with waved margins.

3. *V. gracilis*, *Blume Orchid. Archip. Ind.* 72, t. 17, and t. 20, f. 1; bracts lanceolate acuminate, lip oblong, tip rounded apiculate, disk with a slender ridge from base to apex.

PERAK; at Horum, *Scortechini*.—DISTRIB. Sumatra.

Whole plant 3–8 in. high, simple or branched, glabrous. *Leaves* $\frac{3}{4}$ –1 in., petioled, ovate or ovate-cordate, subacute. *Scape* very short; spike few-fl., papillose; sepals $\frac{1}{2}$ in. long, acute, agglutinate to the narrow petals; spur obtuse, nearly as long as the blade of the lip; anther with a membranous tip.

82. CYSTORCHIS, *Blume*.

Characters of *Vrydagzynea*, but lip clawed as in *Zeuxine*, and with a large exposed didymous sac.—Species 3 or 4, Malayan.

Ætheria fusca, Lindl., referred here by Bentham, is a true *Goodyera*, with the shallow sac of the lip partially exposed. It must be by oversight that its habit is described as altogether that of *Cystorchis*, from which it differs in its tufted roots, radical leaves, robust habit, and alpine habitat. Amongst Scortechini's drawings of Perak Orchids there are several probably referable to *Cystorchis*, but unaccompanied with specimens.

1. *C. javanica*, *Blume Orchid. Archip. Ind.* 87, t. 24, f. 1; leaves dark green with crenate pinkish margins, lip with a long straight claw and dilated tip. *Etæria javanica*, *Blume Bijdr.* 410; *Lindl. Gen. & Sp. Orchid.* 491 (*Ætheria*).

PERAK, *Scortechini*.—DISTRIB. JAVA.

Stem a span long, leafy above. *Leaves* $\frac{3}{4}$ – $1\frac{1}{4}$ in., petioled, ovate, obtuse or subacute, margins entire or crenulate. *Scape* and short raceme puberulous; sheaths lanceolate, acuminate; bracts equalling the ovary; flowers $\frac{1}{4}$ in. long; lateral sepals ovate-lanceolate, 1-nerved, puberulous; petals linear-oblong, obtuse, 1-nerved; sac of lip membranous, claw rigid grooved, the margins being inflexed; rostellum ovate; anther sessile, very convex, umbonate; gland of pollinia ovate, acute.—Specimen not good, but I think referable to Blume's plant, of which the leaves are described as undulate, dark purple above and pale flesh coloured beneath.

2. *C. variegata*, *Blume Orchid. Archip. Ind.* 89, t. 24, f. 3, and 36 C; leaves pale green with dark transverse bands, scape slender, raceme puberulous, beak of lip with incurved sides and a small dilated tip.

SINGAPORE, *Ridley*.—DISTRIB. JAVA.

Leaves 2– $2\frac{1}{2}$ in., ovate-oblong or -lanceolate acute; petiole $\frac{1}{4}$ in. *Scape* with

raceme 4-6 in., glandular-pubescent; flowers about $\frac{1}{4}$ in. long; lateral sepals very gibbous at the base.—Named by Mr. Ridley. The flowers in the specimen he has kindly sent are far too young for analysis.

83. *HERPYSMA*, Lindl.

A terrestrial leafy herb; stem stout, erect. *Leaves* ovate-lanceolate, petioled, membranous; sheaths very large, hyaline. *Flowers* in a dense short sessile spike. *Sepals* subequal free; dorsal forming a hood with the oblong petals. *Lip* adnate to the sides of the column, spreading, spur elongate, straight, exposed, tip 2-fid. *Column* short, not appendaged in front; stigma anticous; rostellum short, erect, 2-fid; anther sessile, erect, linear-oblong, 2-celled; pollinia narrow, tipped with 2 hard lanceolate appendages or glands, pollen grains flattened.

H. longicaulis, Lindl. in Wall. Cat. 7389; in Bot. Reg. under t. 1618; Gen. & Sp. Orchid. 506; in Journ. Linn. Soc. i. 178, 190.

EASTERN HIMALAYA; Nepal, Wallich. Sikkim, alt. 3-4000 ft., J. D. H., &c. KHASIA MTS., alt. 4500 ft., Clarke.

Stem 6-12 in., elongate and creeping below, then ascending, as thick as a swan's quill or less, clothed below with the white, truncate leaf sheaths $\frac{3}{4}$ -1 in. long. *Leaves* 2-3 in., membranous, shortly petioled. *Spike* 1-2 in., pubescent; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., ovate-lanceolate; flowers with ovary rather longer, suberect, pale pink; sepals $\frac{1}{2}$ in. long, 5-nerved, and shorter petals obtuse; lip shorter than the sepals, subpanduriform, reflexed from the middle, strongly 5-nerved, disk with 2 flattish calli about the middle, and a thick lamella extending to the rounded tip; spur longer than the blade, strongly nerved; base of white column contracted below the broad pulvinate stigma.—I do not find the two lamellæ in the spur, which is longitudinally grooved or infolded at the back.

84. *ODONTOCHILUS*, Blume.

Habit and character of *Anætochilus*, but sac or small spur of the lip hidden between the more or less connate bases of the lateral sepals.—Species about 12, Indian, Malayan and Pacific.

The pollen varies greatly in structure in this genus. The species are most difficult of analysis and definition from dried specimens. *Myrmechis*, Blume, is only distinguishable by the fewer often erect flowers and stem with numerous small leaves.

* *Stem* stout, leafy. *Flowers* solitary or very few. (MYRMECHIS, Bl.)

1. **O. macranthus**, Hook. f. Ic. Pl. ined.; leaves ovate acuminate, flowers very large solitary erect, claw of lip entire, margins involute, limb small orbicular.

PERAK, Scortechini; on Maxwell's Hill, Wray.

Stem 2-3 in., from a nodose procumbent base. *Leaves* $\frac{3}{4}$ in., shortly petioled. *Flower* white, nearly 1 in. long, with a sheathing bract on the very short peduncle; sepals erect, lateral linear-oblong from a gibbous base, 1-nerved; dorsal ovate-lanceolate, long-acuminate; petals falcately dimidiate-ovate, long-pointed; sac of lip subglobose, enclosed calli small; limb shortly exserted; column very short, frontal appendage erect lanceolate; rostellar arms very long, slender; anther linear-lanceolate; pollinia clavate, united caudicles long slender, gland elongate.—Resembles *Myrmechis glabra*, Blume of Java, but the narrower flowers, long anther, pollen and rostellar arms at once distinguish it.

2. **O. calcaratus**, *Hook. f. Ic. Plant. ined.*; leaves very small ovate acuminate, flowers 1-3, claw of lip crenate, lobes small quadrate or rounded, column with a linear process descending into the cylindric or incurved spur.

PERAK, *Scortechini*; alt. 3900 ft., *Wray*.

Stem 3-5 in., slender, flexuous, leafy. *Leaves* $\frac{1}{4}$ - $\frac{1}{2}$ in., sessile or petioled, aristately acuminate. *Peduncle* very short, and bracts lanceolate, quite glabrous; flowers white; sepals linear, 1-nerved, lateral with the outer bases connate and enclosing the spur; petals linear-lanceolate, 1-nerved; lip $\frac{1}{2}$ in. long, spur half as long as the sepals, with a columnar caruncle enclosed, tip straight or incurved; column short; rostellar arms long, slender; anther ovate-lanceolate; pollinia short, each attached to the gland by a long stout caudicle.—*Wray* describes the leaves as green dashed with crimson, veined with gold, and bordered with red, the flowers white. *Scortechini* says, leaves dark purple, sepals pale carnation, lip white. This is a *Myrmecis* with the claw of lip of *Odontochilus*.

3. **O. pumilus**, *Hook. f. Ic. Plant. ined.*; leaves $\frac{1}{2}$ - $\frac{1}{2}$ in. scattered petioled ovate, scape 1-3-fld., bracts oblong ciliate, lateral sepals ovate subacute, claw of lip crenulate, terminal lobes subquadrate. *Cheirostylis pusilla*, in part, *Lindl. in Journ. Linn. Soc. i.* 188 (not of *Gen. & Sp. Orchid*).

SIKKIM HIMALAYA, alt. 8-10,000 ft., *J. D. H., Thomson, King*.

Stem with scape 2-3 in., ascending from a prostrate base, stout for the size of the plant. *Leaves* acute, rather thick; nerves obscure; sheaths very short. *Scape* with one membranous ciliate sheath; flowers subglobose, $\frac{1}{2}$ in. diam., white; dorsal sepal broadly ovate with an obtuse recurved tip, 1-nerved, lateral triangular-ovate, very oblique at the base, 1-nerved; sac of lip simple, internal calli very large; terminal lobes shortly exerted, thick.—So like *Cheirostylis pusilla* that it was confounded with it by *Lindley*. The specimens I have seen are very few, and the flowers very difficult of analysis.

** *Stem elongate. Leaves 1 in. or more long. Spikes few- or many-fld.* (ODONTOCHILUS, *Bl.*).

4. **O. crispus**, *Hook. f.*; leaves few ovate acute, bracts shorter than the glabrous ovary, claw of 2-winged lip quite entire, wings toothed much larger than the sepals. *Anæctochilus crispus*, *Lindl. in Journ. Linn. Soc. i.* 180.

SIKKIM HIMALAYA, alt. 5-6000 ft., *Ic. Cathcart, Clarke*. KHASIA HILLS; at Surureem, alt. 5000 ft., *Clarke*.

Stem slender, elongate below the 2-4 leaves. *Leaves* $\frac{3}{4}$ in., petiole $\frac{1}{4}$ -1 in. *Spikes* 4-8-fld., rachis and ovate-lanceolate bracts pubescent; lateral sepals $\frac{1}{2}$ in. long, dorsal much smaller; petals dimidiate-ovate, falcate, acuminate; claw of lip exceeding the sepals, slender; 2-winged limb $\frac{1}{2}$ in. diam., white; sac minute, didymous, enclosed caruncles large; column and rostellar arms very short indeed; anther very short, tip recurved; pollinia globose, sessile at the truncate end of the very large fleshy ? cuneiform caudicle; gland minute.—A Sikkim specimen of *Clarke's* very like this has pubescent sepals, and a few minute tubercles on the claw of the lip.

5. **O. pectinatus**, *Hook. f. Ic. Plant. ined.*; stem leafy, leaves ovate acute, spike few-fld. laxly villous, bracts as long as the ovary, claw of lip pectinate, limb lunate or broadly 2-winged, sac globose, rostellar arms long.

PERAK, alt. 3-4000 ft., *King's Collector; Maxwell's Hill, Wray*.

Stem 6-12 in. *Leaves* $1\frac{1}{2}$ - $2\frac{1}{2}$ in., light green, thick, fleshy, petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Spike*

6-8-fld.; bracts $\frac{1}{2}$ in. long, pubescent, laxly villous, ovary glabrous; sepals ovate-lanceolate, 1-nerved, softly pubescent; petals lanceolate, unequal sided, long pointed; sac of lip with 2 large caruncles; column very short, with 2 ascending auricles in front; rostellar arms long and broad; anther lanceolate; pollinia obovoid, much shorter than their broad thick coherent caudicles.

6. **O. brevistylis**, *Hook. f. Ic. Plant. ined.*; leaves towards the top of the stem obliquely ovate-lanceolate acute, spike few-fld. pubescent, bracts as long as the ovary, claw of lip slender with few curved spinous teeth, sac globose, limb bipartite, segments semicircular, rostellar arms very short.

PERAK; on Gunong Batu Pateh, alt. 3400 ft., *Wray*.

A span high. *Leaves* $1\frac{1}{2}$ -2 in., pale green; petiole $\frac{1}{2}$ in. *Spike* short; flowers white; ovary glabrous; sepals $\frac{1}{2}$ in. long, lateral broadly obliquely ovate, acute, hairy, dorsal much smaller; petals semicircular with long points; sac of lip with 2 large caruncles, claw narrow, limb larger than the sepals; column exceedingly short, frontal appendages obscure; rostellar arms triangular, subacute; anther short, ovate, obtuse; pollinia subglobose, sessile on the truncate base of the united caudicles which form a large fleshy triangular plate acute at the top, gland minute.—The pollinia and their caudicle are a good deal like those of *O. crispus*.

7. **O. Elwesii**, *Clarke mss.*; stem above and few-fld. spike hirsute, leaves ovate acute, flowers large, bracts as long as the hirsute ovary, sepals hairy, claw of lip broad irregularly toothed, sac scrotiform, lobes of limb subquadrate, rostellar arms subulate, pollen grains lamellate. *Hook. f. Ic. Plant. ined.*

SIKKIM HIMALAYA, alt. 4-6000 ft., *Clarke, King*. KHASIA HILLS; on Shillong, alt. 6100 ft., *Clarke*. MUNIPORE; on Kohima, *Prain*.

Stem stout below, 6-8 in. high. *Leaves* $1\frac{1}{2}$ -2 in., rather crowded, dark green with 3 red nerves. *Spike* 2-4-fld.; lateral sepals ovate, acuminate, 1-nerved, green purple-tipped or white, dorsal much smaller; petals semicircular, with long or short points; sac of lip 2-lobed, claw dark purple, centre and subquadrate lobes white; column very short, frontal appendages triangular; anther short, apiculate, connective very thick; pollinia broadly elavate, grains flat, caudicles 0, gland linear.—This and *O. grandiflorus* have lamellate ecaudiculate pollen.

8. **O. grandiflorus**, *Benth. in Gen. Plant. iii.* 598; tall, leafy, leaves 3-5 in. obliquely elliptic acute, spike stout many-fld., rachis pubescent, bracts about equalling the glabrous ovary, sepals glabrous, spur of lip decurrent on the ovary, claw with 5-6 pair of long recurved spines, wings large cuneate, anther lanceolate, pollinia clavate, grains lamellate. *Ancetochilus grandiflorus*, *Lindl. in Journ. Linn. Soc. i.* 179.

SIKKIM HIMALAYA, alt. 4-6000 ft., *J. D. H.* KHASIA HILLS, alt. 4000 ft. *J. D. H. & T. T.*

Stem with spike 12-15 in., as thick as a goose-quill below. *Leaves* 2-2 $\frac{1}{2}$ in. diam., base acute or rounded; petiole $1\frac{1}{2}$ -2 in. *Spike* 4-6 in.; bracts $\frac{1}{2}$ in., pink, slightly pubescent; lateral sepals $\frac{1}{2}$ in., falcately oblong-lanceolate, subacute, connate at the base and with the sac of the lip, and dorsal and petals mottled with pinkish white and green, dorsal much smaller, ovate; sac of lip rather long, calli within large crenate, limb $\frac{1}{2}$ - $\frac{2}{3}$ in. diam.; column longer than in its congeners, with 2 ascending frontal wings; rostellum very broad, 2-cuspidate; pollinia lamellate, without caudicles, narrowed upwards, the narrowed portion lamellate down to the small gland.

9. **O. Clarkei**, *Hook. f. Ic. Plant. ined.*; tall, leaves 2-2 $\frac{1}{2}$ in. obliquely elliptic acute, spike subtomentose many-fld., bracts longer than the

pubescent ovary, sepals glabrous lateral free at the base, sac of lip small globose didymous, claw with broad round auricles at the base and 2-3 pair of spines, wings hatchet-shaped, anther elongate, pollinia subglobose with a long flexuous thick caudicle, grains cuneiform.

SIKKIM HIMALAYA; Mongpo, alt. 3000 ft., *Clarke*.

A foot high including the spike. *Leaves* as in *grandiflorus*, but much smaller. *Spike* 5 in., very many-fld.; bracts $\frac{1}{2}$ in., pink, pubescent; lateral sepals $\frac{1}{2}$ in., broadly ovate-oblong, pink, 1-nerved, dorsal and petals coherent in a small deeply cordate pink cuspidate hood; sac of lip with 2 caruncles, claw expanding just beyond the sac into an, orbicular or obcordate plate, wings as large as the sepals; column with 2 ascending frontal appendages; rostellum broad, bifid; long caudicle of the pollinia rather stout golden, gland small.—The only species with a dilated base of the claw of the lip. The specimen is a solitary one.

10. **O. lanceolatus**, *Benth. in Gen. Plant.* iii. 598; leaves 2-3 in. ovate or ovate-lanceolate acute, spike many-fld., rachis pubescent, bracts as long or longer than the glabrous ovaries, flowers small glabrous, sac of lip globose didymous, claw with 3-4 pairs of recurved spines, wings subquadrate, anther very short, pollinia globose sessile on a broad fleshy triangular caudicle. *O. flavus*, (error for *luteus*), *Benth. l. c.* *Anæctochilus lanceolatus*, *Lindl. Gen. & Sp. Orchid.* 499; in *Journ. Linn. Soc.* i. 179. *A. luteus*, *Lindl. in Journ. Linn. Soc. l. c.*

SIKKIM HIMALAYA, alt. 5-6000 ft., *Griffith's Collectors (Kew Distrib.* 5345, 5354), &c. KHASIA MTS., *Mack, Griffith (Kew Distrib.* 5352), &c.

Stem with the spike 6-8 in., few or many-leaved. *Leaves* green. *Spike* 2-3 in.; bracts $\frac{1}{2}$ - $\frac{1}{2}$ in., usually broader and whiter than in other species, nearly glabrous; lateral sepals $\frac{1}{2}$ in., ovate, obtuse, green, 1-nerved; dorsal and petals connate in an obtuse hood broader than long; lip golden yellow, sac with a pair of curved spurs within, claw not dilated at the base, limb $\frac{1}{2}$ in. diam.; column very short indeed, frontal appendages obscure; rostellum broad, 2-cuspidate; anther short, thick, with a recurved beak, grains of pollen cuneiform.—The pollen is like that of *O. brevistylis* & *crispus*. I cannot distinguish dried specimens of Lindley's *A. luteus* from his *lanceolatus*. According to native drawings *A. luteus* should have much the largest flowers.

85. **HAEMARIA**, *Lindl.*

Terrestrial herbs; caudex creeping. *Leaves* petioled. *Flowers* racemed. *Sepals* subequal, free; dorsal erect forming a hood with the petals; lateral broad, widely spreading. *Lip* adnate to the base and sides of the column, elongate with a small basal sac which is concealed by the sepals; sides winged or auricled, blade of two spreading lobes, sac with 2 large internal calli. *Column* very large, clavate, stigma anticous; anther large, sub-horizontal, cells distinct; pollinia 2, clavate, sulcate, granular, attached by a fleshy gland to the forked rostellum.—Species 4, Malayan and Chinese.

H. discolor, *Lindl. Gen. & Sp. Orchid.* 490; *Miq. Choix. Pl.* t. 16. *Ludisia discolor*; *A. Rich. in Dict. Class. Hist. Nat.* vii. 457; *Blume Orchid. Archip. Ind.* 113, 114, t. 34, f. 2, 3, and t. 42. *Goodyera discolor*, *Ker in Bot. Reg.* t. 271; *Bot. Mag.* t. 2055; *Lodd. Bot. Cab.* t. 143. *Myoda rufescens*, *Lindl. in Wall. Cat.* 7390; *Gen. & Sp. Orchid.* 489.

MALAY PENINSULA; at Johore, *Ridley*. PENANG, *Wallich*.—DISTRIB. Hong Kong, Cochin China.

Caudex very short. *Stem* ascending from the base, 6–10 in., stout or slender, pubescent. *Leaves* subradical, 1–3 in., shortly petioled; elliptic or ovate, apiculate, fleshy, dark red beneath. *Racemes* many-fl.; rachis and ovary tomentose; bracts large, concave, membranous, acuminate, coloured; perianth $\frac{1}{2}$ – $\frac{2}{3}$ in. diam.; petals pinkish, broadly ovate, apiculate, 1-nerved, nerve with flexuous nervules; sepals linear, 1-nerved; lip longer than the sepals, recurved; sac small, 2-lobed; claw with dilated sides; lobes of limb divaricate, quadrately oblong.—Reichenbach's var. *Dawsoniana* from Moulmein (Trans. Linn. Soc. xxx. 142) consists of leaves only and is probably an *Anæctochilus*; it may or may not be his var. *Dawsonianus*, Gard. Chron. 1872, 321 (*Anæctochilus Dawsonianus*, Low in Gard. Chron. 1868, 1038) with red reticulations on the leaves.

86. DOSSINIA, Morr.

A Bornean genus, not hitherto found in British India. The plant referred to it by Lindley is *Anæctochilus brevibrabris* (see p. 95).

87. SPIRANTHES, Rich.

Terrestrial herbs, roots fibrous or tuberous; stem leafy, or the flowering leafless. *Leaves* various. *Flowers* small, secund, in often twisted spikes. *Sepals* subequal, free, or more or less cohæring with the petals in an erect hood, lateral gibbous at the base. *Lip* sessile or clawed, erect, entire or 3-lobed, base concave, disk callous or lamellate. *Column* short, terete, base often decurrent on the ovary; stigma antious, broad, rostellum erect obtuse or elongate and 2-fid; anther erect, 2-celled; pollinia pendulous from the gland of the rostellum.—Species about 80, temperate and tropical.

1. *S. australis*, Lindl. in Bot. Reg. t. 823; Gen. & Sp. Orchid. 464; Journ. Linn. Soc. i. 178; tall, pubescent, root of many fleshy fibres, leaves on the base of the flowering stem linear-lanceolate or linear obtuse or acute or oblanceolate, spikes slender, bracts ovate exceeding the ovary, lip oblong crisped, base saccate 2-glandular, tip dilated retuse or apiculate, disk hairy. Dalz. & Gibs. Bomb. Fl. 270; Wight Ic. t. 1724 (*middle and right-hand figs.*). *S. longispicata*, A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 78. *S. flexuosa*, & *parviflora*, Lindl. in Bot. Reg. under t. 823. *S. pudica*, Lindl. Coll. Bot. t. 30. *S. amœna*, Bunge Enum. Pl. Chin. 63. *S. novæ Zelandicæ*, Hook. Fl. New Zeal. i. 243. *Neottia australis*, Br. Prodr. 319; Don Prodr. 27. *N. crispata*, Blume Bijdr. 406. *N. flexuosa* & *parviflora*, Smith in Rees Cyclop. *N. sinensis*, Pers. Syn. ii. 511. *N. amœna*, Bieb. Fl. Taur. Cauc. iii. 606. *Gyrostachys australis*, Blume Fl. Jav. 107, t. 37, 38.—*Spiranthes*, Griff. Notul. iii. 384; Ic. Plant. Asiat. t. 348.

Throughout INDIA from the PANJAB and W. TIBET to UPPER ASSAM, and southwards to CEYLON and CHITTAGONG; ascending to 7500 ft. in the Sikkim Himalaya, and 7000 ft. in the Nilghiris.—DISTRIB. Afghanistan, N. Asia, China, Java, Australia, N. Zealand.

Plant 6–18 in. high, stout or slender, sometimes almost tuberous. *Leaves* 1–5 in., very variable, rarely oblong and sessile, often scattered and lower long-petioled; sheaths rather distant. *Spike* 3–6 in., twisted, glandular-pubescent; flowers secund, close-set; perianth $\frac{1}{10}$ – $\frac{1}{8}$ in. long, horizontal, reddish or white; sepals obtuse, tips (and of truncate petals) recurved.—There is a great difference in the size of the leaves of this species, but the large and small fld. seem to inhabit the same areas.

VAR. *Wightiana*, Lindl. Gen. & Sp. 465; very stout, sheaths many almost

imbricating, flowers in a dense cylindric spike. *S. Wightiana*, Lindl. in Wall. Cat. 7378. *S. densa*, A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 79: *S. australis*, Wight Ic. t. 1724 (left-hand fig.).—Nilgiri Mts.

2. *S. autumnalis*, Rich. Orchid. Europ. Ann. 57; glandular-pubescent, root of elongate stout tubers, leaves in a tuft at the side of the flowering stem ovate, bracts ovate-lanceolate acuminate exceeding the ovary, lip oblong-panduriform glabrous, base 2-glandular. Lindl. Gen. & Sp. Orchid. 469; in Journ. Linn. Soc. i. 277; Boiss. Fl. Orient. v. 90; Reichb. Fl. t. 47.

WESTERN HIMALAYA; at Lohoo Ghat, Thomson (Fl. May).—DISTRIB. Afghanistan, Caucasus to the Atlantic.

Root of 2 fleshy fusiform or subcylindric tubers $\frac{1}{2}$ –1 $\frac{1}{2}$ in. long. Leaves 1–1 $\frac{1}{2}$ in., on a very short lateral stem that flowers in the following year. Scape with the rather stout raceme 4–6 in.; spike twisted; flowers secund greenish white, variable in size, usually larger than in *S. australis*.—This common European species has not been recorded from any locality between the Caucasus and Afghanistan. Boissier errs in describing the tubers as napiform. In Europe it flowers in October to December; in India and Afghanistan in April and May.

88. *NEOTTIA*, Linn.

Terrestrial erect brown leafless herbs; rootstock with fibres, stem simple laxly sheathed. Flowers racemose. Sepals subequal, free, lanceolate, concave at length spreading, lateral falcate. Petals narrow. Lip pendulous from the base of the column, larger than the sepals, 2-fid, base flat or concave. Column erect or incurved, subterete; stigma transverse; anther erect or inclined forwards, cells contiguous; pollen in loosely connected masses, pendulous from the gland of the rostellum.—Species 3, temperate Europe and Asia.

NEOTTIA STRATEUMATICA, Br. Prodr. 319 (in note). In a note under *Neottia australis*, Brown refers the *Orchis strateumatica* of Linnæus (Flor. Zeylan. n. 319; Sp. Plant. 1. i. 943) to *Spiranthes*, on the faith of a specimen in Hermann's Herbarium; but Linnæus's character of "spur slender as long as the ovary" is quite opposed to this determination. I do not know what it is.

N. listeroides, Lindl. in Royle Ill. 368; Gen. & Sp. Orchid. 458; in Journ. Linn. Soc. i. 176. *N. Lindleyana*, Dcne in Jacquem. Voy. Bot. 163, t. 163.

TEMPERATE HIMALAYA; from Kashmir eastwards to Sikkim, alt. 5–10,000 ft. in Kumaon, and 10–11,000 ft. in Sikkim.

Stem with the raceme 8–14 in., high, stout or slender, stiff, flexuous; sheaths 3–4, lax. Raceme 6–12 in., lax-fld., laxly pubescent; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., sheathing, membranous, as long as the erect pedicels; flowers $\frac{1}{2}$ in. long, red brown; sepals truncate, 1-nerved; petals much narrower, margins convolute; lip 2–3 times as long as the sepals, linear-oblong, cleft into two ovate or linear-subacute parallel lobes from a third of the way up, nearly flat with a dorsal ridge; ovary pubescent. Capsule $\frac{1}{2}$ in. long, ellipsoid, erect.

89. *LISTERA*. Br.

Terrestrial erect 2-leaved herbs, with fibrous roots from a short rootstock. Leaves broad, subopposite. Flowers rather small, racemed. Sepals and petals subequal, free, spreading or reflexed. Lip pendulous from the base of the column, usually longer than the sepals, narrow, entire or 2-fid.

Column stout; *rostellum* terminal; *anther* inclined forwards, cells 2 contiguous; *pollinia* 2, usually 2-partite, pendulous from the gland of the *rostellum*.—Species 10, N. temperate regions.

1. ***L. ovata***, *Br. in Hort. Kew*, v. 201; leaves ovate, lip linear 2-fid. *Lindl. Gen. & Sp. Orchid.* 455; *Boiss. Fl. Orient.* iv. 92; *Ledeb. Fl. Ross.* iv. 80; *Reichb. Ic. Fl. Germ.* xiii. t. 479.

NORTH-WEST HIMALAYA?, *Falconer*.—DISTRIB. Europe to the Ural and the Caucasus.

Whole plant 12–18 in. high. *Root* of fleshy fibres. *Stem* 2–4 in., naked. *Leaves* 2–4 in., sessile, subacute. *Scape* with raceme 6–10 in., with 1–2 small sheaths; raceme 3–6 in., pubescent; bracts broadly ovate, membranous; pedicel $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers $\frac{1}{2}$ in. long, greenish; sepals ovate; petals linear; lip twice as long as the sepals, very narrow, 2-fid. *Capsule* $\frac{1}{2}$ in. long, globosely ellipsoid.—*Falconer*'s is the only Indian Herbarium in which this plant occurs, and as it has not hitherto been found eastwards of Long. 80° E. the specimen may not be Indian, but have been inadvertently placed by him in his Indian Herbarium.

2. ***L. tenuis***, *Lindl. in Journ. Linn. Soc.* i. 176; leaves ovate acute, lip cuneately obcordate.

SIKKIM HIMALAYA; Lachen valley, alt. 11,500 ft., *J. D. H.*

Whole plant 4–5 in. high, very slender; leaves nearer the raceme than the root, $\frac{1}{2}$ –1 in. long, sessile, 3–5-nerved. *Scape* almost filiform; raceme few-fid., puberulous; bracts ovate, acute, membranous; pedicels short; flowers $\frac{1}{2}$ in. long; lip twice as long as the petals, lobes rounded; column short.

3. ***L. pinetorum***, *Lindl. in Journ. Linn. Soc.* i. 175; leaves orbicular cordate acute, lip cuneately broadly obcordate from a narrow base, lobes broad.

SIKKIM HIMALAYA; in pine woods of the Lachen valley, alt. 10–11,000 ft., *J. D. H.*; Chumbi, *King's Collector*.

Whole plant 4–8 in. high, slender. *Leaves* 1–1 $\frac{1}{4}$ in., much nearer the raceme than the root, about as broad as long, very shallowly cordate, 5–7-nerved. *Scape* rather stout, very short and few-fid.; raceme pubescent; bracts appressed to the scape, ovate, acuminate, herbaceous; flowers decurved, $\frac{1}{2}$ in. long, greenish brown; lip twice or thrice as long as the sepals, deeply 2-lobed, sinus obtuse; column long, incurved.

4. ***L. micrantha***, *Lindl. in Journ. Linn. Soc.* i. 176; leaves subradical broadly ovate, lip 3-lobed short.

SIKKIM HIMALAYA; Lachoong valley, alt. 10,000 ft., *J. D. H.*

Whole plant 3–5 in. *Leaves* $\frac{1}{2}$ in. *Scape* filiform, and lax-fid.; raceme pubescent; bracts minute, ovate, acute, shorter than the $\frac{1}{2}$ in. pedicels; flowers very minute, $\frac{1}{10}$ in. long; lip very much smaller than the sepals, cuneate, truncately 3-lobed, lobes acute; column very short.—A remarkable little species.

90. **CHEIROSTYLIS**, *Blume*.

Terrestrial herbs. *Leaves* membranous. *Flowers* small, racemed. *Sepals* connate in a gibbous based tube to the middle. *Petals* narrow, *Lip* inserted at the base of the column, erect, narrow, base saccate, limb shortly clawed broadly dilated entire toothed or crenate. *Column* short with 2 appendages in front, *rostellum* 2-cleft; stigmatic lobes lateral; *anther* erect, cells short; *pollinia* 2, *caudicle* short, *gland* oblong.—Species about 8, Indian and Malayan.

* *Appendages of column as long as the rostellum.*

1. **C. pusilla**, Lindl. *Gen. & Sp. Orchid.* 489; in *Journ. Linn. Soc.* iii. 188 (in part); glabrous, leaves very small ovate, raceme 2-3-fld., limb of lip 2-lobed, lobes quadrate deeply toothed. *Etæria pusilla*, Wall. *Cat.* 7392. *Zeuxine moniliformis*, Griff. *Notul.* iii. 397; *Ic. Plant. Asiat.* t. 350.

KHASIA HILLS, alt. 4-5000 ft., Wallich, &c.

Stem 3-6 in., prostrate below, often moniliform from the swollen internodes. *Leaves* $\frac{1}{2}$ - $\frac{3}{4}$ in., scattered, acute acuminate or aristate; petiole short. *Scape* 1-3 in.; sheaths and bracts oblong-lanceolate, ciliate; flowers inclined, $\frac{1}{4}$ in. long; sepals pink, obtuse; petals spatulate; lip white, base shortly saccate, nerves with a few fleshy setæ within, claw finely hairy towards the tip; columnar appendages fleshy, as long as the rostellar arms; anther lanceolate; pollinia pyriform, gland very long.—Closely resembles *Odontochilus pumilus*, and was confounded with it by Lindley.

2. **C. malleifera**, Parish & Reichb. f. in *Trans. Linn. Soc.* xxx. 141; glabrous, leaves very small ovate acute, raceme 3-5-fld., lobes of lip entire.

TENASSERIM; on Zwakabin, Parish.

Very like *C. pusilla*, but there is no appearance in the specimens of a moniliform stem, leaves rather larger, flowers not half the size, lip with a longer and shallower base, and quite entire somewhat hatchet-shaped lobes; anther with a dilated membranous apex.

3. **C. Griffithii**, Lindl. in *Journ. Linn. Soc.* i. 188; scape pubescent, flowers 1-3 large, limb of lip reniform lacinate, appendages of column linear. *Goodyera* No. 9, Griff. *Notul.* iii. 393.

KHASIA HILLS, alt. 4-5000 ft., Griffith, Lobb, Clarke. PEGU, Kurz (in Herb. Calcutt.). TENASSERIM; on Mt. Tungoo, Parish.

Stem below prostrate. *Leaves* 1 in., shortly petioled, ovate, acuminate; sheaths very large, cupular, hyaline. *Scape* 3-8 in., slender; sheaths and bracts large, loose, lanceolate; flowers nearly 1 in. long with the ovary, white with 2 green spots on the lip; sepals connate to the middle; petals narrowly spatulate; base of lip elongate, concave, with 2 series of glandular setæ within; claw short. *Capsule* $\frac{3}{4}$ in., pedicelled, pyriform.

4. **C. parvifolia**, Lindl. in *Bot. Reg.* 1839, *Misc.* 19; *Gen. & Sp. Orchid.* 488; in *Journ. Linn. Soc.* i. 187; raceme puberulous lax-fld., flowers minute, limb of lip subquadrate 6-8-lobed, appendages of the column dilated upwards rather short. *Thwaites Enum.* 313.

CRYLON; Ambagamowa district rare, Thwaites.

A span high. *Leaves* 2-3 about the middle of the slender stem, $\frac{1}{2}$ -1 $\frac{1}{2}$ in., ovate-lanceolate, acuminate. *Scape* slender, puberulous; raceme 8-10-fld.; bracts as long as the short pedicels; sepals $\frac{1}{2}$ in. long, glabrous, pink; petals oblong-obovate, obtuse, white; lip with a subsaccate base containing 2 small forked calli, limb white; column very short, rostellar arms subulate; anther ovate-cordate; pollinia pyriform, caudicle very short, gland linear.—The specimens are very poor, and the species is perhaps better placed in the following section.

** *Appendages of column shorter than the short rostellum, rarely as long.*

5. **C. flabellata**, Wight *Ic. v.* 16; scape glandular-pubescent, flowers subcorymbose, limb of lip suborbicular deeply 2-cleft, lobes sub 5-fld.,

appendages of column subspathulate; *Lindl. in Journ. Linn. Soc. i.* 187; *Thwaites Enum.* 313 (excl. in both *Syn. Zeuxine*); *Dalz. in Hook. Journ. Bot. iv.* (1852) 112; *Dalz. & Gibs. Bomb. Fl.* 271. *Monochilus flabellatus*, *Wight Ic. t.* 1727. *Goodyera flabellata*, *A. Rich in Ann. Sc. Nat. Ser. 2.* xv. 79, t. 12.

BHOTAN HIMALAYA, *Griffith*. TENASSERIM, *Parish*. The CONCAN, *Dalzel*. NILGHIRI HILLS, alt. 6000 ft., *Wight*, &c. CEYLON; Ambagamowa district, *Thwaites*, *Beckett*.

Stem sometimes moniliform below as in *C. pusilla*, but stouter. *Leaves* $\frac{1}{2}$ – $\frac{3}{4}$ in., petioled, ovate, acute. *Scape* 6–8 in.; sheaths and bracts loose, acuminate; flowers 2–10, white, glandular-pubescent, perianth hemispheric; petals linear-oblong, falcate; sac of lip cymbiform, with 2 calli within; base hairy, claw short with 2 green spots; column very short, appendages subterminal and rostellar arms both subspathulate; anther with a dilated membranous tip; pollinia pyriform, subsessile on the elongate lanceolate gland.

6. ***C. pubescens***, *Parish & Reichb. f. in Trans. Linn. Soc. xxx.* 141; scape pubescent, limb of lip 2-lobed, lobes subquadrate crenate, appendages of the column cuneately obovate much shorter than the subspathulate arms of the rostellum.

TENASSERIM; at Moulmein, *Parish*.

Stem stout, ascending. *Leaves* $1\frac{1}{2}$ –3 in., ovate or ovate-lanceolate, acuminate; petiole slender. *Scape* 3–6 in.; sheaths and bracts lax, acuminate; raceme 3–10-fl.; perianth $\frac{1}{2}$ in. long; sepals connate to the middle; lip with a small concave 3-nerved base, lateral nerves with one slender callus; claw rather broad; anther truncate. *Capsule* $\frac{1}{2}$ in., pyriform, pedicelled.

91. **ZEUXINE**, *Lindl.*

Terrestrial herbs; stem creeping below. *Leaves* membranous. *Flowers* small, spicate. *Sepals* subequal, dorsal concave, cohering with the petals; lateral free. *Lip* inferior, adnate to the base of the column, cymbiform or saccate with a shortly-clawed or sessile entire 2-lobed or 2-winged terminal lobe; sac with 2 calli or spurs near the base within. *Column* very short, 2-keeled or -winged in front; stigmatic lobes 2, marginal, distant; anther membranous, cells contiguous; pollinia pyriform, attached by an oblong gland to the erect rostellum with often an intermediate appendage or a linear caudicle.—Species about 20, tropical Asia and Africa.

I refer to *Zeuxine* those species of *Heteria* that have large terminal lobes to the lip. The appendage between the gland of the pollinia and the pollinia itself is a very curious organ, and its real nature has not been ascertained, whether rostellar or pollinar; it occurs only in some species, and in these under very various forms, so that it cannot be relied on as a generic character. It is further so difficult of analysis in dried specimens, that much allowance must be made for my description of it.

Sect. 1. EUZEUXINE, *Lindl.* *Leaves* sessile, linear-lanceolate.

1. ***Z. sulcata***, *Lindl. Gen. & Sp. Orchid.* 485; in *Journ. Linn. Soc. i.* 186; *Griff. Notul.* iii. 396; *Ic. Plant. Asiat. t.* 349; *Blume Orchid. Archip. Ind.* 67; *Miquel Fl. Ind. Bat.* iii. 723. *Z. bracteata*, *brevifolia*, & *robusta*, *Wight Ic.* 1724 bis, 1725, 1726. *Z. membranacea*, *Lindl. Gen. & Sp.* 486; in *Journ. Linn. Soc. l. c.*; *Blume Orchid. Archip. Ind.* 68. *Z. Tripleura*, *Lindl. in Journ. Linn. Soc. l. c.* *Z. integerrima*, *Lindl. Gen. & Sp.* 486;

Blume Fl. Jav. 55, t. 19 and 23 C; *Orchid. Archip. Ind.* 67; *Miquel. l. c.* *Z. emarginata*, *Lindl. Gen. & Sp. l. c.* *Z. procumbens*, *Blume Fl. Jav.* 56, t. 22, f. 3 and t. 23 B; *Orchid. Archip. Ind.* 68. *Tripleura pallida*, *Lindl. in Wall. Cat.* 7391; *Gen. & Sp.* 452. *Adenostylis emarginata & integerrima*, *Blume Bijdr.* 414, t. 17. *Pterygodium sulcatum*, *Roxb. Fl. Ind.* iii. 452. *Corycium?* *humile*, *Herb. Ham.*

Throughout INDIA, in the plains and lower hills, from the Panjab and Scinde to ASSAM, CHITTAGONG, and southward to CEYLON.—DISTRIB. Afghanistan, Java, China, Philippines.

Stem 2–16 in., erect, glabrous, leafy to the top. *Leaves* few or many, 1–2 in., erect, acuminate, margins usually recurved. *Spike* $\frac{1}{2}$ –2 in., dense-fl., nearly glabrous; bracts $\frac{1}{2}$ – $\frac{1}{2}$ in., erect, lanceolate, acuminate, hyaline, 1-nerved; flowers white, yellow, or very pale rose; sepals $\frac{1}{2}$ in. long, oblong, obtuse, membranous; petals oblong, obtuse, hyaline; lip yellow, equalling the sepals, cymbiform, contracted into a short pubescent claw bearing a hammer-headed terminal lobe or 2 small lobes; column short, rostellum short; anther short, ovate; pollinia pyriform, attached within the tip of a linear appendage of the gland. *Capsule* $\frac{1}{2}$ in. long, ellipsoid.—The commonest Indian Orchid, very variable in size. The tall form, *Z. membranacea*, has large flowers, and may prove distinct, but there appears to be many intermediate forms.

Sect. 2. MONOCHILUS, *Wall. (Gen.)*. *Leaves* ovate.—All scapigerous.

* Claw of terminal lobes short with involute margins.

† Terminal lobe of lip very small, entire or subentire.

2. *Z. goodyeroides*, *Lindl. Gen. & Sp. Orchid.* 486; leaves ovate green with a median pale stripe, spike nearly glabrous, lip cymbiform terminal lobe orbicular or oblong concave membranous. *Monochilus galeatus*, *Lindl. in Journ. Linn. Soc.* i. 187.

EASTERN HIMALAYA; from Sikkim, alt. 6–8000 ft., to Mishmi, *Griffith, &c. Pegu, Kurz in Herb. Calcutt.*

Stem 2–4 in. *Leaves* 1–1 $\frac{1}{2}$ in., sessile or shortly petioled, obtuse acute or acuminate, sheaths short. *Scape* 3–6 in., slender; spike lax-fl.; bracts equalling the glabrous ovary; sepals $\frac{1}{2}$ in. long, dorsal ovate, acute, lateral lanceolate 1-nerved; petals falcate, very obtuse; lip wholly included, coriaceous, with 2 short spurs within; rostellar arms small; stigmatic lobes distant; pollinia pyriform, attached by a slender caudicle to the oblong gland.

3. *Z. reniformis*, *Hook. f. Ic. Plant. ined.*; leaves approximate ovate-lanceolate acuminate, scape short pubescent, bracts longer than the pubescent ovary, sepals ovate 3-nerved subacute glabrous, lip included, sac hemispheric with 2 toothed calli within, terminal lobe reniform crenate.

PERAK, *Scortechini*.

Stem 6–10 in. below the leaves. *Leaves* 2–3 $\frac{1}{2}$ in., membranous, base rounded; petiole $\frac{1}{2}$ in., slender, sheath short inflated. *Scape* 2 in.; spike about as long; bracts $\frac{1}{2}$ in., lanceolate, hyaline; sepals $\frac{1}{2}$ in. long, membranous, ovate, obtuse, 3-nerved; petals $\frac{1}{2}$ in., orbicular, long-beaked, 3-nerved; limb of lip with 2 small appendages at the base; column 2-winged in front; rostellar arms long, fleshy, trumpet-shaped; anther lanceolate; pollinia pyriform attached separately to the face of a large cuneately quadrate horny appendage which is continuous with the triangular gland, margin of gland and appendage recurved.

†† Terminal lobe of lip 2-winged.

4. *Z. longilabris*, *Benth. in Gen. Plant.* iii. 600; spike pubescent,

lip much longer than the sepals, wings of terminal lobe elongate toothed. *Monochilus longilabre*, *Lindl. Gen. & Sp. Orchid.* 487; in *Journ. Linn. Soc.* i. 186. *M. affinis*, *Wight Ic.* t. 1728 (not of *Lindl.*).

ASSAM, LOWER BENGAL and CHITTAGONG, *Clarke*. WESTERN GHATS; in the S. Concan, *Stocks*, and Travancore, *Wight*. CEYLON, in the drier parts of the island, *Macrae*, *Thwaites*.

Leaves 1-1½ in., near the base of the short stem, shortly petioled. *Scape* very slender and elongate, lax-flid.; spike glandular-pubescent; bracts about equalling the ovary; sepals ¼ in. long, broad, obtuse, green; lip twice as long, sac with 2 spurs within, wings toothed on the outer margin, variable in breadth; anther beaked; pollinia clavate, adnate for about two-thirds of their length to the linear appendage of the gland.

5. **Z. regia**, *Benth. in Gen. Plant.* iii. 600; leaves ovate-lanceolate with a median pale stripe acute, spike pubescent, sepals and petals with recurved tips, lip rather longer than the sepals, wings suborbicular or cuneiform. *Monochilus regium*, *Lindl. Gen. & Sp. Orchid.* 487.

CEYLON; damp woods in the Central Province, ascending to 4000 ft., *Macrae*, &c.

Stem slender, elongate. *Leaves* 1½-2½ in., dark green, variable in breadth; petiole and sheath short. *Scape* 3-5 in.; spike few-flid.; bracts as long as the ovary; sepals ½ in. long, very obtuse; lip with a short saccate base; anther broadly ovate, beaked; pollinia clavate, pendulous from the small oblong gland, appendages 0.

6. **Z. nervosa**, *Benth. in Gen. Plant.* iii. 600; leaves broadly ovate acute, sepals ovate obtuse tips straight, spike pubescent, lip rather longer than the sepals, wings cuneate. *Monochilus nervosum*, *Wall. in Lindl. Gen. & Sp. Orchid.* 487; in *Journ. Linn. Soc.* i. 187. *Etæria nervosa*, *Lindl. in Wall. Cat.* 7381.

SIKKIM HIMALAYA, alt. 2-4000 ft., *J. D. H. SILHET*, *Wallich*. CAHAB, *Keenan*. BENGAL; at Comilla, &c., *Clarke*.

Stem rather stout. *Leaves* 1-2 in. *Scape* 2-5 in., stout or slender; spike 1-8 in., lax or dense-flid.; bracts equalling the ovary; sepals ¼ in. or less, green or purplish; anther didymous, apiculate; pollinia and their appendages as in *Z. reniformis*.—The Ceylon habitat cited by *Thwaites* is an error.

7. **Z. flava**, *Benth. in Gen. Plant.* iii. 600; leaves ovate acute, spike glabrous or pubescent, flowers very small, lip shorter than the sepals, wings broadly obovate or hatchet-shaped. *Monochilus flavum*, *Wall. in Lindl. Gen. & Sp. Orchid.* 487; in *Journ. Linn. Soc.* i. 187. *Etæria flava*, *Lindl. in Wall. Cat.* 7380 A, B.

NEPAL, *Wallich*. ASSAM, *Griffith*; on the Naga hills, *Prain*. TENASSERIM, *Helper*, *Griffith*. CEYLON; Central Province, alt. 3000 ft., *Thwaites*.—DISTRIB. Java, Borneo.

Stem usually elongate, slender. *Leaves* 1-1½ in., usually scattered, petioled or not; sheath usually much inflated, hyaline. *Scape* 3-6 in., very slender; spike 1-1½ in., lax-flid.; bracts usually exceeding the ovaries; sepals ⅓ in., obtuse; lip included, sac with 2 long spurs within; anther ovate-lanceolate; pollinia subglobose, attached by a simple caudicle to the lanceolate gland.—Much the smallest flid. species. A drawing in *Herb. Peradeniya* represents the flowers as white with a red lip.

8. **Z. affinis**, *Benth. in Gen. Plant.* iii. 600; leaves ovate or ovate-lanceolate, spike and ovaries pubescent, lip longer than the sepals, wings

obovate-oblong or subcuneate. *Monochilus* affine, *Lindl. Gen. & Sp. Orchid.* 487 (*excl. hab. Courtallum*). *Etæria* affinis, *Lindl. in Wall. Cat.* 7383. *E. flava*, *Wall. Cat.* 7380 C. *Ætheria mollis*, *Lindl. in Journ. Linn. Soc.* i. 184.

SIKKIM HIMALAYA; in the Terai, *Gamble*. KHASIA HILLS, alt. 5000 ft., *Griffith, & a.* BURMA; at Taong Dong, *Wallich*. TENASSERIM; at Moulmein, *Lobb, Parish*. PENANG, *Maingay*.

Very like *Z. flava*, but the flowers are much larger, and much more numerous, the sepals $\frac{1}{2}$ in. long, and the pollinia are pyriform, attached by an elastic caudicle to the oblong gland.

9. ***Z. abbreviata***, *Hook. f.*; leaves lanceolate acuminate, bracts ovate-lanceolate shorter than the slender erect glabrous ovaries, sac of lip with 2 lamellæ on the midrib and 2 large calli on each side, wings of terminal lobe obliquely ovate subacute entire. *Etæria abbreviata*, *Lindl. in Wall. Cat.* 7385; *Gen. & Sp. Orchid.* 491 (*Ætheria*). *E. lanceolata*, *Reichb. f. in Trans. Linn. Soc.* xxx. 142. *Dossinia lanceolata*, *Lindl. in Journ. Linn. Soc.* iii. 186.

NEPAL, *Wallich*. KHASIA HILLS, alt. 4–5000 ft., *J. D. H. & T. T.*

Whole plant 1 ft. *Leaves* $2\frac{1}{2}$ in., many nerved; petiole $\frac{1}{2}$ – $\frac{2}{3}$ in. *Spike* puberulous; sepals pink, broadly ovate, acuminate; petals semi-orbicular or lunate; column with 2 membranous wings on the face; rostellum very short, 2-fid.; anther ovate, obtuse; pollinia elongate, clavate, lamellate down to the large gland.

** Claw of terminal lobe of lip slender, not margined.

10. ***Z. moulmeinensis***, *Hook. f.*; slender, leaves elliptic, spike glandular-pubescent few-fld., bracts ovate-lanceolate shorter than the slender glabrous ovaries, sepals and petals aristately acuminate, sac of lip large globose didymous with 2 large calli within, claw straight rigid, lobes narrowly falcately cuneate lacerate. *Etæria moulmeinensis*, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 142.

TENASSERIM; at Moulmein, *Lobb, Parish*.

Stem slender, with the spike 12–18 in. *Leaves* 2–3 in., elliptic, acute or acuminate, membranous; petiole 1 in., slender. *Spike* 2–3 in., few-fld.; flowers not secund, spreading; ovary slender, $\frac{1}{2}$ in. long; sepals membranous, 1-nerved, dorsal ovate, lateral much broader; petals broadly dimidiate ovate with recurved points; sac of lip with caruncled callous sides, sub-4-celled by imperfect transverse and longitudinal septa, claw slender pubescent, lobes divaricate as long as the rest of the lip; column very short and stout with projecting cheeks on the anterior face; rostellum short, 2-fid.; anther short, ovate, obtuse; pollinia pyriform, attached to the gland by very short caudicles.—Possibly a *Cystorchis*.

11. ***Z. longifolia***, *Hook. f.*; tall, very robust, leaves large lanceolate acuminate, spike elongate laxly many-fld., rachis puberulous, bracts shorter than the long slender glabrous ovaries, sepals and petals aristately acuminate, lip very broad saccate, sac with trapeziform sides two caruncles within towards the base and a flattened uncinat one on the midrib, claw beyond the lobe narrow rigid, wings flabellate lacerate. *Hetæria longifolia*, *Benth. in Journ. Linn. Soc.* xviii. 346. *Rhomboda longifolia*, *Lindl. in Journ. Linn. Soc.* i. 181.

SIKKIM HIMALAYA; in lower valleys, *J. D. H.*

Stem procumbent at the base, as thick as a swan's quill, branched. *Leaves* 6–8 by $1\frac{1}{2}$ –2 in., many-nerved, midrib stout; petiole $1\frac{1}{2}$ in.; sheaths short. *Spike* 7 in.; flowers very obliquely gibbous, not secund; bracts ovate-lanceolate; ovary

$\frac{3}{4}$ in., very slender upwards; sepals 1-nerved, dorsal ovate, lateral triangular-lanceolate; petals semi-lunate with long points; lip when spread out subtriangular, truncate in front with the stout straight stiff claw projecting from between the lobes and bearing 2 wings; column very large, hollow, broadly truncate, almost cupular, with 2 cuneate ridges down the face, a very small rostellum, and a small stigmatic lobe on each side; anther sunk in the column, lanceolate; pollinia narrowly clavate.—A very singular plant.

92. **HYLOPHILA**, *Lindl.*

Terrestrial herbs; stem elongate, creeping. *Leaves* petioled, obliquely ovate-lanceolate. *Flowers* small, spicate, subglobose; perianth horizontal, connivent. *Sepals* acuminate, dorsal with the petals forming a hood; lateral very broadly ovate, concave. *Petals* falcate or subspathulate. *Lip* a subglobose sac contracted at the mouth, with a very small linear blade, and 2 glands within near the base. *Column* very short, appendages 0 or minute; stigma prominent, frontal under the very long forked rostellum; anther elongate, cells short; pollinia shortly caudicled.—Species 2, Malayan.

1. **H. mollis**, *Lindl. in Wall. Cat.* 7396; *Gen. & Sp. Orchid.* 490; leaves flat acuminate, bracts subulate, sepals $\frac{1}{2}$ in. long pubescent. *Blume Orchid. Archip. Ind.* 115, t. 35, 36 F.

SINGAPORE, *Wallich*. MALACCA, *Griffith (Kew Distrib.* 5337). PERAK, *Scortechini*.—DISTRIB. Sumatra.

Caudex flexuous, roots very thick. *Leaves* 3–4 in., black when dry, base unequal, acute. *Scape* 8–12 in., very slender, sheath $\frac{1}{2}$ in., scattered, subulate; spike 4–6 in.; bracts $\frac{1}{2}$ in., equalling the flowers; sepals 3-nerved; petals falcately lanceolate, acute.

2. **H. lanceolata**, *Hook. f.*; leaves caudate-acuminate, margins waved, bracts lanceolate, sepals $\frac{1}{4}$ in. long nearly glabrous. *Dicerostylis lanceolata*, *Blume Orchid. Archip. Ind.* 116, t. 38, f. 1.

PERAK, *Scortechini*.—DISTRIB. Java.

A much stouter plant than *H. mollis*; leaves larger, 4–5 in., petiole 1 in., red brown when dry; scape in the only specimen seen much shorter and stouter, bracts broader and more concave, flowers twice as large, ovary twisted, sepals 5-nerved, petals dimidiately obovate, 3-nerved. *Column* with a minute subulate process on each side below the stigma.

93. **GOODYERA**, *Br.*

Terrestrial leafy herbs; stem short, or elongate and creeping below. *Leaves* subradical, petioled. *Flowers* small, in often twisted spikes. *Sepals* subequal, dorsal erect, concave, forming a hood with the narrow petals; lateral free, erect or spreading, covering the sac of the lip or not. *Lip* inferior, sessile at the base of the column, entire, cymbiform or subsaccate, usually acute, naked or setose within. *Column* various, top cupular; stigma broad, anticus; rostellum erect; anther-cells distinct; pollinia granular, caudicled or not, pendulous from the rostellar gland.—Species 25, temp. and trop. Europe, Asia, N. America, N. Caledonia, and the Mascarene Islands.

* *Stem* tall, stout, 18 in.–2 ft. *Leaves* large, suberect, petioled, lanceolate or elliptic lanceolate acuminate.—The species of this group are not allied *inter se*, agreeing only in stature.

1. *G. procera*, Hook. *Exot. Flor.* t. 39; spike dense-fld., flowers minute, lip saccate softly setose within and with 2 large calli within the obtuse recurved tip, column very short, anther obtuse. *Lindl. Gen. & Sp. Orchid.* 493; in *Journ. Linn. Soc.* i. 183; *Don Prodr.* 28; *Wight Ic.* t. 1729. *G. carnea*, A. Rich. in *Ann. Sc. Nat. Ser.* 2, xv. 80. *Cionisaccus lanceolatus*, Breda *Orch. Kuhl et Hassk.* t. 1. *Cordylestylis foliosa*, Falconer in *Hook. Journ. Bot.* iv. (1842) 75. *Neottia procera*, Ker in *Bot. Reg.* t. 639.—*Leucostachys*, Hoffman *Preisverz. Orch.* 1842, ex *Linnea*, xvi., *Littlb.* 234.

TROPICAL HIMALAYA, alt. 1-3000 ft., from Garwhal to Upper Assam, the KHASIA and NAGA HILLS, and PEGU. NILGHIRI HILLS and MALABAR GHATS, *Wight*. CEYLON, ascending to 4000 ft.—DISTRIB. Java, China.

Root of thick tufted fibres. Stem 10-30 in., usually many-leaved. Leaves 4-8 by 1-2 in., thick, petiole very stout. Spike 3-8 in.; rachis glabrous or pubescent; bracts equalling the subglobose whitish fragrant flowers, which are $\frac{1}{2}$ in. diam.; sepals broadly ovate, obtuse, 1-nerved; petals spathulate; lip not longer than the column; pollinia broadly pyriform, sessile on the gland. Capsule $\frac{1}{2}$ in. fusiform.

2. *G. rubens*, Blume *Orchid. Archip. Ind.* t. 9 C, D; spike rather lax-fld., lip saccate beaked densely clothed within with soft tubercles or short setæ, column long slender, anther lanceolate, pollinia powdery narrowed into one slender caudicle.

PERAK; upper part of the Batang Padang Valley, alt. 2000 ft., *Wray*.—DISTRIB. Java, Philippines.

Habit and foliage of *G. procera*, but leaves obliquely elliptic-lanceolate and petiole more slender. Scape sheathed; spike 4-5 in.; rachis bracts and buds pubescent; bracts lanceolate, longer than the brownish-pink flowers; sepals $\frac{1}{2}$ in. long, 1-3-nerved, dorsal oblong-lanceolate, lateral broader below, not covering the sac of the lip, which is shorter than the column; column keeled in front; rostellar arms large, erect, stigma at their base very large orbicular; caudicles of pollinia as long as the clavate body.—A remarkable plant, with the exposed sac of the lip of *Cystorchis*, but all other characters of *Goodyera* except the very long column.

3. *G. fumata*, Thwaites *Enum.* 314; spike rather lax-fld., lip concave rhomboidly orbicular caudate-acuminate glandular within column clavate, anther ovate subacute.

CEYLON; in the Central Province, rare, Thwaites.

Three feet high and very stout. Leaves many, 6-10 by 3-4 in., obliquely elliptic-lanceolate; petiole 2-4 in., stout. Scape stout and spike glandular-pubescent; bracts shorter than or equalling the greenish-red flowers, lower sometimes elongate; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. long, ovate, acute, 1-nerved; petals dimidiate lanceolate, acuminate, falcate; lip as broad as high, many-nerved, abruptly contracted into a revolute ligulate tail; column almost funnel-shaped, rostellar beaks short.

** Stem 4-8 in., rarely more. Leaves 1-2 in., usually rosulate, ovate-cordate or lanceolate.

† Lip smooth channelled or lamellate within, but with no hairs or soft setæ.

4. *G. repens*, Brown in *Hort. Kew, Ed.* 2, v. 198; leaves ovate acute shortly petioled, spike secund pubescent, bracts equalling or exceeding the flowers, lip ventricose shortly beaked channelled within, column very short ovate. *Lindl. Gen. & Sp. Orchid.* 492; in *Journ. Linn. Soc.* i. 183; *Reichb. Ic. Fl. Germ.* xiii. t. 482; *Ledeb. Fl. Ross.* iv. 86; *Boiss. Fl. Orient.*

v. 90. *G. marginata*, Lindl. in Wall. Cat. 7394; *Gen. & Sp. Orchid.* 493; in *Journ. Linn. Soc. l. c.* *Satyrium repens*, Linn. *Sp. Pl.* 1339.

TEMEPRATE HIMALAYA, alt. 8–11,000 ft., from Simla eastwards to Sikkim.—
DISTRIB. Europe, N. Asia, N. America.

Stem 4–8 in. *Leaves* dark grey or mottled with paler, $\frac{1}{2}$ –1 in. *Spike* 1–4 in., often twisted, sometimes almost glabrous; flowers whitish; lateral sepals $\frac{1}{2}$ in., ovate, acuminate, 1-nerved, dorsal narrow; petals linear, falcate; rostellar arms short; pollinia small, pyriform, sessile on the small gland.

5. *G. fusca*, Hook. f. *Ic. Pl. ined.*; very robust; leaves radical broadly ovate, spike second pubescent, bracts exceeding the flowers, lip deeply saccate with a decurved beak strongly ridged within, column very short, anther very small stipitate didymous. *Ætheria fusca*, Lindl. in *Journ. Linn. Soc.* i. 184. *Cystorchis fusca*, Benth. in *Gen. Plant.* iii. 599.

SUBALPINE HIMALAYA; Harung, Munro; Garwhal, alt. 13,000 ft., Duthie; Sikkim, in the inner ranges, alt. 12–14,000 ft., J. D. H.

Roots densely tufted. *Stem* 6–12 in., often as thick as a swan's quill. *Leaves* revolute, 1–1 $\frac{1}{2}$ in., subacute, coriaceous; petiole very short and broad. *Spike* very many- and dense-flid.; sepals $\frac{1}{4}$ in., obtuse, dorsal narrow, 1-nerved, lateral ovate-oblong, sub-3-nerved; petals gibbously falcate; sac of lip protruding beyond the base of the sepals, 5–7-ridged within; column broad, rostellar arms subulate; anther apiculate.—Closely allied to *G. repens*, though much larger. Besides differing in habit and locality it wants the calli in the lip of *Cystorchis*, under which genus see observation.

6. *G. recurva*, Lindl. in *Journ. Linn. Soc.* i. 283; leaves linear-lanceolate acute, spike second sharply deflexed glandular-pubescent, bracts filiform exceeding the small flowers, lip deeply saccate, beak nearly straight 5-ridged within, column with long slender rostellar arms, anther acuminate.

KHASIA HILLS, Lobb; at Moflong, alt. 6000 ft., on mossy trunks, J. D. H. & T. T.

Stem 4–6 in., sheathed by the leaves, suddenly decurved at the top, so that the spike is pendulous. *Leaves* 2–3 by $\frac{1}{3}$ – $\frac{1}{2}$ in., thick, acute, nerveless, not reticulate, narrowed into the broad petiole. *Spike* 3 in. long; flowers completely second; sepals $\frac{1}{3}$ in. long, 1-nerved, acuminate, dorsal ovate-lanceolate, lateral broader, falcate; petals obliquely linear-lanceolate; lip rather longer than the column, tip obtuse. *Capsule* pedicelled, ellipsoid, $\frac{1}{4}$ in. long.

7. *G. Prainii*, Hook. f. *Ic. Pl. ined.*; leaves ovate acute, spike second recurved glandular-pubescent, bracts lanceolate equalling the flowers, lip cymbiform obtuse lamellate within, column with long rostellar arms, anther acuminate.

NAGA HILLS in Upper Assam; on Pulinabadya, alt. 7200 ft., Prain.

Very near *G. recurva*, but the leaves are 1–1 $\frac{1}{2}$ in., ovate and strongly reticulately nerved, the spike recurved, but not deflexed, the sepals are broader, the lateral not falcate, and the lip is less saccate.

8. *G. gracilis*, Hook. f. *Ic. Pl. ined.*; leaves few petioled elliptic-ovate, stem very slender nearly naked, spike short puberulous, bracts shorter than the flowers, lip straight oblong concave beaked below the emarginate tip, with two large calli at the base within, and a very thick channelled lamella on the disk, column short, rostellar arms slender.

PERAK, *Scortechini*.

Whole plant 8–10 in. high; stem slender, with 2–3 distant lanceolate sheaths.

Leaves 1-1½ in., obtuse or apiculate, nerves obscure, not reticulate, margins minutely crenulate. *Spike* ½-1 in., few-fl., twisted; flowers crowded; sepals ¼ in. long, linear-oblong, obtuse, 1-nerved; petals linear, nearly as broad as the dorsal sepal; lip nearly as long as the sepals, narrow, margins incurved, very thick; rostellar arms slender; anther lanceolate, pollinia narrow, sessile on a long gland.—In a drawing of this by Scortechini corresponding to his specimens the leaves are represented as more ovate, acute and strongly crenate.

†† *Lip within setose and tubercled.*

9. **G. foliosa**, *Benth. in Herb. Kew*; stem with an elongate decumbent base leafy to the tip, leaves petioled ovate-lanceolate, spike glandular-pubescent, bracts much exceeding the flowers, sepals ¼-½ in. 3-nerved, lip saccate, beak rather dilated, base within copiously setose, column short, rostellar arms very long slender, anther lanceolate. *Georchis foliosa*, *Lindl. Gen. & Sp. Orchid.* 496. *G. secundiflora*, *Griff. Notul.* iii. 393 (*excl. Plate*).—*Goodyera* sp. *Griff. It. Notes*, 36, No. 591; *Notul.* iii. 396, No. 11; *Ic. Pl. Asiat.* 346, f. 1.

SIKKIM HIMALAYA, alt. 5-6000 ft., *J. D. H.*, &c. ASSAM, the KHASIA and NAGA hills, ascending to 5000 ft., common. BURMA, *Griffith.* PERAK, alt. 7000 ft., *Wray.*

Stem 6-12 in., rather slender. *Leaves* 1½-2½ in., oblique, acute, green, 3-5-nerved, not reticulate; petiole ¼-¾ in., sheath short. *Spike* 2-3 in.; bracts ½-¾ in., nearly glabrous; flowers pink; sepals ovate-lanceolate, obtuse, 1-nerved; petals dimidiately-oblong, as broad as the dorsal sepal, 1-nerved; pollinia with slender united caudicles.—Distinguished from all others of this section by the elongate and leafy stem, except *G. vittata*, which has a glabrous spike.

10. **G. secundiflora**, *Lindl. in Journ. Linn. Soc.* i. 182 (*excl. cit. Griff. Notul. in part & Ic.*); leaves few subradical ovate acute, mottled with white, spike glandular-pubescent lax-fl. second, bracts shorter than the flowers, petals oblancoate, lip saccate sparsely setose within, beak short lamellate in the disk, column short, rostellar arms slender, anther ovate acuminate. *Goodyera* sp. No. 6, *Griff. Notul.* iii. 392; *Ic. Plant. Asiat.*, t. 347, f. 2.

KHASIA HILLS, alt. 4-5000 ft. *Griffith*, &c. MUNNIPORE, alt. 9000 ft., *Watt.*—*DISTRIB.* China (*Herb. Lindl.*).

Stem strict, with spike 6-10 in., subtomentosely glandular above. *Leaves* 1½-2 in., rarely elliptic, acute, petiole ¼-½ in. *Spike* 2-3 in.; flowers all second, pubescent, white; sepals 1-nerved, lateral ¼-½ in. long, ovate, acute, dorsal much narrower; petals subfalcate, crenate on the outer edge, 1-nerved; lip setose on the 5-7 nerves within.

11. **G. robusta**, *Hook. f. Ic. Plant. ined.*; very robust, leaves subradical ovate-lanceolate acute, spike glandular-tomentose lax-fl., bracts shorter than the second flowers, petals spathulate, lip saccate sparsely setose within, beak short lamellate in the disk, rostellar arms slender, anther lanceolate.

KHASIA HILLS, alt. 4000 ft. *J. D. H. & T. T.*

Closely allied to *G. secundiflora*, but three times the size, and very robust, 18 in. high, including the spike, which is 7 in. long; the leaves are 3-4 in. long, whole coloured, the lateral sepals ¼-½ in. long, and the petals are clawed, gibbously spathulate and acute.—Named by Lindley *G. secundiflora*; but I think it quite different.

12. **G. vittata**, *Benth. in Herb. Kew*; quite glabrous, leaves subradical ovate acute dark green with white nerves, bracts about equalling

the flowers, lip saccate long-beaked setose within, beak 2-lamellate on the disk. *Hook. f. Ic. Plant. ined.* *Georchis vittata*, *Lindl. in Journ. Linn. Soc. i.* 184.

SIKKIM HIMALAYA, alt. 6-9000 ft., *J. D. H.*

Stout, 4-6 in. high, leafy nearly up to the spike. *Leaves* $1\frac{1}{2}$ -3 in., fleshy, dark green above, purplish beneath. *Spike* 2-3 in.; flowers subsecund; sepals 3-nerved, white with pink tips, lateral ovate acuminate, dorsal oblong-lanceolate; petals oblan-ceolate, falcate, 3-nerved; lip 7-nerved, acuminate; columnar arms elongate, subulate; anther ovate-lanceolate; pollinia with short caudicles and a long gland.—The only perfectly glabrous Indian species of this group.

13. *G. hispida*, *Lindl. in Journ. Linn. Soc. i.* 183; leaves sessile ovate-lanceolate acuminate, spike and flowers hispidly glandular, bracts shorter than the small flowers, lip saccate shortly obtusely beaked sparsely setose within. *Hook. f. Ic. Plant. ined.*

KHASIA HILLS, at Churra, alt. 4000 ft., *J. D. H. & T. T.*

Described from a solitary specimen, by Lindley, who observes its similarity to *G. repens*, except in the larger leaves, but who does not appear to have examined the lip, which differs from that of *repens* in the setose sac. It is nearer *G. secundiflora*.—Whole plant only 5 in. high. *Leaves* 2 in., whole-coloured, not reticulate; spike twisted; flowers white; sepals 1-nerved, lateral $\frac{1}{4}$ in. long, ovate-oblong, obtuse; petals oblong-lanceolate, nearly straight, 1-nerved; columnar arms subulate; anther lanceolate; pollinia narrow, with short caudicles and a large gland.

14. *G. cordata*, *Benth. in Herb. Kew*; leaves subradical ovate-cordate, spike puberulous few and lax-flid., bracts shorter than or equalling the large suberect flowers, lip rhomboid-ovate obtuse many-nerved setose at the subsaccate base within. *Hook. f. Ic. Plant. ined.* *Georchis cordata*, *Lindl. Gen. & Sp. Orchid.* 496 (*excl. habitat*); *Reichb. f. in Gard. Chron.* 1879, ii. 520.

KHASIA HILLS, alt. 3-4000 ft. *J. D. H. & T. T.* UPPER ASSAM; in the NAGA HILLS, *Prain*. ? PERAK, *Scortechini*.

Rather slender, 6-12 in. high. *Leaves* $1\frac{1}{2}$ -2 $\frac{1}{2}$ in., variable in depth of basal sinus, acute; petiole $\frac{1}{4}$ - $\frac{1}{2}$ in., slender. *Spike* 4-8-flid.; flowers pubescent; sepals $\frac{3}{4}$ in. long, 3-nerved, subequal, ovate-lanceolate, obtuse; petals dimidiate-obovate, 2-3-nerved; column stout, with projecting cheeks; rostellar arms and anther very long and slender; pollinia slender, with long slender connate caudicles.—The largest flowered Indian species, except *G. biflora*. In the Perak specimen the front row of setæ within the lip are clavellate.

15. *G. biflora*, *Hook. f. Ic. Plant. ined.*; stem short stout leafy, leaves ovate, spike 2-4 flid. pubescent, bracts slender shorter than the very large second flowers, sepals narrow, 3-nerved lateral cuneate at the base, lip saccate at the base with a long recurved beak, sac setose within. *Georchis biflora*, *Lindl. in Wall. Cat.* 7379; *Gen. & Sp. Orchid.* 496.

TEMPERATE WESTERN HIMALAYA, alt. 4-6000 ft. Nepal, *Wallich*; Garwhal, *Edgeworth*; Simla, *Gamble*.

Stem 2-3 in., leafy. *Leaves* 1-2 in., obtuse or subacute, petiole $\frac{1}{4}$ - $\frac{1}{2}$ in. *Raceme* hardly exceeding the leaves, rachis stout; bracts 1 in.; sepals 1 in., dorsal narrowly lanceolate recurved, lateral nearly straight; petals linear, falcate, 3-nerved; lip with a setosely 5-nerved base, beak twice as long as the sac, margins membranous waved; column concave in front, rostellar arms and anther very long and slender. *Capsule* nearly 1 in. long.

94. *HETERIA*, *Blume*. (ETHERIA).

ÆTHERIA, *Endl.*

Characters of *Goodyera*, but lip usually superior, and adnate to the

sides of the column, and stigma with 2 lateral lobes.—Species about 13, Indian.

1. **H. Gardneri**, *Benth. in Gen. Plant.* iii. 604; tall, slender, leaves elliptic acute, spike very long glandular pubescent, bracts equalling the very small flowers, petals linear-spathulate, lip saccate membranous with a few small calli on the nerves within. *Rhamphidia Gardneri*, *Thwaites*, *Enum.* 313.

CEYLON; in the Central Province, *Walker*, &c.

Stem 12–20 in., stout and leafy below. *Leaves* 2–4 by $1\frac{1}{2}$ –2 in., often oblique, 3-nerved, membranous; petiole $\frac{1}{2}$ –1 in., sheath large, short. *Spike* 4–10 in., very many-fld.; flowers hardly secund; bracts $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in. long, obtuse, dorsal ovate 1-nerved, lateral oblong 3-nerved; petals linear-spathulate, 1-nerved; lip cymbiform; column very short, stigmatic lobes large, lateral; rostellar arms and anther short, pollinia subglobose, each caudicled.—*Thwaites* describes the lip as with a very few short hairs within.

2. **H. ovalifolia**, *Benth. in Gen. Plant.* iii. 164; slender, leaves elliptic acute, spikes elongate glandular-pubescent, bracts exceeding the very small flowers, petals obovate-oblong, lip saccate tip obtusely 3-toothed, nerves with tooth-like calli towards the base. *Goodyera ovalifolia*, *Wight. Ic.* t. 1730. *Rhamphidia ovalifolia*, *Lindl. in Journ. Linn. Soc.* i. 181 (*excl. habitat*).

MALABAR; at Courtallam, *Wight*.

Very near to *H. Gardneri*, but smaller, 10–14 in. long, leaves the same, bracts rather longer. *Flowers* tinged with pink; dorsal sepal broadly ovate, obtuse, 1-nerved; lateral oblong, 3-nerved; column very short, stigmatic lobes marginal, very large; rostellar arms minute, pollinia as in *H. Gardneri*.—*Lindley* in *Journ. Linn. Soc.* whilst wrongly ascribing a Sikkim specimen of *H. rubens* to this, rightly describes the lip as 3-fid.

3. **H. rubens**, *Benth. in Gen. Plant.* iii. 164; tall, leaves elliptic acute, spike puberulous, bracts equalling or exceeding the flowers, petals hammer-shaped, lip subhemispheric with a small transverse terminal lobe and a jagged callus on each side towards the base within. *Hook. f. Ic. Plant. ined.* *Rhamphidia rubens*, *Lindl. in Journ. Linn. Soc.* i. 182. *Cerochilus rubens*, *Lindl. in Gard. Chron.* 1854, 87. *Goodyera*, No. 4, *Griff. Notul.* iii. 390.

SIKKIM HIMALAYA, alt. 1500–3000 ft., *J. D. H. Clarke*. ASSAM, *Mann*. UPPER BURMA, *Griffith (Kew Distrib., 5341 and 5342)*.

Rather stout, 10–18 in. high. *Leaves* 4–5 by $1\frac{1}{2}$ –2 in., as in *ovalifolia*, reticulately nerved in the Sikkim specimen; flowers twice as large, greenish-purple; sepals 1-nerved, broadly ovate; petals clawed, very gibbous on one side; lip short, terminal lobe sometimes 2-fid; column very short indeed, with two small wings in front; anther ovate-cordate; pollinia pyriform, subsessile on the gland; stigmatic lobes large, rostellar arms very short.

4. **H. Helferi**, *Hook. f. Ic. Plant. ined.*; slender, leaves elliptic, spike puberulous twisted, bracts shorter than the flowers, petals linear falcate, lip membranous cymbiform acuminate with a few fleshy cilia on each side towards the base within.

TENASSERIM; Misses Eider Islands, *Helfer*.

Stem 6–10 in. with the raceme. *Leaves* 3–4 in., acute, many-nerved, membranous. *Spike* 3–6 in.; bracts narrowly lanceolate; sepals $\frac{1}{2}$ in. long, subequal, ovate-oblong, obtuse, hairy, 1-nerved; lip small; column short with 2 membranous wings in front, and very short rostellar arms; anther ovate-cordate.

5. *H. elongata*, Lindl. in Wall. Cat. 7384 (Etæria); *Gen. & Sp. Orchid.* 494; tall, slender, leaves petioled oblong subacute, scape and elongate lax-fl. raceme and flowers laxly tomentose, bracts shorter than the erect ovary, sepals oblong obtuse, petals broadly obliquely obovate apiculate, lip cymbiform acute 5-nerved, nerves with 1-2 soft spines towards the base. *Hook. f. Ic. Plant. ined.* *Goodyera*? *elongata*, Lindl. *Gen. & Sp. Orchid.* 494.

MALAY PENINSULA, *Herb. Finlayson.*

Stem with scape and racemes 18 in., lower half leafy. *Leaves* 2-3 in., membranous, lower obtuse; petiole $\frac{1}{2}$ - $\frac{3}{4}$ in., slender; lower sheaths hyaline, inflated. *Scape* with distant lanceolate sheaths; raceme 4 in.; bracts $\frac{1}{2}$ in., lanceolate; sepals $\frac{1}{2}$ in. long; lip superior, membranous, adnate to the sides of the column; column short, flat, without wings or membranes in front, as long as the sepals; stigmatic lobes lateral; rostellar arms subulate; anther ovate-cordate; pollinia subglobose, caudicles as long slender, gland rather large, oblong.

6. *H. elata*, *Hook. f. Ic. Plant. ined.*; spike dense-fl., flowers minute, lip minute hemispheric, base within with 2 large calli on each side and with a thickened incurved transverse fold towards the apex which is tipped with a small orbicular membranous appendage, column very short, anther obtuse.

PERAK, *Scortechini*; or Batang Padong, alt. 4900 ft., *Wray*.

Habit of *Goodyera procera*, but petioles more slender, flowers rather smaller, lateral sepals more acute, petals broader, denticulate, and lip very different; column very short and broad, with short distant subacute rostellar arms, and two marginal stigmatic lobes.—The structure of the fleshy lip which is only $\frac{1}{2}$ in. long is difficult to make out, it is no larger than the column.

DOUBTFUL SPECIES.

H. ANOMALA, Lindl. in Journ. Linn. Soc. i. 185; leaves ovate acute, spike few-fl. and flowers hispidly hairy, sepals ovate-oblong, petals linear-spathulate very narrow, sac of lip with 2-3 cellular flattened crenate calli, terminal lobe transverse white wings subquadrate. *Goodyera*, *Griff. Notul.* iii. 394.

UPPER ASSAM in the Tingree Tea forests, *Griffith*.

A foot and a half high. *Leaves* petioled, 5-nerved. *Buds* posticous; bracts ovate-lanceolate pubescent, longer than the ovary; sepals greenish-brown, with white tips, hispid with reflexed hairs; lip continuous with the base of the short column, which has a membranous tooth on each side, an anticous stigma, subulate rostellar arms, and with a crested cellular process in front towards the centre; anther ovate fleshy; pollinia narrow, slender, sectile, sessile on the lanceolate gland, grains elongate scale-like.—Description from Griffith, who adds a notice of deformities of the column, the stigma being posticous, i.e. facing the anther, &c.

95. *APHYLLORCHIS*, Blume.

Terrestrial leafless herbs, caudex tuberous (or of fascicled fibres?); stem simple, sheathed. *Flowers* small, racemed or subspicate. *Sepals* subequal, free, erect or spreading. *Petals* narrower. *Lip* sessile or shortly clawed, at the base of the column, as long as the sepals; base 2-auricled or not, blade oblong, entire or 3-lobed. *Column* rather long; stigma short, ovate, concave; anther shortly stipitate, cells contiguous; pollinia reniform.—Species 5? Indian and Malayan.

* *Flower buds straight.*

1. *A. montana*, *Reichb. f. in Linnæa*, xli. 57; sepals and petals linear-oblong obtuse, lip narrowly obovate-oblong contracted beyond the

middle, and side lobes rounded at the base, claw short broad with 2 linear-calli tip obtuse thickened. *Apaturia montana*, *Thwaites Enum.* 301 (not of *Lindl.*).

? KHASIA Mts., alt. 3500 ft., and SIKKIM HIMALAYA, *Griffith*. CEYLON; Ambagamowa district, rare, *Thwaites*.

Stem 2 ft., with 8–10 loose stout basal sheaths, and a few distant higher up; yellowish tinged with purple. *Raceme* 4–8 in., lax-fl.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., lanceolate, acuminate; pedicel with ovary $\frac{3}{4}$ –1 in.; sepals $\frac{1}{2}$ – $\frac{3}{4}$ in., and petals straw-coloured, backs and tips purple; lip broader than the sepals, base contracted into the subsaccate short claw, nerves with diverging nervules; column very slender.—I find no sufficient character whereby to separate the Sikkim and Khasia specimens, but these latter are quite insufficient for identification.

2. **A. Prainii**, *Hook. f. Ic. Plant. ined.*; sepals and petals linear-oblong, obtuse, lip ovate, claw saccate with two falcately ovate acute wing-like auricles.

NAGA HILLS; *Prain*.

Very like *A. montana* in size, habit, and inflorescence; distinguished by the winged claw of the lip. I have seen but one specimen.

3. **A. ? vaginata**, *Hook. f. Ic. Plant. ined.*; stem stout clothed with lax obtuse sheaths, lip sessile lanceolate acuminate.

KHASIA HILLS; at Mamloo, in woods, alt. 5000 ft., *J. D. H. & T. T.*

Stem 6 in., stout; sheaths $\frac{1}{2}$ in., loose, membranous, obtuse. *Raceme* few-fl.; bracts large sheathing; flowers subsessile, erect, about $\frac{1}{2}$ in. across, dingy red; sepals broadly ovate, obtuse, 3-nerved; petals lanceolate, acuminate, 1-nerved; lip broader than the sepals, as long, with no vestige of claw or caruncle; column shorter than in the other species of the genus, acuminate.—I have seen but one specimen of this curious plant which differs from its congeners in the sessile lip and shorter column. The flowers are young, and too much confidence must not be placed in the diagnosis.

** *Flower buds decurved.*

4. **A. pallida**, *Blume Bijdr. t. 77; Orchid. Archip. Ind. 52, t. 13, f. 1 & 17 D.*; sepals and petals falcate, claw of lip with large oblique auricles, limb 3-lobed, base cordate, side lobes oblong, midlobe oblong obtuse caruncled.

PERAK, *Scortechini*, in rocky places, alt. 800–1000 ft., *King's Collector*, alt. 3900 ft., *Wray*.—DISTRIB. Java.

Root of long tomentose fibres. *Stem* 12–18 in., rather flexuous, slender, spotted with brown-pink; sheaths few, obtuse. *Racemes* 2–6 in., lax-fl.; bracts oblong, upper ovate; pedicel erecto-patent, with the ovary $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers $\frac{1}{2}$ in. long, decurved, pale brownish-pink, spotted with dark brown; sepals linear-oblong, obtuse, concave; petals strongly falcate, 1-nerved; lip recurved; column subclavate; anther didymous; pollinia (*Scortechini*) pyriform (in *Scortechini*, reniform).

96. **CRYPTOSTYLIS**, *Br.*

Terrestrial herbs; caudex short, stout. *Leaves* basal, long petioled; membranous. *Scape* leafless. *Flowers* loosely racemed or subspicate. *Sepals* subequal, and petals very narrow, widely spreading. *Lip* superior, erect, lanceolate from a broad base which embraces the column, contracted above it, entire. *Column* very short; stigma stout; rostellum broad, thick, erect, acuminate; anther obtuse or acuminate; pollinia

pyriform, free, or fixed to the rostellum.—Species 7, Indian, Malayan, and Australian.

C. Arachnites, *Blume Orchid. Archip. Ind.* 132, t. 45. *Zosterostylis Arachnites*, *Blume Bijdr.* 419, t. 32. *Z. zeylanica*, *Lindl. Gen. & Sp. Orchid.* 446; *Thwaites Enum.* 312. *Z. Walkerae*, *Wight Ic.* t. 1748 f. 4.

KHASIA HILLS, *Griffith*; at Churra, alt. 4500 ft., *Clarke*. PERAK, *Scortechini*, &c. PENANG, *Hullett*. CEYLON, *Walker*, ascending to 4000 ft., *Thwaites*.—DISTRIB. Java.

Root of long fleshy tomentose fibres. *Leaves* 1-3, all radical, 3-6 in., elliptic or elliptic-lanceolate, acute, many-nerved and trabeculate, primary nerves 3 indistinct; petiole rather longer, embraced at the base by membranous sheaths. *Scape* 8-18, slender; sheaths acuminate. *Raceme* 4-8 in.; bracts convolute, acuminate, equalling the ovary; pedicel with ovary decurved; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., greenish, acuminate, margins revolute; petals rather shorter, reflexed; lip as long as the petals, acuminate, purple, mottled. *Capsule* $\frac{1}{2}$ in., ellipsoid.—There is some little difference in the breadth of the lip between the Ceylon and Malayan forms, broader in the former, but I do not find that organ to be pubescent in either, or in the Khasian.

97. **CORYSANTHES**, Br.

Very small, terrestrial, 1-leaved, 1-fl'd. herbs. *Leaf* suborbicular. *Flowers* large, red-purple. *Dorsal sepal* falcate; laterals and petals filiform, or petals 0. *Lip* large, erect, base tubular, dilating into a broad reflexed toothed or fimbriate limb. *Column* short, erect, 2-winged at the tip; stigma broad; anther erect; pollinia oblong, free or sessile on the rostellum. *Capsule* erect on an elongate pedicel.—Species about 15, Australian and Malayan.

1. **C. picta**, *Lindl. Gen. & Sp. Orchid.*, 394; lateral sepals and petals much longer than the dorsal sepal, limb of lip broadly obovate erose puberulous within. *Blume Orchid. Archip. Ind.* 174, t. 64 f. 1. *Calcearia picta*, *Blume Bijdr.* 417, t. 33 right-hand figure.

PERAK; near the top of Tambak Batak, *Scortechini*.—DISTRIB. Java.

Stem 1-2 in., base scaly. *Leaf* terminal, ovate, deeply cordate, acuminate, margins waved. *Flower* sessile, bracts $\frac{3}{4}$ in., subulate-lanceolate; dorsal sepal with a long claw, margined with white, and a broad deep violet cuneate emarginate hood; lip strongly recurved, claw embracing the column produced and 2-fid at the base, limb reflexed deep violet.

2. **C. fornicata**, *Lindl. Gen. & Sp. Orchid.* 394; lateral sepals and petals shorter than the dorsal sepal, limb of lip flabelliform with many rough short ridges. *Blume Orchid. Archip. Ind.* 175, t. 64, f. 2. *Calcearia fornicata*, *Blume Bijdr.* 417, t. 33, left-hand figure.

PERAK, Gunong Enar and Tambok Balak, *Scortechini*.—DISTRIB. Java.

Stem $\frac{1}{2}$ -2 in. *Leaf* $\frac{1}{2}$ - $\frac{3}{4}$ in., ovate-cordate, margin not waved. *Flower* sessile; bracts $\frac{1}{2}$ in., subulate-lanceolate; claw of dorsal sepal $\frac{3}{4}$ in., blade spathulate, 5-ribbed, rose-coloured; lip with a long erect convolute tube produced into two spurs at the base, and erose recurved glabrous ribbed limb marked with short blackish purple rugose concentric nerves that end abruptly at the same level towards the claw, and do not reach the margin.

98. **POGONIA**, Griff., Sect. NERVILIA.

Terrestrial tuberous 1-leaved herbs, leafing after flowering. *Leaf* very

broadly cordate or orbicular, strongly plicate. *Flowers* solitary, few, or many, racemed, horizontal or pendulous. *Sepals* and *petals* subequal, narrow, connivent or widely spreading. *Lip* inferior, adnate to the base of the column, sessile or sub-clawed, usually narrow, entire or 2-fid or 3-lobed; spur a very short sac. *Column* elongate, tip clavate, stigma oblong or broader; rostellum short; anther substipitate; pollinia 2 or 4. *Capsule* erect or pendulous.—Species about 30; of Sect. *Nervilia* about 12.

The above characters apply exclusively to the section *Nervilia*, (genus of Gaudichaud), to which all the Old World species of *Pogonia* belong; and which all flower before leafing. All the other species, except one Japanese, are New World, and their flowering stems bear leaves.—The species are very difficult of analysis from Herbarium specimens, but I have been greatly aided by the drawings in Herb. Kew, and those of Herb. Calcutt., kindly lent by Dr. King. All want revision.

* *Stem 1-3-fld.*

1. **P. plicata**, Lindl. *Gen. & Sp. Orchid.* 415; leaf orbicular-cordate hairy, stem 1-3-fld., lip embracing the column, tip dilated 2-lobed. *Epipactis plicata*, Roxb. *Fl. Ind.* iii. 454. *Arethusa plicata*, Andr. *Bot. Rep.*, t. 321.

LOWER BENGAL, the CONCAN & MYSORE, Roxburgh, &c.

Tuber globose. *Leaf* 2-4 in. diam., very many-nerved; petiole 1-3 in., often rusty-purple or brown. *Flowering stem* 4-6 in.; bracts small; flowers 1½ in. diam.; sepals and petals widely spreading, narrowly oblanceolate, acuminate, greenish; lip embracing the column, sides convolute, whitish or rose-coloured, tip pink.—Roxburgh observes and figures the tuberiferous suckers propagated from the apex of the petiole under the surface of the soil.

2. **P. biflora**, Wight. *Ic.* 7399; leaf unknown, stem 2-fld., lip obovate obtusely 3-lobed about the middle, embracing the column.

MALABAR; in the Wynaad jungles, Jerdon.

Tuber globose. *Flowering stem* 2-4 in.; bracts slender; flowers 1½ in. diam.; sepals and petals narrowly oblanceolate, white; lip pink, contracted at the base, side lobes rounded, midlobe emarginate crisped.—Amongst Parish's drawings is one of a similar Moulmein plant in flower only, with red-brown stem, pink sepals and petals, and a more clavate column than in Wight's figure.

3. **P. juliana**, Wall. *Cat.* 7399; leaf ovate-cordate glabrous, stem 1-fld., lip with 2 narrow falcate side lobes near the base which embrace the column, and a longer rhombic-lanceolate acuminate midlobe which is hairy at its base. *Hook. f. Ic. Plant. ined.* *Epipactis Juliana*, Roxb. *Fl. Ind.* iii. 453.

ASSAM (*Ic. in Herb. Calcutt.*). SILHET, Clarke. LOWER BENGAL, Roxburgh, Clarke. Ceylon; in the Doombura district; Thwaites.

Tuber globose. *Leaf* 2-3 in., 5-7-nerved, green or purple beneath; petiole short. *Flowering stem* 3-6 in.; bracts ensiform; flower about 2½ in. diam.; sepals and petals narrowly oblanceolate, acuminate, green; side lobes of lip white, midlobe spreading, white mottled with pink.—Amongst Parish's drawings is one of a Moulmein plant (*P. cuprea*, Par. mss.) like *juliana*, but with purple-green sepals and petals, and the hypochile longer than the epichile; it is in flower only.

4. **P. velutina**, Par. & Reichb. *f. in Trans. Linn. Soc.* xxx. 142; leaf orbicular-cordate velvety on both surfaces, stem 2-fld., lip shorter than the sepals embracing the column oblong-ovate obtuse.

TENASSERIM; at Moulmein, Parish.

Leaf 5-6 in. diam., many-nerved, rust-coloured; petiole very short. *Flowering stem* 4-12 in.; bracts very small; sepals and petals $1\frac{1}{2}$ in. long, narrowly lanceolate, dirty purple; lip ventricose towards the middle, flushed with pink, with two red purple branching nerves down the middle; column gibbously clavate.

5. ***P. macroglossa***, Hook. f. *Ic. Plant. ined.*; leaf unknown, stem 1-fld., lip longer than the sepals embracing the column strap shaped obtuse.

SIKKIM HIMALAYA; in hot valleys, J.D.H.; at Tumlong, alt. 6500 ft., Clarke.

Flowering stem 3-6 in.; bracts small, slender; sepals $1-1\frac{1}{2}$ in., linear-lanceolate, acuminate, white flushed with pink; lip $1\frac{1}{2}$ by $\frac{1}{2}$ in., of the same breadth from the rounded base to the rounded apex, except across the very small side lobes that project beyond the middle, nerves very slender; there is an appearance of lines of roughness on each side of the midrib opposite the side lobes. *Column* very slender, tip clavate.—Near *velutina*, but very distinct in the rather broader sepals, and shape of the remarkable lip which exceeds the sepals.

6. ***P. maculata***, Par. & Reichb. f. in *Trans. Linn. Soc.* xxx. 143; leaf orbicular-cordate glabrous, stem 2-fld., lip shortly spurred at the base embracing the column ovate-lanceolate 3-lobed about the middle woolly within. Hook. f. *Ic. Plant. ined.*

TENASSERIM; at Moulmein, Parish.

Leaf about 2 in. diam., about 13-nerved, green with a black-purple spot at the base of each fold beyond the middle; petiole 2-3 in. *Flowering stem* 5-6 in., slender; bracts minute; sepals and petals $\frac{3}{4}$ in., narrowly oblanceolate, green; lip equalling the sepals, yellow green with dark green veins; column rather slender; anther purple.

** *Flowers racemose. Bracts elongate, linear-lanceolate, reflexed.*

7. ***P. Gammiena***, Hook. f. *Bot. Mag.* t. 6671; leaf orbicular- or ovate-cordate acuminate glabrous, margin waved, sepals and connivent petals spathulately oblanceolate acute, lip saccate at the base, hypophyll narrow much longer than the orbicular waved hairy epichile.

TROPICAL HIMALAYA; from Garwhal, Falconer, &c., to Sikkim, Gammie, &c.

Leaf 6 in. broad and less, many-nerved, pitted between the folds; petiole 4-10 in., stout. *Flowering stem* 3-12 in., stout; bracts $\frac{3}{4}-\frac{3}{2}$ in., reflexed; sepals and petals 1 in. long, conniving, concave, pink; lip greenish-white or yellowish, as long as the sepals.

8. ***P. Scottii***, Reichb. f. in *Flora*, 1872, 276; leaf large reniform many-nerved glabrous, flowering stem tall stout, sepals and petals connivent linear-lanceolate acuminate, lip subclawed, base saccate, 3-lobed about the middle, side lobes obtuse, midlobe suborbicular velvety. ? *Pogonia*, No. 2, Griff. *Notul.* iii. 377; *Ic. Pl. Asiat.* t. 345.

SIKKIM HIMALAYA; at Darjeeling (ex Reichb.). CHITTAGONG; at Seetakoond (*Ic. in Herb. Calcutt.*). ? BURMA, Griffith.

Leaf 8 in. diam., abruptly acuminate, green, margin subundulate; petiole 12 in., very stout. *Flowering stem* dark brown, with raceme 18 in.; bracts $\frac{3}{4}$ in., reflexed; flowers horizontal, almost geniculate with the decurved ovary; sepals and petals $\frac{3}{4}$ in., connivent, dull green with red nerves; lip as long, yellow-white with purple nerves; top of column hairy on the back.—Lindley refers Griffith's plant to *P. carinata*, but the saccate base of the lip, and flowers set on at an angle with the ovary, rather indicate *P. Scottii*. These characters are not, however, shown in Griffith's drawing.

9. **P. carinata**, Lindl. *Gen. & Sp. Orchid.* 414; in *Journ. Linn. Soc.* iii. 45 (*excl. syn. Griff.*); leaf orbicular or cordate 7-9-nerved glabrous, sepals and petals narrowly oblanceolate acuminate, lip 3-lobed about the middle pubescent, side lobes very short, midlobe broadly ovate acute crenate, nerves rectangular. ? Dalz. & Gibs. *Bomb. Fl.* 270. *Epipactis carinata*, Roxb. *Fl. Ind.* iii. 452.

PLAINS OF INDIA; from Rohilcund to Lower Bengal, and the DECCAN PENINSULA. PEGU, Kurz.

Leaf $1\frac{1}{2}$ – $2\frac{1}{2}$ in. diam., cuspidate, not waved; petiole 1–2 in. Flowering stem with raceme 6–12 in., green; bracts $\frac{1}{2}$ in.; sepals and petals 1 in., green; lip not saccate at the base, white with red or purple veins.—I am unable to discriminate satisfactorily in Herbarium specimens of the flower (carefully moistened and laid out) between this and *flabelliformis*.

10. **P. flabelliformis**, Lindl. in *Wall. Cat.* 7400; *Gen. & Sp. Orchid.* 415; in *Journ. Linn. Soc.* iii. 45; leaf large orbicular-cordate many-nerved, lip 3-lobed about the middle, side lobes obtuse, midlobe ovate acute crisped and hairy. ? Dalz. & Gibs. *Bomb. Fl.* 270. *P. Nervilia*, Blume *Mus. Bot.* i. 32. *P. carinata*, Wight *Ic.* t. 1720. *Nervilia Aragoana*, Gaud. in *Freye. Voy. Bot.* 422, t. 35.

TROPICAL HIMALAYA; from Garwhal, alt. 4–5000 ft., Falconer, &c., eastwards. ? TENASSERIM, Parish.—DISTRIB. Marianne Islands, Timor.

Leaf 4–10 in. diam., cuspidate, margin waved; petiole 4–8 in. Flowering stem stout, 6–12 in.; raceme lax-fld.; flowers pale green; sepals $\frac{3}{4}$ in. long, linear-lanceolate, acute; petals rather narrower, obtuse; lip shorter than the sepals, like that of *P. carinata*, but white, and glabrous.—Differs from *carinata* in the many-nerved leaf; the flowers are not readily distinguishable in dried specimens. In a drawing by Parish the lip is represented as saccate at the base, truncate at the apex, with three green medial nerves meeting in the apex, and many red side nerves. In his specimen the tip of the lip varies to rounded, the side lobes are rounded, not acute as in *carinata*, and its nerves are not rectangular but ascending.

DOUBTFUL SPECIES.

POGONIA No. 1, Griff. *Notul.* iii. 376; stem 4 in. 1-fld., flower 1 in. long, sepals linear-lanceolate acuminate pale purplish-brown, petals narrower, lip white 3-lobed, side lobes rounded-oblong denticulate, midlobe obovate crisped pubescent white spotted and veined with purple and with 2 green veins and a yellow-green crest from the middle downwards, margins papillose.—Fields at Suddyah, in Upper Assam, smell of violets.

99. DIDYMOPLEXIS, Griff.

(LEUCORCHIS, Blume.)

Slender (parasitic ?) leafless, tuberous herbs. *Scape* simple, flexuous; flowers few, small, racemed; pedicels greatly elongate in fruit. *Sepals* dorsal and petals connate forming a 3-fld upper lip, lateral connate into an entire or 2-fld lower lip, forming a small mentum with the foot of the column. *Lip* inserted on the short foot of the column, very short, broad, entire, included, base and disk with small calli. *Column* long, narrowly 2-winged above and 2-toothed; stigma broad; anther low, shortly stipitate; pollinia 2, reniform, bipartite, 4? *Capsules* very long pedicelled.—Species 2 or 3, Indian, Malayan and Pacific.

D. pallens, Griff. in *Calcutt. Journ. Nat. Hist.* iv. 383, t. 17; *Hemsl. in Journ. Linn. Soc.* xx. 311, t. 28; *Kurz in Seem. Journ. Bot.* 1866, 40 (excl. *Syn. Epiblema & Gastrodia*). *Leucorchis sylvatica*, *Blume Mus. Bot.* i. 31; *Orchid. Archip. Ind.* 147, with woodcut. *Apetelon minutum*, *Wight Ic.* t. 1758. *Arethusa ecristata*, Griff. *Notul.* iii. 378; *Ic. Plant. Asiat.* t. 343, 344. *A. bengalensis*, *Hort. Bot. Calc.* *Epiphanes pallens*, *Reichb. f. in Seem. Fl. Vit.* 296.

LOWER BENGAL; from the foot of the Sikkim Himalaya to Calcutta. KURZ; in bamboo jungles, *Jerdon*. PERAK, *Scortechini*, *Wray*.

Root branching and tuberous; stem 4-6 in., sheaths loose. *Racemes* terminal, 4-8 fld.; bracts broadly ovate; flowers shortly pedicelled, dull yellow-white, perianth $\frac{1}{2}$ in. diam. subcampanulate; dorsal sepal ovate, obtuse, hooded; petals shorter and broader than the dorsal sepal, truncate, 3-nerved; lateral sepals united to the middle, free portions obtuse; lip stipitate, transversely or obcuneately oblong, membranous, with 3-median nerves between which the disk is papillose. *Capsule* 1-1 $\frac{1}{2}$ in., erect, fusiform, pedicel 3-8 in.—Ridley l. c. distinguishes his *D. pallens* from *Blume's sylvatica* by the entire lower lip of the latter, overlooking *Blume's* woodcut of the *sylvatica*, which represents it as 2-lobed.

100. GASTRODIA, Br.

Terrestrial leafless brownish tuberous herbs; stem erect, sheathed. *Flowers* in lax racemes. *Sepals* connate with the petals into a ventricose 5-lobed tube slit anteriorly. *Lip* short, base adnate to the foot of the column and to the perianth, blade entire. *Column* usually long, narrowly 2-winged, foot short or 0; rostellum small; stigma prominent; anther tumid; pollinia ecaudate, free.—Species 7, Asiatic, Malayan and Australasian.

1. **G. orobanchoides**, Benth. in *Gen. Plant.* iii. 617; lip adnate to the tube of the perianth with a short sessile ovate obtuse free plane blade. *Hook. f. Ic. Plant.* t. 1852. *Gamoplexis Falc. in Royle Ill.* 364; *Lindl. Gen. & Sp. Orchid.* 384; *G. orobanchoides*, *Falc. in Trans. Linn. Soc.* xx. 293, t. 13.

TEMPERATE HIMALAYA, alt. 7-8000 ft., from Kashmir to Garwhal, *Falconer*, &c.

Root a large oblong or ellipsoid annulate tuber, parasitic by a small fibrous base to roots. Stem 10-24 in., usually very stout; sheaths short, loose, truncate. *Raceme* loosely many-fld.; bracts oblong, acute, variable in size; flowers suberect, pedicels short; ovary turgid; perianth $\frac{1}{2}$ - $\frac{3}{4}$ in. long, ventricose, base gibbous, lobes very short obtuse, sepaline rather longer than the petaline; lip longer still, sessile, ovate, obtuse, recurved. *Capsule* $\frac{3}{4}$ in., erect, turgid.

2. **G. elata**, *Blume Mus. Bot.* ii. 174; *Orchid. Archip. Ind.* 143, t. 53; claw of lip adnate to the perianth and furnished with a pair of large fleshy prominent calli, limb free ovate-oblong.

CHUMBI; a Tibetan province east of Sikkim, *King's Collector*.—DISTRIB. China, Japan.

Habit, inflorescence and flowers of *G. orobanchoides*, but differing in the lip, the adnate claw of which has an almost reniform callus on each side, whereas in the first-named species the position of the claw on the perianth is marked by two thickened lines. The Chumbi specimen is a bad one, but having examined many flowers of it and of the Japan plant, I have no reason to doubt their identity.

3. **G. javanica**, *Endl. Gen. Plant.* 212; lip free from the tube of the perianth, blade broadly hastately cordate with two thickened ridges on the disk. *Lindl. Gen. & Sp. Orchid.* 384; *Thwaites Enum.* 311; *Blume, Orchid. Archip. Ind.* 145; *Mus. Bot.* ii. 175. *Epiphanes javanica*, *Blume Bijdr.* 421, t. 4.

CEYLON; near Ratnapoora, &c., *Thwaites*.

I have seen no specimen of the Ceylon plant, only the copy of a drawing in the Peradeniya Garden, kindly made for me by Thwaites, but it gives no analysis. This represents a slender plant with few flowers, an almost globose perianth divided to about the middle, and not representing a specimen of what may be the Javan plant in Herb. Kew collected by Lobb.

4. **G. ? Hasseltii**, *Blume Mus. Bot.* ii. 175; *Orchid. Archip. Ind.* 145, t. 52, f. 5-8; stem 6 in. rather slender, flowers few broadly campanulate $\frac{1}{2}$ in. long, lip quite free, claw slender, limb suborbicular with a broad truncate tip.

PERAK, *Is. Scortechini*.—DISTRIB. Java.

Without specimen either of Blume's or Scortechini's plants identification is impossible.

5. **G. exilis**, *Hook. f. Ic. Plant. ined.*; very slender, flowers minute, lip free sessile by a very small point ovate with 2 long wing-like lamellæ on the middle of the disk.

KHASIA MTS.; at Amwee in grassy places, alt. 3000 ft., *J. D. H. & T. T.*

Tuber $\frac{1}{2}$ – $\frac{3}{4}$ in., oblong; stem 6–12 in., filiform. *Racemes* few and lax-fl'd.; bracts ovate; flowers (with ovary) $\frac{1}{4}$ – $\frac{1}{2}$ in. long, erect, whitish; perianth cylindric, very shortly 5-lobed; sepaline lobes broad, obtuse; petaline much smaller, rounded, fimbriate (or glandular); lip as long as the column, membranous, faintly 5-nerved, base rounded; column acutely toothed at the truncate top. *Capsule* (unripe) $\frac{1}{2}$ in. fusiform.—A very singular species; difficult of analysis after having been dried.

100/1. **YOANIA**, *Maxim.*

A low stout leafless herb; stem with cucullate sheaths. *Flowers* racemose, long and stoutly pedicelled. *Sepals* oblong, obtuse, fleshy. *Petals* broadly ovate. *Lip* sessile at the foot of the column, very shortly clawed, cymbiform, obtusely apiculate. *Column* short, broad, margined, mid-lobe triangular, side lobes erect; stigma concave, transverse; anther long-beaked, 2-celled; pollinia 4, pulpy, sectile, attached in pairs to a viscid gland.

Y. japonica, *Maxim. in Bull. Acad. St. Petersb.* xviii. 68; *Mel. Biol.* viii. 647; *Benth. in Hook. Ic. Pl.* t. 1364.

MUNNIPORE; crest of Bareil range (S. W. of Japoo), alt. about 7000 ft., and on Kohima, *Prain*.—DISTRIB. Japan.

Brownish-white, glabrous. *Rootstock* stout, branched. *Stem* 3–6 in., tortuous in the Munnipore plant, erect in the Japanese, as thick as a goose-quill; sheaths $\frac{1}{2}$ in., shortly rounded; raceme short, 4–6 fl'd.; bracts like the sheaths; pedicel with ovary 1–1 $\frac{1}{2}$ in.; sepals $\frac{3}{4}$ in. long, and oblique obtuse petals many-nerved; lip very shortly clawed, almost hemispheric, with a thickened apex and axis, a small concavity within the lip and four strong flexuous nerves on each side. *Capsule* 2–2 $\frac{1}{2}$ in. long, stoutly pedicelled, erect, narrowly fusiform, ribs very stout.—Except in that the stems are sometimes curved, and the margins of the lip appear to be abruptly

thickened towards the tip, I find nothing to distinguish this from the Japan plant; the column and anther are identical; I failed to find pollen. The flowers, black when dry, are so fragile that I had great difficulty in making out their structure.

101. **EPIPOGUM**, *Gmelin*.

Terrestrial leafless brownish herbs; root tuberous or coralloid; stem erect, sheathed. *Flowers* laxly racemed. *Sepals* and *petals* subequal, free, narrow, erect or spreading. *Lip* sessile at the base of the column, superior or inferior, ovate, entire or 3-lobed, spurred, base broad, disk with rows of papillæ. *Column* short, foot 0; stigma broad, prominent; anther thickened, dorsally 2-cellèd; pollinia 2, separately attached by a filiform strap to a small gland.—Species the following.

1. **E. aphyllum**, *Swartz Summ. Veg. Scand.* 1814; root branching, column cylindric, spur very large as long as the superior 3-lobed lip inflated incurved, *Palmstr. Svensk. Bot.* t. 512; *Boiss. Fl. Orient.* v. 93; *Reichb. Ic. Fl. Germ.* xiii. t. 468; *Nees Gen. Fl. Germ. Monocot.* iii. No. 23. *E. Gmelini*, *Richard Orchid. Europ. Annot.* 36; *Lindl. Gen. & Sp. Orchid.* 383; in *Journ. Linn. Soc.* i. 176; *Bot. Mag.* t. 4821. *Satyrium Epipogium*, *Linn. Syst. Veg.* 676; *Jacq. Fl. Austr.* t. 84.

WESTERN TEMPERATE HIMALAYA, alt. 6–8500 ft., Kashmir, *Clarke*; Simla, *Thomson*; Garwhal, *Duthie*.—DISTRIB. Europe, N. Asia.

Stem 4–8 in., often very stout and swollen at the base; sheaths 1–2, short, appressed, truncate or obtuse. *Racemes* 3–6-fl. ; bracts large, membranous, oblong, obtuse or acute; flowers pale yellow or pinkish, spotted, ovary turgid; sepals $\frac{1}{2}$ – $\frac{3}{4}$ in. long and subequal petals lanceolate, margins involute; lip oblong, whitish, with lines of red glandular warts, lateral lobes small, very variable in size; spur obtuse.

2. **E. nutans**, *Reichb. f. in Bonpland.* 1857, 36; root an oblong tuber, spur straight shorter than the inferior entire lip. *Lindl. in Journ. Linn. Soc.* i. 177; *Benth. Fl. Austral.* vi. 308; *E. roseum*, *Lindl. l. c.* *Galera nutans*, *Blume Bijdr.* 415, t. 3; *Mus. Bot.* ii. 187; *Orchid. Archip. Ind.* 139, t. 52 & 54 E; *G. rosea*, *Blume Mus. Bot.* 188, & *Orchid. Archip. Ind.* 139; *Podanthera pallida*, *Wight Ic.* t. 1759. *Ceratopsis rosea*, *Lindl. Gen. & Sp. Orchid.* 383. *Limodorum roseum*, *Don Prodr.* 30.

TROPICAL HIMALAYA; Nepal, *Wallich*; Sikkim, in hot valleys, *J. D. H. Clarke*. KHASIA MTS., alt. 6000 ft., *Mann*. DECCAN PENINSULA, in the Wynaad, *Jerdon*. CEYLON, *Thwaites*.—DISTRIB. West Africa, Java, Australia.

Root like a small potato. *Stem* 4–8 in., stout or slender; sheaths several, short, inflated, truncate. *Racemes* few or many-fl. ; bracts large, membranous, oblong, acute; flowers pale yellow or pinkish white, speckled or stained with pink; sepals and petals narrowly lanceolate, $\frac{1}{4}$ – $\frac{3}{8}$ in. long; lip entire, disk with 2 or 3 glandular ridges.

102. **CEPHALANTHERA**, *Richard*.

Terrestrial herbs, leafless and tuberous rooted, or with leafy stem and fibrous roots. *Leaves* sessile, plicate. *Flowers* suberect, spiked or racemed. *Sepals* and *petals* subsimilar, free, conniving. *Lip* included, erect from the base of the column, hypochile concave or saccate embracing the column, epibible short. *Column* semi-terete, rostellum short or obsolete; stigma anticus; anther erect; pollinia 2, 2-partite. *Capsule* erect.—Species about 10, north temperate regions.

C. ensifolia, *Richard Orchid. Annot.* 29; leaves ovate or lanceolate, bracts of the upper flowers much smaller than the almost glabrous ovaries, epichile triangular obtuse 5-ridged. *Lindl. Gen. & Sp. Orchid.* 412; in *Journ. Linn. Soc.* i. 172, 175; *Boiss. Fl. Orient.* v. 85. *C. Xyphophyllum*, *Reichb. Ic. Fl. Germ.* xiii. t. 470. *C. acuminata*, *Lindl. in Wall. Cat.* 7405; *Gen. & Sp. Orchid.* l. c.; *Wight Ic.* t. 1721; *Dcne. in Jacquem. Voy. Bot.* 164, t. 164.

TEMPERATE HIMALAYA; alt. 6–12,000 ft., from Kashmir to Bhotan.—DISTRIB. Europe, Western Siberia, and from Afghanistan to Northern Africa.

Rootstock creeping; stem 6–18 in. *Leaves* lower lanceolate or oblong, acute or obtuse, upper linear. *Raceme* laxly 6–20-fld., glabrous; bracts ovate, acute; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. long, white or lip spotted with yellow; sepals lanceolate, acute; petals elliptic, obtuse; ridges of lip crested.

SPECIES UNKNOWN TO ME.

C. THOMSONI, *Reichb. f. in Linnæa*, xli. 54; a span high, leaves (of *C. grandiflora*) oblong acute, upper linear-lanceolate, bracts linear-lanceolate, lower much longer than the flowers, sepals oblong-ligulate acute, petals narrower, lip expanded at the base into a very short conical sac trifid, side lobes broadly ligulate crenulate, midlobe oval transverse with a deflexed apiculus, keels two in the entire base lamellate, with many small papillæ between the posticous lacinia. —Sikkim, *T. Thomson.*, 1857. —*C. cucullata*, *Boiss. Held.* differs in the shorter hypochile with short quite entire lacinia, in the median nerves of the epichile keeled to the tip, in the keels not lamelliform, and in the conico-cylindric spur being thrice as long. —(The above is from Reichenbach. I have examined no *Cephalanthera* answering to the description, nor, as I am informed by King, is there any in the Calcutta Herbarium, whence Reichenbach's specimens must have been sent to him.)

103. **EPIPACTIS**, Br.

Terrestrial leafy erect herbs. *Leaves* sessile, plaited. *Flowers* racemose, pendulous; bracts long, leafy. *Sepals* and *petals* broad, acuminate, strongly-nerved. *Lip* sessile on the base of the column; hypochile concave or saccate, epichile contracted at the base, entire. *Column* short; stigma anticous; rostellum broad, prominent; anther erect, obtuse, cells contiguous; pollinia 2, 2-partite, gland globose.—Species 8 or 10, of the temperate N. hemisphere.

Lindley (*in Journ. Linn. Soc.* i. 172) is disposed to refer all the Himalayan species to states of *E. latifolia*, in which I do not concur.

1. **E. latifolia**, *Swartz in Act. Holm.* 1800, 232; flowers subsecund glabrous or nearly so, lip short, hypochile subglobose, epichile as long or shorter ovate-cordate, base with 2 calli. *Lindl. Gen. & Sp. Orchid.* 461; *Boiss. Fl. Orient.* v. 87; *Reichb. Ic. Fl. Germ.* xiii. t. 134–136. *E. macrostachya*, *Lindl. in Wall. Cat.* 7404; *E. consimilis*, *Don Prodr.* 28. *E. Dalhousiæ*, *Wight Ic.* t. 1723.

TEMPERATE HIMALAYA, from Kashmir, alt. 6500–10,000 ft., to Sikkim, alt. 10–11,000 ft.—DISTRIB. Europe, N. Africa, N. Asia to Japan.

Stem 1–3 ft., stout, puberulous above. *Leaves* 3–5 by 2–3 in., usually from orbicular to ovate-lanceolate rarely lanceolate, often with ciliolate margins, flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam, in often crowded bractate racemes, green variegated with yellow white or purple. *Column* very short.

Var. herbacea; smaller, leaves elliptic acute, raceme dense-fld., flowers $\frac{1}{2}$ in. diam. glabrous pale greenish white. *E. herbacea*, *Lindl. in Royle Ill.* 368; *Gen. & Sp. Orchid.* 462.—Western Himalaya.

Var. *Thomsoni*; small, slender, leaves lanceolate recurved margins quite glabrous, raceme lax-fl'd., flowers $\frac{1}{2}$ in. diam. quite glabrous. *E. macrostachya*, *Wight Ic. t. 1722* (not of *Lindl.*)—Western Tibet, alt. 10–11,000 ft., *Thomson*.—Wight does not know the origin of his specimen, which is a very bad one.

Var. *intrusa*; very slender, leaves few small, flowers few very distant, epichile without calli. *E. intrusa*, *Lindl. in Journ. Linn. Soc. i. 175*.—Sikkim, alt. 11,000 ft., *J. D. H.* This is hardly more than a starved state of *E. latifolia*, with which it grew.

2. ***E. consimilis***, *Wall. Cat. 7403* (not of *Don*); raceme lax-fl'd., flowers large pubescent or tomentose, lip nearly as long as the sepals, hypochile narrow oblong, epichile longer lanceolate inflexed at the base then recurved. *E. veratrifolia*, *Boiss. & Hohen. Diagn. Ser. 1, xiii. 11*; *Boiss. Fl. Orient. v. 87*. *Lindl. in Journ. Linn. Soc. i. 174*. *E. amœna*, *Herb. Ham.*

WESTERN TEMPERATE HIMALAYA; from Peshawur and Kashmir to Nepal.—DISTRIB. westward to Syria.

Stem 1–2 ft., rather slender, pubescent above. *Leaves* 4–7 in., lanceolate, acuminate. *Raceme* lax-fl'd.; bracts long, rarely short; flowers 1–1½ in. diam., distant, long-pedicelled, pubescent or ovary tomentose, greenish; column much longer than in *E. latifolia*.—Lindley is no doubt right in referring *Don's E. consimilis* to *E. latifolia*. A drawing by Jerdon of a plant grown on limestone rocks, overhanging water at Saugor in Malwah closely resembles this.

3. ***E. Royleana***, *Lindl. in Royle Ill. 368*; *Gen. & Sp. Orchid. 461*! in *Journ. Linn. Soc. i. 174*; raceme lax-fl'd. puberulous, hypochile large saccate very much broader than the ovate or ovate-lanceolate epichile. ? *E. americana*, *Lindl. in Ann. Sc. Nat. iv. 385*; *Gen. & Sp. Orchid. 462*. *E. gigantea*, *Dougl. mss. in Hook. Fl. Bot. Am. ii. 220, t. 202*. *Cephalanthera Royleana*, *Regel in Act. Hort. Petrop. vi. 490*; *Boiss. Fl. Orient. v. 85*.

TEMPERATE HIMALAYA; from Kashmir, alt. 7000 ft. to Sikkim, alt. 8–12,000 ft.—DISTRIB. Samarcand? N. America.

Stem 1–2 ft. *Leaves* from lanceolate to orbicular, 4–7 by 1–1½ in., margins eciliate. *Raceme* 6–10 in.; flowers distant, 1 in. diam., green with a yellowish (or reddish?) lip; bracts long, lanceolate.—The very broad strongly many-nerved hypochile, broader than long, with rounded erect sides, are unlike any other species but *E. americana*, which I suspect is the same, and if so, the latter is the earliest name. Lindley's description is taken from a very bad specimen, in which the epichile is constricted in the middle, probably by accident, as this organ contracts much in drying. Regel cites Lindley's *Epip. Royleana* for his *Ceph. Royleana*, and gives Samarcand as a locality.

Tribe IV. OPHRYDÆÆ. (See Vol. v. p. 673.)

104. **ORCHIS**, *Linn.*

Terrestrial erect leafy herbs, with entire oblong or palmately lobed tubers. *Leaves* sheathing, not plicate. *Flowers* racemed or spicate. *Sepals* free, subequal, lateral spreading, or conniving in a hood with the petals and dorsal. *Petals* usually smaller. *Lip* shortly adnate to the column, spreading or pendulous, spurred, entire or 3-lobed. *Column* very short, rostellum cupular or saccate; anther adnate to the face of the column, cells parallel or converging below; pollinia 2, caudicles adnate to 1 or 2 glands, which are concealed in one pouch formed by the rostellum.—Species about 80, of north temperate regions, and the Mascarene Islands.

With the exception of *O. latifolia*, I do not feel confident that the species here

below referred to *Orchis* are referable to that genus. This is owing to my inability to determine satisfactorily in specimens that have been pressed, the structure of the minute rostellum, and its relation to the glands of the pollinia. Moreover, as stated under *Habenaria*, I have in various minute flowered species of that genus been unable to determine whether the glands are hidden between folds of the rostellum, or are covered by pouches or a flap of that organ. Careful drawings of the column and anther, and a comparative study of the extra Indian species are wanted, in order to describe them with accuracy.

1. *O. latifolia*, Linn. *Sp. Pl.* 1334; tubers palmate, leaves erect oblong linear-oblong or lanceolate, spike cylindric dense-fl., bracts green acuminate usually much exceeding the flowers, lateral sepals ovate reflexed, lip oblong or rhomboid crenate entire or very obtusely 3-lobed sides deflexed, spur stout equalling or shorter than the ovary pendulous. *Boiss. Fl. Orient.* v. 71; *Reichb. Ic. Fl. Germ.* xiii. t. 50. *O. latifolia*, *S. indica*, *Lindl. Gen. & Sp. Orchid.* 260. *O. Hatagirea*, *Don. Prodr.* 23; *Wall. Cat.* 7062.

WESTERN TEMPERATE HIMALAYA; from Nepal to Kashmir, and in WESTERN TIBET, alt. 8–12,000 ft. (16,000 ft., *Heyde.*)—DISTRIB. Westward from Afghanistan to N. Africa and the Atlantic, N. Asia.

Stem 1–3 ft., usually fistular, leafy upward. *Leaves* many, 2–6 in., often spotted in Europe, tip flat or concave. *Spike* 1–6 in.; flowers about $\frac{2}{3}$ in. from dorsal sepal to tip of lip, dull purple; sepals and petals acute or obtuse; lip spotted with darker purple, midlobe small or obsolete; spur straight or curved.—The Himalayan specimens have, as far as I can make out from dried specimens, the leaves unspotted and tips concave, and are therefore referable to the European var. *incarnata* (*O. incarnata*, Linn.). Lindley's var. *indica* is characterized as having larger flowers, a rounded sub-lobed lip shorter than the spur, which is as long as the ovary. Lindley is disposed to refer some of the specimens from N.-W. India to *O. maculata*, but the lip in these is not lobed as in the European plant. *O. latifolia* is as variable in India as in Europe, from slender to very robust, with a lax or dense-fl. spike, and bracts equalling to or much longer than the flowers.

2. *O. Chusua*, *Don. Prodr.* 23; leaves few linear or linear-lanceolate acute, spike very short, bracts longer than the ovaries green, lateral sepals reflexed, dorsal much smaller orbicular, lip longer than the sepals broadly obovate 3-lobed, spur as long as the ovary stout cylindric obtuse. *Gymnadenia Chusua*, *Lindl. in Wall. Cat.* 7058; *Gen. & Sp. Orchid.* 280. *G. puberula*, *Lindl. in Wall. Cat.* 7059.

ALPINE HIMALAYA; alt. 10–13,000 ft., Kumaon, *Duthie*; Nepal, *Wallich*. SIKKIM, *J. D. H.*, &c.

Very variable in height and stoutness, 3–18 in., flexuous. *Tubers* oblong, entire. *Leaves* 1–3, rarely more, 3–6 by $\frac{1}{4}$ – $\frac{3}{4}$ in., almost filiform in very alpine forms. *Spike* 2–4 in., 2–many-fl.; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., lanceolate, acuminate; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam., white or purple; lateral sepals oblong-lanceolate, suberect; petals shorter, spreading, oblong, obtuse; lip variable in breadth, often broader than long, lobes spreading, broad, rounded, erose or crenate, rarely oblong with the midlobe retuse; spur thin-walled, slightly incurved, tip sometimes clavate; anther-cells parallel.

3. *O. spathulata*, *Reichb. f. mss.*; leaf solitary radical elliptic, spike few-fl., bracts much larger than the flower, sheaths leafy, sepals subequal lateral suberect, lip obovate not longer than the sepals entire or obscurely 3-lobed, spur shorter than the ovary stout. *Hook. f. Ic. Plant. ined.* *Gymnadenia spathulata*, *Lindl. Gen. & Sp. Orchid.* 280.

ALPINE HIMALAYA; alt. 11–13,000 ft.; Kumaon and Garwhal, *Royle*, *Duthie*, *Sikkim*, *J. D. H.*

Stem very short, sheathed; root elongate, stout, branching into thick fibres. *Leaf* 1–3 in, sessile or petioled, obtuse, fleshy, base narrowed. *Scape* 2–5 in., very stout, flexuous; flowers 2–4, dark purple, $\frac{1}{2}$ in. diam.; bracts $\frac{3}{4}$ –1 in., ovate, obtuse; dorsal sepal ovate, obtuse, lateral oblong, subacute; petals ascending, elliptic, obtuse; lip variable in breadth, from elliptic to cuneate-obovate, crenulate, spur variable in length, stout, obtuse; anther-cells parallel.

4. **O. Stracheyi**, *Hook. f. Ic. Pl. ined.*; leaf solitary radical elliptic or obovate, spike few-fld., bracts longer than the flowers leafy, sepals subequal lateral suberect, lip longer than the sepals broadly cuneate 3-lobed to the middle, lobes obtuse, spur as long as the ovary stout incurved obtuse.

WESTERN HIMALAYA; Garwhal, near Rogile, alt. 11,000 ft., *Strachey* and *Winterbottom* (No. 35 *Gymnad. puberula*.)

This has the solitary leaf of *O. spathulata*, and the flowers of *O. Chusua*, can it be a hybrid?

105. **HERMINIUM**, *Linn.*

Terrestrial small erect tuberous herbs; tubers oblong, undivided. *Leaves* solitary or few. *Flowers* small, spicate. *Sepals* subequal, 1-nerved, free or conniving in a hood, the lateral spreading. *Petals* smaller or nearly as large, often thick and fleshy. *Lip* continuous with the base of the column, shorter or longer than the sepals, broad or narrow, spreading or pendulous, entire or 2–3-fid, base flat concave or very shortly saccate. *Column* very short; stigma 2-lobed or with 2 globose or clavate processes; rostellum short; anther adnate to the face of the column, cells parallel or slightly diverging below; pollinia 2, caudicles very short, glands naked, small or large, or with each gland and its caudicle sheathed by a conical naked coriaceous extingisher-like shiny brown appendage.—Species 6 or 8, European and N. Asiatic.

There is no character by which *Herminium* can be distinguished from *Habenaria*, except that the lip has never a spur, only a gibbous sac. *H. fallax* & *Duthiei*, and some other species appear to me to be referable to either genus, but these from habit and locality I retain here. The glands of the pollinia vary extraordinarily in the several species, from small and orbicular, to extingisher-like bodies, truncate, hollow, coriaceous, brown, shining, and sometimes split down one side. The caudicle appears to be inserted at the bottom of this organ, which is a development of the gland itself; it is exposed at the base of the anther-cell, and like the ordinary gland, is removable with the pollinium. The Indian *Herminia* are all mountain or alpine, and attain the greatest elevation of any orchids.

* *Lip* 3-lobed.

1. **H. Monorchis**, *Br. in Hort. Kew. Ed. 2*, v. 191; leaves 2 rarely 3 linear-oblong, flowers decurved, bracts equalling the ovary or shorter, petals ovate hardly longer than the sepals, lip hardly longer than the sepals 3-fid, lobes narrow. *Lindl. Gen. & Sp. Orchid.* 305; *Boiss. Fl. Orient.* v. 82. *Reichb. Ic. Fl. Germ.* xiii. t. 415. *Ophrys Monorchis*, *Linn. Sp. Pl.* 1342.

ALPINE HIMALAYA and WESTERN TIBET, alt. 10–13,000 ft., from Kashmir to Sikkim.—DISTRIB. Europe, N. Asia.

Four to ten in. high; root ellipsoid. *Leaves* 1–4 in. *Scape* naked, rarely 2-leaved or 1 sheathed; spike 1–2 in.; flowers subsecund, $\frac{1}{2}$ in. diam., yellow-green;

musky at night; sepals and petals subconnivent; sepals oblong, obtuse; petals unequal-sided towards the base, tips fleshy; lobes and lip narrow, base concave; rostellum prominent between the base of the anther-cells.

2. *H. angustifolium*, *Benth. mss.*; tall, leaves elongate linear, spike very long slender many-fld., bracts equalling the ovary or shorter, flowers decurved, petals linear very narrow 1-nerved, lip linear equalling the sepals in length or longer narrow trifid beyond the middle, side lobes filiform, midlobe very short. *Accras angustifolia*, *Lindl. in Wall. Cat.* 7061; *Gen. & Sp. Orchid.* 232; *Bot. Reg. under t.* 1525; in *Journ. Linn. Soc.* iii. 43; *Royle Ill. t.* 87; *Wight Ic. t.* 1691. *H. longicruris*, *Wright in Mem. Acad. Philad. Ser. 2, vi.* 411.—*Thisbe*, *Falc. in Lindl. Veg. Kingd.* 183, c (name only).

TEMPERATE HIMALAYA, from 4–8000 ft. in the North West, and 6–15,000 ft. (*Clarke*) in Sikkim. KHASIA HILLS, alt. 5–6000 ft. UPPER ASSAM, in the Naga Hills, alt. 7000 ft., *Clarke*, *Prain*. TENASSERIM *Parish*.—DISTRIB. China, Manchuria, Japan.

Stout or slender, 1–3 ft. high, 1 or several leaved. *Leaves* scattered, 2–8 in., acute, rarely $\frac{1}{2}$ in. broad. *Spike* 2–10 in.; flowers often very many, subsecund; perianth connivent, $\frac{1}{10}$ – $\frac{1}{8}$ in. diam., green; sepals oblong, obtuse; petals membranous, acute; lip from as long to twice as long as the sepals or more, base not concave, lateral lobes very slender. Anther-cells parallel, pollinia clavate, glands large, staminodes large spreading; stigmatic lobes obscure or 0; rostellum minute, 2-lobed. *Capsule* $\frac{1}{2}$ in., erect, oblong, turgid.—Has in Sikkim an extraordinary range in altitude.

3. *H. fallax*, *Hook. f. Ic. Plant. ined.*; slender, leaves 1–2 towards the middle of stem linear or linear-lanceolate, spikes many-fld. subsecund, bracts longer than the short decurved ovaries, sepals spreading oblong- or ovate-lanceolate broader than the erect narrow falcate petals, lip shorter than the sepals obtusely 3-lobed, sac incurved subdidymous subglobose or clavellate with an inflated tip. *Peristylus fallax*, *Lindl. Gen. & Sp. Orchid.* 298. *Herminium fallax*, *Lindl. in Wall. Cat.* 7412. *Cybele*, *Falc. in Lindl. Veg. Kingd.* 193, c. *C. alpina*, *Falc. mss.*

ALPINE and SUB-ALPINE HIMALAYA, alt. 7–12,000 ft., from Garwhal to Sikkim.

Very variable in height, from 4–18 in.; stem with long tubular sheaths at the base, and one or two lanceolate sheaths above the leaf. *Leaves* usually solitary about the middle of the stem, 2–5 by $\frac{1}{2}$ –1 in., acute, sometimes two subopposite towards the base of the stem. *Scape* naked; spike 2–5 in., lax or dense fld.; lower bracts $\frac{2}{3}$ in. or less, lanceolate; ovary $\frac{1}{2}$ – $\frac{3}{4}$ in., shortly beaked; sepals $\frac{1}{2}$ in., 1-nerved, and petals variable in absolute and relative breadth; lip short and fleshy or narrower, thin, and with distinct nerves, base of limb truncate at the short broad concave claw; anther very small, cells parallel, tubes 0; pollinia ovoid, of few very large grains, sessile in the large solid shining glands which are exposed, one on side of the inconspicuous rostellum; stigmatic processes very short, subglobose.

** *Lip entire.* Bracts short in all but *H. gramineum*.

4. *H. Josephi*, *Reichb. f. in Flora* lv. (1872) 276; stout, leaves 2 rarely 3 lanceolate or oblanceolate, bracts minute, flowers large $\frac{1}{2}$ in. diam. suberect, sepals and petals erect, lip broadly ovate acute. *H. grandiflorum*, *Lindl. in Herb. Ind. Or. H. f. & T.*

SIKKIM HIMALAYA, alt. 11–14,000 ft., *J. D. H.*

Plant, 5–12 in. high. *Leaves* 3–5 by $\frac{1}{2}$ –1 in., obtuse acute or acuminate. *Spike* 1–4 in.; flowers $\frac{1}{2}$ in. diam., not secund; bracts much shorter than the gibbous ovary; sepals 3-nerved, lateral falcately ovate, base rounded; petals as long, ovate, tips narrowed thickened obtuse; lip larger than the sepals, flat, with a thickened

midrib and point; anther-cells spreading at the base, pollinia clavate, terminating in horn-shaped or conical rigid truncate pouches, which embrace the caudicle gland and base of the pollinium; stigmatic processes obscure; rostellum small.—I do not find the single lanceolate sheath under the spike described by Reichenbach.

5. *H. Duthiei*, Hook. f. *Ic. Plant. ined.*; leaves 2 towards the middle or base of the stem linear or oblanceolate, spike many-fl. subsecund, bracts much shorter than the short ovaries, sepals obtuse, dorsal broadly oblong, lateral smaller, subfalcate petals ovate-lanceolate fleshy, lip as long triangular or orbicular-ovate entire subacute or obtuse, sac globose.

WESTERN HIMALAYA; Garwhal, near the Khasi Pass, alt. 11–12,000 ft., *Duthie*.

Whole plant, with the spike, 4–6 in. Leaves shorter than the scape, acuminate. Scape stout, curved, naked; spike 2–4 in.; ovaries $\frac{1}{2}$ in., turgid, curved, almost beaked; perianth $\frac{1}{2}$ in diam.; lip variable in form, as large as the sepals, sometimes orbicular with a contracted point, base with a narrow chink opening into the spur; anther oblong, cells parallel, pollinia clavate sessile on the conical truncate horny glands or caps of the glands; staminodes large, spreading; stigmatic processes clavate, large; rostellum subulate, erect.

6. *H. congestum*, Lindl. in Wall. Cat. 7068; Gen. & Sp. Orchid. 305; in Journ. Linn. Soc. iii. 43; leaves 1–3 oblanceolate, scape elongate, spike many-fl., bracts minute, flowers minute decurved, sepals obtuse, dorsal broadly ovate, lateral oblong, petals rather longer acute, lip ovate or triangular-ovate fleshy acute, base saccate. *H. unalaschcense*, Reichb. f. *Ic. Fl. Germ.* xiii. 107, t. 418. *Habenaria Schischmareffiana*, Chamiss. in Linnæa, iii. 29. *Platanthera Schischmareffiana*, Lindl. Gen. et Sp. Orchid. 286. *Neottia macrophylla*, Don Prodr. 27. *Spiranthes macrophylla* & *unalaschcensis*, Spreng. Syst. iii. 708.

ALPINE HIMALAYA; NEPAL, Wallich; Sikkim, alt. 11–16,000 ft., J. D. H. DISTRIB. Aleutian Islds.

Stem 6–18 in., leafy towards the base or upwards. Leaves 3–6 by $\frac{1}{2}$ – $\frac{2}{3}$ in. Scape rather stout, naked above; spike 2–4 in.; ovary short, gibbous, longer than the ovate bracts; flowers $\frac{1}{2}$ – $\frac{1}{4}$ in. diam.; dorsal sepal orbicular, lateral broadly oblong; petals ovate, equalling the sepals, fleshy; lip fleshy, variable in breadth; sides sometimes almost dilated into lobes, base very distinctly saccate; anther-cells parallel, pollinia subglobose, caudicles short inserted in large spur-like corneous body split on one side; stigma obscure; rostellum minute, erect. Capsule $\frac{1}{2}$ in. erect, twisted.

7. *H. pugioniforme*, Lindl. mss.; leaf solitary elongate-spathulate obtuse, spike few-fl., bracts minute orbicular, flowers minute suberect, petals oblong-ovate, lip dagger-shaped, base dilated.

ALPINE HIMALAYA; Kashmir, alt. 12,000 ft., Aitchison; Garwhal, alt. 14–15,000 ft., Duthie; Sikkim, alt. 15–16,000 ft., J. D. H.

Plant 2–5 in. high. Leaf shorter than the scape, $\frac{1}{2}$ – $\frac{2}{3}$ in. broad. Scape rather stout; bracts very small; flowers minute, $\frac{1}{12}$ in. diam.; dorsal sepal orbicular, lateral very broad obtuse; petals smaller; lip hardly longer than the sepals.—Very near *congestum*, but I think different, the flowers appear to be nearly erect.

8. *H. orbiculare*, Hook. f. *Ic. Plant. ined.*; stem very slender 1–2 leaved and with minute subulate sheaths, bracts minute, flowers very minute secund, sepals orbicular-oblong obtuse dorsal smaller, petals broadly oblong, lip orbicular fleshy with a pit towards the centre and gibbous beneath.

SIKKIM HIMALAYA; Rungboo in the Chumbi Valley, King's Collector.

Stem with spike 4-6 in. *Leaves* 2, towards the base of the stem, 1-1½ in. long, oblanceolate; bracts much shorter than the ovaries which are ½ in. long, curved; flowers ⅙ in. diam.; sepals and petals 1-nerved, all membranous; anther-cells rather divergent, pollinia clavate, gland orbicular translucent; stigmatic processes obscure; rostellum minute.—A very distinct little species, but the flowers are so minute that I cannot satisfactorily analyze the column.

9. **H. gramineum**, *Lindl. in Wall. Cat.* 7413; *Gen. & Sp. Orchid.* 305; very slender, 1-leaved, spike lax-fl., flowers minute secund suberect, bracts subulate equalling the ovary, petals erect linear subfalcate, lip ovate acuminate equalling or shorter than the sepals. *Royle Ill.* t. 87. *Neottia monophylla*, *Don Prodr.* 27. *Spiranthes monophylla*, *Spreng. Syst. Veg.* iii. 709.

WESTERN and CENTRAL HIMALAYA; Nepal, *Wallich*; Kumaon and Garwhal, alt. 5-8000 ft.

Plant 2-6 in. *Leaf* linear, acute, as long as the scape or longer. *Spike* 1-3½ in.; rachis striated with rough ridges; perianth ⅙-⅓ in. diam.; dorsal sepal oblong or broadly ovate, lateral ovate obtuse spreading; petals as long as the sepals, obtuse, thick; lip flat, with a concave base, variable in breadth, slightly saccate beneath; anther-cells parallel, pollinia subglobose, caudicles short, glands large shining coriaceous brown; stigmatic processes low; rostellum very large, as long as the anther, recurved, retuse, fleshy.

106. **HABENARIA**, *Willd.*

Terrestrial leafy herbs with undivided or lobed tubers, and fleshy radical fibres. *Leaves* not plaited, bases sheathing. *Flowers* spicate or racemed. *Sepals* subequal or the dorsal shortest, lateral ascending spreading reflexed or deflexed. *Petals* smaller or larger, simple or cleft (sect. *Ate*). *Lip* continuous with the base of the column, entire 3-lobed or 3-partite, base spurred. *Anther* adnate to the very short column, cells parallel or divergent below, bases often produced into a long or short tube; pollinia clavate or pyriform; caudicle long, short, or 0, sometimes winged, glands exposed, rarely overlapped by the rostellum; staminodes granular surfaces on the side of the anther, rarely elongate; stigma a single or double viscid area on the column below the anther, or two globose or clavate processes; rostellum usually small and erect between the cells of the anther, rarely wholly obsolete.—Species about 400, temperate and tropical.

After devoting many months to the examination of the Indian species of *Habenaria*, I propose the following grouping of them into sections as tentative only. I accept Bentham's view, that the genera which he has brought under it (in *Gen. Plant.*) cannot be separated from one another by natural or artificial characters. To these *Herminium* should be added, were it not for the consequent disturbance of much nomenclature and the multiplication of synonyms; and so should also be *Diplomeris* and *Hemipilia*, which, though they have recognizable differential characters, these are of less importance than those of the four last sections here adopted.

Of all the floral organs of the genus, that of the rostellum is the most difficult of analysis; and in the minute flowered species especially, of definition also. In respect of its relation to the glands of the pollinia it is often in moistened herbarium specimens impossible to determine whether the rostellum nearly overlaps these, or holds them exposed between its folds, or forms pouches beneath them, or a flap over them. By means alone of careful drawings of the rostellum of all the species made from living plants, can its modifications of form be understood; but I doubt whether even this will help much towards the classification of the species, for I think its value in this respect has been greatly overrated in both *Ophrydeæ* and *Vundææ*.

The structure of the stigma has been compendiously described by Benth in the Journal of the Linnean Society (xviii. 356), and I agree with him in thinking that to found genera on the modifications or even in the presence or absence of processes, would lead to a violation of affinities.

For observations on the Indian species referred to *Orchis*, see that genus.

The characters which I have taken for the primary groups, marked A and B, of lateral sepals reflexed spreading or deflexed, and erect or ascending, are in most cases obvious; but in dried specimens of some species placed in Sect. V. it is difficult to say whether the lateral sepals are reflexed naturally or accidentally, or whether, though erect in early flowering, they afterwards spread. The root and its tubers require investigation throughout the genus.

The staminodes present great variety; in most species they are mere warts on the sides of the anther, but in several not otherwise allied they are linear or styliform processes, attached either to the anther or base of the column, as in *Diphylax* and *Dithrix*.

At the end of the genus I have placed four monotypic sections founded on plants differing remarkably in habit from any of their congeners; some of these will, I expect, eventually be regarded (and rightly) as monotypic genera, but in my present imperfect knowledge of any but the Indian species of this very large genus, I prefer keeping them as sections, awaiting their confirmation as genera under the authority of a monographer of the whole tribe of *Ophrydeæ*.

KEY TO THE SECTIONS.

A. *Lateral sepals spreading deflexed or reflexed.*

In some small-flowered species of Sect. v. *Peristylus*, the lateral sepals appear to be spreading or deflexed during or after flowering, and might hence be placed in Sect. iii.

Sect. I. ATE. *Petals* truncate 2-fid or 2-partite. *Lip* 3-lobed or -partite. (Sp. 1-14.)

Sect. II. PLATYGLOSSA. *Petals* entire. *Lip* 3-lobed or -partite, side lobes broad (narrow in *H. platyphylla*) petaloid, mid-lobe narrow. (Sp. 15-34.)

Sect. III. TRIMEROGLOSSA. *Petals* entire. *Lip* 3-partite, side lobes very narrow, entire, usually filiform (lip entire in *Peloria* forms of *H. Mandersii* and *reniformis*). (Sp. 35-66.)

Sect. IV. HOLOGLOSSA. *Petals* entire. *Lip* entire, linear. (Sp. 37-66.)

B. *Lateral sepals erect, or ascending parallel to the dorsal and petals, or forming a hood with these, rarely at length spreading or deflexed.*

Sect. V. PERISTYLUS. *Petals* entire. *Lip* usually 3-fid or 3-partite (entire in *H. breviloba*).—*Flowers* usually very small, and *petals* broader than the lateral sepals and often fleshy; spur rarely exceeding the ovary, usually very short or saccate. (Sp. 67-99.)

Sect. VI. PHYLLOSTACHYA. *Petals* entire. *Lip* broad, entire, petaloid; spur conico-infundibular. *Flowers* large, in the axils of sheathing leaves; stigmatic processes 0; rostellum obscure. (See also 32. *H. triflora*.) (Sp. 100-102.)

ABERRANT SPECIES (OR GENERA?) OF GROUP B.

VII. PLECTOGLOSSA. *Flowers* large, in the axils of imbricating leaves. *Lip* coriaceous, clawed, 3-fid, longitudinally 3-plicate in bud, spur long slender. *Stigmatic processes* large, rhomboid; rostellum broad, triangular. (Sp. 103.)

VIII. DIPHYLAX. *Flowers* small, secund; lip entire; spur short, fusiform. *Anther* with a setiform staminode on each side as long as itself. (Sp. 104.)

IX. DIPYLA. *Flowers* small, secund. *Lip* 3-fid, spur inflated. *Pollinia* sessile on a single large obcordate gland seated in a sinus of the broad 2-lobed rostellum. *Stigmatic processes* small. (Sp. 105.)

X. DITHRIX. *Flowers* small, secund, tubular; sepals petals and lip coherent at the base. *Lip* oblong, 3-fid, base saccate. *Staminodes* 2, filiform, capitate, inserted on the back of the anther. *Stigma* a transverse cushion; rostellum a transverse plate below the anther. (Sp. 106.)

Sect. 1. ATE. See p. 132.

* Petals truncate or 2-fid.

1. **H. lucida**, Wall. in *Lindl. Gen. & Sp. Orchid.* 314; leaves fascicled towards the base of the tall scape, sepals cymbiform, petals subpanduriform truncate. *Platanthera lucida*, *Lindl. in Wall. Cat.* 7047.

PEGU; at Rangoon, *Wallich*. TENASSERIM, at Moulmein, *Parish*.—DISTRIB. Siam.

Leaves 4-8 by 2-2½ in., petioled, obovate or oblanceolate. *Scape* with the very lax-fid. raceme 12-20 in.; bracts broadly ovate, half as long as the slender pedicelled beaked ovary, or longer, tips subulate; flowers ½ in. diam., greenish; lateral sepals reflexed, obtuse; petals smaller and narrower, contracted below the truncate end; lip subequally 3-partite, midlobe narrow 3-nerved thick, rather longer than the sepals, lateral as long spreading and incurved; spur slender, curved, nearly as long as the ovary or longer, mouth with a short ligule; anther-cells short, erect, approximate, tubes short upcurved; pollinia pyriform, gland long narrow; stigmatic processes short, clavate; rostellum minute.

2. **H. barbata**, *Wight in Wall. Cat.* 7034; stem leafy, petals 2-fid pubescent. *Ate virens*, *Lindl. Gen. & Sp. Orchid.* 327; *Wight Ic.* t. 928; *Thwaites Enum.* 309.

TRAVANCORE; in the Pulney and Dindygah Mts., *Wight*. CEYLON; in the Maturatta district.

Stem 10-12 in. *Leaves* 3-5 in., erect, lanceolate, acuminate. *Racemes* few-fid.; bracts large, sheathing, as long as the flowers, or longer; flowers ¾ in. diam., green; lateral sepals narrowly falcate, acuminate; petals much broader, base rounded, upper lobe much the longest, tips filiform, lower broad acuminate, sinus rounded; lip longer than the sepals, scabrid, limb linear, trifurcate at the end, the segments subulate; spur as long as the ovary, mouth with a very long recurved ligule; anther-cells parallel, tubes as long as the cells upcurved, pollinia clavate, caudicles very long, glands small; stigmatic processes very long spreading; rostellum minute. *Capsule* ¾ in. long, linear-oblong.

3. **H. acuminata**, *Thwaites in Trim. Cat. Ceyl. Pl.* 91; stem leafy, petals 2-fid glabrous. *Ate acuminata*, *Thwaites Enum.* 309.

CEYLON; in the central province, *Walker*, *Thwaites*.

Stem 1-2 ft. *Leaves* 2-4 in., erect, lanceolate, and as well as the large cymbiform bracts petaceously acuminate. *Racemes* elongate, lax-fid.; flowers subsecund, ½ in. diam., green; lateral sepals broadly ovate, obtuse; upper lobe of petals slender exceeding the dorsal sepal and about twice as long as the subulate lower; lip as long as the sepals, broadly 3-lobed, dark purple, lobes broad fleshy obtuse very variable in length; anther-cells spreading below, tubes recurved, pollinia clavate, as long as their caudicles, glands minute; stigmatic processes large, globose; rostellum small, triangular.

** Petals 2-partite.

† Stem leafy upwards. Racemes many-flid.

§ *Sepals with filiform tips*.

4. **H. stenopetala**, Lindl. *Gen. & Sp. Orchid.* 319 (not 324); tall, leaves oblong or ovate-lanceolate base narrowed or broad and amplexicaul, raceme dense-flid., bracts as long as the ovaries, segments of petals slender equal or the lower shorter, segments of tripartite lip filiform, spur long slender equalling the ovary.

NORTH WEST INDIA; road to Kashmir, *Royle*. SIKKIM HIMALAYA, alt. 3-6000 ft., *J. D. H. & c.* UPPER ASSAM; the Naga hills, *Griffith, Prain*. LOWER BENGAL; at Mymensing, *Clarke*. ORISSA; at Singboom, *Clarke*. The CONCAN; *Stocks, &c.*

Stem 1-2 ft., stout. *Leaves*, 6-8 in., base contracted into a broad petiole or sessile. *Raceme* short, 4-6 in.; bracts membranous; flowers very variable in size, greenish; sepals oblong-lanceolate, $\frac{3}{4}$ - $\frac{1}{2}$ in. long, membranous, 3-nerved, filiform tips as long as the blade or shorter; lower segment of the petals sometimes obsolete; segments of lip very variable, the lateral sometimes as long or longer than the middle one, at others they are much shorter and subulate; spur equalling the ovary; anther-cells narrow, parallel, tubes nearly as long as the cells; caudicles of pollinia slender, glands small; stigmatic processes elongate, clavate; rostellum large, triangular, erect. *Capsule* $\frac{1}{2}$ - $\frac{3}{4}$ in., linear-oblong.—A very variable plant; the flowers of the Orissa and Bengal specimens are remarkably small; of some Sikkim ones also very small.

5. **H. macrostachya**, Lindl. *Gen. & Sp. Orchid.* 307; leaves large crowded above the middle of the robust stem, raceme lax-flid., bracts equaling the ovary, segments of petals subequal filiform, segments of 3-partite lip subequal filiform, spur shorter than the ovary. *Thwaites Enum.* 309.

TRAVANCORE; on the Anamallay hills, *Beddome* (in *Herb. Calcutt.*). CEYLON, *Macrae*, alt. 4000 ft., *Thwaites*.

Stem 2 ft. *Leaves* 5-7 in., obovate or oblanceolate, acute, broadly petioled. *Raceme* 6-8 in.; bracts and ovary very narrow; sepals $\frac{3}{4}$ in. long; petals and lip spotted with red; lip longer than the sepals, spur very slender, thickened downwards; anther-tubes as long as the parallel cells, suberect, pollinia pyriform, glands minute; stigmatic processes long, slender, adnate to the mouth of the lip; rostellum small.—The spur is stoutest in the Travancore specimen.

6. **H. andamanica**, *Hook. f. Ic. Plant. ined.*; leaves crowded towards the middle of the stout stem, raceme lax-flid., bracts rather shorter than the ovary, upper segment of petals very slender, lower broader divided above the middle into 3 filiform laciniae, side lobes of lip palmately multifid, midlobe linear 3-flid, spur shorter than the ovary.

ANDAMAN ISLANDS; *Parish*.

Stem 12-18 in. *Leaves* 3-4 in., ovate-lanceolate, acute. *Raceme* 6-8 in.; bracts lanceolate; ovary $1\frac{1}{4}$ in., very slender; sepals $\frac{1}{2}$ in. long; laciniae of mid-lobe of lip filiform; anther-cells parallel, tubes rather shorter than the cells; glands of pollinia minute; stigmatic processes subcylindric, elongate; rostellum erect.

§§ *Sepals without filiform tips*.

7. **H. digitata**, Lindl. *Gen. & Sp. Orchid.* 307; leaves ovate or ovate-oblong, raceme laxly many-flid., lateral sepals ovate acute, dorsal suborbicular, petals bipartite, segments subequal or the upper broader, lip tripartite segments linear, spur equalling the ovary. *Dalz. & Gibs. Bomb.*

Fl. 267. *H. trinervia*, *Wight Ic.* t. 1701. *Bonatea punduana*, *Lindl. in Wall. Cat.* 7063. *B. benghalensis*, *Griff. in Calc. Journ. Nat. Hist.* iv. 382. *B. herbacea*, *Wall. mss.*

KASHMIR, *Falconer*. ASSAM, *Simmons*. SILHET, *Wallich*. BENGAL, *Griffith*. TENASSERIM, *Parish*. The WESTERN GHATS, from the Concan southwards.

Stem 1–2 ft., leafy. *Leaves* 2–5 in., very variable, acute or acuminate, rarely narrowed into a petiole, from orbicular to lanceolate. *Raceme* 3–5 in.; bracts large, lanceolate, often almost foliaceous and exceeding the flowers; pedicels very short; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. broad, green; segments of petals variable in length, sinus between the segments narrow or rounded; midlobe of lip shorter or longer than the side lobes; spur subclavate, sometimes inflated, with an erect ligule at the mouth; anther-cells parallel, tubes short upcurved; glands of pollinia minute; stigmatic processes clavate; rostellum erect, triangular. *Capsule* shortly pedicelled, $\frac{1}{2}$ in., fusiform, ribs thick.

Var. *foliosa*; smaller, 6–12 in. high, leaves shorter broader imbricating, raceme dense-fl., bracts shorter, segments of lip filiform. *H. foliosa*, *A. Rich. in Ann. Sc. Nat. Ser.* 2. xv. 71; *Wight Ic.* t. 1700; *Dalz. & Gibs. Bomb. Fl.* 267. *H. laciniata*, *Dalz. in Hook. Journ. Bot.* ii. (1850) 261. *Platanthera marginata*, *Wall. Cat.* 7038 *B.* *Orchis mysorensis*, *Herb. Heyne*.—Nilghiri Mts., alt. 6–8000 ft. Bombay, at Salsette, *Dalzell*.—I have not seen the Salsette plant (*H. laciniata*) of Dalzell, which he describes as having the posticous segment of the petals spirally twisted, and the mid segment of the lip broader than the others; he refers it to *H. foliosa* quoting *Wight's* plate, and adds that it is allied to *H. lancifolia*, *A. Rich.*

8. *H. travancorica*, *Hook. f.*; leaves scattered ovate-oblong amplexicaul, raceme lax-fl., lateral sepals ovate acute pubescent within, petals bipartite, segments narrow lower shortest, lip tripartite, segments subequal filiform, spur shorter than the ovary. *H. Lindleyana*, *Wight Ic.* t. 922 (not of *Steudel*).

TEAVANCORE; on the Pulney Hills, *Wight*.

Stem slender, 12–18 in. *Leaves* 1–2 in. *Raceme* 3–5 in.; bracts as long as the beaked ovary or longer; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; dorsal sepal orbicular; lip longer than the sepals.—The pubescent sepals (not observed by *Wight*) and habit distinguish this from all forms of *H. digitata*, of which however it may prove to be a variety. The leaves and flowers are much smaller, and the ligule at the mouth of the spur very short.

9. *H. Gibsoni*, *Hook. f. Ic. Plant. ined.*; very stout, leafy, leaves linear-oblong, raceme few-fl., bracts equalling or exceeding the ovary, flowers 1 in. diam., petals bipartite, segments narrow subequal, lip tripartite segments linear-subulate subequal fleshy, mouth of clavate spur broad without a ligule.

The CONCAN; near Kyreswur and at Kandalla, *Gibson*.

Stem 8–12 in. *Leaves* 4–6 in., base sheathing. *Raceme* short, 6–8-fl.; bracts 1–1½ in., membranous, broadly lanceolate, the lower exceeding the flowers; flowers white? as in *H. digitata*, but twice as large; upper segment of petals broadest, fleshy, and anther broad, stigmatic processes adnate to the back of the broad mouth of the spur; rostellum small, triangular, exposed.—Much like a gigantic state of *H. digitata*, but very robust, with much longer leaves, narrower for their length, and few very large flowers, and no ligule at the very broad mouth of the spur.

10. *H. dolichostachya*, *Thwaites Enum.* 309; stem leafy upwards, leaves oblong-lanceolate amplexicaul, raceme lax-fl., bracts as long as the flowers, lateral sepals ovate-lanceolate acute, petals bipartite, lower segment short subulate, lip tripartite, segments filiform the middle longest, spur as long as the ovary slender.

CEYLON; in the Central Province, alt. 5000 ft., *Gardner, Thwaites*.

Stem 2-3 ft., leafless below, slender. *Leaves* 2-3 in. *Raceme* 1 ft.; flowers subsessile, about $\frac{1}{2}$ in. broad; dorsal sepal orbicular, mucronate; lip longer than the sepals, side segments spreading; spur as long as the hardly beaked ovary, mouth with a short ligule; anther broad, cells parallel, tubes long upcurved, glands of pollinia small; stigmatic processes clavate, incurved round the mouth of the spur; rostellum short, triangular.—Nearly allied to *H. digitata*, but the flowers are smaller and the base of the leaves amplexicaul.

11. *H. corymbosa*, *Parish & Reichb. f. in Trans. Linn. Soc.* xxx. 141; very stout, leaves lanceolate, raceme dense-fl., bracts longer than the long-pedicelled beaked ovary, sepals broad acute, petals bipartite, segments slender lower subulate half the length of the upper, lip 3-partite, segments subulate subequal or lateral smaller.

TENASSERIM; at Moulmein, *Parish*.

Stem 2-3 ft., leafy upwards, but naked below, and with only sheaths for the upper half. *Leaves* 3-6 in., base contracted. *Raceme* 3-4 in., very dense-fl.; pedicels filiform; bracts $\frac{3}{4}$ -1 in., lanceolate; flowers $\frac{1}{2}$ in. diam.; sepals 3-nerved; lip not longer than the sepals, spur equalling the ovary, tip clavate; anther-cells divaricate below, tubes as long as the cells; pollinia narrow, glands minute; stigmatic processes elongate, clavate; rostellum triangular, acute.

12. *H. dichopetala*, *Thwaites Enum.* 309; leaves crowded about the middle of the stem ovate or ovate-lanceolate, lateral sepals ovate acute, dorsal orbicular, petals bipartite, segments divaricate elongate lowest narrowest and longest, lip tripartite, segments equal elongate setaceous, spur as long as the ovary slender pendulous.

CEYLON; Bintenne district, *Thwaites (in Herb. Lindl.)*.

Stem 1-1 $\frac{1}{2}$ ft. *Leaves* dark green with a red midrib, petioled. *Raceme* lax-fl.; bracts lanceolate; flowers greenish about $\frac{1}{2}$ in. diam.—The above description is from "*Thwaites' Enum.*" There are two specimens from Thwaites in Lindley's Herbarium which differ somewhat from that description, the leaves are linear-oblong erect and sheath the stem all the way up, the bracts $\frac{1}{2}$ - $\frac{2}{3}$, ovary with pedicel $\frac{2}{3}$ -1 in., segments of petals subequal on the lower rather than longest, mid segment of lip the shortest, anther-cells distant, stigmatic processes globose; rostellum short.

†† Stem leafy at or near the base only.

13. *H. grandiflora*, *Lindl. in Wall. Cat.* 7032; leaf solitary radical orbicular or ovate-cordate, flowers few long-pedicelled, petals bipartite upper segment obliquely ovate acuminate lower longer filiform, lip tripartite lateral segments filiform terminal linear or elongate lanceolate, spur longer than the ovary. *Dalz. & Gibs. Bomb. Fl.* 267. *H. rotundifolia*, *Lindl. Gen. & Sp. Orchid.* 306. *Orchis grandiflora*, *Herb. Heyne*.

The CONCAN; on the Ghats at Belgaum, Mahabuleshwar, &c., *Heyne, &c.*

Leaf 1-2 in. *Scape* 3-6 in., naked or with 1-2 sheaths, 2- or more-fl.; bracts sheathing, shorter than the pedicel, which with ovary is 1-1 $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ -1 in. broad, white; sepals broad; petals rather smaller; margins of mid-segment of lip recurved, spur obtuse or thickened at the tip, mouth with a caruncled callus; anther 3-cuspidate, cells parallel, tubes rather short broad spreading, glands of pollinia large orbicular; stigmatic processes large, clavate; rostellum elongate, erect.

14. *H. rariflora*, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv.* 70, t. 2; leaves radical or subradical linear-oblong or lanceolate acute, flowers few long-pedicelled, upper segment of petals ovate acuminate lower usually much longer filiform, lip tripartite, lateral segments filiform, median

linear, spur very long and stout. *Wight Ic. t. 924; Dalz. & Gibs. Bomb. Fl. 269.* *H. uniflora, Dalz. in Hook. Journ. Bot. iii. (1857) 344.*

The DECCAN PENINSULA; on the Ghats, ascending to 6000 ft., from Canara to Travancore.

Leaves very variable, in small specimens 2-3 by $\frac{1}{4}$ - $\frac{1}{2}$ in. and linear, in others 3-4 by 1 in. and elliptic-oblong, in some cauline 3-5 by $\frac{1}{2}$ - $\frac{3}{4}$ in., or ovate complicate and recurved. *Scape* 2-10 in., with 1-2 sheaths; bracts shorter than the stiff erect pedicels, which are as long as the ovary, together 1-2 in.; flowers very variable in size and length of lip, white; dorsal sepal $\frac{1}{8}$ - $\frac{1}{2}$ in. broad, lateral 5-nerved; upper segment of petals 3-4-nerved; spur 1-3 in., upcurved; anther large, apiculate, cells parallel, tubes short upcurved, glands of pollinia orbicular; stigmatic processes clavate; rostellum erect slender.—In Dalzell's *H. uniflora* the segments of the petals are described as subequal.

Sect. II. PLATYGLOSSA. (See p. 132.)

* Side lobes of the lip lacerate to the middle or inner margin, midlobe linear.

15. **H. Susannæ**, *Br. Prodr.* 312; tall, robust, leaves ovate-oblong upper sheathing, flowers few very large, lateral sepals subquadrately oblong ascending, petals linear acute, lip not longer than the sepals, side lobes very broad pectinate, spur twice as long as the ovary. *Blume Bijdr.* 402. *H. gigantea, Don Prodr.* 24; *Bot. Mag. t. 3374; Grah. Cat. Bomb. Pl.* 201. *Plantanthera Susannæ, Lindl. Gen. & Sp. Orchid.* 295; *Wight Ic. t. 920; Dalz. & Gibs. Bomb. Fl.* 269. *P. gigantea, Lindl. in Wall. Cat.* 7052. *P. robusta, Lindl. in Wall. Cat.* 7036; *Gen. & Sp. Orchid.* 295. *Orchis Susannæ, Linn. Sp. Pl.* No. 939. *O. gigantea, Sm. Exot. Bot. t. 100.* *O. altissima, Herb. Ham.*

TROPICAL HIMALAYA, from Garwhal eastwards; the KHASIA, NAGA and MUNIPORE HILLS, BURMA and the DECCAN PENINSULA to TRAVANCORE.—DISTRIB. China, Malay Islands.

Stem 2-4 ft.; tubers 3-4 in. long. *Leaves* 2-6 in., imbricating up to the flowers, upper cucullate. *Raceme* 3-5-fld.; bracts leafy; flowers 3-4 in. diam., subsessile, white, fragrant; sepals spreading, lateral obtuse, dorsal very broad rhomboid spreading; petals small; side lobes of lip truncate; midlobe linear, or dilated downwards; anther very broad and large, cells slightly divergent, tubes adnate to the sides of the column; pollinia linear, about as long as their caudicle; stigmatic surfaces obscure; rostellum confluent with the face of the column.—This is a true *Platanthera*, in wanting the produced stigmatic processes, and the obscure rostellum, which is marked by a triangular line only.

16. **H. pectinata**, *Don Prodr.* 24; leaves ovate-lanceolate, spike dense-fld., bracts leafy, flowers large, dorsal sepal lanceolate, lateral ovate-lanceolate, petals linear falcate glabrous, lip not longer than the sepals, spur rather longer than the ovary. *Wall. Cat.* 7029 A, and B in part. *H. Gerardiana, Wall. Cat.* 7031. *H. ensifolia, Lindl. Gen. & Sp. Orchid.* 321. *Orchis pectinata, Smith Exot. Bot. t. 99.*

TEMPERATE HIMALAYA, from Simla, alt. 5-8000 ft., eastwards, ascending to 9000 ft. in Sikkim. KHASIA HILLS.

Stem 1-2 ft., robust, very leafy. *Leaves* 4-6 in., strongly 3-nerved, upper or all sheathing, rarely linear-lanceolate. *Spike* 3-8 in.; bracts equalling or exceeding the flowers which are 1-2 in. diam. white or greenish; sepals 5-nerved, dorsal erect; petals obtuse, variable in breadth, somewhat dilated on the outer margin, 3-5-nerved; lip as long as the sepals, spur $\frac{1}{2}$ - $\frac{2}{3}$ in., tip subclavate; anther very broad and large,

cells rather divergent, tubes short, glands of pollinia small; stigmatic processes elongate, tips often falcate dilated and upcurved; rostellum obscure. *Capsule* $\frac{2}{3}$ in., sessile, fusiform, ribs thick.—Black when dry.

17. *H. arietina*, Hook. f.; habit and foliage of *H. pectinata*, but petals pubescent broader than the dorsal sepals gibbously dilated on the outer (lower) margin, spur rather longer than the ovary. *H. pectinata*, Lindl. *Gen. & Sp. Orchid.* 341; *Wall. Cat.* 7029 B in part, and C.

TEMPERATE HIMALAYA; from Simla eastwards, alt. 5–8000 ft. and to 10,000 ft. in Sikkim. KHASIA HILLS, alt. 5–6000 ft.

So similar in a dried state to *H. pectinata* as to be with difficulty distinguishable, and though separated by Lindley, perhaps only a variety. Unfortunately Lindley in describing both species gave Don's name to the wrong plant, as I have proved by examining Smith's original specimen of *O. pectinata* in his Herbarium at the Linnean Society, which is of a very small state.—Black when dry.

18. *H. intermedia*, Don. *Prodr.* 24; leaves ovate or oblong acuminate, flowers few very large, dorsal sepal recurved, lateral reflexed narrower than the dimidiate obovate falcate glabrous petals, lip longer than the sepals, spur twice as long as the ovary. *Lindl. Gen. & Sp. Orchid.* 322; *Wall. Cat.* 7030; *Reichb. f. in Gard. Chron.* 1879, 136.

TEMPERATE HIMALAYA; from Kashmir to Sikkim, alt. 5–7000 ft.

Stem 8–10 in. *Leaves* 2–4 in., scattered, 5–7-nerved, base rounded or cordate. *Racemes* few-fl.; bracts broad, equalling the ovary; flowers 2 in. diam., white or greenish; lateral sepals falcately lanceolate, acuminate, reflexed, 5-nerved; petals strongly 5-nerved; spur very stout; anther-cells with long erect filiform tubes, glands of pollinia small; stigmatic processes long, slender, incurved; rostellum adnate to the face of the column between the anther-cells. *Capsule* $1\frac{1}{4}$ –2 in., pedicelled, fusiform, beaked, terete.

19. *H. trichosantha*, Wall. *Cat.* 7028; leaves ovate-oblong or lanceolate, spike lax-fl., bracts shorter than the long-decurved narrow ovary, lateral sepals ovate-oblong or lanceolate acuminate puberulous, petals linear falcate acuminate, lip longer than the sepals, side lobes capillaceo-multifid, spur longer than the ovary.

BURMA, at Taongdong, Wallich; Moulmein, Parish; Attran, Brandis (*in Herb. Calcutt.*).

Stem 8–18 in. *Leaves* few, 3–6 in., 5–7-nerved. *Raceme* 4–10-fl.; ovary 1 in., sessile; lateral sepals $\frac{1}{2}$ in., deflexed; petals dilated upwards, entire or serrulate, 1-nerved; spur $1\frac{1}{2}$ in.; anther-cells short, with short free tubes, pollinia much shorter than their caudicles, glands small; stigmatic processes short, globose; rostellum an obscure plate between the anther-cells. *Capsule* 1 in., fusiform, shortly beaked, deeply channelled.

** Side lobes of lip petaloid, outer margins entire, toothed, or fimbriate, midlobe narrow.

† Lip deeply 3-lobed or partite, not or hardly longer than the lateral sepals.

20. *H. geniculata*, Don *Prodr.* 25; stem tall leafy with many slender sheaths above, lateral sepals acute, petals linear-oblong, lip sub-orbicular, side lobes cuneate or rounded fimbriate or create, spur longer than the beaked ovary geniculate. *Platanthera geniculata*, Lindl. in *Wall. Cat.* 7042.—*Habenaria*, Griff. *Notul.* iii. 406; *Itin. notes*, 31, No. 494; *Ec. Plant. Asiat.* t. 340.

SUBTROPICAL HIMALAYA; from Nepal eastwards. KHASIA and NAGA HILLS, alt. 2-5000 ft. BURMA, *Wallich*.

Stem 1-2 ft., stout. *Leaves* 2-6 in., sessile, oblong-lanceolate. *Spike* 4-20-fl.; bracts as long as the ovary; flowers $\frac{3}{4}$ -1 in. long, white; lateral sepals $\frac{1}{2}$ in.; lip often $\frac{3}{4}$ in. broad; spur subclavate below the knee; anther-cells broad, divaricate, tubes elongate, upcurved, glands of pollinia small; stigmatic processes, clavate, incurved, margining the mouth of the spur; rostellum low, broad. *Capsule* 1 in., shortly pedicelled, beaked, deeply grooved and thickly ribbed.

21. **H. Richardiana**, *Wight Ic.* t. 1713; stem rather slender sheathed above, leaves oblong-lanceolate, spike few- and lax-fl., sepals ovate acuminate, glabrous, petals gibbously triangular subacute, lip cuneate strongly nerved, side lobes narrow deeply toothed, spur stout twice as long as the beaked ovary.

NILGHIRI and TRAVANCORE HILLS, alt. 6-8000 ft., *Wight, &c.*

Stem 6-8 in. *Leaves* often subradical, 4-6 in., cauline much smaller, or reduced to sheaths. *Spike* 8-10-fl.; bracts large, lanceolate, shorter than the curved ovaries, which are $\frac{2}{3}$ in. long; flowers obscurely puberulous, about $\frac{2}{3}$ in. diam.; dorsal sepal smaller than the 5-nerved lateral; side lobes of lip recurved, acuminate, longer or shorter than the linear 3-nerved midlobe, spur $1\frac{1}{2}$ in., slightly thickened downwards; anther-cells distant, tubes short upcurved, glands of pollinia cupular; stigmatic processes large, clavate; rostellum triangular.

22. **H. cephalotes**, *Lindl. Gen. & Sp. Orchid.* 322; stem short stout closely sheathed above, leaves short broad, spike dense-fl., lateral sepals obliquely ovate and shorter broad gibbous petals and lip scurfily pubescent within, lip cuneately obovate, side lobes fimbriate, spur shorter than the beaked ovary. *Wight Ic.* t. 1711.

NILGHIRI and TRAVANCORE HILLS, alt. 7-8000 ft., *Wight*.

Habit and foliage of *H. Richardiana*, but stouter, stem more densely sheathed, and flowers smaller, crowded in a cylindric or oblong spike; dorsal sepal very broad, obtuse; petals in *Wight's* figure with a deep sinus on the lower margin; midlobe of lip rather longer than the side lobes; anther-cells broad, nearly parallel, tubes rather long upcurved, glands of pollinia minute; stigmatic processes long clavate; rostellum short broad.

23. **H. polyodon**, *Hook. f.*; stem short stout sheathed above, leaves ovate-lanceolate, spike many-fl., bracts sheathing as long as the ovary, sepals obtuse glabrous, petals triangular-ovate obtuse, lip broadly obcordate, side lobes erose or pectinately fimbriate, spur very stout exceeding the stout curved ovary. *H. fimbriata*, *Wight Ic.* t. 1712.

NILGHIRI HILLS, *Wight, &c.*

Stem 8-10 in., leafy to the top; tubers large. *Leaves* 2-3 in., sheathing, upper cymbiform. *Spike* 3-4 in., lax- or dense-fl.; flowers $\frac{2}{3}$ in. diam.; bracts cymbiform; sepals broadly ovate, obtuse, dorsal smallest; petals smaller, triangular, fleshy; midlobe of lip short, oblong, spur clavate; anther broad, cells subparallel, tubes short ascending, pollinia longer than their caudicles, gland minute; stigmatic processes very large, short, stout; rostellum very short, broad.

24. **H. longicornu**, *Lindl. in Wall. Cat.* 7027; *Gen. & Sp. Orchid.* 322 (*longicornis*); leaves subradical linear-oblong or lanceolate acuminate, spike lax-fl., bracts shorter than the ovary, lateral sepals ovate acute glabrous, petals lanceolate or linear-oblong, lip tripartite, side lobes recurved cuneate fimbriate or crenate, spur stout twice as long as the very long-beaked ovary. *H. montana*, *A. Rich. in Ann. Sc. Nat. Ser. ii.* xv. 73; *Wight Ic.* t. 925 and t. 1714, *centre figure and lower right-hand flower.* *Orchis longicornu*, *Herb. Heyne.*

NILGHIRI and TRAVANCORE MTS., Heyne, &c.

Stem 6-12 in. *Leaves* 2-5 in., usually linear-oblong, rarely (as figured by *Wight*) shorter and broader. *Spike* 3-6-fl.; upper half of ovary almost filiform; flowers nearly 1 in. long; side lobes of lip longer than the linear midlobe; mouth of spur caruncled; anther-cells broad, parallel, tubes rather long spreading, pollinia as long as their caudicles; stigmatic processes short, clavate; rostellum low, broad.

25. **H. platyphylla**, *Spreng. Syst. Veg.* iii. 690; scapigerous, leaves sessile orbicular or elliptic, spike short dense-fl., bracts shorter than the long-beaked ovary, sepals broadly oblong obtuse, petals linear narrow, lip 3-lobed, side lobes small rounded, midlobe lanceolate, spur longer than the ovary slender. *Lindl. Gen. & Sp. Orchid.* 323; *Grah. Cat. Bomb. Pl.* 201; *Wight Ic. t.* 1709. *Orchis platyphyllos*, *Willd. Sp. Pl.* iv. 10; *O. plantaginea*, *Roxb. Cor. Pl.* 32, t. 37; *Fl. Ind.* iii. 450. *O. Roxburghii*, *Pers. Syn.* ii. 503.

The DECCAN PENINSULA; from the Concan and the Circars to Travancore.

Leaves 3-6, appressed to the earth, fleshy, 3-5 in. long, and as broad or narrower. *Scape* 6-18 in.; stout, strict; sheaths many, erect, narrowly subulate; spike 2-4 in., round-topped, flowers white, sweet-scented; sepals concave; ovary 1 in., beak slender, as long as the body; lip much less deeply lobed than in others of this group, margins erose, spur sometimes twice as long as the ovary, mouth funnel-shaped, with a short tooth; anther-cells divergent, tubes long, pollinar glands small; stigmatic processes subglobose; rostellum short triangular.

26. **H. Lindleyana**, *Steud. Nomencl. Ed.* 2, 716; leaves subradical large ovate-oblong acute, scape tall with a few lanceolate sheaths at the tip, raceme few-fl., flowers large, bracts narrowly lanceolate shorter than the very long ovary, dorsal sepal much smaller than the large oblong acute entire lateral, petals small falcate, side lobes of lip narrow linear much shorter and narrower than the linear-oblong obtuse midlobe, spur filiform longer than the ovary. *H. latifolia*, *Lindl. Gen. & Sp. Orchid* 323.

MALAY PENINSULA (*Ic. Finlayson in Herb. Kew*).

Leaves 5-6 by 2-2½ in., membranous, almost petioled, many-nerved. *Scape* 12 in.; bracts ⅔ in., linear-lanceolate, membranous; ovary 1½ in.; flowers white, spur green; dorsal sepal broadly ovate, acuminate, reflexed, lateral ⅔ in. long, subfalcate, 5-7-nerved; petals much smaller, acuminate; lip 1 in., rather longer than the sepals, midlobe 3-nerved; tube of anther-cells long, slender; stigmatic processes elongate.—A noble species. *Lindley* gives "Ceylon, Macrae" as its origin, but as a fine drawing by *Finlayson* (who collected only in the borders of Siam) is in *Herb. Kew*, and *Thwaites* never saw the plant in Ceylon, this is, no doubt, one of several plants in *Herb. Lindley* wrongly attributed to Ceylon. It is evidently nearly allied to *H. platyphylla*.

27. **H. suaveolens**, *Dalz. in Hook. Journ. Bot.* ii. (1850) 263; leaves subradical linear or linear-oblong acuminate, scape slender, spike few-fl., flowers secund, bracts longer than the ovary narrowly cymbiform acuminate, sepals subequal, petals as long but broader, lip cuneately flabellate, side lobes broad, midlobe as long narrow, spur as long as the curved beaked ovary, tip subclavate. *Dalz. & Gibs. Bomb. Fl.* 268 (excl. syn.).

The CONCAN; between Vignoria and Malwan, rare, *Dalzell*.

Leaves 4-6 by ½-¾ in., rather thick. *Scape* 6-12 in., often flexuous; sheaths 1-3 in.; bracts ⅔ in. long, finely acuminate, herbaceous; flowers 3-6, ½ in. broad, white, jasmine-scented; dorsal sepal orbicular-ovate, obtuse, lateral subfalcate, ovate-oblong, acute; petals triangular-ovate, subacute; lip as long as the lateral sepals, as broad as long, side lobes toothed or entire; anther narrow, erect, apiculate, cells contiguous narrow, tubes 0; pollinia clavate, as long as their stout caudicles;

glands large orbicular, lying close together on each side of the erect acute rostellum; (stigmatic processes short, truncate, *Dalzell*).—A very anomalous species of this section.

†† *Lip deeply 3-lobed or -partite, much longer than the lateral sepals.*

28. **H. longifolia**, *Ham. in Lindl. Gen. & Sp. Orchid.* 324; stem tall slender leafy, leaves very narrow, spike few- and lax-fl'd., bracts slender longer than the slender beaked ovaries, sepals small, petals gibbously ovate, lip flabelliform, side lobes semi-circular quite entire, spur slender twice as long as the ovary. *Gymnadenia longifolia*, *Lindl. in Wall. Cat.* 7060.

WESTERN HIMALAYA; Kumaon, *Royle*; Népál, at Nathpur, *Hamilton*.

Stem 10–18 in. Leaves 3–5 in., scattered, erect, linear, acuminate. Spike 2–3 in.; bracts $\frac{3}{4}$ –1 in.; ovary $\frac{1}{2}$ – $\frac{3}{4}$ in., curved; flowers white; lateral sepals $\frac{1}{2}$ in., oblong-lanceolate, 3-nerved, dorsal smaller; petals 3-nerved, as long as the dorsal; lip $\frac{1}{2}$ – $\frac{3}{4}$ in. long and broad, twice or thrice as long as the lateral sepals, midlobe linear, shorter than the side lobes; anther beaked, cells parallel, tubes upcurved; stigmatic processes short, clavate, incurved, surrounding the mouth of the spur; rostellum long, subulate, erect.

29. **H. plantaginea**, *Lindl. Gen. & Sp. Orchid.* 323; scapigerous, leaves narrowly oblong, scape slender, spike lax-fl'd., bracts half as long as the beaked ovary, sepals small, petals linear-lanceolate, lip flabelliform, side lobes semi-ovate entire or toothed, midlobe as long linear, spur as long as the ovary very slender. *Wight Ic. t.* 1710. *Gymnadenia platyphylla*, *Lindl. in Wall. Cat.* 7053. *Orchis platyphyllos*, *Roxb. Fl. Ind.* iii. 609. *O. tenuis*, *Herb. Rottl.*

SUBTROPICAL HIMALAYA, alt. 3–7000 ft., from Garwhal to Sikkim. BEHAR, CENTRAL INDIA, and the DECCAN PENINSULA, from the Concan southwards, *Heyne*, &c. CEYLON, in the hot drier parts of the Island.

Leaves 3–6 in., radical, horizontal, acute or obtuse, membranous. Scape 8–12 in., slender; sheaths small, acuminate; spike 2–3 in.; flowers subsecund, white; bracts setaceous or lanceolate; ovary $\frac{3}{4}$ in., curved; sepals $\frac{1}{2}$ in. long, subequal, acute, 3-nerved, dorsal ovate-oblong, lateral falcately oblong; lip $\frac{1}{2}$ – $\frac{3}{4}$ in. broad, twice as long as the lateral sepals, puberulous, spur 1–1 $\frac{1}{2}$ in. green; anther rather broad, cells divergent, tubes short upcurved, pollinia as long as their caudicles, glands elongate; stigmatic processes large, clavate; rostellum triangular, broad. Capsule $\frac{3}{4}$ in., turgidly fusiform, curved, beak short slender.—In this species the caudicles of the pollinia are at first inserted in the hollow of a single concave 2-lipped or incurved gland of a lanceolate form, which afterwards splits longitudinally, each pollinia carrying away one half.

30. **H. longicalcarata**, *A. Rich. in Ann. Sc. Nat. Ser. 2*, xv. 71, t. 3; subscapigerous, leaves linear-oblong or lanceolate, flowers 1–4, bracts long convolute much shorter than the long-pedicelled beaked ovaries, sepals broad obtuse, petals oblong-lanceolate acuminate, side lobes of lip dimidiate-ovate acuminate fimbriate or toothed, spur several times longer than the long narrow ovary. *Wight Ic. t.* 925; *Dalz. & Gibs. Bomb. Fl.* 268. *H. decipiens*, *Wight. Ic. v. Pt. i.* 14. *H. montana*, *Wight Ic. t.* 1714 (*upper right and left hand figures*) (*not of A. Richard.*) *H. longicorniculata*, *Grah. Cat. Bomb. Pl.* 202. *H. macroceratitis*, *Herb. Rottl.*

The DECCAN PENINSULA; on the Western Ghats, from the Concan to Travancore, ascending to 6000 ft.

Stem or scape 10–18 in.; sheaths few, distant. Leaves 2–4 in. Flowers white, asmine-scented; bracts $\frac{3}{4}$ –1 in.; ovary 1 in., suberect, its pedicel sometimes as long; sepals $\frac{1}{2}$ in. long, 3-nerved; lip $\frac{1}{2}$ –1 in. long, spur thickened from below the middle to

the tip; anther very broad, tubes as long as the cells, pollinia narrowly pyriform shorter than their slender caudicles, which are narrowly winged on one side, glands very small; stigmatic processes surrounding the mouth of the spur; rostellum obscure.—Allied to *H. longicornu*, but much more slender, leaves longer, flowers much larger, lip longer than the sepals, its side lobes broader, and spur very much longer.

31. *H. crinifera*, Lindl. *Gen. & Sp. Orchid.* 323; scapigerous, leaves oblong or lanceolate, raceme lax-fl., bracts much shorter than the pedicelled ovary, sepals broad obtuse, petals linear acuminate, lip clawed sub 4-partite, side lobes cuneate or dimidiate-ovate crenate caudate, mid-lobe 2-lobuled, spur very slender incurved much longer than the filiform beaked ovary. *Wight Ic. t.* 926; *Dalz. & Gibs. Bomb. Fl.* 269. *H. schizochilus*, *Grah. Cat. Bomb. Pl.* 282. *Symmeria schizochilus*, *Grah. l. c. on last (unnumbered) page.*

The DECCAN PENINSULA, from the Concan to Travancore. CEYLON.

Leaves 1-6 in., very variable in breadth. *Scape* 1-18 in., very slender; sheaths scattered, subulate: bracts lanceolate; flowers white, $\frac{3}{4}$ -1 $\frac{1}{2}$ in. long; dorsal sepal orbicular, subacute, lateral broadly ovate; lip much longer than the sepals, as it were 4-lobed, the lobes tailed; spur with a long erect ligule at the mouth; anther tubes long, straight; caudicles of pollinia winged as in *H. longicalcarata*, glands minute; stigmatic processes clavate, adnate to the mouth of the spur; rostellum very short, obtuse.

32. *H. triflora*, Don *Prodr.* 25; stem leafy 1-2-fl., leaves short sheathing, bracts long embracing the ovaries of the large erect flowers, dorsal sepal oblong-ovate, lateral oblong-lanceolate, petals small linear-subulate, lip very large, side lobes semi-oblong hatchet-shaped crenulate, midlobe shorter linear, spur very slender as long as ovary straight. *Platanthera candida*, Lindl. in *Wall. Cat.* 7035; *Gen. & Sp. Orchid.* 295.

WESTERN HIMALAYA; Kumaon, alt. 5000 ft., *Strachey & Winterbottom*; Nepal, *Wallich*. LOWER BENGAL; at Mymensingh, *Clarke*.

Stem 8-12 in., rather slender. *Leaves* 1-3 in., oblong, acute, sometimes all imbricating, or the lower larger and spreading, upper acuminate. Flowers shortly pedicelled; bracts and slender ovary 1-1 $\frac{1}{2}$ in. long; sepals $\frac{1}{2}$ in. long, suberect; petals 1-nerved; lip 1-1 $\frac{1}{2}$ in. broad, sessile on the mouth of the spur, and there bigibbous; spur slightly thickened at the tip, mouth funnel-shaped; anther very broad, quadrate, truncate, cells marginal, tubes short free, glands of pollinia minute; staminodes prominent; stigmatic surface inconspicuous; rostellum broad obscure.—The suberect lateral sepals, and sheathed stem recall the species of the *Phyllostachya* section.

*** *Lip short, 3-lobed at the broad apex.*

33. *H. Orchidis*, Hook. f.; stem stout leafy, leaves oblong or linear-oblong erect acute, spike short cylindric very dense-fl., bracts longer than the short curved ovaries, flowers small, sepals puberulous, dorsal elliptic, lateral oblong, petals shorter rhombic-orbicular, lip cuneately obovate, spur as long as the ovary slender incurved. *Gymnadenia cylindrostachya*, Lindl. in *Wall. Cat.* 7056; *Gen. & Sp. Orchid.* 278. *G. Orchidis*, and violacea, Lindl. *Gen. & Sp. l. c.* *Platanthera Orchidis*, Lindl. in *Wall. Cat.* 7039 A.

TEMPERATE HIMALAYA; Garwhal, alt. 8-9000 ft., *Duthie*; Kumaon, *Wallich*; Sikkim, alt. 8-1000 ft., *J. D. H.*

Stem 1-2-ft. *Leaves* 2-6 in., broad or narrow, sheathing, sometimes short and imbricating. *Spike* 2-5 in.; bracts lanceolate, herbaceous; ovary $\frac{1}{2}$ in. long, incurved, subrotund; flowers $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., pink, odoriferous, perianth spreading;

dorsal sepal oblong; lobes of strongly nerved lip very short, obtuse, equal or the midlobe longest and broadest; anther short, broad, cells parallel contiguous, tubes 0, pollinia clavate almost sessile on the large oblong gland, grains very large and loose; stigmatic processes very large, globose, placed close under the anther, and swelling up after fertilization so as almost to cover it; rostellum minute. *Capsule* small, sessile, $\frac{1}{8}$ in. long, broadly ellipsoid or subglobose.—A very anomalous member of the section.

34. *H. monophylla*, Collett & Hemsl. in Journ. Linn. Soc. ined.; leaf solitary subradical, stem and many-fld. raceme scurfily pubescent, bracts as long as the ovary or shorter, sepals and petals subequal oblong obtuse glabrous, lip much larger than the sepals clawed cuneately obovate 3-lobed, lateral lobes broad erose, midlobe smaller ovate obtuse, spur as long as the lip incurved obtuse.

UPPER BURMA, Collett.

A foot high, rather slender. Leaf 2 in., oblong, obtuse, sheathing the base of the stem. Stem flexuous; sheaths 2-3, $\frac{1}{2}$ in., and bracts lanceolate, acuminate. Raceme 2 in., rather dense-fld.; bracts $\frac{1}{2}$ in.; flowers about as broad as long; side lobes of lip as broad as long, diverging, disk puberulous, speckled; anther ovoid or globose, cells parallel contiguous, tubes 0, glands of pollinia contiguous orbicular.— Closely allied to *H. Orchidis*. Described from a single indifferent specimen.

Sect. III. TRIMEROGLOSSA. (See p. 132.).

* Tubes of the anther-cells long.

† *Perianth membranous; lateral sepals with deeply looped or arched nerves.*

35. *H. commelinifolia*, Wall. in Lindl. Gen. & Sp. Orchid. 325; tall, robust, leaves oblong to oblong-lanceolate, bracts longer than the long-beaked ovary slender, dorsal sepal orbicular much smaller than the gibbously hatchet-shaped beaked lateral, petals oblong, lip with a linear blade dividing into 3 very long filiform segments, spur very long. Griff. Notul. iii. 372; Ic. Plant. Asiat. t. 339. *Platanthera commelinifolia*, Lindl. in Wall. Cat. 7037. *Orchis commelinifolia*, Roxb. Fl. Ind. iii. 451; Grah. Cat. Bomb. Pl. 201. *O. stylosanthes*, Herb. Ham.

TROPICAL WESTERN HIMALAYA; Kumaon, alt. 3500 ft., Royle, Strachey & Winterbottom. The CONCAN and CANARA, Stocks, Law, &c.

Stem 2-3 ft.; tubers ellipsoid (2-9 in. long, Roxb.). Leaves 3-6 in., upper or sheaths lanceolate. Spike 4-8 in.; ovary 1-1 $\frac{1}{2}$ in., upper two-thirds filiform; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., white, incdorous; mid segment of lip deflexed, scaberulous, lateral widely spreading; spur 1-2 $\frac{1}{2}$ in., incurved, green, mouth funnel-shaped; anther reflexed, tubes long straight erect; staminodes seated on the long arms of the column; stigmatic processes large, clavate, incurved; rostellum short, triangular. *Capsule* $\frac{1}{2}$ in., sessile, fusiform, beak twice as long as the body.

36. *H. malleifera*, Hook. f.; tall, stout, leaves clustered large ob-lanceolate acute, spike long many-fld. furfuraceous, dorsal sepal orbicular cucullate much smaller than the large deformed lateral, petals very small, lip longer than the sepals tripartite to the base, segments filiform subequal or central longest, spur half as long as the long-beaked ovary, tip involute globose or clavate.

SIKKIM HIMALAYA; at Senadah, alt. 6000 ft., King (Herb. Calcutt.). KHASIA HILLS, Lobb; at Myrung, alt. 5000 ft., J. D. H. & T. T.

Stem with raceme 12–18 in.; hairs cellular, scattered. *Leaves* clustered below the middle of the stem, 5–8 by $1\frac{1}{2}$ – $2\frac{1}{2}$ in. *Raceme* 4–6 in., lax-flid.; sheaths large, ovate, finely acuminate; bracts $\frac{3}{4}$ –1 in., shorter than the ovary, ovate-lanceolate; flowers greenish, about $\frac{1}{2}$ in. diam.; ovary $\frac{3}{4}$ –1 in., beak very slender; dorsal sepal embracing the anther, lateral reflexed triangular-oblong in outline but with the lower margin so gibbous as to form an obtuse false apex to the 5-nerved sepal, the true apex in which the looped nerves end being close to the base of the sepal; petals gibbously triangular; staminodes adnate to the sides of the anther; anther recumbent, tubes very long decurved; pollinia clavate, caudicle very long, glands minute; stigmatic processes very long; rostellum obscure.

37. **H. Murtoni**, *Hook. f.*; leaves petioled crowded towards the base of the stem oblanceolate, spike puberulous, dorsal sepal orbicular hooded, much smaller than the deformed lateral, petals small triangular, lip much longer than the sepals tripartite to the base, segments filiform subequal or lateral shorter, spur longer than the long-beaked ovary slender.

MALAY PENINSULA; Perak, on limestone rocks, *Scortechini*, *Kunstler*. SINGAPORE, *Murton*.

Stem 2–3 ft., with rather close-set ovate-lanceolate leafy sheaths, 1–2 in. long above the leaves. *Leaves* 6–10 by 2–3 in., narrowed into a broad petiole. *Spike* lax-flid.; bracts ovate-lanceolate, equalling the decurved ovary; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; upper margin of lateral sepals very short straight, tip lateral, nerves forming deep loops; anther-cells very much as in *H. malleifera*, tubes very long; pollinia shorter than their long caudicles, glands minute; stigmatic processes globose; rostellum obscure.

38. **H. Kingii**, *Hook. f.*; robust, leaves large crowded towards the base of the stem petioled, spike puberulous, dorsal sepal obovate cucullate as long as the cultriform beaked strongly falcate lateral, petals linear-lanceolate obtuse, lip much longer than the sepals tripartite to the base, segments very slender subequal, spur as long as the slender long-beaked ovary.

PERAK; on limestone rocks, *King's Collector*.

Stem 1– $2\frac{1}{2}$ ft. *Leaves* 5–10 in., acute or acuminate. *Spike* lax-flid.; bracts ovate-lanceolate, as long as the ovaries; flowers pale silvery green; sepals about $\frac{1}{2}$ in. long, acuminate, 5-nerved; petals shorter than the dorsal sepal, 1-nerved; spur slightly thickened downwards; anther closely embraced by the hooded dorsal sepal, tubes very long stigmatic processes and rostellum as in *H. Murtoni*.—Differs from *H. Murtoni* in the form of the lateral sepals, the long dorsal, and in the petals and spur. Both these and *H. furfuracea* are near *H. ciliaris*, Kranzlein of China, and *H. muricata*, Vidal, of the Philippine Islands.

39. **H. furfuracea**, *Hook. f.*; tall, leaves large obovate or oblanceolate clustered, spike lax-flid. furfuraceous with short cellular hairs, dorsal sepal broadly ovate acuminate hooded as long as the cultriform strongly curved lateral, lip subequally tripartite to the base, spur shorter than the long-beaked ovary tip fusiform.

KHASIA HILLS; at Nunklow, alt. 3–4000 ft., *J. D. H. & T. T.*

Closely allied to *H. Kingii*, but more slender, with a furfuraceous spike and a shorter spur with a fusiform tip. The anthers stigmatic apparatus, &c., are nearly the same in both. This and *Kingii* differ remarkably from *H. malleifera* & *Murtoni* in the less deformed lateral sepals.

40. **H. pubescens**, *Lindl. Gen. & Sp. Orchid.* 322; stem leafy towards the base and elongate many-flid. raceme pubescent, leaves elliptic-lanceolate base narrowed, dorsal sepal hemispheric nearly as long as the dimidiate-ovate obtuse lateral, petals linear, lip much longer than the

sepals tripartite, segments linear obtuse central broadest, spur slender as long as the curved beaked ovary tip acuminate.

WESTERN HIMALAYA; Kumaon or Garwhal, *Royle, Falconer.*

Stem 12-18 in., stout; upper sheaths free, ovate-lanceolate. *Leaves* 4-6 by 1-1½ in., not margined. *Spike* 8-10 in.; bracts ovate-lanceolate, ciliolate, shorter than the ovary which is curved, ½ in., pubescent, beak slender; lateral sepals ⅓-½ in. long; tubes of anther-cells long, straight; staminodes large; stigmatic processes globose.—Much the smallest flowered of its subdivision.

41. **H. spatulæfolia**, *Par. & Reichb. f. in Trans. Linn. Soc. xxx.* 140; leaves 2-3 subradical obovate-spathulate, scape slender 2-fld., sheath and bracts large broad cymbiform, dorsal sepal hemispheric as long as the hatchet-shaped lateral, petals linear-oblong falcate, lip tripartite to the base, segments filiform side ones short central very long incurved, spur longer than the ovary tip clavate.

TENASSERIM; at Mergui, *Parish.*

Leaves 4-5 by 1-1½ in., not margined, subpetioled. *Scape* as long; sheath solitary; bracts much shorter than the filiform straight beaked pedicelled ovary which is 1½ in. long; sepals ½ in. long; tubes of anther-cells very long, slender; stigmatic processes short.—Habit of *Diplomeris*.

↑↑ *Lateral sepals curved or nearly straight, nerves straight or moderately arched.*

42. **H. pterocarpa**, *Thwaites Enum.* 309; stem leafy, leaves long linear-lanceolate, bracts equalling the ovary, flowers few very large, dorsal sepal ovate-oblong rather shorter than the falcate oblong-lanceolate acuminate lateral, petals linear-oblong falcate, lip twice as long as the sepals 3-cleft to above the middle, side lobes subulate-lanceolate falcately recurved longer than the straight midlobe, spur very large thrice as long as the beaked ovary thickened from below the middle.

CEYLON; at Kandy, *Walker*; at Ramboddi, alt. 3000 ft., *Thwaites.*

Stem 6-18 in. *Leaves* 4-10 in., base contracted. *Spike* 3-10-fld.; bracts large, ovate-lanceolate; ovary narrowly winged, shortly pedicelled; flowers 1½-2 in. diam., white; ovary 1½ in. long; lateral sepals spreading or deflexed, dorsal rather shorter acute as long as the petals; spur 3½ in., green, narrowly clavate, mouth with a tooth; midlobe with deflexed sides; anther-cells divaricate; caudicles of pollinia exactly as in *H. longicalcarata*; stigmatic processes elongate, clavate; rostellum triangular.

43. **H. rhynchocarpa**, *Hook. f.*; stem leafy, leaves lanceolate, spike short dense-fld., dorsal sepal cymbiform half as long as the broadly ovate-oblong lateral, petals linear, lip as long as the sepals 3-lobed to the middle, lobes linear-lanceolate acute mid one longest, spur much longer than the long slender beaked ovary. ? *H. stenopetala*, *Lindl. Gen. & Sp. Orchid.* 324 (not of p. 319). *Platanthera rhynchocarpa*, *Thwaites Enum.* 310.

CEYLON; above Galagama, alt. 4000 ft., *Thwaites.*

Stem 1-2 ft., leafy below the middle. *Leaves* 2-6 in., sessile. *Spike* 2-3 in., dense-fld.; bracts slender, equalling the ovary or longer; flowers white, ½-¾ in. diam.; lateral sepals deflexed, subacute; spur 1-1½ in., cylindric, green, obtuse; anther-cells divaricate, tubes straight; glands of pollinia minute; stigmatic processes elongate, incurved, adnate to the mouth of the lip; rostellum minute.—Lindley's *H. stenopetala* of p. 324 (not of p. 319) is I think a starved specimen of *rhynchocarpa*.

44. **H. vidua**, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 140, t. 27, f. 2; leaves subbasal elliptic-lanceolate acute, scape above and flowers puberulous, raceme lax-flid., bracts much shorter than the ovary, dorsal sepal orbicular pubescent rather smaller than the oblong subacute lateral, petals hatchet-shaped, lip tripartite, segments filiform subequal longer than the sepals side ones recurved over the flower, midlobe deflexed, spur longer than the long-beaked ovary acute.

TENASSERIM; at Moulmein, *Parish*.

Stem short, stout, with 1-2 spreading sheaths above the leaves. *Leaves* 3-5 by $\frac{1}{3}$ - $1\frac{1}{2}$ in. *Raceme* 4-6 in.; bracts ovate, acuminate; flowers $\frac{1}{2}$ in. diam., green and white, sweet scented; pedicel with ovary $\frac{3}{4}$ -1 in., nearly straight; lateral sepals reflexed, margins revolute; spur thickened below; tubes of anther-cells divaricate; pollinia much shorter than their slender caudicles, glands small; stigmatic processes short, clavate, adnate to the mouth of the spur; rostellum short, broad. *Capsule* $\frac{3}{4}$ in., shortly pedicelled, straight, fusiform, beak short.

45. **H. Mandersii**, *Hemsl. & Collett in Journ. Linn. Soc. ined.*; tall, lower leaves linear-oblong upper narrow lanceolate, raceme glabrous, bracts as long as the slender pedicelled long-beaked ovaries, dorsal sepal ovate obtuse as long as the oblong obtuse lateral, petals as long as the sepals linear-oblong obtuse, lip as long as the sepals entire or tripartite nearly to the base lateral segments 0 or shorter than the linear midlobe and recurved, spur twice as long as the ovary geniculate tip clavate.

BURMA; at Mandalay, *Anderson (in Herb. Calcutt.)*, *Collett*.

Stem with raceme 18 in. *Leaves* (imperfect) 3 in., upper narrow ones erect, 1- $1\frac{1}{2}$ in. *Raceme* 4 in.; bracts 1 in., ciliolate, lanceolate; ovary narrowly winged; sepals $\frac{1}{2}$ in., 3-nerved, lateral subfalcate; petals usually straight, 3-nerved; margins of midlobe of lip revolute, spur 1-2 in., mouth with a large obtuse ligule with revolute sides, the convex face (towards the mouth) has 2 short conical spurs side by side and a median tooth above them; anther very large, tubes long erect; pollinia much shorter than their long narrowly winged caudicle; glands ovate; stigmatic processes clavate.—The organ at the mouth of the spur is very curious.

46. **H. rostrata**, *Watl. in Lindl. Gen. & Sp. Orchid.* 325; leaves lanceolate acuminate, upper passing into many slender erect sheaths, spike many- and lax-flid., dorsal sepal cymbiform much shorter than the broadly ovate falcate lateral, petals broadly oblong obtuse, lip much longer than the sepals segments very long filiform, spur shorter than the very long-beaked ovary, tip pyriform. *Platanthera rostrata*, *Lindl. in Wall. Cat.* 7051 A.

PEGU and TENASSERIM, *Wallich*.

Stem 6-12 in. *Leaves* 4-6 by $\frac{1}{2}$ - $\frac{2}{3}$ in. *Spike* 2-4 in.; bracts very slender, ciliolate, longer than the ovary; flowers yellow spotted with brown, about $\frac{1}{3}$ - $\frac{1}{2}$ in. diam.; sepals coriaceous lateral dimidiate oblong, deflexed, 5-nerved, tips turned up; petals oblong, pubescent, falcate, shorter than the sepals; tubes of anther-cells elongate, caudicles of pollinia long, glands linear; stigmatic processes forming a ring round the mouth of the ovary; rostellum very short, triangular. *Young fruit* with the beak as long as the body.

47. **H. acuífera**, *Wall. in Lindl. Gen. & Sp. Orchid.* 325; slender, leaves scattered linear-lanceolate acuminate upper setaceous, spike short, bracts longer than the beaked ovary, sepals obtuse, dorsal broadly oblong shorter than the concave oblong lateral, petals much smaller linear-oblong, lip as long as the sepals, side lobes short subulate, midlobe linear, spur half as long as the ovary. *H. linguella*, *Lindl. l. c.* 325 (*excl. hab. Ceylon*).

Platanthera acuiifera, Lindl. in Wall. Cat. 7045. *P. rostrata*, Lindl. in Wall. Cat. 7051 B.

KHASIA HILLS, alt. 4-5000 ft., common. NAGA HILLS, Prain. TAVOY, Wallich.—DISTRIB. China.

Stem 10-18 in., flexuous. Leaves 2-4 by $\frac{1}{2}$ - $\frac{1}{2}$ in., erect, base sheathing, upper and linear lanceolate ciliolate bracts very finely acuminate; ovary $\frac{1}{2}$ - $\frac{3}{4}$ in., rugose, beaked for half its length; flowers golden, $\frac{2}{3}$ in. diam.; dorsal sepal strongly 3-lateral 5-nerved; petals 1-nerved; margins of midlobe of lip revolute, spur slightly clavate; anther large, apiculate, tubes long erect, caudicles of pollinia long very slender, glands minute; stigmatic processes clavate, incurved.—Lindley errs in describing the leaves as all radical, and in giving Ceylon as a habitat.

48. *H. chlorina*, Reichb. f. in Trans. Linn. Soc. xxx. 140; habit and character of *H. acuiifera*, but rather stouter, leaves broader, spike longer, sepals and petals 3-nerved, side lobes of lip large and spur incurved below the middle with a large clavate ellipsoid tip.

TENASSERIM; at Moulmein, Lobb, Parish. SHAN STATES, alt. 4400 ft., Collett.

Leaves $\frac{1}{2}$ - $\frac{3}{4}$ in. broad. Spike 2-3 in. long; flowers at first yellow-green, then spotted with brown, at last brown.—Probably a form of *H. acuiifera*, but besides the above difference the flowers are smaller.

** Tubes of anther-cells short.

† Stem leafy upwards.

§ Bracts lanceolate, acuminate. Flowers not or hardly secund.

49. *H. elliptica*, Wight Ic. t. 1706; leaves all linear-oblong or lanceolate acuminate narrowly margined, spike many-fld., bracts longer than or equalling the ovaries, dorsal sepal shorter than the broadly oblong obtuse lateral, petals triangular-ovate ciliolate, lip as long as the sepals trifid beyond the middle lobes oblong obtuse, spur stout equalling the shortly beaked incurved ovary.

TRAVANCORE; on the Pulney Mts., Wight.

Stem 12-18 in., rather stout. Leaves 2-3 by $\frac{1}{2}$ - $\frac{3}{4}$ in., upper short sheathing, erect or incurved. Spike 2-4 in., cylindric; bracts finely acuminate; flowers greenish-white, about $\frac{1}{2}$ in. diam.; perianth thick subpuberulous; sepals 3-nerved, dorsal ciliolate almost orbicular, lateral ovate-oblong; petals $\frac{1}{2}$ shorter, fleshy; lobes of lip parallel; anther broad, cells distant divaricate, tubes short; pollinia longer than their stout caudicles, glands small; stigmatic processes large, clavate; rostellum broad, triangular.

50. *H. fusifera*, Hook. f.; leaves oblong acute narrowly margined, spike many-fld., bracts longer than the ovary, dorsal sepal suborbicular nearly as long as but broader than the oblong obtuse lateral, petals larger than the sepals triangular-ovate, lip larger than the sepals 3-partite to the base, side segments filiform longer than the linear mid segment, spur shorter than the curved ovary fusiform with a short narrow neck.

TRAVANCORE; on the Annamallay Hills, Beddome (in Herb. Calcutt.).

Habit of *H. elliptica*, but very different in the shorter not beaked ovary, larger dorsal sepal, and petals, 3-partite lip, and spur; flowers yellow; anther broad, cells divaricate, tubes short; pollinia clavate, caudicles short, glands small; stigmatic processes clavate, incurved, adnate to the mouth of the spur.—I have seen only one specimen.

51. **H. trifurcata**, *Hook. f.*; leaves petioled elliptic-lanceolate acuminate, spike many-fl., bracts equalling the ovary, sepals subequal ovate-lanceolate acute, petals narrowly linear, lip as long as the sepals 3-partite to near the base segments subulate, spur as long as the ovary or longer slender.

KHASIA HILLS; at Nowgong (*Herb. Calcutt.*).

Stem 10–12 in., rather slender, leafless below. *Leaves* 3–4 in., alternate, membranous, not margined, upper or sheaths lanceolate. *Spike* many-fl.; bracts slender, lanceolate; ovary $\frac{1}{2}$ – $\frac{1}{2}$ in., slightly curved; sepals $\frac{1}{4}$ in. long, membranous, 3-nerved; petals as long, 1-nerved; anther oblong, cells contiguous, tubes short divaricate; stigmatic processes elongate, clavate, adnate to the sides of the lip; rostellum narrow, erect.—The petioled scattered leaves and petals distinguish this at once from *H. furcifera*, and the petals and spurs from *fusifera*.

52. **H. avana**, *Hook. f.*; leaves linear-lanceolate acuminate, spike many-fl., bracts longer than the flowers, dorsal sepal very broad, lateral oblong acute, petals as long triangular, lip longer than the sepals tripartite from beyond the base, segments linear-subulate lateral incurved, spur as long as the short not beaked ovary.

BURMA; at Ava, *Mrs. Burney* (*Herb. Calcutt.*).

Stem 6–10 in. *Leaves*, lower 2 in., with long tubular sheaths, upper many erect very narrow. *Spike* dense-fl.; lower bracts $\frac{3}{4}$ in.; ovary $\frac{1}{2}$ in., curved; sepals rather shorter, dorsal broadly ovate obtuse 5-nerved, lateral deflexed 3-nerved; petals 2-nerved; lip hardly twice as long as the sepals, linear before forking; anther short, rather broad, tips of cells recurved hardly tubular; caudicles of pollinia very short, glands large; stigmatic processes long, clavate, adnate to the lip; rostellum broad, acute, flat.—The specimens are indifferent.

§§ *Bracts large, cucullate. Flowers secund.*

53. **H. Heyneana**, *Lindl. Gen. & Sp. Orchid.* 320; stem stout, leaves subimbricate short sheathing acute, bracts cymbiform acuminate sheathing the flowers, sepals subequal obtuse, petals as long narrow, lip equalling the sepals 3-partite side lobes linear obtuse midlobe longer and broader, spur as long as the ovary or shorter straight subclavate. *Wight Ic.* t. 923, 1703–4; *Dalz. & Gibs. Bomb. Fl.* 268. *H. glabra*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 75, t. 5 A. *Platanthera Heyneana*, *Lindl. in Wall. Cat.* 7044.

The DECCAN PENINSULA; on the Ghats, from the Concan southwards, ascending to 7500 ft. on the Nilghiris.

Stem 6–10 in. *Leaves* 1–1½ in., ovate, erect or recurved, rarely scattered and narrower. *Spike* 2–4 in.; bracts imbricating, lower 1 in. long; ovary $\frac{1}{2}$ in., not beaked; flowers greenish-yellow; sepals $\frac{3}{8}$ – $\frac{1}{4}$ in., thick, nerves obscure, dorsal ovate-oblong, lateral narrower; petals linear-oblong; lip thick, variable, midlobe oblong or ovate-lanceolate; anther short, cells rather spreading, tubes 0; caudicles of pollinia very short stout, glands very close together, large, orbicular; stigmatic processes very large, spreading, clavate; rostellum short, triangular, acute.—Turns black in drying.

54. **H. subpubens**, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 75, t. 4 C; leaves linear or linear-oblong scattered, bracts narrowly boat-shaped acuminate, sepals subequal, petals as long falcate, lip spathulate clawed 3-fid, as long as the sepals, side lobes linear midlobe broader, spur as long as the ovary acute. *H. candida*, *Dalz. in Hook. Journ. Bot.* ii. (1850), 262; *Dalz. & Gibs. Bomb. Fl.* 267.

The SOUTHERN CONCAN, *Perrottet, Jacquemont, Dalzell*, and NILGHIRI HILLS, &c.

Very near *H. Heyneana*, and perhaps only a form of it, but more slender, leaves scattered linear 2–2½ in., bases narrowed, bracts narrower, flowers white, lip very different, spur more slender, anther apiculate, glands of the pollinia approximate and even cohering oblong with recurved sides, stigmatic processes longer, adnate to the claw of the lip.—Does not turn black in drying.

†† Leaves more than three, clustered towards the middle or base of the stem.

55. *H. fuscifera*, *Lindl. Gen. & Sp. Orchid.* 319; leaves elliptic, spike long many-fl., bracts as long as the ovary, sepals subequal dorsal ovate-oblong obtuse, lateral falcately oblong-lanceolate subacute, petals as long oblong retuse, lip longer than the sepals trifurcate, side segments filiform longer than the linear mid segment, spur longer than the ovary very slender involute. *H. hamigera, Griff. in Calc. Journ. Nat. Hist.* iv. 380, t. 20. *H. tenuicornis, Wall. mss.*

TROPICAL HIMALAYA; Garwhal, alt. 2–3000 ft., *Royle, Edgeworth.* BHOTAN, *King.* ASSAM, *Wallich.* ORISSA, *Clarke.* EAST BENGAL, *Griffith.*

Stem 10–18 in., stout, with distant small sheaths above the leaves. *Leaves* 4–6 by 1½–2 in., acute or acuminate, base contracted, not petioled. *Spike* 5–7 in., narrow; bracts ovate-lanceolate; ovary ½ in., curved, hardly beaked; sepals ½ in. long, 3-nerved, lateral reflexed; petals as long, membranous, 2-nerved; anther rather small, tubes upcurved; stigmatic processes short. *Capsule* ½ in., fusiform, turgid, decurved, ribs thick, beak ¼ as long as the body.

56. *H. affinis*, *Wight Ic. t.* 1707; leaves large elliptic-lanceolate acuminate, spike elongate cylindric, bracts equalling or exceeding the curved beaked ovary, sepals subequal or dorsal longest ovate-oblong obtuse, petals as long linear- or oblong-lanceolate obtuse, lip longer than the sepals 3-partite, side segments narrow longer than the linear obtuse mid segment, spur half as long as the ovary slender incurved.

CENTRAL INDIA; at Singboom, *Clarke.* The CONCAN and CANARA, *Law, Ritchie*, &c. TRAVANCORE; on the Anamallay Hills, *Beddome (in Herb. Calcutt.)*

Stem stout, 1–2 ft.; clothed above the leaves with many erect lanceolate sheaths. *Leaves* 4–6 by 2–2½ in., hardly petioled, not margined. *Spike* 4–10 in., rachis stout; bracts ½–¾ in.; flowers green; ovary ½ in., beak short; sepals ½ in., 3-nerved; lip twice as long as the sepals; anther broad, cells parallel, tubes shortly upcurved, glands of pollinia small; stigmatic processes large, clavate.—The Travancore specimen has broader segments of the lip than the northern ones.

57. *H. ovalifolia*, *Wight Ic. t.* 1706; subscapigerous, leaves elliptic-lanceolate acute, scape tall, raceme elongate slender lax-fl., bracts as long or half as long as the ovary, dorsal sepal orbicular as long as the ovate obtuse lateral, petals as large as the lateral obtuse, lip as long as the sepals 3-partite side lobes linear-oblong obtuse incurved shorter than the ovate fleshy midlobe, spur slender rather longer than the slender beaked ovary incurved tip thickened acute.

DECCAN PENINSULA; on the Ghats, from the Concan to the Nilghiris.

Tall, 1–2 ft. *Leaves* 2–3, 6–8 by 2–4½ in., sessile or subpetioled, acute or acuminate. *Scape* with a leafy sheath below and slender ones above the leaves; spike 10 in. and under; flowers distant, ¼ in. diam, greenish; bracts lanceolate; nerves of sepals and petals obscure; spur straight, pendulous; anther short, cells diverging, tubes short upcurved, caudices of pollinia short, glands small; stigmatic processes clavate; rostellum short, broad.

58. **H. marginata**, *Coleb. in Hook. Fl. Exot.* t. 136; subscapigerous, leaves few subradical sessile oblong or linear-oblong margins yellow, spikes many-fld., bracts equalling the ovary, dorsal sepal broadly ovate as long as the oblong-lanceolate lateral, petals ovate falcate, lip longer than the sepals tripartite side segments slender longer than the linear obtuse central, spur stout equalling the curved ovary or shorter inflated below. *Lindl. Gen. & Sp. Orchid.* 320; *Dalz. & Gibs. Bomb. Fl.* 268; *Griff. Notul.* iii. 371; *Ic. Plant. Asiat.* t. 341; in *Calcutt. Journ. Nat. Hist.* iv. 382. *Platanthera marginata*, *Lindl. in Wall. Cat.* 7038. *H. promensis*, *Wall. Cat.* 7033; *Lindl. Gen. & Sp. Orchid.* 320. *Orchis mysorensis* and *clavata*, *Herb. Heyne*.

WESTERN HIMALAYA; from Kashmir to Kumaon, alt. 5-7000 ft. BEHAR and BENGAL (*wild in Bot. Gard. Calc.*). BURMA, *Wallich*. The DECCAN PENINSULA, common on the Western Ghats.

Leaves $\frac{3}{4}$ -5 in. *Scape* 4-10 in.; sheaths many, erect, lanceolate, broad or narrow. *Spike* 2-6 in., cylindric; bracts ciliolate; flowers $\frac{1}{2}$ in. diam., yellow-green; lateral sepals 3-5-nerved, deflexed; petals as long, 2-nerved; spur clavate or fusiform below the middle; anther-cells distant, tubes short spreading funnel-shaped; caudicles of pollinia short, glands large; stigmatic processes long, adnate to the lip; rostellum triangular, acute. *Capsule* $\frac{1}{2}$ in., fusiform, turgid, curved, obscurely beaked.

59. **H. flavescens**, *Hook. f.*; scape slender, leaves few radical linear-oblong yellowish when dry margined with yellow, scape slender few-fld., bracts equalling the ovary, dorsal sepal broadly ovate, lateral oblong-lanceolate acute, petals larger than the sepals ovate-oblong, lip rather longer than the sepals 3-partite side-segments slender, mid-segment linear-oblong margins recurved, spur shorter than the ovary tip clavate.

The CONCAN, *Law, &c.*

A much more slender plant than *H. marginata*, turning yellow when dry, with fewer smaller flowers, and a more distinctly beaked ovary; but perhaps only a form of that plant.

60. **H. viridiflora**, *Br. Prodr.* 312; scapigerous, leaves shorter than the scape linear-lanceolate not margined, raceme many-fld., bracts much shorter than the beaked ovaries, dorsal sepal orbicular-ovate much shorter than the broadly oblong lateral, petals broadly obliquely ovate as long as the dorsal sepal, lip longer than the sepals 3-partite, segments slender, spur as long as the beaked ovary thickened below. *Lindl. Gen. & Sp. Orchid.* 319; *Wight Ic.* t. 1705. *H. graminea*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 73 (*not of Lindl.*). *H. tenuis*, *Griff. in Calc. Journ. Nat. Hist.* iv. 379, t. 20; *Notul.* iii. 369; *Ic. Plant. Asiat.* t. 342. *Orchis viridiflora*, *Swartz. in Act. Holm.* 1800, 206; *Willd. Sp. Pl.* iv. 13.

LOWER BENGAL, *Griffith, Clarke*. The DECCAN PENINSULA; in rice fields, *Heyne, &c.* CEYLON, alt. 5-7000 ft., *Walker, &c.*

Tubers ovoid, $\frac{3}{4}$ -1 in. long. *Leaves* many, 2-4 by $\frac{1}{3}$ - $\frac{1}{2}$ in., acuminate, nerves obscure. *Scape* 4-14 in., slender, sheaths many and bracts lanceolate; raceme rather close-fld.; flowers $\frac{1}{2}$ in. diam., greenish-yellow; sepals 3-nerved, lateral reflexed; segments of lip variable in length; ovary $\frac{3}{4}$ in. long; anther-cells short, divaricate, tubes short upcurved, caudicles rather shorter than their pollinia; stigmatic processes clavate; rostellum short, broad. *Capsule* $\frac{3}{4}$ in., fusiform, straight or curved, beak short, pedicel $\frac{1}{4}$ in.

Var. *Dalzellii*; leaves radical linear 3-5 in., scape very slender wiry, flower rather smaller, spur longer than the ovary slender incurved. *Cæloglossum luteum*

Dalz. in Hook. Journ. Bot. ii. (1850), 263; Dalz. & Gibs. Bomb. Fl. 269 (excl. syn.).—The Deccan Peninsula; Malwan, *Dalzell, &c.*

61. **H. khasiana**, *Hook. f.*; scapigerous, leaves linear not margined, scape slender, raceme elongate, bracts much shorter than the ovary, sepals 3-nerved, dorsal nearly as long as the rather narrower lateral, petals as long ovate-lanceolate, lip much longer than the sepals, side segments much the longest filiform, spur as long as the beaked ovary rather stout slightly incurved. *H. graminea*, *Lindl. Gen. & Sp. Orchid.* 318 (*not of Sprengel*). *Platanthera linifolia*, *Lindl. in Wall. Cat.* 7041 (*the Silhet plant*).

KHASIA HILLS; in grassy places, alt. 4–5000 ft., common.

Leaves 3–4 by $\frac{1}{2}$ – $\frac{3}{4}$ in., acute or acuminate. *Scape* with elongate raceme 8–12 in.; sheaths very few and bracts lanceolate; ovaries $\frac{1}{2}$ – $\frac{2}{3}$ in., suberect, curved, shortly pedicelled and beaked; flowers sweet-scented, yellow, narrow; the strictly deflexed lateral sepals and erect dorsal sepal are in one line, $\frac{1}{2}$ in. long; anther broad, cells subparallel, tubes short; caudicles of pollinia short stout, gland rather large; stigmatic processes clavate, adnate to the mouth of the spur; rostellum very short, broad. *Capsule* $\frac{1}{2}$ in., subsessile, fusiform, not beaked.—Very near *H. viridiflora*, from which the narrower leaves, shorter pedicels, subequal sepals, of which the dorsal is narrower and erect, and stout spur distinguish this.

62. **H. ditricha**, *Hook. f.*; scapigerous, leaves linear acute not margined, spike few-fl., bracts as long as the ovary, sepals 1-nerved dorsal broadly ovate as long as the lanceolate acute lateral, petals as long ovate-lanceolate acute, lip much longer than the sepals 3-partite, side segments capillary, spur longer than the beaked curved ovary slender incurved.

TENASSERIM; at Moulmein, *Lobb.*

Leaves as in *H. khasiana*. *Scape* with few-fl. raceme 2–4 in.; sheaths few, membranous; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., ovate-lanceolate; flowers few, $\frac{1}{2}$ in. broad; ovary $\frac{1}{2}$ in., sessile, curved; dorsal sepal obtuse, obscurely 5-nerved; mid segment of lip shorter than the lateral; spur hardly thickened at the tip; anther-cells divaricate, tubes short; pollinia and stigmatic processes as in *H. khasiana*.—Very near *H. khasiana*, but the scape is very short, the bracts different, the ovary shorter, and the flowers smaller. *Lobb's* specimens have all short scapes.

††† Leaves 2, rarely 3, radical or opposite on the stem, sessile, broadly ovate-cordate or oblong.

63. **H. crassifolia**, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 72, t. 3 C*; leaves radical orbicular or broadly ovate-cordate margined fleshy, raceme many-fl., bracts large exceeding the ovary, sepals and petals short broad, lip subequally 3-fid hardly longer than the sepals, lobes linear-oblong obtuse, spur equalling the beaked ovary. *H. brachyphylla*, *Reichb. f. in Trans. Linn. Soc. Ser. 2, iii. 113*. *Platanthera brachyphylla*, *Lindl. Gen. & Sp. Orchid.* 293; *Wight Ic. t. 1694; Dalz. & Gibs. Bomb. Fl.* 269.

The DECCAN PENINSULA; from the Concan to the Nilghiris, common.

Leaves 2–3, 1–1 $\frac{1}{2}$ in. diam. *Scape* 6–12 in., stout; sheaths many, finely acuminate. *Spike* 6–8 in., narrow; bracts ovate-lanceolate, sheathing; flowers $\frac{1}{4}$ in. diam., greenish-white, rather fleshy; sepals 3-nerved; petals 1-nerved; side lobes of lip hardly spreading; bases of anther-cells distant, tubes very short spreading; stigmatic processes short; rostellum small, erect.—The Khasian habitat taken by *Reichenbach* from *Lindley's Herbarium* is an error.

64. **H. diphylla**, *Dalz. in Hook. Journ. Bot. ii. (1850) 262*; leaves radical orbicular cordate margined, raceme many-fl., bracts much shorter

than the ovary, sepals ovate-oblong subequal, petals as long linear, lip much longer than the sepals 3-partite, segments filiform lateral longest, spur about equalling the ovary inflated acute. *Dalz. & Gibs. Bomb. Fl.* 268. *H. Jerdoniana*, *Wight Ic. t.* 1715. *H. Sutleri*, *Reichb. f. in Linnæa* xxv. 229. *Platanthera canarensis*, *Lindl. in Plant. Hohenack exsicc.*, No. 142. *Liparis diphyllus*, *Nimmo in Grah. Cat. Bomb. Pl.* 252.

WESTERN HIMALAYA; Garwhal, *Falconer*. EASTERN BENGAL; *Dacca*, *Clarke*. THE DECCAN PENINSULA; from the Concan to Malabar.

Leaves 1-2 in. diam., thinly fleshy. *Scape* 4-10 in., slender; sheaths many, small. *Spike* 2-4 in., narrow; bracts $\frac{1}{2}$ in., acute; flowers about $\frac{1}{2}$ in. diam.; ovary $\frac{1}{2}$ in., hardly beaked; dorsal sepal ovate, lateral oblong, acute, 3-nerved; anther broad, cells diverging, tubes very short; stigmatic processes elongate, clavate, adnate to the mouth of the spur; rostellum obscure.

65. **H. Aitchisoni**, *Reichb. f. in Trans. Linn. Soc. Ser. 2, Bot.* iii. 113; leaves opposite orbicular cuspidate, scape tall, spike elongate, flowers subsecund erect, bracts half as long as the ovary, sepals subequal oblong-ovate obtuse, petals as long ovate-lanceolate, lip as long as the sepals 3-partite above the base, side segments longest spreading and recurved, spur shorter than the short curved ovary clavate. *H. brachyphylla*, *Aitch. & Hemsl. in Journ. Linn. Soc.* xix. 118.

TEMPERATE HIMALAYA; Kashmir, alt. 7000 ft., *Falconer*, &c.; Kumaon, alt. 9-12,000 ft., *Duthie*; Sikkim, alt. 10-11,000 ft., *J. D. H.*—DISTRIB. Affghanistan.

Very variable in size and stoutness, 10-18 in. high. *Leaves* inserted above the base of the stem, 1-3 in. broad, not margined. *Scape* sometimes as thick as a goose-quill; sheaths few, small; spike rather dense-fld.; bracts $\frac{1}{2}$ in., acute or acuminate; flowers $\frac{1}{2}$ in. diam., greenish; sepals 3-nerved, lateral spreading, dorsal erect; petals 1-nerved; mid-segment of lip straight; anther short, broad, cells parallel, tubes very short upcurved; stigmatic processes large, clavate; rostellum minute.

Var. *Josephi*; smaller, 2-4 in. high, leaves 1-1 $\frac{1}{2}$ in., spike few-fld. *H. Josephi*, *Reichb. f. l. c.* 114.—Kumaon, alt. 10-11,000 ft., *Duthie*; Sikkim, alt. 12-14,000 ft., *J. D. H.*, *King's Collector*.

66. **H. reniformis**, *Hook. f.*; leaves 1-2 radical orbicular or oblong, scape slender few-fld., bracts much shorter than the ovary, sepals and petals subequal ovate or ovate-lanceolate acute, lip longer than the sepals entire or 3-partite with slender segments, spur shorter than the ovary or 0.—*Herminium reniforme*, *Lindl. in Wall. Cat.* 7067. *Aopla reniformis*, *Lindl. in Bot. Reg. under t.* 1701; *Gen. & Sp. Orchid.* 304, 457; *Benth. Fl. Hongk.* 363. *Listera reniformis*, *Don Prodr.* 28.

NEPAL, *Wallich*. KHASIA HILLS, alt. 4-5000 ft., *Lobb*, &c.—DISTRIB. China.

Leaves $\frac{1}{2}$ – $\frac{3}{4}$ in. long, fleshy, very variable in form, sessile, obtuse. *Scape* with 4-6-fld. spike 3-6 in., wiry; sheaths few, small; bracts lanceolate; flowers about $\frac{1}{2}$ in. diam., green; sepals 3-nerved, lateral deflexed; lip (in the *Peloria* state) entire and linear-oblong, or with two small basal teeth; in the perfect state with three very narrow often tortuous divaricate segments longer than the sepals; spur usually wholly absent, if present slender, nearly as long as the ovary, slightly incurved; anther-cells nearly parallel, tubes very short; caudicles of pollinia short, glands large?; stigmatic processes large, subcylindric or clavate; rostellum short, triangular, acute.—A puzzling little plant, which in the Khasia usually and in Nepal has been collected only in the *Peloria* form, without spur, and with an entire lip. *Bentham* (in *Gen. Plant.*) retains it in *Herminium* from which it differs in being normally spurred. It is obviously allied to *H. Aitchisoni*.

Sect. IV. HOLOGLOSSA (see p. 132). See also *H. Mandersii* and *reniformis*.

* Stigmatic processes large.

† Stem leafy upwards.

67. *H. latilabris*, Hook. f.; leaves sessile ovate or oblong acuminate, spike many-fld., bracts green longer than the ovary, dorsal sepal broadest, lateral broadly ovate, petals dimidiate-ovate or broadly ovate, lip linear or lanceolate, spur flexuous longer than the curved beaked ovary. *Platanthera acuminata*, Lindl. in Wall. Cat. 7040; Gen. & Sp. Orchid. 289. *P. latilabris*, Lindl. Gen. & Sp. l. c. *P. orchidis*, Wall. Cat. 7039 B.

TEMPERATE HIMALAYA; from Kashmir, alt. 5–10,000 ft., to Sikkim, alt. 7–12,000 ft. CENTRAL INDIA, Hope (Herb. Clarke).

Stem 6–18 in., stout or slender, leafy. Leaves 3–5 in., usually sheathing. Spike 3–10 in., lax-fld.; bracts ovate-lanceolate, lower leafy; ovary $\frac{1}{3}$ – $\frac{1}{2}$ in., curved; flowers yellow-green, $\frac{1}{3}$ – $\frac{1}{2}$ in. diam. or more; sepals 3–5-nerved, glabrous or ciliolate, lateral spreading or deflexed, dorsal orbicular concave; petals as long as the lateral sepals, variable in shape, fleshy, lower base gibbous; spur stout or slender, often involute and upcurved; anther-cells contiguous, tubes 0; caudicles of pollinia very short, glands small; stigmatic processes large, subglobose; rostellum short, triangular, obtuse. Capsule $\frac{1}{4}$ in., sessile, fusiform, shortly beaked, more or less curved or twisted.—A very common and variable species in the Himalaya.

68. *H. stenantha*, Hook. f.; leaves many sessile oblong, spike many-fld., bracts green much longer than the flowers, dorsal sepal oblong, lateral linear deflexed, petals erect as long as the sepals linear, lip linear obtuse, spur flexuous longer than the straight obtuse ovary.

TEMPERATE HIMALAYA; Sikkim, alt. 8–12,000 ft., J. D. H., Clarke.

Very near to *H. latilabris*, differing in the form of the lateral sepals and petals, which are very narrow, and straight; and the former being sharply deflexed, whilst the latter are erect; the flower hence looks as if laterally compressed. The lip also is very narrow, but more so than in forms of *acuminata*, with which *stenantha* agrees in the column, anthers, pollinia, stigma and rostellum.

69. *H. densa*, Wall. in Lindl. Gen. & Sp. Orchid. 326; tall, stout, leaves many ovate or oblong acuminate base sheathing, spike very long narrow stout, bracts sheathing and exceeding the very short ovaries, flowers very small, sepals obtuse puberulous, lip linear obtuse as long as the sepals, spur clavate shorter than the ovary. *Platanthera densa*, Lindl. in Wall. Cat. 7046. *P. clavigera*, Lindl. Gen. & Sp. Orchid. 289.

TEMPERATE HIMALAYA; from Simla to Sikkim, alt. 5–9000 ft.

Stem 1–3 ft. usually much stouter than in any form of *H. acuminata* or its allies. Leaves 3–5 by 1–2 in. Spike 8–14 in., rather dense-fld.; rachis stout; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., finely acuminate; ovary $\frac{1}{4}$ in., stout, curved, shortly beaked; flowers erect, $\frac{1}{4}$ in. diam.; sepals subequal, thick, 3-nerved; petals nearly as long, obliquely ovate or narrower, obtuse, fleshy; lip with a tooth at the mouth of the spur; anther short, broad, cells parallel, tubes 0; pollinia subglobose, almost sessile on the large orbicular gland; stigmatic processes large, shortly clavate; rostellum small, erect.—Varies greatly in size; a Wallichian specimen from Nepal is 3 ft. high, with leaves 6 by 2 in., and a fruiting spike nearly 18 in. long. The most distinct species of its group.

†† Leaf solitary at or below the middle of the stem (rarely 2). Flowers subsecund. Rootstock or root branching (I think in all).

70. **H. oligantha**, *Hook. f.*; stem slender naked above the usually solitary oblong leaf, bracts lanceolate herbaceous much longer than the flower usually divaricate, sepals and petals subequal, spur stout about as long as the shortly beaked ovary incurved clavate.

SIKKIM HIMALAYA; in the interior valleys, alt. 10–12,000 ft., *J. D. H.*

Stem 5–10 in. *Leaf* sessile, 2–4 by $\frac{3}{4}$ –1 $\frac{1}{2}$ in., obtuse or subacute. *Spike* 1 $\frac{1}{2}$ –4 in., lax-flid.; bracts spreading, lower $\frac{3}{4}$ –1 in., green, upper gradually smaller, uppermost hardly exceeding the short sessile curved ovary; sepals $\frac{1}{2}$ in. long, oblong or oblong-lanceolate, subacute, obscurely 3-nerved, subciliate; petals as long, triangular-lanceolate, base of lower margin gibbous; lip linear-lanceolate, fleshy; anther-cells parallel, tubes 0; pollinia pyriform, caudicles short, glands minute; stigmatic processes short; rostellum fleshy, triangular, obtuse.

71. **H. leptocaulon**, *Hook. f.*: stem slender, with 2–3 narrow distant sheaths above the linear-oblong acute leaf, spike slender few-flid., bracts equalling the erect curved ovary, sepals and petals subequal, spur slender as long as the ovary incurved.

SIKKIM HIMALAYA; Lachen Valley, alt. 10–11,000 ft., *J. D. H.*

Stem 8–12 in. *Leaf* below the middle of the stem, 1 $\frac{1}{2}$ –4 by $\frac{2}{3}$ in.; sheaths above the leaves 1–1 $\frac{1}{2}$ in., linear-lanceolate, erect. *Spike* 3–8-flid., 1–2 in., rachis slender; bracts $\frac{1}{2}$ – $\frac{1}{2}$ in., erect, slender; sepals $\frac{1}{4}$ in. long, 1-nerved, lanceolate, acute; petals broader than the sepals, triangular-lanceolate from a broad gibbous base, fleshy; anthers as in *H. oligantha*, but rostellum shorter, and glands of pollinia large, oblong, resting on the sides of the rostellum; stigmatic processes short.—Near *H. oligantha*, but distinguished by the narrow leaves, the sheaths above them, small bracts, and long slender spur.

72. **H. pachycaulon**, *Hook. f.*; stem short very stout with 2 or 3 large herbaceous sheaths above the solitary oblong leaf, spike short dense-flid., bracts herbaceous much longer than the flowers, sepals and petals subequal, lip ovate-lanceolate, spur equalling the ovary incurved clavate.

SIKKIM HIMALAYA; Lachen Valley, alt. 12,000 ft., *J. D. H.*; Nattong, *King's Collector*.

Rootstock branched; roots thick, fleshy. *Stem* 4–6 in., as thick as a goose-quill or less. *Leaf* 2 $\frac{1}{2}$ –3 $\frac{1}{2}$ by $\frac{3}{4}$ –1 $\frac{1}{2}$ in., thick, obtuse; sheaths 1–1 $\frac{1}{2}$ in., lanceolate. *Spike* 1 $\frac{1}{2}$ –2 in.; bracts $\frac{3}{4}$ –1 in., many-nerved; flowers purple; ovary $\frac{1}{2}$ in., hardy beaked; sepals thick, linear-oblong, 1-nerved, ciliate; petals shorter, ovate-oblong, fleshy; lip fleshy, subacute; anther-cells parallel; glands of pollinia oblong resting on the sides of the short acute rostellum; stigmatic processes obscure.

73. **H. nematocaulon**, *Hook. f.*; stem very slender naked or with one or two sheaths above the small oblong subacute leaf, spike very slender lax-flid., bracts half the length of the erect ovary, flowers minute, sepals erect and petals subequal, lip oblong-lanceolate, spur very short clavate.

SIKKIM HIMALAYA; alt. 10–12,000 ft. *J. D. H.*, *Clarke*.

Stem 3–8 in. *Leaf* towards the base of the stem, 1–1 $\frac{1}{2}$ in.; sheaths usually very small, rarely green and leaf-like. *Spike* 2–4 in. long; bracts membranous; ovary $\frac{1}{4}$ – $\frac{1}{2}$ in., hardly beaked; flowers $\frac{1}{16}$ in. long; sepals ovate-lanceolate, acute, 1-nerved; petals as broad as the dorsal sepal, triangular-ovate, acute, 1-nerved; lip not fleshy, 5-nerved, obtuse; spur not half the length of the sepals, neck contracted; anther short, broad, cells parallel, glands of pollinia rather large, resting on the sides of the erect fleshy rostellum; stigmatic processes globose. *Capsule* $\frac{1}{2}$ in. long, sessile, erect, fusiform, beaked.—The erect lateral sepals, minute flowers and short spur, are those

of *Sect. Peristylus*, to which this species is perhaps referable, but the branched rootstock, habit, and habitat induce me to refer it here.

** No stigmatic processes.

74. *H. arcuata*, Hook. f.; stem very robust leafy, leaves oblong or lanceolate, bracts herbaceous narrow longer than the large flowers, dorsal sepal beaked, petals small linear membranous, lip twice as long as the sepals linear, spur many times longer than the ovary. *Platanthera arcuata*, Lindl. *Gen. & Sp. Orchid.* 289.

WESTERN HIMALAYA; Royle; Naini Tal, Davidson.

Stem as thick as the little finger. *Leaves* 3-4 in., oblong, subacute, upper lanceolate, bases sheathing. *Spike* many-flid.; lower bracts 1-1½ in., linear-lanceolate; ovary 1½ in., hardly beaked, curved; sepals ½ in. long, dorsal cucullate, lateral larger, oblong, obtuse, 3-nerved, deflexed; petals very narrow, 1-nerved; lip large, linear, with rounded shoulders at the base, puberulous, sides reflexed, spur 2-2½ in., incurved, acute; anther large, broad, cells divergent, tubes erect; pollinia with stout, short caudicles, glands very large, ovate; rostellum broad, flat, acute.—A very remarkable species, with the lip of *Hologlossa*, but anther of the larger *Trimeroglossa*. I have seen but one specimen from Col. Davidson, and a rude tracing in Herb. Lindl., of Royle's plant.

75. *H. sikkimensis*, Hook. f.; stem stout leafy, spike elongate lax-flid., bracts herbaceous longer than the large flowers, petals as large as the sepals triangular-lanceolate, lip as long as the sepals linear, spur rather longer than the ovary very stout obtuse strongly incurved.

SIKKIM HIMALAYA; on Sinchal, alt. 8-9000 ft., Thomson.

Stem with spike 10-12 in. *Leaves* 3-4 in., narrowly oblong. *Spike* 3-4 in.; bracts lanceolate, acute, lower 1½ in., spreading and reflexed; ovary ¾ in., strongly curved, hardly beaked; sepals 3-nerved, green, dorsal broadly ovate obtuse rather shorter than the oblong-lanceolate acuminate spreading lateral; lip linear; anther broad, cells narrow, distant, tubes short; pollinia rather shorter than their stout caudicles, glands small; rostellum obscure, very broadly triangular.—Closely allied to *H. acuminata*, but flowers much larger, and there are no stigmatic processes or rostellum. The broad anthers and its cells are those of *H. arcuata*. Only one specimen seen.

76. *H. concinna*, Hook. f. *Ic. Plant. ined.*; small, stem many-leaved, leaves small sessile erect ovate or oblong, spike many-flid., bracts longer than the small flowers herbaceous, lateral sepals linear longer and much narrower than the dorsal and petals, lip linear from a broad base as long as the sepals, spur as long as the ovary slender incurved acute.

KHASIA HILLS; at Kala-pane, alt. 5000 ft., J. D. H. & T. T.; Clarke.

Root of thick tuberous fibres. Stem with spike 4-8 in. *Leaves* almost imbricating, amplexicaul, lower 1-1½ in. obtuse, upper gradually smaller acute; spike 2-4 in., rather dense-flid.; bracts ½ in., ovate-lanceolate, acute; ovary ¼ in., suberect; dorsal sepals 3-nerved, ovate, obtuse; lateral ⅙ in. long, reflexed, obtuse, 1-nerved; petals as long as the dorsal sepal, 1-3-nerved; lip narrow; anther large, cells distant, bases slightly divergent, tubes 0; pollinia as long as their caudicles, glands small; rostellum triangular.—The habit is that of *Sect. Peristylus*.

77. *H. zosterostyloides*, Hook. f.; radical leaves long-petioled elliptic acute, cauline sessile ovate-cordate amplexicaul, racemes long sparse-flid., bracts as long as the ovary, lateral sepals linear-oblong obtuse rather longer than the rounded ovate dorsal, petals as large as the dorsal sepal triangular-ovate, lip linear as long as the sepals, spur as long as the ovary slender acute.

MALAYAN PENINSULA; on Mt. Ophir, *Griffith* (*Kew Distrib.*, 5359), *Lobb*, PERAK, *Scortechini*, alt. 7000 ft., *Wray*.

Root of thick tomentose fibres spreading from the crown, which gives off one or more long-petioled leaves and a tall rather slender scape. *Radical leaf* 4–6 in. *Scape* with the raceme 12–18 inches high, with membranous basal sheaths, and bearing one or more sessile or oblong leaves about the middle, and with 2–8 small distant ovate herbaceous sheaths above them. *Spike* 4–6 in.; flowers distant; bracts $\frac{1}{2}$ in. long, lanceolate, acuminate; sepals dorsal, 3-nerved, nearly orbicular, lateral $\frac{1}{4}$ in. subacute, reflexed; lip elongate, linguiform, obtuse; anther broad, cells distant divergent, tubes hardly any; pollinia shorter than their stout caudicles, glands large orbicular; stigmatic processes 0; rostellum very obscure. *Capsule* (immature) sessile, curved.—A remarkable species, in habit unlike any other. The solitary long-petioled radical leaf, sometimes distant from the flowering stem, is very peculiar, and closely resembles that of *Cryptostylis* (*Zosterostylis*, *Blume*), *zeylanica*.

Sect. VI. PERISTYLUS. (See p. 132.)

* Spur as long the sepals, or longer, or shorter in *H. aristata*.

† *Leaves scattered along the stem, or radical.* (See also 83. *H. Gardneri*.)

78. *H. bicornuta*, *Hook. f.*; leaves lanceolate or ovate-lanceolate, spike long many-fl'd.; bracts equalling or exceeding the ovary, lateral sepals linear obtuse, petals as long elliptic, lip tripartite, segments filiform, lateral longer than the sepals recurved over the flower, mid-segment shorter, spur longer than the sepals clavate or fusiform incurved. *Peristylus Richardianus*, *Wight Ic.* t. 1097.

The WESTERN GHATS; on the Nilghiri and Pulney hills, ascending to 6500 ft. *Stem* 1–2 ft., rather stout. *Leaves* 2–3 in., sessile, acute or acuminate, 5–7-nerved. *Spike* 6–10 in., rather dense-fl'd.; bracts herbaceous, lanceolate, acuminate, lower $\frac{1}{2}$ – $\frac{2}{3}$ in.; sepals $\frac{1}{4}$ in. long, dorsal oblong obtuse sub 5-nerved, lateral erect at length spreading; petals 1-nerved; lip with a large concave claw, mid-segment variable in length from triangular to linear, straight, obtuse; spur stout; anther minute, cells parallel, tubes 0, pollinia clavate, caudicles short; stigmatic processes long, lying in the claw of the lip; rostellum truncate, plicate, concealing the base of the cells and pollen glands?—Blackens when dry. Differs from *stenostachya* in the larger flowers, long side lobes of the lip, and spur.

79. *H. stenostachya*, *Benth. Fl. Hongk.* 362; leaves lanceolate acuminate, spike narrow lax- or dense-fl'd., flowers small, bracts equalling or exceeding the ovary, lateral sepals linear obtuse, petals larger than the sepals triangular-ovate or oblong fleshy, lip as long as the sepals 3-fl'd, side lobes subulate, midlobe usually shorter broader and obtuse, spur straight about as long as the ovary. *H. peristylodes*, *Wight Ic.* t. 1702. *Platanthera stenostachya*, *Lindl. in Hook. Journ. Bot.* vii. (1855) 37. *Gymnadenia*? *tennis*, *Lindl. in Wall. Cat.* 7057. *Cœloglossum densum*, *Lindl. Gen. & Sp. Orchid.* 302. *C. peristylodes*, *Reichb. f. in Bonpland.* 1856, 321. *C. cernuum*, *Rf. l. c.* 1855, 250.

SIKKIM HIMALAYA, *King (Herb. Calcutt.)*, the KHASIA HILLS, TENASSERIM, and the DECCAN PENINSULA, from the Concan Southward.—DISTRIB. China.

Stem with the spike 6–30 in., usually slender, with many small sheaths above the leaves. *Leaves* 1–4 in., sometimes all subradical, erect, bases sheathing, 5–7-nerved. *Spike* 3–5 in.; flowers small, erect, greenish yellow or white, about $\frac{1}{2}$ in. diam.; bracts $\frac{1}{4}$ – $\frac{1}{3}$ in., broadly ovate-lanceolate, finely acuminate; ovary $\frac{1}{4}$ in.; sepals $\frac{1}{6}$ in. long, subequal, concave, lateral suberect, at length spreading, nerve very thick, produced into a point under the apex of the sepal; lip with a large excavate base, very variable in the length of the lobes, lateral spreading or recurved; anther

minute, cells parallel, tubes 0; pollinia short, grains large, caudicle and gland obscure; stigmatic processes clavate; rostellum erect, truncate, toothed, plicate, concealing the glands of the pollinia.—Habit of *H. viridiflora*. In the Khasia specimens the midlobe of the lip is much longer than in the Peninsular. I have had difficulty in choosing a specific name, for Bentham, in adopting *stenostachya*, overlooked the older published one of *tenuis*. That of *peristyloides* may be objected to from the plant being sectionally a *Peristylus*, though Wight did not recognize it as such, and it is preoccupied by A. Richard for an Abyssinian species.

80. *H. cubitalis*, Br. Prodr. 312; tall, slender, leaves scattered or subradical, linear oblong or lanceolate acute, spike long narrow, flowers minute, bracts as long as the curved ovary or shorter, sepals linear-oblong concave keeled, petals larger ovate-oblong, lip not exceeding the sepals 3-fid, side lobes spreading and recurved, midlobe shorter broad obtuse, spur straight as long as the sepals nearly cylindric. *Platanthera cubitalis*, Lindl. Gen. & Sp. Orchid. 292; *Thwaites Enum.* 310. *Orchis cubitalis*, Linn. Fl. Zeyl. 320.

The KHASIA MTS., TENASSERIM, Parish, &c. CEYLON; Hermann, at Pasdoon Corle, Thwaites.

Stem with the slender spike 1–3 ft. *Leaves* 2–6 in., sessile, flat, nerves obscure. *Spike* 8–12 in.; bracts ovate-lanceolate, acuminate, lower $\frac{1}{2}$ in.; ovary $\frac{1}{4}$ in., erect, tip decurved; sepals $\frac{1}{2}$ in., obtuse, 1-nerved, nerve produced beneath the tip, dorsal longest and broadest; petals obliquely oblong, obtuse; lip with a short concave claw, lateral lobes shorter than or equalling the sepals; anther minute, cells parallel, tubes 0, pollinia short granular, caudicles and glands obscure; stigmatic processes clavate; rostellum erect, truncate, toothed, plicate, concealing the glands of the pollinia.—Near *H. stenostachya*, but flowers much smaller. There are two forms in Ceylon, one with leaves scattered along the stem, and another also found in Tenasserim with radical leaves; the latter is,—

Var. *brevifolia*; leaves very short 1–1½ in. radical linear-oblong. *Cæloglossum brevifolium*, Lindl. Gen. & Sp. Orchid. 302 (excl. hab. Nepal).—Tavoy, Wallich. Ceylon, Walker & Gardner. Wallich's specimen in Herb. Linn. Soc. are not numbered by him, but are ticketed, "Tavoy, Dec. 16, 1827." The number 7041 which has been put on the sheet by another hand, Wallich gave only to the Khasian plant, his *linifolia* (*H. khasiana*, p. 151). To var. *brevifolia* he gave the mss. name of *comelinifolia* (not *micrantha*, as Lindley states in his Herbarium).

†† *Leaves clustered round the middle of the stem (sometimes scattered in H. Gardneri.) Slender species; spike long, lax-fl'd.*

81. *H. tipulifera*, Par. & Reichb. f. in Trans. Linn. Soc. xxx. 139; leaves 4–6 linear-lanceolate acuminate, bracts very slender equalling the slender ovaries, lateral sepals linear obtuse, petals broader ovate-oblong obtuse membranous, lateral segments of lip many times longer than the sepals capillary, mid one short subulate, spur clavate as long as the sepals. ? *Peristylus gracilis*, Blume Bijdr. 406.

TENASSERIM; at Moulmein, Parish.

Stem 1–2 ft., with appressed sheaths below the leaves, and 1–2 lanceolate ones above them. *Leaves* 5–8 by $\frac{3}{4}$ –1 in., clustered about the middle of the stem, membranous, sessile. *Spike* 6–10 in.; flowers erect, small, distant; bracts $\frac{1}{2}$ – $\frac{2}{3}$ in.; ovaries as long, straight; sepals $\frac{1}{2}$ in. long, 1-nerved, dorsal ovate-oblong broad or narrow, lateral erect; lip divided close to the narrow concave claw; anther minute, cells parallel, tubes 0, pollinia clavate, caudicles very short, glands oblong; stigmatic processes marginating the claw of the lip; rostellum broad, plicate, concealing the bases of the anther-cells and glands. *Capsule* $\frac{1}{2}$ in., very slender, straight, erect.—Very near *H. aristata*, differing in the long narrow leaves, and much longer very slender ovary.

82. *H. aristata*, *Hook. f.*; very slender, leaves 3-5 elliptic-lanceolate membranous, spike very slender lax-fl., bracts shorter than the shortly beaked ovaries, sepals subequal linear obtuse, petals broader oblong membranous, lip longer than the sepals 3-partite lateral segments longest filiform or capillary, spur clavate or fusiform equalling or shorter than the sepals. *Peristylus aristatus*, *Lindl. Gen. & Sp. Orchid.* 300; *Thwaites Enum.* 310 (*in part excl. syn.*). *P. exilis*, *Wight Ic.* t. 1698.

KHASIA HILLS, alt. 4-5000 ft. *J. D. H. & T. T. TRAVANCORE*; on the Pulney Mts., *Wight*. CEYLON; at Newera Elia, *Thwaites*.

Stem with spike 18-20 in. *Leaves* 2-3 in., clustered around the middle of the stem, sessile or subpetioled. *Scape* with a few narrow sheaths; bracts $\frac{1}{2}$ in., ovate-lanceolate; flowers distant, $\frac{1}{4}$ in. diam.; greenish; ovary $\frac{1}{2}$ in., erect; sepals and petals membranous, 1-nerved, $\frac{1}{5}$ in. long; lip with a retrose spur over the concave claw, lateral segments broad at the base sometimes very long and circinnate, spur variable; anther minute, cells parallel, tubes 0, pollinia minute of few grains, caudicles and glands obscure; stigmatic processes clavate; rostellum obscure. *Capsule* $\frac{1}{2}$ in., fusiform.—The very minute column is so distorted by pressure that I have failed to detect the relations of the rostellum to the gland of the pollinia.

83. *H. Gardneri*, *Hook. f.*; tall, leaves oblong-lanceolate acute, spike narrow many-fl., bracts as long as the ovary, lateral sepals linear-oblong falcate obtuse, petals larger broadly oblong obtuse, lip rather longer than the sepals 3-partite lateral segments subulate recurved mid-segment shorter obtuse, spur as long as the sepals incurved tip globose didymous. *Peristylus aristatus*, *Thwaites Enum.* 310 (*in part*).

CEYLON, *Gardner, Walker*; Adam's Peak, *Thwaites* (C.P. 3081. *Ic. in Herb. Peradeniya*, 2373 *in Herb. Lindl.*).

Stem with spike 14-30 in., stout or slender, naked below and above except for a few sheaths. *Leaves* 2-3 in., usually clustered towards the middle of the stem, spreading or suberect, strongly 5-7-nerved beneath, bases sheathing. *Spike* 6-14 in., rather stout; lower bracts $\frac{1}{2}$ in., ovate-lanceolate, acuminate; ovary erect, $\frac{3}{4}$ - $\frac{1}{2}$ in.; sepals $\frac{1}{4}$ in. long and petals spreading, lateral sepals falcate linear obtuse; lip thick, claw concave; anther small, cells parallel, tubes 0, pollinia pyriform grains large, caudicles and glands obscure; stigmatic processes clavate; rostellum erect, truncate, toothed, plicate, concealing the glands of the pollinia. *Capsule* $\frac{1}{2}$ in., erect, fusiform, hardly beaked, very shortly pedicelled.—Differs from *H. aristata* in the large size, robust habit, less membranous leaves with strong nerves, larger flowers and longer ovary and capsule. Near *H. stenostachya*, but the spike and ovaries are much longer, the stem naked below for several inches, and the spur shorter.

84. *H. Stocksii*, *Hook. f.*; rather stout, leaves obovate or elliptic obtuse acute or acuminate, spike strict twisted, flowers secund, bracts longer than the ovaries, lateral sepals linear-oblong, dorsal elliptic, petals larger ovate obtuse fleshy, lip shorter than the sepals obtusely 3-fl., spur as long as the sepals straight or incurved subclavate.

THE CONCAN AND MYSORE, *Stocks, Ritchie, &c.*

Stem with spike 6-18 in. *Leaves* more or less clustered towards the middle of the stem, 4-6 in. long, usually petioled. *Spike* 3-6 in.; lower bracts often $\frac{3}{4}$ in. long, finely acuminate; ovary $\frac{1}{2}$ - $\frac{1}{3}$ in., curved; flowers $\frac{1}{2}$ in. diam., yellowish; lateral sepals at length reflexed; lateral lobes of lip incurved, claw broad concave; anther minute, cells parallel, pollen clavate; stigmatic lobes clavate; rostellum minute, erect, 2-fl.—Very like *H. Lawii*, but spur quite different.

** Spur much shorter than the sepals, globose or ellipsoid.

† *Stem leafy, leaves scattered or subimbricate.*

85. **H. breviloba**, *Hook. f.*; slender, leaves oblong-lanceolate acuminate, spike short dense-fl., bracts about equalling the ovary, lateral sepals lanceolate, petals broadly oblong, lip as long as the sepals obcordate sub-fimbriiform, spur minute inflated incurved. *Peristylus brevilobus*, *Thwaites Enum.* 311.

CEYLON; near Ratnapoora, *Thwaites*.

Stem with spike 10–18 in., naked below. *Leaves* 2–3 by $\frac{3}{4}$ – $\frac{3}{2}$ in., bases sheathing, nerves very slender. *Spike* (young) 1 in.; bracts lanceolate, finely acuminate; ovary $\frac{1}{4}$ in.; lateral sepals linear-lanceolate, subacute, 1-nerved; petals oblong, obtuse, 3-nerved; lip sessile at the base of the column; anther oblong, truncate, cells parallel, tubes 0; stigmatic processes 0; rostellum 3-fid, concealing the small polliniferous glands.—A very anomalous species, the flowers are too young for satisfactory analysis. *Thwaites* describes the lip as having a minute midlobe.

86. **H. malabarica**, *Hook. f.*; stem leafy, leaves many ovate or lanceolate acuminate upper passing into bracts longer than the flowers, spikes many-fl., ovary very short, lateral sepals linear, petals obliquely ovate-oblong obtuse, lip as long as the sepals deeply trifid, lateral segments subulate recurved, mid one straight, spur a small globose didymous or ellipsoid sac. *Peristylus brachyphyllus*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 70, t. 2 A.

NILGIRI, and Bababudan Hills in CANARA, *Heyne, Perrottet, Stocks*.

Stem rather stout, 6–12 in. *Leaves* 1–2½ in., bases sheathing, nerves very slender. *Spike* 2–4 in., rather dense-fl.; bracts herbaceous, lower $\frac{1}{2}$ – $\frac{3}{4}$ in. or longer, often twice as long as the flowers, ovate-lanceolate, acuminate, sheathing; ovary $\frac{1}{4}$ in.; lateral sepals as long, erect or spreading, 1-nerved, apiculate below the tip, dorsal elliptic obtuse faintly 3-nerved; base of lip 3-lobed above the concave claw, contracted at the base of the segments; spur incurved or not; anther-cells parallel, glands of pollinia concealed by the 3-fid rostellum; stigmatic processes clavate.—Habit of *H. peristyloides* & *concinna*.

87. **H. torta**, *Hook. f.*; small, slender, subbasal leaves linear-lanceolate upper passing into narrow sheaths, spike very slender lax-fl. twisted, bracts longer than the very small second flowers, lateral sepals linear obtuse, petals linear-oblong, lip equalling the sepals 3-cleft beyond the middle, lobes short obtuse lateral spreading or incurved midlobe straight, spur a minute sac. *Peristylus spiralis*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 69, t. 2 B; *Wight Ic.* t. 1696.

On the WESTERN GHATS; from the Concan to Travancore, *Wight, &c.* CEYLON, in the Central Province, alt. 4–7000 ft.

Stem with the spike 6–18 in., often flexuous. *Leaves* 1–2½ in., obtuse acute or acuminate, nerveless, passing into the sheaths of the scape. *Spike* 2–4 in., rachis often flexuous; bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., lanceolate, acuminate; flowers decurved, greenish white; lateral sepals reflexed, $\frac{1}{10}$ – $\frac{1}{8}$ in. long, dorsal linear-oblong obtuse; lip very variable, fleshy, broader or narrower than long, base truncate above the short concave claw; anther minute, cells parallel; stigmatic processes clavate; rostellum between the cells, 3-fid.—The Ceylon plant has larger flowers than the Peninsular.

88. **H. Prainii**, *Hook. f.*; stem slender naked above or with one or two sheaths, leaves few oblong or ovate-oblong acute, spike many-fl., bracts as long or longer than the ovary, lateral sepals linear-oblong obtuse, petals

broadly ovate fleshy obtuse or apiculate, lip shorter than the sepals broad obtusely 3-lobed at the apex, spur a minute globose sac.

NAGA HILLS in UPPER ASSAM; on Kohima, *Prain*. UPPER BURMA (*in Herb. Calcutt.*).

Stem 12-18 in., naked below, and above except for a few lanceolate sheaths. *Leaves* $1\frac{1}{2}$ -2 in., obtuse or acute, sessile, nerves obscure. *Spike* 2-3 in., rather dense-fld.; bracts subulate-lanceolate, acuminate, not herbaceous, lower $\frac{1}{2}$ in.; ovary $\frac{1}{4}$ - $\frac{1}{2}$ in.; flowers nearly horizontal; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in. long, apiculate behind the tip, 1 nerved; lip with a broad concave claw; anther small short broad, cells parallel; stigmatic processes rather long; rostellum minute, 3-fid.

89. **H. robustior**, *Hook. f.*; stem tall slender naked below, leaves close set ovate-lanceolate acuminate passing into foliaceous imbricating bracts much longer than the flowers, spike many-fld., flowers erect, lateral sepals linear acute, petals oblong obtuse, lip longer than the sepals 3-partite lateral segments elongate subulate recurved over the flower, mid one shorter straight obtuse, spur very small ellipsoid or fusiform. *Peristylus lancifolius*, *A. Rich. in Ann. Sc. Nat. Ser. 2, xv. 69, t. 2 C.* *P. robustior*, *Wight Ic. t. 1699.* *Gymnadenia secunda*, *Lindl. in Wall. Cat. 7054.* *Cœloglossum secundum*, *Lindl. Gen. & Sp. Orchid. 303.* *Satyrum foliosum*; *Herb. Heyne.*

MALABAR; in the Bababudan Hills, *Heyne*. NILGHIRI HILLS, *Perrottet, Lobb*. TRAVANCORE; in the Pulney Hills, *Wight*.

Stem 1-2 ft., sometimes naked for a foot, then leafy, the leaves gradually diminishing upwards. *Leaves* 2-3 in., suberect or spreading, bases sheathing, nerves obscure. *Spike* 2-6 in.; bracts twice as long as the flowers, lower $\frac{3}{4}$ -1 in. long, green; ovaries $\frac{1}{2}$ in. long, nearly straight; lateral sepals $\frac{1}{2}$ in., 1-nerved, reflexed; petals nearly as long, 2-3-nerved; lip 2-auricled at the small concave claw; anther-cells parallel; stigmatic processes long; rostellum 3-fid, between the cells. *Capsule* $\frac{1}{2}$ in., oblong, erect.—*Wight's figure of P. robustior* has the flowers large, bracts shorter and side segments of lip much larger and more slender than in his specimens, which bear the mss. name of *P. persimilis*.

90. **H. Hamiltoniana**, *Hook. f.*; stem tall slender naked below, leaves linear-lanceolate acuminate, spike dense-fld., bracts filiform much longer than the minute flowers, lateral sepals linear-oblong obtuse, petals broadly oblong, lip shorter than the sepals broad shortly obtusely 3-lobed, spur globose. *Herminium Hamiltonianum*, *Lindl. in Wall. Cat. 7069.* *Peristylis Hamiltonianus*, *Lindl. Gen. & Sp. Orchid. 299.* *Orchis micranthema*, *Herb. Ham.*

NEPAL; in the Morung, *Hamilton*. SIKKIM HIMALAYA, *Griffith's Collectors (Kew Distrib. 5356).* KHASIA MTS.; on Shillong, *Clarke*.

Stem 6-12 in., stout or slender, elongate and sheathed below the leaves, and with one or two filiform sheaths above them. *Leaves* 4-6 by $\frac{1}{2}$ - $\frac{3}{4}$ in., or broader, sometimes overtopping the spike, nerves obscure. *Spike* 3-6 in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in., often tortuous (when dry); ovary $\frac{1}{4}$ - $\frac{1}{2}$ in., slender, suberect; sepals $\frac{1}{2}$ in., 1-nerved, nerve strong, excurrent below the tip, dorsal oblong; lip broadly cuneate, base broad, concave, lobes variable; spur large for the size of the flower, bladdery; anther-cells parallel, glands of pollinia exposed on each side of the minute rostellum; stigmatic processes large, clavate.—Habit of *H. robustior*, but the flowers are much smaller, the lateral sepals obtuse, and the spur globose.

†† *Leaves clustered about the middle of the stem.*

91. **H. gigas**, *Hook. f.*; stem very stout and tall, leaves elliptic acuminate, spike very many and dense-fld., bracts membranous longer

than the flowers, lateral sepals $\frac{1}{3}$ in. long lanceolate acuminate, petals as long gibbously ovate obtusely acuminate, lip as long as the sepals obtusely trifid lobes subparallel, spur very shortly oblong.

PERAK; in the Batong Padang Valley, *Wray*.

Stem 4-5 ft., hollow at the base, nearly an inch diam., nearly 3 ft. before leafing; sheaths above the leaves few. *Leaves* 8-10 by 3-4 in., narrowed into a petiole. *Spike* 8 in., cylindric, lax-flid. below; bracts $\frac{3}{4}$ in., lanceolate; ovaries $\frac{1}{2}$ in.; flowers pale green; sepals 1-nerved, $\frac{1}{2}$ in. long, dorsal linear-oblong, obtuse; petals with fleshy tips; lip rather oblong, lobes subequal; spur an incurved sac; anther orbicular, cells parallel, tubes upcurved, pollinia clavate subsessile on the large oblong glands which have recurved sides; stigmatic processes large, clavate, adnate to the sides of the lip; rostellum small. *Capsule* $\frac{3}{4}$ in., sessile, linear-oblong, obtuse, not twisted.—Resembles a huge *H. goodyeroides*, but leaves petioled, flowers smaller, lip shorter, capsule much longer.

92. *H. goodyeroides*, *Don Prodr.* 25; stem 1-2 ft. stout, leaves elliptic-oblong or lanceolate acute, spike elongate dense-flid., flowers subsecund, bracts equalling or exceeding the ovary, lateral sepals $\frac{1}{4}$ in. linear- or ovate-oblong obtuse, petals gibbously ovate, lip as long as the sepals trifid, spur minute. *Peristylus goodyeroides*, *Lindl. Gen. & Sp. Orchid.* 299; *Dalz. & Gibs. Bomb. Fl.* 270: *Royle Ill. t.* 87, f. 2. *P. grandis*, *Blume Bijdr.* 405. *Herminium goodyeroides*, *Lindl. in Wall. Cat.* 7066.

SUBTROPICAL HIMALAYA; from Kumaon to Bhotan, alt. 2-5000 ft. The KHASIA MTS. and SILHET, MUNNIPORE, TENASSERIM and the ANDAMAN ISLANDS. THE DECCAN PENINSULA, from Behar (on Parusnath) and the Concan to Travancore. —DISTRIB. Java, Philippine Islands.

Stem 1-2 ft., stout. *Leaves* 6-10 by 2-3 ft., base contracted, hardly petioled. *Spike* 4-12 in.; bracts lanceolate, membranous; flowers about $\frac{1}{4}$ in. diam., very variable in size, yellowish green; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in.; lip recurved, sessile, lobes very variable, spur subglobose fusiform or clavate; anther small, tubes very short, pollinia clavate, caudicles hardly any; glands small; stigmatic processes short clavate; rostellum erect, toothed. *Capsule* $\frac{1}{2}$ in., sessile, fusiform, acute,—The Ceylon habitat given by Thwaites no doubt refers to *H. Wightii*, which has been confounded with this.

93. *H. constricta*, *Hook. f.*; stem stout tall, leaves elliptic acute or acuminate, spike dense-flid. cylindric, bracts as long or longer than the flowers, lateral sepals linear-lanceolate, petals larger ovate-oblong gibbous on the lower side, lip rather longer than the sepals 3-fid to the middle side lobes slender longer than the midlobe, spur globose. *Platanthera constricta*, *Lindl. in Wall. Cat.* 7043. *Herminium constrictum*, *Lindl. in Bot. Reg. under t.* 1449. *Peristylus constrictus*, *Lindl. Gen. & Sp. Orchid.* 300. *Orchis leucantha*, *Herb. Ham.*

SUBTROPICAL SIKKIM, *J. D. H. KHASIA HILLS*, alt. 2-4000 ft., *J. D. H. & T. T.*, &c. TENASSERIM; at Moulmein, *Helfer (Kew Distrib.* 5357), &c.

Stem with spike 2-3 ft. *Leaves* 4-6 by $2\frac{1}{2}$ -4 in., narrowed at the base or broadly petioled. *Spike* 4-8 in.; bracts large; flowers yellowish; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., dorsal lanceolate; lobes of lip very variable, claw hardly any; anther minute, cells parallel, tubes short; pollinia clavate, caudicles short, glands large; stigmatic processes clavate; rostellum 2-fid, erect.

94. *H. Parishii*, *Hook. f.*; stem short stout, leaves sessile ovate-oblong, spike narrow elongate, bracts linear-lanceolate longer than the small flowers both erect, lateral sepals linear-oblong obtuse, petals broader ovate-oblong, lip as long as the sepals shortly 3-lobed beyond the middle,

spur very short fusiform. *Peristylus Parishii*, *Reichb. f. in Trans. Linn. Soc.* xxx. 139.

TENASSERIM; at Moulmein, *Parish*.

Stem below the leaves very stout, 3-4 in., laxly sheathed, above the stem 3-6 in., with 2-3 lanceolate sheaths. *Leaves* 3-5 by $1\frac{1}{2}$ -2 in., acute or acuminate. *Spike* 4-6 in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in. with filiform tips and flowers appressed to the rachis; ovary $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in.; petals ovate-cordate, obtuse; lip very variable in form, broad or narrow, lobes short obtuse, or the middle one narrower and longer.—Turns black in drying. The specimens are not good. Perhaps a form of *goodyeroides*.

95. **H. Wightii**, *Trimen Cat. Ceyl. Pl.* 91; tall, leaves oblong-lanceolate acuminate, spike elongate narrow dense-fl., bracts longer than the ovary, flowers small, lateral sepals oblong obtuse dorsal shorter orbicular or very broadly ovate, petals very broad obliquely orbicular nerves branched, lip shorter than the sepals broad entire or shortly 3-lobed, spur small scrotiform. *H. goodyeroides*, *Hook. Bot. Mag. t.* 3397 (not of *Lindl.*). *Peristylus plantagineus*, *Lindl. Gen. & Sp. Orchid.* 300; *Wight Ic. t.* 921; *Thwaites Enum.* 310. *P. elatus*, *Dalz. in Hook. Journ. Bot.* iii. (185) 344.

The CONCAN, *Nimmo*; Malwan, *Dalzell*, &c. TRAVANCORE; at Paul Ghat, *Wight*. CEYLON, *Macrae*.

Stem 1-2 ft., rather stout, loosely sheathed below the leaves and with lanceolate sheaths above them. *Leaves* 5-7 by $2\frac{1}{4}$ -3 in., acute or acuminate. *Spike* 4-8 in.; bracts $\frac{1}{2}$ in., lanceolate; ovary $\frac{1}{4}$ - $\frac{1}{2}$ in.; flowers greenish white; sepals 1-nerved, lateral $\frac{1}{2}$ in., apiculate below the lip, dorsal $\frac{1}{4}$ in. shorter; lip contracted beyond the very short broad concave base; anther rounded, cells parallel with short recurved tubes; pollinia clavate, caudicles very short, glands small solid; stigmatic processes short; rostellum short, acute.—*Dalzell* describes the petals as longer than the sepals. I do not find the erect long narrow processes on each side of the anther figured in *Bot. Mag.*—The Travancore plant figured by *Wight* precisely resembles the Concan one.

96. **H. Lawii**, *Hook. f.*; stem slender not tall, leaves few elliptic or lanceolate, spike slender, flowers few or many distant very small, bracts longer than the ovary, sepals obtuse, dorsal elliptic, lateral linear-oblong, sepals very broad obtuse, lip as long as the sepals broadly obtusely 3-fl., spur small globose or clavate. *Peristylus Lawii*, *Wight Ic. t.* 1695; *Dalz. & Gibs. Bomb. Fl.* 270.

BEHAR; on Parusnath, alt. 4200 ft., *Clarke*. The CONCAN and MAISOE, *Law*, &c.

Stem 6-10 in., loosely sheathed below the leaves. *Leaves* 3-5, membranous, 3-4 by 1-2 in., subpetioled, acute. *Spike* narrow, strict, 2-3 in., lax-fl.; bracts $\frac{1}{4}$ - $\frac{1}{2}$ in., ovate-lanceolate, membranous; ovary $\frac{1}{4}$ in., straight or curved, almost beaked; flowers $\frac{1}{2}$ in. diam., yellow; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., 1-nerved, at length spreading; petals thick; lip broad with a concave claw; anther-cells parallel, tubes 0, pollinia clavate, caudicle 0, glands small, stigmatic processes clavate; rostellum short, acute.—*Wight's* figure is of a very indifferent few-fl. specimen.

97. **H. Brandisii**, *Hook. f.*; very slender, leaves scattered towards the middle of the stem linear- or oblong-lanceolate acute, spike very long laxly many-fl., bracts nearly as long as the erect not beaked ovary, lateral sepals linear obtuse, petals broader ovate-oblong, lip clawed 3-partite, segments much longer than the sepals, lateral segments capillary, midlobe short, spur very short globose.

PEGU, *Brandis (Herb. Hort. Calcutt.)*.

Stem with spike 20 in. *Leaves* 3-5 in., membranous, upper smaller. *Spike* 8 in., very slender; bracts $\frac{1}{2}$ in., ovate-lanceolate; flowers $\frac{1}{6}$ in. diam.; sepals and petals membranous, 1-nerved, lateral sepals deflexed; long segments of lip 1 in.; spur sub 2-lobed, with a very short contracted neck; ovary small, with a thick dorsal ridge and terminal beak, cells parallel (tubes short upcurved?); pollen grains few, large, glands not seen; stigmatic processes clavate; rostellum erect between the cells.—Closely allied to *H. aristata*, though with so different a spur.

††† *Leaves* few radical, or solitary and cauline.

98. **H. lacertifera**, Benth. *Fl. Hongk.* 362; stem or scape stout or slender with few or many erect sheaths, leaves usually radical ovate or oblong, spike elongate few- or many-fl., bracts narrow longer than the erect very small flowers, lateral sepals linear-oblong obtuse, lip equalling or longer than the sepals trifid tripartite or obtusely 3-toothed, lobes or segments short subequal or the lateral long, spur minute ovoid or globose. *Cœloglossum lacertiferum* & *acuminatum*, Lindl. *Gen. & Sp. Orchid.* 302. *Peristylus chloranthus*, Lindl. in *Kew Journ. Bot.* vii. (1855) 37. *Gymnadenia*? *tenuiflora*, Lindl. in *Wall. Cat.* 7055. *Chæradoplectron Spiranthes*, Schauer in *Pl. Meyen.* 436, t. 13 C.

KHASIA, NAGA and MUNNIPORE HILLS, alt. 2-4500 ft., TENASSERIM, TAVOY and PENANG, Wallich.—DISTRIB. Hong Kong.

Stem 6-10 in.; sheaths $\frac{1}{2}$ -1 in., lanceolate. *Leaves* few, 1-2 in., spreading, acute or obtuse. *Spike* 3-10 in., slender, lax- or dense-fl.; lower bracts often $\frac{2}{3}$ in.; ovary $\frac{1}{2}$ - $\frac{3}{4}$ in., slender, erect, not beaked; sepals $\frac{1}{2}$ - $\frac{3}{4}$ in., 1-nerved, dorsal ovate-oblong, obtuse; petals variable, rather thick; lip very variable in length, and in length of lobes or segments, limb with a short spur over the short broad claw; anther minute, cells nearly parallel, tubes 0; pollinia ovoid, grains large, glands obscure; stigmatic processes small; rostellum a plicate-membrane stretched across the base of the anther but not? concealing the glands. *Capsule* $\frac{2}{3}$ in., sessile, oblong, obtuse.—Both this and the following var. are found in Penang. Lindley errs in giving "Nepal, Wallich," as a habitat. I suspect that Lindley's *Glossula tentaculata* (Bot. Reg. t. 862), of Hong Kong, is only a form of this with elongate filiform side lobes of the lip.

Var. *robusta*; very stout, 12-18 in., leaves 3-5 by $\frac{3}{4}$ -1 in., spike very long many-fl., lateral segments of lip slender exserted much longer than the middle one.—Penang, Wallich, Maingay (*Kew Distrib.* 1662, *Spiranthes*), Curtis.

99. **H. gracillima**, Hook. f.; stem long filiform, leaves subradical narrowly linear, spike elongate, flowers few minute distant, bracts shorter than the curved ovaries, lateral sepals linear-oblong, petals broader ovate obtuse fleshy, lip very short fleshy trifid lobes obtuse, spur very short inflated 2-lobed. *Cœloglossum Mannii*, Reichb. f. in *Linnaea* xli. 54.

KHASIA HILLS, alt. 4-5000 ft., on grassy hills, common. MUNNIPORE, Clarke.

Stem 6-16 in., with a few subulate sheaths. *Leaves* 1-3 by $\frac{1}{3}$ - $\frac{1}{4}$ in., alternate, acuminate. *Spike* 2-6 in.; flowers $\frac{1}{2}$ in. apart; bracts $\frac{1}{2}$ in.; ovary $\frac{1}{4}$ in.; sepals $\frac{1}{4}$ in., 1-nerved; lip shorter than the sepals, claw as broad as, and hardly shorter than the blade, midlobe rather the longest; pollinia most minute, broadly pyriform, subsessile on one large flat ovate (2-flid?) gland, grains large.

Sect. VI. PHYLLOSTACHYA. (See p. 132.)

100. **H. galeandra**, Benth. *Fl. Hongk.* 263; leaves oblong obtuse or subacute base contracted, bracts ovate, flowers $\frac{1}{2}$ in. diam., lip broadly cuneiformly obovate or obcordate, spur a short conical sac. *Platanthera obcordata*, Lindl. in *Wall. Cat.* 7050; *Gen. & Sp. Orchid.* 290. *P. gale-*

andra, *Reichb. f. in Linnæa*, xv. 226. P. Championi, *Lindl. in Hook. Journ. Bot.* vii. (1855) 38. *Gymnadenia obcordata* & *galeandra*, *Reichb. f. Ot. Hamb.* 32, 33. *Orchis obcordata*, *Don Prodr.* 230. O. *Susannæ*, *Herb. Heyne*.

WESTERN HIMALAYA; Nepal, *Wallich*; Kumaon, *Blinkworth*, alt. 7000 ft., *Strachey & Winterbottom*. CENTRAL INDIA; Hawalbagh, *Clarke*.—DISTRIB. China.

Tubers small, globose or oblong. *Stem* 6–8 in., rather slender, glabrous or puberulous. *Leaves* 1–2 in., rarely subacute; bases not sheathing. *Spike* 2–4 in.; bracts oblong-ovate or lanceolate, lower twice as long as the pale purple flowers, upper shorter; ovaries $\frac{1}{2}$ in. long, glabrous or puberulous; dorsal sepal ovate, lateral falcately lanceolate; petals rather narrower, obtuse; lip shortly clawed, base puberulous; anther-cells approximate; rostellum very minute.—I do not find the difference between the spurs of the Indian and Chinese plant that Lindley indicates.

VAR. nilagirica; leaves broader acute, bases sheathing. *Platanthera affinis*, *Wight Ic. t.* 1693.—Travancore, on the Pulney Mts., *Heyne, Wight*.

VAR. major; stem 12–18 in., leaves and larger flowers more remote.—Khasia Hills; at Myruug, alt. 5000 ft., *J. D. H. & T. T.*

101. **H. jantha**, *Benth. in Gen. Plant.* iii. 626; leaves imbricate ovate or lanceolate amplexicaul acuminate, flowers $\frac{3}{4}$ in. diam., lip broadly flabelliform or orbicular-ovate retuse crenulate spur very short conical obtuse. *Platanthera jantha*, *Wight Ic. v.* 11 (? t. 1692).

MALABAR and TRAVANCORE; on the Nilghiri and Pulney Mts., *Wight*.

Except in being more robust and having much larger flowers, this hardly differs from *H. obcordata*. *Wight* gives the larger flowers as a character, but in his figure t. 1692 they are represented as even smaller. In his specimen the lip is $\frac{3}{4}$ in. diam.; he describes the flowers as deep lilac, and the leaves as of the same colour and streaked with a darker shade.—Probably a large state *H. obcordata*.

102. **H. Helferi**, *Hook. f.*; stem pubescent, leaves and bracts linear- or oblong-lanceolate acuminate, flowers 1–1 $\frac{1}{2}$ in. diam., lip very large orbicular cucullate, spur infundibular acute. *Gymnadenia Helferi*, *Reichb. f. in Flora* 1872, 276; in *Trans. Linn. Soc.* xxx. 139.

ASSAM (*Herb. Wight*) KHASIA MTS., *Simons*. TENASSERIM, at Moulmein, *Lobb. Helfer, Parish*.

Stem 12–18 in., rather stout; tubers oblong. *Leaves* 4–8 in., sessile, acuminate, base narrowed. *Flowers* shortly pedicelled; sepals falcately-lanceolate, acuminate, nearly 1 in. long, green, lateral at length recurved; petals ovate-lanceolate, acuminate, green; lip twice as large as the sepals, very concave with recurved edges, folded down the centre, purple; anther obtusely apiculate, cells narrow parallel, tubes very short, pollinia clavate, as long as their broadly winged caudicles, glands approximate, rather large; stigmatic processes obscure; rostellum small, fleshy, 3-lobed, erect between the gland. *Capsule* $\frac{3}{4}$ in., linear-oblong, sessile, erect, ribs thick.—*Reichenbach* describes the lip as broad or narrow.

SECT. VII. PLECTOGLOSSA. (See p. 132.)

103. **H. Perrottetiana**, *A. Rich. in Ann. Sc. Nat. Ser. 2*, xv. 74, t. 4 B. *Platanthera lutea*, *Wight Ic. t.* 919. *H. lutea*, *Benth. in Journ. Linn. Soc.* xviii. 354; *Gen. Plant.* iii. 626.

TRAVANCORE; as the Pulney Mts. amongst long grass, *Wight*. Nilghiri Hills, *Perrottet*.

Stem 1–2 ft., very stout; clothed with short imbricating amplexicaul sheathing acuminate leaves 2–3 in. long that pass upward into the bracts. *Spike* 6–8 in.;

bracts foliaceous, broadly ovate, $1\frac{1}{2}$ –2 in. long, cymbiform, acuminate; ovary $\frac{3}{8}$ in. long, erect, slender, beaked, narrowly winged; sepals erect, $\frac{3}{8}$ in., ovate-oblong, obtuse, concave; petals erect, as long, linear, obtuse; lip as long as the sepals, very coriaceous, triplicate in bud, being folded longitudinally down the middle, with the side lobes appressed to the midlobe, and each also folded down the middle with the concavity inwards, long clawed, cuneately obovate, obtuse, claw geniculate; side lobes linear-oblong, obtuse, incurved, shorter than the triangular ovate midlobe; spur pendulous, subclavate; anther broad, bases of cells shortly upcurved; pollinia large, pyriform, grains large, caudicles short, glands small orbicular.—The stigmatic processes differ from those of any other Indian *Habenaria*, A. Richard figures them as clavate as in most *Habenariæ*, but I have never found them so, though I have examined many flowers. The rostellum? forms a broad triangular acute plate extending across the column, and reaching to the bases of the anther-cells.

Sect. VIII. DIPHYLAX. (See p. 133.)

104. *H. urceolata*, Clarke in Journ. Linn. Soc. xv. 73, t. 30.
Diphyllax urceolata, Hook. f. Ic. Plant. t. 1865.

SIKKIM HIMALAYA; Yakla, alt. 10,000 ft., and NAGA HILLS, alt. 9000 ft., Clarke.

Root unknown. Stem very slender, recurved, with the raceme 4–6 in. high. Leaves one large (2–4 in.) subradical, elliptic-lanceolate, acute, and several small scattered ones alternate higher up, all membranous, 5–7-nerved. Racemes 2–3 in., decurved; flowers secund, $\frac{1}{3}$ – $\frac{1}{2}$ in. diam., very shortly pedicelled; bracts ovate or lanceolate, as long as the short ovary; sepals white and rosy; petals 1-nerved; lip recurved, lanceolate, terminal half solid terete acuminate green, spur inflated, nearly as long as the sepals; anther beaked, cells contiguous, parallel, pollinia oblong, grains large, caudicles very short.

Sect. IX. DIPYLA. (See p. 133.)

105. *H. secundiflora*, Hook. f. Ic. Plant. ined.

SUB-ALPINE HIMALAYA; Kumaon, alt. 9–10,000 ft., Duthie. Sikkim, alt. 14,000 ft., J. D. H.; in Chumbi, King's Collector.

Tubers globose, small. Stem 3–5 in., erect or recurved. Leaves 2–5 in., linear, acuminate, sides complicate, bases sheathing. Spike 1–2 in., more or less recurved, dense-flid.; flowers secund, pink; bracts linear-lanceolate, lower $\frac{1}{2}$ – $\frac{3}{4}$ in. longer than the flowers; ovary $\frac{1}{8}$ in., curved; sepals lanceolate, 1-nerved; petals much narrower, acuminate; lip as long as the sepals, sessile, linear-oblong, trifid to about the middle, puberulous, strongly-nerved, lobes parallel, lanceolate, acuminate; spur nearly as long as the sepals, conoidal, slightly contracted at the base, inflated, apex subacute; anther membranous; pollinia clavate, grains very large, caudicles short, glands large, cordate, membranous.—The resemblance to *H. urceolata* is remarkable; lobes of the rostellum inflected over the glands of the pollinia like two flaps or doors, whence the name.

Sect. X. DITHRIX. (See p. 133.)

106. *H. (Dithrix) decipiens*, Hook. f., Ic. Plant. ined.—Herminium, Griff. Notul iii. 270; Ic. Plant. Asiat. t. 285 f. 1.

NORTH-WEST INDIA; Edgeworth, alt. 3000 ft.; Lahul, alt. 4–5000 ft., Thomson.—DISTRIB. Afghanistan, Griffith, (Kew Distrib., 5326.) Kurrum Valley, Aitchison No. 322.

Tubers small, oblong. Stem 5–8 in., rather slender, erect or flexuous, laxly leafy. Leaves 1–2 $\frac{1}{2}$ in., lower larger, elliptic or linear-oblong, acute or obtuse, membranous, lower subpetiolate, upper sessile, bases sheathing. Spike 1–2 in.; flowers close-set, decurved; bracts ovate-lanceolate, longer than the ovary, membranous; ovary $\frac{1}{8}$ – $\frac{1}{6}$ in., curved, and sepals about as long, soft, 1-nerved; dorsal ovate-lanceolate, obtuse, lateral linear-oblong, tip rounded, petals as long, narrowly lanceolate, sub

3-nerved; lip as long as the sepals, obscurely 3-nerved, narrowed from the base upwards, terminal teeth acute, middle one longest.—The analysis of the dried flowers has been very difficult, and repeated many times; the capillary stamnodia long escaped detection. Resembles a small *Spiranthes* of the *S. æstivalis* type, with which it was confounded in Griffith's Herbarium.

IMPERFECTLY KNOWN SPECIES.

H. AFFINIS, *Don Prodr.* 25; *Lindl. Gen. & Sp. Orchid.* is a small state of *H. goodyeroides*.

H. CARANJENSIS, *Dalz. in Hook. Journ. Bot.* ii. (1850) 262; *Dalz. & Gibs. Bomb. Pl.* 267; lower leaves somewhat rounded, upper oblong-lanceolate 3-nerved, bracts shorter than the ovary 3-nerved, flowers small, yellow, dorsal sepal rounded, petals half ovate obtuse, lip tripartite, midsegment oblong rather obtuse, lateral shorter cuneate truncate, spur obovate shorter than the ovary.—The Concan; Island of Caranjah, *Dalzell*.

H. GRACILIS, *Coleb. in Hook. Exot. Fl.* t. 135, a Silhet plant, figured and described by Colebrooke (*in Hook. Exot. Fl.*), and to which he attributes an articulated fibrous root. I know of no plant in this least like the figure. *Lindley (Gen. & Sp. Orchid.* 302) suggests its being possibly his *Cæloglossum brevifolium* (*H. cubitalis*, β). It is possibly a bad drawing of *H. peristyloides*.

H. LOBBII, *Reichb. f. in Linnæa*, xli. 50; leaf cuneately oblong ligulate acuminate, raceme 2 ft. lax-fld., bracts half as long as the pedicelled ovary oblong acuminate, dorsal sepal ovate apiculate cucullate 3-nerved, lateral triangular retrorse 3-nerved, petals linear falcate 1-nerved, lip tripartite, lateral segments linear retrorse, midsegments twice as long linear obtusely acute, spur filiform shorter than the pedicelled ovary tip clavate, anther erect emarginate, tubes ascending, staminodes triangular.—*E. Indies, T. Lobb*. Flowers rather larger than those of *H. leptoceras*, *Hook. Bot. Mag.*, t. 2726 (a Brazilian species).

H. LONGIBRACTEATA; *Hook. f.*; stem stout leafy 2-3 ft., leaves 6 by $\frac{3}{4}$ -1 in. linear-oblong acute margins thickened, bracts 2-3 in. narrowly linear-lanceolate finely acuminate, lip 3-partite, segments linear lateral shorter, spur short obtuse. *Platanthera longibracteata*, *Lindl. in Wall. Cat.* 7048; *Gen. & Sp. Orchid.* 293.—*BURMA*, on the banks of the Irawaddy at Seendya, *Wallich*. *Wallich's* specimens are in very young bud only, and the description of the flowers taken from *Lindley* cannot be depended on. It is a noble species, and should be sought for in Burma.

H. MODESTA, *Dalz. in Hook. Journ. Bot.* ii. (1850) 262; *Dalz. & Gibs. Bomb. Fl.* 267; stem leafy at the base, naked above, bracts half as long as the ovary, flowers greenish white, lip 3-fid, lateral divisions linear lanceolate free spreading, mid one shorter ovate obtuse cohering with the tips of the petals and upper sepal and concealing the column, spur filiform hardly clavate a little longer than the ovary.—The Concan, at Salsette, *Dalzell*. Description from *Dalzell*, who does not appear to have seen leaves; it is, perhaps, *H. stenostachya*.

H. PELOBOIDES, *Par. & Reichb. f. in Trans. Linn. Soc.* xxx. 139, t. 27, f. A; tall, robust, leaves ovate or oblong-lanceolate passing into copious sheaths, spike many-fld., bracts large equalling the ovary ciliolate, sepals subequal lanceolate acuminate, lip linear, spur 0. *TENASSEERIM*; Amherst by the seaside, *Parish*. Stem a foot high. Leaves 2-3 in., largest subradical; upper sheaths slender, passing into the bracts the lower of which are $1\frac{1}{2}$ in. long. Spike 2-3 in., many-fld.; sepals $\frac{3}{4}$ in. long, membranous; petals as long as the sepals, lanceolate, 1-nerved; lip very narrow; anther-cells elongate, with very long erect tubes, stigmatic processes long. Capsule $\frac{3}{4}$ in., sessile, fusiform.—An anomalous plant, clearly a *Peloria* form. I have seen but one indifferent specimen.

H. UNIFLORA, *Don Prodr.* 25. *Platanthera uniflora*, *Lindl. Gen. & Sp. Orchid.* 2957 is probably a state of *H. triflora*.

107. **DIPLOMERIS**, *Don*.

Terrestrial small 2-fld. and 1-2-leaved. Leaves ensiform or oblong.

Flowers large. *Sepals* subequal, free, lanceolate, spreading. *Petals* longer and broader. *Lip* sessile at the base of the column, spreading, very broad, entire, spurred. *Column* very short; rostellum broadly dilated, membranous, beneath which is a broad oblong lamina from the column; anther-cells thick, parallel, tubes very long incurved ascending; caudicles of pollinia very long slender, glands small naked; stigmatic processes 0; rostellum prominent between the anther-cells.

1. **D. pulchella**, *Don Prodr.* 26 (excl. hab.); glabrous, leaves ensiform, lip broadly orbiculate. *Lindl. Gen. & Sp. Orchid.* 330; in *Journ. Linn. Soc.* iii. 44. *Diplochilos longifolium*, *Lindl. in Wall. Cat.* 7064; in *Bot. Reg. under t.* 1499. *Orchis uniflora*, *Roxb. Fl. Ind.* iii. 452; *Griff. Notul.* iii. 368. *Habenaria uniflora*, *Griff. Ic. Plant. Asiat.* t. 338, f. 2. *Paragnathis pulchella*, *Spreng. Syst. Veg.* iii. 694.

KHASIA HILLS, alt. 4–5000 ft., *Roxburgh, Wallich, &c.*

Rootstock creeping, subterraneous and fibrous; stem short. *Leaves* usually 2, erect, 3–4 by $\frac{1}{2}$ – $\frac{1}{2}$ in., acute. *Scape* about equalling the leaves, naked, 1-fl.; bract cymbiform, green, acuminate; flower 1– $1\frac{1}{2}$ in. diam., white; sepals ovate-lanceolate, acute; petals much larger, broadly obovate rounded or ovate-oblong; lip $\frac{2}{3}$ in. diam., sinus cuspidate; spur $1\frac{1}{2}$ in., incurved or upcurved, thickened beyond the middle, tip acute.—Don gives “Nepal, Wallich,” as the habitat, but Wallich’s specimens are from the Silhet Mts. (Khasia hills). Don’s generic description is unintelligible, and he erroneously describes the flowers as rose purple.

2. **D. hirsuta**, *Lindl. Gen. & Sp. Orchid.* 331; hirsute, leaf oblong, lip cuneately orbicular. *Diplochilos hirsutum*, *Lindl. in Wall. Cat.* 7065; in *Bot. Reg. under t.* 1499.

TROPICAL HIMALAYA; Nepal, *Wallich*; Western Bhotan, alt. 1500 ft., *Gammie*.

Tubers globose. *Leaf* 2– $2\frac{1}{2}$ in., radical, with sometimes a small second. *Scape* 1– $1\frac{1}{2}$ in.; flowers $1\frac{1}{2}$ in. diam.; bract oblong, sheathing; sepals 5-nerved, ovate-oblong, subacute; petals very much larger, orbicular; lip with a short slender claw, apex retuse or rounded, apiculate or not; spur $1\frac{1}{2}$ in., very slender, incurved and ascending.

108. **HEMIPILIA**, *Lindl.*

Terrestrial 1-leaved tuberous herbs. *Leaf* radical, broad. *Flowers* laxly racemose. *Sepals* equal in length, lateral spreading. *Petals* broadly ovate, entire. *Lip* continuous with the column, broad, obscurely 3-lobed, spreading; spur trumpet-shaped. *Column* very short; rostellum broad projecting from between the anther cells, complicate; stigmatic processes 0; anther-cells subdivergent, tips produced into grooves of the rostellum; pollinia 2, caudicles long, glands distant exposed.

1. **H. cordifolia**, *Lindl. Gen. & Sp. Orchid.* 296; leaf ovate-cordate, lip obovate-oblong, spur longer than the sepals. *Platanthera cordifolia*, *Lindl. in Wall. Cat.* 7049; *Gen. & Sp. Orchid.* 296.

WESTERN TEMPERATE HIMALAYA; alt. 4–500–7000 ft., from Nepal, *Wallich*, to Simla, *Gamble*.

Tubers oblong. *Leaf* 2–4 in., amplexicaul, acute, many-nerved. *Scape* with few or many-fl. racemes, 4–10 in.; bracts shorter than the ovary; flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam.; dorsal sepal oblong obtuse, lateral falcately oblong; petals subacute; lip with low rounded side lobes and a broad subcrenate midlobe, spur recurved; anther sessile, cells nearly parallel, pollinia clavate, caudicles short, glands rather distant.

2. **H. calophylla**, *Par. & Reichb. f. in Journ. Bot.* xii. (1874) 197;

leaf ovate or oblong, lip obcordate, spur shorter than the sepals, *Reichb. f. in Ot. Hamb.* 38; *Bot. Mag. t.* 6920.

TENASSERIM; on limestone rocks at Moulmein, *Gilbert, Parish.*

Leaf 3-5 in., from almost orbicular-ovate to linear-oblong acute, and slender scape and bracts dark green mottled with brown. Scape with few-fl. racemes 6-8 in.; flowers distant, $\frac{2}{3}$ in. diam.; bracts shorter than the ovary; dorsal sepal oblong, and lateral and petals white; lip purple, side lobes low, rounded, midlobe broad, 2-lobed; pollinia small, oblong, adnate to the elongate spatulate caudicles.

109. **SATYRIUM**, Swartz.

Terrestrial leafy erect herbs, tubers undivided. *Leaves* broad or narrow. *Flowers* in dense spikes. *Sepals* and *petals* subsimilar, free, spreading or deflexed. *Lip* superior, sessile at the base of the column, erect, broad, hooded, 2-spurred or -saccate behind. *Column* erect, terete; stigma terminal, broad, concave, [or forming with the rostellum a 2-lipped body; anther dorsal, cells subparallel; pollinia 2, caudicles recurved, glands large naked sometimes connate.—Species 50, African and Indian.

S. nepalense, *Don Prodr.* 26; *Lindl. Gen. & Sp. Orchid.* 340; in *Journ. Linn. Soc.* iii. 44; *Wight Ic. t.* 929; *Bot. Mag. t.* 6625; *Wall. Cat.* 7025. *S. Perrottetianum*, *A. Rich. in Ann. Sc. Nat. Ser.* 2, xv. 76, t. 53; *Wight Ic. t.* 1716. *S. albiflorum*, *A. Rich. l. c.*; *Wight Ic. t.* 1717. *S. pallidum*, *A. Rich. l. c.*

TEMPERATE HIMALAYA, from Kashmir, alt. 4-6000 ft., eastwards, ascending to 14,000 ft. in Sikkim. KHASIA HILLS, alt. 4-6000 ft. The DECCAN PENINSULA, from Concan to Travancore. CEYLON, alt. 4-6000 ft. ?BURMA; Shan states, alt. 4000 ft., *Manders.*

Stem with spike 6-30 in., usually very stout, sheathed above. *Leaves* few, from oblong to linear-oblong, 4-10 by .2-4 in., rather fleshy, sessile, base sheathing. *Spike* 1-6 in., dense-fl.; bracts much larger than the flowers, oblong or lanceolate, erect spreading or recurved; ovary turgid, $\frac{1}{2}$ in. long; flowers from dark pink to white, fragrant; sepals linear-oblong, obtuse, spreading and recurved; petals rather narrower; lip superior, broadly oblong, concave, strongly keeled on the back, spurs variable in length and stoutness, about as long as the ovary; column contracted and terete at the base; anther broad, cells turgid, tubes short, pollinia clavate, caudicles short, glands orbicular; stigma large, concave.—A very common and variable plant. The Burmese specimen has orbicular leaves at the very base of the stem.

Var. *Wightiana*; radical leaves few broad, spike short dense-fl. *S. Wightianum*, *Lindl. Gen. & Sp. Orchid.* 340; in *Journ. Linn. Soc. l. c.*; *Wight Ic. t.* 1718.—Nilghiri Mts.

Var. *ciliata*, *Lindl. l. l. c.*; a small plant with spurs hardly longer than the sepals.—Sikkim, alt. 7-12,000 ft., *J. D. H.* Bhotan, alt. 10,000 ft., *Griffith.*

110. **DISPERIS**, Swartz.

Terrestrial leafy herbs; tubers entire. *Leaves* 2 or more, scattered, sessile, cordate. *Flowers* solitary or few. *Dorsal sepal* very narrow, coherent with the broad petals into a subglobose hood; lateral spreading or deflexed, free or bases connate, disk with a depression within answering to a cone without. *Lip* confluent with the column to above the anther, appearing as if it surmounted the column. *Column* short in the Indian species, terete below, stigmas on a transverse hyaline membrane, the ends of which form twisted tubular processes that sheath the caudicles and glands of the

pollinia; anther oblong, obtuse, completely 2-celled; grains of pollinia 3-4-seriate, secund on the rachis, cuneiform, caudicles rather long, twisted, glands large naked. *Capsule* fusiform.—Species 20, Africa and the following.

The above description applies to the two Indian species of this highly interesting genus, the fertilization of which deserves a careful study. The analysis of dried specimens is so difficult that I advance the description of the membrane of the column and its appendages (which differs from that of others) with hesitation.

1. **D. zeylanica**, *Trimen Cat. Pl. Ceyl.* 91; lateral sepals concave not waved, petals semilunate obtuse. *D. tripetaloides*, *Lindl. Gen. & Sp. Orchid.* 371 (*in part*); *Thwaites Enum.* 311; *Wight Ic. t.* 930 & v. 15.

CEYLON; in the Central Provinces alt. 3-5000 ft., *Walker, &c.* The MALABAR & CANARA Ghats, &c., *Wight, &c.*

Stem 6-10 in. erect from the subglobose tubers, 1-3-leaved. *Leaves* $\frac{3}{4}$ -1 in., distant, amplexicaul, acute. *Flowers* $\frac{1}{2}$ in. diam., subcorymbosely, spicate; bracts leafy; ovary $\frac{1}{2}$ in., straight; lip included under the hood, erect from the top of the column, 2-partite from a narrow cuneate base, arms falcately recurved, papillose; a pendulous linear appendage, with a rounded dilated papillose apex bearing a central cone, is inserted on the cuneate base of the lip. *Capsule* $\frac{1}{2}$ in.

2. **D. neilgherrensis**, *Wight Ic. t.* 1719; lateral sepals strongly waved, petals lunate cuspidately acuminate.

NILGHIRI HILLS, *Wight*.

Larger and stouter than *D. zeylanica*, with larger reddish white flowers spotted with crimson; the lateral sepals are free or connate, and pubescent at the base.—Perhaps a form of *D. zeylanica*.

Tribe V. CYPRIPEDIEÆ. (See vol. v. p. 668.)

111. CYPRIPEDIUM, Linn.

Terrestrial herbs, with a leafy stem, plaited leaves, and terminal flowers, or stemless with distichous radical coriaceous often tessellately coloured leaves and 1-∞-fid. scapes. *Flowers* large, solitary or few. *Sepals* spreading, free on the lateral connate and placed under the lip. *Petals* free, very various. *Lip* sessile, side lobes small, spreading or inflexed, midlobe very large saccate, inflated oblong or helmet-shaped. *Column* short, terete; anthers 2, globose, together with the disciform deflexed stigma hidden under a large disciform staminode; ovary 1 celled.—Species about 40, Europe, temp. and trop. Asia and America.

In describing the Scapigerous species I have largely availed myself of published plates and the description in Veitch's excellent Manual, made from living plants. I have made no attempt to enumerate even the multitude of named hybrid forms that have been produced by crossing the Indian species with one another. They are well systematized in Veitch's Manual, where nearly 50 are assigned to their parents. *C. barbatum* alone has been crossed with upwards of 15 other species.

* Leaves 2, opposite on the stem, plicate.

1. **C. elegans**, *Reichb. f. in Flora*, 1886, 560; villous with cellular hairs, leaves orbicular-ovate or oblong, flowers solitary.

SIKKIM HIMALAYA, alt. 1000 ft., *Pantling*. EASTERN TIBET; North of Phari, *King's Collector*.

Stem 1-2 ft. high below the leaves. *Leaves* 1-2 in. broad. *Scape* shorter than the leaves; bract elliptic; flower about 1 in. diam.—A very interesting plant, the nearest ally of which is *C. japonicum*. I have seen only a single small specimen.

* Leaves several, alternate, plaited.

2. **C. cordigerum**, *Don Prodr.* 37; sepals and narrower petals spreading ovate-lanceolate acuminate green or white, lip oblong white, staminode ovate- or oblong-cordate. *Lindl. Gen. & Sp. Orchid.* 527; *Dcne in Jacquem. Voy. Bot.* 165, t. 166.

TEMPERATE HIMALAYA; from Kashmir, alt. 9–11,000 ft., *Clarke*, to Kumaon, alt. 7–9000 ft., *Royle*.

Stem 10–24 in., robust or slender, and ovary puberulous. *Leaves* 3–6 by 2–4 in., approximate or scattered, from nearly orbicular to lanceolate, acute or acuminate. *Flower* solitary; bract 1–4 in., leafy; sepals $1\frac{1}{2}$ –2 in., longer than the lip, the connate lateral entire or split at the apex; column yellow. *Capsule* $1\frac{1}{2}$ in., erect, clavate. —As *Lindley* observes, this is not distinguishable except by colour from the European *C. calceolus*, which extends from Britain to Dahuria. It would be well to compare living specimens before uniting them.

3. **C. macranthon**, *Swartz in Act. Holm.* 1800, 251; dorsal sepal from linear- to ovate-oblong acute, connate lateral narrower, lip subglobose much inflated purple, staminode ovate-oblong. *Lindl. Gen. & Sp. Orchid.* 528; in *Bot. Reg.* t. 1534; *Bot. Mag.* t. 2938; *Reichb. Fl. Exot.* ii. t. 16, No. 99; *Ic. Fl. Germ.* xiii. t. 498; *Fl. des Serres*, t. 1118; *Ill. Hort.* 1857, t. 147; *Belg. Hort.* vii. 353, t. 61; *Gartenfl.* 1863, t. 409; *Trans. Russ. Hort. Soc.* 1863, t. 135; *Orchidoph.* 1887, t. 75, f. 1; *Ledeb. Fl. Ross.* iv. 87.

ALPINE HIMALAYA; from Garwhal to Sikkim, alt. 11,500–14,000 ft.—DISTRIB. Northern and Subarctic Europe and Asia to Japan.

Stem 1– $1\frac{1}{2}$ ft., usually very stout, pubescent. *Leaves* 3–6 by 2–4 in., ovate or oblong, acute, puberulous. *Flowers* 1–2, $1\frac{1}{2}$ –2 in. diam.; sepals and petals very variable in length and breadth, longer or shorter than the lip, yellowish or greenish with dark purple stains, or all purple; combined lateral acute or bidentate; lip inflated, light or dark purple, mouth small crenate, sides often grooved concentrically. —In Sikkim specimens gathered by myself, the dorsal sepal is broadly oblong 1 in. long, and the petals as long but narrower and lanceolate, both yellow-green and striped with dark red.

VAR. *ventricosa*; *Carrière in Rev. Hort.* 1877, '310; dorsal sepal broader, and petals usually much longer, often 2 in. long, lip very large 1– $1\frac{1}{2}$ in. diam. *C. ventricosum*, *Swartz in Act. Holm.* 1800, 251; *Lindl. Gen. & Sp. Orchid.* 529; *Sweet Fl. Gard.* iv. t. 1; *Reichb. Ic. Fl. Germ.* xiii. t. 497. —Chumbi, in Tibet, N.E. of Sikkim, *King's Collector*. —Distrib. Siberia. —In King's Tibetan specimen, of which he has lent me a drawing, the dorsal sepal is broadly ovate, $1\frac{1}{4}$ by $\frac{3}{4}$ in., the petals 2 by $\frac{3}{4}$ in., oblong-lanceolate, both white striped with red.

** Leaves radical, distichous, oblong or lorate, coriaceous, not plaited. Scape 1–3-fld., pubescent or villous.

a. *Petals as broad as the dorsal sepal, short, sessile, broadly oblong, margins not undulate nor warted.*

4. **C. concolor**, *Batem. in Bot. Mag.* t. 5513; leaves oblong or linear-oblong tessellated, scape short 1–2-fld., sepals suborbicular and elliptic-oblong petals yellow ciliate, sac of lip subcylindric, staminode subrhomboidly ovate apiculate. *Ill. Hort.* 1865, t. 444; *Gartenfl.* 1874, t. 803; *Fl. des Serres*, t. 2321; *Williams Orchid. Alb.* t. 302; *Reichb. f. in Gard. Chron.* 1865, 626; 1883, i. 19, fig. 3; *Veitch Man.* 17, with fig.

TENASSERIM; near Moulmein, *Parish*. UPPER BURMA; in the Shan hills, *Prayer*. —DISTRIB. Cambodia.

Leaves 3-5 in., crowded, obtuse, pale green above, fascicled with undulate bands of dark green, purple or purple spotted beneath. *Scapes* 1-2 in. and cymbiform bract dark purple; flowers 2-3 in. diam., pale yellow, sparsely dotted with purple; petals hardly longer than the sepals; lip small, mouth slightly dilated.—Reichb. f. describes (Gard. Chron. 1886, 294) a var. *chlorophylla* with an interrupted line of purple spots along the midribs of the sepals and petals, and var. *sulphurina* (l. c. 1888, ii. 264) with unspotted sulphur coloured flowers. Other vars. are *tonkinensis*, Lindenia, ii. t. 77, and *Regneri*, Orchidoph. 1886, 226.—The *C. Godefroyi* of Siam is very closely allied, but has dorsal sepals and petals broader than long, copiously spotted, and a 3-toothed staminode.

5. ***C. niveum***, Reichb. f. in Gard. Chron. 1869, 1038; Xen. Orchid. ii. 155; leaves linear-oblong tessellated, scape elongate 1-2-fld., sepals orbicular and broadly oblong petals ciliate, sac of lip ovoid mouth contracted, staminode large transversely oblong. Bot. Mag. t. 5922; Ill. Hort. 1871, t. 83; Flor. Mag. 1871, t. 543; Jennings Orchid. t. 28; Reichenbachia, i. t. 34; Gard. Chron. 1883, ii.; fig. 1. Veitch Man. 39, with fig.; C. concolor, var. *nivea*, Reichb. f. in Gard. Chron. l. c.

STRAITS OF MALACCA; Langkawi Islands, south of Penang.—DISTRIB. Tambilan Island, between Singapore and Borneo, and W. coast of Siam.

Leaves 4-6 in., green above with darker blotches, lurid purple beneath. *Scape* 1-2-fld.; bracts very short; flowers 3 in. diam., pure white more or less dotted with purple; dorsal sepal very broad, stained with purple on the back; petals rather longer, variable in size and breadth; staminode closing the mouth of the lip.

β. *Petals* as broad as the dorsal sepal or nearly so, spatulate, clawed, margins not warded.

6. ***C. villosum***, Lindl. in Gard. Chron. 1854, 125; leaves loriform, not tessellate, scape elongate, villous bract nearly as long as the ovary, dorsal sepal suberect obovate-oblong with the lower margins revolute and spatulate petals ciliate, lip helmet-shaped, staminode obovate base cordate. Ill. Hort. iv. t. 126; Pescator. t. 48; Fl. des Serres, t. 1475. Lindenia, iii. t. 132; Warner Sel. Orchid. ii. t. 30. Veitch Man. 54, with fig. C. Boxalli, Reichb. f. in Gard. Chron. 1877, i. 367; Ill. Hort. xxvi. 345.

TENASSERIM; Moulmein, alt. 4-5000 ft., Lobb, Parish.

Leaves 10-18 in., green above, paler beneath. *Scape* 1-fld.; bract spathaceous and ovary villous; flowers 5-6 in. diam., glossy; dorsal sepal green with brown-purple base and white margins, keel hirsute; petals hirsute towards the base, and lip brownish yellow, mouth and staminode tawny yellow.—*C. Boxalli* is a var. with black spots on the dorsal sepal and more tessellated petals. Var., *aurea* (Gard. Chron. 1883, i. 374) has a bright yellow-green dorsal sepal margined with white and golden yellow petals and lip.

7. ***C. hirsutissimum***, Lindl. in Bot. Mag. t. 4990; leaves lorate acute not tessellate, bract small and flower hirsute, dorsal sepal erect orbicular-ovate obtuse, petals horizontal spatulate claw crisped or undulate, lip helmet-shaped, staminode quadrate angles rounded. Warner Sel. Orchid. i. t. 15; Belg. Hortic. vii. 353, t. 61; Ill. Hort. iv., Misc. 67; Xen. Orchid. ii. 107, t. 132; Rev. Hortic. 1859, 182; Fl. des Serres, t. 1430; Veitch Man. 29, with fig.

KHASIA HILLS; on the Assam face, Simons.

Leaves 9-12 in., green. *Scape* 12 in., green, hairs of bracts and flowers dark purple; flowers 4 in. diam.; dorsal sepal green with a dull purplish spotted disk; petals nearly as broad as the dorsal sepal, violet-purple, the lower half with green sides and midrib and copious dark spots, and hairs; lip green flushed with dark purple, minutely warded, mouth green within; staminode green, base white.

γ. Petals narrower but not much longer than the dorsal sepal, sometimes warted on the surface, but not on the margins, which are glabrous.

8. **C. Drurii**, *Beddome Ic. Plant. Ind. Or.* 23, t. 112; leaves ligulate glabrous not tessellated, scape tall 1-fl. pubescent, bract much shorter than the ovary, dorsal sepal broadly ovate ciliate arched, petals linear-oblong obtuse surface warted and hirsute towards the base, lip helmet-shaped mouth open, staminode subquadrate. *Reichb. f. in Gard. Chron.* 1876, 68; *Xen. Orchid.* ii. 223; *Ill. Hort.* 1877, t. 265; *Lindenia*, i. t. 6; *Flor. Mag. N. S.* t. 425; *Veitch Man.* 22, with fig.

TRAVANCORE MTS., alt. 5-6000 ft., *Drury*.

Leaves 7-10 in., bright green. *Scape* 9-12 in. and small obtuse bracts and ovary pubescent; flowers 3 in. diam.; dorsal sepal greenish yellow with a broad dark median band and a dorsal keel with black hairs; lower connate sepals smaller; petals incurved tips rounded, bright ochreous yellow, with a dark median band, warts and hairs blackish; staminode much smaller than the mouth of the lip, which is bright yellow dotted with purple within, and with acute margins.

9. **C. insigne**, *Wall. mss. in Lindl. Coll. Bot.* t. 32; leaves ligulate glabrous not tessellated, scapes elongate 1-2-fl., bract equalling the ovary, dorsal sepal large arched orbicular-ovate margins subrecurved, petals linear-oblong glabrous margin undulate, lip broadly helmet-shaped, staminode subquadrate. *Lindl. Gen. & Sp. Orchid.* 530; *Hook. Fl. Exot.* t. 34; *Lodd. Bot. Cab.* t. 1321; *Bot. Mag.* t. 3412; *Williams Orchid. Alb.* iv. t. 155; *Griff. Notul.* 344; *Ic. Pl. Asiat.* t. 322; *Veitch Man.* 32; *Flore des Serres*, 1564.

KHASIA HILLS, alt. 4-5000 ft., *Wallich, &c.*

Leaves 8-12 in., acute, pale green. *Scape* 12 in., 1-2-fl. and large oblong compressed bracts and ovary pubescent; flowers 4-5 in. diam., glossy; dorsal sepal apple-green, purple-spotted, tip white, lateral smaller, paler; petals rather longer than the sepals, margins subcordate, green with white tips and purple veins; lip broad yellow or green suffused with purple, tawny yellow within; staminode pubescent with a central callus.—The above description is of the wild form; cultivated specimens vary greatly in colour, and have numberless synonyms, the principal given by Veitch are

VAR. Chuntinii, Rafar. in *Rev. Hort.* 1866, 249; 1878, 130, with fig.; dorsal sepal margined with white purple spotted, lower combined sepals longer more acute, petal veined with amber, lip chesnut brown. *Fl. des Serres*, xxi. 72; *Orchidoph.* 1885, 36; *Williams Orchid. Alb.* vi. t. 278; *Gard. Chron.* 1882, ii. 717, fig. 127.

VAR. Maulei, Moore in *Flor. Mag.* 1861, t. 57; flowers larger, margins of dorsal sepal revolute towards the base white at the tip, petals paler, lip longer narrower paler. *Fl. des Serres*, xv. t. 1564; *Gard. Chron.* 1882, ii. 716, fig. 126.

VAR. Sanderæ; flowers primrose yellow, except the white margins.

Other vars. are *aspera*; *aurea*, *Fl. & Pomol.* 1882, 75, and *albo-marginata*, *Williams Orchid. Alb.* v. t. 232, 178. For figures of the flowers of many varieties see *Gard. Chron.* 1882, ii. 716, f. 126.

10. **C. Spicerianum**, *Reichb. f. in Gard. Chron.* 1880, i. 40, 74, fig. 7; leaves ligulate subacute not tessellated, scape tall 1-2-fl., bracts much shorter than the ovary, dorsal sepal very large erect rhombic-obovate hirsute sides strongly recurved below, petals shorter deflexed ligulate margins undulate and crisped, lip helmet-shaped mouth dilated, staminode orbicular. *Bot. Mag.* t. 6490; *Ill. Hort.* 1883, t. 473; *the Garden*, 1883, t. 378; *Williams Orchid. Alb.* iii. t. 119; *Belg. Hort.* 1883, 289, t. 18; *Orchidoph.* 1890, 415; *Gard. Chron.* 1880, i. 41, f. 7; *Veitch Man.* 46, with fig.

ASSAM (*Low's and Sander's Collectors*).

Leaves 6-9 in., dark green, margins more or less waved, beneath purple-spotted near the base. *Scape* 9-12 in., slender, pubescent; bract narrow; flowers about 3 in. diam.; dorsal sepal horizontal, sides at the base so stoutly reflexed as to appear clawed, white base purple dotted on a green ground, midline purple; petals shorter than the lip, obtuse, yellow- or olive-green with a red median band and spots; lip brown, tinged with crimson; staminode red, edged with white, base contracted into auricle-like folds.

δ. *Petals narrower than the dorsal sepal, very long in C. Parishii, margins bearded or hirsute and warted.*

11. **C. venustum**, Wall. in *Bot. Mag.* t. 2129; *Cat.* 7023; leaves elliptic-oblong or loriform tessellate, scape 1-2-fid., bracts half as long as the ovary, dorsal sepal broadly ovate or cordate, petals linear-oblong bearded sparsely warted, lip subcylindric reticulate, staminode semi-lunate. *Lindl. Gen. & Sp. Orchid.* 530; *Hook. Exot. Flor.* t. 35; *Bot. Mag.* t. 2129; *Bot. Reg.* t. 788; *Reichb. Fl. Exot.* 100; *Lodd. Bot. Cal.* 585; *Warner Sel. Orchid.* ii. t. 24; *Veitch Man.* 53. *C. pardinum*, *Reichb. f. in Gard. Chron.* 1869, 554, and 1887, i. 382, fig. 76 (*pardinum* var.); *Flor. Mag.* N. S. t. 51.

TROPICAL SIKKIM HIMALAYA, alt. 3-4000 ft., J. D. H., Clarke. SILHET and ASSAM, Wallich, Griffith, &c.

Leaves 4-10 in., dark green, marbled with pale green above and dull purple beneath. *Scape* 6-9 in., pubescent; flowers 2-2½ in. diam.; dorsal sepal white with dark stripes; petals spreading, subspathulate, green and purplish, warts blackish; lip yellow green, flushed with pink, and with green reticulations, inflexed lobes yellow nearly closing the mouth.—The var. *pardina* has larger flowers, whiter sepals, and larger and more scattered wart on the petals.

12. **C. Fairleanum**, Lindl. in *Gard. Chron.* 1857, 740; leaves linear-oblong or loriform not tessellate, scape slender 1-fid., bracts half as long as the glandular hairy ovary, dorsal sepal large erect suborbicular obtuse, petals linear-lanceolate falcately upcurved margins crisped bearded and with black tubercles, lip slipper-formed pubescent, staminode orbicular with a deep notch and included spur in front. *Bot. Mag.* t. 5024; *Fl. des Serres*, t. 1244; *Xen. Orchid.* ii. 108, t. 133; *Orchid. Alb.* ii. t. 70; *Veitch Man.* 24, with fig.

ASSAM, Tronson (*l.c.* in *Hort. Calcutt.*).

Leaves 4-6 in., acute, bright green. *Scape* 4-6 in., green; bract green; ovary purple; flower 2½-3 in. diam.; dorsal sepal greenish white with broad purple reticulated nerves, ciliate, margin waved, keel hairy; petals yellow- or greenish-white with purple nerves and margins; lip green with purple veins and spots; staminode deeply notched and 3-fid in front, side lobes acute incurved, midlobe as long, straight acute.

13. **C. superbiens**, Reichb. f. in *Bonpland.* 1855, 227; in *Algem. Gartenzeit.* 1856, 323; *Xen. Orchid.* ii. 9, t. 103; leaves elliptic-oblong tessellate, scape 1-fid., bract much shorter than the ovary, dorsal sepal orbicular-ovate acute, petals broadly linear deflexed fringed with black hairs and warted, lip helmet-shaped, staminode suborbicular notched in front, base 2-lobed. *Gartenfl.* 1863, 49; *Warner Sel. Orchid.* ii. t. 12; *Fl. des Serres*, t. 1996; *Veitch Man.* 51, with fig.; *Gard. Chron.* 1886, ii. 405, f. 83, 84. *C. Veitchianum*, Ill. *Hort.* xii. t. 429; *De Puydt, Les Orchid. frontisp.* p. 267; *Rev. Hort.* 1871, 595, fig. 78, 79. *C. barbatum* Veitchii, *Fl. des Serres*, t. 1453. *C. barbatum superbum*, Belg. *Hortic.* 1883, 97.

MALAY PENINSULA; Mt. Ophir, *Lobb*.

Leaves 5-7 in., pale or dark green with dull blotches. *Scape* 9-12 in., 1-fl.; flowers ciliolate, 4 in. diam.; dorsal sepal white striped with green; petals longer than the dorsal sepal, white veined with green; lip brownish purple, inflexed, lobes crimson, warted.

14. **C. barbatum**, *Lindl. in Bot. Reg.* 1841, *Misc.* 53; 1842, t. 17; leaves oblong to linear-oblong acute tessellate, scape 1-2-fl. pubescent, bract much shorter than the ovary, dorsal sepal broadly ovate or orbicular acute or obtuse, petals longer linear-oblong spreading and decurved ciliate and with a few black warts along the upper or both margins, lip helmet-shaped mouth dilated, staminode hypocrepiiform. *Bot. Mag.* 4234; *Fl. des Serres*, iii. t. 190, and xviii. t. 1879 (var. *grandiflorum*); *Belgique Hortic.* xxxiii. 96, t. 7; *Warner Sel. Orchid. Ser.* 3, t. 11 (var. *Warneri*); *Veitch Man.* 12. *Gard. Chron.* 1886, ii. 308, f. 63. *C. purpuratum*, *Wight Ic.* t. 1760 (not of *Lindl.*). *C. Warnerianum*, *Reichb. f. in Gart. Zeit.* 1883, fasc. ix. *C. orbum*, *Reichb. f. in Gard. Chron.* 1887, ii. 778. *C. Crossii*, *Belg. Hortic.* xv. 227; *Veitch Man.* 12, with fig.

PENANG, *Maingay*. MALACCA; on Mt. Ophir, *Griffith*, &c.—DISTRIB. W. Siam.

Leaves 4-8 in., pale green above with darker oblong spots. *Scape* 10-12 in.; flowers 2-3 in. diam.; dorsal sepal folded in the middle, white with purple veins and greenish base, lower connate sepals much narrower; petals greenish brown towards the base, purple towards the tip; lip dark purple. Variable in the size and colour of the flowers. *Veitch* retains two varieties, 1, *Crossii*, leaves paler with more scattered deep green spots, under which are *C. Warneriana* and *orba*, and 2, *O'Brieni*, with leaves paler, spots smaller, petals and lip deeper coloured.—*C. orbum* is described as a hybrid by *Reichenbach*, but *Veitch* regards it as a synonym of var. *Crossii*.

15. **C. Parishii**, *Reichb. f. in Flora*, 1869, 322; in *Gard. Chron.* 1869, 814, with fig.; leaves ligulate 2-fl. not tessellated, scape stout 4-7-fl., bracts spathaceous, dorsal sepal suberect broadly elliptic-ovate with the basal margins revolute, petals very long linear pendulous twisted margin sparsely warted below, lip helmet-shaped, staminode obovate-oblong obtusely 2-fl. base spurred. *Bot. Mag.* t. 5791; *Williams Orchid. Alb.* ii. t. 86; *De Puydt. Orchid.* 188; *Orchidoph.* 1887, t. 91. *Ill. Hort.* 1875, t. 214; *Gard. Chron.* 1869, 814; *Veitch Man.* 41. *Selenipedium Parishii*, *Rev. Hort.* 1885, 132.

TENASSERIM; at Moulmein, *Parish*.

Leaves 9-15 by $1\frac{1}{2}$ - $2\frac{1}{2}$ in., glossy green. *Scape* 12-18 in., pale green, hairy; bracts and hirsute ovary green; flowers 3-4 in. diam.; dorsal sepal arched, keeled, pale yellow green; petals 4-6 in. long, spreading, at length pendulous, basal half green with pale undulate margin and a few bristly marginal tubercles, the other half dark purple, tip obtuse pubescent; lip green or stained with purple, mouth green within; staminode greenish yellow, margins white.

112. APOSTASIA, *Blume*.

Terrestrial herbs, with a short caudex and leafy rigid stems. *Leaves* narrow, strongly nerved. *Flowers* small, in terminal or axillary simple or paniced often decurved or deflexed spikes. *Sepals, petals and lip* all equal and alike, free, spreading or recurved. *Ovary* very slender, 3-celled. *Column* short; anthers 2, at the sides of the rostellum, shortly stipitate, narrow, erect, 2-celled, cells parallel; staminode erect, behind the stigma,

or 0; stigma terminal long erect, tip discoid.—Species 6, Indian, Malayan and Australian.

1. **A. Wallichii**, Br. in Wall. Cat. 4448; in Pl. As. Rar. i. 75, t. 84 (A. odorata); leaves linear-lanceolate 5-7-nerved, spikes panicled, peduncle naked below, anthers versatile cell bases unequal, staminode adnate to the style. Blume in Ann. Sc. Nat. Ser. 2, ii. 93; Miquel Fl. Ind. Bat. iii. 748; Thwaites Enum. 315; Rolfe in Journ. Linn. Soc. xxv. 237, t. 48, f. 22-24. Mesodactylus deflexa, Wall., ex. Pl. As. Rar. l. c. 74.

TROPICAL NEPAL, Wallich. KHASIA HILLS, J. D. H. & T. T. ASSAM, Griffith. PENANG, Curtis. PERAK, Scortechini, King's Collector, CEYLON; in the Suffragan district, Thwaites.—DISTRIB. Sumatra, Java, N. Guinea.

Stem 1-2 ft. Leaves 4-8 in. Panicle decurved, 4-10 in.; bracts subulate; flowers subsecund, $\frac{1}{2}$ in. diam., yellow; ovary $\frac{1}{2}$ - $\frac{3}{4}$ in. Capsule $\frac{1}{2}$ - $\frac{3}{4}$ in.

2. **A. nuda**, Br. in Wall. Cat. 4449; in Wall. Pl. As. Rar. i. 76, t. 85; leaves narrowly linear-lanceolate finely acuminate 3-5-nerved, spikes panicled many-bracteate at the base, anthers erect cell-bases equal, staminode 0. Blume in Ann. Sc. Nat. Ser. 2, ii. 93; Miquel Fl. Ind. Bat. iii. 748; Rolfe in Journ. Linn. Soc. xxv. 239, t. 48, f. 20, 21. A. Brunonis, Griff. Notul. iii. 243; Ic. Pl. Asiat. t. 282.

KHASIA HILLS and CHITTAGONG, J. D. H. & T. T. TENASSERIM; at Mergui, Griffith (Kew Distrib. 5604). MALACCA, Maingay, top of Mt. Ophir, Hullett. SINGAPORE, Lobb. PERAK, Wray.—DISTRIB. Sumatra, Java.

Stem 10-12 in. Leaves 4-10 in. Panicle decurved, much shorter than in A. Wallichii, as are the ovaries.

3. **A. latifolia**, Rolfe in Journ. Linn. Soc. xxv. 242; leaves petioled elliptic-lanceolate finely acuminate very many nerved, spikes panicled, peduncle naked at the base, anther erect bases equal staminode 0.

PERAK, Scortechini, Wray.

Stem 3 ft. Leaves 4-6 by 1-1 $\frac{1}{2}$ in., nerves very close; petiole 1-1 $\frac{1}{2}$ in. Panicle stouter than in nuda and Wallichii, bracts broader; ovaries $\frac{3}{4}$ in., curved; flowers very small.

113. NEUWIEDIA, Blume.

Terrestrial herbs, with a short caudex and leafy stiff stems. Leaves elongate, petioled, strongly nerved. Flowers small, in a terminal simple erect dense raceme, clothed with long bracts. Sepals and petals equal and similar, free, or the latter rather broader. Lip subspathulate. Column short; stigma terminal, long, erect, tip discoid; anthers 3, erect, narrow, stipitate, one on each side of the stigma, and one dorsal, cells parallel. Ovary 3-celled.—Species 6, Malayan.

1. **N. Lindleyi**, Rolfe in Journ. Linn. Soc. xxv. 232, t. 48, f. 10-12; peduncle elongate, raceme elongate many and dense-fl. and flowers puberulous, bracts 1-1 $\frac{1}{2}$ in. membranous, erect and recurved.

PENANG, Curtis.—DISTRIB. Borneo.

Stem very short, stout. Leaves many, 1-2 ft. by 2-3 in., oblanceolate, membranous, many-nerved, stoutly petioled. Raceme 1-2 ft., stout, erect, rachis stout; bracts much longer than the flowers, narrowly lanceolate; flowers 1 in. long, horizontal, pedicelled; ovary $\frac{1}{2}$ in.

2. **N. Curtisii**, Rolfe in Journ. Linn. Soc. xxv. 233, t. 48, f. 13, 14;

peduncle short, raceme short many-fl. and flowers pubescent, bracts $\frac{1}{2}$ – $\frac{3}{4}$ in. erect.

PENANG; on West Hill, alt. 2000 ft., *Curtis*.—DISTRIB. Sumatra.

Leaves as in *N. Lindleyi*, but peduncle and raceme very short, and bracts glandular-pubescent.

3. *N. Griffithii*, *Reichb. f. Xen. Orchid.* ii. 215; peduncle short, spike short many-fl. and flowers subhispidly pubescent, bracts $\frac{1}{2}$ – $\frac{3}{4}$ in.

MALACCA, *Griffith, Maingay (Kew Distrib.* 1682). PERAK, *King's Collector*.

Stem very short. *Leaves* 4–10 in., elliptic-lanceolate, finely acuminate, many-nerved, petioled. *Raceme* 2–3 in.; flowers white, very shortly pedicelled, $\frac{1}{2}$ in. long, decurved. *Capsule* $\frac{1}{2}$ in. long, turgid, trigonous.

SUPPLEMENT TO **ORCHIDÆ**, WITH ADDITIONS AND CORRECTIONS.

During the elaboration of the *Orchidæ* for this Flora, very large collections of species, from many parts of India, were being received at intervals by the Herbarium of the Royal Gardens, Kew, especially from the rich stores of the Royal Gardens of Calcutta, together with the loan of a magnificent series of original drawings of Orchids from the same source. The most important of these collections were Malayan, abounding in novelties, from Penang, Perak, Singapore and Malacca, made by the late Father Scortechini (presented, together with the loan of the Rev. father's pencil drawings of many species, by the Government of Perak), by Kunstler, a collector sent from the Calcutta Bot. Gardens by Dr. King, by Curtis, Hullett, Wray and Ridley. Important collections were also sent by Mann, from Assam, Bhotan, and the Khasia hills; by Gamble (on loan) from various parts of India; by Duthie from Garwhal; by Clarke from Sikkim, the Khasia hills, and Bengal, together with a few from Central India; and (on loan) by Dr. Trimen from Ceylon. These successive arrivals necessitated many consecutive revisions and emendations of the work already prepared, some printed, some in the press, and some in mss., besides adding many species and some genera to the Indian Flora.

Vol. v. p. 667. KEY TO THE TRIBES AND SUBTRIBES.

The Key to the Indian Genera Subtribes and Tribes was extracted, with a few modifications, from that prepared by Bentham for the Genera Plantarum; which, whether as regards the difficulties that attend the analysis of the plants of this most complicated Order, or the chaotic state into which the family had fallen since Lindley's days, is a masterpiece of research and scientific taxonomy. As may be supposed, the detailed examination of so many Indian genera and species as are contained in this Flora (about 1400), and of a large proportion of which Bentham had no knowledge, or only a superficial one, has suggested a few emendations in his classification, but these are very slight, and I shall notice them in their order, in the following pages.

Sub-order MALAXEÆ. I have departed from Bentham, in including LIPARIEÆ and MALAXEÆ under one sub-order. The essential character of *Lipariæ*, the incumbent anther, fails in a great measure when *Oberonia* is placed in it, for the pollinia of this genus are as Griffith points out (*Notul.* iii. 273) in *O. anthropophora* and *trilobata (ensiformis, Lindl.)* at first accumbent; and in these and others he describes them as "accumbenti-incumbentia." Added to this the habit of *Microstylis*, which is placed in *Malaxeæ*, is that of *Lipariæ*, and of *Oberonia*, which is placed in *Lipariæ*, is that of *Malaxis*. The clinandrium is so minute in *Oberonia* and *Microstylis*, that I have little confidence in my own results obtained by softening these parts in dried specimens, but my impression is that in *Microstylis* the anther will be found to both accumbent and incumbent, very much as in *Oberonia*. Lastly the pollinia of *Oberonia* are variously described and figured as 2 or 4. I think

that 4 is the rule, but one of each pair is often much smaller, and I suspect sometimes suppressed.

In line 3 of the character of subtribe *Malaxæ* for not incumbent, read accumbent or incumbent.

P. 667. Subtribe *ERIEÆ*. The inflorescence is often subterminal in *Eria*, and appears to be truly terminal in the anomalous genus 10/2 *Cladocria*. (See p. 810.)

P. 668. The Subtribe *CYRTOPODIEÆ* of Benthams, is here included as far as the Indian genera are concerned in *Eulophiæ*, though by oversight, it is introduced at p. 671. *Eulophiæ* are described in the "Genera" as pseudobulbous, and having a spurred lip, but very few indeed of the Indian species are pseudobulbous, many have a mere sac to represent the spur, in many the so-called spur is a true mentum, and Bolus "Orchid of Cape Peninsula" describes species that have neither a spurred nor saccate lip. The only character given for *Cyrtopodiæ*, as distinctive from *Eulophiæ*, is that of the column being produced into a foot; but this is invalidated by my having to follow Blume, Bolus and others in replacing *Cyrtopera*, which in the "Genera" is referred to *Cyrtopodium*, in *Eulophia*; and as I find no character by which *Plocoglottis*, the only other Indian genus of Benthams *Cyrtopodiæ*, can be excluded *Eulophiæ*, I propose as a character—

Subtribe *EULOPHIÆ*. Terrestrial, never epiphytic. Stem rarely pseudobulbous. Lip usually spurred saccate or forming with the lateral sepals a mentum.

39. *EULOPHIA*. Lip free from the sides of the column, adnate to its base or foot.

48. *PLOCOGLOTTIS*. Lip adnate by a membrane to the sides of the column.

Suborder *CYMBIDIEÆ*. Terrestrial or epiphytic. Lip neither spurred nor conspicuously saccate; adnate to the base of the column.—Genera as at p. 671, including *Cremastra*, which has to be added.

Suborder *VANILLEÆ*. The free often hippocrepiform pollinia, without caudicle or gland, distinguish the Indian species from *Corymbæa* and *Spiranthea*.

Subtribe *CORYMBÆÆ*, differs from all other Indian *NEOTTIEÆ* in the hard almost woody stem, and rigid leaves, in which respect the species resemble *Apostasia*.

Tribe *OPHRYDEÆ*. In 4th line insert "long or" before short.

Subtribe *EUOPHRYDEÆ*. If I am correct in my analyses of the rostellum in some of the smaller *Habenariæ*, it may prove difficult to separate this subtribe from *Habenariæ*. Under any circumstances the modifications of the rostellum are so great in both, that I doubt its forming a subtribal character.

After Subtribe *DISEÆ* should follow (as at p. 675)—

Subtribe *CORYCIEÆ*, to include 110 *DISPERIS*. This genus and *Satyrium* are the solitary Indian representatives of the extensive S. African Subtribes *Diseæ* and *Coryciæ*, which are distinguished from one another by Benthams, and more recently by Bolus (the Orchids of the Cape Peninsula) by the former having the sepals and petals all free, and the lip at the base of the column, whilst in the latter the dorsal sepal and petals cohere, and the lip is adnate to the column nearly to its tip.

Tribe *CYPRIPEDIEÆ*. This tribe I think includes two subtribes, if not two tribes; namely—

CYPRIPEDIEÆ. Flowers very irregular. Lip inflated. Anthers 2, one on each side of a large dilated rostellum. Staminode very large.

APOSTASIEÆ. Flowers regular. Lip like the sepals and petals. Anthers 2 or 3 on the sides of a small erect rostellum; staminode very small or 0.

KEY TO THE GENERA.

P. 669. After 9. *BULBOPHYLLUM*, insert—

9/1. *HENOSIS*, see Vol. v. p. 771, and for amended characters p. 189 of this volume.

P. 670. After 18. *CHRYSOGLOSSUM*, insert—

VOL. VI.

18/2. *COLLABIUM*. *Scape* tall, raceme long. *Lip* jointed on to the trumpet-shaped foot of the column. *Pollinia* 2, 2-cleft, united by a viscus. (See Vol. v. p. 784.)

After 19. *ERIA*, insert—

19/1. *CLADERIA*. Terrestrial, subsucculent. Leaves plicate. Inflorescence terminal. Lip sessile at the base of the long sigmoid column. Pollinia 2?

21. *PACHYSTOMA*, add to description. Flowers small; and insert after it—

21/1. *IPSEA*. *Scape* leafless. Flowers large. Sepals spreading. Column elongate, foot 0. Pseudobulb 1-2-leaved.

28. For *JOSEPHA* read *JOSEPHIA*.

29. *GLOMERA*. Cancel this genus. (See Vol. v. p. 823.)

P. 671. *EULOPHIA*. See remarks under Subtribes *EULOPHIÆ*, at p. 177 of this volume. The character of "petals like the dorsal sepal," is subject to many exceptions.

41. *CYPERORCHIS*, though removed in "Gen. Plant." from proximity to *Cymbidium*, should stand next to it. The two genera are hardly separable. After it insert—

41/1. *CREMASTRA*. Sepals and petals and lip very narrow and conniving in a tube. Leaf solitary on a tuberous rhizome. *Scape* leafless, sheathed; flowers racemose, secund.

Subtribe 3. *CYRTOPODIÆ* and 48. *Plocoglottis*. For remarks on these see Subtribe *Eulophiæ*, at p. 177 of this volume.

Subtribe 4. *SARCANTHÆ*. The classification of the genera of this subtribe presents great difficulties. In so far as the Indian genera are concerned I have not been able to improve upon Bentham's arrangement; though I find numerous exceptions to the characters given under the three subdivisions marked by stars.

49. *LUISIA*. The *Cristaria* section of *Vanda* unites that genus with this. The incurved sepals and petals of Sect. *Cristaria* are those of *Luisia*, but the foliage and habit are those of most *Vandæ*. The lip of one species of Sect. *Cristaria* is spurred or saccate as in *Vanda*, of another it is flat as in *Luisia*, without spur or sac.

50. *COTTONIA*. Replace the character by,—Sepals and narrower petals spreading. Lip sessile, not jointed at the base of the column, flat. Stipes of pollinia long, narrow. Raceme very long-peduncled,—and follow it with—

50/1. *DIPLOPROBA*. Sepals and broader petals spreading. Lip with the sides adnate to the sides of the column, cymbiform, with a compressed bioandate tip. Stipes of pollinia short, narrow. Raceme very shortly peduncled.

P. 672. 53. *PHALÆNOPSIS*. Add to character of lip, disk with a forked callus or plate, and after foot short, add—or long or 0.

54. *DORITIS*. In this genus the foot of the column forms a conical mentum with the lateral sepals.

55. *RHYNCHOSTYLIS* is placed by Bentham in a division of *Sarcanthea* with a foot to the column and a mentum, but appears to me to have these characters very obscurely if at all. The lip and spur are exactly those of *Saccolabium*.

56. *SARCHOCHILUS* is inconstant as regards the presence or absence of a foot to the column, and in having a mentum or spur or neither. It is a truly polymorphous genus, incapable of precise definition.

58. *ÆRIDES*. I do not find the lip to be truly articulate with the foot of the column as described in "Gen. Plant." The species of the first section with terete leaves closely approach the terete leaved *Vandæ*, and those of Section II. ** resemble *Saccolabia*. The stipes of the pollinia is sometimes short and broad.

60. *VANDA*. See above under 58 *Ærides*, and 49 *Luisia* for remarks. The Sect. *Anota* (*V. densiflora*) has so short a foot to the column that it might well be placed in *Saccolabium*. The stipes of the pollinia varies greatly in length and breadth.

61. *SACCOLABIUM*. The sepals and petals are often incurved. To the character should be added—Spur without a callus under the column within, or a septum.

62. *SCHÆNORCHIS*. As stated at p. 54 of this volume this genus was inserted by oversight, *Saccolabium filiforme* having been mistaken for it by Thwaites.

63. *UNCIFERA* and 64. *ACAMPE* I have been obliged to include under *SACCOLABIUM*. See remarks under the latter genus in this volume, p. 54.

65. *SARCANTHUS* and 66. *CLEISOSTOMA*, are separated from *Saccolabium*, and from one another, by characters so minute and trivial, that they might well rank as sections of that genus, to which 67. *Ornithochilus* might be added.

P. 673. Subtribe 3. *SPIRANTHÆ*. The Indian genera of this subtribe are most difficult of classification. The following attempt which may aid the student, requires critical revision with living specimens; the characters of the minute fleshy column and stigma being extremely difficult of accurate analysis in herbarium specimens, however carefully their organs may be moistened or laid out.

KEY TO THE INDIAN GENERA OF SPIRANTHÆ.

* Spur or sac of the lip exposed beyond the base of the lateral sepals. (See also a few species of *Goodyera*.)

79. *PHYSURUS*. Lip not clawed beyond the spur, limb broad abruptly contracted at the base; spur eglandular within; column not appendaged in front; stigma anticus.

80. *ANÆCTOCHILUS*. Lip clawed beyond the spur, limb 2-winged; spur 2-glandular within; column appendaged in front; stigmatic lobes lateral.

81. *VRIDAGZYNEA*. Lip not clawed, limb oblong membranous entire; spur 2-glandular within; column not appendaged in front; stigmatic lobes lateral.

82. *CYSTORCHIS*. Lip saccate, contracted into a beak with a small dilated tip; sac 2-glandular within (or not?); column not appendaged in front; stigma anticus.

83. *HERPYSMA*. Lip adnate to the sides of the column, limb spreading; spur long, naked within; column not appendaged in front; stigma anticus.

** Lip if spurred, with the spur or sac covered by the bases of the lateral sepals (except in a few *Goodyera*).

† Lip clawed beyond the spur or sac.

84. *ODONTOCHILUS*. Lateral sepals connate at the base; claw of lip crenate toothed or fimbriate, limb usually 2-winged; sac 2-glandular within; column appendaged in front; stigmatic lobes lateral.

85. *HÆMARIA*. Sepals free; lip adnate to the base and sides of the column, claw winged, limb 2-winged; sac 2-glandular within; column large, clavate; stigma anticus.

90. *CHEIROSTYLIS*. Sepals connate to the middle in a tube; lip with a saccate or cymbiform base and 2-lobed toothed or pectinate limb, sac 2- or multi-glandular within; columnar appendages long, fleshy; stigmatic lobes lateral.

91. *ZEUXINE*. Sepals free; lip with a cymbiform or saccate base, a short broad entire toothed or crenate claw, and broadly dilated limb; sac 2-glandular within; column with two linear appendages in front; stigmatic lobes lateral.

†† Lip saccate or spurred, not clawed beyond the sac or spur.

92. *HYLOPHILA*. Lip a large globose sac with a narrow linear inflexed blade; sac 2-glandular within; column minutely appendaged in front; stigma anticus.

93. *GOODYERA*. Lip cymbiform or subsaccate, naked or setose within; column not appendaged in front; stigma anticus.

94. *HETERIA*. Sepals free at the base or connate, lip adnate to the sides of the column, limb entire or 2-lobed; sac 2-glandular or setose within; column winged or not in front; stigmatic lobes lateral.

††† *Lip flat, neither clawed spurred or saccate.* (*Subsaccate in Spiranthus, and see also some Goodyeræ.*)

87. SPIRANTHUS. Leaves several.

88. NEOTTIA. Leafless herbs.

89. LISTERA. Two-leaved herbs.

P. 674. After 100. GASTRODIA, insert—

100/1. YOANIA. Sepals and petals free. Lip shortly clawed, cymbiform. Column 3-lobed. A stout leafless herb.

P. 675. 105. HERMINIUM. The Herminia will with a saccate base of the lip differ in no way from HABENARIA.

P. 675. 1. O. IRIDIFOLIA, Lindl. is not the *iridifolia* of Bot. Mag. t. 4517, which is *O. tahitensis*.

P. 676. After 4. O. GRIFFITHIANA, insert—

4/1. INSECTIFERA, Hook. f. *Ic. Plant.* t. 2004; stem 0, leaves 2-4 in. ensiform straight narrowed from the base to the tip, scape very short, spike about equalling the leaves, flowers subwhorled sessile, sepals ovate subacute and linear petals reflexed, lip much longer than the sepals, side lobes 2-3-partite segments elongate, midlobe with 2 long slender tails.

PERAK; at Larut, King's Collector.

Leaves $\frac{1}{2}$ in. broad, coriaceous, acute, shortly sheathing. Scape minutely bracteate; bracts with subulate tips, minutely erose; flowers about $\frac{3}{10}$ in. from the tip of the dorsal sepal to that of the lip; sepals hyaline, obscurely 3-nerved; petals 1-nerved; lip papillose, like a minute 2-tailed insect, the 3-partite side lobes representing its legs. Capsule very shortly pedicelled.—The flowers closely resemble those of *O. Griffithiana*, from which this differs in the absence of stem, short scape, ensiform leaves narrowed from the base to the tip, and longer lip.

4/2. O. LUNATA, Lindl. *Gen. & Sp. Orchid.* 17; stemless, leaves ensiform erect straight or falcate acuminate, scape and spike stout nearly as long as the leaves, bracts broadly ovate, flowers in crowded whorls sessile, sepals ovate acuminate nerveless, petals linear-lanceolate, lip semilunar erose fimbriate. *Malaxis lunata*, Blume *Bijdr.* 394.

SINGAPORE; at Selitan, Ridley.—DISTRIB. Java.

Leaves 3-5 by $\frac{1}{2}$ - $\frac{1}{2}$ in., not very fleshy, broadest about the middle. Peduncle 1-1 $\frac{1}{2}$ in., with many subulate bract-like scales; spike 2-3 in., straight or decurved; flowers $\frac{1}{10}$ in. diam., whitish, sepals and petals membranous; lip with the broad sides or lateral lobes sometimes drawn up into large auricles (like a *Microstylis* of Sect. *), tip notched or retuse, smooth. Capsule (young), sessile, tripterous.

P. 678. 12. O. FALCONERI. After Hook. f. insert— *Ic. Plant.* t. 1780.

P. 680. After 19. O. RECURVA, add—

19/1. O. ROSEA, Hook. f. *Ic. Plant.* t. 2005; stem short, leaves narrowly ensiform, scape very short, spike as long as the leaves or shorter, bracts lanceolate, flowers sessile, petals elliptic erose, lip hardly longer than the sepals, side lobes quadrate, midlobe cuneiform retuse.

MALAY PENINSULA, Norris. PERAK; Gunong Batu Pateh, Wray; Larut, alt. 3-4000 ft., King's Collector.

Stem sometimes flexuous. Leaves 2-3 $\frac{1}{2}$ by $\frac{3}{4}$ - $\frac{1}{2}$ in., slightly curved, acuminate. Scape rather stout, naked; flowers about $\frac{1}{10}$ in. diam., pink; sepals rounded-ovate, obtuse, nerveless; petals as long; side lobes of lip incurved or spreading. Capsules subsessile.

19/2. O. MANNII, Hook. f. *Ic. Plant.* t. 2003; stem elongate, leaves linear-ensiform subacute recurved, spike very slender, flowers very minute subfascicled, bracts ovate erose, petals ovate-oblong erose, lip longer than the sepals quadrately oblong, side lobes small subulate-lanceolate divaricate, tip bifid with a minute lobule in the sinus, segments subulate.

JYNTEA HILLS, north of Silhet, alt. 3000 ft., *Mann*.

Stem 3-4 in. *Leaves* alternate, 1 in. long, $\frac{1}{2}$ in. at the base. *Spike* 2 in.; flowers $\frac{3}{16}$ in. broad, green; sepals rounded-ovate, obtuse; petals obtuse, nerveless; side lobes of lip decurved, terminal segments diverging or dependent. *Capsules* minute, shortly pedicelled.—*Habit* of *O. angustifolia*, which has more obtuse shorter leaves, an obcordate midlobe and linear-oblong side lobes of the lip. It would be better to transfer *angustifolia* and place it with *Mannii*, in the broad petaled division with a 3-lobed lip.

P. 681. 23. *O. PACHYRACHIS*, add to habitats—Khasia Hills, alt. 4-5000 ft., *Mann*.

P. 682. 29. *O. CAULESCENS*, may be easily confounded with 36. *O. angustifolia* from which the many straight acuminate leaves narrowed to the base, and pedicelled ovaries, at once distinguish it.

P. 684. 36. *O. ANGUSTIFOLIA*, add to collectors' names in the Khasia—*Griffith*,—As mentioned under *O. Mannii*, *O. angustifolia* had better be referred to the division + δ at p. 680, and placed next to that plant.

P. 686. After 40 insert—

41/1. *O. CILIOLATA*, *Hook. f.*; caulescent, leaves broadly equitant short broadly ensiform obtuse, spike dense-fl., bracts minute lanceolate, sepals ovate acute nerveless and narrow petals ciliate with long hairs, lip quadrately oblong truncate pectinately irregularly toothed.

SINGAPORE; at Krangi, *Ridley*.

Stem $1\frac{1}{2}$ -3 in., $\frac{2}{3}$ in. broad across the base of the leaves. *Leaves* erecto-patent, 1- $1\frac{1}{2}$ by $\frac{1}{2}$ - $\frac{3}{4}$ in., straight, rather broadest at the base, not very coriaceous. *Scape* shorter than the leaves; spike 2-3 in.; flowers hardly whorled, $\frac{3}{16}$ in. diam., shortly pedicelled, sparsely hairy externally, as are the bracts and young fruit. *Capsules* pedicelled, $\frac{1}{16}$ in. long, turgid, thickly 3-winged.

After * Sides of the lip produced upwards into large auricles, add—(*CREPIDIUM*, *Blume*).

2. *M. KHASIANA*, after *Hook. f.* insert— *Ic. Plant. t. 1831.*

P. 687. 6. *M. SCOTTII*, add— *Ic. Plant. t. 2001.*

P. 688. 8. *M. POLYODON*, add— *Ic. Plant. t. 2002.*

P. 689. Under synonyms of 15. *MICROSTYLIS CONGESTA*, enter—*Neottia plantaginea*, *Don Prodr. 26, fid. Lindl. Gen. & Sp. Orchid. 458*; and under habitats, enter—PENANG, SINGAPORE, and MALACCA, *Ridley in litt.*

P. 691. 22. *MICROSTYLIS CRENULATA*, Mr. Ridley informs me that the lip is much more rounded than in any other species, that it is a much smaller plant than *M. Rheedii*, and that it may be a curious form of *M. versicolor*.

P. 692. 3. *L. THWAITESII*, add— *Ic. Plant. t. 2006.*

P. 696. 20. *L. ACUMINATA*, add— *Ic. Plant. t. 2007.*

21/1, *L. WRAYII*, *Hook. f.*; leaves 3-4 large elliptic-acuminate, scape shorter than the leaves, bracts minute, sepals subequal linear-oblong 3-nerved, lip deflexed from above the 2-tubercled base cuneately flabelliform beyond the contracted middle truncately 2-lobed, lobes fimbriately toothed.

UPPER PERAK, alt. 300 ft., *Wray (in Herb. Calcutt.)*.

Stem stout, 3-5 in., base swollen; roots stout. *Leaves* 4-6 in., sessile or contracted into a broad petiole. *Scape* rather stout; raceme 2-4 in., glabrous; pedicels $\frac{1}{2}$ - $\frac{3}{4}$ in.; flowers $\frac{1}{2}$ in. diam., pale green with 2 claret-coloured stripes on the lip; sepals flat, at length revolute; petals very narrow, margins revolute; lip as long as the sepals; column stout, incurved, not winged.

P. 697. 24. *L. DEFLEXA*, after *Hook. f.* insert— *Ic. Plant. t. 2008.*

26. *L. PARADOXA*. Mr. Ridley, who finds this species at Singapore, informs me that there are two forms, one with pure yellow flowers, the other with the sepals and petals deep blackish-purple, and the lip green with a purple centre, which latter is

the *L. nervosa*, *Lindl. Gen. & Sp. Orchid.* 24; *Benth. Fl. Hongk.* vi. 352; *Franch. et Sav. Enum. Fl. Jap.* ii. 21; *Ridley in Journ. Linn. Soc.* xxii. 262 *Ophrys nervosa*, *Thunb. Fl. Jap.* 27; *Ic. Pl. Jap.* t. 10. *Malaxis nervosa*, *Swartz in Act. Holm.* 1800, 235. *Sturmia nervosa*, *Reichb. f. in Bonpland.* iii. 250.—DISTRIB. China, Japan.

P. 698. *E. PARADOXA*, var. *Parishii*. Additional specimens of this collected in Upper Burma (Herb. Calcutt.), appear to prove this to be a distinct species, which may be characterized as follows:—

26/1. *L. PARISHII*, *Hook. f.*; leaves 2–3 narrowed to the base or broadly petioled lanceolate acuminate, flowers fleshy, bracts small ovate acuminate, sepals oblong obtuse 5-nerved, lip recurved obovate retuse, base with 2 teeth, sides flat, column suberect not winged. *L. paradoxa*, var. *Parishii*, *Hook. f. l. c.*

TENASSERIM, *Lobb, Parish. UPPER BURMA, Herb. Calcutt.*

Leaves 2–3 in. *Scape* 6–8 in., naked, few-flid.; bracts $\frac{1}{2}$ in.; pedicels $\frac{1}{2}$ in.; ribs of ovary not wrinkled; flowers $\frac{1}{2}$ in. diam.; sepals spreading, dorsal longest; petals deflexed, margins revolute; lip thick, minutely erose beyond the middle; basal teeth united by a curved ridge, nerves faint subconcentric.—Very near *L. paradoxa* but pedicels longer, bracts smaller and sides of lip not erect.

P. 701. After 37. *L. OBSCURA*, insert—

37/1. *L. LATIFOLIA*, *Lindl. Gen. & Sp. Orchid.* 30. *L. Scortechinii*, *Hook. Fl. Brit. Ind.* v. 703, *Ic. Plant.* t. 2009. *L. robusta*, *Hook. f. Ic. Plant.* t. 2012. *Malaxis latifolia*, *Blume Bijdr.* 393.—I have now little doubt but that the two species which I proposed as *L. Scortechinii* & *robusta* are forms of the Javanese *L. latifolia*; the former of which was taken from a drawing of a specimen in an advanced state of flowering. *L. latifolia* should be referred to the subsection of *Coriifolia*, with single-leaved pseudobulbs and 3-nerved sepals. *L. robusta* is a native of Maxwell's Hill, PERAK (*Wray*).

P. 701. After 41. *L. OBSCURA*, insert the two following:—

41/1. *L. TORTA*, *Hook. f. Ic. Plant.* t. 2014; pseudobulbs small, leaf sessile elliptic-lanceolate acute 9-nerved, scape terete, bracts half as long as the long decurved pedicels, sepals linear-oblong obtuse 1-nerved revolute, margins recurved, lip shorter than the sepals cuneate-obovate angles rounded, tip rounded obscurely crenulate, callus basal 2-lobed.

KHASIA HILLS, alt. 3000 ft., *Mann.*

Pseudobulbs $\frac{3}{4}$ in., conical-ovoid. *Leaf* 4–5 by $1\frac{1}{4}$ – $1\frac{1}{2}$ in., thinly coriaceous. *Scape* rather stout, with few lanceolate bracts, sometimes flexuous; bracts $\frac{1}{4}$ – $\frac{1}{2}$ in., lanceolate, membranous, spreading; pedicel with ovary $\frac{2}{3}$ in.; sepals $\frac{1}{2}$ in.; lip $\frac{1}{2}$ in. broad.—A very distinct species, perhaps nearest to *L. bootanensis*, but differing in the 1-nerved sepals and the wings of the column not being hooked.

41/2. *L. TENUIFOLIA*, *Hook. f. Ic. Plant.* t. 2013; pseudobulbs small narrow, leaf elongate very narrowly linear-oblancoate, scape naked with the elongate raceme as long as the leaf, bracts setaceous equalling the short capillary pedicels, flowers minute, sepals deflexed flat 1-nerved, lip with a suberect sessile lunate hypochile and a rhomboidly orbicular convex puberulous deflexed epichile, calli 0, column not winged.

UPPER ASSAM; on the Mikir Hills, alt. 1000 ft., *Mann.*

Pseudobulbs $\frac{1}{2}$ – $\frac{3}{4}$ in., narrowly pyriform. *Leaf* 6–8 by $\frac{1}{4}$ – $\frac{1}{2}$ in. at the broadest part, rounded downwards, 1-nerved. *Scape* and *raceme* very slender; bracts $\frac{1}{2}$ in., as long as the pedicel and ovary; flowers pale, $\frac{1}{2}$ in. diam.; sepals linear-oblong, obtuse, margins slightly recurved, nerve faint; lip rather shorter than the sepals, lobes of the hypochile incurved, subacute, half as long as the epichile; column rather slender.—A very distinct species.

P. 703. 45. *L. SCORTECHINII*, see *L. latifolia*, above.

After 46. *L. FLACCIDA*, insert—

46/1. *L. GRACILIS*, *Hook. f. Ic. Plant.* t. 2011; pseudobulbs narrow, leaves 2 oblancoate, scape long slender terete, raceme long lax-flid., bracts as long as the

very short pedicels, sepals linear-oblong obtuse revolute 3-nerved, lip sharply reflexed from above the middle subclawed quadrately oblong nerveless truncate shortly bifid and toothed with a minute entire obtuse interposed tooth, calli obscure or 0.

PERAK; on Waterfall Hill, Wray.

Pseudobulbs 1 in., sheathed. *Leaves* 3-7 in., acute, rather thin, 5-nerved. *Scape* with raceme much longer than the leaves; bracts $\frac{1}{2}$ in.; flowers distant, about $\frac{1}{2}$ in. diam., pale green; margins of sepals not recurved; lip shorter than the sepals, concave towards the base with thickened involute margins, blade smooth red, no calli, but an obscure thickened ridge at the very base; column obscurely winged above.—A very distinct species.

P. 704. After 49. L. DISTANS, insert—

49/1. L. DOLABELLA, Hook. f. *Ic. Pl.* t. 2010; pseudobulbs narrow, leaves 2 narrowly oblanceolate, scape narrowly winged, raceme erect lax-fld., bracts small subulate, flowers small, sepals oblong obtuse spreading 1-nerved, margins not recurved, lip axe-shaped reflexed from a short broad claw anterior margin crenulate, disk with a depressed 3-carinate ridge which is truncate posteriorly and vanishes beyond the middle of the lip and a branched nerve on each side.

KHASIA HILLS, alt. 4000 ft., Mann.

Pseudobulbs 1-2 in. *Leaves* 6-14 by $\frac{3}{4}$ -1 in., acute, subpetioled, 5-7-nerved. *Scape* with raceme shorter than the leaves; pedicels $\frac{1}{2}$ in., longer than the bracts; flowers $\frac{1}{2}$ in. diam.; lip broader than long, exactly the shape of an axe or chopper, anterior margin slightly rounded; column incurved, slender, not winged.

P. 705. 53. L. RESUPINATA. Mr. Ridley informs me that the Nilghiri habitat is no doubt an error, taken up from the late N. B. Ward's Herbarium (at the British Museum). The specimen was collected by Griffith, and no doubt in the Khasia.

P. 707. LIPARIS DECURSIVA. Mr. Ridley informs me that this is absolutely identical with *L. reflexa*, Lindl., an Australian species.

P. 708. LIPARIS ZEYLANICA. Mr. Ridley informs me that he cannot guess what Loddiges' *Liparis* from Ceylon is, and that the additional name of *zeylanica* is a misprint in his monograph.

In generic character of PLATYCLINIS, after *sepals* and *petals*, add subequal.

1. P. GRACILIS, in fourth line of character, for linear-oblong read ovate-lanceolate; and after tip rounded, add or acute. Add at end, *Ic. Plant.* t. 2016.

2. P. KINGII; after Hook. f., insert *Ic. Plant.* t. 2015.

P. 709. OREORCHIS INDICA; at end of character dele (*not of Dene*).

P. 710. In character of Sect. 1. SARCOPODIUM after "*Leaves* 2" insert in brackets (*Leaf* solitary in *D. longicolle*).

P. 711. Line 6, after *Aporum* add, and *Strongyle*.

P. 712. 5. DENDROBIUM LONGICOLLE. Mr. Ridley informs me that this species occurs in New Guinea, and that Reichenbach's *D. inauditum* Reichb. f. (*Lindenia* ii. 66) is a synonym of it; as also that the pseudobulbs are constantly 1-leaved, in which respect it differs from all other Indian *Sarcopodia*, and approaches *Bulbophyllum*.

6. D. PERAKENSE, after Hook. f. insert, *Ic. Plant.* t. 2019.

P. 713. 7. D. MACROPODIUM, add *Ic. Plant.* t. 2020; and for "pedicels very short" read "pedicels with ovary very long."

8. D. GEMINATUM, for "*Lindl. mss.*," read *Lindl. Gen. & Sp. Orchid.* 77, and add as synonym *Desmotrichum geminatum*, *Blume Bijdr.* 332.

9. D. LONGIPES, add *Ic. Plant.* t. 2017, and in line 2 add, pedicel with ovary very long.—A fine suite of specimens from Mr. Wray offers great variations; a small form from the top of Gunong Batu Pateh, alt. 6700 ft., has close-set polished pseudobulbs $\frac{1}{2}$ in. long, and leaves only $\frac{1}{2}$ - $\frac{1}{3}$ in., scape $1\frac{1}{2}$ in.; another has a 3-leaved pseudobulb nearly 1 in. long, and petioled leaves 3 in., the flowers of these are white tinged with

yellow in the centre, veined with red brown; a third form has 3 sessile elliptic leaves 2-2½ in. long, and a very stout 3-4-fl. scape, the flowers are straw coloured, finely lined with dull pink; a fourth form from a lower elevation has leaves 1-2½ in., and a slender 2-fl. scape, the flowers are large white. The breadth of the midlobe of the lip in this species varies from almost orbicular-ovate to dagger-shaped. The sheaths of the rhizome and pseudobulb are very membranous, red-brown.

10. *D. PUMILUM*. "Common at Singapore, with flowers yellow or cream coloured; lip with a dark spot at the tip, or veined with red. The two forms look totally different, but I can find no structural difference. I never saw so many flowers in a head as in *D. quadrangulare*." *Ridley in litt.*

P. 714. 12. *D. MACRAEI*, in line 2, for peduncled read pedicelled.

13. *D. LONCHOPHYLLUM*, add *lc. Plant. t.* 2018.

14. *D. KUNSTLERI*, add *lc. Plant. t.* 2023, and in line 1 for leaves read leaf. "Common in mangrove swamps at Singapore, flower very fugacious, lip superior." *Ridley in litt.*

P. 723. 49. *D. LEONIS*. After the habitats insert, *DISTRIB. JAVA*. "Flowers exquisitely scented of Vanilla." *Ridley in litt.*

P. 724. 51. *D. GRANDE*. Add *lc. Plant. t.* 2024.

P. 724. 52. *D. ATROPURPUREUM*. "I think that the yellow fl. *D. carnosum* is distinct. *D. atropurpureum* is smaller, shabbier-looking, and the flowers dark claret-coloured as in Blume's drawing." *Ridley in litt.*

P. 725. After Sect. VII. *STRONGYLE*. Dele "*Flowers terminal*."

59. *D. KENTROPHYLLUM*. Add *lc. Plant. t.* 2021, and in line 2 for flowers terminal, read "terminal or lateral."

P. 726. 62. *D. SUBULATUM*, for *Hook. f.* read *Lindl. Gen. & Sp. Orchid.* 91, and add as synonym *Onychium subulatum*, *Blume Bijdr.* 328.

63. *D. ACEROSUM*. Add to *Syns.*, *D. subteres*, *Lindl. in Journ. Linn. Soc.* iii. 4. "Flowers all white or veined with red, leaves curiously grooved on each side." *Ridley in litt.*

P. 727. 68. *D. CATHCARTII*. After *Hook. f.* insert *lc. Plant. t.* 2022.

P. 728. 72. *D. LOBBII*, add *Syn. D. Teysmanni*, *Miquel Fl. Ind. Bot.* iii. 640.

73. *D. TUBERIFERUM*. After *Hook. f.* insert *lc. Plant. t.* 2025, and in the habitats, for Singapore read "Perak." The Singapore and Chittagong plants are probably different species.

74. *D. PODAGRABIA*. After *Hook. f.* insert *lc. Plant. t.* 2026.

75. *D. CLAVIPES*, *lc. Plant. t.* 2027.

P. 729. After 76. *D. CRUMENATUM*, insert—

76/1. *D. TENUICAULE*, *Hook. f.*; stem tall very slender above, basal internode minute globose, 2nd and 3rd slender, 4th and 6th thickened elongate conical, 5th stout 1 in. thickened cylindric ribbed, leaves 3-4 in. very narrowly linear, flowers few terminating the leafless stems, dorsal sepal oblong 7-nerved, petals oblong with one branched nerve, mentum twice as long as the obtuse lateral sepals straight, lip cuneate side lobes short rounded as broad as the sessile orbicular midlobe, disk pubescent.

ANDAMAN ISLANDS (*lc. in Hort. Bot. Calc.*).

Stems 10-12 in., sheathed at the upper nodes. *Leaves* $\frac{1}{10}$ in. broad, acute. *Bracts* minute, pedicel with ovary slender $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ - $\frac{3}{4}$ in. long, pure white; petals as long as the dorsal sepal; mentum trumpet-shaped tip acute yellowish; lip sessile at the base of the mentum, membranous, delicately veined; column very short, 3-toothed; anther hemispheric.—Described from a drawing (that will be published in King's Annals of the Calcutta Garden) and dried flowers.

78. *D. BOLBOFLOSUM*. To end of specific character add *lc. Plant. t.* 2028. The spurs at the base of the column, figd. and observed by Mr. Clarke, are not apparent in dried specimens.

P. 730. 79. *D. ADUNCUM*. Dele *Bot. Mag.* t. 6784.—Two very closely allied species are confounded under this name. *D. ADUNCUM* and *D. HERCOGLOSSUM*, agreeing in habit, foliage, inflorescence, and very nearly in flowers, but distinguished by the lip, which in *aduncum* has a glabrous area on the disk, its flowers too are paler, the sepals less acuminate, and the arms of the column more notched. Until quite recently the native country of *aduncum* was unknown, and it was supposed to be specifically the same as a Chinese plant which Reichenbach described as *hercoglossum*, and which in Veitch's "Manual" is cited as a synonym. The lip in both is very shortly clawed. Lindley regarded *D. aduncum* as closely related to *D. moschatum*, but to me it seems widely different.

The following are the characters of the two species:—

79. *D. ADUNCUM*; flowers pale pink, lip with a broad naked area on the pubescent disk.—Sikkim and Bhotan Himalaya, Assam.

79/1. *D. HERCOGLOSSUM*, *Reichb. f. in Hamb. Gartenzeit.* xliii. 558, in *Gard. Chron.* 1886, ii. 487; flowers bright rose-red, disk of lip villous all over. *D. aduncum*, *Hook. f. Bot. Mag.* t. 6784.

SINGAPORE, *Ridley in litt.* China.

79/2. *D. FLAVIDULUM*, *Ridley mss.*; stems slender pendulous, leaves linear-lanceolate, racemes on the leafless stems short, bracts subacute, dorsal sepal ovate-oblong obtuse, tip thickened, lateral ovate acute deeply keeled from the middle to the tip, petals oblong obtuse 5-nerved, mentum large obtuse shorter than the lateral sepals, lip ovate-oblong 3-fid beyond the middle, lobes ciliate, midlobe thickened.

SINGAPORE; at Kranji, in Mangrove swamps, common, *Ridley*.

Stems 12–18 in., rather flexuous, soft, internodes about 1 in. Leaves $2\frac{1}{2}$ –3 in., acuminate with a notch on one side, membranous. Raceme with the slender peduncle $\frac{1}{2}$ –2 in.; bracts $\frac{1}{2}$ in.; flowers $\frac{1}{2}$ in. long; sepals and petals rigid; lip 7-nerved, lobes ovate-oblong obtuse.—A very distinct species. Mr. Ridley informs me that there are 2 forms of it, one with flowers all yellow, the other with white sepals and petals.

81. *D. CORNUTUM*. Insert after *Ic. Plant.* t. 2029.

P. 731. 82. *D. CUMULATUM*. I have examined specimens preserved in spirits sent by Dr. King (collected by Mr. Lister in Bhotan). The claw of the lip is not short, but may be traced down the spur, and is as long as the blade; and what appeared as a small tubercle in the dried specimen is an elongated grooved callus much raised towards base of the claw, the mentum is more or less laterally compressed, sometimes longer than the sepals. The Perak plant doubtfully referred to *D. cumulatum* is very different, but not in a state for description.

P. 731. 81/1. *D. CROCATUM*, *Hook. f.*; stems terete, leaves 4 by 1 in. lanceolate acuminate, racemes on leafless stems slender few-fld., dorsal sepal and petals broadly oblong subacute 7-nerved, mentum twice as long as the ovate-oblong subacute lateral sepals slender spur-like acute, lip large spatulate, claw as long as the obovate entire crenulate limb, with an obtuse oblong reversed callus at the base.

PERAK; at Larut (*Ic. in Hort. Calcutt.*).

Stems 2–3 ft., narrowed to the base, which is not tuberos, internodes 1 in., $\frac{1}{3}$ in. diam. Leaves bright green, many-nerved. Raceme 1 in.; bracts small, ovate; pedicel with ovary slender, $\frac{1}{2}$ – $\frac{3}{4}$ in.; flowers $1\frac{1}{2}$ in. long, bright orange yellow with red specks on each side of the lip towards the base of the limb; mentum nearly straight.—Described from dried flowers and a drawing that will be published in King's Annals of the Calcutta Garden.

84. *D. KENTROCHILUM*, after *Hook. f.* insert *Ic. Plant.* t. 2030.

85. *D. MEGACERAS*, after *Hook. f.* insert *Ic. Plant.* t. 2031.

P. 732. 87. *D. HYMENANTHUM*, after *Hook. f.* insert *Ic. Plant.* t. 2032. There being an earlier *D. hymenanthum* (Lindl. Gen. & Sp. Orchid. 86), I have named this species *HYMENOPTERUM* in the "Icones Plantarum."

After 89, *D. PERULA*, insert—

89/1. *D. PANDURIFERUM*, *Hook. f.*; stems elongate cylindric grooved, leaves (on young stems only) lanceolate, racemes short 6–8-fld., dorsal sepal broadly ovate obtuse, petals orbicular crenate, mentum many times longer than the broadly ovate subacute lateral sepals tip swollen, claw very long and slender, limb small deeply constricted in the middle forming lateral auricle-like side lobes and an obcordate midlobe, disk with a large transverse lamella between the side lobes.

PERG; at Rangoon, *Gilbert (Ic. in Herb. Calcutt.)*.

Stems 2–3 ft., narrowed at the base; internodes 1–1½ by ¼ in., nodes often rooting; sheaths membranous, white, young green and speckled. Leaves few, 1–1½ in., acuminate. Racemes 1–2 in.; bracts small; pedicel with ovary ½ in.; flowers 1 in. long; sepals and petals green with streaks of red dots along the numerous nerves; mentum incurved, thickened towards the rounded tip, straight or slightly curved, green streaked with red; claw of lip 3–4 times as long as the dull yellow limb, margins incurved above, below united to the walls of the mentum; anther stipitate on the top of the column.—Nearly allied to *D. tropæoliflorum*. Also near 88, *D. ionopus*, R.f., but the flowers are not yellow with red blotches, nor is the claw of the lip thick and keeled. This will be figured in King's Annals of the Calcutta Garden.

Var. *serpens*. In the Calcutta Garden collection of drawings is one of a variety of *panduriferum*, or of a very closely allied species, marked as from Perak (*Kunstler*), with longer flexuous stems tuberous at the base, yellow sepals, and petals streaked rather than dotted with red along the nerves, and a mentum as long but not thickened towards the tip; the limb of the lip is less constricted in the middle. This may be Reichenbach's *D. ionopus*.

89/2. *D. TROPÆOLIFLORUM*, *Hook. f.*; stem flexuous thickened upwards deeply grooved, leaves linear-oblong, raceme slender 6-fld., dorsal sepal ovate acute, petals very broad, mentum straight cylindric many times longer than the triangular-ovate acute lateral sepals, lip with a very long slender claw and small panduriform limb disk with a large semilunar callus.

PERAK; at Larut, *Kunstler (Ic. in Herb. Calcutt.)*.

Stem a foot long, incurved, internodes ¾–1 in., the thickest ¼ in. diam. Leaf 2½ by ¾ in., acute. Raceme 2 in., rachis pink; bracts minute; pedicel with ovary ¾ in., green; flowers 1 in. long; sepals and petals ¼–½ in. long, dark red-purple; mentum ¾ in., yellow-green, tip rounded; limb of lip with a rounded retuse apiculate tip.—A remarkable species, described from a drawing, which will be published in King's Annals of the Calcutta Garden. According to a note by Mr. Brace which accompanies the drawing, the sides of the claw of the lip adhere to the sides of the mentum (as in *panduriferum* and probably other species of Sect. *Pedilonum*). The flowers very much resemble in form those of *Tropæolum pentaphyllum*, Lamk.

P. 732. 91. *D. BIFARIUM*; after *Wall. Cat. 2002*, add (*in part*), for one of the specimens is a var. of *Appendicula bifaria*. (See p. 83.)

P. 737. 108. *D. SPHEGIDOGLOSSUM*. *D. STUPOSUM* being the earlier name should be adopted.

P. 741. 124. *D. PENDULUM*. Dele Syn. *D. Wardianum* (see No. 127). *D. melananthum* is considered to be a hybrid with *D. Wardianum*.

P. 743. 130. *D. DEVONIANUM*; under Syns., after “not of Lodd.,” add, nor of *Roxb.*, or of *Bot. Mag.*

131. *D. DALHOUSIEANUM*, must take the name of *PULCHELLUM*, *Roxb. in Lindl. Gen. & Sp. Orchid.* 82; *Fl. Ind.* iii. 486, a species, which, misled by Lindley's reference to it of *D. Devonianum*, I had hitherto failed to recognize. Reverting to it for this supplement, I find nothing in Roxburgh's description and drawing to distinguish it from *Dalhousieanum* (also a native of Silhet) except the drawing of the lip, which is too obcordate, and does not represent the villous tip, or the pectinate lobes on the disk which are so conspicuous in the latter plant. On the other hand, Roxburgh describes the lip as “beautifully marked, ciliate and ramentaceous,” characters that apply to *Dalhousieanum* and to no other species at all like it.

In short, as with *Cælogyne nitida* & *Geodorum recurvum*, the faulty drawings, all by the same native artist, of the lips (probably in a withered state) have retarded the recognition of otherwise well marked and described species. In this view Mr. Rolfe is disposed to agree with me.

With regard to Loddige's *pulchellum*, (Bot. Cab. t. 1935, & Bot. Mag. t. 5037), Rolfe (Gard. Chron. 1887, ii. 155) has shown that it is a Chinese plant (*D. Loddigesii*, Rolfe), and neither Roxburgh's *pulchellum* nor *Devonianum*.

P. 745. 137. *D. BRYMERIANUM*. Dr. Trimen has sent me a fine drawing from the Peradeniya Herbarium of a cultivated specimen of *D. criniferum*, showing that has no affinity with *D. Brymerianum*, but belongs to the Sect. *Cadetia*. It is probably a Philippine species.

P. 746. *D. MOULMEINENSE*, is perhaps only a state of *D. dixanthum*. At the end of the specific character add *lc. Plant. t. 2033*.

P. 748. 146. *D. CHRYSEUM*, as stated at vol. v. p. 751, this name must give place to *D. aurantiacum*, R.f.

P. 752. *D. HUGHII*. Dele, said to be a form of *D. crumenatum*; and add to SPECIES UNKNOWN TO ME—

D. ANDERSONII, Scott in Journ. Agric. Soc. Ind. iii. (1872) 117, from Burma, collected by Dr. J. Anderson in 1868, and described from a plant that flowered in the Calcutta Bot. Gardens. It resembles, according to its author, a dwarfed form of *D. formosum*, from which species the description does not enable me to distinguish it. It is stated to be highly aromatic.

P. 753. 2. *B. CLANDESTINUM*. Common at Singapore, Ridley in litt.

3. *B. MACRANTHUM*, in last line after "lip" add "strongly recurved," and to citations, Ridley in Ann. Bot. iv. (1890), 335, t. 22, f. 1-6. The flowers smell of cloves, Ridley.

P. 754. After 4. *B. MEGALANTHUM*, add—

4/1. *B. PATENS*, King mss.; scape very short 1-fl., pedicel longer than the pseudobulb of the elliptic-oblong leaf, flower $1\frac{1}{2}$ in. diam., petals linear-lanceolate and broader lateral sepals widely spreading and falcately decurved, lip shortly stipitate linear-oblong quite straight, column truncate without apical teeth.

PERAK, Kunstler (*lc. in Herb. Calcutt.*)

Rhizome stout, crinite at the nodes; pseudobulbs 1- $1\frac{1}{2}$ in., ellipsoid. *Leaf* 6-8 in. by 2- $2\frac{1}{2}$ in., acute, narrowed into a short petiole. *Scape* $\frac{1}{2}$ - $\frac{1}{2}$ in., close to the pseudobulb, clothed with short imbricate scales; pedicel $1\frac{1}{2}$ -2 in., yellowish speckled with red; sepals and petals yellowish, closely mottled with red-purple, $\frac{3}{4}$ -1 in. long, dorsal erect and incurved, linear-lanceolate, lateral ovate-lanceolate; lip $\frac{1}{2}$ in. long, obtuse, base truncate; column very short.—Described from the drawing in Herb. Calcutt., and dried flowers. The straight lip is remarkable in the genus, and distinguishes it from *B. macranthum*.

P. 755. 9. *B. LOBBII*, add to habitats, Chittagong hills, (*lc. in Herb. Calcutt.*)

P. 756. 17. *B. MEMBRANIFOLIUM*. After *lc. Plant.* insert t. 2034.

P. 757. 19. *B. MEDUSÆ*. Mr. Ridley informs me that there are two forms of this; a Bornean with pale hardly spotted flowers, and a Singaporean with much larger thickly spotted flowers.

21. *B. CONFERTUM*. After *lc. Plant.* insert 2035.

P. 758. 24. *B. CAULIFLORUM* " " " 2036.

25. *B. PROTRACTUM* " " " 2037.

P. 759. 29. *B. MODESTUM* " " " 2038 B.

29/1. *B. CONCINNUM*, Hook f. *lc. Plant.* t. 2038 A; scape shorter than the oblong leaf slender few-fl., flowers very small, sepals ovate-lanceolate acute 3-nerved cellular, 3 times as long as the linear-oblong obtuse 1-nerved petals, mentum rounded, lip minute recurved, columnar spurs slender.

SINGAPORE, at Chang Chu Rang. Ridley.

Rhizome very slender, sheathed; pseudobulbs $\frac{1}{2}$ - $\frac{3}{4}$ in., narrow terete curved.

Leaf $\frac{3}{4}$ –1 in., acute or obtuse, coriaceous. *Scape* $\frac{3}{4}$ –1 in., 3–5-fld., sheaths few small, bracts lanceolate nearly as long as the ovary or shorter, flowers orange-yellow; sepals about $\frac{1}{2}$ in. long, dorsal rather the shortest; lip tongue-shaped.

30. *B. LEPTANTHUM*. After *Ic. Plant.* insert 2039 A, and in line 4 for 3-nerved sepals read 1-nerved petals.—Var. ? *Gamblei*. After a further comparison of specimens with *B. leptanthum*, I am convinced of the specific distinctness of this variety, which I have figured in the “*Icones Plantarum*” as *B. Gamblei* t. 2039 B.

P. 760. 3. *B. KINGII*. After *Ic. Plant.* insert t. 2053 *ined.*

P. 761. Under 37. *B. CUPREUM*. Dele the synon. *var. stenopetala*. Two very closely allied species are here confounded, both natives of Tenasserim; one is the true *cupreum* *var. stenopetalum*, which, as Mr. Rolfe has pointed out to me is also that author’s *B. rufinum*, a plant referred by me by oversight to 58. *B. CONCHIFERUM* (which has no pseudobulb and no auricles to the lip). The following are the characters of the two species:—

37. *B. CUPREUM*, *Lindl. l.c.*; pseudobulb 1 in. subglobose, scape slender inclined slightly curved, sheaths small distant, raceme 1–2 in., flowers uniformly coppery yellow, bracts ovate-oblong much shorter than the ovary, lateral sepals ovate-lanceolate acute, petals triangular-ovate acuminate, lip narrow obtuse auricles large, columnar spurs short slender. *TENASSERIM, Parish.*—Very like *B. Carey-anum*, but the rhizome and scape are much more slender, the flowers fewer and less dense, and the petals are not aristate. Lindley’s description is wholly insufficient. In his specimen the petals and auricles of the lip are serrulate, in others that flowered at Kew they are entire. The Manilla habitat is no doubt an error.

37/1. *B. RUFINUM*, *Reichb. f. Xen. Orchid.* iii. 45 t. 219; pseudobulb 2 in. oblong, scape long stout decurved, sheaths large, raceme 6–10 in. lax-fld., bracts lanceolate about as long as the flowers, flowers dirty-yellow with red streaks on the sepals, lateral sepals and small petals narrowly lanceolate acuminate, lip narrow obtuse, auricles small entire, columnar spurs slender. *B. cupreum* *var. stenopetalum*, *Reichb. f. in Trans. Linn. Soc.* xxx. 152.—*TENASSERIM, Parish.*—The large pseudobulb, stout large scape, long raceme and bracts, narrow sepals, and colour of the flowers readily distinguish this from *cupreum* and *Careyanum*.

P. 764. 32. *B. GYMNOPIUS*. After *Ic. Plant.* insert t. 2040.

53. *B. THOMSONI* “ “ t. 2041.

54. *B. SECUNDUM* “ “ t. 2042.

P. 766. 58. *B. CONCHIFERUM*, dele *B. rufinum*, &c. See above, No. 37/1.

61. *B. APODUM*. After *Ic. Plant.* insert t. 2043.

62. *B. WRAYI* “ “ t. 2044.

P. 767. 63. *B. LEPTOSEPALUM* “ “ t. 2045.

64. *B. HYMENANTHUM* “ “ t. 2046, and after it place—

64/1. *B. ADENOPETALUM*, *Lindl. in Bot. Reg.* 1842, *Misc.* 85; pseudobulbs obsolete, leaves petioled oblong obtuse base scarcely pseudobulbous, spike rather longer than the leaf many-sheathed below many-fld., sepals acuminate, petals spatulate acute glandular within, lip narrowly ovate obtuse ciliate base channelled. *Walp. Ann.* vi. 255.

SINGAPORE; *Hort. Loddiges.*

Flowers yellowish, slightly sweet-scented.—Described from Lindley; there is no specimen in his Herbarium, only a sketch of the flower, in which the ovate sepals are narrowed into long capillary points.—Two different Philippine species in *Herb. Hook.* and in *Herb. Lindley*, both labelled by that author *B. adenopetalum*, led me to suppose that the latter had been erroneously attributed to Singapore, whence my exclusion of it from the Flora.

64/2. *B. VERMICULARE*, *Hook. f. Ic. Plant.* t. 2054; rhizome very slender tortuous, leaves small linear-oblong obtuse base narrowed, scape short slender few-fld., sepals 1-nerved dorsal linear, lateral ovate-lanceolate uncinately falcate, petals narrowly linear 1-nerved, lip linear-oblong obtuse 3-nerved hairy.

SINGAPORE; at Kranji, *Ridley*.

Rhizome as thick as a sparrow's quill; pseudobulb 0. *Leaf* $1\frac{1}{2}$ – $1\frac{3}{4}$ in., narrowed into a short petiole. *Scape* with the spike shorter than the leaves, 2-sheathed; bracts half as long as the flower; ovary very short; flowers $\frac{1}{8}$ in. long; lateral sepals finely acuminate, decurved; petals half as long, obtuse; lip thin, sessile, almost as long as the petals, hairs long flexuous; column with short spurs.—Near *B. adenopetalum*, differing in the petals not being spatulate or glandular within, and in the sepals not having long filiform apices, and in the linear 3-nerved lip.

66. *B. GLOBULUS*. After *Ic. Plant.* insert t. 2047.

P. 768. 71. *B. MICRANTHUM* " " " t. 2048.

P. 769. 75. *B. CIRRHATUM* " " " t. 2049.

P. 770. 79. *B. CANDIDUM* " " " t. 2050.

P. 770. *B. ADENOPETALUM*. See above, No. 64/1.

P. 771. *B. SILLENIANUM*, should be *SILLEMIANUM*.

After *B. SILLEMIANUM*, add—

B. STRIAELLUM, *Ridley in Ann. Bot.* iv. (1890) 335 (*excl. fig.*); very small, rhizome filiform, pseudobulbs conic curved, leaf lanceolate acute, scape very short filiform 1-fld. sepals subequal oblong or oblong-lanceolate caudate, petals ovate-oblong obtuse, lip very short narrow recurved pubescent beneath, columnar arms obtuse.

SINGAPORE, on trees, Char Chu Raang, *Ridley*.

Pseudobulbs hardly $\frac{1}{2}$ in. long. *Leaf* erect, 2 by $\frac{1}{2}$ in. *Scape* hardly longer than the pseudobulb, 1–2-sheathed at the base; pedicel 1 in., red; perianth closed; sepals $\frac{1}{2}$ in. long and petals yellow with 3 red keels; petals 1-nerved; lip yellow, tip dotted with red and with 2 red dots at the base; column short.—I have seen no specimen. Description from *Ridley*, who describes the arms of the column as short and obtuse. The petals he describes as being rather shorter than the body of the sepals (that is without the tails). The figure which he gives (t. 22 f. 7, 8, 9) must belong to a different species, for the columnar arms are represented as very slender. I do not know where to place this curious 1-flowered species which certainly does not naturally belong to the 1-fld. section. It may be a depauperated state of a plant of either the racemose or capitate section.

9/1. *HENOSIS*. I have erred in the description of this remarkable plant. The real petals, which form a minute broad low wing on each side of (what is not a column with adnate petals but) the enormous 2-winged column, along the naked foot of which they extend as a membranous boarder to the insertion of the lateral sepals, they are perfectly hyaline, and were so appressed to the sides of the very base of the column that (though they are indicated in a rude sketch by Lindley), I overlooked them, and I am indebted to my artist, Miss Smith, for pointing them out to me; they are not triangular-ligulate, as described by Reichenbach, but low and very broad.—It may be a question whether this plant should not be restored to *Bulbophyllum*, in which Reichenbach placed it; if it is to be retained it must be on account of the remarkable very large 2-winged column, like none other in the genus known to me; the long pedicels too are quite peculiar. If referred to *Bulbophyllum* it should be to the racemose section with pseudobulbs and glabrous eciliate sepals and petals, though very unlike any member of that group. It might with 52. *B. gymnopus* and 62. *B. Wrayi*, form a group distinguished from all others by the lateral sepals being inserted at the apex of the naked foot of the column.

H. LONGIPES, after *Ic. Plant.* insert t. 2051 *ined.*

P. 773, after 3. *C. VAGINATUM*, insert—

3/1. *C. LONGESCAPUM*, *Teysm. & Binn. in Batav. Natur. Tijdsch.* xxiv. (1862) 311; pseudobulbs subovate obtuse 4-angled 2-leaved, leaves oblong obtuse emarginate coriaceous glabrous, scapes long cylindric, flowers capitate densely crowded horizontal, bracts short, lateral sepals subserrulate, dorsal smaller linear-lanceolate erect, petals obtuse ciliate with long hairs 5-nerved, lip tongue-shaped obtuse reflexed channelled base cordate. *PENANG, Lobb.*

Pseudobulb 2 by $1\frac{1}{2}$ in. *Leaves* 6 by $1\frac{1}{2}$ in. *Scape* 15 in.; flowers 20–25, brown.—Description from the authors. I know nothing like it. The 2-leaved pseudobulbs are remarkable.

P. 774. 9. *C. ROXBURGHII*. After *Ic. Plant.* 2057 A. insert—From a drawing lately received from Calcutta, I suspect that *C. Andersonii* should be referred to *C. Roxburghii*.

9/1. *C. CONCINNUM*, *Hook. f. Ic. Plant.* t. 2060 B.; very small, rhizome slender, pseudobulbs conico-ovoid, lateral sepals $\frac{1}{2}$ in. linear-oblong acute nearly flat, twice as long as the ovate caudate long-ciliate dorsal, petals as long as the dorsal sepal ovate-lanceolate caudate acuminate long ciliate, lip fleshy strongly recurved, column winged shortly 2-toothed.

SINGAPORE; *Ridley*.

Pseudobulbs $\frac{1}{2}$ in.; close set, curved. *Leaf* $1-1\frac{1}{2}$ in., oblanceolate, obtuse, coriaceous, hardly petioled. *Scape* from the base of the pseudobulb, with membranous sheaths at the base, very slender, shorter than the leaf; flowers 6–8, whorled; bracts minute; pedicels very short; sepals 5-nerved; petals 3-nerved.

P. 775. 15. *CIRRHOPE TALUM ELATUM*, after *Ic. Plant.* insert—t. 2052

64. *E. PULCHELLA*. I have lately received more specimens, and from Calcutta drawings of this plant, from which I conclude that Lindley was right in distinguishing *E. discolor* from *E. pulchella*, though he assigns no good reasons for doing so. The chief differences are the very large stout articulate pseudobulbs of *E. discolor*, its much stouter rhizome, and stouter more glabrous scape with more numerous cochleate coriaceous bracts.

E. pulchella is a Malayan species, from Tenasserim to Java. *E. discolor* has been found only in Sikkim. Both have nearly orbicular lips articulate with the pulvinate purple shining foot of the column by a very narrow short claw.

P. 803. 71. *E. THWAITESII*. For *Hook. f.*, read *Trimen Cat. Ceyl. Pl.* 88.

P. 804. After 72. *E. PANNEA*, insert—

73/1. *E. CALAMIFOLIA*, *Hook. f.*; stems very short from a creeping rootstock 3-4-leaved, leaves linear terete acuminate, scape terminal 3-4-fld. and flowers densely woolly, bracts large ovate acuminate, mentum short obtuse, petals linear-oblong puberulous, lip ovate-oblong obtuse very thick concave about the middle, quite smooth and naked.

UPPER ASSAM; Makum forest, *Mann.*

Rhizome as thick as a crow-quill, and short leaf sheaths sparingly woolly; pseudobulbs 0. *Leaves* 3-6 in., about $\frac{1}{2}$ in. diam., obscurely channelled above when dry, acuminate, quite smooth, glabrous. *Scape* terminal, much shorter than the leaves, slender, densely white, silkily woolly as are the backs of the bracts and sepals; bracts $\frac{1}{2}$ in.; sepals $\frac{1}{2}$ in. long, dorsal oblong, lateral triangular-ovate acute; petals much smaller; lip straight, jointed on the broad foot of the column, which is short broad puberulous with an ovate subacute apex and incurved sides; anther mitriform, obtuse.—Probably the Sikkim & Khasian *E. pannea*.

P. 804. 75. *ERIA PYGMÆA*, After *Ic. Plant.* insert—t. 2074 B

76. „ *LANCIFOLIA*, „ „ „ t. 2075

P. 811. 4. *PHREATIA NANA*, „ „ „ t. 2084

P. 813. 2. *SPATHOGLOTTIS AUREA*, after *Walp. Ann.* vi. 455, insert *Reichb. f. in Gard. Chron.* 1888, 92, with fig.; *Veitch. Man. Orchid.* Pt. vi. 6. *S. Kimbali*, *Hort.*

3. *S. WRAYI*, after *Ic. Plant.* insert t. 2086.

P. 814. 4. *S. BENSONI*, „ „ „ t. 2087.

5. *S. LOBBII*, at end of description add in *Veitch Man. Orchid.* Pt. vi. 7 this species is described as a native of Borneo. Reichenbach gives *E. Indies*, ? Khasia. The specimens in Kew Herbarium are from Tenasserim, on rocks at Akyab, *Parish*.

6. *S. PUBESCENS*, var. *Berkeleyi*, specimen of this in Herb. Calcutt. from Upper Burma have leaves 1 in. broad, the scape 18 in., and flower as in *Fortuni*, except that the midlobe of the lip is very thick, and its wings cuneately oblong and truncate.

P. 816. 1. *PHAJUS WALLICHII*. Add after *Walp. Ann.* vi. 459, *Bot. Mag.* t. 7023, and after *de Vriese Illust.* t. 8, add *Regel Gartenfl.* 1865, t. 404.—*Veitch (Man. Pt. vi. 15)* describes *P. bicolor* as a var. of *Wallichii*, with small knobby rhizomes, and smaller flowers having a tawny yellow spur and tube of the lip, and white midlobe bordered with rose. It is a native of Ceylon. He retains *P. grandifolius* as a different species, including *Blumei* as a var. of it. The only tangible characters, except colour, by which he distinguishes *grandifolius* from *Wallichii* are, that in the former the sepals and petals are oblong-lanceolate, and the lip broadly obovate; whilst in the latter the sepals and petals are linear-lanceolate and the lip broadly oval. He gives the Himalayas as habitat for both. His var. *Blumei* differs from the type (*grandifolius*) in the broader deep buff yellow petals and sepals faintly mottled with red. As habitats of *grandifolius* he gives, besides the original one of China, the Himalaya, Cochinchina and Australia; thus following Benthams (*Fl. Austral.* vii. 304), who includes *P. australis*, *leucophæus* and *Carronii*, of F. Muell) under that species.

2. *P. VERATRIFOLIUS*. Add. *Syn. Dendrobium veratrifolium*, *Rowb. Hort. Beng.* 63.

P. 817. 3. *P. MACULATUS*. After *Mus. Bot.* ii. 180 insert *Williams Orchid. Alb.* t. 381, and place *Blum. Orchid. Archip. Ind.* 9, after *Reichb. Fl. Exot.* t. 63.

3/1. *P. NANUS*, *Hook. f. Ic. Plant.* t. 2088 *ined.*; leaves 4–5 in., scape very short closely sheathed, raceme dense-fld., sepals and petals lanceolate acuminate, lip as broad as long puberulous within, side lobes rounded, midlobe short broad undulate, spur 0.

BENGAL; in the Buxa Doar, *Gamble (in Herb. Calcutt.)*.

Pseudobulbs 0. *Roots* tufted; rootstock stout, with grass-like sheaths sometimes much longer than the leaf. *Leaf* elliptic, acute; petiole 2 in., stout. *Scape* from the base of the leaf and shorter than it is, sheaths subacute; bracts cymbiform, acuminate; sepals $1\frac{1}{2}$ in. long; column short, stout, puberulous.—A very singular species, of which I have seen but two specimens, kindly lent from the Calcutta Herbarium by Dr. King. The long grass-like sheaths or primordial leaves are singular.

P. 818. 7. *P. ALBUS*. Var. *Bensoniæ*, after description insert *Phajus Bensoniæ*, *Hemsl. in Gard. Chron.* 1882, 565; and after *Jenning's Orchid.* add *Williams Orchid. Alb.* ii. t. 67.—Veitch (*Man. Orchid.* Pt. vi. 19) does not regard *Bensoniæ*, *alba* and *Marshalliana* as specifically distinct; he distinguishes *Bensoniæ* from *alba* by the larger differently-coloured flowers, with the midlobe of the lip larger in proportion to the whole lip, and more oblong, and by the wings of the column being toothed. He keeps *Marshalliana* as a form from being usually more tall and robust, the lip shorter, the hairs on the crests of the lip more numerous and longer, the column shorter and stouter with the apical wings more dilated; and as a subvar. of this he maintains Reichenbach's var. *ionophlebia* (*Gard. Chron.* 1885, 70), with the centre of the lip pale yellow, the sides streaked with purple.

25. NEPHELAPHYLLUM, *Blume*.

In the generic description in the 2nd line after leaf, add, or elongate and exserted; and after 3. *N. TENUIFLORUM*, add—

4. *N. NUDUM*, *Hook. f.*; leaves ovate acuminate, scape slender much longer than the leaves few-fld., bracts slender, lip elongate narrowly subpanduriform, side lobes small acute, midlobe transversely oblong retuse with a short broad semicircular lamella on the midrib towards the tip.

SIKKIM HIMALAYA; *King*.

Stem stout, 4 in., ascending. *Leaves* distant, 1–2 in., lower petioled, upper sessile; sheath short, membranous. *Scape* 6 in., with a basal and median tubular appressed sheath nearly 1 in. long; bracts $\frac{1}{2}$ in., as long as the pedicel and ovary, deflexed; sepals and petals spreading, subequal, linear, subacute, 3-nerved: lip nearly 1 in. long from the base of the stout truncate spur to the tip of the dorsal sepal, membranous, 3-nerved with branching side nerves, gradually dilated upwards to the tooth-like side lobes, midlobe broader than the rest of the lip, margins undulate.—Near *N. tenuiflorum*, which has also a tall scape.

5. *N. GRANDIFLORUM*, *Hook. f.*; leaves ovate deeply cordate acuminate, scape longer than the leaves 2-fld., flowers 1 in. diam., lip oblong, side lobes small obtuse, midlobe ovate tip rounded, disk with 3 keels from base to apex.

PERAK (*Ic. Scortechini*). MALAYA, *Kunstler (Ic. in Herb. Calcutt.)*.

Leaves 3–5 by $2\frac{1}{2}$ – $3\frac{1}{2}$ in., strongly nerved, basal lobes rounded, sinus narrow; petiole 3–4 in., stout. *Scape* with raceme 8–10 in., pubescent, sheaths tubular, appressed, membranous; bracts small, lanceolate; flowers greenish flushed with red, lip purple; sepals lanceolate, acute; petals rather broader, elliptic; lip decurved, white externally, mentum truncate; column white, purple at the base.—Described from a fine drawing in *Herb. Calcutt.*, perhaps (as usual with native artists) exaggerated in dimensions.

P. 820. 2. *TAINIA PENANGIANA*, after *Hook. f.* insert *Ic. Plant.* t. 2089 *ined.*

6. *T. LATIFOLIA*, add *Syn. Cymbid.*, *Griff. Notul.* iii. 343; *Ic. Plant. Asiat.* t. 319.

7. *T. KHASIANA*, after *Ic. Plant.* insert t. 2090
 8. *T. MINOR*, " " t. 2091
 9. *T. HASTATA*, " " t. 2092
 10. *T. MACULATA* to be cancelled; it is *Chrysoglossum maculatum*, p. 784.
 11. *T. LATIILINGUA*, after *Ic. Plant.* insert t. 2093
 14. *T. MAINGAYI*, after " " t. 2094 and add—

15. *T. CORDATA*, *Hook. f.*; leaf-blade longer than the stout petiole base cordate, scape tall many-fld. slender, sepals linear subacute and lanceolate petals 1-nerved, mentum very short, side lobes of lip short acute, midlobe suborbicular, disk with 2 lamellæ reaching nearly to the apex.

SIKKIM HIMALAYA (*Ic. in Hort. Calcutt.*).

Rhizome as stout as the middle finger or stouter and pseudobulb and petiole dark purple. *Leaf* about 12 by $4\frac{1}{2}$ in., 7-nerved, base oblique. *Scape* with raceme 2 ft.; raceme laxly many-fld.; bracts $\frac{1}{2}$ in., lanceolate, shorter than the ovaries; sepals and petals $\frac{2}{3}$ in., dark green and red; lip yellow, midlobe entire; anther with two purple nobs.—Described from an excellent drawing made in the Calcutta Bot. Gardens, where there is also an outline drawing, by Simons, of an Assam allied species, with no pseudobulb, a petiole as thick as the little finger, a suborbicular-cordate acuminate 9-nerved leaf $7\frac{1}{2}$ by 6 in., a scape much shorter than the leaf few-fld., sepals lanceolate 5-nerved, petals ovate-oblong acute 5-nerved, and a cuneiform lip with small midlobe, mentum large conical.

- P. 824. 3. *AGROSTOPHYLLUM GLUMACEUM*, after *Ic. Plant.* insert t. 2095
 4. *A. MAJUS* " " " t. 2096

P. 828. 34. *CÆLOGYNE*. After the publication of Vol. V. of this work, Veitch's Manual Pt. vi. appeared, containing the cultivated species of *Cælogyne* with good descriptions, and with figures of several British Indian ones, which are cited below.

1. *CÆLOGYNE GARDNERIANA*, after *Pact. Mag.* vi. t. 73 insert *Williams Orchid. Alb.* iv. t. 153.

- P. 829. 4. *C. CRISTATA*, after *Coll. Bot.* t. 32 insert *Gen. & Sp. Orchid.* 39 (*excl. Syn. Cymbid. strictum, Don*); and add to citations, *Wall. Cat.* 1958; *Gard. Chron.* 1877, 597, *with fig.*; 1888, i. 488, *fig.* 68; *Veitch Man. Orchid.* Pt. vi. 34, *with fig.*

- P. 830. 6. *C. TOMENTOSA*, add *Veitch Man. Orchid.* Pt. vi. 57, *with fig.*
 7. *C. MASSANGIANA*, add " " " 43, *with fig.*

- P. 831. After 9. *C. LENTIGINOSA*, insert—

9/1. *C. ROSSIANA*, *Reichb. f. in Gard. Chron.* 1884, ii. 808; pseudobulbs large 8-10-grooved, leaves elliptic-lanceolate petioled, scape very stout decurved then suddenly upcurved 3-4-fld. closely clothed with short densely imbricate sheaths, lateral sepals narrowly linear-oblong acute and very narrow petals white, lip narrow side lobes with rounded angles and brown sides, midlobe ovate entire revolute yellow, disk with 2 crenate lamellæ from base to apex and a slender median one. *Veitch Man.* Pt. vi. 48; *Rolfé in Gard. Chron.* 1889, 650; *Bot. Mag.* t. 7172.

BURMA (*Hort. Ross*).

Pseudobulbs 2-3 in., oblong or subpyriform; sheaths 0. *Leaves* 8-12 by 2-3 in., strongly 3-nerved, petiole 1-1 $\frac{1}{2}$ in. *Scape* from the base of the pseudobulb, 2-3 in. long along its curvature, narrowed from the stout base upwards; sheaths coriaceous, green, tips rounded; raceme erect, 2-3 in., slender, lax-fld.; bracts

$\frac{2}{3}$ in. long, as long as the pedicel and ovary, lanceolate, concave, caducous; flowers $1\frac{1}{2}$ –2 in. diam.; sepals $\frac{1}{2}$ in. broad; midlobe of lip not contracted at the base; column white.—The strong decurvature of the scape is not mentioned by Reichenbach or Veitch.

P. 831. 11. *C. CORYMBOSA*, after *Gard. Chron.* 1876, insert, 88.

P. 832. 16. *C. OCCULTATA*, insert after *Ic. Plant.* 2104.

P. 834. After 21. *C. CYNOCHES*, insert—

21/1. *C. LONGIBRACTATA*, *Hook. f.*; pseudobulbs small, leaves petioled lanceolate, scape very long stout strict erect, raceme erect few-fl. bracts 2 in. persistent, flowers white, sepals lanceolate acuminate, petals narrowly linear-oblong, side lobes of lip short rounded, midlobe orbicular, disk with 3 crenate yellow ridges.

PERAK, *Kunstler*.

Rhizome very stout; pseudobulbs $1\frac{1}{2}$ –2 in., obovoid, deeply grooved. *Leaves* 6–7 by 1 – $1\frac{1}{2}$ in. *Scape* lateral, 6 in., clothed with cylindric green tubular truncate sheaths $1\frac{1}{2}$ –2 in. long, and with 2 leaves emerging from the upper sheath; bracts very narrow, at length deflexed; flowers nearly 2 in. diam.; midlobe of lip yellowish towards the centre, margins at the base crisped. In many respects allied to *C. Maingayi*.

22. *C. SPECIOSA*. Veitch (*Man. Orchid.* Pt. vi. 50) gives as a synonym *C. salmonicolor*, Reichenb. f. in *Gard. Chron.* 1883, 328, and describes a Var. *albicans*, with larger flowers, sepals and petals light yellowish-green, lip 3 in. long, white, side lobes freckled with red-brown, midlobe brown.

24. *C. SCHILLERIANA*, insert after the description, TENASSERIM, at Moulmein, Lobb.

P. 835. 28. *C. PANDURATA*, in line 1 for 78 read 791, and add to citations, *Veitch. Man. Orchid.* Pt. vi. 47, with fig.

29. *C. ASPERATA*. Veitch (*Man. Orchid.* Pt. vi. 31) says of this, "Widely distributed over the Malay Archipelago, from Sumatra to New Guinea."

P. 836. 33. *C. MICRANTHUM* should be *MICRANTHA*.

P. 837. 34. *C. TREUTLERI*, after *Ic. Plant.* insert t. 2105.

36. *C. NITIDA*, under Syn. *C. OCELLATA*, add *Veitch Man. Orchid.* Pt. vi. 45.

37. *C. STENOCHILA*, after *Ic. Plant.* insert t. 2106.

P. 838. 38. *C. CARNEA*, after *Ic. Plant.* insert t. 2107.

39. *C. ELATA*. This is said to inhabit higher regions than the Tropical, up to 9000 ft. (*Veitch Man. Orchid.* Pt. vi. 37).

41. *C. GRIFFITHII*. After *Ic. Plant.* insert t. 2108.

P. 839. 42. *C. BABBATA*, add *Veitch Man. Orchid.* Pt. vi. 32, with fig.

P. 840. 47. *C. ANCEPS*. After *Ic. Plant.* insert t. 2109.

48. *C. PRÆCOX*. In line 1, before *Fol. Orchid.* insert *Gen. & Sp. Orchid.* 43, and to syns. add *Cymbidium præcox*, *Smith in Rees Cyclop.* *Veitch (Man. Orchid.* Pt. vi. 58) distinguishes his Var. *Wallichiana*, by its deeper colour, more strongly-marked veins, the midlobe of the lip toothed rather than fringed, and the shorter teeth of the crests; he includes *C. birmanica* under it, and gives a figure of the flower.

49. *C. HUMILIS*. Veitch (*Man. Orchid.* Pt. vi. 55) gives an excellent figure and description of this.

P. 841. 50. *C. MACULATA*, add VAR. *Arthuriana*, *Veitch Man. Orchid.* Pt. vi. 57; pseudobulbs smaller angular, flowers smaller, petals with purple lines, midlobe of lip margined with a purple band. *C. Arthuriana*, *Reichenb. f. in Gard. Chron.* 1881, i. 40.—Rangoon.

51. *C. LAGENARIA*, Veitch (*Man. Orchid.* Pt. vi. 57) gives a good figure of the flowers, and adds that it was introduced by Lobb from the Khasia Hills.

52. *C. REICHENBACHIANA*, Veitch gives 6–7000 ft. as the elevation at which this species was found.

P. 842. 53. *C. HOOKERIANA*. Veitch (*Man. Orchid.* Pt. vi. 53) cites a var. *brachyglossa*, *Reichenb. f. in Gard. Chron.* 1887, i. 833, with a shorter and more open

lip, white with a light yellow disk spotted with brown, and pale rose sepals and petals. It is a native of Sikkim at a higher elevation than the type. *C. HOOKERIANA* is, as stated at p. 828, the only species in which the leaves persist after flowering.

55. *C. ? PURPURASCENS*, after *Ic. Plant.* insert 2109.

P. 843. *C. ROSSIANA*. See ante p. 192.

1. *O. ALBA*. After *Wall. mss.* add *Dipodium*, *Griff. Ic. Pl. Asiat.* t. 329 (not of *Notul.* iii. 406).

P. 847. 11. *PHOLIDOTA*, for *MICRANTHA*, read *PARVIFLORA*.

1. *CALANTHE TRICARINATA*. Add to citations *Veitch Man. Orchid.* Pt. vi. 69; *Franch. & Savat. Enum. Pl. Jap.* ii. 26; and after habitat add, *DISTRIB.* Japan.—I have not compared the Japanese with the Indian plant.

P. 849. 5. *C. DIPLOXIPHION*. After *Ic. Plant.* insert t. 2111.

P. 850. 10. *C. MANNII*, after *Hook. f.* insert *Ic. Plant.* t. 2113.

11. *C. WRAYI* " " " t. 2114.

P. 851. 15. *C. VERATRIFOLIA*. To the synonyms of this species add *Veitch Man. Orchid.* Pt. vi. 88 and *C. Petri*, *Reichb. f. in Gard. Chron.* 1880, 326. *C. colorans*, *Rf. l. c.* 1885, 360; *Williams Orchid. Alb.* v. t. 218. *C. australis*, *Hort.* It is well figured at p. 69.

P. 852. 16. *C. VESTITA*. Under *Bot. Zeit.* for xvi. 128 read 1853, 493. *Veitch (Man. Orchid. Pt. vi. 70)* enumerates several subvars.; as *gigantea*, *Williams Orchid. Alb.* v. t. 211, (*Syns. grandiflora*, *Hort. Belg.* 1889, 121, and *rubro-oculata*, *Part. Mag.* xvi. 129; *Regel Gartenfl.* 1873, 751); also Var. *Regnieri*, *C. Regnieri*, *Reichb. f. in Gard. Chron.* 1883, 274, with its Subvars. *Sanderii* and *Stevenii*, *Williams Orchid. Alb.* iii. t. 134; also a Var. *Turneri*, with the elongated pseudobulbs of *Regnieri* and the flowers of *rubro-oculata*.

16/1. *C. RUBENS*, *Ridley in Gard. Chron.* 1890, i. 576; pseudobulbs 6 by 1½ in. conical silvery, scape 2 ft. woolly, sheaths about 5, raceme 14-fl. flowers pink smaller than in *C. vestita*, bracts 1 in., pedicel with ovary 2 in., sepals sub-similar dorsal ¾ in. slender lanceolate mucronate, lateral longer-mucronate, petals shorter more spatulate, lip rose-pink darker at the base adnate to the base of the column erect 4-lobed, side lobes oblong erect appressed to the column, midlobe deeply divided segments rounded with an interposed tooth, spur ½ in. filiform curved, column as in *C. vestita*.

Langkawi Island, north of Penang, *Curtis*.—I have seen no specimen.

P. 854. 27. *C. ANGUSTIFOLIA*. To *Syn. C. phajoides* add *Ic. Plant.* t. 1864.

P. 855. After 31. *C. GRACILIS*, add—

31/1. *C. LONGIPES*, *Hook. f.*; stems tall, scape axillary very long stout, raceme very short and flowers pubescent, lateral lobes of lip rounded crenate, midlobe flabelliform margins undulate and crenate, disk with a membranous lamella on each side from the base to that of the midlobe, spur 0.

SIKKIM HIMALAYA, *King*.

Stem as thick as the little finger. *Leaves* not seen. *Scape* 10–12 in., with 2–3 inflated sheaths; raceme 8–10-fl.; flowers ¾ in. diam.; sepals 5-nerved and 3-nerved petals subequal, elliptic, acuminate; lip as long as the sepals, adnate to the base of the column.—I have seen but one flowering specimen of this plant, which is leafless; its habit is that of *C. tubifera*, but the flowers are very much smaller, the sepals broader.

P. 856. 33. *C. LABROSA*, for *Hook. f.* substitute *Reichb. f. in Gard. Chron.* 1883, 44.

P. 858. 7. *ARUNDINA CANTLEYI*, after *Ic. Plant.* insert t. 2112.

VOL. VI.

P. 1. Under 1. *E. VIRENS*, for *Ærobrum*, read *Ærobrion*.

P. 5. 14. *E. DECIPIENS*, in line 1, for *Griff.* read *Kurz*.

P. 3. 8. *E. EXPLANATA*; at end of diagnosis insert *Hook. Ic. Plant.* t. 1882.

P. 6. After *E. SQUALIDA*, insert—

29/1. *E. HOLOCHILA*, *Coll. & Hemsl. in Journ. Linn. Soc.* xxviii. 132; raceme lax-fl'd., flowers large, bracts about equalling the ovary, scape robust, sepals oblong obtuse, petals obovate-oblong tips rounded, lip orbicular entire or very obscurely broadly 3-lobed, disk smooth. *Hook. f. Ic. Plant.* 2116 ined.

BURMA; on the Shan Hills, alt. 4000 ft., *Collett.*

Leaves very young at flowering time. *Scape* 12 in., as thick as a swan's quill, with two oblong ventricose obtuse sheaths below the middle; raceme 6 in.; bracts slender, membranous; pedicel with ovary $\frac{3}{4}$ in.; flowers $1\frac{1}{2}$ –2 in., broad; sepals 7-nerved, lateral adnate to the sides of the spur; petals 5-nerved, the outer pair branching outwards; lip about as long as the sepals, nerves very many parallel, mentum spur-like.—Only one specimen seen by me.

P. 8. 25. *E. SANGUINEA*. Add Syn. *C. rufa*, *Thw. Enum.* 302, and to the habitats, CEYLON, at Hantani, alt. 3000 ft., *Thwaites.*

CYRTOPERA RUFa, *Thwaites.* This plant was unknown to me till I was shown a living specimen that was sent by Dr. Trimen from Ceylon, and which flowered in the Royal Gardens, Kew. It is identical with 25, *Eulophia sanguinea*, as figured in Bot. Mag. t. 6161. The colour of the flowers varies.

EULOPHIA Sp., *Trimen Cat. Pl. Ceyl.* 89 (C.P. 3958). Dr. Trimen has kindly lent me the Herb. Peradeniya species of this; it is *E. graminea*, L.

To the species of *Eulophia* "UNKNOWN TO ME" add ? *BLETIA BICALLOSA*, *Don Prodr.* 30 (*Limodorum bicallosum*, *Ham. mss.*),¹ from Nepal, thus described by Don.—*Scape* $1\frac{1}{2}$ ft. erect terete scaly, raceme 6–8-fl'd., flowers pale, lip 3-lobed subungiculate anfractuously articulate and saccate at the claw, lobes rounded, midlobe largest crisped glabrous, sepals and petals elliptic mucronulate, lateral sepals adnate to the unguiform process; pollinia 4, parallel, waxy.—Don adds that it is hardly a *Bletia*, under which genus he includes an *Arundina*, a *Calanthe* and a *Eulophia*.

P. 32. After 2. *DORITIS WIGHTII* insert—

3. *D. BRACEANA*, *Hook. f.*; scape stout elongate, mentum spur-like acute, side lobes of lip ovate-lanceolate, midlobe spatulately obovate.

SIKKIM HIMALAYA, *Gamble.*

Roots very many, broad, flat. *Stem* very short. *Leaves* oblong, very dark green. *Scape* much longer than the leaves, as thick as a crow-quill or thicker, very dark green, speckled with brown; raceme 6–10-fl'd.; bracts minute, triangular; peduncle with ovary $\frac{3}{4}$ –1 in., decurved; flowers 1 in. diam.; sepals obovate-oblong, obtuse, and narrower petals fleshy yellow with pinkish midrib; lip membranous, violet-purple, tips of the forked appendage straight. *Column* very large, fleshy; pollinia 4 subglobose.—Described from a drawing and notes by Mr. Brace. Much nearer to *D. tanialis* than to *Wightiana*, differing in the many-fl'd. long remarkable stout scape and much larger flowers with yellow sepals and petals and a longer spur-like mentum.

P. 40. After 26. *SARCOCHILUS MERGUENSIS*, insert—

26/1. *S. (Fornicaria) PUGIONIFOLIA*, *Hook. f. Ic. Plant. ined.*; stemless, peduncle about equalling the few elongate-subulate recurved deeply channelled leaves, bracts suberect, lip sessile on the foot of the column saccate truncately 3-lobed ciliate.

CEYLON; at Varuniya, in the N. Central Province, *Trimen.*

Leaves 2–3 by $\frac{1}{2}$ in. at the thickest part, fleshy, more than semi-terete with a rounded back and very deep channel in front. *Peduncle* glabrous; bracts ovate-oblong, obtuse. *Flowers* $\frac{1}{2}$ in. diam., pale primrose; lip with a few purplish markings; sepals ovate-oblong obtuse, lateral gibbous on the lower margin; petals oblong obtuse; lip ciliate on the lobes and disk towards the broad 3-lobed apex, side lobes rounded, midlobe not longer orbicular; a small caruncle at the base of the midlobe; column short, white.—I have to thank Dr. Trimen for a specimen and a drawing.

P. 40. On last line of description of *SARCOCHILUS FILIFORMIS*, for *S. Trimeni* read *S. viridiflorus*. I had proposed the former name for the latter plant before discovering (whilst the description was passing through the press) that it was *Arides viridiflorum*, *Thw.*

P. 44. To habitats of 3, *Æ. CYLINDRACEUM*, add CEYLON.

P. 55. For 1. *S. GEMINATUM* read *GEMMATUM*.

P. 60. Under the citations for 20, *S. CALCEOLARÆ*; in line 2, for Bot. Reg. 1883, Misc. 130, read 1838, Misc. 75.

P. 62. To syns. of 29. *S. LONGIFOLIUM* add *Ærides rigidum*, *Smith in Rees. Cyclop.*

30. *S. WIGHTIANUM*, under the syns. place *Thwaites Enum.* 303. after *Lindl. Fol. Orchid.* 2.

P. 88. 3. *G. JAVANICA*, add to habitats, CEYLON, on roots of coffee trees in the Central Province, *Thwaites*.

P. 107. 1. *Z. SULCATA*, add to syns. *Orchis stratumatica*, *Linn. Sp. Pl.* 903.

P. 116. 5. *H. ELONGATA*, add to syns. *Rhamphidia elongata*, *Thwaites Enum.* 313; and to habitats, CEYLON, alt. 4000 ft., *Thwaites*.

P. 141. 30. *Habenaria longecalcarata*. Two species are confounded here, having been mixed up in Wight's descriptions, *Icones* and *Herbarium*; they are—

30. *H. LONGECALCARATA*, *A. Rich. (Wight Ic. t. 925, Dalz. & Gibs. l.c.)* with few (2-3) very large flowers, large cucullate sheathing bracts much shorter than the long-pedicelled ovary, lip twice as long as the sepals.

30/1. *H. DECIPIENS*, *Wight Ic. vol. v. pt. i. p. 14*, with several (4-8) smaller flowers, very short pedicels, lanceolate bracts nearly as long as the ovary, lip rather longer than the sepals. *H. montana*, *Wight (not of A. Rich.) Ic. t. 827*, and 1714 the upper right and the left hand figures only.—This much resembles *H. longicornu* *Lindl. (montana, A. Rich.)* but has a longer lip and much longer spur. Wight has given it both names in his *Herbarium*, and says there that it is intermediate between *longicornu* and *longecalcarata*.

P. 147. 48. *H. CHLOBINA*, insert *Par. &* before *Reichb. f.*

P. 151. 63. *H. CRASSIFOLIA*, add to syns. *P. canarensis*, *Lindl. Plant. Hohenack. Essicc. n. 142*.

P. 165. 106. *H. DECIPIENS*. This name being confirmed for Wight's plant (see above) must be replaced by *H. GRIFFITHII*.

INDIAN ORCHIDÆE OF UNDETERMINED AFFINITY.

In the above revision of the Indian Orchids I have doubtless overlooked some species that have been published in one or other of the multitude of works I have had to ransack, and in others that have escaped my notice; and for which I must beg indulgence. There are further some published ones, of which from the incompleteness of the descriptions in respect especially of the pollinia, I have been unable to determine the genera. The chief of these are Kœnig's Indian species, referred to *Epidendrum* (a genus now known to be peculiar to the New World,) and published in the 6th Part (p. 43 et seq.) of Retz's *Observationes* (in 1791). Of these few have been taken up by subsequent authors. They are for the most part Peninsular and probably all communicated by Heyne, who included a few Malaccan species from his correspondents. The descriptions are so full and good in all but the pollinia, &c., that local botanists may in time recognize many of them. It is unfortunate that Kœnig should not have identified any of them with Rheedee's plates.

Epidendrum bidentatum, Kœn. in Retz. Obs. Pt. vi. 54 = *Limodorum bidentatum*, Willd. *Sp. Pl.* iv. 124.

Order CXLIX. SCITAMINEÆ. (By J. G. Baker, F.R.S.)

Herbs, often large, rarely with a woody caudex. *Leaves* cauline or radical, usually membranous, closely pinnately nerved from a midrib. *Flowers* bracteate and often bracteolate, solitary or spicate, rarely paniculate, irregular, hermaphrodite (except *Musa*). *Calyx* superior; sepals free and imbricate, or connate into an entire toothed or spathaceous tube. *Corolla-tube* long or short, free or adnate to the petaloid staminodes; limb 3-partite, segments free or connate. *Stamens* either 5 subequal with a 6th imperfect, or one perfect with the rest forming petaloid staminodes; anthers linear, 2-celled, or of one cell on the margin of a petaloid connective. *Ovary* 3-, rarely 1- or 2-celled; style usually slender, with 2 very short stylodes crowning the ovary; stigma entire or subentire; ovules many, rarely few, axile, rarely parietal, anatropous. *Fruit* usually crowned with the remains of the perianth, loculicidally 3-valved, or fleshy or membranous and indehiscent. *Seeds* various, albumen flowery; embryo small.—Genera about 40, species 4–500, chiefly tropical.

The Traveller's tree, *Rarenala madagascariensis*, Sonnerat (*Urania speciosa*, Wall. Cat. 5765), is frequently planted, especially near Singapore. It has much the leaves of a *Musa* but they are distichous.

Tribe I. **Zingiberææ**. *Calyx* tubular or spathaceous. *Stamen* 1; anther 2-celled; lateral staminodes filiform or petaloid, or small, or 0. *Style* slender, embraced below the stigma by the anther. *Embryo* central, straight.

* Ovary 1-celled; placentas 3, parietal.

1. MANTISIA. Scape leafless; corolla-tube long; lateral staminodes filiform or spatulate, in the middle of the elongate filament, opposite, spreading.

2. GLOBBA. Stem leafy; corolla-tube long; lateral staminodes petal-like; filament slender.

3. HEMIORCHIS. Corolla-tube short; lateral staminodes petal-like; filament short.

** Ovary 3-celled; placentas axile.

† Lateral staminodes broad.

§ *Connective spurred at the base.*

4. ROSCOEA. Flowering stem leafy; bracts 1-fld.; filament long; capsule subdehiscent.—Flowers purple or white.

5. CAUTLEYA. Flowering stem leafy; bracts 1-fld.; filament long; capsule dehiscent with recurved valves.—Flowers yellow.

6. CURCUMA. Flowering stem leafy or not; bracts cucullate, several-fld., forming a cone-like spike; filament petaloid; capsule subdehiscent.

§§ *Connective very broad or crested, not spurred.*

7. GASTROCHILUS. Flowering stem short or erect; filament short; connective broad not crested.

8. KÆMPFERIA. Flowering stem leafy or not; filament very short; connective crested.

9. HITCHENIA. Flowering stem leafy; filament long, complicate; connective broad not crested.—Inflor. as in *Curcuma*.

§§§ *Connective very narrow, neither spurred nor crested.*

10. HEDYCHIMUM. Flowering stem leafy; filament long, slender.

†† Lateral staminodes small or 0, rarely narrow and adnate to the lip.

§ *Flowers in a dense-fld. cone-like spike.*

11. AMOMUM. Flowering scapes usually leafless; filament short; anther-cells diverging above; connective dilated crested or 2-lobed, rarely simple.

12. ZINGIBER. Spikes terminating leafy stems or leafless scapes; filament short, anther-cells parallel, connective usually produced into a long appendage.

13. COSTUS. Spikes terminating leafy stems or leafless scapes; filament petaloid, anther adnate to its middle, cells parallel.

§§ *Flowers in lax-fld. spikes or panicles.*

14. CYPHOSTIGMA. Scape leafless, panicle loosely flowering from the base upwards; filament short, connective with a 3-lobed crest.

15. ELETARIA. Scape leafless, panicle loosely flowering from the base upwards; filament very short; anther-cells parallel, connective not dilated.

16. ELETARIOPSIS. Scape leafless; spike simple; bracts small; filament short, anther petaloid.

17. SCAPHOCHLAMYS. Scape leafless; spike simple; bracts large, persistent; filament short, connective petaloid.

18. *ALPINIA*. Spike or panicle terminating a tall leafy stem; filament long, connective shorter than the anther or longer and dilated.

19. *RHYNCANTHUS*. Spike terminating a leafy stem; filament long, connective not dilated.

Tribe II. **Marantææ**. *Calyx* of free sepals, rarely loosely cohering. *Stamen* 1; anther 1-celled, laterally adnate to a lobe of the perianth; staminodes petaloid, connate into a 5-6-lobed inner perianth, of which 1 or 2 lobes are lateral, 1 (the lip) anticus; of the 2 or 3 dorsal one or two are hooded and another bears the anther. *Ovary* 1-3-celled, cells 1-ovuled; style excentric incurved or involute. *Embryo* curved.

20. *CLINOGYNE*. Stem leafy with terminal panicked scattered flowers; panicle with convolute deciduous sheaths at the forks; bracts deciduous.

21. *PHRYNIUM*. Stem with one broad leaf, and a lateral head or spike of flowers, or spike radical; bracts and bracteoles persistent.

Tribe III. **Cannææ**. *Sepals* free. *Stamen* 1; anther 1-celled, adnate to lateral petaloid filament; staminodes 4. *Ovary* 3-celled, cells many-ovuled; style flattened; stigma terminal. *Embryo* straight.

22. *CANNA*.

Tribe IV. **Musææ**. *Sepals* free or connate in a split spathe. *Stamens* 5, free; anthers linear, 2-celled; staminode 1 or 0. *Style* central; stigma 2-3-fid. *Embryo* short.

23. *MUSA*. Stem subarborescent, stout, simple; flowers in a stout terminal spike; calyx tube short.

24. *LOWIA*. Stem slender, dichotomously branched; flowers clustered at the base of a petiole; calyx tube very long.

1. **MANTISIA**, Sims.

Rhizome short, creeping; leafy stem short. *Scape* short, sheathed below. *Leaves* oblong-lanceolate, caudate. *Panicle* laxly-fld.; bracts at the forks membranous, coloured. *Calyx* short, campanulate, obtusely 3-lobed. *Corolla*-tube slender, lobes subequal, ovate; dorsal erect, concave. Lateral *staminodes* at or below the middle of the exerted incurved filament, slender, spatulate; lip deflexed, 2-fid; filament long, curved; anther-cells linear-oblong, broadly winged. *Ovary* 1-celled; ovules 3, parietal; style filiform, placed in a groove of the filament; stigma turbinate. *Capsule* globose, dehiscent at the apex. *Seeds* many, minute, oblong.—Species the following.

1. **M. saltatoria**, Sims in *Bot. Mag.* t. 1320, staminodes linear-subulate. *Horan. Prodr.* 19. *Globba saltatoria*, *Rosc. Scitam.* t. 112. *G. purpurea*, *Andr. Bot. Rep.* t. 615. *G. radicalis*, *Roxb. in Asiat. Res.* xi. 359; *Corom. Pl.* t. 230. *G. subulata*, *Roxb. Hort. Beng.* 2; *Fl. Ind.* i. 81.

CHITTAGONG, *Roxburgh*, *Lister*.

Rootstock perennial. *Stems* annual, 1-2 ft. *Leaves* 4-6 in.; sheath 1-2 in.; bract-leaves sheathing, oblong. *Panicle* lax, 3-6 in.; branches simple, usually short and ascending; flowers few, crowded towards the tips of the branches; bracts ovate, lilac, $\frac{1}{4}$ - $\frac{1}{2}$ in., lower flowerless. *Calyx* campanulate, lilac, $\frac{1}{4}$ in.; lobes suborbicular. *Corolla*-tube twice as long as the calyx; segments ovate, lilac, $\frac{1}{8}$ in., central rather larger and clasping the filament. *Staminodes* $\frac{1}{4}$ in.; lip yellow, cuneate, deeply lobed; wings of anther suborbicular. *Capsule* purple, the size of a small cherry.

2. **M. spathulata**, Schult. Mant. i. 49; staminodes with a narrow claw and flattened petaloid blade. Horan. Prodr. 19. Globba spathulata. Roxb. Hort. Beng. 2; Fl. Ind. i. 83.

SILHET, Roxburgh; CHITTAGONG, Lister.

Habit and foliage of *M. saltatoria*, but panicle larger, branches more numerous, bracts oblong, uppermost about as long as the calyx, corolla-segments narrower, lip less deeply bifid, staminodes much shorter, and placed lower down on the filament.

2. **GLOBBA**, Linn.

Rhizome short, creeping; stem erect. *Leaves* oblong or oblong-lanceolate. *Flowers* in terminal panicles, rarely spikes; bracts usually deciduous, buds often replaced by bulbils. *Calyx* funnel-shaped, 3-lobed. *Corolla*-tube longer than the calyx; lobes ovate, subequal. *Lateral staminodes* petaloid, contiguous to the corolla-segments; lip deflexed; filament with 2 dorsal appendages, long, incurved; anther oblong, connective simple, winged or spurred, produced beyond the cells. *Ovary* 1-celled; placentas 3, parietal; style filiform, placed in a groove of the filament; stigma turbinate. *Capsule* globose, finally dehiscent. *Seeds* small, ovoid; aril small, white, lacerate.—Species about 25, Indian, Chinese, and Malayan.

SECT. I. **Aplanthera**, Horan. Anther neither winged nor spurred.

* *Leaves glabrous beneath (or slightly pubescent in G. racemosa)*.

1. **G. racemosa**, Smith Exot. Bot. ii. 115 t. 117; leaves slightly hairy or quite glabrous beneath, panicle long narrow, lower branches 2-3-fld. at the tip, bulbils 0, bracts small deciduous, corolla-segments and staminodes ovate equal in length, lip longer shortly bifid, capsule smooth. *G. orixensis*, Wall. Cat. 6535 B, G, H., not of Roxb.

CENTRAL and EASTERN HIMALAYA, ascending to 6000-7000 feet in Kumaon.

Leafy stems 1½-2 ft. *Leaves* 6-9 in., oblong or oblong-lanceolate, subcaudate, sometimes slightly hairy beneath on the ribs towards the base. *Panicle* ½-1 ft.; rachis glabrous; branch-bracts and flower-bracts caducous. *Calyx* ¼ in., yellowish, shortly lobed. *Corolla* bright yellow; tube 2-3 times the length of the calyx; segments ½ in., reflexed; filament 2-3 times the length of the segments. *Capsule* ½ in. —The name *racemosa* is a misleading one.

2. **G. orixensis**, Roxb. in Asiat. Res. xi. 358; Hort. Beng. 2; Corom. Pl. t. 229; Fl. Ind. i. 78; leaves glabrous beneath, panicle long narrow, lower branches 2-3-fld. at the tip, bulbils 0, bracts small deciduous, corolla-segments staminodes and lip equal in length, capsule warted. Horan. Prodr. 19.

SIKKIM HIMALAYA, at a low level, Hook. f. et Thoms. (Herb. Ind. Or. No. 15). NORTHERN CIRCARS, Roxburgh.

Nearly allied to *G. racemosa*, but flowers smaller, deep orange, with a shorter corolla-tube; lip spotted with red-brown at the throat; capsules smaller.

3. **G. Clarkei**, Baker; leaves glabrous beneath, panicle long narrow, lower branches 2-3-fld. at the tip, bulbils many, bracts small deciduous, corolla-segments and staminodes ovate equal in length, lip longer shortly 2-lobed, capsule smooth.

SIKKIM HIMALAYA; alt. 3000-7500 ft. (Herb. Ind. Or. H. f. & T., No. 9); KHASIA HILLS, J. D. H. alt. 3000-5700 ft.; MUNNIPORE, Watt.

Nearly allied to *G. racemosa*, but racemes longer and laxer, with most of the upper flowers changed into bulbils, calyx less corolline, usually brownish, corolla yellow, tinged with brown.

4. **G. Wallichii**, *Baker*; leaves small glabrous beneath, panicle very long lax-fld., branches 1-2-fld., bracts small deciduous, bulbils few or 0, corolla-segments ovate, staminodes lanceolate rather longer, lip small placed a little above the segments, capsule small smooth. *G. pendula*, *Wall. Cat.* 6533, *not of Roxb.*

PENANG, *Wallich, Curtis.*

Much weaker in habit than other species of the section. *Leaves* 3-4 in., caudate, pale beneath. *Panicle* sometimes 1 ft.; rachis and slender patent branches glabrous. *Calyx* green, $\frac{1}{2}$ in. *Corolla* pale yellow; tube 2-3 times the length of the calyx; segments reflexed, $\frac{1}{2}$ in., upper concave; filament yellow, $\frac{3}{4}$ in., bearing the small lip a short distance above its base. *Capsule* $\frac{1}{2}$ in. diam.

** *Leaves more or less pubescent beneath.*

5. **G. Hookeri**, *Clarke mss.*; leaves very hairy on the midrib beneath, panicle long narrow, lower branches 2-3-fld. at the tip, bulbils sometimes present, bracts small deciduous, corolla-segments and staminodes ovate and equal in length, lip longer shortly bifid, capsule smooth.

NEPAL, *Wallich*; SIKKIM HIMALAYA, alt. 3000-5000 ft., *J. D. H. (Herb. Ind. Or. No. 10).* NAGA HILLS, alt. 4500 ft., *Clarke.*

Doubtfully distinct from *G. racemosa*, but more robust and floriferous, with broader leaves. *Flowers* bright yellow; lip not spotted.

6. **G. ophioglossa**, *Wight Ic. t.* 2002; leaves finely pubescent beneath, panicle narrow, lower branches 4-6-fld., bracts small deciduous, lower nodes with a few bulbils, corolla-segments ovate, staminodes longer lanceolate, lip longer deeply bifid, capsule smooth. *Horan. Prodr.* 19. *G. orixensis*, *Wall. Cat.* 6535 A, C, D, I, *not of Roxb.* *Alpinia?* *Missionis*, *Wall. Cat.* 6580.

TRAVANCORE *Heyne*; Anamallay hills, &c., *Wight, Jerdon.* COCHIN, *Gamble.* BEAR, on Parasnath, alt. 2500 ft., *Vicary, Clarke.*

Leaf conspicuously caudate, 6-9 in. *Panicle* 4-6 in., rachis and branchlets glabrous; flowers not crowded at their tips; bulbils ovoid, deflexed. *Calyx* $\frac{1}{2}$ in., broadly funnel-shaped, pale green; teeth broad, ovate. *Corolla* pale yellow; tube 3 times the length of the calyx; segments $\frac{1}{2}$ in., ovate; lip twice the length of the segments, lobes longer and narrower than in others of the section. *Capsule* $\frac{1}{2}$ in., globose.

7. **G. multiflora**, *Wall. Cat.* 6537 A; leaves pubescent beneath, panicle long narrow, lower branches 4-6-fld., bracts small deciduous, lower nodes with bulbils, segments of corolla and staminodes ovate and equal in length, lip not longer shortly bifid, capsule smooth. *G. velutina*, *Wall. in Voigt Hort. Sub. Calc.* 573 (*name only*).

SIKKIM HIMALAYA, ASSAM, SILHET, the KHASIA HILLS, and MUNNIPORE.

Leaves conspicuously caudate, $\frac{1}{2}$ -1 ft. *Panicle* $\frac{1}{2}$ -1 ft., rachis and branchlets very hairy; branchlets more crowded than in the foregoing species, and flowers not crowded at their tips. *Calyx* $\frac{1}{2}$ in. *Corolla*-tube 3 times the length of the calyx; segments and lip $\frac{1}{2}$ in.; filament $\frac{1}{2}$ in.; anther $\frac{1}{2}$ in., sometimes obscurely margined.

8. **G. substrigosa**, *King mss.*; leaves very pubescent on both surfaces, panicle lax cernuous, branches few-fld., bulbils 0, bracts large foliaceous persistent, corolla-segments ovate, capsule pubescent.

TENASSERIM, *Gallatly.*

Whole plant not more than 6-8 in. *Leaves* few, oblong-caudate, the largest 3-4 in. *Panicle* $1\frac{1}{2}$ -2 in.; branches few, short, lower spreading or reflexed; bracts oblanceolate-oblong, pubescent. *Calyx*-tube $\frac{1}{2}$ in. *Corolla* yellow, gland-dotted. *Capsule* blackish, the size of a pea.

9. **G. Andersoni**, *Clarke, mss.*; leaves slightly pubescent beneath,

panicle lax, flowers crowded at the tips of the branches surrounded by a whorl of large bracts, corolla-segments and staminodes equal in length, lip longer deeply bifid, capsule warted.

SIKKIM HIMALAYA, alt. 1500-2500 ft. (*Hk. fil. & Thoms. Herb. Ind. Or.* 12), *Clarke, Gamble, King.*

Habit and leaves of *G. racemosa*. Leaves sometimes 1 ft., caudate. Panicle 3-4 in., erect or spreading, rachis very hairy, branchlets short, spreading; bracts $\frac{1}{2}$ in., dark, ovate, membranous. Calyx green, tubular. Corolla bright yellow; tube 2-3 times the length of the calyx; segments $\frac{1}{2}$ in.; filament nearly 1 in.

10. *G. arracanensis*, *Kurz in Journ. Asiat. Soc. Beng.* xxxix. pt. ii. 83; leaves slightly pubescent beneath, panicle short, flowers crowded at the tips of the short branches surrounded by a whorl of large bracts, corolla-segments ovate lilac, lip deeply bifid, capsule smooth.

ARRACAN; forests of the low sandstone hills, *Kurz.*

Habit of *G. racemosa*. Leaves 6-9 in., caudate. Panicle 3-4 in., subsessile, rather spreading, bracts $\frac{1}{2}$ in., much imbricate, broadly ovate, obtuse, membranous, lilac. Calyx $\frac{1}{2}$ in. Corolla-tube short, whitish; lip yellow or tinged with lilac, segments obovate-oblong; filament long, lilac.

SECT. II. *Careyella*, *Horan*. Anther with a narrow entire border.

11. *G. sessiliflora*, *Sims in Bot. Mag.* t. 1428; raceme narrow or subspicate, bulbils many on lower nodes, corolla-segments ovate, staminodes longer lanceolate, lip long deeply bifid. *Horan. Prodr.* 19. *G. Careyana*, *Roxb. Hort. Beng.* 2; *Fl. Ind.* i. 80; *Rosc. Scit.* t. 110; *Lodd. Bot. Cat.* t. 691; *Wall Cat.* 6534; *Horan. Prodr.* 19. *G. orixensis*, *Wall. Cat.* 6535 F. Scitaminea Finlaysonianana, *Wall. Cat.* 6623.

PEGU, *Carey, &c.*

Leafy stem 1-1 $\frac{1}{2}$ ft. Leaves 6 in., oblong, acuminate, pale and finely pubescent beneath. Raceme short, erect or drooping; upper half bearing flowers on the rachis or on short branches; lower half with crowded bulbils sessile in the axils of small ovate scariose spreading or ascending bracts. Calyx $\frac{3}{8}$ - $\frac{1}{2}$ in., narrowly funnel-shaped. Corolla yellow; tube 2-3 times the length of the calyx; segments $\frac{1}{2}$ in.; filament yellow, $\frac{1}{2}$ - $\frac{3}{4}$ in.; anther cuspidate, margin very narrow. Capsule globose, warted, the size of a large pea.

12. *G. floribunda*, *Baker*; panicle long lax, branches many-fld., bulbils 0, staminodes scarcely longer than corolla-segments, lip long not bifid.

MALAY PENINSULA; Johore, *King.*

Habit of *G. multiflora*, 2 ft. high. Leaves oblong, caudate, nearly 1 ft., pubescent. Panicle erect, 6-8 in.; rachis very hairy; branches 1-1 $\frac{1}{2}$ in., many, ascending, 6-8-fld.; bracts small, deciduous. Calyx $\frac{1}{2}$ in. Corolla pale yellow; segments oblong, $\frac{1}{2}$ in.; anther narrowly margined at the sides and base; lip inserted above the base of the filament. Ovary glabrous.

13. *G. uliginosa*, *Miquel Fl. Ind. Bat. Suppl.* 613? panicle long very lax narrow, lower branches 1-2-fld., upper flowers sometimes replaced by bulbils, corolla-segments and staminodes ovate and equal in length, lip small. *G. elongata*, *King mss.*

PENANG, *King*. MALACCA, *Cuming, Griffith (Kew Distrib.* 5652), &c.—DISTRIB. Malay isles.

Stem very weak. Leaves small, membranous. Panicle sometimes 6-9 in.; bracts small, deciduous. Calyx funnel-shaped, $\frac{1}{2}$ in. Corolla yellow; tube $\frac{1}{2}$ in.; segments $\frac{1}{2}$ - $\frac{1}{3}$ in.; filament $\frac{1}{2}$ in.; lip placed a little above its base; anther obscurely margined. Capsule smooth.—I doubt whether *Bentham's Sect. Careyella* should be

separated from *Aplanthera*. Neither Miquel's description, nor his type specimen, indicate the structure of the anther in the Malay *G. uliginosa*.

SECT. III. **Ceratanthera**, *Lestib.* (gen.) Anther with a membranous spur from the base or side of each cell.

14. **G. Kingii**, *Baker*; panicle narrow subspicate, bracts small deciduous, bulbils 0, corolla-segments oblong, staminodes linear-oblong, lip small inserted above the base of the filament.

SINGAPORE, *King*.

Leafy stem a foot long. *Leaves* oblong-caudate, subglabrous, 3-4 in. long. *Peduncle* erect, longer than the panicle; panicle very lax, erect, 4-5 in. long; branches very short, 1-2-fld. *Calyx* $\frac{1}{2}$ in. long. *Corolla*-segments orange-yellow, $\frac{1}{2}$ in. long. *Spurs* as long as the anther-cells. *Ovary* glabrous.

15. **G. stenothyrsa**, *Baker*; panicle erect subspicate, lower nodes bearing bulbils, bracts deciduous, corolla-segments oblong, staminodes linear-oblong, lip small emarginate inserted above the base of the filament.

TENASSERIM; Moulmein, *Parish*.

Stem 1 ft. or more. *Leaves* 6-8 in., oblong, caudate. *Panicle* peduncled, 8-9 in., lower half with small sessile bulbils in the axils of small bracts; flowering branches short, ascending, 1-2-dd. *Calyx* funnel-shaped, $\frac{1}{2}$ in. *Corolla* bright yellow, tube $\frac{1}{2}$ in., segments $\frac{1}{2}$ in.; staminodes scarcely longer; filament nearly 1 in.; spurs membranous, as long as the anther-cells.

Var. ? *Cumingii*; bulbils 0, anther spur shorter. Malacca, *Cuming* (No. 2370.)

16. **G. pallidiflora**, *Baker*; panicle lax erect, branches few-fld., bulbils 0, bracts small deciduous, staminodes longer than the whitish corolla-segments, lip inserted above the base of the filament.

MALAY PENINSULA; Johore, *King*, 716, 717.

Stem $1\frac{1}{2}$ ft. *Leaves* 8-9 in., oblong, caudate, pubescent beneath. *Panicle* 2-3 in.; peduncle short; branches less than 1 in., ascending or spreading, 2-3-fld. towards the tip. *Calyx* $\frac{1}{2}$ in. *Corolla*-segments suborbicular, $\frac{1}{2}$ in., tube $\frac{1}{2}$ in.; filament 1 in.; lip with a spreading base; anther spurs subulate. *Ovary* glabrous.

17. **G. bracteolata**, *Wall. ex Voigt Hort. Sub. Calc.* 573 (name only) panicle short dense drooping, bracts oblong or obovate yellow subpersistent, bulbils 0, corolla-segments oblong, staminodes longer linear-oblong, lip small emarginate. *G. expansa*, *Wall. Cat.* 6536 D.

TAVOY, *Wallich*; TENASSERIM, *Griffith, Helfer*; UPPER BURMA, up to 4000 ft., *King*.

Stem $\frac{1}{2}$ -1 ft. *Leaves* oblong, acuminate, 3-4 in., tinged with purple beneath; sheaths broader than in the other species. *Panicle* oblong, 3-4 in.; lower branches spreading, about 1 in., 3-4-fld.; branch-bracts obovate; flower-bracts oblong, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Calyx* funnel-shaped, $\frac{1}{2}$ in. *Corolla* bright yellow; tube $\frac{1}{2}$ in.; segments reflexed, $\frac{1}{2}$ in.; lip with a red spot at the throat; filament yellow, $\frac{1}{2}$ - $\frac{3}{4}$ in.; anther-spurs large curved. *Ovary* smooth.

18. **G. subscaposa**, *Coll. et Hemsl. in Journ. Linn. Soc.* xxviii. 135; panicle sparse erect, bracts small deciduous, bulbils 0, corolla segments oblong, staminodes longer lanceolate, lip long deeply bifid inserted at the base of the filament.

UPPER BURMA; Shan hills, 4000-5000 ft., *Collett*.

Stem including panicle not above 1 ft. Produced *leaves* few and small. *Raceme* short, lax; lower branches 1 in., spreading, 3-4-fld. *Calyx* funnel-shaped, $\frac{1}{2}$ in.

Corolla greenish-yellow; segments $\frac{1}{2}$ in.; lip pale yellow, $\frac{1}{4}$ in.; filament above $\frac{1}{2}$ in.; anther-spurs from the sides of the cells.

19. **G. pendula**, *Roxb. in Asiat. Res.* xi. 359; *Fl. Ind.* i. 79; *Coromand. Pl.* t. 228; panicle lax drooping, bracts deciduous, bulbils rarely produced, corolla-segments oblong, staminodes rather longer, lip small attached above the base of the filament. *Horan. Prodr.* 20. *G. multiflora*, *Wall. Cat.* 6537 B.

TAVOY, TENASSERIM and PENANG, *Roxburgh, &c.*

Stem 1-2 ft. *Leaves* 5-6 in., oblong, acuminate. *Racemes* sometimes 1 ft.; lower branches spreading, 2-3-fld.; bracts greenish, lanceolate or ovate, not longer than the buds. *Calyx* funnel-shaped, $\frac{1}{12}$ in. *Corolla* greenish-yellow; tube 3 times the length of the calyx; segments $\frac{1}{8}$ in. *Staminodes* linear-oblong; lip not longer than the corolla-segments; anther oblong, spurs linear-subulate, longer than the cells. *Ovary* globose, smooth.—I doubt the specific distinctness of the Javan *G. maculata*, Blume, *Enum.* i. 63.

SECT. IV. **Marantella**, *Horan.* *Anther* winged on each side by a bifid quadrate membranous process.

20. **G. cernua**, *Baker*; panicle very lax few-fld. cernuous, bracts minute deciduous, bulbils 0, staminodes longer than the corolla-segments, lip placed a little above the base of the filament, anther-wings spreading.

MALAY PENINSULA; Goping, *King's Collector*, 757.

Stem 9-12 in. *Leaves* oblong, caudate, 2-3 in. long, finely pubescent beneath. *Panicle* 1-1 $\frac{1}{2}$ in.; branches ascending, 1-2-fld. *Calyx* $\frac{1}{12}$ in. *Corolla* pale yellow; segments oblong, $\frac{1}{8}$ in.; lip with two spreading lobes at the base. *Ovary* glabrous.

21. **G. pauciflora**, *King mss.*; panicle very lax few-fld., bracts minute deciduous, bulbils 0, corolla-segments oblong, staminodes not longer than the corolla-segments, lip placed a little above the segments, anther-wings spreading.

ANDAMAN ISLANDS, *King's Collector*, 376.

Whole plant $\frac{1}{2}$ -1 ft. *Leaves* oblong, caudate, 2-3 in., minutely pubescent beneath. *Panicle* short, erect; lower branches 1 in., ascending, 1-2-fld. *Calyx* glabrous, $\frac{1}{8}$ in. *Corolla* pale yellow; segments $\frac{1}{8}$ in. *Capsule* glabrous.

22. **G. versicolor**, *Smith Exot. Bot.* t. 117 A, B, C; panicle broad very lax, bracts small deciduous, corolla-segments oblong, staminodes longer lanceolate, lip small placed a little above the segments, anther-wings deflexed. *Horan. Prodr.* 20. *G. Hura*, *Roxb. in Asiat. Res.* xi. 359; *Fl. Ind.* i. 79. *G. expansa*, *Wall. Cat.* 6536. *Hura siamensium*, *Koenig in Retz. Obs.* iii. 49.

MALAY PENINSULA, *Roxburgh.* From PEGU to SINGAPORE, *Roxburgh*, and PENANG. SOUTH ANDAMANS, *Kurz.*

Stem 1-1 $\frac{1}{2}$ ft. *Leaves* 4-8 in., oblong, caudate. *Panicle* 3-6 in.; rachis and branches very slender, lower 2-3 in., flowering only in the upper half. *Calyx* green, $\frac{1}{8}$ in. *Corolla* yellow or tinged with lilac; tube $\frac{1}{4}$ in.; segments half as long as the tube; filament yellow, $\frac{1}{2}$ - $\frac{3}{4}$ in.; anther-wings 1, deeply bifid, yellow, quadrate, deflexed. *Capsule* smooth, $\frac{1}{4}$ in.

23. **G. brachycarpa**, *Baker*; panicle lax, bracts small leafy persistent, lower with solitary bulbils in their axils, staminodes longer than the oblong corolla-segments, lip placed at the base of the filament, anther-wings spreading.

PERAK, alt. 2-3000 ft., *King's Collector*, 2414.

Stem 1 ft. *Leaves* about 5, oblong-caudate, 4-5 in., finely pubescent beneath. *Panicle* $\frac{1}{2}$ ft.; main bracts $\frac{1}{4}$ - $\frac{1}{3}$ in.; lower 4-5 bulbilliferous; branches spreading, 5-6-fld. *Calyx* $\frac{1}{8}$ in. *Corolla* segments pale yellow; staminodes $\frac{1}{8}$ in. *Ovary* rugose.—Very near *G. Schomburgkii*, Hook. f. in Bot. Mag. t. 6298, of Siam.

24. ***G. bulbifera***, *Roxb. in Asiat. Res.* xi. 358; *Fl. Ind.* i. 78; spike lax, bracts ovate ascending persistent, lower nodes bearing bulbils, corolla-segments ovate, staminodes rather longer oblong, lip small deeply bifid, anther-wings spreading. *Thw. Enum.* 315. *G. marantina*, *Wall. Cat.* 6532; *Dalz. & Gibs. Bomb. Fl.* 272; *Blume Enum.* i. 62. *G. bracteata*, *Herb. Heyne.* *G. bracteosa*, *Horan. Prodr.* 20. *G. marantinoides*, *Wight Ic.* sub t. 2001. *G. strobilifera*, *Zoll. & Moritz. Syst. Verz.* 84; *Miq. Fl. Ind. Bat.* iii. 591.

EASTERN HIMALAYA and TROPICAL INDIA; MALABAR, the MALAY PENINSULA and CEYLON.—DISTRIB. Malay Islands, Timor.

Stem not so stout as in *G. marantina*; leaves smaller and sheaths not so broad. *Spike* 3-4 in.; bracts $\frac{1}{2}$ -1 in., green, not touching one another, many of the lower enclosing ovoid bulbils. *Flower* and *stamens* as in *G. marantina*; in both the quadrate yellow deeply bifid anther-wings spread horizontally from the sides of the cells.

25. ***G. marantina***, *Linn. Mant.* ii. 170; spike dense, bracts imbricate persistent, lower nodes bulbilliferous, staminodes oblong rather longer than the corolla-segments, lip small deeply bifid, anther-wings spreading. *Rosc. in Trans. Linn. Soc.* viii. 356; *Scit.* t. 111; *Smith. Exot. Bot.* ii. 85, t. 103; *Roxb. in Asiat. Res.* xi. 358; *Fl. Ind.* i. 77; *Miq. Fl. Ind. Bat.* iii. 591. *Colebrookia bulbifera*, *Roxb. in Donn Hort. Cant.* edit. 1.

KHASIA HILLS, *Griffith.*—DISTRIB. Malay Islands, Philippines.

Stem 1 ft. *Leaves* 5-6 in., oblong, acuminate, sheaths broader than in the other species. *Spike* oblong, strobiliform, $1\frac{1}{2}$ -2 in.; bracts $\frac{1}{2}$ -1 in. broad, ovate, green, bulbils ovoid. *Calyx* short, green, teeth ovate. *Corolla* yellow; tube 3 times the length of the calyx; segments $\frac{1}{8}$ in.; lip as long as the segments; filament $\frac{1}{2}$ - $\frac{3}{4}$ in. *Ovary* smooth.

SPECIES IMPERFECTLY KNOWN. (Anthers not seen.)

26. *G. CANARENSIS*, *Baker*; leaves small thin caudate, panicle narrow erect very few- and lax-fld., most of the flowers replaced by long narrow acuminate bulbils, calyx green narrowly funnel-shaped $\frac{1}{8}$ in., corolla-tube more than twice as long as the calyx, corolla-segments oblong $\frac{1}{8}$ in.—Canara, *Law*.

27. *G. PLATYSTACHYA*, *Baker*; leaves large and thin, panicle short lax and very broad, lower branches 2-4 in. ending in a bulbil and bearing numerous close flowers shortly pedicelled towards the end each subtended by a small persistent ovate acutely-keeled bract, calyx green broadly funnel-shaped $\frac{1}{12}$ in., corolla-tube 3 times the length of the calyx, segments oblong yellow $\frac{1}{8}$ - $\frac{1}{10}$ in.—Canara, *Law*. (Hk. f. & Thoms. *Herb. Ind. Or.* 14.)

3. **HEMIORCHIS**, *Kurz.*

Rhizome stout, creeping. *Leafy stem* distinct from the flowering, produced after it. *Flowers* spicate; bracts membranous, deciduous. *Calyx* short, deeply 3-lobed. *Corolla-tube* shorter than the calyx, 3-lobed, lateral lobes oblong, midlobe rather longer, ovate. *Lateral staminodes* like the corolla-lobes, obovate with a short basal spur; lip orbicular, concave; filament short; anther-cells contiguous, connective narrow not produced.

Ovary 1-celled; *placentas* 3, parietal; *style* filiform; *stigma* small, subglobose. *Capsule* small, 1-celled, 3-valved. *Seeds* conical, aril white.

H. burmanica, *Kurz in Journ. Asiat. Soc. Beng.* xlii. pt. ii. 108, t. 8; *Baker in Bot. Mag.* t. 7120.

KHASIA HILLS, Mann. PEGU, MARTABAN and TENASSERIM, *Kurz*.

Habit of Gastrochilus. *Rhizome* white, hypogæous. *Leaves* few, oblong, acute. *Peduncle* with spike $\frac{1}{2}$ –1 ft., very pubescent, as are the rachis and calyx. *Spike* dense upwards; bracts small, lanceolate, deciduous. *Calyx* funnel-shaped, reddish-brown, $\frac{1}{4}$ in., cleft below the middle. *Corolla-lobes* reddish-brown; *staminodes* about $\frac{1}{2}$ in., greenish-white; lip whitish, minutely dotted with red-brown; *stamen* half as long as the corolla-segments. *Capsule* globose, 10-grooved, crowned by the persistent acute calyx-lobes.

4. ROSCOEA, Smith.

Root fibres thick, fleshy, fascicled; *rootstock* 0. *Leaves* lanceolate or oblong. *Flowers* in terminal spikes; bracts persistent, 1-fld. *Calyx* long, tubular, slit down one side. *Corolla-tube* slender, as long as or longer than the calyx; lateral segments spreading; upper broad, cucullate, erect, hiding the staminodes and stamen. *Lateral staminodes* oblanceolate, petaloid, erect; lip large, cuneate, deflexed, 2-fid or emarginate; filament short, erect; anther-cells linear, contiguous, connective produced at the base into a forked appendage. *Ovary* 3-celled, cylindric or oblong; ovules very numerous, superposed; *style* erect; *stigma* turbinate, margins ciliate. *Capsule* cylindric or clavate, membranous, tardily 3-valved. *Seeds* ovoid, minute, arillate.—One species in Cochin China, and the following.

1. **R. alpina**, *Royle, Ill.* 361, t. 89; stem short, produced leaves 2–3 sessile oblong-lanceolate, spike sessile 1–2-fld., corolla-tube much longer than the calyx, limb dark purple, upper segment orbicular, lip broad deeply bifid. *Wight Ic.* t. 2013; *Horan. Prodr.* 20. **R. purpurea**, *Royle l. c.* t. 89, f. 3. **R. purpurea** var. *minor*, *Wall. Cat.* 6528 D, E.

TEMPERATE CENTRAL and WESTERN HIMALAYAS; from KASHMIR to NEPAL, ascending to 11,000 ft.

Whole plant 4–6 in. high. *Leaves* 3–4 in., under and not fully developed at the flowering time. *Calyx-tube* green, 1 in. or more, slit nearly to the base. *Corolla-tube* white, 1 in., longer than the calyx; upper segment orbicular-cuspidate, erect, $\frac{1}{2}$ – $\frac{3}{4}$ in. long and broad; lateral $\frac{1}{2}$ in., linear-oblong, deflexed. *Staminode* oblong-spathulate, half as long as the upper segment; fertile stamen as long as the staminode; lip obovate-cuneate, $\frac{1}{2}$ – $\frac{3}{4}$ in., bifid about one-third of its length.

2. **R. purpurea**, *Smith Exot. Bot.* ii. 97, t. 108; leafy stem elongate, produced leaves 5–6 lanceolate, flowers few in a sessile spike, corolla-tube not longer than the calyx, limb purple rarely pale lilac or white, upper segment obovate-cuneate, lip broad deeply bifid. *Hook. Exot. Fl.* t. 144; *Bot. Mag.* t. 4630; *Rosc. Scit.* t. 64; *Lodd. Bot. Cal.* t. 1404; *Horan. Prodr.* 20; *Wall. Cat.* 6528 A, B.

CENTRAL and EASTERN HIMALAYA; from Kumaon to Sikkim, ascending to 10,000 ft. ASSAM, the KHASIA HILLS, and BURMA.

Leafy stem $\frac{1}{2}$ –1 ft. long. *Leaves* 6 by $\frac{1}{2}$ –1 in. at flowering time; sheaths broad, imbricated. *Bracts* oblong, hidden in the sheaths of the upper leaves. *Calyx* green, $1\frac{1}{2}$ in., slit deeply down one side as the flower expands. *Corolla-tube* rather dilated upwards; upper segment about 1 in., very cucullate; lower lanceolate, decurved, about as long. *Staminode* oblanceolate unguiculate, half as long as the upper

segment; fertile stamen as long as the staminode; anther-tails $\frac{1}{8}$ in.; lip $1-1\frac{1}{2}$ in., deflexed. *Capsule* cylindric, $1-1\frac{1}{2}$ in.—Varies greatly in robustness, breadth of leaves and colour and size of flowers. Var. *R. exilis*, "Smith;" Horan. Prodr. 21, is probably a dwarf narrow-leaved variety.

Var. *R. PROCERA*, Wall. *Pl. As. Rar.* t. 242; Wall. *Cat.* 6528 C.; taller, more robust, with broader leaf-sheaths and larger flowers. *R. purpurea*, Lindl. in Bot. Reg. xxvi. t. 61.—Kumaon, Nepal and Sikkim.

Var. *R. BRANDISII*, King mss.; leaf-sheaths narrower and perianth-tube longer than in the type.—Khasia Hills.

3. *R. capitata*, Smith in Trans. Linn. Soc. xiii. 461; stem elongated, leaves many linear, flowers many in a dense oblong peduncled spike, corolla-tube not longer than the calyx, limb pale blue, upper segment oblong-cuneate, lip narrow emarginate. Wall. *Pl. As. Rar.* t. 255; *Cat.* 6529; Horan. Prodr. 20.

NEPAL, Wallich, Scully.

Stem $\frac{1}{2}$ –1 ft. or longer. *Leaves* erecto-patent, $\frac{1}{2}$ –1 ft. by $\frac{1}{2}$ in. *Peduncle* erect, 3–6 in. *Spike* $1\frac{1}{2}$ –2 in.; bracts green, lanceolate, $1-1\frac{1}{2}$ in. *Calyx* 1 in., green, minutely 2-toothed, slit deeply down one side. Upper *corolla-segment* $\frac{3}{4}$ in., arcuate, very concave; lower rather longer, oblanceolate deflexed. *Staminode* nearly as long as the upper segment; lip 1 by $\frac{1}{2}$ in., oblong-spathulate. *Capsule* 1 in., clavate.

IMPERFECTLY-KNOWN SPECIES.

4. *R. LONGIFOLIA*, Baker; stem short, produced leaves about 6 outer oblong inner 12 in. linear or lanceolate, flowers 1–3 in a sessile spike, calyx-tube slender cylindric $1\frac{1}{4}$ in., corolla-tube twice as long, limb not seen, capsule shortly pedicelled clavate above an inch long.—SIMLA, on Fagu, Thomson.

5. *CAUTLEYA*, Royle.

Characters of *Roscoea*, but flowers yellow, dorsal lobe of the corolla narrow, and capsule dehiscing to the base with recurved lobes exposing the seeds in a columnar mass.—Species, the following.

1. ***C. lutea***, Royle Ill. 361; spike lax few-fl., leaves sessile lanceolate or oblong-lanceolate, bracts oblong green much shorter than the calyx, seeds black angular exarillate. Hook. f. in Bot. Mag. t. 6991. *Roscoea gracilis*, Smith in Trans. Linn. Soc. xiii. 460; Horan. Prodr. Scit. 21. *R. elatior*, Smith l. c.; Wall. *Cat.* 6531 A, B. *R. lutea*, Royle Ill. 361, t. 89, f. 2; Wight Ic. t. 2013.

TEMPERATE HIMALAYA; from Kashmir to Sikkim, ascending to 7–8000 ft. KHASIA HILLS, J. D. H. & T. T.

Stem 12–18 in., slender. *Leaves* 6–9 by $1-1\frac{1}{2}$ in. at flowering time, usually purple beneath. *Flowers* 6–12 in a lax peduncled spike, rachis red flexuose; bracts $\frac{3}{4}$ – $\frac{1}{2}$ in. *Calyx* red, above $\frac{1}{2}$ in., minutely toothed, slit deeply down one side. *Corolla-tube* slightly exserted; limb bright yellow; upper segment $\frac{1}{2}$ – $\frac{3}{4}$ in., lower as long, oblong-cuneate, deflexed. *Staminode* nearly as long as the upper segment, bases minutely spurred on the inner side; lip $\frac{3}{4}$ in., 2-lobed to below the middle, lobes oblong. *Capsule* $\frac{1}{2}$ in., bright red, globose; valves ovate, reflexed, red inside. *Seeds* black, angled, top flat.

2. ***C. Cathcarti***, Baker; spike dense many-fl., leaves sessile lanceolate or oblong-lanceolate, bracts green oblong shorter than the calyx, seeds black angular exarillate.

SIKKIM HIMALAYA, alt. 7–8000 ft., Griffith's Collectors, &c.

Very near *C. lutea*, but more robust, flowers twice or thrice as many, bracts

larger, calyx longer and lip broader, with crisped margins; capsule and seeds quite similar.

3. **C. spicata**, Baker; spike dense many-fld., leaves oblong acuminate sessile or shortly petioled, bracts red as long as the calyx, seeds not angled completely enclosed in a white scarious aril. *Roscoeia spicata*, Smith in *Trans. Linn. Soc.* xiii. 461; *Wall. Cat.* 6530; *Horan. Prodr.* 21.

CENTRAL and EASTERN HIMALAYAS, from Kumaon to Sikkim, ascending to 8500 ft.

Stem 1-2 ft. *Leaves* sometimes 3-4 in. broad, not purple beneath. *Spike* shortly peduncled, 6-9 in.; bracts oblong, bright red, lower 1-1½ in. *Calyx* 1 in., tubular, red, minutely obtusely toothed, finally slit deeply down one side. *Corolla-tube* as long as the calyx, upper segment about 1 in.; lip bright yellow. *Staminodes* nearly as long as the upper segment of the corolla, oblanceolate-oblong. *Capsule* small, red, globose. *Seeds* ½ in., black, ovoid or flattened by pressure.

4. **C. robusta**, Baker; spike dense many-fld., leaves sessile oblong acute, bracts linear-oblong reddish as long as the calyx, seeds pink not angled enclosed in a red or yellow arillus.

SIKKIM HIMALAYA, alt. 5500-6500 ft., Clarke.

Leaves 1 ft. or less by 3 in. or more. *Spikes* peduncled, 6-9 in.; bracts 1 in. *Corolla* not seen. *Capsule* depressed-globose, ½ in. diam. *Seeds* ovoid or compressed, forming a dense mass ½ in. diam., entirely enveloped in the scarious aril.

5. **C. petiolata**, Baker; spike dense many-fld., leaves petioled oblong-lanceolate caudate, bracts oblong reddish shorter than the calyx. *Roscoeia petiolata*, Royle mss.

GARHWAL HIMALAYA; between Dehra and Landour, alt. 7000 ft., Royle.

Stem 1 ft. or more. *Leaves* 6 by 1½-2½ in., shortly petioled, erecto-patent. *Spike* 3-4 in., nearly sessile; bracts oblong, reddish, nearly 1 in. *Calyx* 1 in., reddish, obscurely bidentate, slit deeply down one side. Upper *corolla-segment* and lip pale sulphur-yellow, under 1 in. *Staminode* and stamen nearly as long as the upper segment.—Known only from an unpublished figure of Royle's artist.

6. CURCUMA, Linn.

Rootstock tuberous, bearing sessile and long stipitate tubers; stem none. *Leaves* usually oblong, often very large. *Flowers* in dense compound spikes (except in *C. Kunstleri*) crowned by a coma of coloured enlarged bracts; lower bracts ovate, membranous, enclosing several bracteolate fugitive flowers which open in succession. *Calyx* short, cylindric, minutely toothed. *Corolla-tube* funnel-shaped; segments usually ovate or oblong, upper longer and more concave. *Lateral staminodes* oblong, petaloid, connate with the short filament; anther not crested, cells contiguous, spurred at the base; lip orbicular, tip deflexed. *Ovary* 3-celled, many-ovuled; style filiform; stigma 2-lipped, lips ciliate. *Capsule* globose, membranous, finally 3-valved. *Seeds* ovoid or oblong, usually arillate.—India, Siam, Malay Islands and N. Australia.

The species of this genus are very difficult of determination and the characters are taken almost without exception from published or unpublished drawings.—Many of Sect. I. are probably varieties, but this can be determined only by a comparison of living specimens. I have failed in my endeavours to subdivide the species of the several sections.

Sect. I. **Exantha**, Horan. *Flower-spike* vernal or æstival, distinct
VOL. VI.

from the leaves, and usually developed before they appear; peduncle sheathed by scarioso bract-leaves.

1. ***C. angustifolia***, *Roxb. in Asiat. Res.* xi. 338, t. 3; *Hort. Beng.* 1 *Fl. Ind.* i. 31; dwarf, rootstock small globose, leaves lanceolate plain green shortly petioled, bracts of the coma pink, lobes of the corolla pale yellow. *Royle, Ill.* 357, 359; *Horan. Prodr.* 22. *C. longa*, *Wall. Cat.* 6605 E, F, G.

TROPICAL HIMALAYA; from Kumaon to Nepal, alt. 3-4000 ft. NORTH OUDH.

Rootstock small; tubers many, oblong, at the end of long fibres. *Leaves* with petiole 1-1½ ft.; blade lanceolate, plain green, ½-1 ft. by 2-3 in. *Spike* with peduncle æstival, ½-1 ft., 3-6 by 2 in. diam.; flower-bracts 1 in., green, ovate; pink; bracts of coma few or many. *Corolla-tube* ½ in.; upper segment ovate, lateral shorter, oblong. *Staminode* and lip bright yellow, the latter orbicular-cuneate, emarginate.—Similar plants in flower and not distinguishable in a dried state are found in Upper Burma, alt. 4000 ft., *Collett, Prain*, and in Munnipore, alt. 5000 ft. *Watt*.

2. ***C. nellgherrensis***, *Wight Ic.* t. 2006; dwarf, rootstock small, white inside, leaves lanceolate pale green shortly petioled, bracts of coma pink, lobes of corolla pale ovate. *Horan. Prodr.* 22. *C. longa*, *Wall. Cat.* 6605 C. *C. angustifolia*, *Dalz. & Gibs. Bomb. Fl.* 274, not of *Roxb.*

CONCAN; at Ramghaut. MALABAR; abundant on the S.W. slope of the Nilghiris, alt. 4500-6000 ft.

Very near *C. angustifolia*. *Leaf* and petiole together 12 in. or more; blade glabrous beneath, narrowed gradually from the middle to both ends. *Spikes* vernal, 2-4 by 1½-2 in. diam.; flowering bracts pale yellowish green, 1-1½ in. *Flowers* 1 in., bright yellow; lip orbicular, deflexed, emarginate.

3. ***C. aromatica***, *Salisb. Parad.* t. 96; in *Trans. Hort. Soc.* i. 285; rootstock large, tubers sessile yellow and aromatic inside, petiole long green, leaves large oblong pubescent beneath, bracts of the coma pink, lobes of corolla pinkish white. *Rosc. Scit.* t. 103; *Wight Ic.* t. 2005; *Thw. Enum.* 316; *Horan. Prodr.* 23. *C. Zedoaria*, *Roxb. in Asiat. Res.* 333; *Hort. Beng.* 1; *Fl. Ind.* i. 23; *Wall. Cat.* 6601 A; *Dalz. & Gibs. Bomb. Fl.* 274; *Bot. Mag.* t. 1546; *Grah. Cat. Bomb. Pl.* 209.

Throughout INDIA from the EASTERN HIMALAYA to CEYLON, wild and frequently cultivated.

Rootstock tuberous, biennial, 1 in. diam. *Leaves* 3-4 ft.; petiole as long as the blade, which is 1-2 ft. by 4-8 in., caudate, base deltoid, plain green above or variegated with lighter and darker green, clothed beneath with fine persistent pubescence. *Spike* with peduncle 1 ft., produced from April to June with or before the leaves, the later half as long, 3-4 in. diam.; flower-bracts ovate, pale green, 1½-2 in.; those of the coma larger and more or less tinged with pink. *Flowers* shorter than the bracts. *Corolla-tube* 1 in., upper half funnel-shaped; lateral segments oblong, upper longer ovate, concave. *Staminode* obtuse, as long as the corolla-segments; lip deflexed, orbicular, yellow, obscurely 3-lobed. *Stigma* obscurely 2-lobed.

4. ***C. Zedoaria***, *Rosc. Scit.* t. 109; rootstock large, sessile tubers pale yellow or whitish inside, petiole long green, leaves large oblong glabrous beneath clouded with purple down the middle, bracts of the coma bright red, lobes of corolla whitish. *Wall. Cat.* 6601 B; *Horan. Prodr.* 23. *C. Zerumbet*, *Roxb. in Asiat. Res.* xi. 333; *Hort. Beng.* 1; *Fl. Ind.* i. 20; *Coromand. Pl.* t. 101; *Wall. Cat.* 6600 A, B; *Grah. Cat. Pl. Bomb.* 209;

Royle Ill. 859; *Thw. Enum.* 316. *C. officinalis*, *Salisb. in Trans. Hort. Soc.* i. 285. *C. speciosa*, *Link Enum.* ii. 3. *Amomum Zedoaria*, *Berg. Mat. Med.* 41; *Willd. Sp. Plant.* i. 7. *A. Zerumbeth*, *König in Retz. Obs.* iii. 55. *A. latifolium*, *Lamk. Ency.* i. 134.—*Rumph. Amboin.* v. 108; *Rheede. Hort. Malab.* xi. t. 7.

EASTERN HIMALAYA, wild; cultivated throughout India.—DISTRIB. Malay Islands.

Rootstock ovoid, tubers many, some 1 in. diam., sessile, cylindric, and many oblong terminating long fibres. *Leaves* 1–2 ft., oblong, acuminate, narrowed to the base; petiole longer than the blade. *Spikes* vernal, $\frac{1}{2}$ ft. by 3 in. broad; flowering bracts $1\frac{1}{2}$ in., ovate, green, often slightly tinged with red; bracts of the coma many, spreading, bright red. *Flowers* pale yellow, rather shorter than the bracts. *Calyx* whitish, obtusely toothed, scarcely half as long as the corolla-tube. *Corolla-tube* funnel-shaped; lateral segments oblong, upper rather longer, ovate, convex. *Lip* $\frac{1}{2}$ in. broad, orbicular, deflexed, obscurely 3-lobed emarginate. *Capsule* ovoid-trigonal, smooth, dehiscing irregularly. *Seeds* oblong, aril lanceolate white.

5. *C. elata*, *Roxb. Hort. Beng.* 1; *Fl. Ind.* i. 25; rootstock large, sessile tubers pale yellow inside, petiole long green, leaves large oblong plain-green pubescent beneath, bracts of coma bright red, lobes of corolla whitish. *Rosc. Scit.* t. 104; *Wall. Cat.* 6610; *Horan. Prodr.* 23.

BURMA, *Carey*.

Rootstock and numerous sessile tubers large. *Leafy tuft* 6–8 ft.; blade 2–3 by 1 ft. *Spike* vernal, $\frac{1}{2}$ ft. by 3 in. diam.; flowering bracts $1\frac{1}{2}$ in., ovate, green; those of the coma ovate-oblong, larger, spreading. *Flowers* pale yellow, shorter than the bracts; lip obscurely 3-lobed, midlobe broad, emarginate.—Very near *C. Zedoaria*.

6. *C. comosa*, *Roxb. in Asiat. Res.* xi. 336; *Hort. Beng.* 1; *Fl. Ind.* i. 29; rootstock large, sessile tubers few pale yellow inside, petiole long green, leaves large oblong plain green glabrous beneath, bracts of coma bright red, lobes of the corolla pinkish white. *Wall. Cat.* 6609 A; *Horan. Prodr.* 23.

PEGU, *Carey*.

Leafy tuft 5–6 ft.; blade 2–3 ft., plain green except in the earliest leaves, which are clouded with faint brown down the centre. *Spike* vernal, denser and thicker than in *C. Zedoaria*; flower-bracts pinkish white; those of the coma many, bright red, 2–3 in., spreading. *Flowers* pale yellow.—Very near *C. Zedoaria*.

7. *C. ornata*, *Wall. mss. ex Voigt Hort. Suburb. Calc.* 564 (name only); rootstock large, sessile tubers 0, leaves ovate clouded in the centre when young, bracts all white tipped with mauve-purple, lobes of the corolla tinged with red.

PEGU, *Wallich*.

Stalked tubers very numerous. *Leafy stem* produced after the flowers. *Leaves* young only seen, perhaps oblong when developed. *Spike* under 1 ft. long, 3–4 in. diam.; bracts all whitish tipped with mauve-purple, the upper more so, 2 in. *Flowers* as long as the bracts; expanded limb $\frac{1}{2}$ in. diam., white tinged with yellow.—Closely allied to *C. comosa*.

8. *C. latifolia*, *Rosc. Scit.* t. 108; very tall, rootstock large, sessile tubers pale yellow inside, petiole long green, leaves large oblong clouded down the middle with purple pubescent beneath, bracts of the coma bright red, lobes of the corolla whitish. *Horan. Prodr.* 23.

BENGAL?, *Carey*.

Very near *C. Zedoaria* & *aromatica*. *Leafy tuft* 8–12 ft.; blade 3–4 by 1 ft. or more. *Spike* produced vernal, 6–8 in., 3 in. diam.; flower-bracts green, ovate, $1\frac{1}{2}$ in., of the coma many, longer and more oblong. *Flowers* pale yellow, rather shorter than the bracts; lip obscurely emarginate.—Sent by *Carey* from Serampore to the Liverpool Botanical Garden; origin unknown.

9. ***C. leucorhiza***, *Roxb. in Asiat. Res.* xi. 337; *Hort. Beng.* 1; *Fl. Ind.* i. 30; rootstock large, sessile tubers nearly white inside, petiole long green, leaves large oblong plain green glabrous beneath, bracts of the coma pink, lobes of the corolla nearly white. *Rosc. Scit.* t. 102; *Wall. Cat.* 6607; *Horan. Prodr.* 22.

BEHAR; jungles south of Bhagulpore, *Glass*.

Very near *C. Zedoaria* & *aromatica*. *Rootstock* large, ovoid; sessile tubers cylindric, sometimes nearly 1 ft. *Leafy tuft* 3–4 ft.; blade 1–2 ft. by 5–6 in., broad at the middle, plain green and glabrous on both sides. *Spike* vernal; coma nearly as long as the fertile portion; flower-bracts green, obtuse, $1\frac{1}{2}$ in.; bracts of the coma longer, more oblong. *Flowers* pale yellow, rather shorter than the bracts; central lobe of the lip distinctly emarginate.

10. ***C. cæsia***, *Roxb. in Asiat. Res.* xi. 334; *Hort. Beng.* 1; *Fl. Ind.* i. 26; rootstock large, sessile tubers pale grey inside, petiole long green, leaves large oblong with a broad purple-brown cloud down the middle, bracts of the coma and corolla-limb red. *Wall. Cat.* 6613; *Horan. Prodr.* 22.

BENGAL, *Roxburgh*.

Rootstock ovoid; sessile tubers longer and not so thick as in *C. æruginosa*. *Leafy tuft* about 3 ft.; blade $1-1\frac{1}{2}$ ft. by 5–6 in., glabrous beneath. *Spike* produced, dense, 5–6 by $2\frac{1}{2}$ –3 in. diam.; flower-bracts green, ovate, very obtuse, $1\frac{1}{2}$ in.; bracts of the coma rather longer, many, bright red. *Flowers* pale yellow, rather shorter than the bracts; lip $\frac{1}{2}$ in., broad, obscurely 3-lobed, midlobe emarginate.—“Resembles *C. Zerumbet*, *Roxb.* (*Zedoaria* supra p. 210), but differs widely in the colour of the root,” *Roxb.*

11. ***C. æruginosa***, *Roxb. in Asiat. Res.* xi. 335; *Hort. Beng.* 1; *Fl. Ind.* i. 27; rootstock large, sessile tubers palmate verdigris-green inside, petiole long green, leaves large oblong green faintly tinged with red-brown down the middle, bracts of the coma pink, lobes of the corolla pale red. *Rosc. Scit.* t. 106; *Salisb. in Trans. Hort. Soc.* i. 285; *Wall. Cat.* 6606; *Horan. Prodr.* 22.

BURMA, *Carey*.

Very near *C. Zedoaria*. *Rootstock* ovoid; sessile tubers short, above 1 in. thick, stipitate tubers purely white within. *Leafy tuft* 4–6 ft.; petiole and blade each 2–3 ft., the latter 6–9 in. broad. *Spike* vernal, 6–8 by $2\frac{1}{2}$ –3 in. diam.; flower-bracts green, ovate, obtuse, 2 in.; many upper longer oblong, pink. *Flowers* pale yellow, shorter than the bracts; corolla-tube an inch long; lip deflexed, $\frac{1}{2}$ in. broad.

12. ***C. amarissima***, *Rosc. Scit. Pl.* t. 101; rootstock large, sessile tubers yellow and very bitter inside, petiole long red-brown, leaves large oblong plain green, bracts of the coma whitish tipped with pink, lobes of the corolla red. *Horan. Prodr.* 23.

BENGAL?, *Carey*.

Rootstock very large, yellow in the centre, æruginose towards the outside. *Leafy tuft* 3 ft.; blade $1-1\frac{1}{2}$ ft. by 5–6 in. *Spike, bracts and flowers* as in *C. Zedoaria*.—Sent by *Carey* in 1824 from Serampore to the Liverpool Botanic Garden, probably a native of Bengal.

13. **C. ferruginea**, Roxb. in *Asiat. Res.* xi. 336; *Hort. Beng.* 1; *Fl. Ind.* i. 27; rootstock large, sessile tubers pale yellow and very fragrant inside, petiole long red-brown, leaves large oblong with a faint red-brown cloud down the centre, bracts of the coma bright red, lobes of the corolla red. *Rosc. Scit.* t. 105; *Horan. Prodr.* 23.

BENGAL, Roxburgh.

Rootstock ovoid; sessile tubers very stout. *Tuft of leaves* 4-5 ft.; blade 1-1½ by 5-6 in. *Spike* vernal; flowers few, large; fertile bracts tinged with red-brown, those of the coma few bright red; lip above ½ in. diam., obscurely emarginate.

14. **C. rubescens**, Roxb. in *Asiat. Res.* xi. 336; *Hort. Beng.* 1; *Fl. Ind.* i. 28; rootstock large, sessile tubers white inside, petiole long red-brown, leaves large oblong green with a red-brown midrib, bracts of the coma few pale red, limb of the corolla reddish. *Rosc. Scit.* t. 107; *Horan. Prodr.* 23. **C. erubescens**, Wall. *Cat.* 6608. **C. longiflora**, Salisb. in *Trans. Hort. Soc.* i. 286. **C. rubricaulis**, Link. *Enum.* i. 3.

BENGAL, Roxburgh.

Rootstock ovoid-cylindric; tubers sessile and many on long fibres. *Leafy tuft* 4-5 ft.; blade dark green, 1-2 ft. by 5-6 in. *Spikes* vernal, produced apart from the leaves, and sometimes also from the centre of the leaves in September, 5-6 in., under 2 in. diam; flower-bracts pale green, 1½ in.; those of the coma few, ovate, pale red. *Flowers* pale yellow, protruding beyond the bracts; lip ½ in. diam., emarginate.

SECT. II. **Mesantha**, Horan. *Flower-spike* autumnal, in the centre of the tuft of leaves; bracts not recurved at the tip.

15. **C. attenuata**, Wall. *Cat.* 6602; rootstock small, petiole long slender, leaves lanceolate, flower bracts small, those of the coma oblong tinged with red, flowers ?

BURMA; banks of the Irrawaddy, Wallich.

Rootstock globose; sessile tubers oblong. *Leafy tuft* 2½-3 ft.; petiole as long as the blade, which is firmer in texture than is usual in the genus, quite glabrous, 1-1½ ft. by 1 in., tapering gradually to the base and a long point. *Peduncle* 1 ft., slender, erect; spike dense, 3-4 in. by 1 in. diam.; flower-bracts under 1 in., membranous, very obtuse; bracts of the coma few, 1 in., bright coloured. *Flowers*, withered only seen.

16. **C. plicata**, Wall. *Cat.* 6611; rootstock small, petiole slender long or shorter, leaves firm oblong-lanceolate, flower-bracts green, those of the coma much tinged with red, flowers small pale yellow.

BURMA and PEGU, Wallich, J. Anderson.

Rootstock globose; fibres bearing small tubers. *Leafy tuft* 9-18 in.; petiole as long as the blade, which is 6-8 in. by 1½-3 in., firm, tapering gradually to both ends, bright green, with a brown dorsal cloud the centre. *Peduncle* slender, 2-4 in. *Spike* 3-4 in. by 1½ in. diam.; flower-bracts 1 in., pale green, very obtuse; those of the coma few, rather longer and more oblong. *Flowers* rather longer than the bracts. *Corolla* whitish, ½ in. diam.; upper lobe ovate; lip obscurely 3-lobed, midlobe emarginate.

17. **C. Amada**, Roxb. in *Asiat. Res.* xi. 341; *Hort. Beng.* 1; *Fl. Ind.* i. 33; rootstock large, sessile tubers pale yellow inside, petiole long, leaves large oblong-lanceolate, flower-bracts pale green, those of the coma pinkish, flowers pale yellow. *Rosc. Scit.* t. 99; *Royle Ill.* 359; *Grah. Cat. Pl. Bomb.* 209; *Dalz. & Gibs. Bomb. Fl.* 275; *Horan. Prodr.* 23.

BENGAL and the CONCANS; native and widely cultivated, under the name of Mango Ginger.

Rootstock ovoid; sessile tubers thick, cylindric. *Leafy tuft* 2-3 ft.; petiole as long as the blade, which reaches 1-1½ ft. by 6 in. or more in breadth, plain green, tapering gradually to the base and apex. *Peduncle* ½ ft. or more, hidden by the sheathing bases of the leaves. *Spike* autumnal, 3-6 in. by 1½ in. diam.; flower-bracts about 1 in., those of the coma tinged with pink. *Flowers* about as long as the bracts. *Corolla* whitish, lip pale yellow.—Not distinguishable in Herbarium specimens from *C. longa*.

18. **C. longa**, *Linn. Sp. Plant.* 2; rootstock large, sessile tubers bright yellow inside, petiole long, leaves large oblong narrowed to the base, flower-bracts pale green, those of the coma tinged with pink, flowers pale yellow. *König in Retz. Obs.* iii. 71; *Roxb. in Asiat. Res.* xi. 340; *Hort. Beng.* 1; *Fl. Ind.* i. 32; *Royle Ill.* 358; *Wall. Cat.* 6605 D; *Grah. Cat. Pl. Bomb.* 209; *Lindl. in Bot. Reg.* t. 886; *Benth. & Trim. Med. Pl.* t. 269; *Horan. Prodr.* 23. *Amomum Curcuma*, *Jacq. Hort. Vind.* iii. t. 4.—*Rheede Hort. Mal.* xi. t. 11. *Rumph. Amboin.* v. t. 67.

Widely cultivated in BENGAL and other parts of INDIA. Clarke considers it to be indigenous on Parasnath, in Behar, alt. 4-5000 ft., *Clarke*.—DISTRIB. Cultivated through the Tropics.

Rootstock ovoid; sessile tubers thick, cylindric. *Leafy tuft* 4-5 ft.; petiole as long as the plain green blade, which is 1-1½ ft. by 4-8 in. broad. *Peduncle* ½ ft. or more, hidden by the sheathing petiole. *Spikes* autumnal, 4-6 in. by 2 in. diam.; flower-bracts pale green, ovate, 1½ in.; those of the coma pale pink. *Flowers* as long as the bracts, like those of *C. Zedoaria* & *aromatica* in structure.

19. **C. montana**, *Rosc. in Trans. Linn. Soc.* viii. 355; rootstock large, sessile tubers pale yellow inside, petiole long, leaves oblong narrowed to the base, flower-bracts pale green, those of the coma pink, flowers pale yellow. *Roxb. in Asiat. Res.* xi. 342; *Hort. Beng.* 1; *Corom. Pl.* t. 151; *Fl. Ind.* i. 35; *Griff. Notul.* iii. 415; *Ic. Plant. Asiat.* t. 352, fig. 1; *Horan. Prodr.* 23. *C. pseudo-montana*, *Grah. Cat. Pl. Bomb.* 210; *Dalz. & Gibs. Bomb. Fl.* 275; *Lisboa in Journ. Bomb. Nat. Hist. Soc.* ii. 144.

CONCAN and the CIRCARS, *Roxburgh, &c.*

Rootstock ovoid, perennial. *Leafy tuft* 2-3 ft.; blade 1 ft. or more by 6-8 in., plain green, narrowed to the base; petiole green, deeply channelled, as long as the blade. *Peduncle* shorter than the petiole. *Spike* autumnal, ½ ft. by 2 in. diam.; flower-bracts ovate, 1½ in. *Flowers* about as long as the bracts. *Corolla*-segments subequal, lip longer, deflexed, obscurely 3-lobed.—*C. Kuchoor*, *Royle Ill.* 359 (name only), which is cultivated on the hills above the Dehra Doon, is said to be nearly allied. A flowerless specimen from Mussoorie, sent by Mr. Duthie, furnishes no distinctive characters.

20. **C. Kuntzleri**, *Baker*; petiole long, leaves oblong narrowed to the base, bracts very broad all pale green, coma 0, flowers yellow.

PEGU, *Kunstler (Hort. Calcutt.* 1882).

Rootstock not seen. *Leaf-blade* under 1 ft., 4-6 in. broad, acute, green above, tinged with purple beneath; petiole 5-6 in., robust, deeply channelled. *Peduncle* very short; spike short, 2 in. diam., without any coma of coloured bracts; flower-bracts 1½ in. long and broad. *Corolla*-tube as long as the bract; segments lanceolate, ½ in.; lip obovate-cuneate, rather longer than the corolla-segments, yellow throughout, emarginate.—Near *C. montana*.

21. **C. reclinata**, *Roxb. in Asiat. Res.* xi. 342; *Hort. Beng.* 1; *Fl. Ind.* i. 36; rootstock small, sessile tubers 0, petiole short, leaves thin oblong

obtuse, flower-bracts green tinged with red, those of the coma reddish, flowers reddish-yellow. *Horan. Prodr.* 24.

CENTRAL INDIA, *Colebrooke*.

Rootstock oblong, bearing many subglobose tubers at the end of fibres. *Leaves* plain green, obtuse, rounded at base, 6-8 by 3-4 in.; petiole shorter than the blade. *Peduncle* very short. *Spike* autumnal, oblong, 3-4 by 2 in. diam.; bracts 1 in.; those of the coma oblong, ascending, similar to flower-bracts in colour. *Flowers* small, dull red, except the yellow orbicular emarginate lip.

22. **C. decipiens**, *Dalz. in Kew Journ.* ii. (1850), 144; *rootstock* small, sessile tubers 0, petiole short, leaves thin cordate-ovate cuspidate, bracts and flowers purple. *Dalz. & Gibs. Bomb. Fl.* 274; *Horan. Prodr.* 23.

The CONCAN, *Dalzell, Law*.

Rootstock bearing numerous small almond-like tubers at the end of fibres. *Leaves* thin, 6-8 in. by 3-4, base rounded tip, deltoid with a small cusp; petiole as long as the blade. *Spikes* æstival, earlier lateral, later central, 4-6 by 1½-2 in.; peduncle short; lower bracts ovate, 1 in.; many upper sterile, longer, oblong; flower shorter than the bract; lip bifid, margins curled.

23. **C. albiflora**, *Thw. Enum.* 316; *rootstock* small, sessile tubers 0, petiole short, leaves small oblong rounded at the base, flower-bracts green all fertile, flowers white with a yellow spot on the lip. *Hook. f. in Bot. Mag.* t. 5909.

CEYLON; Maskellia, in the Ambagamowa district, at a low elevation.

Rootstock bearing a few small tubers at the end of fibres. *Leaves* bright green, 6-8 by 2½-3 in., acute, base rounded or cordate; petiole deeply channelled, as long as or rather longer than the blade. *Peduncle* very short; spike oblong, 3-4 in.; lower bracts 2 in., oblong-lanceolate, acuminate, upper shorter, ovate. *Flowers* 1 in. long. *Corolla*-lobes oblong. *Staminode* broad; lip ¾ in. broad, shallow, emarginate, pure white, with a yellow spot at the throat.

24. **C. oligantha**, *Trimen in Journ. Bot.* 1885, 245; *rootstock* small, sessile tubers 0, petiole short, leaves small ovate narrowed to the base, flower-bracts green all fertile, flowers white with a yellow spot on the lip.

CEYLON; Central Province, near the Mahaweli river, *Trimen*.

Near *C. albiflora*. *Leaves* 5-7 in., thin, bright light transparent green, with distinct veins and transverse veinlets. *Peduncle* short, slender; spike 4-6 in.; bracts green, appressed, acuminate; flowers few, erect, large for the genus. *Corolla*-tube 1 in.; segments long, pinkish. *Staminode* subacute, crisped, pure white; lip broad, deeply bifid, with a yellow stain at the throat. *Seeds* oblong, grey, shining, exarillate.

SECT. III. **Hitcheniopsis**, *Baker*. *Spike* autumnal, from the centre of the tuft of leaves; bracts very obtuse, adnate at the sides and spreading at the tip.

25. **C. parviflora**, *Wall. Pl. Asiat. Rar.* i. 47, t. 57; *rootstock* small, leaves small oblong rounded to the base, fertile bracts green, those of the coma greenish-white, lip violet. *Horan. Prodr.* 24.

BURMA; banks of the Irrawaddy, near Prome, *Wallich*.

Rootstock oblong, fibres bearing a few small fusiform tubers. *Leaves* about six to a tuft; petiole 4-8 in.; blade green, cuspidate, ½ ft. by 2-3 in., veins darker green. *Peduncle* short, slender, hidden by the clasping petioles; spike oblong, 2 in. by 1 in. diam.; flower-bracts ¾-1 in., very obtuse, tips spreading. *Flowers*

as long as the bracts. *Corolla*-segments small, ovate; staminodia oblong, white, as long as the *corolla*-segments; lip longer, obovate-cuneate, obscurely emarginate.

26. **C. strobilifera**, *Wall. Cat.* 6599; rootstock small, leaves small oblong, bracts all green, flowers pale yellow. *C. strobilina*, *Wall. mss.*; *Grah. Cat. Pl. Bomb.* 210.

PEGU; near Rangoon, *Wallich*.

Rootstock bearing a few globose sessile tubers. *Leaves* about six to a tuft; petiole green, deeply channelled, 6-8 in.; leaves 6-8 by $2\frac{1}{2}$ -3 in., bright green, acute, base rather rounded, darker green along the veins. *Peduncle* much shorter than the petioles; spike oblong, 3-4 in. by 2 in. diam.; bracts all similar, green, very obtuse, spreading at the tip. *Flowers* about as long as the bracts. *Corolla*-segments small, whitish; lip short, deflexed, orbicular, distinctly emarginate.

27. **C. grandiflora**, *Wall. ex Voigt Hort. Suburb. Calc.* 565 (name only); rootstock small, leaves small oblong acute, bracts all pale green, flowers pale yellow.

MALAY PENINSULA, *Wallich*.

Rootstock oblong; fibres not bearing tubers. *Leaves* 6-8 to a tuft; petiole deeply channelled, 6-10 in.; blade 6-8 by 3-4 in., cuspidate, base rounded, darker green along the veins. *Peduncle* much shorter than the petioles. *Spike* oblong, 3-4 in.; bracts all similar, very obtuse, spreading at the tip. *Flowers* rather longer than the bracts. *Corolla*-segments ovate or oblong; staminode short and broad; lip $\frac{3}{4}$ in., broad, obscurely emarginate, both primrose-yellow.

28. **C. petiolata**, *Roxb. Fl. Ind. i.* 37; rootstock small, leaves oblong base rounded, flower-bracts green, those of the coma purple or lilac, flowers yellowish-white. *Rosc. Scit. t.* 100; *Horan. Prodr.* 23; *Hook. f. in Bot. Mag. t.* 5821. *C. cordata*, *Wall. Pl. Asiat. Rar. i.* 8, t. 10; *Cat.* 6598; *Horan. Prodr.* 23; *Hook. Bot. Mag. t.* 4435. *C. cordifolia*, *Roxb. Hort. Beng. 1.*

BURMA, PEGU, and TENASSERIM, *Roxburgh, &c.*

Rootstock with a few sessile tubers, pale yellow inside, and many at the end of fusiform fibres. *Leaves* 4-6 to a tuft; petiole $\frac{1}{2}$ -1 ft.; blade 6-9 in., thin, cuspidate. *Peduncle* much shorter than the petioles; spike $\frac{1}{2}$ ft. by 2 in. diam.; flower-bracts $1\frac{1}{2}$ in., very obtuse, spreading at the tip; those of the coma similar in size and shape, but brightly coloured. *Flowers* nearly as long as the bracts. *Corolla*-tube nearly an inch long; upper segment convex, cuspidate; lip suborbicular, deflexed, emarginate.

29. **C. Roscoeana**, *Wall. Pl. Asiat. Rar. i.* 8, t. 9; *Cat.* 6597; rootstock small, leaves oblong rounded at the base, bracts of the flowers and coma both bright red, flowers yellowish white. *Hook. in Bot. Mag. t.* 4667; *Lem. Jard. Fleur. t.* 327; *Horan. Prodr.* 24. *C. coccinea*, *Wall. mss.* *Hitchenia Roscoeana*, *Benth. in Gen. Plant. iii.* 643.

BURMA and PEGU, *Wallich*.

Rootstock without sessile tubers, but with many small ones at the end of the fibres. *Leaves* 6-8 to a tuft; petioles $\frac{1}{2}$ -1 $\frac{1}{2}$ ft.; blade 6-12 in., cuspidate, bright green, darker along the veins. *Peduncle* short, hidden by the sheathing petioles; spike 6-8 in., by 2-3 in. diam.; bracts very obtuse, adnate at the sides and spreading at the tip; those of the coma similar in size, shape and colour to the lower ones. *Flowers* about as long as the bracts. *Corolla* $\frac{1}{2}$ in. diam., segments oblong, subequal; limb $\frac{1}{2}$ in. diam.; staminodes oblong; lip orbicular, entire.

IMPERFECTLY KNOWN SPECIES.

C. KURZII, *King mss.*; nearly allied to *C. petiolata*, but leaves larger, petioles longer, scape longer, bracts more imbricating, and their tips less spreading.—S. Andaman Islds.

7. GASTROCHILUS, Wall.

Perennial, rarely annual; rootstock 0 or creeping; root-fibres cylindric or slender. *Leafy stem* absent or present. *Leaves* oblong, acute. *Flowers* solitary or spicate, often secund. *Calyx* short, spathaceous. *Corolla*-tube slender; segments equal, connivent, linear-oblong, ascending; lateral staminodes petaloid, broader than the corolla lobes, oblanceolate-oblong; filament very short; anther-cells parallel, connective neither crested nor spurred; lip oblong, longer than the corolla-segments, entire. *Ovary* oblong, 3-celled; ovules few, or many, superposed; style filiform; stigma subglobose. *Capsule* oblong. *Seeds* ovoid, aril small basal.—India and one other species from China.

1. **G. longiflora**, Wall. *Plant. Asiat. Rar.* i. 22, t. 25; *Cat.* 6589; perennial, stemless, leaves large long-petioled often cordate, flowers 1-2 in radical spikes, corolla-tube much longer than the bracts, staminodes white rather longer than the white corolla-segments. *Hook. in Bot. Mag.* t. 4010; *Horan. Prodr.* 22. *Alpinia Hamiltoniana*, Wall. *Cat.* 6579. *Banglium sulphureum*, Ham. mss.

SIKKIM HIMALAYA, KHASIA HILLS, ASSAM, and from PEGU and UPPER BURMA to MALACCA.

Root-fibres tufted, cylindric. *Leaves* about 4 in a tuft; petiole long, erect, channelled; blade $\frac{1}{2}$ –1 ft. or more, base cordate or cuneate, often tinged purple beneath. *Scape* radical; bracts about 2 in., many, imbricate, scarious, oblong-lanceolate. *Calyx* much shorter than the bract. *Corolla*-tube 2–3 in., very slender; segments $\frac{1}{2}$ –1 in. *Stamen* rather shorter than the corolla-segments; lip half as long again as the corolla-segments, oblong-cuneate, sometimes 1 in. broad, more or less tinged with red and crisped on the incurved margins.—Perhaps more than one species is included. The Bot. Mag. plant is *G. Jenkinsii*, Wall. mss. and has larger flowers than that figured by Wallich, of a purer white, the lip tipped with bright red. *G. speciosa*, Kurz mss. has still larger flowers of a dull sulphur yellow, with the sides of the lip clouded with purple.

2. **G. minor**, King mss.; perennial, stemless, leaves oblanceolate-oblong long-petioled, corolla-tube not longer than the bract, staminodes and lip scarcely longer than the corolla-segments.

PERAK, King's Collector.

Rootstock slender, widely creeping. *Leaves* 1–4 in a tuft; petiole 3–4 in.; blade 4–5 in., glabrous, moderately firm, narrowed to the base. *Flowers* several in a sessile spike; bracts 2 in., lanceolate, membranous. *Corolla*-tube slender to the apex; segments 1 in., oblong, whitish; lip oblong, marked with red and yellow, with a decurved tip and incurved margins.

3. **G. pulcherrima**, Wall. *Pl. Asiat. Rar.* i. 22, t. 24; perennial, leafy stem usually produced, leaves sessile or shortly petioled, flowers many in terminal spikes with imbricate bracts, corolla-tube not longer than the bract, staminodes white not longer than the white corolla-segments. *Paxt. Mag. Bot.* vii. 75, with fig.; *Bot. Mag.* t. 3930; *Horan. Prodr.* 22.

PEGU, Wallich; TAYOY, Gomex; TENASSERIM, Helfer, Lobb, Parish; PENANG, Maingay.

Rootstock creeping; root-fibres thick, fleshy. *Stem* 6–12 in., rarely 0. *Leaves* 4–6 in., oblong, caudate. *Spike* sessile, 2–3 in.; bracts oblong-lanceolate, green, about $1\frac{1}{2}$ in. *Calyx* spathaceous, rather shorter than the bract. *Corolla*-segments linear-oblong, $\frac{1}{2}$ in. *Stamen* shorter than the corolla-segments; lip 1 in., obovate-cuneate, white tinged with pink.

4. **G. tillandsioides**, Baker; perennial, stem 0, leaves distinctly petioled, flowers many in a long subsessile spike with imbricate bracts, staminodes linear-oblong not longer than the corolla-segments.

?PEBAK; *Kunstler*.

Leaves 6-8 in., oblong, subacute, base rounded, green above, purplish beneath, petiole nearly or quite as long as the blade. *Spike* 6 in.; bracts 20-30, oblong, about 1 in. *Staminodes* $\frac{1}{4}$ - $\frac{1}{2}$ in., whitish, similar to the corolla-segments in shape and size; lip orbicular-cuneate, $\frac{1}{2}$ in. long and broad, pure white with a faint yellow spot at the throat; stamen half as long as the lip; filament as long as the anther.—Described from a specimen cultivated in *Hort. Calcutt.*

5. **G. rubrolutea**, Baker; perennial, leafy stem produced, leaves oblong caudate sessile or shortly petioled, flowers many, spike very narrow terminal on the stem or on a radical scape, corolla-tube not longer than the bract, staminodes yellow rather longer than the red corolla-segments.

KHASIA HILLS; J. D. H. & T. T., *Clarke*.

Leafy stem $\frac{1}{2}$ -1 ft. or more. *Leaves* 6-8 in. narrowed to the base. *Spike* 2-3 in., as long as its peduncle or scape, much narrower and fewer flowered than in *G. pulcherrima*; bracts few, small, closely sheathing the scape. *Corolla-segments* 1 in.; staminodes yellow, $\frac{1}{3}$ in. broad; stamen nearly as long as the staminodes; lip oblong-cuneate, panduriform, upper half red, lower yellow.

6. **G. parvula**, Wall. *Cat.* 6590; annual, stem short, leaves small shortly petioled oblong, flowers solitary from the centre of the leaves, corolla-tube not longer than the bract, staminodes longer than the corolla-segments.

TAVOY, *Gomez*.

A dwarf annual, with 3-4 acute membranous leaves $1\frac{1}{2}$ -2 in. long at the top of a short stem. *Root-fibres* all slender. *Bract* green, under 1 in., wrapped tightly round the corolla-tube, its base hidden by the sheath of the uppermost leaf. *Corolla-segments* linear-oblong, greenish, $\frac{1}{4}$ in.; lip $\frac{1}{2}$ in., obovate-cuneate; stamen arcuate half as long as the lip. Habit of a *Kämpferia* of the *Sincorus* section.

IMPERFECTLY KNOWN AND UNDESCRIBED SPECIES.

G. ? **TILIÆFOLIA**, Baker; annual, root-fibres slender fascicled, leafy stem short, leaves 4-5 by 3 in. distinctly petioled ovate cuspidate, base oblique, spike 4-5 in., terminal, sessile dense-fl., bracts 1- $1\frac{1}{2}$ in., oblong-lanceolate scarioso imbricate, corolla-tube as long as the bract, segments lanceolate under an inch, staminodes not longer than the segments, lip oblong-cuneate $1\frac{1}{2}$ in.—KHASIA HILLS, tropical region, *Hk. f. & Thomson* (*Monolophus* 6, *Herb. Ind. Or.*). I have not been able to make out the structure of the anther.

G. **AFFINIS**, Wall. *mss. ex. Voigt Hort. Suburb. Calcutt.* 372; *Horan. Prodr.* 22).—Assam.

G. **JENKINSII**, Wall. *mss. l. c.*—Assam. (See under *G. longiflora*.)

8. **KÄMPFERIA**, Linn.

Rootstock often tuberous, fibres various. *Stem* short or 0. *Leaves* few. *Flowers* spicate, on radical scapes, or terminating a leafy stem. *Calyx* short, cylindric, splitting down one side. *Corolla-tube* long, slender; segments equal, usually spreading. *Staminodes* broad, petaloid; stamen short, arcuate; anther-cells separated on a broad connective, which is produced above into a petaloid crest, not spurred below; lip broad, usually bifid. *Ovary* 3-celled; style long, filiform; stigma turbinate. *Capsule* oblong; pericarp thin. *Seeds* subglobose, aril small lacerate.—Tropics of the Old World.

SUBGEN. I. **Sincorus**, *Horan.* Stemless. *Leaves* contemporary with the flowers. *Spikes* central, radical. *Lip* usually bifid.

* *Anther crest* 2-lobed, 2-fid, or toothed.

1. **K. Galanga**, *Linn. Sp. Pl.* 3; *Hort. Cliff.* t. 3; leaves sub-orbicular subsessile, corolla-segments lanceolate, staminodes obovate-cuneate white, lip white with a lilac throat deeply bifid, anther-crest quadrate, lobes two rounded. *Rosc. in Trans. Linn. Soc.* viii. 351; *Scit. Pl.* t. 92; *Roxb. in Asiat. Res.* xi. 327; *Hort. Beng.* 1; *Fl. Ind.* i. 15; *Wall. Cat.* 6581; *Wight. Ic.* t. 899; *Grah. Cat. Pl. Bomb.* 208; *Dalz. & Gibs. Bomb. Fl.* 274; *Horan. Prodr.* 21. *K. sessilis*, *Kænic in Retz. Obs.* iii. 67. *K. humilis*, *Salisb. Prodr.* 6. *K. plantaginifolia*, *Salisb. in Trans. Hort. Soc.* i. 286. *Alpinia sessilis*, *Kænic in Retz. Obs.* iii. 62.—*Rumph. Amboin.* v. t. 69, fig. 2. *Rheede Malab.* xi. t. 41.

In the plains throughout BRITISH INDIA.—DISTRIB. Malay isles.

Rootstock tuberous; root-fibres cylindric. *Leaves* 3-6 in. long, spreading flat on the ground, tip deltoid, thin, deep green, 10-12-ribbed, margin not thickened nor coloured; petiole short, channelled. *Flowers* 6-12, fugitive, sweet-scented, opening successively; bracts lanceolate, green, small. *Calyx* as long as the bract. *Corolla-tube* 1 in.; segments $\frac{1}{2}$ in.; staminodes $\frac{1}{2}$ in. long and broad; lip 1 in. broad, bifid below the middle, lobes obtuse; anther-crest small, with two shallow obtuse lobes.

Var. *K. LATIFOLIA*, *Donn. Hort. Cant.* ed. vi. p. 3; lip spotted at the throat with brown. *K. Galanga*, *Willd., Enum.* i. 3; *Bot. Mag.* t. 850.

2. **K. marginata**, *Carey in Rosc. Scit. Pl.* t. 93; leaves orbicular subsessile edged with brown, corolla-segments lanceolate, staminodes lilac obovate, lip lilac cut deeply into two orbicular lobes, anther crest bifid. *Horan. Prodr.* 21.

BURMA, *Carey*; TENASSERIM, *Parish*.

Root-fibres oblong. *Leaves* spread flat on the ground, 4-6 in. long and broad, firmer in texture than in *K. Galanga*, tinged reddish-brown beneath, and with a distinct brown margin. *Flowers* few in a sessile central cluster; bracts and calyx under 1 in. *Corolla-tube* 1 in.; segments as long, white. *Staminodes* as long as the corolla-segments; lip 1 in., lobes $\frac{1}{2}$ in. broad, overlapping; anther-crest deeply bifid, lobes bidentate.—Nearly allied to *K. Galanga*. An allied plant with purple flowers sent by Dr. King from Quedah in the Malay Peninsula, is probably a distinct species.

3. **K. angustifolia**, *Roscoe in Trans. Linn. Soc.* viii. 351; *Scit. Pl.* t. 94; leaves ascending lanceolate, corolla-segments long linear, staminodes oblong white, lip lilac deeply cut into two obovate lobes, anther-crest bifid. *Roxb. in Asiat. Res.* xi. 328; *Hort. Beng.* 1; *Fl. Ind.* i. 17; *Red. Lil.* t. 389; *Horan. Prodr.* 21. *K. Roxburghiana*, *Schult. Mant.* i. 33. *K. undulata*, *Link.*; *Teysm. and Binnen. in Miq. Fl. Ind. Bat.* iii. 598.

Foot of the EASTERN HIMALAYAS. BENGAL, *Roxburgh*.—DISTRIB. Malay isles.

Rootstock tuberous; root-fibres slender or cylindric. *Leaves* many, 6-8 by 1 in. or less, sessile, ascending, lanceolate. *Flowers* few in a central sessile spike; bracts small. *Calyx* 1 in. *Corolla-tube* white, twice as long as the calyx; segments 1 in., very narrow, white, reflexing; staminodes erect, $\frac{1}{2}$ - $\frac{3}{4}$ in.; lip reflexed, $\frac{1}{2}$ by $\frac{3}{4}$ in., bifid about halfway down; lobes suborbicular; anther-crest quadrate, shallowly bifid.

4. **K. ovalifolia**, *Roxb. Hort. Beng.* 1; *Fl. Ind.* i. 19; *Corom. Pl.* t. 278; leaves oblong distinctly petioled, spike sessile, corolla-segments

large linear, staminodes oblong white, lip lilac deeply cut into two obovate emarginate lobes, anther-crest 3-4-dentate, *Rosc. Scit. Pl.* t. 95; *Wall. Cat.* 6583; *Horan. Prodr.* 21. *K. diversifolia*, *Link. in Dietr. Sp. Plant.* i. 57; *Horan. Prodr.* l. c. *K. Parishii*, *Hook. f. in Bot. Mag.* t. 5763.—*Trilophus*, *Lestib. in Ann. Sc. Nat. ser. ii. xv.* 341.

TENASSERIM, *Parish*; MALACCA, *Farquhar*.—DISTRIB. Siam.

Rootstock tuberous; root-fibres cylindric or oblong at the tip. *Leaves* 6 by 4 in., spreading, thin, pale green, acute; channelled petiole in the wild plant 2-3 in., sometimes 6 in. in the cultivated. *Spike* few-fl., sometimes produced before the leaves; bracts imbricate, 1-2 in., pale green striped with brown. *Corolla*-tube $1\frac{1}{2}$ -2 in. long; segments narrow, $1\frac{1}{2}$ in.; staminodes erect, 1 by $\frac{1}{2}$ in.; lobes of lip short and broad, imbricate, bright lilac; anther-crest large, quadrate, usually trifid.—Connects the sections *Sincorus* and *Protanthium*, and is included by Horaninov in both, under different names.

5. ***K. speciosa***, *Baker*; leaves suborbicular erect shortly petioled, flowers in a sessile head large pure white, corolla-tube very long, segments ovate, staminodes large obovate, lip patent broader than long bifid.

BURMA (*lc. in Hort. Calcut.*)

Petiole 2-3 in.; blade 5-6 in. long and broad, plain green or variegated deeper and paler green. *Corolla*-tube 3 in.; segments nearly 1 in.; staminodes and lip 1 in., the expanded limb being 2 in. diam.

6. ***K. pandurata***, *Roxb. in Asiat. Res.* xi. 328, t. 2; *Hort. Beng.* 1; *Fl. Ind.* i. 18; leaves oblong petioled large erect, corolla-segments ascending, staminodes oblong as long as the corolla-segments white, lip oblong-cuneate twice as long as the staminodes entire, anther-crest quadrate bifid. *Rosc. Scit. Pl.* t. 96; *Bot. Reg.* t. 173; *Wall. Cat.* 6586; *Grah. Cat. Pl. Bomb.* 208; *Dalz. & Gibs. Bomb. Fl. Suppl.* 87; *Thw. Enum.* 316; *Horan. Prodr.* 21. *K. ovata*, *Rosc. in Trans. Linn. Soc.* viii. 351. *Curcuma rotunda*, *Linn. Sp.* 2.—*Rheede, Hort. Mal.* xi. t. 10; *Rumph. Amboin.* v. t. 69, fig. 2.

CONCAN and GUZERAT, *Graham*. SOUTH ANDAMAN ISLD., *Kurz*. TENASSERIM, *Helfer*. CEYLON, *Thwaites*.—DISTRIB. Malay Islds.

Rootstock perennial, tuberous, bright yellow; root-fibres cylindric. *Leaves* 9-12 in., acute, narrowed to the base; petiole long, channelled. *Spike* peduncled, hidden in the dilated bases of the petioles; bracts oblong or lanceolate, moderately firm, $1\frac{1}{2}$ -2 in. *Calyx* shorter than the bracts. *Corolla*-tube 2-2 $\frac{1}{2}$ in.; segments whitish, above $\frac{1}{2}$ in.; lip 1 in., white, tinged with red, margins incurved; anther-crest small.—Resembles *Gastrochilus* in the shape of the flower, especially *G. longiflora*, but the anther is crested. Cultivated for its ginger-like rootstock.

7. ***K. Prainiana***, *King mss.*; leaves oblong-lanceolate erect, petiole as long as the blade, corolla-segments oblong ascending, lip oblong-cuneate much longer than the corolla-segments.

MALAY PENINSULA; Goping, *King's Collector*.

Rootstock small. *Leaves* about 4 in a tuft; petiole 6 in.; blade 8-9 by 2-2 $\frac{1}{2}$ in., moderately firm, glabrous, narrowed to the base. *Flowers* in a sessile cylindric spike 6 in. long; bracts many, oblong, imbricate, membranous. *Corolla* whitish; tube 1 in., slender, segments under $\frac{1}{2}$ in., lip the same, but much smaller.—Nearly allied to *K. pandurata*.

** *Anther-crest entire*.

8. ***K. Roscoeana***, *Wall. in Bot. Reg.* t. 1212; leaves orbicular subsessile variegated black and green; flower entirely white; corolla-segments

short lanceolate; staminodes obovate, lip deeply cut into two obovate lobes, anther-crest ovate entire. *Hook. in Bot. Mag. t. 5600; Horan. Prodr. 21. K. Roscoe, Wall. Cat. 6584.*

BURMA, *Wallich* (not NEPAL, as stated by Horaninov).

Root-fibres many, fascicled, cylindric. *Leaves* 2, spreading flat on the ground, obscurely cuspidate, 4–5 in., firmer in texture than in *K. Galanga*, margins pale, obscurely crisped. *Flowers* few, in a sessile central tuft; bracts and calyx under 1 in. *Corolla-tube* 1–1½ in.; segments ½ in.; staminodes ½ in. long and nearly as broad; lobes of the lip similar in shape and size; crest of the anther small and not at all lobed.—Nearly allied to *K. Galanga*.

9. ***K. parviflora***, *Wall. Cat. 6587*; leaves subsessile ovate, corolla-segments short linear-oblong, staminodes narrow, lip lilac obovate-cuneate emarginate, anther-crest orbicular entire.

BURMA; banks of the River Attran, *Wallich*.

Root-fibres slender. *Leaves* thin, ovate, 3–4 in. long, rounded at the base, plain green; petiole short, channelled. *Flowers* few in a sessile central tuft; bracts 1 in., lanceolate, green. *Calyx* not longer than the bract, *Corolla-tube* 1½ in.; segments greenish, ½ in., upper ascending, rather concave. *Lip* ½ by ½ in., subemarginate; anther-crest obtuse, as broad as long.—The flower resembles that of a *Gastrochilus*, but the anther is crested.

10. ***K. involucrata***, *King mss.*; leaves oblanceolate-oblong long-petioled erect, flowers several in a head surrounded by large oblong green bracts, corolla-segments ascending, staminodes rather longer than the corolla-segments, lip orbicular bifid twice as long as the corolla-segments, anther-crest orbicular entire.

SIKKIM HIMALAYA, *Jaffray*. ASSAM, *Jenkins*.

Stemless. *Petiole* 5–6 in.; blade 6–7 by 1½–2 in., green, membranous, narrowed gradually to the base. *Peduncle* 1–4 in.; outer bracts membranous, 1½–2 in., inner small lanceolate. *Corolla-tube* 1½ in.; segments small, oblong, whitish. *Staminodes* crested, oblong, white, ¾–½ in.; lip ½ in. long and broad, white with a yellow blotch in the centre.

11. ***K. Andersoni***, *Baker*; leaves oblong acute shortly petioled ascending, flowers several in a head surrounded by large oblong green bracts, staminodes small obovate, lip orbicular emarginate, anther-crest orbicular entire.

BURMA, *T. Anderson (in Hort. Bot. Calc.)*.

Petiole 1–2 in.; blade 3–4 in., light green, not mottled, narrowed to the base. *Peduncle* 0; bracts 1½–2 in. *Corolla-tube* shorter than the bracts; segments small, ovate; lip above ½ in. long and broad, pure white with a yellow spot at the throat.—Nearly allied to *K. involucrata*.

12. ***K. concinna***, *Baker*; leaves oblong-lanceolate long-petioled ascending, spikes oblong shortly peduncled, corolla-tube rather longer than the bract, flower white blotched with red, lip oblong margins incurved, anther-crest small entire.

PERAK, alt. 4–600 ft., *King's Collector*.

Rootstock very slender. *Leaf-blade* subcoriaceous, glabrous, 6–8 by 2 in.; petiole slender, 9–12 in. *Spikes* many-flid.; bracts 1 in., ovate-lanceolate, reddish. *Calyx* very short. *Corolla-tube* very slender, gradually dilated to the throat; segments oblong, ½ in.—Habit of *K. pandurata*.

Subgen. II. ***Protanthium***, *Horan*. Stemless. *Leaves* not produced till after the flowers. *Spikes* radical. *Lip* and *anther-crest* bifid.

13. **K. rotunda**, Linn. *Sp.* 3; leaves oblong erect petioled, corolla-segments long linear, staminodes oblong acute white, lip lilac or reddish deeply cut into two suborbicular lobes, anther-crest deeply bifid. *Roxb. in Asiat. Res.* xi. 327; *Hort. Beng.* 1; *Fl. Ind.* i. 16; *Rosc. Scit. Pl.* t. 97; *Bot. Mag.* t. 920 and 6054; *Wight Ic.* t. 2029; *Grah. Cat. Pl. Bomb.* 208; *Dalz. & Gibs. Bomb. Fl., Suppl.* 86; *Thw. Enum.* 316. *K. longa*, Jacq. *Hort. Schoenb.* t. 317; *Red. Lil.* t. 49. *K. versicolor*, Salisb. in *Trans. Hort. Soc.* i. 286.—*Rheede Hort. Mal.* xi. t. 9.

Throughout INDIA from the HIMALAYAS to CEYLON and the MALAY PENINSULA, often cultivated.—DISTRIB. Malay Islands.

Rootstock tuberous; root-fibres many, very thick. *Leaves* erect, petiole short channelled; blade 12 by 3-4 in., usually variegated with darker and lighter green above and tinged purple beneath. *Spikes* 4-6-fl., produced in March and April before the leaves; bracts oblong, acute, outer short, the inner 2-3 in. long. *Calyx* nearly as long as the corolla-tube, minutely toothed, slit down one side. *Corolla*-tube 2-3 in., segments spreading, nearly as long as the tube. *Staminodes* $1\frac{1}{2}$ -2 in.; lip rather shorter, reflexed, 2-lobed to below the middle lobes $\frac{3}{4}$ -1 in. broad, deeply tinged with lilac or red-purple; anther-crest cut half way down into two lanceolate lobes, with often a small tooth between them.

14. **K. candida**, Wall. *Pl. Asiat. Rar.* i. 47, t. 56; *Cat.* 6585; flowers white, corolla-segments lanceolate, staminodes obovate obtuse, lip orbicular-cuneate shallowly bifid, anther-crest bifid.

BURMA, Wallich, &c; Shan Hills, 3000 ft., Collett.

Rootstock tuberous; root-fibres slender, with large tubers at the end. *Leaves* not known. *Spikes* 6-8-fl.; bracts broader than in *K. rotunda*, inner 2-3 in. long. *Calyx* 1 in., minutely toothed. *Corolla*-tube twice as long as the calyx; segments 1 in. or less; staminodes $1\frac{1}{2}$ by 1 in., erect, pure white; lip reflexed, $1\frac{1}{2}$ in. long and broad, tinged yellow in the centre; anther-crest much smaller than in *K. rotunda*.

Subgen. III. **Monolophus**, Wall. (gen). *Leafy stem* usually produced. *Leaves* contemporary with the flowers. *Spikes* terminal on the leafy stem. *Lip* bifid or entire. *Anther-crest* entire.

15. **K. siphonantha**, King mss.; leafy stem none, leaves oblong oblique at the base, petiole longer than the blade, flower lilac, staminodes oblong, lip broad deeply bifid.

ANDAMAN ISLANDS, King's Collector.

Annual, stemless; root-fibres slender. *Leaves* 3 in a tuft; petiole 6 in.; blade 4-5 in., oblong, acute, membranous, glabrous, base unequal-sided, sides rounded. *Flowers* solitary at the end of a long very slender spike; bracts few, narrow, membranous. *Corolla*-tube much exserted from the upper bract; segments $\frac{1}{2}$ in., oblong-lanceolate, greenish.

16. **K. elegans**, Wall. *Cat.* 6593; leafy stem short or none, leaves oblong, petiole rather shorter than the blade, flowers bright lilac, staminodes obovate-cuneate, lip cut nearly to the base into two obovate lobes. *K. Crawfordii*, Wall. *ined.* *Monolophus elegans*, Wall. *Pl. Asiat. Rar.* i. 24, t. 27; *Horan. Prodr.* 22.

PEGU, MARTABAN, TAVOY, and TENASSERIM.

Annual, root-fibres slender. *Leaves* 2-4 to a tuft, 5-6 by 2-3 in., acute, thin, green above, much paler beneath, base rounded; petiole channelled, nearly as long as the blade. *Cluster* of flowers shortly peduncled; outer bracts 2 in., oblong-lanceolate, green. *Calyx* about 1 in. *Corolla*-tube slender, twice as long as the

calyx; segments less than 1 in., green, lanceolate; staminodes spreading, $\frac{1}{2}$ in.; lip $\frac{1}{2}$ –1 in. long and broad, bifid nearly to the base; anther-crest large, suborbicular.

17. **K. macrochlamys**, *Baker*; stemless, leaves lanceolate petioled, flowers white, staminodes orbicular-cuneate, lip broad cut deeply into two orbicular lobes.

TENASSERIM, *Parish*.

Leaves 4–5 by 1 in., acute, narrowed gradually into a channelled petiole 2–3 in. long. *Cluster* of flowers shortly peduncled; outer bracts 2 in., oblong, purplish-brown. *Corolla*-segments $\frac{1}{2}$ in.; staminodes a little longer than the corolla-segments; lip 1 in. broad, bifid half way down, yellow and pilose below; anther-crest ovate, entire.—Described from a sketch and notes made by Prof. Oliver of a plant that flowered in Kew in May, 1871.

18. **K. linearis**, *Wall. in Roxb. Fl. Ind. ed. Wall. & Carey*, i. 20; leafy stem elongate, leaves sessile lanceolate acuminate, flowers white, corolla-tube half as long again as the bracts, corolla-segments linear-oblong whitish, staminodes oblong-cuneate, lip broad cuneate entire or slightly emarginate. *Monolophus linearis*, *Wall. Cat.* 6592; *Horan. Prodr.* 22.

EASTERN HIMALAYA, ASSAM, SILHET and the KHASIA HILLS, alt. 2–3500 ft.

Annual, root-fibres slender. *Stem* simple; slender, erect, 4–10 in. *Leaves* ascending, membranous, green, 3–4 by $\frac{1}{4}$ – $\frac{1}{2}$ in. *Spikes* 1–2, sessile or shortly peduncled, 1–2-flid.; outer bract 1–1 $\frac{1}{2}$ in., lanceolate, acuminate, green. *Corolla*-tube 1 $\frac{1}{2}$ –2 in.; segments $\frac{3}{4}$ – $\frac{1}{2}$ in.; staminodes as long as the corolla-segments; lip about $\frac{3}{4}$ in. long and broad, tinged with yellow at the throat; anther-crest large, orbicular.

19. **K. sikkimensis**, *King mss.*; leafy stem elongate, leaves sessile lanceolate-acuminate, corolla-tube twice as long as the bract, segments linear-oblong dark lilac, staminodes white orbicular cuneate, lip suborbicular white entire.

SIKKIM and BHOTAN HIMALAYA, *King, Elwes*.

Stems slender, 2–4 in. long. *Leaves* reaching 2–3 in. long, $\frac{1}{2}$ –1 in. broad. *Spike* solitary; 1-flowered, its base hidden in the sheath of the uppermost leaf; bract green, $\frac{1}{2}$ in. long. *Corolla*-tube slender, an inch long; segments $\frac{1}{2}$ in. long.—Very near *K. linearis*.

20. **K. secunda**, *Wall. in Roxb. Fl. Ind. ed. Wall. & Carey*, i. 19; leafy stem produced, leaves sessile oblong acute, flowers white or red, corolla-segments linear-oblong, staminodes oblong-cuneate, lip broad cuneate slightly emarginate. *Bot. Mag. t.* 6999. *Monolophus secundus*, *Wall. Cat.* 6591; *Horan. Prodr.* 22.

SIKKIM HIMALAYA, ASSAM, SILHET, the KHASIA HILLS and TENASSERIM, ascending to 4000 ft.

Annual. Leafy stem 6–9 in., slender, simple. *Leaves* 3–4 by 1 in. (or more), membranous, green, ascending, acuminate. *Spikes* 1–4; outer-bract 1–1 $\frac{1}{2}$ in., oblong-lanceolate, green, moderately firm. *Calyx* much shorter than the bract. *Corolla*-tube 1 $\frac{1}{2}$ –2 in.; segments $\frac{3}{4}$ – $\frac{1}{2}$ in., greenish, membranous; staminodes scarcely longer than the corolla-segments; lip 1 in. or more broad; anther-crest large, ovate.

21. **K. parvula**, *King. mss.*; leafy stem produced, leaves petioled oblong acute, flowers small white solitary in the axil of a large folded oblong firm green bract.

MALAY PENINSULA; Goping, *King's Collector*.

Habit of *K. secunda*. Leafy stem 3-4 in., bearing 3-7 distinctly-petioled oblique oblong acute moderately firm glabrous leaves 1-2 in. long. Bract 1 in., terminal, solitary, shortly peduncled. Corolla-tube very slender, much shorter than the bract.

Subgen. IV. **Stachyanthesis**, Benth. Leafy stem produced. Flowers many in a terminal spike. Lip bifid; anther-crest quadrate entire.

22. **K. scaposa**, Benth. in *Gen. Plant.* iii. 642. *Hedychium scaposum* Nimmo in *Grah. Cat. Pl. Bomb.* 205; Wall. in *Kew Journ. Bot.* v. (1853), 375. *Monolophus scaposus*, Dalz. in *Kew Journ. Bot.* ii. (1850), 143; Dalz. & Gibs. *Bomb. Fl.* 273; Wight *Ic. t.* 2030; Horan. *Prodr.* 22.

CONCAN; on the banks of rivulets, Graham, &c.

Rootstock tuberous, oblique; root-fibres long, slender. Leaves 12 by 2-3 in., oblong-lanceolate, acute, green above, paler and pubescent beneath, narrowed into a deeply channelled petiole. Spike 3-6 in., moderately dense; peduncle long, slender, naked; bracts 1-1½ in., oblong-lanceolate, persistent, green. Calyx loosely sheathing the corolla-tube, above 1 in., minutely toothed. Corolla-tube slender, 2-3 in., segments short, lanceolate; staminodes oblong, white, as long as the corolla segments, shorter than the broad bifid lip, which is above an inch long. Capsule obovoid, red, pubescent, the size of a sparrow's egg.

9. HITCHENIA, Wall.

Habit and inflorescence of *Curcuma*, but bracts subcoriaceous. Calyx short, minutely toothed. Corolla-tube slender, much longer than the calyx; segments oblong or lanceolate, subequal. Lateral staminodes petaloid, free from the filiform filament; lip orbicular or cuneate; filament narrow as long as the lip; anther-cells marginal on the broad connective, not crested. Ovary 3-celled; ovules many, superposed; style filiform, stigma turbinate. Capsule oblong-trigonus, finally dehiscent. Seeds ovoid, arillate.—All Indian.

1. **H. glauca**, Wall. in *Trans. Med. Phys. Soc. Calcutt.* vii. 215; bracts all with flowers, corolla-tube twice the length of the bract, segments oblong, staminodes as long as the corolla-segments, lip ovate, filament short. Horan. *Prodr.* 24. *Curcuma glaucophylla*, Wall. *Cat.* 6594; *Grah. Cat. Pl. Bomb.* 210.

BURMA, Wallich.

Rootstock bearing only small tubers at the end of long slender fibres. Stem 3-4 ft. Leaves oblanceolate-oblong, 1 ft. or more by 4-5 in., narrowed gradually from the middle to the base. Spike 5-6 in.; bracts crowded, orbicular-cuneate, 1-1½ in., upper third spreading. Flowers white; corolla-tube 2 in.; segments small, oblong, concave; expanded flower 1 in. diam. Staminodes as long as the corolla-segments; lip ovate, not clawed, acute, obscurely emarginate; stamen as long as the corolla-segments.

2. **H. caulina**, Baker; upper bracts empty and enlarged, corolla-tube half as long again as the bract, segments ovate, staminodes as long as the corolla-segments, lip orbicular, filament very short. *Curcuma caulina*, *Grah. in Cat. Pl. Bomb.* 210; Dalz. & Gibs. *Bomb. Fl.* 275; *Lisboa in Journ. Bomb. Nat. Hist. Soc.* ii. 140, with fig.

The CONCAN; abundant on the table-land of Mahableshwur.

Rootstock ovoid, white inside, bearing large oblong tubers at the end of long

fibres. Leafy stem 3-4 ft. Leaves oblong, 1-1½ ft. by 5-6 in., narrowed to the base, often tinged red-brown. Spike ½ ft.; bracts 1 in., green, obovate-cuneate, spreading in the upper third, those of the coma longer, whitish. Flowers yellow; corolla-tube slender, 1½ in.; expanded limb 1 in. diam.; staminodes oblong, ½ in.; lip ½ in. diam., deeply bifid; stamen shorter than the corolla-segments.

3. **H. Careyana**, Benth. in *Gen. Plant.* iii. 643; bracts all flowering, corolla-tube little longer than the bract, segments linear, staminodes minute, lip cuneate with a long claw, filament long. *Curcuma Careyana*, Wall. Cat. 6595.

EASTERN HIMALAYA, subtropical region. KHASIA HILLS, ASSAM, CACHAR, SILHET and MANIPUR.

Stem 4 ft. Leaves oblong, 1-2 ft. by 4-5 in., narrowed gradually from the middle to the base. Spike 6-8 in.; bracts 1-1½ in., closely imbricate, obovate-cuneate, squarrose; bracteoles 1 in., lanceolate. Flowers purple; corolla-segments ½ in.; staminodes minute, obovate-cuneate, emarginate; lip ¾ in., cuneate, with a long claw and a small bifid cusp; filiform filament ½ in. Capsule small, green, oblong-trigonus.—Resembles *H. glauca* in habit, but differs so much in structure that probably it should form a different genus.

IMPERFECTLY KNOWN SPECIES.

4. **H. MUSACEA**, Baker; stemless, leaves like *Musa* in texture, 1½ ft. by 6-8 in., oblong, base rounded, petiole as long as the blade, spike central, peduncle ½ ft. long, bracts 1¼-1½ in. orbicular coriaceous slightly squarrose each several-fld., flowers withered and imperfect. *Curcuma musacea*, Wall. Cat. 6596.—Singapore, Wallich. Malacca, Griffith, Maingay.

10. HEDYCHUM, Kœnig.

Rootstock horizontal, tuberous; root-fibres not much thickened. Stem elongate, leafy. Leaves distichous, oblong or lanceolate. Flowers solitary or in terminal spikes; bracts oblong, subcoriaceous, one- or more-fld. Calyx tubular, 3 dentate. Corolla-tube long, slender; segments linear, equal, spreading. Lateral staminodes linear or oblong-cuneate; filament narrow; anther-cells contiguous, connective not produced; lip large, bifid. Ovary 3-celled; ovules many, superposed; style long, filiform, stigma subglobose. Capsule globose, 3-valved. Seeds many, small, aril lacerated.—India and Malay Islands.

SECT. I. **Gandasulium**, Horan. Stamen never much longer than the lip.

* Leaves more or less pubescent beneath.

1. **H. coronarium**, Kœnig in Retz Obs. iii. 73; leaves oblong or oblong-lanceolate, spike dense-fld., bracts large oblong imbricate 3-4-fld., flowers white or tinged with yellow, staminodes oblong or oblong-lanceolate, lip broad shallowly bifid distinctly clawed, stamen as long as or rather longer than the lip. Roxb. in *Asiat. Res.* xi. 325; *Hort. Beng.* 1; *Fl. Ind.* i. 10; Ed. Wall. & Carey, i. 9; *Rosc. in Trans. Linn. Soc.* viii. 343, t. 20, f. 6; *Scit. Pl.* t. 51; *Bot. Mag.* t. 708; *Smith Exot. Fl.* ii. t. 107; *Blume Enum. Fl. Jav.* i. 56; *Wight Ic.* t. 2010; Wall. Cat. 6539, in *Kew Journ.* v. (1853), 325; *Thw. Enum.* 319. *H. spicatum*, Lodd. Bot. Cat. t. 653, not of Hamilt. *H. Gandasulium*, Prophetæ and album, *Herb. Hamilt.*—*Hedychium*, Griff. *Notul.* iii. 419 (the 2nd species.)—*Rumph. Amboin.* t. 69, fig. 3.

Throughout India from the HIMALAYAS to CEYLON and MALACCA, ascending to 4000 ft. in the Khasia Hills, and 6000 ft. in Ceylon.—DISTRIB.—Malay Islands.

Rootstock 1 in. thick. *Stem* 4–6 ft. *Leaves* often above a foot by 3–5 in., usually pubescent beneath. *Spike* $\frac{1}{2}$ –1 ft.; outer bracts $1\frac{1}{2}$ –2 by 1 in., at first green, brown in age. *Calyx* green, cylindric, shorter than the bract. *Flowers* fragrant, in the type pure white or tinged with yellow. *Corolla-tube* 3 in.; segments linear, reflexing, half as long as the tube; lateral staminodes $1\frac{1}{2}$ –2 in. by about $\frac{1}{2}$ in.; lip $1\frac{1}{2}$ –2 in. broad, narrowed suddenly to a short claw, short lobes rounded; filament red; anther about $\frac{1}{2}$ in. *Capsule* oblong, glabrous, orange inside. *Seeds* with a crimson aril.

Var. *H. CHRYSOLEUCUM*, Hook. Bot. Mag. t. 4516 (sp.); lip white with a large yellow patch in the centre. Lindl. & Paxt. Fl. Gard. i. 110, t. 77.

Var. *H. MAXIMUM*, Rosc. Scit. Pl. t. 52 (sp.); leafy stem taller than in the type, flowers pure white larger, staminodes $\frac{3}{4}$ –1 in. broad, lip 2–2 $\frac{1}{2}$ in. broad. Lindl. in Bot. Reg. t. 1022; Horan. Prodr. 24.

Var. *H. FLAVESCENS*, Carey in Rosc. Scit. Pl. t. 50 (sp.); stature of the type, flowers sulphur yellow. Wight Ic. t. 2008–9; *H. flavum*, Bot. Mag. t. 2378 (not of t. 3039). *H. sulphureum*, Wall. mss.

Var. *H. UROPHYLLUM*, Lodd. Bot. Cat. t. 1785 (sp.); stature of the type, flowers bright yellow. Horan. Prodr. 24.

Var. *H. FLAVUM*, Roxb. Hort. Beng. 1; Fl. Ind. i. 12 (sp.); dwarfer than the type, flowers smaller bright yellow. Rosc. Scit. Pl. t. 49; Bot. Mag. t. 3039; Lodd. Bot. Cat. t. 604; Wall. Cat. 6542; Kew Journ. Bot. v. (1853), 326; Horan. Prodr. 24.

2. *H. Elwesii*, Baker; leaves oblong nearly glabrous beneath, spike dense-fld., bracts large oblong 4–5-fld., calyx shorter than the bract, flowers bright yellow, staminodes lip linear, broad shallowly bifid, stamen as long as the lip.

KHASIA HILLS; Bishop's fall, near Shillong, alt. 4000 ft., Elwes.

Leaves 1 ft. or more, by 3 in. *Spike* $\frac{1}{2}$ ft.; bracts green, subcoriaceous, 2–2 $\frac{1}{2}$ in., rather diverging, not so closely imbricate as in *H. coronarium*. *Corolla-tube* 2 $\frac{1}{2}$ in.; segments above 1 in.; staminodes resembling the segments in size and shape; lip $1\frac{1}{2}$ in. broad, narrowed suddenly to a broad claw; filament bright red; anther linear, $\frac{1}{3}$ in.—May be an extreme form of *H. coronarium*.

3. *H. marginatum*, Clarke in Journ. Linn. Soc. xxv. 75, t. 31; leaves oblong-lanceolate very hairy beneath, spike short dense-fld., bracts oblong imbricated 1-fld., flowers yellow, staminodes linear, lip small cuneate distinctly clawed shallowly bifid, stamen rather longer than the lip.

NAGA HILLS; Kohima, alt. 4500 ft. Clarke; Griffith (5680), without locality.

Leaves 1 ft. by $1\frac{1}{2}$ –2 in., pale beneath. *Spike* 3–4 in.; bracts $1\frac{1}{2}$ –2 in., not so firm as in *H. coronarium*, glabrous, with a pale horny margin and a tuft of hairs at the tip. *Calyx* 1 in. *Corolla-tube* twice as long as the calyx; segments 1 in., staminodes resembling the corolla-segments in size and shape; lip 1 in. long, claw long, blade $\frac{1}{4}$ – $\frac{1}{3}$ in. broad.

4. *H. venustum*, Wight Ic. t. 2012; leaves oblong-lanceolate nearly glabrous beneath, spike lax-fld. often cernuous, bracts small 1-fld., flowers whitish, calyx exceeding the bract, staminodes linear, lip narrow cuneate deeply bifid distinctly clawed, stamens shorter than the lip. Wall. in Kew Journ. Bot. v. (1853), 328. *H. cernuum*, Wight Ic. t. 2011.

NILGHIRI HILLS, Wight.

Leaves 1 ft. by 3–4 in., obscurely pubescent beneath. *Spike* 6–9 in., cernuous

or erect; bract thin, at most 1 in., glabrous, rolled round the calyx. *Calyx* $1\frac{1}{2}$ in. long. *Corolla*-tube 2 in.; segments $1\frac{1}{2}$ in.; staminodes as long as the corolla-segments; lip rather longer than the staminodes, cut down below the middle into two acute segments; anther linear. *Capsule* subglobose, pubescent.

** *Leaves quite glabrous beneath.*

5. **H. spicatum**, *Hamilt. ex Smith in Rees Cyclop.* xvii. No. 3; leaves oblong or oblong-lanceolate, spike dense-fld., bracts large oblong 1-fld., calyx shorter than the bract, flowers white, staminodes lanceolate, lip cuneate deeply bifid, stamen rather shorter than the lip. *Rosc. Scit. Pl.* t. 48; *Hook. Exot. Flora*, t. 46; *Bot. Mag.* t. 2300; *Royle Ill.* 357; *Wall. Cat.* 6553; in *Kew Journ.* v. (1853), 328; *Horan. Prodr.* 24.

SUBTROPICAL HIMALAYA; NEPAL, *Wallich*. KUMAON, alt. 5000-7000 ft., *Royle, Strachey & Winterbottom*.

Leaves reaching 1 ft. or more, very variable in breadth, glabrous. *Spike* sometimes 1 ft.; bracts oblong, obtuse, green, $1-1\frac{1}{2}$ in. by $\frac{3}{4}$ in. broad, flowers ascending and closely imbricate in the type. *Corolla*-tube $2-2\frac{1}{2}$ in.; segments 1 in., linear; staminodes 1 in., lanceolate; lip $\frac{1}{2}-\frac{3}{4}$ in. broad, not at all clawed, lobes 2 rounded; filament pale red; anther linear, $\frac{1}{4}-\frac{1}{2}$ in. *Capsule* glabrous, globose.

Var. **TRILOBUM**, *Wall. in Kew Journ.* v. (1853) 328; spike laxer, bracts narrower convolute round the calyx, corolla-segments staminodes and lip longer, the latter with a small tooth between the two lobes. *H. trilobum*, *Wall. Cat.* 6554.—Nepal, *Wallich*.

Var. **ACUMINATUM**, *Wall. in Kew Journ.* l. c.; leaves glabrous beneath, spike laxer and flowers fewer, bracts convolute round the calyx, flowers white or pale yellow, tube, corolla-segments staminodes and clawed lip longer than in the type, stamen about half as long as the lip. *H. acuminatum*, *Rosc. Scit. Pl.* t. 47; *Bot. Mag.* t. 2969; *Lodd. Bot. Cat.* t. 1795.—Kumaon to Sikkim, ascending to 7000 ft.

Var. **KHASIANUM**, *Clarke*; like the last, but leaves pubescent beneath.—Khasia Hills, *Clarke*.

H. flavescens, *Lodd. Bot. Cat.* t. 723 (not of *Carey*) and *H. Sieboldii*, *Wall. in Kew Journ.* v. 371 (*H. flavescens*, *Lindl. in Hort. Soc. Journ.* vii. 281, & *Paxt. Flow. Gard.* iii. 164, fig. 311. *H. Roxburghii*, *Siebold in Hort. Soc. Journ.* l. c.) are probably varieties of this species.

H. bicornutum, *Wall. mss.*, is a monstrous form, with two stamens, each with a large erect spur at the base of the anther.

6. **H. densiflorum**, *Wall. Cat.* 6552; *Kew Journ.* (1853) v. 368; leaves oblong, spike long moderately dense-fld., bracts small oblong 1-fld., calyx longer than the bract, flowers small bright yellow, staminodes lanceolate, lip cuneate deeply bifid, stamen as long as the lip. *Horan. Prodr.* 25.

TEMPERATE HIMALAYA; NEPAL, *Wallich*; SIKKIM, alt. 6000-8000 ft. *Griffiths' Collectors*; *J. D. H.*

Leaves 1 ft. by 4-5 in., glabrous beneath. *Spike* sessile, sometimes 1 ft.; bracts oblong, $\frac{1}{2}-1$ in., rolled tightly round the calyx. *Calyx* cylindric, about 1 in. *Corolla*-tube $1-1\frac{1}{2}$ in.; segments linear, reflexing, under 1 in.; staminodes lanceolate, under 1 in.; lip about $\frac{1}{2}$ in., not clawed; stamen just exceeding the staminodes; filament yellow, anther linear.

SECT. II. **Macrostemium**, *Horan*. Stamen much longer than the lip (rather longer in *H. Griffithianum*).

* Lip narrow 2-fid or 2-partite, lobes or segments narrow (lip emarginate in *H. ellipticum*.)

† *Leaves glabrous beneath.*

7. **H. crassifolium**, *Baker*; leaves oblong-lanceolate subcoriaceous, bracts short oblong 1-fld., calyx twice as long as the bract, flowers bright yellow, calyx-segments very long, staminodes lanceolate half as long as the corolla-segments, lip narrow long clawed bipartite segments narrow, stamen twice as long as the lip.

PERAK, in dense jungle, on trees, *King's Collector*.

Epiphytic; *leafy stem* 15-20 in. *Leaves* under 1 ft. $1\frac{1}{2}$ -2 in. broad, glabrous, firmer in texture than in any other species, narrowed gradually from the middle to the base. *Bracts* green, glabrous, $\frac{1}{2}$ in. rolled tightly round the calyx. *Corolla-tube* $\frac{1}{4}$ -in. longer than the calyx; segments linear-convolute, 2 in. long; staminodes and lip about 1 in.; filament bright red, 2 in.; anther large, linear.

8. **H. longicornutum**, *Griff. mss.*; leaves oblong-lanceolate, spike short dense-fld. oblong, bracts oblong hairy imbricate 1-fld., calyx longer than the bract, corolla-segments much longer than the oblanceolate staminodes, lip bipartite, segments narrow, stamen twice as long as the lip.

MALACCA, *Griffith, Maingay*.

Epiphytic. *Stem* slender, 1- $1\frac{1}{2}$ ft. *Leaves* 1 ft. by 2-2 $\frac{1}{2}$ in., thin, narrowed gradually to the base and apex. *Spike* $1\frac{1}{2}$ -2 in.; lower bracts 1 in. *Calyx* protruded, $\frac{3}{8}$ - $\frac{1}{2}$ in. beyond the bract. *Corolla-tube* protruded $\frac{1}{4}$ in. beyond the calyx; segments bright red, $1\frac{1}{2}$ -2 in.; staminodes half as long as the corolla-segments; lip a little shorter than the staminodes; stamens as long as the corolla-segments; anther linear.

9. **H. Gomezianum**, *Wall. Cat.* 6543, in *Kew Journ.* v. (1853) 368; leaves long lanceolate, spike dense-fld. curved, bracts 1-fld. cylindric, calyx longer than the bract, flowers white, staminodes linear, lip narrow clawed bipartite, segments narrow, stamen much longer than the lip. *Horan. Prodr.* 25. *Hedychium*, *Griff. Notul.* iii. 419, *first species*.

TAVOY, *Gomez*; TENASSERIM, *Griffith*.

Epiphytic, gland-dotted. *Leafy stem* 1 ft. or more. *Leaves* sometimes above 1 ft., 2-3 in. broad, narrowed gradually from the middle to the base. *Spike* cernuous, 3-4 in.; bracts glabrous, rolled tightly round the calyx. *Calyx* twice as long as the bract. *Corolla-tube* a little longer than the calyx; segments linear, 1 in. white; staminodes rather shorter than the corolla-segments; lip white; filament $1\frac{1}{2}$ in.; anther linear, orange yellow.

10. **H. ellipticum**, *Hamilt. ex Smith in Rees, Cyclop.* xvii. No. 2; leaves oblong, spike short dense-fld., bracts oblong imbricate 1-fld., calyx as long as the bract, flowers white, staminodes linear, lip narrow unguiculate faintly bifid, stamen twice as long as the lip. *Rosc. Scit. Pl.* t. 55; *Bot. Cat.* t. 1881; *Wall. in Kew Journ.* v. (1853) 327; *Horan. Prodr.* 25. *H. fastigiatum*, *Wall. Cat.* 6340.

TROPICAL HIMALAYA, from GARWHAL, SIKKIM, and KHASIA HILLS, alt. 2000-5000 ft.

Leaves $\frac{1}{2}$ -1 ft. by 3-5 in. *Spike* very dense, 3-4 in.; bracts bright green, about 1 in. *Corolla-tube* twice as long as the bract; segments 1 in., linear; staminodes rather shorter and broader than the corolla-segments; lip oblong, distinctly clawed, shorter than the staminodes, only emarginate at the apex; filament $1\frac{1}{2}$ -2 in.; anther linear, orange yellow.

11. **H. villosum**, *Wall. in Roxb. Fl. Ind.* i. 12; in *Kew Journ.* v.

(1853) 329; *Cat.* 6545 A, B; leaves oblong or oblong-lanceolate, spike long dense-fld., bracts oblong very hairy often 2-3-fld., calyx longer than the bract, flowers white, staminodes linear, lip narrow clawed bipartite segments narrow, stamen twice as long as the lip, anther small sagittate. *Rose Scit. Pl.* t. 54; *Horan. Prodr.* 25.

NÉPAL, SILHET, ASSAM, KHASIA HILLS, MŪNIPUR, alt. 4000-6000 ft.

Leaves sometimes 1 ft. 2-4 in. broad, glabrous beneath. *Spike* $\frac{1}{2}$ -1 ft.; rachis very stout and hairy; bracts pale green, $\frac{3}{4}$ -1 in. *Calyx* about $1\frac{1}{2}$ in. *Corolla*-tube longer than the calyx; segments linear, 1- $1\frac{1}{4}$ in.; staminodes like the corolla-segments; lip 1 in. or more; filament $1\frac{1}{2}$ -2 in., bright red; anther much shorter than in any other species.

Var. *TENUIFLORUM*, *Wall. Cat.* 6546 C.; flowers much smaller than in the type, corolla-segments staminodes and lip $\frac{1}{2}$ in.—Assam, Silhet and Khasia.

†† *Leaves more or less pubescent beneath.*

12. **H. aureum**, *Clarke & Mann mss.*; dwarf, leaves small thin lanceolate, spike short dense-fld. oblong, bracts 1-fld. wrapped tightly round the calyx, calyx as long as the bract, flowers very small golden yellow, staminodes linear, lip narrow cuneate deeply bifid segments narrow, stamen half as long again as the lip.

NORTHERN KHASIA HILLS; alt. 5000-6000 ft., *Clarke, Mann.*

Epiphytic; leafy stem short, slender. *Leaves* 6-8 by 1- $1\frac{1}{2}$ in., slightly pubescent beneath, tapering gradually to a long point. *Spike* $1\frac{1}{2}$ -2 in.; bracts cylindric, green, glabrous, $\frac{1}{2}$ in. *Calyx* about as long as the bract. *Corolla*-tube $\frac{1}{2}$ - $\frac{3}{4}$ in.; segments linear, $\frac{3}{4}$ - $1\frac{1}{2}$ in.; staminodes as long as the corolla-segments; lip $\frac{1}{2}$ - $\frac{3}{4}$ in. long, narrowed gradually to a short claw; filament as long as the lip; anther linear, $\frac{1}{8}$ in. *Capsule* globose, glabrous, the size of a pea.

13. **H. gracile**, *Roxb. Hort. Beng.; Fl. Ind.* i. 14; *Cor. Pl.* iii. 48, t. 251; leaves oblong-lanceolate, spike long moderately dense-fld., bracts 1-fld. wrapped tightly round the calyx, calyx longer than the bract, flowers small greenish white, staminodes linear, lip oblong-cuneate 2-partite, segments narrow, stamen half as long again as the lip. *Wall. Cat.* 5546 B. in *Kew Journ.* v. (1853) 367, in part.

KHASIA HILLS and CHITTAGONG, *Roxburgh, Wallich.*

Leafy stem 2-3 ft. *Leaves* 5-6 by $1\frac{1}{2}$ -2 in., thin, caudate, finely pubescent beneath. *Spike* 2-4 in.; bracts $\frac{1}{2}$ in., green, cylindric, thin, glabrous. *Calyx* a little longer than the bract. *Corolla*-tube 1 in., very slender; segments linear, nearly as long as the tube; staminodes very narrow, shorter than the corolla-segments; lip $\frac{1}{2}$ in., distinctly clawed; filament 1 in., bright red; anther linear. *Capsule* globose, glabrous, the size of a pea.

Var. *H. GLAUCUM*, *Rosc. Scit. Pl.* t. 53 (sp.) More robust and larger in all its parts; leaves glabrous and glaucous beneath; spike often 6-9 in.; bracts $\frac{3}{4}$ in.; parts of the flower half as long again as in the type. *H. gracile*, *Wall. Cat.* 6546 A, in *Kew Journ.* v. 367, in part; *Hook. f. in Bot. Mag.* t. 6638.—Khasia Hills, Bhotan, and Sikkim, alt. 3000-6000 ft.

14. **H. Griffithianum**, *Wall. in Kew Journ.* v. (1853), 369; leaves lanceolate, spike lax-fld., bracts 1-fld. cylindric, calyx longer than or equalling the bract, flowers white or pale yellow, staminodes linear, lip long narrow clawed bipartite, segments narrow, stamen rather longer than the lip. *Horan. Prodr.* 25.

KHASIA HILLS, alt. 4-5000 ft., *Griffith, Hook. f. & Thoms.*

Leaves sometimes above 1 ft., 2-3 in. broad, marked above with glandular lines,

finely pilose beneath. *Spike* 6–9 in.; bracts 1–1½ in., rolled tightly round the calyx, calyx and corolla glandular. *Corolla*-tube 2–3 in.; segments 1 in., linear. *Staminodes* nearly as long as the corolla-segments; lip 1 in. long; filament bright red, 1–1½ in.; anther large, linear. *Capsule* globose, glabrous, ½ in. diam.—Nearly allied to *H. spicatum*.

Var. *glanduligerum*, Clarke. *Leaves* glabrous beneath. Whole plant especially the flower very glandular.—Khasia Hills.

15. **H. thyrsoforme**, *Hamilt. ex. Smith in Rees Cyclop.* xiii. No. 4; leaves oblong or oblong-lanceolate, spike dense-flid. oblong, bracts cylindric 1-flid., calyx not longer than the bract, flowers white, staminodes linear, lip narrow clawed 2-partite, segments narrow, stamen twice as long as the lip. *Wall. Cat.* 6541; in *Kew Journ.* v. (1853), 327; *Rosc. Scit. Pl.* t. 56; *Horan. Prodr.* 25. *H. heteromallum*, *Lindl. in Bot. Reg.* t. 767. *H. Tocucho*, *Herb. Hamilt.*

TROPICAL HIMALAYA; from KUMAON to SIKKIM, alt. 2–4000 ft., and CHITTAGONG.

Leaf sometimes 1 ft., 3–4 in. broad, finely pilose beneath. *Spike* very dense, 3–6 in.; lower empty bracts ovate; flower-bracts cylindric, green, 1½ in. *Corolla*-tube not much longer than the bract; segments 1 in., linear; staminodes as long as the corolla-segments; lip as long, distinctly clawed, usually cut about half way down into two linear-oblong segments; filament whitish, 1½–2 in.; anther linear.

** Lip cuneate or obovate.

16. **H. Hookeri**, *Clarke mss.*; dwarf, leaves short oblong, spike short oblong, bracts oblong imbricate 1-flid., calyx shorter than the bract, flowers very small sulphur-yellow, staminodes oblong-cuneate, lip obovate-clawed bifid, stamen twice as long as the lip.

KHASIA HILLS, alt. 4–5000 ft., *Hook. f. & Thomson.* ASSAM, *Griffith.*

Leafy stem slender, 1–1½ ft. *Leaves* 5–6 by 2 in., thin, glabrous, caudate, base cuneate. *Spike* 1–2 in., resembling that of *Globba bulbifera*, few-flid.; bracts ½ in., oblong, laxly imbricate, green, glabrous. *Calyx* ¼ in. *Corolla*-tube a little longer than the calyx; segments linear, ½ in.; staminodes as long as the corolla-segments; lip nearly as long, distinctly clawed; filament ¾–1 in.; anther ½ in. *Capsule* globose, glabrous, ½ in. diam.

17. **H. Gardnerianum**, *Rosc. Scit. Pl.* t. 62; tall, leaves oblong white pulverulent beneath, spike long moderately dense-flid., bracts large oblong 1–2-flid., calyx not longer than the bract, flowers bright lemon-yellow, staminodes oblanceolate, lip obovate-cuneate, tip 2-fid or 2–3-toothed, stamen twice as long as the lip. *Wall. in Kew Journ.* v. (1853), 369 (*excl. syns. & vars.*); *Bot. Reg.* t. 774; *Hook. f. in Bot. Mag.* t. 6913 (*excl. syns.*); *Horan. Prodr.* 25; *Reichb. Exot.* t. 183; *Gard. Chron.* 1875, i. 461, figs. 92, 93; *Mart. Fl. Bras.* iii. p. 3, t. 9.

EASTERN HIMALAYA; Nepal, Sikkim, and the KHASIA HILLS, alt. 4–8000 ft.

Leafy stem 5–6 ft. *Leaves* 1–1½ ft. by 4–6 in., white pulverulent beneath, as are the young bracts and rachis of the spike. *Spike* 1–1½ ft.; bracts 1½–2 in., rolled tightly round the flowers, glabrous. *Corolla*-tube a little longer than the bract; segments greenish, reflexing, 1–1½ in. *Staminodes* above 1 in. by ½–¾ in. broad; lip 1 in. or more, ¾–¾ in. broad, narrowed gradually to a short claw; filament bright red, 2–2½ in.; anther linear, ¾–1 in. *Capsule*-valves ovate, orange-red within, persistent, ¾ in. *Seeds* brownish-crimson.

Var. **H. pallidum**, *Regel in Trans. Russ. Hort. Soc.* 1864, t. 153 (sp.). Lip narrower, more distinctly clawed and distinctly bifid. *Horan. Prodr.* 25.—Khasia, J. D. H.

18. **H. speciosum**, *Wall. in Roxb. Fl. Ind. Ed. Carey & Wall. i. 13; Cat. 6550; Pl. As. Rar. iii. 51, t. 285*; leaves oblong-lanceolate, spike long moderately dense-fl., bracts large oblong 1-2-fl., flowers pale sulphur-yellow, staminodes linear, lip oblong-cuneate entire, stamen twice the length of the lip. *H. Gardnerianum*, *Wall. in Kew Journ. v. (1853) 369, in part. Gamochilus, Lestid. in Ann. Sc. Nat. Ser. 2, xv. 341.*

SILHET, Gomez.

Leaves above 1 ft., 3-4 in. broad, glabrous beneath. Spike $\frac{1}{2}$ -1 ft.; lower bracts $1\frac{1}{2}$ in., $\frac{3}{4}$ in. broad. Calyx cylindric, about as long as the bract. Corolla-tube 2 in.; segments linear, 1 in.; staminodes longer than the segments; lip not clawed, 1 in. by $\frac{1}{2}$ in. broad; filament bright red, twice as long as the lip; anther linear, yellow, $\frac{1}{4}$ - $\frac{1}{2}$ in.

19. **H. stenopetalum**, *Lodd. Bot. Cab. t. 1902*; very tall, leaves oblong very hairy beneath, spike long lax or moderately dense-fl., bracts large oblong often 2-fl., flowers pure white, staminodes oblanceolate, lip oblong-cuneate bifid, stamen twice as long as the lip. *H. barbatum*, *Wall. Cat. 6544. H. coccineum* β , in part, *Wall. in Kew Journ. v. (1853), 373. H. elatum*, *Clarke in Journ. Linn. Soc. xxv. 75. H. elatum var. orgyale, Horan. Prodr. 25.*

ASSAM, KHASIA, the NAGA HILLS, and NORTH BURMA, alt. 1500-3000 ft.

The tallest species. Leaves sometimes 2 ft. by 5-6 in., very hairy all over beneath. Spike 1 ft. or more, rachis very stout; bracts rigid, often 2 in. by 1 in. Calyx shorter than and corolla-tube scarcely longer than the bract. Corolla-segments linear, $1\frac{1}{2}$ in.; staminodes shorter than the corolla-segments; lip pure white, 1 in., narrowed gradually into a short claw; filament pale, $1\frac{1}{2}$ -2 in.; anther linear, yellow, $\frac{1}{2}$ in.

*** Lip orbicular.

20. **H. coccineum**, *Hamilt. ex Smith in Rees Cyclop. xvii. 5*; leaves lanceolate, spike long moderately dense-fl., bracts oblong 1-2-fl., calyx not longer than the bract, flowers small bright crimson, staminodes lanceolate, lip orbicular distinctly clawed deeply bifid, stamen more than twice as long as the lip. *Wall. in Kew Journ. v. (1853), 372, ex parte; Rosc. Scit. Pl. t. 58; Wall. Cat. 6548; Reichb. Ic. Exot. t. 184; Royle Ill. 357; Roxb. Fl. Ind. edit. Wall. & Carey, i. 82, in note.*

CENTRAL and EASTERN HIMALAYA, common (under one or other form). CEYLON (native?).

Leaves 1 ft. or more, $1\frac{1}{2}$ in. broad, base rather rounded, narrowed gradually from the middle to the point. Spike 1 ft.; bracts green, 1- $1\frac{1}{2}$ in. Corolla-tube scarcely longer than the bract; segments 1 in., linear, reflexing; staminodes under 1 in., $\frac{1}{2}$ - $\frac{3}{4}$ in. broad; lip above $\frac{1}{2}$ in. and broad; filament $1\frac{1}{2}$ in.; anther linear, $\frac{1}{4}$ - $\frac{1}{2}$ in.—The type was described and drawn from a plant in the Calcutta Garden.

Var. **H. ROSCOEI**, *Wall. mss. (sp.)*. Staminodes bright red; lip dull brick red. *H. coccineum*, *Lindl. in Bot. Reg. t. 1209.*

Var. **H. SQUARROSUM**, *Buch. Hamilt. mss. (sp.)*; less robust with smaller bright crimson flowers and very long glabrous leaves often not above 1 in. broad. *H. angustifolium*, *Wall. Cat. 6547; in Kew. Journ. v. (1853) 371, in greater part, non Roxb.*—Common in the Eastern Himalaya, Khasia, and Upper Burma, alt. 8-9000 ft. Ceylon.

Var. **H. LONGIFOLIUM**, *Rosc. Scit. Pl. t. 59 (sp.)*; flowers bright crimson, leaves very narrow pubescent beneath.—Same range as the last variety.

Var. **H. ANGUSTIFOLIUM**, *Roxb. Hort. Beng. 1; Cor. Pl. iii. 248, t. 251; Fl. Ind*

i. 13; leaves not so long and narrow as in the two last, spike shorter, flowers dull brick red or salmon-red often 3-4 in a fascicle, lip obovate-cuneate less deeply bifid under $\frac{1}{2}$ in. and broad. *Rosc. Scit. Pl.* t. 60; *Bot. Mag.* t. 2078; *Kern. Hort.* t. 807.—Chittagoug and Silhet, always at low levels.

Var. *H. CARNEUM*, *Rosc. Scit. Pl.* t. 57 (sp.); leaves $1\frac{1}{2}$ -2 in., flowers white tinged with pale red, lip orbicular $\frac{1}{2}$ - $\frac{3}{4}$ in. long and broad, filament pale red $1\frac{1}{2}$ -2 in. *Bot. Mag.* t. 2637; *Lodd. Bot. Cab.* t. 693.

21. *H. aurantiacum*, *Wall. Cat.* 6551; leaves long lanceolate, spike long moderately dense-fld., bracts oblong often 2-3-fld., calyx not longer than the bract, flowers bright orange-yellow, staminodes lanceolate, lip orbicular distinctly clawed deeply bifid, stamen more than twice as long as the lip. *Rosc. Scit. Pl.* t. 39. *H. Gardnerianum*, var. γ , *Wall. in Kew Journ.* v. (1853), 369; *Savi Fl. Ital.* iii. t. 112. *H. angustifolium*, *Bot. Reg.* t. 157.

KUMAON and NEPAL, alt. 5000 ft. or more.

Leaves $1-1\frac{1}{2}$ ft. by 2-3 in., narrowed gradually to the base, glabrous beneath. Spike $\frac{1}{2}$ -1 ft.; bracts oblong, green, glabrous, $1-1\frac{1}{4}$ in. Corolla-tube not much longer than the bract; segments linear, 1 in. or more; staminodes as long as the corolla-segments; lip shorter than the staminodes, about as broad as long; filament pale bright red; anther linear, yellow, $\frac{1}{2}$ in.—The affinity is stronger with some forms of *coccineum* than with *Gardnerianum*.

22. *H. luteum*, *Herb. Calcut.*; leaves oblong-lanceolate, spike short dense-fld., bracts oblong closely imbricate, flowers lemon-yellow, corolla-tube twice as long as the bract, staminodes lanceolate, lip orbicular bifid distinctly clawed, stamen half as long again as the lip.

ASSAM, Oldham.

Intermediate between *H. flavum* & *aurantiacum*. Stem slender. Leaves under 1 ft. Bracts broad, green, 1 in. Corolla-tube 2 in.; segments linear, pale yellow, above 1 in.; lip under 1 in. broad, uniform yellow throughout, narrowed suddenly to a short claw.—Described from a drawing in the Calcutta collection.

23. *H. gratum*, *Wall. ex Voigt. Hort. Suburb. Calcutt.* 570 (name only); leaves long lanceolate, spike dense-fld., bracts large oblong, corolla-tube much longer than the bract, flowers whitish, staminodes oblong, lip orbicular clawed deeply emarginate, stamen a little longer than the lip.

KHASIA HILLS, Wallich.

Leafy stem long and stout. Leaves above 1 ft., 3 in. broad. Spike $\frac{1}{2}$ ft.; bracts 2-3 in. Corolla-segments linear, $1\frac{1}{2}$ in.; staminodes 1 in., narrowed to the base; lip 1 in. broad, narrowed suddenly to a short claw.—Differs from *coccineum* by its whitish flowers and shorter stamens. Described from a drawing in the Calcutta collection.

24. *H. elatum*, *Br. in Bot. Reg.* t. 526; leaves large oblong, spike long moderately dense-fld., bracts oblong 1-2-fld. moderately large, calyx as long as the bract, flower white tinged with red, staminodes ob-lanceolate, lip orbicular clawed bifid, stamen twice as long as the lip. *Rosc. Scit. Pl.* t. 63; *Wall. Cat.* 6549 A, B; *Lodd. Bot. Cab.* t. 856; *Reichb. Fl. Exot.* t. 270; *Horan. Prodr.* 26. *H. coccineum*, var. β , *Wall. in Kew Journ.* v. (1853), 373, in part.

SUBTROPICAL HIMALAYA; from KUMAON to SIKKIM, alt. about 5000 ft.

Leaf above 1 ft., 3-4 in. broad, glabrous beneath. Spike 1 ft. or more, rachis very stout; bracts oblong, $1-1\frac{1}{4}$ in., $\frac{3}{4}$ in. broad. Calyx cylindric, $1-1\frac{1}{4}$ in. Corolla-tube a little longer than the bract; segments linear, $1\frac{1}{4}$ in.; staminodes $1-1\frac{1}{4}$ in.,

distinctly clawed; lip rounded at the base to a distinct claw, $\frac{3}{4}$ -1 in. broad, white, with a patch of dull red in the centre; filament pale red, 2 in. or more; anther $\frac{1}{4}$ - $\frac{3}{4}$ in.—This and *H. aurantiacum* are so difficult to distinguish when dried from some of the forms of *coccineum*, that I have purposely abstained from citing several of Wallich's numbers.

11. **AMOMUM**, Linn.

Rootstock perennial, widely creeping. *Leafy stem* elongate. *Leaves* usually oblong-lanceolate. *Spikes* dense-fl., except in § *Cenolophus* produced direct from the rootstock; bracts imbricate. *Calyx* cylindric, 3-dentate. *Corolla*-tube cylindric; segments oblong or linear-oblong, upper often broader and more convex. *Lateral staminodes* 0 or minute teeth; lip broad or lingulate; filament short, arcuate; anther-cells divaricate, sometimes hairy, often furnished with a petaloid crest. *Ovary* 3-celled; ovules many, superposed; style filiform, stigma small and subglobose or larger and gibbous on the back. *Fruit* indehiscent or dehiscent irregularly, sometimes beaked, winged or echinate. *Seeds* globose or truncate. Species about 150, in the tropics of the Old World.

SECT. I. **Geanthus**, Reinw. (gen.). *Spike* radical. *Lip* broad. *Anther* not crested. (Sp. 1-4.)

1. **A. gramineum**, Wall. *Cat.* 6558; leaves small thin lanceolate pubescent beneath, spike small globose, peduncle very short, outer bracts lanceolate, lip small.

TAVOY, Gomez.

Stem slender, 2-3 ft. *Leaves* 6 by 1 in. *Spike* 1 in.; bracts $\frac{1}{2}$ - $\frac{3}{4}$ in. *Calyx* $\frac{1}{4}$ in. *Corolla*-tube rather longer than the calyx; segments $\frac{1}{4}$ in. linear-oblong; lip rather longer than the corolla-segments. *Anther*-cells short, glabrous.

2. **A. floribundum**, Benth. in *Gen. Plant.* iii. 644; leaves oblong-lanceolate glabrous beneath, spike globose, peduncle long erect, outer bracts large orbicular, lip small obovate. *Elettaria floribunda*, Thw. *Enum.* 319.

CEYLON; forests in the Ambagamwa district.

Leafy stem 3-6 ft. or more. *Leaves* subcoriaceous, 18-24 by 3-5 in. petioled. *Peduncle* 1-1 $\frac{1}{2}$ ft.; bract-leaves sheathing, obtuse. *Spike* 2-3 in. long and broad; flowers very numerous; bracts dark red, outer 1 $\frac{1}{2}$ in. long and broad. *Flowers* pale ochraceous yellow. *Corolla* tube $\frac{3}{4}$ in.; segments and lip much shorter than the tube. *Fruit* small, oblong, smooth.

3. **A. nemorale**, Benth. in *Gen. Plant.* iii. 644; leaves oblong-lanceolate glabrous beneath, spike small globose, peduncle very short, outer bracts ovate obtuse, lip small orbicular 3-lobed. *Elettaria nemoralis*, Thw. *Enum.* 319.

CEYLON; forests in the Reigam and Pasdoon Corles.

Rootstock slender. *Leafy stem* 2-4 ft. *Leaves* firm, 6-15 by 1 $\frac{1}{2}$ -2 in. *Spike* 1-1 $\frac{1}{2}$ in.; peduncle decumbent, shorter than the spike; bracts glabrous, outer $\frac{1}{2}$ - $\frac{3}{4}$ in., inner lanceolate. *Corolla*-tube under 1 in., segments short, oblong, obtuse. *Lip* yellow, copiously veined with purple; midlobe smaller, bifid. *Capsule* globose, $\frac{1}{4}$ in. shortly beaked.

4. **A. involucratum**, Benth. in *Gen. Plant.* iii. 644; leaves large oblong-lanceolate glabrous beneath, spike globose, peduncle long erect, outer bracts very large obovate overtopping the flowers, lip small obovate equally 3-lobed. *Elettaria involucrata*, Thw. *Enum.* 319.

CEYLON; damp forests of the central provinces, alt. 4000–6000 ft.

Leafy stem 6–10 ft. or more. *Leaves* thin, $1\frac{1}{2}$ –3 ft. by 4–7 in. *Spike* 2–3 in. long and broad; flowers very numerous; bracts bright red, outer 3 in.; inner lanceolate, $1\frac{1}{2}$ in. *Corolla*-tube as long as the inner bracts; segments oblong, obtuse. *Lip* pale ochraceous yellow. *Capsule* $1\frac{1}{2}$ in., ovoid-trigonus, smooth.

Sect. II. **Achasma**, Griff. (gen.). *Spike* radical. *Lip* narrow, margins incurved. *Anther* not crested.

* *Lip* not, or hardly longer than the corolla-segments.

5. **A. Fenzlii**, Kurz in Journ. Beng. As. Soc. xlv. pt. ii. 154, t. 12; leaves lanceolate glabrous beneath, spike globose, peduncle short erect, bracts ovate densely ciliated, lip not longer than the corolla-segments.

NICOBAR ISLANDS, Kurz.

Leafy stem 6–7 ft. *Leaves* thin, 2–3 ft. by $2\frac{1}{2}$ –3 in., green and glabrous on both surfaces. *Spike* very dense-fld., 2 in. diam.; peduncle 6 in., its bract-leaves large, oblong; outer bracts very large, ovate; inner 1 in., pale red, back glabrous, margin densely-matted with whitish tomentum. *Corolla*-tube $\frac{1}{2}$ in.; segments 1 in. linear, pale red. *Lip* 1 in., red, with white inflexed margins. *Fruit* obovoid, 1 in. *Seeds* obovoid, black; aril white.

6. **A. araneosum**, Baker; spike oblong, peduncle very short, bract ovate densely matted on the edge, lip rather longer than the corolla-segments.

TENASSERIM, Griffith, Helfer (Hook. f. & Thoms. Herb. Ind. Or. 4.).

Leaves unknown. *Spike* oblong, 2 in.; peduncle 2–3 in., bract-leaves large, crowded, ovate; outer bracts large, ovate, backs glabrous, margins densely matted with whitish cottony tomentum; inner lingulate, $1\frac{1}{2}$ in. *Corolla* as long as the inner bracts. *Anther*-cells glabrous.—Nearly allied to *A. Fenzlii*.

7. **A. stenoglossum**, Baker; leaves lanceolate glabrous beneath, spike globose, peduncle longer than spike, outer bracts large oblong acute glabrous, lip not much longer than the corolla segments.

PERAK, alt. 500–1000 ft., King's Collector.

Leafy stem 8–12 ft. *Leaves* 2 ft. or more, by 2 in. *Spike* globose, 3 in.; central bracts $1\frac{1}{2}$ –2 in.; peduncle 4–5 in., bract-leaves 1 in., rigid, oblong, obtuse. *Corolla*-tube $1\frac{1}{2}$ in.; segments shorter. *Anther*-cells $\frac{1}{2}$ in. glabrous, linear.

** *Lip* much longer than the corolla-segments.

† *Spike* globose.

8. **A. sphærocephalum**, Baker; leaves large oblong-lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts oblong-lanceolate glabrous, lip much longer than the corolla-segments.

PENANG, Maingay (Kew Distrib. 1581).

Leafy stem long, robust. *Leaves* subcoriaceous, $1\frac{1}{2}$ –2 ft., by 3–4 in. *Spikes* $1\frac{1}{2}$ –2 in. long and broad; outer bracts $1\frac{1}{2}$ in., inner 1 in., lingulate, glabrous. *Calyx* cylindric, shortly 3-toothed, bearded at the apex. *Corolla*-tube 1 in.; segments oblong, obtuse. *Lip* deep crimson, $\frac{1}{2}$ in., bifid $\frac{1}{3}$ of its length, incurved margin white. *Anther* truncate.

9. **A. metriochelos**, Baker; leaves lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts oblong-lanceolate glabrous, lip twice as long as the corolla-segments. *Achasma metriochelos*, Griff. Notul. iii. 427; Ic. Plant. Asiat. t. 356.

MALACCA, *Griffith* (*Kew Distrib.*, 5758). PENANG, on Government Hill, *Curtis*, 1530.

Leaves 1-1½ ft. by 1½ in., bright green. *Spike* 2 in. long and broad; peduncle arcuate, as long as the spike; outer bracts bright red, 1½ in.; inner as long, lingu- late. *Calyx* 1 in., spathaceous, cylindric; teeth minute, densely pilose. *Corolla*- tube as long as the calyx; segments 1 in. oblong, glabrous. *Lip* scarlet, with a small obovate tip, and margins incurved more than half way up. *Anther*-cells glabrous.—A closely-allied plant from Perak (*King's Collector*, 2933) has stems 12-15 ft. and leaves 3 ft. by 4-5 in.

10. **A. Maingayi**, *Baker*; leaves lanceolate glabrous beneath, spike globose, peduncle long erect, bracts glabrous outer orbicular, lip twice as long as the corolla-segments.

MALACCA, *Maingay* (*Kew Distrib.* 1586).

Rootstock slender, woody. *Leaves* thin, 12 or more by 2 in., narrowed very gradually to the base. *Spike* many-fl., 1½-2 in. long and broad; peduncle 12 in.; bract-leaves several distant obtuse small; outer bracts 1 in. orbicular; inner lingu- late. *Calyx* 1 in.; segments linear-lanceolate, as long as the tube. *Lip* 1 in., narrowed to an obtuse tip. *Filament* connate with the lip nearly to the top; anther- cells hairy. *Fruit* bright red, neither ribbed nor echinate.

†† *Spike* oblong.

11. **A. macrocheilos**, *Baker*; spike oblong shortly peduncled, outer bracts large oblong acute glabrous, lip more than twice as long as the corolla-segments bifid, margins of the lower third incurved. *Achasma macrocheilos*, *Griff.* *Notul.* iii. 429; *Ic. Plant. Asiat.* t. 357.

MALACCA, *Griffith*.

Leaves unknown. *Spike* 3 in.; peduncle 2 in., bract-leaves small, ovate, imbricate; outer bracts brownish, 2-2½ in. *Calyx* cylindric, spathaceous, as long as the corolla-tube. *Corolla*-segments linear-oblong, above 1 in.; upper broader. *Flower* greenish red. *Lip* 2½ in.; upper half linear, deeply bifid. *Anther* glabrous, deeply emarginate.

12. **A. costatum**, *Benth.* in *Gen. Plant.* iii. 644; leaves oblong-lanceolate pubescent beneath, spike oblong shortly peduncled, outer bracts oblong-lanceolate glabrous, lip twice as long as the corolla-segments. *Alpinia costata*, *Roxb. Corom. Pl.* t. 252. *A. Cardamomum* medium, *Roxb. Fl. Ind.* i. 74. *E. costata*, *Horan. Prodr.* 31. *Elettaria media*, *Link ex Horan.* *Cardamomum* medium, *Schult. Mant.* i. 244.

EASTERN TROPICAL HIMALAYAS; Silhet, *Roxburgh*.

Rootstock ½ in. diam. *Leafy stem* stout, 5-6 ft. *Leaves* 2-3 ft. by 3-4 in. *Spikes* 2-3 in.; peduncle as long as the spike; outer bracts pink, 1½ in. *Corolla*- tube 2 in., cylindric; segments obtuse, half as long as the tube. *Lip* 2 in., deflexed, lingu- late, red-yellow, tip entire, flat in the upper half, margins below the middle slightly incurved. *Fruit* ½ in., ovoid, strongly ribbed, smooth. *Seeds* many, obovoid, truncate acrid, aromatic, brownish.

13. **A. linguiforme**, *Benth.* in *Gen. Plant.* iii. 644; leaves oblong-lanceolate glabrous beneath, spike oblong few-fl. shortly peduncled, outer bracts ovate whitish glabrous, lip more than twice as long as the corolla-segments. *Alpinia linguiforme*, *Roxb. Fl. Ind.* i. 75; *Pl. Coromand.* t. 276. *Elettaria linguiformis*, *Schult. Mant.* i. 24; *Horan. Prodr.* 31.

EASTERN HIMALAYA, Tropical region, Sikkim, *J. D. H. KHASIA HILLS* (*Hook. f. & Thoms. Herb. Ind. Or.*, 10), *King. BENGAL*, *Roxburgh*.

Rhizome stout, copiously stoloniferous. *Leafy stem* 4-6 ft. *Leaves* thin,

1-1½ ft. by 3-5 in. *Spikes* about 3 in.; peduncle as long or shorter; inner bracts lanceolate, pink, 2-2½ in. *Corolla-tube* cylindric, 2 in.; segments oblong, bright red, half as long as the tube. *Lip* bright yellow, deflexed, above 2 in. long, bifid, margins below the middle incurved. *Stamen* shorter than the corolla-segments. *Ovary* hairy.

14. **A. gomphocheilos**, *Baker*; leaves large lanceolate glabrous beneath, spike oblong shortly-peduncled, outer bracts oblong-lanceolate large glabrous, lip twice as long as the corolla-segments, tip cuneate.

PERAK, *King's Collector*, 1897.

Leafy stem 12 ft. *Leaves* 2-3 ft. by 3 in. *Spike* 3 in.; outer bracts 2 in. *Corolla-tube* 2 in.; segments linear-oblong, under 1 in. *Lip* twice as long as the corolla-segments, with a cuneate-clawed tip, margins incurved to the tip of the corolla-segments. *Anther* emarginate; cells glabrous, tips much divaricated.

15. **A. megalocheilos**, *Baker*; leaves oblong-lanceolate, spike oblong very shortly peduncled, outer bracts ovate glabrous, lip more than twice as long as the corolla-segments tip obovate. *Achasma megalocheilos*, *Griff. Notul.* iii. 426; *Ic. Plant. Asiat.* t. 355.

MALACCA; foot of Mount Ophir, *Griffith*.

Leafy stem stout, 12-16 ft. *Spike* 3-4 in.; outer bracts 1½-2 in. *Calyx* spathaceous, cylindric, above 2 in. long; teeth small, lanceolate. *Corolla-tube* as long as the calyx; segments 1 in., linear-oblong. *Lip* 3 in., bright red; margins of the lower half incurved, yellow. *Anther*-cells glabrous, tip emarginate.

Sect. III. **Hornstedtia**, *Retz.* (gen.) (*Donacodes*, *Blume*; *Stenochasma*, *Griff.*). *Spike* radical. *Lip* narrow, margins incurved. *Anther* crested.

16. **A. macrodus**, *Scortech. in Nuov. Giorn. Bot. Ital.* xviii. 309, t. 12; leaves oblong-lanceolate, spike small subglobose shortly peduncled, bracts small ovate-lanceolate, lip not longer than the corolla-segments oblong margins involute, anther-crest small truncate.

MALAY PENINSULA; Kinta, *Scortechini*.

Leafy stem slender, 2 ft. *Leaves* caudate, 6-8 by 2-3 in. *Spike* 1 in. diam.; bracts red, glabrous, ½ in. *Calyx* spathaceous, ½ in. *Corolla-tube* half as long again as the calyx; segments oblong, ¼ in. *Lip* bifid, tip yellow, purple inside towards the base; small staminodes developed; anther-crest entire; cells parallel, glabrous.

17. **A. rubro-luteum**, *Baker*; leaves lanceolate glabrous beneath, spike globose sessile, outer bracts ovate glabrous, lip much longer than the corolla-segments.

MALACCA, *Maingay* (*Kew Distrib.*, 1588).

Leaves about 1 ft. by 2 in. *Spike* 2 in.; outer bracts 1½ in., pink ½ upwards. *Corolla-tube* 1½ in.; segments linear-oblong, subequal. *Lip* lingulate, deeply cleft at the tip, bright crimson, incurved margins yellow. *Filament* shortly produced beyond the anther.

18. **A. Leonurus**, *Kœnig in Retz. Obs.* iii. 69; leaves oblong-lanceolate glabrous beneath, spike cylindric subsessile, outer bracts large ovate pubescent, lip not longer than the corolla-segments. *Hornstedtia Leonurus*, *Retz. Obs.* vi. 18. *Stenochasma convoluta*, *Griff. Notul.* iii. 433; *Ic. Pl. Asiat.* t. 359.

MALACCA, *Kœnig*; dense woods at Rhim, *Griffith*.

Leafy stem 6 ft. or more. *Leaves* above 1 ft. *Spike* 3-4 in., 1 in. diam.; outer bracts $1\frac{1}{2}$ in., ovate, acute, rigid, reddish-green. *Corolla-tube* 3 in.; segments linear, red, half as long as the tube. *Lip* with an obtuse rigid point and sides, involute in the lower third. *Anther-cells* hispid; crest small, emarginate. *Capsule* large, oblong-trigonus.

19. **A. scyphiferum**, *Kœnig* in *Retz. Obs.* iii. 68; leaves oblong-lanceolate pubescent beneath, spike oblong shortly peduncled, outer bracts large suborbicular rigid reticulated, lip as long as the corolla-segments. *Hornstedtia Scyphus*, *Retz. Obs.* vi. 18. *Stenochasma urceolare*, *Griff. Notul.* iii. 431; *Ic. Plant. Asiat.* t. 358.

MALACCA, *Kœnig*, *Griffith*, *Maingay* (*Kew Distrib.*, 1582). SINGAPORE, *Ridley*.

Leafy stem 10-12 ft. *Leaves* $1\frac{1}{2}$ -3 ft. by 4-6 in. *Spike* 4 in., 2 in. diam.; central bracts 2 in., rigid, tip rounded, vertical ribs raised and connected by tomentose cross veinlets. *Corolla-tube* 2 in.; segments shorter, linear-oblong. *Lip* bright red, concave to the tip, base auriculate. *Anther-cells* pilose; crest orbicular-oblong. *Capsule* 1 in., oblong-trigonus.

20. **A. triorgyale**, *Baker*; leaves oblong-lanceolate pubescent beneath, spike oblong subsessile, outer bracts large suborbicular not reticulated, lip as long as the corolla-segments.

PERAK, *King's Collector*.

Nearly allied to *A. scyphiferum*. *Leafy stem* 20 ft. *Leaves* above 2 ft. by 6 in., distinctly petioled. *Spike* like that of *A. scyphiferum*, but the bracts less rigid and the close vertical ribs not connected by raised pubescent cross-veinlets. *Corolla-tube* 2 in.; segments and lip shorter than the tube.

Sect. IV. **Euamomum**, *Benth.* *Spike* radical. *Lip* broad. *Anther* crest.

* *Anther-crest* entire or crenate.

† *Anther-crest* lunate.

21. **A. Kœnigii**, *Baker*; leaves oblong, spike ovate-oblong shortly peduncled, outer bracts obtuse, lip 3-lobed bifid longer than the corolla-segments, anther-crest semilunar. *Amomum*, No. 57, *Kœnig* in *Retz. Obs.* iii. 54. *Meistera*, *Giseke Præl. Linn.* 205.

Coast of TENASSERIM; island of Junk Seylan, *Kœnig*.

Leafy stem 6-7 ft. Outer bracts ciliate, cymbiform, as long as the corolla-tube. *Corolla-segments* obovate, subequal, white. *Lip* white, broader than the corolla-segments; central lobe small; anther-crest white.—I have seen no specimen.

22. **A. acuminatum**, *Thw. Enum.* 317; leaves oblong-lanceolate caudate glabrous beneath, spike globose shortly peduncled, bracts small oblong acute, lip broad 3-lobed longer than the corolla-segments, anther-crest semilunar.

CEYLON; Ratnapoora, at a low elevation.

Rootstock wide-creeping. *Leafy stem* 2-4 ft. *Leaves* 5-6 by $1\frac{1}{2}$ in., shortly petioled. *Spike* 1- $1\frac{1}{2}$ in.; bracts under 1 in. *Lip* yellow tinged with red; central lobe emarginate; anther-cells ciliate; crest crenulate.

23. **A. fulviceps**, *Thw. Enum.* 317; leaves oblong-lanceolate glabrous beneath, spike globose, peduncle moderately long, bracts oblong pubescent, lip 3-lobed not longer than the corolla-segments, anther-crest semilunar.

CEYLON; Raxawa, in the central province, *Thwaites, Walker*. (*Hook. f. & Thoms. Herb. Ind. Or.* 11.)

Leafy stem 6–8 ft. and more. *Leaves* subcoriaceous, 1–2 ft. by $2\frac{1}{2}$ –3 in. *Spike* very dense, $2\frac{1}{2}$ –3 in. diam.; bracts dark red, $1-1\frac{1}{2}$ in., persistently pubescent. *Corolla*-tube $1\frac{1}{2}$ in.; segments oblong, a third the length of the tube. *Lip* pale yellow. *Anther-cells* pilose.

24. **A. masticatorium**, *Thw. Enum.* 317; leaves lanceolate glabrous beneath, spike globose shortly peduncled, bracts small obovate pubescent, lip broad 3-lobed, anther-crest semilunar, capsule small globose echinate.

CEYLON; common in the forests of the central province up to 4000 ft.

Rootstock slender. *Leafy stem* 6–8 ft. *Leaves* sessile, 1 ft. or more by $1-1\frac{1}{2}$ in. *Spikes* $1\frac{1}{2}$ in. long and broad; peduncle 2–3 in.; bract-leaves many, small, scarioso oblong; bracts under 1 in., ciliate. *Corolla*-tube hairy, as long as the bract; segments oblong, obtuse. *Lip* orbicular, dotted with red, bidentate at the base. *Capsule* $\frac{3}{4}$ in. diam., greenish-black.—*Rootstock* a native condiment.

†† *Anther-crest orbicular or transversely oblong.*

25. **A. pauciflorum**, *Baker*; spike sessile 1–2 fld., bracts oblong-lanceolate, lip orbicular-clawed longer than the corolla-segments, anther-crest small transversely oblong entire.

KHASIA HILLS; near Nunklow, *Hook. f. & Thoms.* (*Herb. Ind. Or.* 1).

Rootstock slender. *Leafy stem* unknown. *Spikes* several from one rootstock; bracts $1-1\frac{1}{2}$ in., several, pinkish, membranous. *Corolla*-tube $1\frac{1}{2}$ in.; segments 1 in. oblong, obtuse, white. *Lip* $1\frac{1}{2}$ –2 in., blade crisped orbicular, narrowed suddenly to a broad claw, with a yellowish middle, and radiating red veins; anther-cells glabrous, parallel.

26. **A. corynostachyum**, *Wall. Pl. Asiat. Rar.* i. 48 t. 58; *Cat.* 6561; leaves oblong-lanceolate glabrous beneath, spike globose, peduncle moderately long, outer bracts oblong, lip small broad obscurely 3-lobed, anther-crest orbicular.

SIKKIM HIMALAYA, *Kurz.* MARTABAN, *Wallich.* PEGU, *Kurz.*

Leafy stem 3–4 ft. *Leaves* $1-1\frac{1}{2}$ ft. by 2–3 in. *Spike* $1\frac{1}{2}$ in. diam.; peduncle $\frac{1}{2}$ –1 ft., bract-leaves obtuse and imbricate; outer bracts 1 in. oblong navicular, pale brown; inner oblanceolate, obtuse. *Corolla*-tube under 1 in.; segments oblong, shorter than the tube. *Lip* under 1 in. suborbicular, white, tinged with yellow in the middle; filament very short; anther-cells glabrous; crest white, entire, petaloid.

27. **A. graminifolium**, *Thw. Enum.* 430; leaves linear glabrous beneath, spike globose shortly peduncled, outer bracts oblong glabrous, lip obovate truncate longer than the corolla-segments, anther-crest large orbicular entire.

CEYLON; abundant in the Singherajah forest.

Rootstock slender. *Leafy stem* 3–4 ft. or more. *Leaves* about 12 in. under 1 in. broad, firm, linear, very acuminate. *Spike* few-fld.; peduncle 1–2 in., bract-leaves many, small, oblong, scarioso, brown; bracts 1 in. *Corolla*-tube as long as the bracts; segments obtuse, half as long as the tube. *Lip* 1 in.; anther-cells glabrous, $\frac{1}{2}$ in.; crest as long as the cells.

28. **A. ciliatum**, *Baker*; leaves lanceolate pubescent beneath, spike oblong shortly peduncled, bracts oblong pubescent densely ciliate, lip short broad, anther crest transversely oblong. *A. fulviceps* β , *Thw. Enum.* 317.

CEYLON; Reigam Corle, *Thwaites*, 3704.

Leaves 12 by $1\frac{1}{2}$ –2 in., sessile, caudate. *Spike* $1\frac{1}{2}$ –2 in. diam.; peduncle 3–4 in.;

bracts 1 in., dark coloured, back pubescent and densely ciliated with whitish hairs. Corolla-tube much shorter than in *A. fulviceps*; segments $\frac{1}{2}$ in. oblong.

29. **A. microstephanum**, Baker; leaves large lanceolate or oblong-lanceolate pubescent beneath, spike globose shortly peduncled, outer bracts oblong glabrous, lip obovate longer than the corolla-segments, anther-crest small orbicular, capsule 9-costate.

CONCAN, Stocks; near Chandwar (planted), Ritchie. (Hook. f. & Thoms. Herb. Ind. Or. 4).

Leafy stem 4 ft. Leaves $1\frac{1}{2}$ –2 ft. by 2–4 in., densely softly pubescent beneath. Spike 2 in.; outer bracts 1 – $1\frac{1}{2}$ in. Corolla-tube 1 in.; segments linear-oblong, half as long as the tube. Flower white. Lip 1 in.; anther-cells glabrous, $\frac{1}{2}$ in.

30. **A. xanthioides**, Wall. Cat. 6557; leaves lanceolate glabrous, spike globose shortly peduncled, outer bracts small oblong, lip cochleariform bifid longer than the corolla-segments, anther-crest short broad entire, capsule echinate.

TAVOY, Gomez. TENASSERIM, Parish.

Leafy stem 5–6 ft. Leaves 1 – $1\frac{1}{2}$ ft. by $1\frac{1}{2}$ –3 in., firm, bright green. Spike 1 in., few-flid.; peduncle arcuate, slender, 2–3 in.; outer bracts $\frac{1}{2}$ – $\frac{3}{4}$ in., acute, glabrous. Corolla-tube under 1 in.; segments oblong, $\frac{1}{2}$ – $\frac{1}{2}$ in. Lip with an orbicular blade $\frac{1}{2}$ – $\frac{3}{4}$ in. broad, narrowed suddenly to a broad claw; anther-crest auricled on each side. Capsule rigid, oblong-trigonous, pale brown, under 1 in. long.—A nearly allied plant from Perak (King's Collector, 1839) with robust leafy stems 12 ft. long and much longer leaves, is doubtless a distinct species, but the materials are too scanty for description.

††† Anther-crest subquadrate or truncate.

31. **A. littorale**, Kœnig in Retz Obs. iii. 52; leaves oblong, spike globose, peduncle very short, outer bracts orbicular, lip broad emarginate, anther-crest truncate emarginate.

COAST OF TENASSERIM; island of Yunk Seylan, Kœnig.

Leafy stem taller than a man. Leaves 1 ft. Outer bracts orbicular-cordate; inner linear-lanceolate, white; tip ciliate. Corolla-segments unequal; upper erect, oblong; lower lanceolate, approximate. Lip cordate, bright orange; margins crisped; recurved lip bidentate; stamen half as long as the lip. Capsule oblong-trigonous.—I have seen no specimens.

32. **A. dealbatum**, Roxb. Fl. Ind. i. 43; leaves large oblong-lanceolate pale and pubescent beneath, spike globose short-peduncled, outer bracts ovate, lip large obovate emarginate, anther-crest small subquadrate entire, capsule-ribs winged. Wall. Cat. 6556; Horan. Prodr. 30.

EASTERN HIMALAYAS; SIKKIM, KHASIA HILLS, SILHET, EASTERN BENGAL and CHITTAGONG. (Hk. f. & Thoms. Herb. Ind. Or. 5.) Roxburgh, &c.

Leafy stem 4–5 ft. Leaves 2–3 ft. by 4–6 in., bright green above, whitish beneath. Spike 2 in. diam.; peduncle very short; outer bracts 1 in., reddish. Corolla-tube 1 in.; segments oblong, obtuse, white, as long as the tube. Lip obovate-cuneate, $1\frac{1}{2}$ in., white with a yellow line down the centre and radiating red veins. Anther-crest small, subquadrate. Capsule globose, reddish, 1 in. diam., with 9 winged crenulate vertical ribs.—Nearly allied to the Malayan *A. maximum*, Roxb.

Var. **A. sericeum**, Roxb. Fl. Ind. i. 46 (sp.); leaves silvery white beneath, anther-crest larger, capsule ovoid.—Sikkim, Khasia and Cachar. (Hk. f. & Thoms. Herb. Ind. Or. 6.).

33. **A. hypoleucum**, *Thw. Enum.* 318; leaves large oblong-lanceolate silvery beneath, spike 1-3-fl., peduncle very short, bracts oblong membranous, lip broad longer than the corolla-segments, anther-crest subquadrate crenate, capsule 9-ribbed.

CEYLON; damp forests of the central province, up to 4000 ft.

Rootstock slender. *Leafy stem* stout, 4-5 ft. *Leaves* 1½-2 ft. by 3-5 in., persistently silky beneath, petiole 3 in. *Spikes* many to a rootstock; bracts 1½-2 in. *Corolla*-tube as long as the bracts; segments 1 in., oblong, white, subequal; lip orbicular-cuneate, 1½ in., entire, white with a yellow disk tinged with red. *Capsule* 1 in. globose, red.

34. **A. cannæcarpum**, *Benth. in Gen. Plant.* iii. 644; leaves oblong-lanceolate glabrous, spike oblong nearly sessile, outer bracts oblong-lanceolate, lip broad not longer than the corolla-segments, anther-crest short truncate, capsule globose echinate. *Elettaria cannæcarpa*, *Wight Ic.* t. 2007.

NILGHIRI HILLS; *Wight, Gardner.*

Leafy stem 4-6 ft. *Leaf* 12 by 2½ in. *Spike* 3 in.; outer bracts 1-1½ in., tips deep pink, paler below. *Corolla*-tube 1½ in.; segments oblong, half as long, the upper broader; lip obovate, yellow, emarginate; filament short; anther-cells parallel, glabrous; crest very small, entire. *Capsule* rigid, 1 in. diam. *Seeds* angled.—*Wight's* description and figure do not agree with one another, and neither is quite accurate.

35. **A. subulatum**, *Roxb. Cor. Pl.* t. 277; *Fl. Ind.* i. 44; leaves oblong-lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts obtuse with a horny cusp, lip obovate-cuneate emarginate, anther-crest small truncate, capsule echinate. *Horan. Prodr.* 29.

EASTERN HIMALAYAS; *Roxburgh.*

Leafy stem 3-4 ft. *Leaves* 1-2 ft. by 3-4 in. green, glabrous on both surfaces. *Spike* very dense, shortly peduncled, 2-3 in.; bracts red-brown, outer 1 in., ovate, inner shorter and obtuse. *Calyx* and *corolla*-tube 1 in.; segments subobtus, shorter than the tube; upper cuspidate. *Lip* yellowish white, rather longer than the corolla-segments. *Filament* very short; anther-crest entire. *Capsule* 1 in., globose, red-brown, densely echinate.

** Anther-crest 3-4-lobed.

† *Spike* 2-3-fl.

36. **A. biflorum**, *Jack in Mal. Misc.* i. 2; leaves oblong-lanceolate glabrous except the midrib, spike 2-fl. peduncled, bracts lanceolate, lip obovate white with a yellow centre, anther-crest 3-lobed. *Hook. Bot. Misc.* i. 274.

PENANG, *Jack.*

Rootstock not thicker than a goose-quill. *Leafy stem* 3 ft. *Peduncle* enveloped in bracteal sheaths; bracts reddish; bracteole half as long as the calyx. *Corolla* white, segments subequal. *Lip* white, tip rounded.—Not seen.

37. **A. elatteroides**, *Baker*; leaves oblong-lanceolate softly pubescent beneath, spike sessile 2-fl., bracts lanceolate, corolla-tube long slender, lip broad longer than the corolla-segments, anther-crest 3-lobed.—*Amomum* sp. *Griff. Notul.* iii. 417.

MALACCA, *Griffith, Kew Distrib.* 5753, *Maingay* (K. d. 1573.)

Rootstock slender. *Leafy stem* 2-2½ ft. *Leaves* 9-12 by 1½-2 in. *Spikes* many

to a rootstock; bracts 1 in., reddish, membranous. *Corolla*-tube 2 in., very slender; segments $\frac{1}{2}$ in., linear-oblong, membranous. *Lip* white, subcochleate, twice as long as the corolla-segments, with a broad yellow central band with a reddish border; anther-crest large, petaloid.

†† *Spike many-fld., oblong.*

38. **A. Kingii**, Baker; leaves oblong-lanceolate, spike oblong peduncled, bracts ovate, lip small broad emarginate, anther-crest obscurely 3-lobed, fruit neither costate nor echinate.

SIKKIM HIMALAYA; *King*.

Leafy stem stout. *Leaves* above a foot long, 3-4 in. broad. *Spike* 4-5 in.; bracts pale brown, 1-1 $\frac{1}{2}$ in.; peduncle as long as the spike. *Corolla*-tube 1 in.; segments oblong, obtuse, nearly as long as the tube. *Lip* $\frac{1}{2}$ in. broad, white tinged with yellow, obscurely 3-lobed, narrowed suddenly to a broad claw; stamens shorter than the lip. *Capsule* globose, 1 in. diam.

39. **A. uliginosum**, Kœnig in Retz Obs. iii. 56; leaves oblong glabrous, spike peduncled, outer bracts oblong, lip broad emarginate margins rounded ascending, anther-crest 4-lobed, capsule globose echinate. Wurfbainia, Giseke Præl. Linn. 206.

MALAY PENINSULA; Raput Nok, Kœnig.

Rootstock filiform. *Leafy stem* 3-4 ft. *Leaves* scarcely 1 ft. *Spike* distant from the leaves; bracts oblong, membranous, subrigid, white. *Corolla*-segments white; upper oblong, obtuse; lateral lanceolate. *Lip* with a rigid claw and a recurvato-ascending cymbiform blade.—*Descript. from Kœnig, l. c.*

††† *Spike globose.*

40. **A. xanthophlebium**, Baker; leaves lanceolate glabrous, spike globose shortly peduncled, outer bracts large oblong glabrous, lip broad 3-lobed longer than the corolla-segments, anther-crest trifid.

MALACCA, Maingay (*Kew Distrib.* 1585).

Leafy stem long, robust. *Leaves* above 1 ft. *Spikes* 2-2 $\frac{1}{2}$ in. and broad; peduncle about as long; outer bracts reddish, 1 $\frac{1}{2}$ in. *Corolla*-tube as long as the bract; lower segments oblong, upper broader ovate. *Lip* dull red, paler towards the margin, with radiating yellow veins. *Anther*-crest broad; lateral lobes decurved.

41. **A. aromaticum**, Roxb. *Fl. Ind.* i. 45; leaves oblong-lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts small ovate, lip large obovate-cuneate, anther-crest trifid, fruit neither costate nor echinate. *Wall. Cat.* 6559; *Horan. Prodr.* 29 ? *Renealmia fasciculata*, *Rosc. Scit. Pl. t.* 109. *Geocalis fasciculata*, *Horan. Prodr.* 33.

EASTERN HIMALAYAS, tropical region; NEPAL, Wallich; SIKKIM, KHASIA HILLS, SILHET, & NORTHERN BENGAL; *Roxburgh*, &c.

Leafy stem 3-4 ft. *Leaves* $\frac{1}{2}$ -1 ft. by 2-4 in., and glabrous on both sides. *Spike* small, globose; peduncle generally short, rarely longer and decumbent; outer bracts 1 in., ovate, pale brown. *Corolla*-tube 1 in.; segments obtuse, nearly as long as the tube, white, tinged with brown. *Lip* pale yellow, twice as long as the corolla-segments, outer half deflexed. *Anther*-crest large, petaloid, lobes rounded. *Capsule* 1 in., oblong, trigonous.

Renealmia fasciculata is founded on a rough drawing, probably of this species.

42. **A. pterocarpum**, Thw. *Enum.* 317; leaves large oblong-lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts

oblong glabrous, lip short broad, anther-crest short 3-lobed, capsule ovoid 9-ribbed.

CEYLON; forests of the central province, up to 4000 ft.

Leafy stem 3-6 ft. or more. *Leaves* thin, 1-2 ft. by 2-6 in., narrowed gradually to the base. Flowering spike globose; bracts $1\frac{1}{2}$ in., deciduous and fruiting pedicels elongating. *Lip* round, white, shortly bidentate at the base; disk yellow, tinged with red. *Capsule* 1 in.; ribs crenulate.

43. **A. Benthamianum**, *Trimen Cat. Ceyl. Pl.* 92; leaves lanceolate glabrous beneath, spike small globose shortly peduncled, bracts oblong acute glabrous, lip short broad, anther-crest broad 3-lobed, capsule small echinate.

CEYLON; Reigam Corle, *Thwaites*.

Rootstock slender. *Leafy stem* short and slender. *Leaves* 6-8 by 1-1½ in., shortly petioled. *Spike* 1 in. diam.; outer bracts greenish, 1 in.; peduncle rather longer than the spike. *Corolla-tube* 1 in.; segments oblong obtuse. *Anther-crest* with 3 shallow orbicular lobes. *Capsule* ½ in. diam.

44. **A. aculeatum**, *Roxb. in Asiat. Res.* xi. 344, t. 6; *Fl. Ind.* i. 40; leaves oblong-lanceolate glabrous beneath, spike globose shortly peduncled, outer bracts ovate, lip broad rather longer than the corolla-segments, anther-crest broad 3-lobed, capsule echinate, *Horan. Prodr.* 30.

SOUTH ANDAMAN ISLANDS, *Kurz*.—DISTRIB. Malay isles.

Rootstock tuberous. *Leafy stem* 5-10 ft. *Leaves* sessile, 1-1½ ft. by 2-4 in. *Spike* 2 in. diam.; bracts brown, acute, 1-1½ in. *Corolla-tube* 1 in.; segments oblong, half as long as the tube. *Lip* suborbicular, pale yellow, tinged with red in the centre. *Anther-crest* short, broad, equally 3-lobed. *Capsule* brown, rigid, densely echinate, 1 in. under.

45. **A. echinatum**, *Willd. Sp. Plant.* i. 8; leaves lanceolate glabrous beneath, spike globose, peduncle moderately long, bracts small oblong, lip broad rather longer than the corolla-segments, anther-crest transversely oblong 3-lobed, capsule globose echinate. *Thw. Enum.* 316; *Horan. Prodr.* 30.

CEYLON; forests of central province, up to 4000 ft.

Leafy stem 6-12 ft. *Leaves* 1-2 ft. by 2-3 in.; caudate or acuminate, sessile. *Spike* $1\frac{1}{2}$ -2 in. diam.; peduncle stout, ½ ft. bright red in the lower part, its bract-leaves very obtuse and imbricate; bracts 1 in., faintly pubescent, brown-black, convex. *Corolla-tube* 1 in.; segments oblong, obtuse. *Lip* yellow, with many fine red veins. *Anther-crest* short and broad, with three subequal orbicular lobes. *Capsule* 1 in., purplish-black, with copious curved spines.

SUBGEN. V. **Cenolophon**, *Horan. (gen.)*. *Spike* terminal on the leafy stem. (Sect. 46-48.)

46. **A. rufescens**, *Benth. in Gen. Plant.* iii. 645; leaves oblong-lanceolate, spike dense-fl. globose, lip broad 3-lobed as long as the corolla-segments. *Elettaria rufescens*, *Thw. Enum.* 430.

CEYLON; Ambagomowa district, alt. 3000 ft.

Leafy stem $1\frac{1}{2}$ -2 ft. *Leaves* ½-1 ft. by 1-2 in. moderately firm, green and glabrous on both surfaces. *Spike* small, globose, terminal, enveloped at first in a large green orbicular cuspidate bract; flower-bracts obtuse, under 1 in. *Corolla-segments* oblong, obtuse; lip as long as the corolla-segments, midlobe retuse.

47. **A. vitellinum**, *Lindl. in Journ. Hort. Soc.* ii. 245; *Bot. Reg.*

1847, t. 52; leaves oblong, spike dense-fl. globose lip orbicular twice as long as the corolla-segments. *Cenolophon vitellinum*, *Horan. Prodr.* 36.

CEYLON? Hort. Chiswick.

Leafy stem slender, 2 ft. *Leaves* 6-8 by 3-4 in., bright green, glabrous. *Spike* small, shortly peduncled; bracts green, oblong, $\frac{1}{2}$ in. *Calyx* and corolla-tube about as long as the bract; corolla-segments linear-oblong, as long as the tube. *Lip* 1 in., base spurred, bright yellow, with red veins. *Anthers* with a large trifid crest; cells glabrous, tips diverging.

48. **A. macrostephanum**, *Baker*; leaves lanceolate base cordate, spike elongate, bracts deciduous, lip obovate-cuneate much longer than the corolla-segments.

PERAK; alt. 500-1000 ft., *King's Collector*.

Leafy stem very slender, 4-8 ft. *Leaves* 1-1 $\frac{1}{2}$ ft. by 2-3 in. thin, glabrous, caudate, narrowed from the middle to the cordate base. *Spike* 3-4 in.; peduncle long, erect, enveloped in the sheath of the topmost leaf; bracts caducous. *Ovary* densely villous. *Calyx* loosely tubular, $\frac{1}{3}$ in. *Corolla*-tube rather longer than the calyx; segments linear-oblong. *Lip* 1 in. *Filament* half as long; anther glabrous; crest large, leafy, crisped, lacerate.

12. ZINGIBER, *Adans.*

Rootstock horizontal, tuberous. *Leafy stem* elongated. *Leaves* oblong-lanceolate, clasping the stem by their long sheaths. *Spikes* usually radical, rarely lateral or terminal on the leafy stem; peduncle short or long; bracts persistent, usually single-fl. *Calyx* cylindric, shortly 3-lobed. *Corolla*-tube cylindric; segments lanceolate, upper concave. Lateral *staminodes* 0 or adnate to the obovate-cuneate lip; filament short; anther-cells contiguous, crest narrow, as long as the cells. *Ovary* 3-celled; ovules many, superposed; style filiform; stigma small, subglobose. *Capsule* oblong, finally dehiscing. *Seeds* large, globose, arillate.—Species 30, Tropics of Old World.

Sect. I. **Cryptanthium**, *Horan.* *Spikes* produced direct from the rootstock, very short and dense; peduncle very short.—(Sp. 1-11.)

* *Leaves more or less pubescent beneath.*

1. **Z. chrysanthum**, *Rosc. Scit. Pl.* t. 86; leaves pubescent beneath, bracts green outer ovate inner lanceolate with a hairy cusp, corolla-segments bright red, lip bright yellow deeply 3-lobed, midlobe orbicular, lateral ovate. *Horan. Prodr.* 27. *Z. ligulatum*, *Wall. Cat.* 6566, non *Roxb.*

TROPICAL HIMALAYA, from KUMAON, ascending to 5500 ft., to SIKKIM and ASSAM.

Leafy stem 6-8 ft. *Leaves* 12 by 2-3 in., oblong-lanceolate. *Spike* very dense, globose or oblong; peduncle very short; inner bracts 1 $\frac{1}{2}$ -2 in. broad. *Corolla*-tube 1 $\frac{1}{2}$ -2 in.; segments 1 in., lanceolate. *Lip* 1 in., unspotted; basal auricles largest of any species, hence the lip is as broad as long. *Stamen* shorter than the lip. *Capsule* oblong. *Seeds* brown, nearly as large as a pea, wrapped to the top in a white membranous aril.—*Z. FLAVESCENS*, *Link.; Dietr. Sp.* i. 54, is probably a form of this, but the description is very incomplete.

2. **Z. rubens**, *Roxb. in Asiat. Res.* xi. 348; *Hort. Beng.* 1; *Fl. Ind.* i. 53; leaves pubescent beneath, bracts bright red outer ovate inner

lanceolate, corolla-segments red, lip oblong much spotted and streaked with red on a pale ground, basal auricles small rounded. *Rosc. Scit. t. 88; Horan. Prodr. 28.*

KHASIA HILLS, *H. f. & T. (Herb. Ind. Or. 10), Clarke.* BENGAL; Rungpore, Hamilton.

Leafy stem stout, 6-8 ft. *Leaves* 12 by 4-5 in. or more. *Spike* very dense, globose; peduncle 1-4 in.; inner bracts $1\frac{1}{2}$ in. *Corolla*-tube as long as the bracts; segments 1 in., lanceolate, subequal, bright red. *Lip* nearly as long as the corolla-segments, yellowish-white, copiously spotted and streaked with minute dots and lines of red-purple. *Stamen* as long as the lip, beak of the anther bright red.

3. **Z. roseum**, *Rosc. in Trans. Linn. Soc. viii. 348; Scit. Pl. t. 87;* leaves pubescent beneath, bracts pale red outer ovate inner lanceolate, corolla-segments pale red, lip oblong-cuneate whitish unspotted, basal auricles very small yellow rounded. *Roxb. in Asiat. Res. xi., 347, Fl. Ind. i. 50; Wall. Cat. 6570; Horan, Prodr. 28.* *Amomum roseum, Roxb. Coromand. Pl. t. 126.*

NORTHERN CIRCARS, *Roxburgh.*

Leafy stem 3-4 ft. *Leaves* 8-12 by 3-4 in. *Spike* very dense, oblong; peduncle very short; inner bracts $1\frac{1}{2}$ -2 in. *Corolla*-tube whitish, 2 in.; segments 1 in., lanceolate, subequal. *Lip* shorter than the corolla-segments; margins recurved, crisped. *Stamens* arching over the lip and equalling it in length; beak as long as the anther, as in the other species.

4. **Z. Nimmonii**, *Dalz. in Hook. Kew Journ. Bot. iv. (1852) 341;* leaves pubescent beneath, bracts red-striped linear-oblong or lanceolate, corolla-segments reddish-yellow, lip yellow emarginate, basal auricles small rounded. *Dalz. & Gibs. Bomb. Fl. 273; Horan. Prodr. 28.* *Alpinia Nimmonii, Grah. Cat. Pl. Bomb. 206.*

CONCANS; common in the mountains, *Nimmo, Dalzell.*

Leafy stem 4-5 ft. *Leaves* 1- $1\frac{1}{2}$ ft., 6-12 by 2-3 in. broad. *Spikes* subglobose; peduncle very short; bracts glabrous, 1- $1\frac{1}{2}$ in. *Corolla*-tube as long as the bracts; segments lanceolate. *Lip* obovate-cuneate, faintly emarginate. *Capsule* the size of a pigeon's egg.—Nearly allied to *Z. panduratum*.

5. **Z. Wightianum**, *Thw. Enum. 315;* leaves pubescent beneath, bracts green outer ovate inner lanceolate, corolla-segments pale, lip obovate-cuneate pale yellow veined and spotted with purple, basal auricles small ovate. *Z. squarrosus, Wight Ic. t. 2004, non Roxb.*

TRAVANCORE; abundant in the Anamallay forests, &c. CEYLON; common in the forests up to 4000 ft.

Leafy stem 4-6 ft. *Leaves* 12-18 by 3-4 in., oblong-lanceolate. *Spikes* oblong or subglobose; peduncle very short; flower-bracts $1\frac{1}{2}$ in., pubescent. *Corolla*-tube as long as the bract; segments subequal, under 1 in. *Lip* nearly as long as the corolla-segments, emarginate. *Stamen* shorter than the lip, arching over it, as in the other species. *Capsule* 1 in.—In a specimen from Thwaites the spike is terminal on the leafy stem, thus connecting sections *Cryptanthium* and *Dymeris*.

6. **Z. barbatum**, *Wall. Pl. Asiat. Rar. t. 55; Cat. 6567;* leaves pubescent beneath, bracts reddish-green ovate cuspidate, corolla-segments whitish, lip obovate-cuneate white emarginate, basal auricles very small. *Horan. Prodr. 28.*

BURMA, *Wallich. PEGU, McClelland.*

Leafy stem 2-3 ft. *Leaves* oblong, 6-8 by $1\frac{1}{2}$ -2 in. *Spike* $1\frac{1}{2}$ -2 in. very dense, ovoid; peduncle very short; bracts 1 in., ovate with a large green cusp, hairy all

over. *Corolla*-tube $\frac{3}{4}$ –1 in.; upper segment larger than the two side ones, concave. *Lip* $\frac{1}{2}$ in. *Stamen* as long as the lip.

7. **Z. squarrosus**, *Roxb. in Asiat. Res.* xi. 348; *Hort. Beng.* 1; *Fl. Ind.* i. 54; leaves pubescent beneath, bracts green lanceolate, tips hooked, corolla-segments pink, lip ovate emarginate yellowish-white tipped with lilac, basal auricles small spreading rounded. *Wall. Cat.* 6568; *Horan. Prodr.* 28.

BURMA, *Roxburgh*; Prome, *Wallich*. PEGU, *F. Carey*.

Leafy stem 2–3 ft. *Leaves* 12 by 3–4 in. *Spike* globose, very dense; peduncle very short; outer bracts short, ovate; inner about 1 in., pale green, tip distinctly hooked. *Corolla*-tube 1 in.; segments lanceolate, subequal, about as long as the tube. *Lip* shorter than the corolla-segments, distinctly emarginate, margins deflexed. *Stamen* nearly as long as the lip.

** *Leaves glabrous beneath.*

8. **Z. ligulatum**, *Roxb. in Asiat. Res.* xi. 348; *Hort. Beng.* 1; *Fl. Ind.* i. 51; *Coromand. Pl.* t. 253; leaves glabrous beneath, bracts pink outer ovate inner lanceolate, corolla-segments pink, lip obovate-cuneate yellowish-white unspotted, basal auricles small ovate. *Horan. Prodr.* 28.

COROMANDEL, *Roxburgh*.

Leafy stem about 2 ft. *Leaves* 12 by 2–3 in., oblong-lanceolate. *Spike* dense, subglobose; peduncle 2–3 in.; bracts about 1 in. *Corolla*-tube as long as the bract; segments subequal, $\frac{3}{4}$ in.; lip as long as the corolla-segments, margin crisped, not distinctly emarginate; basal auricles more or less acute. *Stamen* yellow, shorter than the lip. *Capsule* oblong, 1 in. and more, bright red inside. *Seeds* blackish-brown, with a nearly complete white aril.—Very near *Z. roseum*.

9. **Z. cernuum**, *Dalz. in Hook. Kew Journ. Bot.* iv. (1852) 342; leaves glabrous beneath, bracts yellowish-green ovate or oblong obtuse, corolla-segments buff-yellow, lip deeply bifid variegated pink and white, basal auricles small red and yellow. *Dalz. & Gibs. Bomb. Fl.* 273; *Horan. Prodr.* 28.

CONCAN; at Ram Ghat, *Dalzell*.

Leafy stem curved, bright light green. *Leaves* oblong-lanceolate, acuminate. *Spikes* ovoid; peduncle very short. *Lip* beautifully coloured. *Capsule* smooth, yellowish-white. *Seeds* red, striated, aril membranous.

10. **Z. panduratum**, *Roxb. Hort. Beng.* 2; *Fl. Ind.* i. 55; leaves glabrous beneath, bracts red outer ovate inner lanceolate, corolla-segments bright red, lip obovate yellowish-white unspotted, basal auricles small rounded. *Wall. Cat.* 6569; *Horan. Prodr.* 28.

PEGU, *F. Carey*. TAVOY, *Gomez*.

Leafy stem 3 ft. *Leaves* 6–12 by 3–4 in.; ligule very large. *Spike* 2 in., very dense, oblong; peduncle very short; inner bracts $1\frac{1}{2}$ in., tip not hooked. *Corolla*-tube $1\frac{1}{2}$ in.; segments 1 in., subequal. *Lip* shorter than the corolla-segments, unspotted, not emarginate. *Stamen* as long as the lip.—Nearly allied to *Z. roseum* & *ligulatum*.

11. **Z. pardocheillum**, *Wall. ex Voigt Hort. Suburb. Calcut.* 562 (name only); leaves glabrous beneath, bracts obovate-cuneate red-brown truncate, corolla-segments reddish, lip deeply 3-lobed tessellated with dark lilac on a yellowish-white ground.

BURMA, *Wallich*.

Leafy stem stout. *Leaves* 12 by 3–4 in., oblong-lanceolate, acute. *Spikes* 2–3 in.

long and broad, very dense, globose, subsessile; bracts much imbricate, outer 1 in. Corolla-tube as long as the bract; segments ovate-lanceolate, a little shorter than the tube. Lip a little shorter than the corolla-segments; midlobe obovate-cuneate, lateral orbicular. Stamen as long as the lip.

SECT. II. **Lampuzium**, Horan. Spikes produced from the root-stock on more or less elongated peduncles with sheathing scariose bract-leaves.—Species 12–21.

* *Leaves glabrous beneath.*

12. **Z. intermedium**, Baker; spikes globose, bracts lanceolate, corolla-segments pale red, lip orbicular reddish-black finely spotted, basal auricles oblong.

North KHASIA HILLS; at Bhorlasa, alt. 3500 ft., Clarke.

Peduncle slender, 2–6 in.; bract-leaves several, small, sheathing, obtuse. Spike very dense, globose, $1\frac{1}{2}$ –2 in.; bracts membranous, convolute, $1\frac{1}{2}$ in. Corolla-tube as long as the bract; segments 1 in., lanceolate. Lip as long as the corolla-segments. Anther with a dark red beak.—Spike and bracts as in sect. *Cryptanthium*, with a produced peduncle. A plant from Silhet in Herb. Wallich under *Z. Cassumunar* may be this species. An allied plant collected by Prain in the Naga hills has oblanceolate-oblong leaves above a foot long, a slender erect peduncle as long, and bracts rather longer than in Clarke's plant.

13. **Z. officinale**, Rosc. in *Trans. Linn. Soc.* viii. 348; *Scit. Pl.* t. 83; leaves lanceolate glabrous beneath, spike oblong-cylindric, bracts greenish suborbicular cuspidate, corolla-segments greenish, lip small purplish-black, mid-lobe orbicular, lateral ovate. Roxb. in *Asiat. Res.* xi. 345; *Hort. Beng.* 1; *Fl. Ind.* i. 47; *Wall. Cat.* 6564; *Grah. Cat. Pl. Bomb.* 207; *Horan. Prodr.* 27; *Bentl. & Trim. Med. Pl.* t. 270. *Z. Missionis*, Wall. *Cat.* 6565. *Amomum Zingiber*, Linn. *Sp.* 1; *Jacq. Hort. Vind.* i. t. 75. *Curcuma longifolia*, Wall. *Cat.* 6612, in part.—*Rheede Hort. Mal.* xi. 21, t. 12; *Rumph. Amboin.* v. t. 66, fig. 1.

Widely cultivated in TROPICAL ASIA; native locality unknown.

Rootstock biennial, bearing many sessile tubers. Leafy stem 3–4 ft. Leaves 6–13 by 1 in., tapering gradually to the point. Spike 2–3 by 1 in. diam.; peduncle $\frac{1}{2}$ –1 ft.; bracts about 1 in. Corolla-segments lanceolate, subequal, under an inch long. Lip shorter than the corolla-segments. Stamen dark purple, as long as the lip.—“Very rarely flowers, and have never seen seeds,” Roxburgh.

14. **Z. Griffithii**, Baker; leaves oblong glabrous beneath, spikes cylindric shortly peduncled, bracts ovate obtuse bright red, lip yellowish-white 3-lobed.

MALACCA, Griffith (*Kew Distrib.* 5731), Maingay. (K. d. 1564.)

Leafy stem 2–3 ft. Leaves 6–8 by 2–3 in. Spike 4–6 in., 1 in. diam.; peduncle very short; bracts 1 in., lower orbicular, 1 in. broad. Corolla-tube as long as the bract; segments obtuse, under 1 in.

15. **Z. gracile**, Jack. in *Malay Misc.* i. 1; leaves oblong-lanceolate glabrous beneath, spike oblong-cylindric, bracts ovate acute red, flowers yellowish-white, lip 3-lobed, midlobe bifid. Horan. *Prodr.* 27; *Hook. Bot. Misc.* i. 273.

PENANG, Jack.

Leaves 6–7 in., bright green. Scape a foot. Corolla-segments longer than the lip.—No authentic specimens of Jack's plant exist, but King's 7954 and 1027 S. from Perak, and Hullet's 854 from Mount Ophir are probably the same species. They

have a spike 6-9 in., 1 in. diam., peduncle about as long, leafy stem 2-3 ft., and a pink capsule.

16. **Z. Zerumbet**, *Smith Exot. Bot.* ii. 105, t. 112; leaves oblong-lanceolate glabrous beneath, spike oblong very dense, bracts orbicular green, corolla-segments whitish, lip sulphur-yellow unspotted, midlobe orbicular emarginate, basal lobes large orbicular. *Rosc. in Trans. Linn. Soc.* viii. 348; *Scit. Pl.* t. 84; *Roxb. in Asiat. Res.* xi. 346; *Hort. Beng.* 1; *Fl. Ind.* i. 48; *Horan. Prodr.* 27; *Grah. Cat. Pl. Bomb.* 207; *Bot. Mag.* t. 2000; *Wall. Cat.* 6562; *Wight Ic.* t. 2003; *Dalz. & Gibs. Bomb. Fl.* 272. *Z. spurium*, *Kœnig in Retz. Obs.* iii. 60. Zingiber sp., *Griff. Notul.* iii. 412; *Ic.* t. 351. *Amomum Zerumbet*, *Linn. Sp.* i. 1; *Jacq. Hort. Vind.* iii. t. 54. *A. spurium*, *Gmel. Syst.* i. 6. *A. sylvestre*, *Poir. Ency. Suppl.* v. 548. *Zerumbet Zingiber*, *Lestib. in Ann. Sc. Nat.* ser. 2, xx. 329.—*Rheede Hort. Mal.* xi. 27, t. 13; *Rumph. Amboin.* v. 148, t. 64, fig. 1.

From the HIMALAYAS to CEYLON and the MALAY PENINSULA.—DISTRIB. Widely cultivated in tropics of Old World.

Rootstock tuberous, biennial, pale yellow inside. *Leafy stem* 3-4 ft. *Leaves* 12 by 2-3 in. *Spikes* 3-4 in., $1\frac{1}{2}$ in. diam.; peduncle $\frac{1}{2}$ -1 ft.; bracts 1-1 $\frac{1}{2}$ in. long and broad, very obtuse, green with a paler edge. *Corolla*-tube as long as the bract; segments 1 in., upper broader. *Lip* with a midlobe $\frac{3}{4}$ in. broad. *Stamen* pale, as long as the lip. *Capsule* oblong, above 1 in.—I cannot from the description distinguish *Z. amaricans*, Blume; *Miq. Fl. Ind. Bat.* iii. 593.

** *Leaves more or less pubescent beneath.*

17. **Z. cylindricum**, *Moon Cat. Ceyl. Pl.* 1; leaves oblong-lanceolate pubescent beneath, spikes oblong-cylindric, bracts ovate pale or reddish, corolla-segments green, lip yellowish-white unspotted obovate, basal auricles small obtuse. *Thwaites Enum.* 315.

CEYLON; in forests of the central province.

Leafy stem 3-6 ft. and more. *Leaves* 6-8 by 1-2 in. *Spike* 3-4 in., $1\frac{1}{2}$ in. diam.; peduncle 3-9 in.; bract-leaves obtuse, imbricate; bracts about 1 in., closely imbricate, upper subacute, lowest obtuse. *Corolla*-tube as long as the bract; segments lanceolate. *Capsule* subglobose red. *Seeds* black, aril white.

18. **Z. macrostachyum**, *Dalz. in Hook. Kew Journ. Bot.* iv. (1852) 342; leaves oblong-lanceolate pubescent beneath, spike cylindric, bracts ovate reddish, corolla-segments greenish-white, lip obovate yellowish-white marked with purple lines, basal auricles small. *Dalz. & Gibs. Bomb. Fl.* 273; *Horan. Prodr.* 27. *Alpinia Neesana* (Mesuana), *Grah. Cat. Pl. Bomb.* 207.

Hills of the CONCAN, *Graham, &c.*

Stems reddish, pubescent. *Leaves* dark green, 12-18 by $1\frac{1}{2}$ -3 in. *Spike* $\frac{1}{2}$ -1 ft., $1\frac{1}{2}$ in. diam.; peduncle elongate, with large obtuse sheathing scarious bract-leaves; bracts 1-1 $\frac{1}{2}$ in. *Corolla*-tube as long as the bract; segments lanceolate, nearly 1 in. *Capsule* red, pubescent, the size and shape of a sparrow's egg.

19. **Z. spectabile**, *Griff. Notul.* iii. 413; leaves oblong-lanceolate pubescent beneath, spike dense oblong-cylindric, bracts orbicular subcoriaceous reddish with a pale margin, corolla-segments yellowish-white, lip orbicular blackish-purple, basal auricles short obtuse.

MALACCA, *Griffith (Kew Distrib.* 5762), *Maingay (K. d.* 1567). PERAK; Larut, *King's Collector.*

Leafy stem long and stout. *Leaves* 9-12 by 2-3 in. *Spike* $\frac{1}{2}$ -1 ft., $2\frac{1}{2}$ in. diam.; bracts 1-1 $\frac{1}{2}$ in. long and broad, more coriaceous and more spreading than in the

other species, resembling those of *Hitchenia glauca*; peduncle sometimes 1 ft. Corolla-tube $1\frac{1}{2}$ in.; upper segment broader than the two others. Lip emarginate. Stamen nearly as long as the lip. Capsule oblong. Seeds shining, black, and 3-5 partite, large, white.

20. **Z. Casumunar**, Roxb. in *Asiat. Res.* xi. 347, t. 5; *Hort. Beng.* 2; *Fl. Ind.* i. 49; leaves oblong-lanceolate pubescent beneath, spikes oblong, bracts ovate reddish, corolla-segments whitish, lip yellowish-white with a deeply bifid midlobe, basal auricles large oblong obtuse. *Rosc. Scit.* t. 85; *Bot. Mag.* t. 1426; *Grak. Cat. Pl. Bomb.* 207; *Dalz. & Gibs. Bomb. Fl.* 272; *Horan. Prodr.* 27. *Z. purpureum*, *Rosc. in Trans. Linn. Soc.* viii. 348. *Z. Cliffordiæ*, *Andr. Bot. Rep.* t. 555. *Z. montanum*, *Link. in Dietr. Sp.* i. 52. *Amomum montanum*, *Koenig in Retz. Obs.* iii. 51. *Casumunar Roxburghii*, *Colla Nov. Gen. Scit. in Comm. Taur.* 1830.—*Rumph. Hort. Amboin.* v. 154, tab. 65, fig. 2.

From the HIMALAYAS to CEYLON and MALAY PENINSULA.—DISTRIB. Widely cultivated only in tropical Asia.

Rootstock perennial, bright yellow inside. *Leafy stem* 4-6 ft. *Leaves* 12-18 by 2-3 in. *Spike* oblong, 4-6 in., $1\frac{1}{2}$ -2 in. diam.; peduncle 3-12 in.; bracts 1-1 $\frac{1}{2}$ in. and nearly as broad, bright red or greenish-red. *Corolla*-tube as long as the bract; segments 1 in., upper broader and more concave. Lip with an orbicular unspotted midlobe $\frac{3}{4}$ in. long and broad. Stamen yellowish-white, shorter than the lip. Capsule small, globose.—*Z. Casumunar*, *Wall. Cat.* 6563, includes three species, none of them the true one and not in a state for description.

21. **Z. Parishii**, *Hook. f. in Bot. Mag.* t. 6019; leaves oblong-lanceolate pubescent beneath, spikes oblong, bracts orbicular usually cuspidate pale green with a red edge, corolla-segments yellowish-white, lip obovate sulphur-yellow marked with brown spots and lines, basal auricles short obtuse.

TENASSERIM, *Griffith, Parish.*

Leafy stem 3 ft. *Leaves* 4-6 by 1-1 $\frac{1}{2}$ in., thin, bright green. *Spike* 2-4 in., $1\frac{1}{4}$ in. diam.; peduncle 3-4 in., with obtuse oblong sheathing bract-leaves; bracts densely imbricate, about 1 in. broad. *Corolla*-segments as long as the tube, about 1 in. *Lip* shorter than the corolla-segments, faintly emarginate; basal auricles broad, truncate. *Stamen* pale yellow, as long as the lip; beak as long as the anther.

SECT. III. **Pleuranthesis**, Benth. *Spike* peduncled arising from the side of the leafy stem. (Sp. 22.)

22. **Z. Clarkei**, *King, mss. ex. Benth. Gen. Plant.* iii. 646.

SIKKIM HIMALAYA; alt. 3000-5000 ft., *Hook. f. Thoms. (Herb. Ind. Or. 3)*, *Clarke, King.*

Leafy stem 5-6 ft. *Leaves* oblong or oblong-lanceolate, 12-18 by 2-4 in., finely pubescent beneath. *Spike* lateral, oblong-cylindric, 3-4 in., cernuous; peduncle 3-6 in.; main bracts 1 in., oblong, obtuse, green, finally reddish, 2-4-fld. *Corolla*-tube as long as the bract; segments 1 in., pale yellow, upper one broadest. *Lip* as long as the corolla-segments, oblong, yellow flushed with purplish-brown. *Stamen* pale yellow, nearly as long as the lip. *Capsule* subglobose, membranous, shorter than the bract. *Seeds* as large as a pea, brown; aril small, white.

SECT. IV. **Dymczewiezia**, *Horan. (gen.)*. *Spikes* terminal on the leafy stem. (Sp. 23, 24.)

23. **Z. capitatum**, *Roxb. in Asiat. Res.* xi. 348; *Fl. Ind.* i. 55; leaves

linear ascending, bracts ovate. *Rosc. Scit. Pl.* t. 90; *Wall. Cat.* 6560. *Dymczewiezia capitata*, *Horan. Prodr.* 26.

CENTRAL and EASTERN HIMALAYAS, from KUMAON to SIKKIM the KHASIA HILLS & SILHET.

Leafy stem 3-4 ft. *Leaves* 12-18 by 1-1½ in., tapering gradually to the point, erecto-portent, usually pubescent beneath. *Spike* sessile at the end of the leafy stem, dense-fl., erect, oblong or oblong-cylindrical, 3-6 in., 1½-2 in. diam.; bracts closely imbricate, subcoriaceous, 1½ in., green with a narrow brown edge. *Corolla*-tube as long as the bract; segments 1 in., pale yellow. *Lip* pale yellow, unspotted, midlobe orbicular emarginate ¾ in. broad, basal auricles large, oblong, obtuse, bright red. *Capsule* bright red, the size of a small olive; valves ovate. *Seeds* black, shining, aril large lacerated white.

Var. *Z. ELATUM*, *Roxb. Fl. Ind.* i. 57 (sp.). A more tropical form, with taller stems, stouter spikes and larger flowers. *Rosc. Scit. Pl.* t. 91. *Dymczewiezia elata*, *Horan. Prodr.* 26.

24. **Z. marginatum**, *Roxb. in Asiat. Res.* xi. 349; *Fl. Ind.* i. 57? leaves oblong-lanceolate spreading, bracts oblong obtuse. *Dymczewiezia marginata*, *Horan. Prodr.* 26?

KHASIA HILLS; Umwai, alt. 3000 ft., *Clarke*.

Leafy stem 3-4 ft. *Leaves* 4-6 by 1 in.; ligule, very large, lanceolate, brown. *Spike* terminal, sessile, 1-2 in., under ½ in. diam.; rachis very hairy; bracts ½ in., closely imbricate, hairy, brown when dried, obtuse, 1-fl. *Corolla* and lip not seen.—*Roxburgh's* description is very brief, and he gives no locality. *Blume* and *Miquel* give the species as Javan, and cite for it *Lampuzium minus*, *Rumph. Hort. Amboin.* v. 148 tab. 64, fig. 2.

IMPERFECTLY KNOWN SPECIES.

22. *Z. (Lampuzium) near ODORIFERUM*, *Blume Enum.* i. 14. *Leafy stem* stout several feet long, leaves 6-8 in. oblong-lanceolate, peduncle 6-8 in. erect, spike 5-6 in. long 2 in. diam. dense-fl., bracts closely imbricate ovate subacute glabrous lower 1½ in., bracteole 1 in. complicate, flower not seen.—*Andamans*, on Mount Haniot, *Prain* 59.

23. *Z. (Lampuzium) near COROLLINUM*, *Hance in Journ. Bot.* 1890, 301. *Leafy stem* long, leaves 10-12 by 1½-2 in. lanceolate glabrous, spike dense-fl. a foot long 3 in. diam., bracts 1½-2 in. subcoriaceous oblong obtuse glabrous, bracteoles 1 in., complicate; flower not seen.—*Great Cocos island*, *Andanan group*, *Prain* 713.

13. **COSTUS**, *Linn.*

Rootstock tuberous, horizontal. *Leafy stem* long. *Leaves* oblong; sheaths broad. *Spike* dense-fl., globose or ovoid, usually terminal, rarely produced direct from the rootstock on a short peduncle. *Calyx*-tube short, infundibular; teeth ovate. *Corolla*-tube not longer than the calyx; segments large, oblong, subequal. *Lateral staminodes* 0 or minute. *Lip* large, obovate, margins incurved. *Filament* forming with the connective an oblong petaloid process, in the middle of which are placed the contiguous linear anther-cells. *Ovary* 3-celled; ovules many, superposed; style filiform; stigma with a semilunar foveole, ciliated round the margin. *Capsule* globose or ovoid, finally dehiscing on one side between the ribs. *Seeds* obovoid or subglobose, aril short.—*Species* 25; tropics of both hemispheres.

1. **C. speciosus**, *Smith in Trans. Linn. Soc.* i. 249; spike ovoid or oblong terminal on the leafy stem. *Roxb. in Asiat. Res.* xi. 349; *Hort.*

Beng.?; *Fl. Ind.* i. 58; *Wall. Cat.* 6555; *Wight Ic.* t. 2014; *Grah. Cat. Pl. Bomb.* 208; *Dalz. & Gibs. Bomb. Fl.* 274; *Thwaites Enum.* 320. *Reichb. Ic. Exot.* t. 69; *Paxt. Mag.* iv. t. 245. *C. arabicus*, *Jacq. Ic.* t. 1. *Hellenia grandiflora*, *Retz. Obs.* vi. 68. *Banksia speciosa*, *König in Retz. Obs.* iii. 75.—*Rheede Hort. Mal.* xi. t. 8; *Rumph. Amboin.* vi. t. 64, fig. 2.

Throughout India from the CENTRAL and EASTERN HIMALAYAS, ascending to 4000 ft. to CEYLON and MALACCA.—DISTRIB. Malay islands.

Leafy stem 6–9 ft. stout. *Leaves* $\frac{1}{2}$ –1 ft. or more, oblong, acute, thinly silky beneath. *Spike* very dense-fl'd. 2–4 in.; bracts ovate, bright red, 1–1 $\frac{1}{2}$ in. *Calyx* 1 in.; segments 3, ovate cuspidate. *Corolla*-segments white, oblong 1–1 $\frac{1}{2}$ in. *Lip* white, suborbicular, 2–3 in., the margins incurved and meeting. *Filament* 1 $\frac{1}{2}$ –2 in. including the oblong petaloid connective. *Capsule* 1 in., globose, red, crowned with the persistent calyx.

Var. *C. NIPALENSIS*, *Rosc. Scit. Pl.* t. 80* (sp.) leafy stem shorter, leaves narrower lanceolate, spike globose. *Wall. Cat.* 6555 p. *C. speciosus*. Var. *angustifolius*, *Ker in Bot. Reg.* t. 665—Central Himalayas.

Var. *ARGYROPHYLLUS*, *Wall. Cat.* 6555 G, H.; leaves more densely silky and paler beneath, spikes globose, bracts pubescent.—Pegu and Penang.

2. ***C. globosus***, *Blume Enum. Pl. Jav.* 62 ? leaves glabrous beneath, peduncle produced direct from the rootstock, bract-leaves very short small ovate, corolla-segments glabrous. *Miq. Fl. Ind. Bat.* iii. 610 ? *Horan. Prodr.* 36 ?

MALACCA, *Maingay (Kew Distrib.* 1578).—DISTRIB. Java.

Leaves 6–8 by 2 $\frac{1}{2}$ –3 oblanceolate-oblong, narrowed gradually from the middle to the base. *Peduncle* about 2 in. curved; bract-leaves $\frac{1}{2}$ in., ovate, densely imbricate. *Spike* 1 $\frac{1}{2}$ in. globose; outer bracts ovate; inner 1 in., oblong, back scabrous towards the tip. *Calyx* 1 in. *Corolla*-segments 1 in., ovate or oblong. *Lip* and stamen *C. speciosus*.

3. ***C. Kingii***, *Baker*; leaves pubescent beneath, peduncle longer produced direct from the rootstock, bract-leaves larger oblong, corolla-segments villous.

PERAK; Larut, *King's Collector*, 2194.

Leaves 6–8 by 3–3 $\frac{1}{2}$ in., oblanceolate-oblong, subcoriaceous, broadest above the middle, narrowed gradually to the base. *Peduncle* 4–5 in. stout; bracts 1 in., densely imbricate, oblong, scarious. *Spike* 2 $\frac{1}{2}$ –3 in., very dense, globose; outer bracts above 1 in., ovate; inner lanceolate. *Calyx*-tube 1 in., villous; segments ovate, sharply cuspidate. *Corolla*-segments 1 in., hairy. *Lip* suborbicular, 2 in. long and broad.

14. **CYPHOSTIGMA**, *Benth.*

Rootstock thick, horizontal, perennial. *Leafy stem* short. *Leaves* oblong-lanceolate. *Inflorescence* a panicle distinct from the leafy stem, lax, decumbent; flowers 1–2 to a bract, bracteolate. *Calyx* cylindric, minutely 3-toothed, slit down one side. *Corolla*-tube cylindric; segments linear-oblong, subequal. *Lateral staminodes* obsolete; lip orbicular-reniform, emarginate; filament short; anther-cells distant, crest very large petaloid. *Ovary* 3-celled; ovules many, superposed; style filiform; stigma large, cylindric, gibbous at the base, stigma cup-shaped. *Capsule* and seeds unknown.

C. pulchellum, Benth. *Gen. Plant.* iii. 645; *Hook. Ic. Pl.* t. 1380. *Amomum pulchellum*, *Thwaites Enum.* 318.

CEYLON; forests of the central province, alt. 3000 ft.

Leafy tuft $1\frac{1}{2}$ –2 ft. *Leafy stem* formed from the connate bases of the petioles. *Leaves* 1–2 ft. by 3–5 in. broad at the middle, narrowed to the base; petiole $\frac{1}{2}$ –1 ft. *Panicles* like those of *Elettaria*, decumbent, sometimes a foot long; bracts oblong, obtuse, clasping the slender rachis. *Calyx* under 1 in. *Corolla*-tube rather longer than the calyx; segments under an inch long. *Lip* 1 in. broad, red and yellow; anther-crest orbicular, crenulate, rose-purple, nearly as broad as the lip.

15. **ELETTARIA**, Maton.

Rootstock thick, horizontal, perennial. *Leafy stem* long. *Leaves* oblong-lanceolate. *Panicle* produced direct from the rootstock, long, flexuous, decumbent; bracts 2–3-fld.; flowers shortly pedicelled, bracteolate. *Calyx* cylindric, membranous, shortly lobed. *Corolla*-tube cylindric; mid-segment oblong, convex; lateral narrower. *Lateral staminodes* minute teeth; lip obovate-cuneate; filament very short; anther-cells contiguous, not crested. *Ovary* 3-celled; ovules many; style filiform; stigma small, turbinate. *Capsule* globose or oblong, coriaceous, indehiscent. *Seeds* small, angled by pressure.

E. Cardamomum, Maton in *Trans. Linn. Soc.* x. 254; Benth. & Trim. *Med. Pl.* t. 267; Thw. *Enum.* 318; Horan. *Prodr.* 30. *Alpinia Cardamomum*, Roxb. in *Asiat. Res.* xi. 355; *Hort. Beng.* 1; *Coromand. Pl.* t. 226; *Fl. Ind.* i. 70; *Grah. Cat. Pl. Bomb.* 206; Dalz. & Gibs. *Flor. Suppl.* 86. *Amomum Cardamomum*, Linn. *Sp.* 1; White in *Trans. Linn. Soc.* x. 220, t. 4–5. *A. repens*, Willd. *Sp. Plant.* i. 9; *Woodv. Med. Bot.* t. 131. *A. racemosum*, Lam. *Encyc.* i. 134. *Cardamomum officinale*, Salisb. in *Trans. Linn. Soc.* i. 232.—*Rheede Hort. Mal.* xi. 9, t. 4–5.

MALABAR; on the Western Ghats, from Kurg southwards (wild or cultivated). CEYLON (cult.).

Leafy stem 6–9 ft. *Leaves* 1–2 ft. by 3 in., pubescent beneath. *Panicles* several to one leafy stem, 1–2 ft.; bracts linear-oblong, persistent, $1\frac{1}{2}$ –2 in. *Calyx* $\frac{1}{2}$ in. *Corolla*-tube shortly exserted; segments $\frac{1}{2}$ in. *Lip* longer than the corolla-segments, white sheathed with violet. *Capsule* subglobose or oblong, marked with many fine vertical ribs.

Var. MAJOR, Thw. *Enum.* 318; more robust, leaves broader, capsule 1 in. oblong-fusiform. *E. major*, Smith in *Rees. Cyclop.*; Horan. *Prodr.* 31.—Ceylon, up to 3000 ft. (indigenous).

16. **ELETTARIOPSIS**, Baker.

Rootstock slender, wide-creeping. *Leaves* 1–2-nate direct from the rootstock, long petioled. *Spike* radical lax-fld.; bracts small, membranous. *Calyx*-limb spathaceous, clasping the flower-bud. *Corolla*-tube slender, cylindric; segments linear-oblong or lanceolate. *Lateral staminodes* 0; lip obovate-cuneate; filament shorter; anther with a small orbicular petaloid crest. *Ovary* oblong, 3-celled; ovules many, superposed; style filiform; stigma small, globose. *Fruit* and *seeds* unknown.—A Bornean species and the following:—

1. **E. exserta**, Baker; spike erect, corolla-segments lanceolate, tube very long. *Cyphostigma exsertum*, *Scortech. in Nuov. Gior. Bot. Ital.* xviii. 310, t. 13.

MALAY PENINSULA; Perak, *Scortechini*, 1947.

Leaves usually solitary, erect; blade oblong-lanceolate, $2\frac{1}{2}$ –3 ft., narrowed to the base; petiole much shorter. *Spike* 6 in.; lower internodes $\frac{1}{2}$ in.; bracts lanceolate. *Calyx* 1 in. *Corolla*-tube $2\frac{1}{2}$ –3 in., cylindric, rather dilated towards the top; segments $\frac{3}{4}$ in. *Lip* 1 in., yellow, with two red streaks.

2. **E. Curtisii**, *Baker*; spike decumbent, corolla-segments linear-oblong, tube very long.

PENANG; West hill, alt. 2500 ft., *Curtis*, 1578.

Rootstock sheathed with imbricated obtuse scale-leaves. *Leaves* solitary, erect; petiole $\frac{1}{2}$ ft.; blade 8–9 by 2 in., oblong-lanceolate, coriaceous. *Spike* $1\frac{1}{2}$ –2 in.; rachis very slender; bracts lanceolate, $\frac{1}{2}$ in. *Calyx* $\frac{1}{2}$ in. *Corolla*-tube $\frac{1}{4}$ in., very slender; segments $\frac{1}{2}$ in. *Lip* deflexed, twice as long as the corolla-segments.

3. **E. serpentina**, *Baker*; spike decumbent secund, corolla-segments linear-oblong, tube twice as long as the calyx-limb.

PENANG, alt. 100°–1500 ft., *King's Collector*.

Rhizome very slender, sheathed by oblong imbricated scale-leaves. *Leaves* less than 12 in. by 2 in., geminate, erect, lanceolate, subcoriaceous, glabrous; petiole slender, 8–9 in. *Spike* 2–3 in.; shortly peduncled; bracts small, lanceolate, membranous. *Calyx*-tube $\frac{1}{2}$ in. *Corolla*-tube 1 in.; segments half as long as the tube. *Lip* white, marked with red-brown and yellow in the centre.

17. **SCAPHOCHLAMYS**, *Baker*.

Rootstock wide-creeping, not tuberous. *Stem* 0. *Leaves* erect, oblong-lanceolate; petiole as long as the blade. *Spike* lax-fl'd.; bracts several-fl'd., large, lingulate, persistent. *Calyx* oblique, spatheaceous. *Corolla*-tube slender, cylindric, longer than the calyx; lip obovate-cuneate, emarginate; filament short; anther-cells slightly divergent, with a small petaloid-crest. *Ovary* 3-celled?; ovules few in a cell; style filiform; stigma small, globose. *Capsule* subglobose, membranous. *Seeds* ovoid, with a large white aril cut down to the base into subulate processes.

S. malaccana, *Baker*.

MALACCA; Mount Ophir, *Cuming*, *Griffith* (K. d. 5761), *Maingay* (*Kew Distrib.* 1579), *Hullett*.

Leaf-blade firm, glabrous, 6–8 by 2–3 in. *Spike* of about 6 nodes; peduncle short, slender; bracts 1– $1\frac{1}{2}$ in., green, lingulate, erecto-patent, obtuse, involute in the lower half. *Calyx* $\frac{1}{2}$ in. *Flowers* white. *Corolla*-tube under 1 in., slender, cylindric; segments shorter than the tube. *Lip* under 1 in. *Stamen* porrect, shorter than the lip. *Capsule* $\frac{1}{2}$ in., 3-seeded.

18. **ALPINIA**, *Linn.*

Rootstock horizontal. *Leafy stem* elongated. *Leaves* oblong or lanceolate. *Panicle* or *raceme* terminal (except in sp. 16–17); bracteoles sometimes enveloping the bud. *Calyx* laxly tubular, shortly 3-toothed. *Corolla*-tube cylindric, usually not longer than the calyx; segments linear-oblong or oblong, upper usually broader and more convex. *Lateral staminodes* 0 or very small; lip patent, often orbicular with incurved margins, sometimes with 2 subulate processes at the base of the claw; filament flattened; anther-cells divergent at the apex, furnished rarely with an orbicular crest. *Ovary* 3-celled, ovules few or many in a cell; style filiform; stigma subglobose. *Fruit* globose, dry or fleshy, usually

indehiscent. *Seeds* globose or angled by pressure.—Species 30, in the Tropics of the Old World.

Sect. I. **Ethanium**, Horan. *Anther* not crested. *Bud* not enclosed in large bracteoles. *Panicle* terminal.—(Sp. 1–9).

1. **A. conchigera**, Griff. *Notul.* iii. 424; *Ic. Plant. Asiat.* t. 354; leaves oblong-lanceolate glabrous beneath, panicle long narrow, flowers small, corolla-segments oblong greenish, lip orbicular yellowish with red lines and dots with two small teeth at the base. *A. Galanga*, Wall. *Cat.* 6572 E, F. *Strobidia conchigera*, Kuntze *inedit.*

CHITTAGONG and the Malay Peninsula to MALACCA.—DISTRIB. Siam, Cambodia.

Leafy stem 3–4 ft. *Leaves* $\frac{1}{2}$ –1 ft. by 2–3 in. *Panicle* 6–9 in.; rachis pubescent; lower branch often elongate, the others short ascending; bracts small, brown, scariose, ovate. *Calyx* $\frac{1}{2}$ – $\frac{3}{4}$ in.; mouth oblique, obscurely 3-dentate. *Corolla*-tube scarcely longer than the calyx; segments $\frac{1}{2}$ in. *Lip* with incurved margins, not longer than the corolla-segments, not clawed. *Ovules* 2 in each cell.—I do not regard *Strobidia* as generically distinct from *Alpinia*.

2. **A. Manii**, King MSS. (under *Strobidia*); leaves oblong-lanceolate glabrous beneath, panicle long narrow subracemose, flowers small, corolla-segments oblong, lip narrow cuneate.

ANDAMAN ISLANDS, King's Collector.

Leafy stem elongate. *Leaves* shortly petioled, 12 in. or more by 3–4 in., bright green, with more prominent ribs than in its allies. *Panicle* 6–9 in.; rachis pubescent; branches short, erecto-patent, usually 1-fl.; bracts minute, *Calyx* $\frac{1}{2}$ in., minutely 3-dentate. *Corolla*-tube twice as long as the calyx; segments $\frac{1}{2}$ in. *Lip* scarcely longer than the corolla-segments. *Capsule* globose, $\frac{1}{4}$ in. diam., 1–2 seeded.

3. **A. Galanga**, Sw. *Obs. Bot.* 8; leaves oblong-lanceolate glabrous beneath, panicle copiously compound, flowers small, corolla-segments linear-oblong greenish-white, lip obovate-clawed emarginate white veined with lilac, with a pair of subulate glands at the base of the claw. *Roxb. Hort. Beng.* 2; *Asiat. Res.* xi. 352; *Fl. Ind.* i. 59; *Rosc. in Trans. Linn. Soc.* viii. 345; *Wall. Cat.* 6572, ex parte; *Grah. Cat. Pl. Bomb.* 206; *Dalz. & Gibs. Bomb. Fl.* 274; *Thw. Enum.* 319. *A. viridiflora*, Griff. *Notul.* iii. 423; *Ic. Pl. Asiat.* t. 353. *Maranta Galanga*, Linn. *Sp. Plant.* 2. *Galanga*, Salisb. in *Trans. Hort. Soc.* i. 281.—*Rumph. Amboin.* v. t. 63.

Throughout INDIA from the foot of the Himalayas to CEYLON and MALACCA.—DISTRIB. Malay islands and widely cultivated.

Rootstock perennial, tuberous, slightly aromatic. *Leafy stem* 6–7 ft. *Leaves* 1–2 ft. by 4–6 in., green and glossy on both sides. *Panicle* dense-fl., $\frac{1}{2}$ –1 ft., rachis densely pubescent, branches numerous short; pedicels $\frac{1}{2}$ – $\frac{3}{4}$ in.; bracts small, ovate, *Calyx* greenish-white, $\frac{1}{2}$ in. oblique at the throat. *Corolla*-segments $\frac{1}{2}$ – $\frac{3}{4}$ in. *Lip* distinctly clawed, $\frac{1}{2}$ in., basal glands ascending, reddish, linear-subulate. *Stamen* arcuate, shorter than the lip. *Ovules* 1–2 in a cell. *Fruit* orange-red, the size of a small cherry.—Probably *A. alba*, *Rosc. in Trans. Linn. Soc.* viii. 346 (*Hellenia alba*, Willd. *Sp. Plant.* i. 5. *Languas vulgare*, Koenig in Retz. *Obs.* iii. 64; *Heritiera. alba*, Retz. *Obs.* vi. 18), *A. carnea*, Griff. *Notul.* iii. 420, and *A. zingiberina*, Hook. f. in *Bot. Mag.* t. 6944 are forms. The drawing of *Costus arabicus*, Linn. in Hermann's Ceylon Herbarium belongs here.

4. **A. Allughas**, *Rosc. in Trans. Linn. Soc.* viii. 346; *Scit. Pl.* t. 67; leaves oblong-lanceolate glabrous beneath, panicle narrow copiously com-

pound, flowers small, corolla-segments linear-oblong greenish-white, lip cuneate pink distinctly emarginate with two small linear-subulate glands at the base. *Roxb. in Asiat. Res.* vi. 353; *Hort. Beng.* 2; *Fl. Ind.* i. 61; *Wall. Cat.* 6571; *Griff. Notul.* iii. 432; *Grah. Cat. Pl. Bomb.* 206; *Dalz. & Gibs. Bomb. Fl.* 273; *Thw. Enum.* 320; *Horan. Prodr.* 33. *A. Rheedii*, *Wight Ic.* t. 2026, *Hellenia Allughas*, *Willd. Sp. Plant.* i. 4; *Andr. Bot. Rep.* t. 501; *Salisb. in Trans. Hort. Soc.* i. 281. *Heritiera Allughas*, *Retz. Obs.* vi. 17, t. 1. *Zingiber nigrum*, *Gaertn. Fruct.* t. 12.—*Rheede Hort. Mal.* xi. t. 14.

From the HIMALAYAS to CEYLON and MALACCA.—DISTRIB. Malay isles and widely cultivated.

Rootstock tuberous, biennial or perennial. *Leafy stem* 3–6 ft. *Leaves* 1–1½ ft. by 3–6 in., smooth and glossy on both surfaces. *Panicle* erect, ½–1 ft.; branches pubescent, fewer and more ascending than in *A. Galanga*; flowers crowded, shortly pedicelled; bracts small, ovate-amplexicaul. *Calyx* pubescent, ¾–1 in.; mouth oblique. *Corolla*-tube as long as the calyx; segments as long as the tube. *Lip* clawed. *Stamen* arcuate, shorter than the lip. *Capsule* globose, black, ½ in. diam.

5. *A. calcarata*, *Rosc. in Trans. Linn. Soc.* viii. 347; *Scit. Pl.* t. 68; leaves lanceolate glabrous beneath, panicle short, slightly compound flowers middle-sized, corolla-segments oblong greenish-white, lip oblong striped and spotted with red and yellow on a pale ground with edges slightly incurved, base spurred. *Roxb. in Asiat. Res.* xi. 355; *Hort. Beng.* 2; *Fl. Ind.* i. 69; *Bot. Reg.* t. 141; *Wall. Cat.* 6577; *Grah. Cat. Pl. Bomb.* 206; *Wight Ic.* t. 2028; *Dalz. & Gibs. Bomb. Fl.* 274; *Thw. Enum.* 320. *A. bracteata*, *Rosc. in Trans. Linn. Soc.* xi. 381; *Scit.* t. 70, non *Roxb.*, *A. cernua*, *Sims in Bot. Mag.* t. 1900. *Renealmia calcarata*, *Haw. in Andr. Bot. Rep.* t. 421; *Salisb. in Trans. Hort. Soc.* i. 231. *Globba erecta*, *Red. Lil.* t. 174.

SOUTHERN MALAY PENINSULA, the CONCAN, and CEYLON.—DISTRIB. China, and widely cultivated.

Rootstock perennial, not tuberous. *Leafy stem* slender, 2–4 ft. *Leaves* 6–12 by 1–2 in. acuminate, green and glossy on both surfaces. *Panicle* dense-fld., 3–4 in.; rachis pubescent; lower branches short, bearing 3–4 crowded flowers; bracts small, ovate. *Calyx*-tube funnel-shaped, ¼–½ in.; ovary densely pubescent. *Corolla*-segments ½ in. *Lip* 1–1½ in., beautifully variegated with red and yellow, emarginate. *Anther*-cells minutely margined. *Ovules* many in a cell. *Capsule* globose, red.

6. *A. Wrayi*, *King MSS.*; leaves lanceolate glabrous beneath, peduncle scarcely leafy, panicle short slightly compound, flowers middle-sized, corolla-segments oblanceolate, lip dark yellow obovate-cuneate.

PENANG, alt. 2–3000 ft., *King's Collector*.

Leafy stem elongate. *Leaves* 12 by 2 in. or more, acute, moderately firm. *Peduncle* from the rootstock, slender, erect, under a foot long, with several sheathing bract-leaves, only the uppermost produced into a small lanceolate blade. *Panicle* 3–4 in., dense-fld., erect; bracts small, deciduous. *Ovary* very hairy. *Calyx* ½ in., narrowly funnel-shaped. *Corolla*-tube as long as the calyx; segments ¾ in. *Lip* 1 in.—May be an abnormal form of *A. calcarata*.

7. *A. mutica*, *Roxb. in Asiat. Res.* xi. 354; *Hort. Beng.* 2; *Fl. Ind.* i. 67; leaves oblong-lanceolate glabrous beneath, panicle slightly compound, flowers large, corolla segments oblong white, lip suborbicular variegated red and yellow, base not spurred, margins much incurved. *Rosc.*

Scit. Pl. t. 69; *Hook. f. in Bot. Mag.* t. 6908; *Horan. Prodr.* 34. *Renealmia mutica*, *Salisb. in Trans. Hort. Soc.* i. 280.

PENANG, *Roxburgh.* MALAY PENINSULA.—DISTRIB. Malay isles.

Rootstock perennial, not tuberous. *Leafy stem* 4–6 ft. *Leaves* 1–2 ft. by 2–4 in. *Panicle* 6–9 in.; rachis stout, very pubescent; lower branches short, 2–3; bracts oblong. *Calyx*-tube $\frac{1}{2}$ in., funnel-shaped, white bordered with pink. *Corolla*-segments 1 in. *Lip* $1\frac{1}{2}$ in., nearly as broad, beautifully variegated with red and yellow, *Capsule* globose, 1 in. diam., bright yellow. *Seeds* many in a cell.

8. **A. petiolata**, *Baker*; leaves oblong-lanceolate petioled glabrous beneath, raceme simple, bracts large, flowers large, lip obovate-cuneate.

PERAK, alt. 2500–4000 ft., *Kunstler.*

Leafy stem 2–3 ft. *Leaves* 1– $1\frac{1}{2}$ ft. by 3–4 in., subcoriaceous, dark glossy green, petiole 3–4 in. *Spike* moderately dense-fl., erect, 3–4 in.; rachis slender, pubescent; bracts 1 in., green membranous. *Ovary* densely villose. *Calyx* 1 in. *Lip* half as long again as the calyx, bright yellow; filament 1 in.

9. **A. Rafflesiana**, *Wall. Cat.* 6575; leaves lanceolate finely pubescent beneath, panicle dense subglobose, flowers middle-sized, corolla-segments oblong reddish-yellow, lip suborbicular margins much incurved. *Hook. Ic.* t. 1063. *A. aurantiaca*, *Wall. mss.*

PENANG, SINGAPORE and MALACCA.

Rootstock perennial, not tuberous. *Leafy stem* 4–6 ft. *Leaves* 1– $1\frac{1}{2}$ ft. by 2–3 in. *Panicle* sessile at the end of the leafy stems, congested into a globose head 2 in. long, subtended by a large ovate green bract; pedicels very short; flower-bracts small, persistent, orbicular, subcoriaceous. *Calyx* funnel-shaped, bright red, $\frac{1}{2}$ – $\frac{3}{4}$ in. *Corolla*-segments concave, $\frac{1}{2}$ – $\frac{3}{4}$ in. *Lip* $\frac{3}{4}$ –1 in. long and broad, beautifully striped with red on a yellow ground. *Capsule* globose, small.—*Alpinia vittata* of gardens appears to be a form of this very distinct species with leaves variegated with white.

Subgen. II. **Catumbium**, *Juss.* *Anther* not crested. *Bud* enclosed in large membranous bracteoles. *Raceme* or *panicle* terminal.—Species 10–13.

10. **A. bracteata**, *Roxb. Hort. Beng.* 2; *Fl. Ind.* i. 63; raceme simple, bracteoles green. *Wall. Cat.* 6578, non *Roscoe*. *A. Roxburghii*, *Sweet Hort. Brit. edit.* 2, 493; *Horan. Prodr.* 34.

EAST HIMALAYAS, BENGAL, ASSAM, CACHAR, BURMA, the SHAN STATES and MALACCA.

Leafy stem 3–6 ft. *Leaves* oblong-lanceolate, 1– $1\frac{1}{2}$ ft. by 2–4 in., pubescent beneath. *Raceme* dense-fl., 6–9 in.; rachis densely pubescent; pedicels very short. *Buds* not so short and more acute than in *A. malaccensis*; bracteoles 1 in., oblong-navicular. *Corolla*-segments 1 in., oblong, pure white. *Lip* ovate, half as long again as the corolla-segments, emarginate, edge white, centre variegated red and yellow, margins incurved; base with two ascending horn-like processes. *Capsule* large, globose. *Seeds* many in a cell.

11. **A. malaccensis**, *Rosc. in Trans. Linn. Soc.* viii. 345; raceme simple, bracteoles white. *Roxb. in Asiat. Res.* xi. 353; *Hort. Beng.* 2; *Fl. Ind.* i. 64; *Bot. Reg.* t. 328; *Wall. Cat.* 6573 *A. Horan. Prodr.* 34. *Maranta malaccensis*, *Burm. Fl. Ind.* 2; *Willd. Sp. Plant.* i. 14. *Costus malaccensis*, *König in Retz. Obs.* iii. 71.—*Rumph, Amboin.* v. t. 71, fig. 1.

EASTERN HIMALAYAS, ASSAM, KHASIA HILLS and CHITTAGONG, ascending to 5000 ft. MALABAR, *Law.*

Rootstock perennial. *Leafy stem* 6–10 ft. *Leaves* 2–3 ft., oblong-lanceolate, pubescent beneath. *Raceme* erect, $\frac{1}{2}$ –1 ft.; rachis very stout, densely pubescent; pedicels all very short. *Buds* oblong, obtuse; bracteoles oblong-navicular, 1 in. *Corolla*-segments white, oblong, 1 in. *Lip* ovate, emarginate, $1\frac{1}{2}$ –2 in., margin pale; centre beautifully variegated red and yellow; edges much incurved. *Capsule* globose, yellow, 1 in. diam. *Seeds* many, ovoid.

12. **A. nutans**, *Rosc. in Trans. Linn. Soc.* viii. 346; *Seit.* t. 73; panicle cernuous slightly compound, bracts deciduous, peduncles short, bracteoles white tipped with pink. *Smith Exot. Bot.* ii. t. 106; *Roxb. in Asiat. Res.* xi. 354; *Hort. Beng.* 2; *Fl. Ind.* i. 65; *Bot. Mag.* t. 1903; *Wall. Cat.* 6574 ex parte; *Grah. Cat. Pl. Bomb.* 206; *Wight Ic.* t. 2027; *Thw. Enum.* 320. *A. malaccensis*, *Wall. Cat.* 6573 B, *C. A. cristata*, *Griff. Notul.* iii. 421. *Globba nutans*, *Linn. Mant.* 170; *Red. Lil.* t. 60. *Renealmia nutans*, *Andr. Bot. Rep.* t. 360; *Salisb. in Trans. Hort. Soc.* i. 279. *Zerumbet speciosum*, *Jacq. Fragm.* t. 68; *Wendl. Sert. Han.* t. 19.

EASTERN HIMALAYAS AND MALAY PENINSULA.—DISTRIB. Malay islands.

Rootstock perennial. *Leafy stem* 8–10 ft. *Leaves* 1–2 ft. by 3–6 in., oblong-lanceolate, finely pubescent beneath. *Panicle* $\frac{1}{2}$ –1 ft.; rachis very hairy; lower branches bearing 2–3 crowded flowers. *Bracteoles* 1 in. or more, broad, oblong-navicular. *Corolla*-segments oblong, 1 in., white tipped with pink. *Lip* ovate, $1\frac{1}{2}$ in. long and broad, base spurred, margins pale, centre beautifully variegated with red and yellow, margins much incurved. *Capsule* red, globose. *Seeds* many in a cell.

Var. . *ASERICEA*, *Moon Cat. Ceyl.* 1 (sp.); panicle shorter, flowers smaller, bracteoles and corolla-segments not tipped with pink.—Ceylon.

13. **A. involucrata**, *Griff. Notul.* iii. 422; panicle cernuous slightly compound, bracts persistent cupular, bracteoles white.

MALACCA, *Griffith (Kew Distrib.* 5697), *Maingay (K. d.* 1574). PERAK, *King's Collector*.

Nearly allied to *A. nutans*, of which it may be only a variety. *Leafy stem* 10–15 ft. Lower branches of the *panicle* elongated, with 2–3 flowers crowded at the lip, enveloped by persistent scarious bracts. *Capsule* globose, 1 in. diam.

SECT. III. **Hellenia**, *Willd.* *Anther* furnished with a small petioled crest. *Panicle* terminal. (Sp. 14–17.)

14. **A. aquatica**, *Rosc. in Trans. Linn. Soc.* viii. 346; leaves oblong not scabrous, anther with a semi-orbicular crest, lip obcordate. *Hellenia aquatica*, *Horan. Prodr.* 35. *Heritiera aquatica*, *Retz. Obs.* v. 18. *Languas aquaticum vel sylvestre*, *Kœnig in Retz. Obs.* iii. 65.

THE DECCAN PENINSULA, in swamps, *Kœnig*.

Leafy stem 4 ft. and more. *Leaves* coriaceous, bright green, denticulate, glabrous beneath. *Panicle* narrow, oblong, peduncled, with 2–3 membranous white bracts at the base. *Calyx*-limb tubulose-campanulate, glabrous, tridentate. *Corolla*-segments whitish; upper ovate-oblong; two lower acute, approximate. *Lip* shorter than the corolla-segments, with an oblong gland on each side at the base. *Anther* with a coloured crest. *Capsule* black. *Seeds* about 5, trietrous.—Known only from *Kœnig's* description.

15. **A. scabra**, *Benth. in Gen. Plant.* iii. 648; leaves lanceolate very scabrous above, anther with an obscure truncate crest, lip narrow bilobed. *Hellenia scabra*, *Blume Enum.* i. 60; *Miq. Fl. Ind. Bat.* iii. 603; *Horan. Prodr.* 35.

PERAK, alt. 2-3000 ft., *King's Collector*.—DISTRIB. JAVA.

Leafy stem 6-8 ft. *Leaves* above 1 ft., $2\frac{1}{2}$ -3 in. broad, very scabrous. *Panicle* 1 ft., erect, with a few short spreading compound branches at the base; branchlets about 1 in., bearing several pedicelled waxy white flowers; bracts minute. *Calyx* $\frac{1}{4}$ in.; teeth minute. *Corolla-tube* as long as the calyx; segments oblong, $\frac{1}{8}$ in. *Lip* not longer than the corolla-segments. *Anther-cells* divaricate upwards, the truncate connective scarcely overtopping them. *Capsule* globose, $\frac{1}{8}$ in. diam.

Subgen. IV. **Geostachys**, Baker. *Anther* not crested. *Buds* enclosed in large bracteoles. *Spike* radical.

16. **A. ? decurvata**, Baker; leaves lanceolate, racemes not secund.

PERAK; Larut, alt. 3-4000 ft., *King's Collector*.

Leafy stem 4-5 ft. *Leaves* 12-15 by $1-1\frac{1}{4}$ in., narrowed to a petiole 1 in. long. *Racemes* 6 in., lax, decurved; peduncle short, slender, erect, hidden by the large imbricate green bract-leaves; pedicels deflexed, $\frac{1}{2}$ in.; bracteoles $1\frac{1}{2}$ in., green, oblong-navicular, acute, persistent. *Ovary* oblong, shortly peduncled within the bracteole. *Calyx* $\frac{1}{2}$ in., spathaceous. *Corolla-tube* as long as the calyx; segments linear-oblong, $\frac{1}{2}$ in. *Lip* obovate, longer than the corolla-segments. "*Flowers* bright yellow, tinged with red. *Fruit* glossy, dark red."

17. **A. ? secunda**, Baker; leaves oblong-lanceolate, racemes secund.

PERAK, alt. 3-4000 ft., *King's Collector*, 8047.

Nearly allied to *A. ? decurvata*, with which it entirely agrees in habit and in the flower being enclosed in large persistent oblong-navicular green bracteoles. *Leaves* 6-8 by 2 in.; petiole short. *Raceme* simple, lax-fld., secund, deflexed; pedicels cernuous, $\frac{1}{2}$ in.; bracteoles under 1 in. *Calyx* cylindric, spathaceous, $\frac{1}{2}$ in. "*Flower* light yellow. *Fruit* deep red."

19. **RHYNCHANTHUS**, Hook. f.

Rootstock tuberous; fibres stout, hairy. *Stem* leafy. *Leaves* oblong-lanceolate. *Spike* terminal. *Calyx* cylindric, minutely toothed. *Corolla-tube* long, subcylindric; segments ovate-lanceolate, acuminate. *Lateral staminodes* obsolete; lip nearly obsolete; filament long linear, margins incurved, tip filiform; anther-cells contiguous, not crested. *Ovary* 3-celled: ovules many, superposed; style filiform; stigma small, turbinate. *Capsule* and *seeds* not seen.

R. longiflorus, Hook. f. in *Bot. Mag.* t. 6861.

BURMA (*Hort. Low*).

Rootstock ovoid, green, $1-1\frac{1}{2}$ in. diam. *Leafy stem* $1\frac{1}{2}$ -2 ft. *Leaves* 6-8 by $1\frac{1}{2}$ -2 in. *Spike* 4-6 in., sessile at the end of the stem; bracts 2 to each flower, linear, green, $1-1\frac{1}{2}$ in., wrapped round the calyx-tube. *Corolla-tube* $1\frac{1}{2}$ -2 in.; segments 1 in. *Stamen* as long as the corolla-tube.

20. **CLINOGYNE**, Salisb.

Rootstock tuberous or sublignose. *Stems* leafy, copiously dichotomously branched. *Leaves* oblong or oblong-lanceolate. *Panicle* lax-fld. terminal; flowers in pairs; bracts long, narrow, firm. *Sepals* short, free. *Petals* narrow, connivent. *Staminal tube* cylindric; segments obovate, petaloid, unequal; anther 1-celled, adnate to the margin of one segment. *Ovary* 3-celled; cells 1-ovuled; style adnate below to the staminal tube, above free, hooked; stigma capitate. *Fruit* indehiscent.

1-3-seeded. *Seeds* subglobose, aril lacerate; embryo curved.—Species 7-8; tropics of Old World.

1. **C. dichotoma**, *Salisb. in Trans. Hort. Soc. i.* 276; leaves broadly rounded at the base, branches of panicle few short, staminal tube elongate, fruit 2-3-lobed 2-3-seeded. *Benth. in Gen. Plant. iii.* 651. *Phrynium dichotomum*, *Roxb. in Asiat. Res. xi.* 324; *Hort. Beng. 1*; *Fl. Ind. i.* 2; *Horan. Prodr. 11, in part.* *Maranta dichotoma*, *Wall. Cat. 6614*. *M. ramosissima*, *Wall. Cat. 6615*; *Pl. Asiat. Rar. t.* 286; *Grah. Cat. Pl. Bomb. 212*. *Donax Arundinastrum*, *Lour. Fl. Coch. 15*. *Thalia cannæformis*, *Willd. Sp. Plant. i.* 16.—*Rumph. Amboin. iv.* 22, t. 7.

EASTERN BENGAL and the MALAY PENINSULA.—DISTRIB. Malay islds.

Shrub 15 ft.; stem short, woody; branches slender. Upper leaves ovate-oblong, 3-6 in. by $1\frac{1}{2}$ -2 in. Branches of panicle at most 3-4 in.; outer bracts lanceolate, $1\frac{1}{2}$ in. *Flowers* white; 1 in. *Sepals* lanceolate. *Petals* oblanceolate, spreading in the upper half. *Staminal tube* as long as the largest lobes; lip flat. *Fruit* $\frac{1}{2}$ in. diam.

2. **C. grandis**, *Benth. in Gen. Plant. iii.* 651; leaves broadly rounded at the base, branches of the panicle many and moderately long, staminal tube elongated, fruit globose smooth 1-seeded. *Maranta grandis*, *Miq. Fl. Ind. Bat. Suppl. 616*. *Phrynium dichotomum*, *Korn. in Mem. Mosc. xi.* t. 89; *Horan. Prodr. 11, in part, not Roxb.*

TENASSERIM, MALACCA, PERAK, SINGAPORE, and the ANDAMAN ISLANDS.—DISTRIB. Malay islds.

Habit of *C. dichotoma*. Upper leaves $\frac{1}{2}$ -1 ft. by 3-6 in. Branches of the panicle sometimes 6-9 in.; outer bracts $1\frac{1}{2}$ in. *Flowers* as in *C. dichotoma*. *Fruit* glossy, $\frac{3}{4}$ - $\frac{1}{2}$ in. diam.

3. **C. virgata**, *Benth. in Gen. Plant. iii.* 651; leaves slightly rounded at the base, branches of the panicle many and long, staminal tube short, fruit 2-3-lobed 2-3-seeded, *Maranta virgata*, *Wall. Cat. 6616*; *Wight Ic. t.* 2015; *Thw. Enum. 320*. *Phrynium virgatum*, *Roxb. in Asiat. Res. xi.* 324; *Hort. Beng. 1*; *Fl. Ind. i.* 4.

The DECCAN PENINSULA and CEYLON.

Stems 6-8 ft. Upper leaves 4-6 by $1-1\frac{1}{2}$ in.; lower $1-1\frac{1}{2}$ ft. *Panicle* 1 ft. or more; branches very slender, flexuose; outer bracts about 1 in. *Flowers* white, inodorous, much smaller than in *C. dichotoma*. *Fruit* the size of a large pea.

21. **PHRYNIUM**, *Willd.*

Rootstock creeping. *Leaves* large, oblong, radical; petiole long, sheathing. *Spike* compound, produced from the side of the petiole or direct from the rootstock; main bracts 2- ∞ -fid. *Sepals* 3, narrow. *Corolla*-tube cylindric; segments 3, linear-oblong, subequal, spreading. *Staminal tube* longer than the corolla-tube; segments unequal, petaloid, one bearing the 1-celled anther on its margin. *Ovary* 3-celled; cells 1-ovuled, rarely 2 cells empty; style adnate in the lower part to the staminal tube; free portion hooked; stigma capitate. *Fruit* globose, indehiscent or finally dehiscent. *Seeds* 1-3 erect; aril short, fleshy; embryo curved.—Species 20; tropics of Old World.

1. **P. capitatum**, *Willd. Sp. Plant. i.* 17; spike globose from the

side of the petiole rarely terminal, main bracts oblong with an incurved scarious tip which breaks up into bristles, corolla-segments longer than the tube, fruit usually 3-seeded. *Roxb. in Asiat. Res.* xi. 325, t. 1; *Hort. Beng.* 1; *Fl. Ind.* i. 8; *Wall. Cat.* 6619; *Wight Ic.* t. 2016; *Thw. Enum.* 320. *Phyllodes Placentaria*, *Lour. Fl. Coch.* ch. 17. *Maranta Placentaria*, *A. Dietr. Sp.* i. 30.—*Rheede Hort. Mal.* xi. t. 34.

EASTERN HIMALAYAS, MALAY PENINSULA, MALABAR, TRAVANCORE, CEYLON. **DISTRIB.** Malay islds.

Rootstock perennial, tuberous. *Leaves* oblong, 1-1½ ft. by 6-8 in.; petiole longer than the blade, that which bears the spike 2-3 ft. or more. *Spike* sessile. 1½-2 in. diam.; subtended by 2-3 large rigid ovate bracts; inner main bracts 1 by ½ in., firm, oblong, several-fld. *Sepals* large, linear. *Corolla*-segments linear-oblong purple. *Capsule* turbinate, 3-lobed, the size of a gooseberry, smooth, 3-valved.

2. **P. parviflorum**, *Roxb. Hort. Beng.* 1; *Fl. Ind.* i. 7; spike globose from the side of the petiole, bracts lanceolate, corolla-segments white shorter than the tube, fruit usually 1-seeded. *Rosc. Scit. Pl.* t. 34; *Wall. Cat.* 6620; *Horan. Prodr.* 11. *Maranta parviflora*, *A. Dietr. Sp.* i. 30.

EASTERN HIMALAYAS and MALAY PENINSULA, and the CONCAN.

Rootstock perennial. *Leaves* oblong-cuspidate, 1-1½ ft. by 6-8 in.; petiole longer than the blade, the one that bears the spike 2-2½ ft. *Spike* sessile, 1-2 in. diam.; bracts 1 in., pale green, acute, 2-3-fld. *Corolla*-tube as long as the bract; segments linear-oblong. *Staminal* lobes small, orbicular, white tipped with yellow.

3. **P. imbricatum**, *Roxb. Hort. Beng.* 1; *Fl. Ind.* i. 6; spike oblong from the side of the petiole, main bracts oblong obtuse, corolla-segments shorter than the tube, fruit usually 3-seeded. *Horan. Prodr.* 11. *Maranta imbricata*, *A. Dietr. Sp.* i. 30.

CHITTAGONG, *Roxburgh.*

Habit of *P. capitatum* and *parviflorum*. *Leaves* 1½-2 ft.; oblong, acute, petiole longer than the blade. *Spike* 3-4 in.; main bracts 1-1½ in. long, minutely toothed at the obtuse tip. *Calyx* and *corolla* of *P. parviflorum*. *Staminal* lobes small, white. *Capsule* rugose, oblong, the size of a large field bean.

A flowerless specimen with similar but terminal spikes and bracts, much smaller leaves and more slender petiole, collected at Rangoon by McClelland, probably represents a distinct species.

4. **P. macrostachyum**, *Wall. Cat.* 6612 A, B; spike long lax from the side of the petiole, main bracts lanceolate complicate, fruit 1-seeded.

PEGU, *Wallich.* TAVOY, *Gomez.* TENASSERIM, *Helfer.*

Rootstock short, with copious slender fibres. *Leaves* nearly 4 by 3-4 in., thin oblong, caudate; petiole twice as long as the blade. *Spike* sessile, 9-12 in.; main bracts 2-4 in., spaced out on the rachis, ascending; finally scarious. *Fruit* small, smooth, oblong, crowned with the small green lanceolate sepals.—*P. musaceum*, *Wall. Cat.* 6612 C, from the Trogl hills, known in leaf only, is probably a different species.

5. **P. spicatum**, *Roxb. Hort. Beng.* 1; *Fl. Ind.* i. 5; spike radical shortly-peduncled, main bracts ovate imbricate, corolla-segments shorter than the tube, fruit usually 3-seeded. *Wall. Cat.* 6617; *Horan. Prodr.* 11. *Maranta caespitosa*, *A. Dietr. Sp.* i. 30.

PEGU, *Carey, Wallich, R. Scott.* The CONCAN, *Law.*

Rootstock wide-creeping, perennial, not tuberous. *Leaf* oblong, 6–10 by 2–3 in.; petiole slender, longer than the blade. *Spike* 1–2 in.; bracts not 1 in., ovate, green, several-fld. *Corolla*-segments white, linear-oblong, much shorter than the cylindric tube. Larger *staminal lobes* obovate, as long as the corolla-segments. *Seeds* $\frac{1}{4}$ in., dull brown, triquetrous on the inner face.—An allied plant, with subequal crowded lanceolate bracts $1\frac{1}{2}$ –2 in., collected by Griffith and Helfer in Tenasserim, is no doubt a distinct species, but all the specimens are very incomplete. *P. sumatranum*, Miquel, appears to be specifically distinct from *P. spicatum*.

6. ***P. Griffithii*, Baker**; spike radical long-peduncled, bracts bifarious with tips rounded recurved, corolla-segments unequal, upper erect oblong, lateral reflexed. *P. spicatum*, *Griff. Notul.* iii. 418, non Roxb.

MALACCA, in wet jungles at Ching, *Griffith*.

Leafy stem many-leaved; petiole 3–4 ft.; blade oblong, 2 ft. *Peduncle* 1 ft. *Calyx*-segments linear, white, shorter than the tube. *Ovary* 3-celled.

7. ***P. zeylanicum*, Benth.** in *Gen. Plant.* iii. 653; spike shortly-peduncled radical, main bracts ovate imbricate, corolla-segments shorter than the tube, fruit 1-seeded. *Trimen Cat. Ceyl. Pl.* 92. *Maranta spicata*, *Thw. Enum.* 320, excl. *syn. Roxb.*

CEYLON; in the central province, rare; *Thwaites*.

Habit exactly of *P. spicatum*. *Leaves* oblong, caudate, $\frac{1}{2}$ ft.; petiole slender, twice as long as the blade. *Spike* $1\frac{1}{2}$ in.; main bracts few, green, not 1 in. *Fruit* small, smooth, oblong, crowned by the small green linear sepals.

8. ***P. Cadellianum*, King mss.**; spike shortly peduncled radical, main bracts ovate-lanceolate, fruit 1-seeded.

ANDAMAN ISLANDS., *King's Collector*.

Rootstock short-creeping, perennial, slender. *Leaf* oblong, 9–10 in. by 3–4 in., base deltoid; petiole slender, 2–2 $\frac{1}{2}$ ft. *Spike* $1\frac{1}{2}$ in.; bracts 1–1 $\frac{1}{2}$ in., few, closely imbricate, thin, glabrous. *Flower* not seen. *Fruit* oblong, smooth, $\frac{1}{4}$ in., crowned with the short sepals.

22. **CANNA**, Linn.

Rootstock perennial. *Stem* simple, leafy. *Leaves* large, oblong, acute. *Flowers* a lax terminal simple or branched raceme; bracts small, ovate. *Sepals* 3, small, oblong, or lanceolate. *Corolla*-tube cylindric, segments 3, lanceolate, equal. *Staminal tube* cylindric; segments petaloid, unequal, with the 1-celled anther adnate to the margin of one of the smaller ones. *Ovary* 3-celled; cells many-ovuled; style adnate at the base to the staminal tube, free above; stigma capitate. *Fruit* globose, echinate, indehiscent. *Seeds* large, globose; embryo straight.—Species 20–30 tropical American and the following:—

***C. indica*, Linn.** var. *C. ORIENTALIS*, *Rosc. Scit. Pl.* t. 12; corolla-tube much shorter than the segments, petaloid staminal segments of the outer row 3 oblanceolate emarginate bright red, lip reflexed emarginate at the truncate apex. *Horan. Prodr.* 16. *C. indica*, *Linn. Sp. Plant.* 1, in part; *Roxb. in Asiat. Res.* xi. 322; *Fl. Ind.* i. 1; *Wall. Cat.* 6621; *Dalz. & Gibs. Bomb. Fl.* 687; *Thw. Enum.* 320. *C. chinensis*, *Willd. Enum. Berol.* i. 2?—*Rheede Hort. Malab.* xi. t. 48; *Rumph. Hort. Amboin.* v. t. 71, fig. 2.

Throughout INDIA from the HIMALAYAS to CEYLON and MALACCA.—DISTRIB. Malay isles, &c.

Rootstock tuberous, with many fibres. *Stem* 3-4 ft. *Leaves* oblong, acute, lower 1 ft. or more. *Bracts* $\frac{1}{2}$ in., ovate, green. *Sepals* small, lanceolate. *Corolla*-tube $\frac{1}{4}$ - $\frac{1}{2}$ in.; lobes 1 in., lanceolate, greenish. *Outer staminal segments* 3, bright red, oblanceolate, $1\frac{1}{2}$ in. by $\frac{1}{8}$ - $\frac{1}{4}$ in.; lip rather shorter; anther $\frac{1}{4}$ in. *Capsule* globose, $\frac{1}{2}$ - $\frac{3}{4}$ in. *Seeds* black, the size of a pea.

Var. *FLAVA*, *Rosc. Scit. Pl.* t. 13; stature of the type, staminal segments plain bright yellow. *C. flavescens*, *Link*; *Horan. Prodr.* 41.

Var. *C. NEPALENSIS*, *Wall. Cat.* 6622 (sp.); stem much taller, leaves larger, corolla-segments $1\frac{1}{2}$ in., outer staminal segments usually 3 bright red not emarginate, capsule above 1 in. *Bouché in Linnæa*, viii. 158; *Horan. Prodr.* 15.—Nepal, *Wallich*.

Var. *C. SPECIOSA*, *Rosc. Scit. Pl.* t. 17 (sp.); much taller than the type, leaves larger, outer staminal segments 2 acute bright red with a channelled yellow claw, lip variegated with red and yellow. *Herb. in Bot. Mag.* t. 2317; *Wall. in Bot. Reg.* t. 1276; *Horan. Prodr.* 16.—Nepal and Kumaon.

Another Indian form, unknown to me, is *C. exigua*, *Bouché*; *Horan. Prodr.* 16. The American form to which Roscoe and Horaninow restrict the name *INDICA* is figured *Rosc. Scit. Pl.* t. 1; *Bot. Reg.* t. 776.

23. *MUSA*, *Linn.*

Stem subarborescent, of convolute leaf sheaths. *Leaves* very large, oblong. *Flowers* in an erect or decurved spike, subunisexual, lower female, upper male; bracts large, spathaceous ovate or orbicular. *Calyx* slit down one side to the base, 3-5-lobed. *Corolla* as long as the calyx or shorter, wrapped round the stamens and style. *Perfect stamens* 5, sixth rudimentary or 0; filaments stout, filiform; anthers linear, erect, 2-celled. *Ovary* 3-celled; ovules many, superposed; style filiform from a thickened base; stigma subglobose 6-lobed. *Fruit* fleshy, indehiscent, oblong or fusiform, trigonous. *Seeds* subglobose or angled by pressure.—Species about 20; tropics of the Old World.

* Not stoloniferous, dying after flowering. *Bracts* many-fld. *Fruit* not pulpy and edible.

1. *M. superba*, *Roxb. Hort. Beng.* 19; *Corom. Pl.* t. 223; *Fl. Ind.* i. 667; stem short stout ovoid, leaves sessile on the sheath, bracts large orbicular many-fld. dull red, calyx 3-cleft, petal shorter than the calyx obcordate with a large mucro, fruit oblong subcoriaceous. *Wall. Cat.* 5166; *Wight Ic.* t. 2017; *Grah. in Bot. Mag.* t. 3849-3850; *Dalz. & Gibs. Bomb. Fl.* 272; *Horan. Prodr.* 41. *M. textilis*, *Grah. Cat. Pl. Bomb.* 213, non *Née*.

WESTERN GHATS.

Whole plant 10-12 ft. *Stem* covered with the persistent sheaths of the leaves. *Leaves* 8-10 ft., narrowed to the base. *Spike* drooping; lower bracts nearly a foot long and broad; upper crowded, persistent; flowers biserial, 20-30 or more to a bract. *Calyx* $1-1\frac{1}{2}$ in.; lobes three, linear, loosely cohering. *Corolla* $\frac{1}{2}$ in. *Fruit* trigonous, 3 by $1\frac{1}{2}$ in. *Seeds* $\frac{1}{2}$ - $\frac{1}{3}$ in. diam. smooth, brown, subglobose.

2. *M. nepalensis*, *Wall. in Roxb. Fl. Ind. ed. Wall. & Carey*, ii. 492; stem short stout ovoid, leaves sessile on the sheath, bracts large ovate many-fld. dull purple, calyx 3-cleft, petal obcordate with a large mucro shorter than the calyx, fruit oblong subcoriaceous. *Horan. Prodr.* 41.

Lower hills of NEPAL, *Wallich*.

Habit of *M. superba*. Trunk 5-6 ft., 2 ft. diam at the base. *Leaves* as in *superba*, but smaller and rather glaucous, upper passing gradually into the bracts. *Spike* short, drooping; lower floriferous bracts 6 in.; flowers 2-seriate, 7-8 to a bract. *Calyx* and *corolla* yellowish-white. *Fruit* and *seeds* as in *M. superba*.

3. *M. glauca*, *Roxb. Hort. Beng.* 19; *Corom. Pl.* t. 300; *Fl. Ind.* i. 669; trunk cylindric, leaves shortly petioled, bracts ovate greenish many-fld., calyx 3-cleft, petal obcordate with a large mucro shorter than the calyx, fruit obovoid-oblong subcoriaceous. *Horan. Prodr.* 41.

PEGU; *Carey*.

Trunk 10-12 ft. below the leaves, 8 in. diam. *Leaves* 4-5 ft., oblong-lanceolate, acute. *Spike* drooping from the base; bracts numerous, imbricate, the lower not $\frac{1}{2}$ ft.; flowers 10-20 to bract. *Calyx* pale, about 1 in.; segments 3, loosely coherent, linear. *Corolla* not half as long as the calyx. *Fruit* 4-5 in., $1\frac{1}{2}$ in. diam. *Seeds* smooth, globose, nearly black, $\frac{1}{2}$ in. diam.

** Stoloniferous. *Bracts* many-fld. *Fruit* pulpy, edible.

4. *M. sapientum*, *Linn. Sp. Plant.* 1477; stoloniferous, stem tall cylindrical, leaves petioled, spike drooping, bracts ovate many-fld. usually deciduous, calyx 5-toothed at the tip, petal shorter than the calyx, fruit pulpy. *Roxb. Hort. Beng.* 18; *Corom. Pl.* t. 275; *Fl. Ind.* i. 663; *Grab. Cat. Pl. Bomb.* 212; *Dalz. & Gibs. Bomb. Fl. Suppl.* 88.; *Thw. Enum.* 321; *Horan. Prodr.* 42—*Rheede Hort. Malab.* i. 17, t. 12-14; *Rumph. Amboin.* v. 130, t. 60; *Trew Ehret.* t. 21-23.

Indigenous in BRHAR and the EASTERN HIMALAYAS, ascending to 4000 ft. CEYLON, *Thwaites*; cultivated throughout India and the tropics.—DISTRIB. Malay isles, &c.

Stem 8-12 ft. *Leaves* 4-5 ft. oblong, bright green above, paler beneath. *Inflorescence* about as long as the leaves; bracts ovate, more or less pruinose, lower 6-8 in., upper much shorter, falling before the fruit matures. *Calyx* yellowish-white, 1-1 $\frac{1}{2}$ in. *Petal* oblong, about half as long. *Fruit* oblong, trigonous, 2-3 in. in the wild form, and full of seed (seedless in the cult. forms) tapering to the base and apex, yellowish green when ripe. *Seeds* angled by pressure, brownish-black, rugose, $\frac{1}{2}$ in. diam. The principal varieties and subspecies wild and cultivated in India are—

M. DACCA, *Horan. Prodr.* 41; differs from typical *sapientum* by leaves paler green above white-pruinose beneath, pruinose stem, broad red border of the petiole and pale yellow fruit about 4 in. long with a very thick skin.

M. CHAMPA, *Hort.*; stem and midrib of the leaf red, fruit pale straw-coloured about 6 in. long.

M. SIKKIMENSIS, *Kurz in Journ. Agric. Hort. Soc. Ind.* n.s.v. 164; differs from *sapientum* by its duller purple spathes and angled tubercled seeds 4-5 lin. diam.—Wild in Sikkim. *Hook. f. & Thoms. (Herb. Ind. Or.)* 5.)

M. PARADISIACA, *Linn. Sp. Plant.* 1477; stem reaching a length of 20 ft., leaf-blade of 5-6 ft. and petiole of 2 ft., fruit larger than in *sapientum*, $\frac{1}{2}$ -1 ft. long, with firmer pulp, not fit to eat till cooked, bracts and male flowers more persistent. *Roxb. Hort. Beng.* 19; *Trew Ehret.* t. 18-20. *M. Cliffortiana*, *Linn. Hort. Cliff.* i. t. 1.—Commonly cultivated; wild in Ceylon, according to Moon.

M. SIMIABUM, *Kurz in Journ. Agric. Hort. Soc. Ind.* xiv. 297; bracts violet, only one opening at a time, those of the male flowers convolute, fruit very small.—Andamans and Malacca, *Kurz*.

M. TROGLODYTARUM, *Linn.*; *Kurz in Journ. Agric. Hort. Soc. Ind.* n. s. v. 166; leaves narrow oblong, flower-spike erect, bracts greenish imbricated, fruit 3 in. long dark yellow or reddish brown.—Wild in Ceylon, according to Moon.

M. CORNICULATA, (*Rumph.*) *Kurz in Journ. Agric. Hort. Soc. Ind. n.s. v.* 166, t. 2-3; flower larger than in any other form, only 2-3 rarely 4 whorls of flowers produced, fruit as large as in *paridisiaca*.

M. TEXTILIS, *Née in Cav. Ann. Ciénc. Nat. iv.* 123; leaves firmer in texture than in *sapientum*, yielding a useful fibre, bracts polished, seeds very small and scarcely at all angled.—Native of the Philippines, cult. in India.

M. ARAKANENSIS, *Ripley in Proc. Agric. Hort. Soc. Ind. x.* 51; a fibre-yielding form from Arrakan.

M. ZEBRINA, *Flore des Serres*, t. 1061-2 and *M. VITTATA*, *Bot. Mag. t.* 3402, are handsome forms with variegated leaves. Other forms are mentioned by *Kurz in Journ. Agric. Hort. Beng. n.s. v.* (1878), 112-168; and *Sagot in Journ. Soc. Nat. Horticult. France*, 1887, 238, 285.

*** Stoloniferous. *Stem* slender, cylindric. *Bracts* few-fl., bright coloured. *Fruit* not edible.

5. *M. rosacea*, *Jacq. Fragm. t.* 132, fig. 4; *Hort. Schoen. t.* 445; stoloniferous, leaves petioled, flower-spike drooping or erect, bracts ovate lilac or pale red, lower usually 3-fl., calyx yellowish-white 5-toothed, petal as long as the calyx, fruit oblong-trigonus pulpy. *Bot. Reg. t.* 706. *Lodd. Bot. Cab. t.* 615. *M. ornata*, *Rorb. Hort. Beng. 19*; *Fl. Ind. i.* 666; *Dalz. & Gibs. Bomb. Fl.* 272.

EASTERN HIMALAYA and the CONCAN.—DISTRIB. Java.

Stem cylindric, slender, 3-5 ft. *Leaves* linear-oblong, firmer in texture than in *M. sapientum*. *Spike* about $\frac{1}{2}$ ft., drooping in the cultivated form; bracts oblong, about $\frac{1}{2}$ ft., crowded; male fl. 5-6 in a cluster. *Calyx* about 1 in. *Fruit* and seeds as in typical *sapientum*.

6. *M. sanguinea*, *Hook. f. in Bot. Mag. t.* 2975; stoloniferous, leaves petioled, spike erect or finally drooping, bracts ovate-lanceolate bright red, lower usually 3-fl., rachis pubescent, calyx bright yellow 5-toothed, petal as long as the calyx, fruit oblong-trigonus pulpy.

ASSAM, *Mann*.

Stem 4-5 ft., very slender. *Leaves* 2 ft., thin, bright green; petiole 1 ft. or more. *Spike* $\frac{1}{2}$ ft.; bracts crowded, imbricate, 3-6 in. *Calyx* $1\frac{1}{2}$ in. *Fruit* 2-3 in., pale yellowish green, variegated with red. *Seeds* irregularly cubical, black, tubercled.

IMPERFECTLY KNOWN SPECIES ALLIED TO *M. SANGUINEA*.

M. ASSAMICA, *Cat. Hort. Bull.* 1871, 6; leaves about 1 ft. very unequal-sided bright green.—Assam.

M. AURANTIACA, *Mann. mss.*, from Assam. I cannot by dried specimen of inflorescence distinguish this from *M. sanguinea*.

M. DASYCARPA, *Kurz in Journ. Agric. Hort. Soc. Ind. xiv.* 301 (s.p.); fruit hairy.—Assam.

M. MANNII, *Wendl. mss.*; differs from *M. sanguinea* in the shorter stem and longer leaves.—Assam.

M. URANOSCOPOS, *Lour. Fl. Coch.* 645 (*M. coccinea*, *Andr. Bot. Rep. t.* 47), Java, China, Cochín China.—Cultivated in India.

M. VELUTINA, *Wendl. and Drude in Regel Gartenst.* xxiv. 65, t. 823, bracts densely pubescent externally, male fl. 6-9 in a cluster.—Assam, *Mann*.

24. *LOWIA*, *Seortechini*.

Stemless, herbaceous. *Stem* dichotomously branched. *Flowers* in a cluster from the base of the petiole, pedicelled, with a large persistent

lingulate bract folded round the calyx tube and others from the pedicel. *Calyx*-tube long, very slender; segments 3, lanceolate, reflexed. *Corolla* of 3 petals; two upper small, lanceolate; lower large, oblong, clawed. Fertile *stamens* 5; filaments short, cylindric; anthers linear, acuminate, 2-celled. *Ovary* 3-celled; ovules many, superposed; style long, slender, trifurcate at the stigmatose apex. *Fruit* and *seeds* unknown. *Orchidantha*, *N. E. Br. in Gard. Chron.* n. s. xxvi. (1886) 519.—Also Borneo.

L. longiflora, *Scortech. in Nuov. Giorn. Ital.* xviii. 308, t. 11.

PERAK, in the province of Kinta, *Scortechini, Kunstler*.

Whole plant 3-4 ft.; flower-bearing *petiole* $1\frac{1}{2}$ ft., flowerless much shorter; blade oblong, 2-3 ft. *Calyx*-tube 4-5 in.; segments rather shorter, $\frac{1}{2}$ in. broad. Upper *petals* equal, as long as the stamens; lower with a white oblong blade 2 in. long, narrowed suddenly to a rather shorter purple claw. *Style* an inch longer than the calyx-tube; branches of stigma channelled, margins toothed.

Order CL. **HÆMODORACEÆ.**

Perennial herbs. *Leaves* usually radical, distichous, narrow, nerve parallel. *Flowers* bisexual, in terminal spikes racemes in panicles, regular. *Perianth* corolline, persistent; lobes 6, biseriate, imbricate or induplicate-valvate. *Stamens* 6, opposite the perianth-lobes or fewer; anthers erect or versatile, 2-celled, rarely opening by pores. *Ovary* inferior or subinferior; 3-celled; stigma simple or 3-notched; ovules 1-many, on the inner angles of the cells, anatropous or semianatropous. *Fruit* superior or inferior, dehiscent or not. *Seeds* various; embryo small, partially enclosed in the fleshy albumen.

TRIBE I. **Conostyleæ.** *Ovary-cells* many-ovuled.

Flowers in a long simple spike or raceme 1. ALETRIS.

TRIBE II. **Ophiopogonæ.** *Ovary-cells* 1-2-ovuled.

Filaments connate in a ring closing the mouth of the
perianth 2. PELIOSANTHES.
Filaments short, free. Perianth short superior . . . 3. OPHIOPOGON.
Filaments filiform. Perianth inferior tube slender . . 4. SANSEVIERA.

1. **ALETRIS**, Linn.

Leaves radical, narrow. *Scape* leafless; flowers small, short, spicate, or racemed; bracts 1-fld. *Perianth*-tube short, subcampanulate, lobes sub-valvate. *Stamens* 6, on the bases of the lobes, filaments very short; anthers ovate or subglobose. *Ovary* half-inferior, top conic, 3-celled; style 3-partite, or 3-fld; ovules many, 2-seriate or elongate placentas. *Capsule* half superior, loculicidally 3-valved. *Seeds* minute, oblong.—Species 8, N. American and Asiatic.

Aletris litoralis, Kæn.; Wall. Cat. 5082, in *Aloe vera*, L. (*A. perfoliata*, Willd.).

1. ***A. nepalensis***, Hook. f.; leaves 5-7-nerved, flowers glabrous, anthers subglobose, ovary glabrous, style very short, capsule globose-ovoid. *Telfeldia nepalensis*, Wall. Cat. 5097; *Royle Ill.* 385. *Stachyopogon pauciflorus* & *spicatus*, Klotzsch in *Bot. Reise Pr. Wald.* 49, t. 94.

TEMPERATE and ALPINE HIMALAYA, from KASHMIR to BHOTAN, alt. 10–15,000 ft.—DISTRIB. China.

Leaves grass-like, 3–8 in. long, strongly nerved, rarely $\frac{1}{4}$ in. diam. *Scape* 4–12 in., nearly naked, glandular-pubescent or woolly above. *Spike* or raceme few or many-fl., 1–4 in.; tomentose flowers $\frac{1}{2}$ in. long, greenish, sessile or pedicelled; bracts 1–2, close under the flower, linear, green, longer or shorter than the flowers, lower sometimes $\frac{2}{3}$ in. long; perianth-lobes oblong, obtuse, recurved, 3-nerved.—Bureau and Franchet (in Morot, Journ. de Bot. V. 155,) observe that *Tosfieldia nepalensis*, Herb. Strachey & Winterb. No. 1 appears to belong to their *A. lanuginosa*; adding that Wallich's plant should be called *A. nepalensis*.

2. ***A. sikkimensis***, Hook. f.; leaves 7–9-nerved ensiform, scape tall, spike very long, flowers glabrous, ovary glabrous, capsule globosely ovoid.

SIKKIM HIMALAYA; Lachen valley, alt. 9–12,000 ft. J. D. H.

A much larger plant than *A. nepalensis*, with short narrowed leaves $\frac{1}{2}$ – $\frac{3}{4}$ in. broad, and a leafy scape with the raceme 1–2 ft. high, and with linear smaller and much narrower seeds.

3. ***A. khasiana***, Hook. f.; leaves many-nerved, flowers glandular-pubescent, anthers oblong, ovary puberulous, capsule ovoid-lanceolate.

KHASIA HILLS, alt. 4–6000 ft., common, Griffith, &c.

Leaves grass-like, 4–12 in., rarely $\frac{1}{2}$ in. broad, closely striately nerved. *Scape* 6–12 in., glandular-pubescent above. *Flowers* usually sessile, $\frac{1}{4}$ in. long, yellowish-red, pinkish or purplish; bracts as in *A. nepalensis*. *Seeds* very minute, reniform.

2. **PELIOSANTHES**, Andr.

Scapigerous herbs; rootstock horizontal. *Leaves* narrow, linear or lanceolate, subpubescently nerved. *Scape* erect; flowers small, racemed, bracts scarious. *Perianth* superior, tube short, broadly campanulate; lobes 6, subequal, spreading. *Stamens* 6, filaments very short connate in a ring almost closing the mouth of the perianth; anthers subsessile, slits introrse. *Ovary* inferior, top free conical, 3-celled; stigma subsessile, 3-lobed; ovules 2 or more, erect basal in each cell, anatropous. *Fruit* indehiscent. *Seeds* few, bursting through the pericarp during ripening, and resting on the base of the withered perianth, tube fleshy or succulent; embryo in the base of the hard fleshy albumen.—Species about 8, Indian and Malayan.

The species of this genus are far from well defined. Better characters than those hitherto employed for distinguishing them may perhaps be found in the number of ovules, and form of the staminal tube and anthers.

* *Bracts many-fl.*

1. ***P. Teta***, Andr. Bot. Rep. t. 605; leaves long petioled 12–24 by $1\frac{1}{2}$ –3 in., nerves 10–20, scape stout shorter than the leaves, raceme many-fl., Brown in Trans. Linn. Soc. 1817, 8; Kunth Enum v. 307; Bot. Mag. t. 1302; Redouté Liliac. t. 415, Reichb. Mag. t. 14; Baker in Journ. Linn. Soc. xvii. 505. P. violacea, Wall. Cat. 5084 (in part?) *Teta viridiflora*, Rorb. Fl. Ind. ii. 165.

SIKKIM HIMALAYA, the KHASIA HILLS, ASSAM, CHITTAGONG and BURMA. PENANG, Curtis.

Leaves 2–7; petiole variable in length; cross-nervules distinct when dry. *Scape* naked or with a few scales above and large membranous sheaths at the base; raceme 6–12 in.; bracts 1–3 to every fascicle of flowers, variable in length; pedicels short; flowers $\frac{1}{4}$ – $\frac{1}{2}$ in. diam., purplish or bluish-green. *Seeds* as large as a pea, olive-blue.

2. **P. Griffithii**, *Baker in Journ. Linn. Soc.* xvii. 506; leaves long-petioled 6-8 by $1\frac{3}{4}$ - $2\frac{1}{4}$ in. strongly 5-nerved, scape very short.

SIKKIM HIMALAYA, *Griffith's Collectors*; alt. 1500 ft. *Clarke*.

Leaves 5-6, with 5-distant nerves much stronger than the numerous others; petiole 8-10 in., very slender. *Raceme* many-fl.; pedicels short, stout; bracts long; flowers not seen. *Seeds* globose, about $\frac{1}{8}$ in. diam.

** Bracts 1- rarely 2-fl. Flowers cernuous.

3. **P. violacea**, *Wall. Cat.* 5084; leaves 6-12 by $1\frac{1}{2}$ -3 in., long-petioled, nerves very many, racemes usually shorter than the petiole many-fl., flowers violet-blue. *Baker in Journ. Linn. Soc.* xvii. 502. *P. Teta*, *Wall. Cat.* 5083 A in part. *P. campanulata*, *Wall. mss.*

EASTERN HIMALAYA, the KHASIA HILLS, and BURMA.

Habit of *P. Teta* and with flowers of the same size and colour, but solitary in the bracts. *Seeds* $\frac{3}{8}$ in. long, oblong.—Baker has three varieties. 1. *minor*, with smaller fewer 5-7-nerved leaves and smaller green flowers; 2. *Clarkei*, with more conspicuous transverse nervules and a darker purple flower; 3. *Princeps*, more robust, leaves broader, 4-4 $\frac{1}{2}$ in. diam., racemes longer, flowers greenish.—Moulmein, *Lobb*.

4. **P. macrophylla**, *Wall. mss.*; *Baker in Journ. Linn. Soc.* xvii. 505; leaves petioled 10-18 by 3-4 $\frac{1}{2}$ in. elliptic-lanceolate nerves 13-15 strong, scape long or short, raceme many-fl., flowers greenish or purple.

EASTERN HIMALAYA; Sikkim alt. 3-600 ft., *J. D. H.*; *Clarke*; Mishmi Hills, *Griffith*.

The largest and stoutest Indian species, but I suspect only a further development of *P. violacea* var. *Princeps*. *Seeds* globose or obturbinate.

5. **P. neilgherriensis**, *Wight. Ic. t.* 2052; leaves long-petioled 4-8 by $\frac{3}{4}$ -1 $\frac{1}{2}$ in. with 5-10 stronger nerves, scape about equalling the leaves, bracts short, flowers small. *Baker in Journ. Linn. Soc.* xvii. 503. *P. longifolia*, *Steudel Pl. Canara Exsicc.* n. 1306.

MALABAR and CANARA; in the Ghats, *Wight.*, &c.

Leaves few, membranous, transverse nervules conspicuous; petiole 6-9 in., very slender. *Scape* 4-6 in.; raceme as long; lower bracts many, $\frac{1}{2}$ in., upper very short; perianth dark purple, $\frac{1}{4}$ in. diam. *Seeds* obturbinate ovoid.

6. **P. courtallensis**, *Wight. Ic. t.* 2057; leaves long-petioled 8-12 by $1\frac{1}{2}$ -2 in. with 5 strong nerves, scape much shorter than the leaves, bracts longer than the flowers. *Baker in Journ. Linn. Soc.* xvii. 504. *P. Teta*, *Wall. Cat.* 5083 B.

TRAVANCORE; at Courtallum, *Wight.*, &c.

A much larger plant than *P. neilgherriensis*, with leaves twice as long as the scape and raceme, and long lanceolate bracts much exceeding the flowers.—In a coloured drawing of this by Jerdon, the flowers are blue-purple, $\frac{1}{2}$ in. diam.

7. **P. humilis**, *Andrews Bot. Repos. t.* 634 (not of *Baker*); dwarf, leaves sessile or very shortly petioled elliptic-lanceolate 5-nerved, scape short stout, raceme short, bracts ovate about equalling the small crowded very shortly pedicelled flowers. *Bot. Mag. t.* 1532; *Kunth Enum.* v. 307.

PENANG, *Maingay*.

Leaves about 3 in. long; petiole shorter than the blade or 0. *Flowers* about $\frac{1}{4}$ in. diam.; segments of perianth green margined with white, obtuse and emargi-

nate in Andrews' drawing, acute in that of the "Botanical Magazine."—A very little-known plant. Maingay's specimens accord with the figures but they are flowerless.

8. **P. Bakeri**, *Hook. f.*; dwarf, leaves elliptic-lanceolate 5-7-nerved, petiole slender, scape very short, raceme short, bracts subulate-lanceolate all or the lower much longer than the small pedicelled flowers. *P. humilis*, *Baker in Journ. Linn. Soc. xvii. 505 (excl. Penang)*.

EASTERN HIMALAYA, alt. 1-6000 ft., *J. D. H.*; *Clarke*; Mishmi Hills, *Griffith*. KHASIA HILLS, alt. 3-5000 ft., *J. D. H. & T. T.*

Leaves 4-7 by 1-2 in., thin, subcaudately acuminate; petiole as long. *Raceme* hardly exceeding the petiole; pedicels sometimes $\frac{1}{4}$ in. long, and lower bracts nearly $\frac{1}{2}$ in.; perianth $\frac{1}{2}$ in. diam., green or lurid purple (*Clarke*). *Seeds* small, oblong.—There are cultivated specimens in Wallich's Herbarium from the Calcutta Botanical Garden under No. 5083 D.

9. **P. albida**, *Baker in Bot. Mag. t. 7110*; leaves stoutly petioled 5-8-nerved, scape very short, raceme very long many-fld., bracts subulate-lanceolate longer than the small white shortly pedicelled flowers.

PENANG; *Curtis*.

Leaves 12 by $1\frac{1}{2}$ -2 in., elliptic-lanceolate, caudate-acuminate, nerves strong; petiole about half as long as the blade. *Raceme* longer than the petiole, stout, strict, white; lower bracts $\frac{1}{2}$ in. long, narrow; flowers deflexed; perianth $\frac{1}{4}$ - $\frac{1}{2}$ in. diam.; outer segments broadly ovate, inner orbicular-obovate; anthers very small within the much contracted mouth of the low truncate staminal tube. *Ovarian cells* about 5-ovuled. *Style* short, columnar, stigma 3-lobed.

3. OPHIOPOGON, *Ker*.

Scapigerous herbs. Stem short from a short rootstock or elongate subscandent. *Leaves* linear or lanceolate parallel-nerved. *Scape* leafy or leafless, flowers racemed; bracts scarious, usually many-fld. *Perianth* superior, segments spreading. *Stamens* 6, on the bases of the segments, filaments short, erect; anthers basifixed. *Ovary* inferior, 3-celled, crown flat or depressed; style columnar, stigma 3-toothed; ovules 2 in each cell, collateral, erect, anatropous. *Fruit* indehiscent. *Seeds* few, as in *Peliosanthes*, testa fleshy or succulent.—Species 8 or 10, East Asiatic.

Ophiopogon was established in 1807 by Ker-Gawler (*Bot. Mag. t. 1063*) on the figure of a plant supposed to be the *Convallaria japonica* β minor of Thunberg (*Fl. Jap. 140*), and to which Gawler gave the name of *O. japonicus*, referring to it the *C. japonica* of Decandolle in Redouté's *Liliac. ii. t. 80* (Gawler's description is, however, that of a third plant). Judging from the figures, Gawler's and Decandolle's are not of the same species. Gawler's has blue flowers, linear-oblong perianth segments, and linear-oblong obtuse anthers; Redouté's has much smaller white flowers, ovate perianth-segments, and longer acute anthers. Both differ from any Indian species (except, perhaps, that mentioned at the end of the genus of which there are no flowers) in their small size, very short scape, and above all in the very short fusiform 6-grooved style, which was observed by Don (*Prodr. 48*) but overlooked by subsequent authors. Specimens of both are in Kew Herb.; that of Gawler, from Japan, is *O. japonicus* Gawl. *genuinus* of Maximovicz; the other is a continental garden specimen from Herb. Gay of what is clearly the plant figured in Redouté, and which is also figured in Schrader's *Neues Journ. t. 1* as *Fluggea japonica*, Rich.

O. japonicus hence disappears from the Flora of British India; all the Indian species having slender styles; but I am not prepared to say whether or no any other Indian species may be identical with Japanese. They are extremely variable and

difficult of definition, and I am not satisfied that all the species here proposed will prove distinct from one another.

* *Stem creeping and rooting; roots not tuberiferous.*

1. ***O. dracænoides***, *Hook. f.*; stem stout, leaves oblanceolate acuminate very many-nerved, petiole slender, racemes about equalling the leaves. *Fluggea dracænoides*, *Baker in Trimen Journ. Bot.* 1874, 174; in *Journ. Linn. Soc.* xvii. 502.

SIKKIM HIMALAYA, and the KHASIA HILLS, alt. 4-6000 ft., *J. D. H.*

Stems prostrate, as thick as a goose-quill, closely jointed, clothed at first with green sheaths that have broad scarious margins, rooting and with short tufts of leaves and flowery scapes. *Leaves* 3-6 in., including the petiole, $\frac{3}{4}$ -1 $\frac{1}{2}$ in. broad. *Racemes* 2-3 in.; bracts shorter than the flower, which are solitary or fascicled, white or pale lilac, $\frac{1}{2}$ - $\frac{3}{4}$ in. diam. *Perianth* segments ovate-oblong; anthers lanceolate, filaments very short; style filiform. *Seeds* oblong.

2. ***O. Clarkei***, *Hook. f.*; stem prostrate with a terminal tuft of secundly curved linear leaves which are 8-12 by $\frac{1}{2}$ in., scape short few-fl., flowers $\frac{3}{4}$ in. diam., filaments one-third the length of the lanceolate anther.

SIKKIM HIMALAYA, *J. D. H.*; at Rungbee, alt. 6000 ft., *Clarke*.

Stems 8-10 in. long, rigid, as thick as a crow-quill or thicker, bearing one rather slender terminal tuft of very long slender leaves, which are faintly rough beneath. *Scape* with the 3-5-fl. raceme curved, 3-4 in. long; bracts ovate-lanceolate, about equalling the pedicels, which are jointed at or near the base.—In this species the stem is a long runner bearing a solitary tuft of leaves and scape.

3. ***O. reptans***, *Hook. f.*; stem prostrate with distant tufts of linear leaves which are 6-8 by $\frac{1}{12}$ - $\frac{1}{8}$ in., scape very short slender few-fl.

KHASIA HILLS, at Nurtiung, alt. 4-6000 ft. *J. D. H.* GARROW HILLS; alt. 4000 ft., *Clarke*.

Stems 2-3 ft., prostrate, rather stouter than in *O. Clarkei*, rigid. *Leaves* quite smooth. *Scape* with fruiting raceme 2-3 in. *Seeds* $\frac{1}{4}$ - $\frac{1}{2}$ in. diam., subglobose.—Very different from *O. Clarkei* in habit, the numerous tufts of very narrow shorter leaves, and the very short slender scapes. It closely resembles a Tonkin plant (*Balanca* n. 4155 bis.).

** *Stems tufted. Roots often tuberiferous.*

4. ***O. Wallichianus***, *Hook. f.*; rootstock short very stout, leaves 6-24 in. by $\frac{1}{2}$ - $\frac{1}{3}$ in., scape stout usually much shorter than the leaves, flowers usually fascicled $\frac{1}{2}$ - $\frac{3}{4}$ in. diam., anthers lanceolate, filaments very short broad. *O. japonicus*, *Wall. Cat.* 5139 A. *O. japonicus*, var. *Wallichianus*, *Maxim. in Bull. Acad. N. S. St. Petersburg.*; *Mel. biol.* vii. 321. *O. longifolius*, *Decne in Fl. des Serres*, xvii. 182 (ex. *Maxim.* l. c.). *Fluggea Wallichiana*, *Kunth Enum.* v. 303. *F. japonica*, var. *Wallichiana*, *Baker in Journ. Linn. Soc.* xvii. 501 (excl. syn. *Blume & Royle*).

TEMPERATE and SUBTROPICAL HIMALAYA; from Kumaon eastward, alt. 6-9000 ft. KHASIA HILLS, alt. 4-6000 ft.

Distinguished from the following by the rootstock, usually as thick as the thumb, sometimes 4-6 in. long, the stout scape longer or shorter than the leaves, and the large flowers. *Roots* of long cylindric tubes. *Leaves* often distichous and recurved, nearly quite smooth. *Raceme* lax or dense-fl., sometimes cylindric, with flowers nearly 1 in. diam.; bracts usually shorter than the flowers; pedicels

jointed about the middle; perianth white or pale lilac, segments variable in breadth, obtuse; anthers oblong-lanceolate, filament short and broad; style slender. *Seeds* $\frac{1}{3}$ – $\frac{1}{2}$ in. long, oblong.—Kunth's observation that the raceme is flexuous makes me suspect that the Wallichian plant which he describes (distributed as 5139 of Herb. Wallich.) is a Nepal specimen of 5139 A.

Var. *pauciflora*; more slender, leaves narrower, flowers few not fascicled.—Khasia Hills, alt. 4–6000 ft. Intermediate between *O. Wallichianus* & *intermedius*.

5. **O. intermedius**, *Don Prodr.* 48; rootstock short not very stout, leaves 6–24 by $\frac{1}{6}$ – $\frac{1}{2}$ in., margins minutely erose, scape slender as long as the leaves or shorter, flowers solitary or fascicled $\frac{1}{3}$ – $\frac{1}{2}$ in. diam. white, anthers linear-oblong, filaments very short or 0. *Royle Ill.* 382, t. 96, f. 1. *O. japonicus*, *Wall. Cat.* 5139 C. *O. japonicus*, var. *intermedius*, *Maxim. Mel. Biol.* vii. 321. *O. indicus*, *R. W., Rottl.?*; *Wight Ic.* t. 2050. *Fluggea Jacquemontiana*, *Kunth Enum.* v. 304. *F. japonica*, var. *intermedia*, *Schultes f. in Roem. & Sch. Syst.* vii. 310. *F. intermedia*, *Kunth l. c.* 306.

TEMPERATE HIMALAYA; from Kashmir eastwards, alt. 5–9000 ft. KHASIA and MUNNIPORÉ hills, alt. 5–7000 ft. Ghats of MALABAR, MYSORE, &c., *Wight*. CEYLON.

Except by the usually much smaller flowers and always narrow leaves, and more oblong anthers, this cannot be distinguished from small states of *O. Wallichianus* (however widely different the extreme states of each are). The following are the most marked forms selected from some hundreds of specimens. They pass into one another, and I fear into *O. Wallichianus*. The bracts are so variable that I have omitted describing them.

Var. 1. *occidentalis*; raceme suberect many-fl., flowers white about $\frac{1}{4}$ in. diam., pedicels often $\frac{1}{4}$ – $\frac{1}{2}$ in.—Western Himalaya, Khasia hills and Munnipore.

Var. 2. *macrantha*; scape stout, raceme erect many-fl., flowers $\frac{1}{2}$ – $\frac{3}{4}$ in. diam. white.—Western Himalaya.

Var. 3. *parviflora*; leaves very narrow secundly curved, scape very slender decurved, flowers $\frac{1}{4}$ – $\frac{1}{2}$ in. diam. white or pale purplish, pedicels very short.—Sikkim Himalaya, Khasia, and Munnipore hills.

Var. 4. *pauciflora*; leaves long $\frac{1}{3}$ – $\frac{1}{2}$ in. broad not secund, scape usually very long, raceme short decurved few-fl., pedicels short, flowers $\frac{1}{4}$ – $\frac{1}{2}$ in. diam. (*Wall. Cat.* 5139 C).—Khasia hills, Munnipore, Western Ghats and Ceylon.

Var. 5. *gratilipes*; leaves long very slender $\frac{1}{2}$ – $\frac{1}{3}$ in. broad narrowed into almost filiform petioles, scape slender, raceme few-fl. cernuous, flowers $\frac{1}{2}$ – $\frac{1}{3}$ in. diam. white.

6. **O. Malcolmsoni**, *Royle Ill.* 382 (*name only*); leaves 6–14 by $\frac{1}{2}$ in. flaccid petioled tip obtuse, scape erect and raceme very slender, flowers $\frac{1}{2}$ in. diam. solitary or in distant pairs, pedicels very short, filaments distinct, anthers lanceolate acute. *O. japonicus*, *Wall. Cat.* 5139 G.

PEGU; at Rangoon, *M'Clelland, Kurz. ATTRAN, Wallich.*

The flaccid elongate linear-lanceolate obtuse leaves and long slender racemes seem to distinguish this.—*Rootstock* stout; roots fascicled, fleshy; bracts usually longer than the flowers; pedicels jointed below the middle; perianth rather membranous, white?, style very slender. *Seeds* $\frac{1}{2}$ in. long, ellipsoid.—I assume this to be *Royle's O. Malcolmsoni*, a native of Rangoon, of which, however, I have seen no authentic specimen.

7. **O. micranthus**, *Hook. f.*; leaves 10–20 by $\frac{1}{3}$ – $\frac{1}{2}$ in. flaccid petioled, tip obtuse, scape rather stout long or short, raceme suberect elongate, flowers subsolitary $\frac{1}{2}$ in. diam., anthers sessile oblong obtuse.

ASSAM; *Mrs. Mack*.

In foliage this resembles *O. Malcolmsoni*, but the flowers are minute, with much shorter perianth-segments, and very different anthers, the seeds also are smaller and globose.

8. *O. Griffithii*, *Hook. f.*; leaves very narrowly elliptic-lanceolate 6-10 by $\frac{1}{2}$ - $\frac{3}{4}$ in. many-nerved narrowed into a very slender petiole, tips obtuse, scape stout compressed, raceme lax-flid., pedicels very short. *Flaggea Griffithii*, *Baker in Journ. Linn. Soc.* xvii. 502.

UPPER ASSAM; on the Patkoye hills, alt. 4500 ft., *Griffith*.

A very distinct-looking species, from the elliptic petioled leaves but not in flower. *Baker* describes the seeds as solitary oblong $\frac{1}{4}$ in. long, blue.

9. *O. prolifera*, *Lindl. in Journ. Hort. Soc.* 1 (1846), 76; rootstock climbing and rooting, leaves $\frac{3}{4}$ in. broad ensiform decurved bright green, scape bright purple, flowers subsessile clustered obovate between fleshy and spongy, stamens united by a short fleshy ring, ovary thin-skinned adherent but not growing to the ovary 3-celled, ovules 2 erect in each cell, style pyramidal, stigmas 3 point-like. *Maxim. Mel. Bot.* vii. 129. *Flaggea? prolifera*, *Baker in Journ. Linn. Soc.* xvii. 502.

PENANG. *T. Lewis* (Cult. in Hort. Soc. Gardens, 1845).

I have seen no specimen.—A sketch of that in the Lindley Herbarium (now at Cambridge) represents fragments of two strongly striated leaves 6-10 in. long, without apices and a stout scape, with clusters of flowers about $\frac{1}{4}$ in. diam. subtended by broad ovate bracts. It a good deal resembles *Liriope*.

DOUBTFUL AND IMPERFECTLY KNOWN SPECIES.

O. INDICUS, *Royle mss. Ill.* 382 (name only).

O. MINOR, *Royle mss. l.c.* (name only), from Turanda in Kumaon, is probably *intermedia*, var. *pauciflora*.

O. MOLLIS, *Royle mss. l.c.* (name only), "common in the Himalaya from the Ganges to the Sutlej," is probably *Theropogon pallidus*.

O. ? PALLIDUS, *Wall. Cat.* 5138, is *Theropogon pallidus*.

O. SPICATUS, *Ker-Gawl.*; said by *Don (Prodr.* 47) to be from Nepal, *Wallich*, is *Liriope spicata*, a native of Japan and China, not hitherto found in India.

OPHIPOGON, sp.? *Munnipore*, *Watt*, a small species not in flower, possibly the Japanese *O. japonicus*.

4. SANSEVIERIA, *Thurle*.

Stout herbs with a short often stoloniferous rootstock. *Leaves* narrow, cartilaginous or fleshy flat or terete, nerves immersed. *Scape* stout; flowers racemose. *Perianth-tube* long, slender, lobes narrow. *Stamens* 6, on the leaves of the lobes; filaments filiform; anthers dorsifixed. *Ovary* superior, attached by a broad base, 3-celled; style filiform, stigma simple; ovules solitary, erect in each cell. *Fruit* membranous, indehiscent. *Seeds* 1-3 ripening outside the pericarp globose, all large, or 1-2 imperfect; testa long, fleshy or succulent.—Species 10, Indian and African.

1. *S. zeylanica*, *Willd. Sp. Pl.* ii. 159; leaves 1-2 ft. ensiform semi-terete attenuate from the base to the acuminate lip, deeply channelled above, barred with green and edged with red, raceme short, flowers $1\frac{1}{2}$ in. long. *Redouté Liliac*, t. 290; *Bot. Reg.* t. 160; *Kunth Enum. Pl.* v. 18; *Baker in Journ. Linn. Soc.* xiv. 548. *Aletris zeylanica*, *Mill. dict.* No. 4. *A. hyacinthoides*, var. *zeylanica*, *Linn. Sp. Pl.* i. 456. *Aloe zeylanica*, *Jacq. Enum. Stirp. Agu. Vindot.* 310.

? CEYLON.—DISTRIB. ? Tropical Africa.

Leaves 1-1½ in. broad at the base, very thickly fleshy and hard, margins scarious. *Scape* 1-2 ft., with distant scarious sheaths; bracts ½ in. long; pedicels short; perianth 1½ in. diam.—The above description accords with Baker's, and with the plant figured in The Botanical Register, of which the origin is uncertain, but which has long been cultivated as a native of Ceylon. It is stated to inhabit also Tropical and South Africa; which is more probably its native country.

2. *S. Roxburghiana*, *Schult. fl. Syst.* vii. 357; leaves 1-2 ft. narrowly linear-ensiform narrowed towards the base semiterete channelled above green faintly clouded with black, scape slender, raceme elongate. flowers ½ in. long. *Kunth Enum.* v. 18; *Baker. in Journ. Linn. Soc.* xiv. 549. *S. zeylanica*, *Roxb. Pl. Cor.* ii. 45, t. 184; *Fl. Ind.* ii. 161.—? *Rheede Hort. Mal.* xi. t. 42.—*Moorva, As. Res.* iv. 271.

COROMANDEL COAST, *Roxburgh.*

According to Roxburgh's drawing (at Kew) this is a very different species from *S. zeylanica*, with fewer very much longer and much narrower leaves reaching 4 ft. in length, 1 in. broad, narrower at the base and not nearly so deeply channelled; the scape is more slender with few narrowly lanceolate sheaths, the raceme much longer and the flowers smaller.—Whether it is Rheede's xi. t. 42, which grows in sandy places on the Malabar coast, is doubtful. Roxburgh describes it as cultivated for its fibre. I suspect that it is the only species indigenous to India and is confined to the Western Peninsula and Ceylon, wild or cultivated.

Order CLI. IRIDÆ.

Perennial herbs; rootstock various, *Leaves* narrow, often distichous and equitant. *Flowers* 2-bracteate. *Perianth* superior, petaloid, segments 6-biseriate, imbricating. *Stamens* 3, epigynous, or aduate to the outer perianth-segments; anthers often narrow, extrorse. *Ovary* 3-celled; style simple; stigmas 3, simple or petaloid or variously cleft; ovules many, 2-seriate in the inner angles of the cells, anatropous. *Capsule* trigonous, 3-celled, loculicidal. *Seeds* many, testa thin or coriaceous; embryo immersed in the albumen, short, cylindric.—Genera 57, species about 700, chiefly temperate.

Tribe I. MOREÆ. Stamens opposite to and shorter than the petaloid style-arms.

Stigmatic surface on the back of the petaloid style-arms 1. IRIS.

Tribe II. SISYRINCHIEÆ. Stamens alternating with the style-arms.

Rootstock a tunicate corm; stem 0; perianth-tube long

slender 1. CROCUS.

Rootstock creeping; stem erect; perianth-tube very short. . . 2. BELAMCANDA.

1. IRIS, Linn.

Rootstock bulbous or creeping. *Leaves* equitant, ensiform. *Perianth-tube* long or short, segments large, outer (sepals) largest, stipitate, reflexed, inner (petals) usually smaller, suberect or reflexed. *Stamens* inserted at the base of the outer segments; anthers linear, basifixed. *Ovary* 3-gonous; style stout; stigmas petaloid, arching over the stamens, 2-fid and with a transverse dorsal crest, stigmatic surface a point below the crest. *Capsule* coriaceous, 3- or 6-ribbed. *Seeds* flat or globose, testa coriaceous or fleshy.—Species about 100, North temperate regions.

The Himalayan species of *Iris* are very imperfectly known; good specimens and drawings are much wanted, with descriptions from the living plants. The common *I. Xiphion* of Europe and the East advances into Afghanistan, but has not been collected in British India, and Prof. Foster informs me that he suspects that the European and Eastern *I. Sisgrinchium*, L., a species with the filaments united below, occurs in the Punjab. It is a native of Afghanistan. The character of bearded and crested sepals is artificial and inconstant in this genus.

* *Rootstock* a coated bulb or corm (*Xiphion*).

1. ***I. Aitchisoni***, Boiss. *Fl. Orient.* v. 123; leaves slender subterete, spathes 1-fld., sepals shortly clawed obovate, petals linear spreading, stamens adherent to the style-arms. *Xiphion Aitchisoni*, Baker in *Gard. Chron.* 1876, i. 723; in *Trim. Journ. Bot.* xiii. (1873) 108; in *Journ. Linn. Soc.* xvi. 124.

THE PANJAB; Salt range, alt. 3000 ft., *Vicary*, *Aitchison*.—DISTRIB. Afghanistan.

Corm 2 in. long, ovoid; coats brown, shining. *Stem* $\frac{1}{2}$ –1 $\frac{1}{2}$ ft., slender, 1–3-fld. *Leaves* as long, $\frac{1}{2}$ in. broad. *Spathes* 2–2 $\frac{1}{2}$ in., lanceolate, green. *Perianth* lilac or yellow; tube 1–1 $\frac{1}{2}$ in.; blade $\frac{1}{2}$ in.; petals much shorter, spreading, limb small 3-cuspidate. *I. Stocksii*, Boiss. *Fl. Orient.* v. 123, of Beluchistan, is closely allied to *I. Aitchisoni*, but is a dwarf species with lanceolate plicate leaves.

Var. *chrysantha*, Baker, has the stem 2 ft., and much stouter and flowers yellow.

** *Rootstock* stout, prostrate and creeping.

§ *Sepals* neither crested nor bearded.

2. ***I. ensata***, Thunb. in *Trans. Linn. Soc.* ii. 328; leaves linear rigid grooved glaucous, sheaths shorter than the fusiform ovary, flowers lilac, perianth-tube 0, blade of sepals rhomboidly ovate obtuse entire shorter than the claw, petals oblanceolate erect, style-arms linear tip acutely 2-fld. Boiss. *Fl. Orient.* v. 129; Baker in *Journ. Linn. Soc.* xvi. 139; in *Gard. Chron.* 1876, ii. 323; *Regel Gartenfl.* t. 1011. *I. biglumis*, Vahl *Enum.* ii. 149; *Sweet Brit. Fl. Gard. Ser.* ii. t. 187. *I. triflora*, Balbis *Misc. Bot.* vii. t. 1; *Redouté Lil.* t. 481. *I. Doniana*, Spach. *Hist. Veg.* xiii. 34. *I. Pallasii*, Fisch.; *Reichb. Ic. Fl. Germ.* t. 469; *Bot. Mag.* t. 2331. *I. fragrans*, Lindl. in *Bot. Reg.* xxvi. t. 1. *I. longispatha*, Fisch. in *Bot. Mag.* t. 2528. *I. Moorcroftiana*, Wall. *Cat.* 5021; Don. in *Trans. Linn. Soc.* xviii. 315. *I. pabulina*, Naud. in *Rev. Hort.* 1888, 338 (name). *Xiphion Donianum*, Alefeld in *Bot. Zeit.* (1863) 297. *Ioniris Doniana*, fragrans, triflora & Pallasii, Klatt in *Bot. Zeit.* 1872, 502.

WESTERN HIMALAYA and WESTERN TIBET, alt. 5–9000 ft., Royle, &c.—DISTRIB. Temp. Asia.

Stems tufted, short, or 1 $\frac{1}{2}$ –2 ft., stout or slender, sheaths fibrous. *Leaves* 1 $\frac{1}{2}$ ft. by $\frac{1}{4}$ – $\frac{1}{2}$ in. *Spathes* 3–4 in., 1–3-fld.; valves lanceolate, green. *Flowers* pedicelled; ovary 1 in., cylindric; blade of sepals 1 $\frac{1}{2}$ –2 by $\frac{1}{2}$ – $\frac{3}{4}$ in., claw rather longer; petals $\frac{1}{2}$ in. broad; style-arms 1 in., crests large, deltoid. *Capsule* 1 $\frac{1}{2}$ –3 in., by $\frac{1}{2}$ – $\frac{3}{4}$ in., 6-ribbed, beaked, ribs rounded.

3. ***I. spuria***, Linn. *Sp. Pl.* 58; leaves 1–3 ft. ensiform coriaceous strongly striate, spathes 2–3-fld., flowers lilac, perianth-tube long, blade of sepals orbicular half as long as the claw, petals oblanceolate, style-arms deflexed. *Bot. Mag.* t. 58, 1131, 1314–5; *Jacq. Fl. Austr.* t. 4; *Reichb. f. Fl. Germ.* ix. t. 345. *I. Notha*, M. Bieb. *Cent. Pl. Ross.* t. 77; *Reichb. Ic. crit.* x. t. 915. *I. halophila*, *Bot. Mag.* t. 875 (not of Pallas); Boiss. *Fl. Orient.* v. 128. *Xyridion Nothum* and *spurium*, Klatt in *Bot. Zeit.* 1872, 499.

KASHMIR, alt. 6000 ft., *Clarke*.—DISTRIB. Westward to Russia.

Stem 2-3 ft., sheathed. *Leaves* $\frac{1}{2}$ -1 $\frac{1}{4}$ in. broad. *Spathes* 2-3 in., linear-oblong, firm, green. *Flowers* 2-3 in. diam., bright lilac; sepals $\frac{1}{2}$ in. broad, claw keeled; petals $\frac{1}{3}$ - $\frac{1}{2}$ in. broad; style-arms 1 in. long, crests small, deltoid. *Capsule* 1-2 in., 6-ribbed, long-beaked.—A very common Oriental plant. Baker refers the Kashmir specimens to *I. Notha* as a variety with very stout stems, broad leaves and large flowers.

4. **I. aurea**, *Lindl. in Bot. Reg.* xxxiii. t. 59; tall, stout, leaves ensiform, spathes 2-3-fld., flowers long-pedicelled yellow, ovary as long as the perianth-tube, blade of crisped and crenulate sepals oblong as long as the claw, petals shorter oblanceolate, style-arms with entire broad incurved lobes. *Baker in Gard. Chron.* 1876, ii. 584. *I. crocea*, *Jacquem. mss.* *Xyridion aureum*, *Klatt in Bot. Zeit.* 1872, 501.

WESTERN HIMALAYA; Kashmir, *Royle, Jacquemont*.

Stem 3-3 $\frac{1}{2}$ ft., stout, terete, with leafy sheaths. *Leaves* 1 $\frac{1}{2}$ -2 ft. by $\frac{3}{4}$ -1 in. *Spathes* 3-4 in.; valves lanceolate, green. *Flowers* bright yellow; sepals 2 $\frac{1}{2}$ -3 $\frac{1}{2}$ in., blade 1 in. broad; style-arms 1 $\frac{1}{4}$ -1 $\frac{1}{2}$ in. long, crests deltoid. *Capsule* 1 $\frac{1}{2}$ in. long, oblong, 6-angled, beaked.—Differs from *I. spuria*, chiefly in the yellow flowers.

5. **I. Wattii**, *Baker mss.*; tall, stout, leaves broadly ensiform, flower-heads racemose on stout long peduncles, spathes 2-3-fld., perianth-tube short infundibular, sepals obovate-spathulate, blade as long as the claw, petals rather shorter obovate-oblong, style-arms with 2-fid lacinate tips.

MUNNIPORE; summit of Kongui, alt. 6000 ft., *Watt*.

Stem with 5-6 flower-heads on erecto-patent peduncles. *Leaves* thin, 18 by 1 $\frac{1}{2}$ -2 in., as long as the stem. *Spathes* with the outer valve 1-1 $\frac{1}{2}$ in., lanceolate, thin, green; inner much shorter, oblong, obtuse; pedicels short, jointed with the ovary. *Flowers* pale lavender blue, tube $\frac{1}{2}$ in.; blade of sepals $\frac{3}{4}$ in. broad, striped and spotted with purple, throat yellow; petals $\frac{1}{2}$ in. broad; style-arms $\frac{1}{2}$ in. long, crest deltoid lacinate. *Capsule* small, oblong, obtusely trigonous.—Baker, from whose description much of the above is taken, says of the sepals, "apparently not crested."—Bhotan specimens from Griffith of this or an allied species have stout compressed grooved stems and firmer spathe-valves.

§§ Sepals crested.

6. **I. Milesii**, *M. Foster in Gard. Chron.* 1883, i. 231; tall, stout, leaves very broadly ensiform, flower-heads branched, spathes many-fld., perianth-tube rather short, sepals spreading, blade as long as the claw obovate, crests sharply toothed, petals as large spreading oblong undulate, style-arms with a large fimbriate crest. *Baker in Bot. Mag.* t. 6889.

WESTERN HIMALAYA; Kullu and Parbutta valleys, alt. 4000 ft., *Brandis*.

Stem 3 ft., as thick as the little finger, leafy upwards; sheaths at the forks 4-6 in. *Leaves* 1 $\frac{1}{2}$ -2 ft. by 1-2 in. broad, pale green, firm, strongly curved. *Spathes* 1-1 $\frac{1}{2}$ in., valves oblong, obtuse; pedicels short, jointed at the tip; flowers 2-4 in. diam., large; ovary clavate; perianth-tube $\frac{1}{2}$ in.; blade of sepals 1 $\frac{1}{2}$ -2 in., disk whitish with dark radiating purple blotches, margins purple, crest yellow; style-arms 1 in., blue-purple, crest square.—Possibly this is the tall *Iris* mentioned by Stewart (*Panjab Plants*, 241) as found in the Beas valley, alt. 5-12,000 ft., and used for thatching.

7. **I. nepalensis**, *Don Prodr.* 54 (not of Wall.); stem slender, leaves linear, spathes 1-3-fld., flowers shortly pedicelled, perianth-tube slender, blade of sepals oblong as long as the claw, crests narrow, petals oblong,

crests of style-arms large toothed, capsule 3-gonous with broad flat sides and a long slender beak. *Sweet Brit. Fl. Gard. Ser. ii. t. 11*; *Baker in Journ. Linn. Soc. xvi. 143*; *in Gard. Chron. 1876, ii. 37*. *I. decora, Wall. Pl. As. Rar. i. 77, t. 86*; *Don in Trans. Linn. Soc. xviii. 313*; *Royle Ill. 372*. *I. sulcata, Wall. Cat. 5049*. *Neubeckia decora and sulcata, Klatt in Linnaea, xxxiv. 588, 590*.

TEMPERATE HIMALAYA; from the Panjab and Western Tibet eastwards, alt. 5–10,000 ft. KHASIA HILLS, alt. 5–8000 ft.

Rootstock with densely fibrous sheaths, and copious fleshy finger-like roots; stem $\frac{1}{2}$ –1 ft.; flower heads 1–2. *Leaves* 6 in. long at flowering time, elongating to 24 by $\frac{1}{2}$ in., streaked with purple lines and dots. *Spathes* $1\frac{1}{2}$ –2 in. long, outer valves thin, green, persistent; pedicels very short. *Perianth-tube* $1\frac{1}{2}$ in., limb $1\frac{1}{2}$ in., pale lilac; blade of sepals $\frac{1}{2}$ in. broad, crest yellow; petals $\frac{1}{2}$ in. broad; style-arms 1 in. and less. *Capsule* oblong, trigonous, $1\frac{1}{2}$ in., enclosed in the persistent spathes.—Prof. Foster informs me that the roots are characteristic, resembling those of a *Hemerocallis*. Hemsley (*Journ. Linn. Soc. xxviii. 136*) mentions a starved form of this, 3–4 in. high, as having been collected in the Shan hills by General Collett at 4000 ft. elevation.

§§§ Sepals bearded.

† *Dwarf species*; stems 12 in. or less.

8. *I. gilgitensis*, *Baker mss.*; dwarf, leaves linear, flower-heads solitary, spathe 2-fld., pedicels short, perianth-tube long, blade of sepals small narrow oblong much shorter than the strongly bearded claw, petals oblong.

WESTERN TIBET; at Gilgit, alt. 12,000 ft., *Giles*.

Stems tufted, 4–6 in., basal sheaths entire. *Leaves* flaccid, 6–9 by $\frac{1}{2}$ – $\frac{3}{8}$ in. *Spathes* $1\frac{1}{2}$ –2 in., valves lanceolate green, margins pale. *Perianth-tube* less than 1 in., limb $1\frac{1}{2}$ in., bright lilac; blade of sepals $\frac{1}{4}$ in. broad; petals clawed; style branches $\frac{3}{4}$ in., crests small, deltoid.—Differs from *I. kumaonensis* by the small blade of the sepals. A single specimen only seen.

9. *I. kumaonensis*, *Wall. Cat. 5052*; dwarf, leaves linear, flower-head solitary, spathes 1-fld., pedicels very short, perianth-tube very long, blade of sepals spreading cuneate obovate as long as the bearded claw, petals erect, blade oblong, capsule ellipsoid or subglobose beaked. *Don in Trans. Linn. Soc. xviii. 311*; *Royle Ill. 372*; *Baker in Gard. Chron. 1876, ii. 709*. *I. Kingiana, M. Foster in Gard. Chron. 1887, i. 611*; *Baker in Bot. Mag. t. 6957*. *I. tigrina, Jacquem. mss.*

WESTERN HIMALAYA; from Kashmir to Kumaou, alt. 8–12,000 ft.

Stems 2–12 in., crowded; outer basal sheaths fibrous. *Leaves* 12–14 by $\frac{1}{2}$ in. *Spathes* 2–3 in., valves lanceolate, ventricose. *Perianth-tube* 2–2½ in.; limb $1\frac{1}{2}$ –2 in., bright lilac; blade of sepals $\frac{3}{4}$ in. broad, blotched with darker lilac, beard of claw of yellow-tipped hairs on a white crest, blade of petals $\frac{1}{2}$ in. broad; style-arms $\frac{3}{4}$ in. long, crests deltoid acute. *Capsule* 1–2 in., narrowed at both ends, trigonous, angles obtuse.—Don describes the sepals as blood-red with black-purple spots.

10. *I. goniocarpa*, *Baker in Gard. Chron. 1876, ii. 710*; *in Journ. Linn. Soc. xvi. 145*; dwarf, slender, leaves narrow linear, flower-heads solitary, spathes 1–2-fld., flowers subsessile, perianth-tube long, sepals cuneately-oblong, keel strongly bearded, petals erect, blade oblong, capsule trigonous with broad flat sides and a long slender beak.

SIKKIM HIMALAYA, alt. 10–13,000 ft., *J. D. H.*

Stem 6 in., 1-leaved, sheaths fibrous. *Leaves* 6–8 by $\frac{1}{2}$ in. *Spathes* 1 in. long, valves lanceolate persistent. *Perianth-tube* $\frac{1}{2}$ – $\frac{3}{4}$ in.; blade of lilac? sepals $\frac{1}{2}$ in. broad;

style-arms $\frac{1}{2}$ in.; crests large, deltoid, acute. Capsule exactly as in *I. nepalensis*, of which this may be a variety, but the sepals are strongly bearded.

11. **I. Duthieii**, *Foster in Gard. Chron.* 1887, i. 611; dwarf, leaves linear, flower-heads solitary, spathes 1-fld., perianth-tube very long, blade of spreading sepals cuneate-obovate gradually narrowing into the bearded claw, petals oblong obovate red lilac.

WESTERN HIMALAYA; Kumaon, *Duthie (Hort. Foster)*.

Seems to differ from *I. kumaonensis*, of which it is probably a variety, in the reddish lilac flowers, with darker veins. Capsule $1\frac{1}{4}$ by 1 in., trigonous. As in *kumaonensis* the flowering precedes the mature leafing.

12. **I. Hookeriana**, *Foster in Gard. Chron.* 1887, i. 611; dwarf, leaves linear, flower-head solitary, spathes three 2-fld., persistent perianth-tube short, blade of sepals obovate-cuneate gradually narrowing into the thickly bearded claw, blade of erect petals narrowly obovate, capsule small trigonous beaked.

WESTERN HIMALAYA; Lahul (*Hort. Foster*).

Stem 5-6 in., sheaths torn. Leaves immature at the flowering season, at length 24 by $\frac{1}{2}$ - $\frac{3}{4}$ in., pale green. Spathes about 5 in. long; valves lanceolate, ventricose. Perianth-tube $\frac{1}{2}$ in., limb $1\frac{1}{2}$ -2 in.; blade of sepals cuneate-obovate, $\frac{3}{4}$ in. broad, purplish blue blotched with darker; claw white with violet veins, hairs of beard white yellow-tipped; blade of petals $\frac{1}{2}$ in. broad, suddenly narrowed into the channelled claw; style-arms very convex dorsally, crests revolute deltoid, coarsely serrulate. Capsule oblong.

†† Stem 1 ft. or more.

13. **I. Clarkei**, *Baker mss.*; stem tall stout, leaves linear or ensiform strongly striate, flower-heads 1-2, spathes 1-2-fld., valves green to the tips, pedicels nearly equalling the spathe, perianth-tube short infundibular, blade of sepals oblong-cuneate with a bearded erect claw, blade of petals small oblong, claw long, capsule oblong obtuse at both ends.

SIKKIM HIMALAYA, alt. 10-11,500 ft., *J. D. H., Clarke*.

Rootstock very stout, creeping, sheaths long, fibrous. Stem 10-24 in., fruiting very stout, 2-leaved. Leaves not membranous at the tips, at length $1\frac{1}{2}$ -2 ft. by $\frac{1}{3}$ - $\frac{1}{2}$ in. Spathes 2 $\frac{1}{2}$ -3 in., valves lanceolate, persistent. Perianth bright lilac blotched with violet, throat yellow; tube $\frac{1}{2}$ in.; limb 2 in.; blade of sepals $\frac{3}{4}$ in. broad, style-arms 1 in. long, bright lilac, crests square. Capsule $1\frac{1}{2}$ -2 in., oblong, trigonous, valves thick, rigid, keeled at the back.—The leaves are very variable, linear and $\frac{1}{4}$ in. broad in small fld. specimens.

DOUBTFUL SPECIES.

Of the following, except *I. longifolia*, all are supposed to be either garden plants or originally garden escapes, and probably identical with Persian species. The attention of Indian botanists should be given to them.

I. DEFLEXA, *Knowles and Westc. Flor. Cab.* ii. 19, t. 57 (*Lindl. Bot. Reg.* 1840, Misc. 25, 34; *Baker in Gard. Chron.* 1876, ii. 774 (in part). *I. germanica*, var. *nepalensis*, *Herb. in Bot. Reg.* l. c. 34. Baker, who characterizes the plant of the Floral Cabinet by the scarious tips of the spathes and deflexed stem, considers it to be intermediate between *germanica* and *pallida*, but as he has included under it the *nepalensis* of Royle & Wallich, some of which are certainly different, his view is perhaps not correct. Herbert, who cultivated authentic specimens, says that the deflexed stem was due to its being grown in heat, and that it is a var. of *germanica*, and is *I. nepalensis*, *Wall. in Bot. Reg.* t. 818.

I. KASHMIRIANA, *Baker in Gard. Chron.* 1877, ii. 744 (Kashmir to Kumaon). Differs, according to Baker, from *I. florentina*, in the sweet-scented pure white flowers with the spathe-valves scarious at the tips only, and the pure milk white stigmas two-thirds as long as the perianth with large crests.

I. LONGIFOLIA, Royle Ill. 372, t. 91, f. 2; Baker is disposed to regard this as a long-leaved form of *I. nepalensis*, Don Prodr. (not of Trans. Linn. Soc.). Prof. Foster thinks it is an entirely different plant, apparently allied to *I. ruthenica*.

I. NEPALENSIS, Wall. Cat. 5050 *in part*, a native of Nepal and Kumaon. There are two plants under this number in Herb. Wall., one a solitary specimen, with spathes scarious throughout, the others with them green throughout. Of this latter there is an excellent drawing by Wallich's article made in Nepal. Except in the very pale flowers it may be a *I. germanica*; but Royle (Ill. Him. Pl. p. 372) says that he perceived a distinct smell of Orris-root (as of *I. florentina*) in Wallich's specimen, which is against its being *germanica*. The specimen with scarious valves looks more *I. florentina*, but it has no roots.

I. NEPALENSIS, Wall. mss. in Lindl. Bot. Reg. t. 818 (from Nepal, Wallich). This has the dark blue flowers of *I. germanica*, very unlike the Wallichian drawing of *I. nepalensis*, it may or may not agree in colour with some of his specimens. Herbert makes it a var. of *germanica*, but gives no varietal character. Baker cites it under *depressa*.

I. NEPALENSIS, Wall. ex *I. Don.*; in Trans. Linn. Soc. xviii. 310. This is a mixture of Wallich's, Royle's and the Bot. Reg. *nepalensis*; in consequence of which the root is described as fragrant, as in *I. florentina*, and used for similar purposes. Don distinguishes it from *germanica* by the shorter scarious ventricose spathes (while they are not in Wallich's plant!) entire sepals, longer slenderer tube, and more coarsely serrated stigmatic lobes. Don has a variety with the scape undivided, sub 2-fld. shorter than the leaves, but these are characters of Wallich's drawing of his type.

I. NEPALENSIS, Wall. ex Royle Ill. 372, t. 90, f. 2. I have seen no specimens of this, which is a native of Garwhal, on the ascent to Surkunda. It has a pale flower and "orris" scented roots.

CROCUS, Linn.

Rootstock a sheathed corm; stem 0. *Leaves* radical, narrowly linear, channelled, margins recurved. *Flowers* solitary or fascicled, subsessile; basal spathes 1-3 or 0 hyaline, floral embracing the ovary and sometimes a narrow hyaline bract. *Perianth* funnel-shaped, tube very slender; limb subequally 6-lobed in two series. *Stamens* on the throat of the perianth, filaments short, anthers longer, basifixed. *Ovary* 3-celled; style filiform, arms slender subentire lobed or laciniate; tips stigmatic. *Capsule* oblong, membranous, loculicidal. *Seeds* subglobose.—Species about 70, European and E. Asian.

C. sativus, Linn. Sp. Pl. 36; sheaths of corm closely reticulate, basal spathes embracing the scape 2-valved, flowers violet autumnal appearing with the leaves, throat of perianth bearded, anthers yellow, style-arms exserted orange-red subclavate tips entire or lobulate. *Maw Gen. Croc.* t. 20. *C. sativus* var. *kashmeriana*, Royle Ill. 374, t. 91, f. 1; *Stewart, Panjab Pl.* 239; *Boiss. Fl. Orient. V.* 100; *Reichb. Ic. Fl. Germ.* t. 360; *Benth. & Trim. Med. Bot.* 274.

KASHMIR, cultivated only. Native of South Europe.

The Kashmir saffron is regarded by Royle as a variety of that cultivated in England, distinguished by the very dark violet blue flowers, yellow anthers and brick-red stigmas, but this accords exactly with the common form figured by Bentley and Trimen.

BELAMCAUDA, Adams.

Rootstock creeping; stem erect, leafy. *Leaves* ensiform, equitant. *Inflorescence* branched, sheaths membranous; spathes several-fld., subscarious; bracts scarious; flowers pedicelled. *Perianth-tube* very short;

segments oblong, spreading, subequal. *Stamens* inserted at the base of the perianth, filaments filiform, anthers linear basifixed. *Ovary* obovoid; style filiform arms elongate, tips reniform stigmatic. *Capsule* obovoid, membranous, loculicidal, valves reflexed, leaving the seed-bearing axis persistent and free. *Seeds* subglobose, testa lax shining fleshy within.

1. **B. chinensis**, *Leman in Red. Lil.* t. 121; *Baker in Journ. Linn. Soc.* xvi. 113. *B. punctata*, *Moench Meth.* 529. *Pardanthus chinensis*, *Ker in Kœnig & Sims Ann. Bot.* i. 246; *Miquel Fl. Ind. Bat.* iii. 579; *Royle Ill.* 371; *Lodd. Bot. Cab.* t. 1874; *Flore des Serres* t. 1632. *P. nepalensis*, *Sweet Brit. Fl. Gard. Ser.* ii. 498. *Ixia chinensis*, *Linn. Sp. Pl.* 36; *Gœrtn. Fruct.* t. 13; *Bot. Mag.* t. 171. *Morœa chinensis*, *Murr. Syst. Veg.* 93; *Roxb. Fl. Ind.* i. 170.—*Rheede Hort. Mal.* xi. t. 37.

Very doubtfully wild in the HIMALAYA, ascending to 6000 ft. Cultivated all over INDIA; a native of China.

Order CLII. AMARYLLIDÆ.

Rootstock bulbous tuberous or a corm. *Leaves* radical. *Scape* naked (in the Indian genera). *Perianth*-superior, regular or irregular, tube long short or 0, limb 6-lobed or -partite, with sometimes a crown at the mouth. *Stamens* 6, on the bases of the segments, rarely epigynous, filaments free or connate; anthers erect or versatile. *Ovary* 3-celled; style stout or slender, stigma simple or cleft; ovules many, 2-seriate in the inner angle of the cells, anatropous. *Fruit* usually capsular, loculicidal, rarely fleshy and bursting irregularly. *Seeds* few or many, albumen fleshy enclosing the small embryo.—Genera 64, species about 650.

The American Aloe, *Agave americana*, Linn. (*A. cantula*, Roxb. *Fl. Ind.* ii. 167) is planted as a hedge in the Panjab (Stewart, Panjab Plants, 232) and introduced elsewhere in India. *A. vivipara*, Linn. (Wight *lc.* t. 2024) is naturalized in the Deccan. *Zeyhyranthes tubispatha*, Herb. a Peruvian plant, resembling a small *Pancratium*, but without a corona, is cultivated in gardens and found as an escape far from habitations.

Tribe I. HYPOXIDÆ. *Rootstock* tuberous. *Flowers* spicate or racemose. *Ovary* not produced above the crown into a stipes 1. HYPOXIS.
Ovary produced into a short or long stipes above the crown 2. CUCULIGO.

Tribe II. AMARYLLÆ. *Rootstock* bulbous. *Flowers* umbelled.
Filaments free 3. CRINUM.
Filaments united by a membrane 4. PANCERATIUM.

1. HYPOXIS, Linn.

Rootstock tuberous, or a coated corm. *Leaves* radical, narrow, strongly nerved. *Flowers* solitary, racemed, or umbellate. *Perianth* rotate, 6-partite, sessile on the top of the ovary, persistent. *Stamens* 6 on the base of the segments; filaments short; anthers erect, dorsifixed. *Ovary* 3-celled; style short, columnar, stigmas 3, erect, stout, distinct or connate; ovules 2-seriate. *Capsule* circumsciss below the top or 3-valved. *Seeds* subglobose, testa crustaceous shining beaked at the hilum.—Species about 50, widely diffused but rare in Asia, many S. African.

1. **H. aurea**, *Lour. Fl. Coch.* 200; villous or hairy, leaves narrowly linear, scape slender 1-2-fld., ovary and perianth lobes externally hairy,

anthers sagittate. *Baker in Journ. Linn. Soc.* xvii. 108; *Kurz in Mig. Ann. Mus. Lugd. Bat.* iv. 178. *H. minor*, *Don Prodr.* 53; *Royle Ill. t.* 91, f. 3. *H. Franquevillei*, *Miquel Fl. Ind. Bat.* iii. 586. *H. curculigoides*, *Wall. Cat.* 5164. *Curculigo graminifolia*, *Nimmo in Grah. Cat. Bomb. Pl.* 215; *Dalz. & Gibs. Bomb. Fl.* 276.

SUBTROPICAL HIMALAYA; from Kashmir eastwards, ascending to 7000 ft. in Sikkim. KHASIA HILLS, BENGAL, BEHAR and BURMA, and in the Western Ghats from the Concan southward. (Not in Ceylon).—DISTRIB. Java, China, Japan.

Dioecious. *Rootstock* globose, or elongate and erect, crowned with fibrous remains of old leaves. *Leaves* 4–14 by $\frac{1}{2}$ – $\frac{1}{4}$ in., subcoriaceous, keeled. *Scape* 1–4 in., filiform, hairy; bracts setaceous. *Ovary* clavate. *Perianth-lobes* $\frac{1}{2}$ – $\frac{1}{3}$ in., elliptic-lanceolate, yellow, outer green on the back. *Capsule* $\frac{1}{4}$ – $\frac{1}{2}$ in., clavate, at length 3-valved, crowned with the erect perianth-lobes, walls thin. *Seeds* black, tuberculate.

2. *CURCULIGO*, Gærtn.

Root stock tuberous, or a coated corm. *Leaves* lanceolate and plaited, or linear and flat. *Scape* short or long; flowers often unisexual, spicate or racemed or subcapitate. *Perianth* usually produced above the ovary as a solid stipes, bearing the rotate limb. *Stamens* ovary and seeds of *Hypoxis*. *Fruit* indehiscent, usually more or less beaked.—Species about 12, tropical.

SECT I. MOLINIERA. *Perianth* limb sessile or very shortly stipitate above the ovary.

1. *C. recurvata*, *Dryand. in Ait. Hort. Kew* Ed. 2, ii. 253; leaves long-petioled lanceolate plicate glabrous or with the nerves beneath hairy, scapes many flattened villous, flowers in a decurved subcapitate raceme, ovary turbinate, berry globose hairy. *Bot. Reg. t.* 770; *Roxb. Fl. Ind.* ii. 145; *Benth. Fl. Austral.* vi. 448; *Miquel Fl. Ind. Bat.* iii. 585; *Wall. Cat.* 5159. *C. villosa*, *Wall. Cat.* 5163 B. *Moliniera recurvata*, *Herbert Amaryllid.* 84; *Baker in Journ. Linn. Soc.* xvii. 120; *Kurz in Ann. Mus. Lugd. Bat.* iv. 175. *M. plicata*, *Colla, Hort. Ripp. App.* ii. 333, t. 18. *M. capitulata*, *Herbert l. c.* *Leucojum capitulatum*, *Lour. Fl. Coch.* 199. *Hypoxis Saarpata*, *Herb. Ham.*

TROPICAL HIMALAYA; from Nepal eastwards. BENGAL, CHITTAGONG and BURMA. CEYLON; at Saffragam.—DISTRIB. Malay Islands, S. China, Australia.

Rootstock tuberous. *Leaves* very variable, 2–3 ft. by 3–6 in., recurved, narrowed into a channelled petiole 1–2 ft., villous below, glabrous above. *Scapes* 3–9 in., stout or slender, bracts spathaceous, lanceolate, villous; heads of flowers 2–4 in. diam., villous; flowers pedicelled. *Ovary* $\frac{1}{4}$ – $\frac{1}{2}$ in., villous; bracts 1–1½ in.; cells about 10-ovuled. *Perianth* about $\frac{3}{4}$ in. diam., outer segments villous on the back. *Filaments* very short; anthers cohering. *Berry* $\frac{1}{4}$ – $\frac{1}{2}$ in. diam. *Stigmas* sub 3-lobed, shining. *Seeds* black, testa deeply closely grooved.

2. *C. gracilis*, *Wall. Cat.* 5760; leaves long-petioled lanceolate plicate glabrous, scapes many flattened tomentose, flowers in a decurved dense elongate raceme, ovary oblong tip narrowed, berry oblong? *Moliniera gracilis*, *Kurz in Ann. Mus. Lugd. Bat.* iv. 177; *Baker in Journ. Linn. Soc.* xvii. 120.

TROPICAL HIMALAYA; from Nepal, Wallich, eastwards.

Habit, &c., of *C. recurvata*, of which it is probably a form, but more slender, with the ovary oblong and the inflorescence elongate. Wallich's specimens have leaves 8–12 by $\frac{1}{2}$ –1 in., short woolly scapes, few-flid. loose racemes, and flowers $\frac{1}{2}$ in. diam. Sikkim specimens have stoutly petioled leaves 2½ ft. by 4½ in., and a robust scape 6–12 in. The var. *Jamesoni*, *Baker l. c.* 121; with leaves rigidly coriaceous flowers subsessile in a dense globose head I should refer to *recurvata*.

3. **C. crassifolia**, *Hook. f.*; leaves long-petioled elliptic-lanceolate thickly and rigidly coriaceous plicate glabrous above beneath white-tomentose, scape flattened stout densely tomentose, flowers in a very large dense oblong raceme, bracts glabrous or woolly, ovary oblong top silky, berry oblong. *Moliniera crassifolia*, *Baker in Journ. Linn. Soc.* xvii. 121.

SIKKIM HIMALAYA, *J. D. H.* KHASIA MTS., alt. 5-5000 ft., *J. D. H. & T. T., Mann, Clarke.*

Leaves 2-3 ft. by 3-6 in., strongly closely plicate; petiole 1 ft. stout. *Scape* 2-8 in.; raceme 3-4 in.; bracts 1-1½ in., very variable; lower flowers pedicelled. *Perianth* segments ½ in., outer hairy or villous externally. *Berry* ½ in. long. *Seeds* globose, black, granulate.
